## General Comment

The number of unknowns that are listed in the documentation I've been reviewing are overwhelmingly excessive. There has not been enough research, hard-science, done to know what procedures must be mandated to handle this hazard safely. That is pre-supposing that this hazard can be handled safely in any manner. I suspect not, however before any rational determination can be made as to proper procedures, protocols, for handling this, "High Burnup Nuclear Fuel," the research must be completed. I am asking that you postpone this hearing and all decisions until a future date when the research has been done and realistic decisions can be made as to how to proceed safely with handling this massive contaminant that has been created by the nuclear industry.
