Hello,
I'm submitting on behalf of third parties, signed letters and signed petitions in support of the Holtec International HI-STORE Consolidated Interim Storage Facility Project docket number NRC-2018-0052.
Thank you,

Gerges Scott

Dear Sir or Madam:

Living in New Mexico is a treasure most of us take for granted. The nature; the plants and animals; the perfect weather; the canyons, mountains and desert; the inspiring Native American tribes and pueblos – there is no other place like this on Earth.

But it is important for those of us fortunate enough to live here to share our space and our perspective with people like you who live in distant places like Washington DC. Many of the environmentalists I've spoken with are passionate about preserving what they see as their slice of paradise here in NM. I understand, but think they are off base when they talk about the proposed Holtec project in Lea County. But I think your environmental review document can help them better understand the proposal, the technology and the proven safety features of the project.

It's time we bring facts forward and prioritize balance rather than extremism. I was a young person in the 1970s and remember full well some of the tragedies that befell our environment. But that was a long time ago and I think a lot of the falsehoods masked as facts, along with natural fear of the unknown in the environmental community is spreading and is really damaging.

Fake news is not just on the right – it's alive and thriving on the anti Holtec websites. It was also out in force at the public meetings. Science appears important to many of them when talking about endangered species, but somehow it doesn't work in this nuclear discussion. Science of course isn't a "sometimes" deal – it's what drives our society whether you're a person of faith or not. And it needs to drive this Holtec review.

I claim no special expertise, but I'm smart enough to know that the NRC does. I have also been doing some reading on the project and am a strong believer that we can continue to have a beautiful and environmentally rich New Mexico without reverting to witchcraft disguised as science.

I encourage the NRC to focus on the facts and the benefits for our state. And I encourage you to approve Holtec's application and demonstrate that common sense is still alive and well in Washington DC. Thank you.

Respectfully,

Bob Finch

Dear NRC:

I am writing in response to Docket ID: NRC-2018-0052.

I would welcome the opportunity to talk about my opinion on this nuclear waste station with you.

I know that the biggest concern of everyone that lives in this area that another incident like what happened in Los Alamos will happen here.

But, I read an article in a magazine that discussed how Holtec's nuclear waste canisters have been tested immensely for durability, thus a leak is unlikely to occur. This article discussed that they test the canisters at something like 80 miles an hour, so I cannot imagine damage would be an issue.

However, I would like to know how the canisters will be transferred from one location to another. Will the waste be transferred into Holtec's canisters prior to transportation? If so, then I am not opposed to this project, and I would feel safe in knowing that the waste would not be released into the air and ground during transportation or upon arrival.

Thank you for taking the time to listen to me.

Thank you,

May Ma, Office of Administration

To whom it may concern,

I have always been a supporter of new innovative ways to power our cities. I was in support of the windmills when those first got designed, of the solar panels when those came out, you get the idea. The point is that I believe that like everything in the last 100 years we are making massive strides in science and technology but the only way to continue to make strides is to take leaps and chances on these new initiatives.

We must keep moving forward. The whole reason we even developed the two I listed above was because we wanted a cleaner way to power our cities. And so we developed this tech and then we used it and it is being used throughout the country. Now we have come up with an even more efficient and cleaner way to create energy. Nuclear energy. Someone handed me this information sheet from the American Nuclear Society and it showed the electricity generation equivalent to power a cite. It would take 1,800 windmills to generate the same amount of energy as 1 nuclear reactor. That's amazing. The only way we can continue to make strides and come up with these new leading technologies is to actually utilize and push through with the newest advancement. This storage site is apart of that process.

This site will be a land mark in the history of nuclear energy and it should happen. New Mexico was already the birth place of the nuclear industry, might as well make another large leap with it in the same place. Approve the project, build the project.

Thank you,

Petition in Support of Holtec International's Consolidated Interim Storage Facility

This petition is in support of the licensing and construction of the consolidated interim storage (CIS) in Lea County, New Mexico. The signers of this petition believe this project will provide a path to resolve the nation's long standing used nuclear fuel storage problem by providing a safe, secure, temporary, retrievable, and centralized facility for storage of used nuclear fuel and provide substantial economic benefits to our communities.

Please sign below and show your support for the CIS.
