Office of Nuclear Reactor Regulation
ATTN: Mr. Victor Stello, Jr., Director
Division of Operating Reactors
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Stello:

Re: Turkey Point Plant Units 3 & 4
Docket Nos. 50-250 & 50-251
Proposed Amendment to Facility
Operating Licenses DPR-31 & DPR-41

Regulatory Docket File

Pursuant to 10 CFR 50, Section 50.90, Florida Power & Light Company herewith submits this application for amendment of the Turkey Point Plant Units 3 & 4, Facility Operating License DPR-31 and DPR-41.

The proposed amendment relates to modification of the spent fuel storage facility for each unit. The modification provides for replacing the existing fuel storage racks with the Combustion Engineering, Incorporated, supplied High Capacity Fuel Assembly Storage Rack. The augmented storage rack would increase the fuel storage capacity of each unit's spent fuel pit from 217 to 621 fuel assemblies.

The attached safety analysis report contains details of the design, design analysis, and safety evaluation of the proposed modification.

The proposed modification has been reviewed by the Florida Power & Light Company on-site and off-site review committees and the committees concur that the modification does not constitute any significant hazards to the public.

Since the present Technical Specifications on fuel storage are based on the existing fuel storage rack design, Technical Specifications 5.4 require revision prior to implementation of this modification. Proposed changes to Technical Specifications 5.4 are identified by vertical lines in the margin of the attached replacement page 5.4-1.

January 28, 1976

We request that approval of the proposed modification and revision to Technical Specifications 5.4 be granted by July 1, 1976.

Forty copies of this request, including three signed originals, are enclosed.

Very truly yours,

Robert E. Uhrig
Vice President

REU:nch
Attach.
