Draft Letter to the Nuclear Energy Institute Regarding the Clarification of Regulatory Paths for Lead Test Assemblies

Comment On: NRC-2018-0109-0002

Draft Letter to Nuclear Energy Institute Regarding Clarification of Regulatory Paths for Lead Test Assemblies

Document: NRC-2018-0109-DRAFT-0196

Comment on FR Doc # 2018-14121

Submitter Information

Name: Edward Butler

General Comment

I believe that the draft letter must not be finalized and issued. I agree with the reason for the draft letter, namely the need to clarify regulatory expectations for the insertion of Lead Test Assemblies in operating reactor cores. But that objective should be achieved through appropriate means, not via a letter to the industry trade group. The draft letter outlines two regulatory pathways: (1) the Standard Technical Specification (STS) path for licensees having technical specification provisions comparable to STS 4.2.1, and (2) the 50.59 and nonexemption path. The STS path is more appropriately provided through revisions to the STS Bases documents and/or issuance/revision of Regulatory Guides and Regulatory Issue Summaries to explain this path and the conditions for its use. The 50.59 and non-exemption path is not needed because the pending 50.46 rulemaking expressly addresses the exemption portion and the proper application of 50.59 already addresses the remainder. Therefore, the draft letter must not be finalized and issued. It is an entirely inappropriate means for communicating regulatory expectations on safety regulations protecting workers and the public. I also wish to support the specific views advanced in the non-concurrence package submitted by Harold Chernoff.
