Office of Nuclear Reactor Regulation  
Attention: Mr. Victor Stello, Jr., Director  
Division of Operating Reactors  
U.S. Nuclear Regulatory Commission  
Washington, D. C. 20555

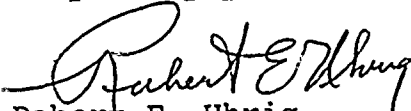

Dear Mr. Stello:

Re: Turkey Point Units 3 and 4  
Docket Nos. 50-250 and 50-251  
Thermal and Hydraulic Safety Limits

On April 4, 1977, (L-77-106), Florida Power & Light Company submitted proposed modifications to Technical Specification Figure 2.1-1, Reactor Core Thermal and Hydraulic Safety Limits, Three Loop Operation. The revised figure included the effects of rod bow. This figure has subsequently been revised as a result of steam generator tube plugging. The attached figures are submitted as an amendment to our April 4, 1977 submittal. Figure 2.1-1 is for operation with  $\leq 15$  percent steam generator tubes plugged and Figure 2.1-1a is for operation with  $\geq 15$  percent and  $\leq 19$  percent steam generator tubes plugged. Both figures include a rod bow penalty consistent with our April 4, 1977 submittal.

This revision to our proposed amendment to Facility Operating Licenses DPR-31 and DPR-41 has been reviewed by the Turkey Point Plant Nuclear Safety Committee and the Florida Power & Light Company Nuclear Review Board. They have concluded that this revision does not involve an unreviewed safety question.

Very truly yours,

  
Robert E. Uhrig  
Vice President
