Subject: Clarification Question on LAR 18-021 PORV Relief Valve Noise Mitigation

Amy,

I have received the following clarification question on the subject from the staff:

The maximum capacity of the PORV at design pressure is limited to reduce the magnitude of a reactor transient if one valve would inadvertently open and remain open. The size of PORV block valves is proposed to change from 6" to 12". Discuss the evaluation of this scenario and any impacts on reactor transients.

Right now we are looking to clarify that a review was done and a summary of the impact of the transient. If more information is necessary on this topic for the review, a NRC request for additional information may be necessary.
