Regional Summary, Mid-winter Bald Eagle Count Covers period from 1986-2010

Data Definitions:

Overall Trend: INC = Increasing
 NC = No change (less than ±0.2 percent)
 DEC = Decreasing
Num Routes Number of surveyed routes per region
Actual Scale Units are annual percentage change
Statistical Significance Tests that trend is significantly different from 0, at $p \leq 0.05$
Adjusted p-value p-value for the statistical test above, but adjusted for multiple testing (44 states, 44 tests) using Bonferoni step-down procedure

Summary for Individual Routes, Mid-winter Bald Eagle Count Covers period from 1986-2010

Data Definitions:

Overall Trend:

INC = Increasing
 NC = No change (less than ± 0.2 percent)
 DEC = Decreasing

Route Used in Models?

Whether or not the route was used in the modeling effort

Actual scale

Units are annual percentage change

Maximum

Maximum number of Bald Eagles ever observed

Mean

Mean number of Bald Eagles over the surveys conducted

Num Years Observed Number of years that the route was surveyed
 First Year, Last Year First and last year observations (not necessarily consecutive) were made
 Percent change over the observation period Percentage change in counts between first and last year observed (model-based)
 Over 30%? Whether or not that percentage is greater than 30 percent

While statistical significance is not identified at the route level, confidence intervals for logged counts that cover 0, or for actual counts that cover 1, are not statistically different from 0.
