## General Comment

Please allow more time for those who state the importance of further review of this situation. Federal regulations are made as a protective measure to ensure the safety of the public and the environment. Private nuclear plant owners should not be allowed to proceed with experiments that are not preceded by overview that will see to the safety, or dangers of such experimentation.

Profit is always the first of many concerns of any business, but the effects of their work must be be overseen at all costs.

The Union of Concerned Scientists is an organization which I follow and contribute to because of their high ethical standards and excellent qualifications and reputation. Give them your ears!
