Hi Jim,

Attached are the near final versions of the Final Status Survey Report

SU1- contained a major burial area

SU2- contained a major burial area

SU3- contained small hotspots

SU4- Not found to be impacted but we conducted a MARSSIM Class 3 survey to confirm. This unit wraps around WEAC's main building. We intend on installing a sewage pipe on one of the flanks for the new building.

SU5- reference area

I figured I would get these to you in case your guys ran out of things to review.

I am also waiting on the final disposal manifests from WCS in Texas

As always, let me know if you need more information. And have a great weekend

Best

Elon
