1

14883673.1

The Petition is both procedurally flawed and substantively inaccurate. It is based 1 2 on false allegations that are part of a broader scheme concocted by Petitioner and its 3 legal counsel, including an attorney who has been disciplined multiple times by the California State Bar for fabricating evidence. Petitioner's counsel has recruited declarants 4 5 who are willing to lie under oath with the expectation of receiving a financial benefit if the 6 government files an action against TtEC for making false claims. The NRC should not 7 allow the integrity of its licensing process to be tarnished by the perjured statements 8 submitted in support of the Petition.

9 The NRC has already completed a comprehensive investigation of data issues
10 identified at the Site by the Navy and TtEC. Those issues were thoroughly investigated
11 by TtEC, in close consultation with the Navy and the NRC. The investigation and results
12 were documented in a report issued by TtEC (the "Investigation Conclusion Anomalous
13 Soil Samples at Hunters Point Naval Shipyard" report, April 2014). Both the Navy and the
14 NRC reviewed the report, and the Navy accepted the report's conclusions.

15 The NRC has also conducted two independent investigations into the allegations 16 against TtEC, from 2011 to 2013 and again in 2014. This included investigating the data 17 irregularities identified by the Navy, and a broader investigation into allegations made by former employees and subcontractors. The NRC filed and resolved an enforcement 18 19 action against TtEC that addressed the discrete, localized data irregularities identified in 20 the TtEC/Navy investigation, and found all other allegations of misconduct to be 21 unsubstantiated. Any further investigation by the NRC, triggered solely by Petitioner's 22 and declarants' willingness to lie to the NRC for financial gain, is not necessary or 23 warranted under 10 C.F.R. § 2.206. Therefore, the PRB should reject the Petition.

24 I. BACKGROUND

Α.

25

HPNS Historical Use and Superfund Designation

HPNS is a former Naval shipyard located in southeast San Francisco, California.
HPNS functioned as a Navy-run repair facility from 1939 to 1974, with private companies

-2.

1	operating at the Site prior to and following its use as a Naval base. ¹ The shipyard was
2	used for radiological operations beginning in 1946, which included the repair, use, and
3	disposal of radioluminescent items, gamma radiography for testing, radiological research
4	and laboratory operations, decontamination and scientific research during atomic
5	weapons testing, and additional use of radionuclides for scientific research by the Naval
6	Radiological Defense Laboratory. ² Numerous radiological investigations, surveys, and
7	studies have been conducted at the Site. ³
8	Shipyard operations were permanently terminated following the Navy's decision in
9	1998 to add HPNS to its Base Realignment and Closure ("BRAC") Program for cleanup
10	and transfer of the military installation for redevelopment. ⁴ In 1989, the U.S.
11	Environmental Protection Agency ("EPA") evaluated and placed HPNS on the Superfund
12	National Priorities List in response to concerns about hazardous and radiological wastes
13	created by historical activities at the Site. ⁵ The Navy is the lead agency responsible for
14	investigation and cleanup, while the EPA is the lead regulatory agency providing federal
15	oversight. ⁶ To manage cleanup of the 934-acre HPNS Site, the Site was divided into
16	thirteen parcels. ⁷ Parcel A was transferred to the San Francisco Office of Community
17	Investment and Infrastructure (formerly the San Francisco Redevelopment Agency) in

2004, and Parcels D-2, UC-1, and UC-2 were transferred to the City in 2015; cleanup
 activities on the remaining nine parcels are ongoing.⁸

3

B. TtEC's Engagement and Work at HPNS

TtEC was first awarded a contract to perform work for the Navy at HPNS in 2002,
and had a continuous presence at HPNS through 2016 for both non-radiological studies
and radiological tasks. TtEC was involved in three major categories of radiological tasks
at HPNS: (1) removal of Navy contaminated sanitary sewers and storm drains, (2)
surveys of impacted buildings and former building sites, and (3) radiological support
activities.

10 The Navy initially directed TtEC to hire a small business subcontractor to complete 11 the radiological work and identified New World Environmental ("NWE"), dba New World 12 Technology, as the sole radiological subcontractor able to complete the necessary work.⁹ NWE was already present and working at the Site prior to the time that TtEC was 13 14 awarded its first radiological contract in 2003. From that point until March 30, 2009, all 15 radiological work at HPNS was completed under only NWE's license. Unfortunately, 16 TtEC's reliance on NWE created unclear lines of authority at the Site, leading to quality 17 control and morale issues. To address these issues, TtEC developed a new management 18 plan for HPNS in 2006, under which TtEC placed senior managers onsite at HPNS full 19 time, hired radiological supervisors to manage the fieldwork, and developed a 20 comprehensive data management system and standard operating procedures.

21 In early 2009, to resolve ongoing issues with NWE's performance, TtEC, with the 22 support of the Navy, invoked its own NRC materials license at the Site. TtEC's license

23 24

- 25 8 Id.

⁹ See Memorandum from Laurie Lowman, Director, Radiation Support and Navy Low-Level Radioactive Waste, Naval Sea Systems Command Detachment, Radiological Affairs Support Office, Qualification of Radiological Subcontractor at HPNS (Jan. 23, 2007), attached as <u>Exhibit 1</u>.

was invoked on March 30, 2009.¹⁰ Based on the Navy Radiological Affairs Support
 Office's ("RASO") input, TtEC hired experienced NWE supervisors and workers, including
 Petitioner's Declarant Elbert Bowers, to maintain continuity at HPNS.

All of TtEC's work was performed to ensure public safety, and was conducted with
the nearly continuous presence of state, local, and federal regulatory agencies. In
particular, the Navy RASO was a daily presence at the Site. The work that TtEC
performed was extensive. TtEC removed 24 miles of sewer and storm drains and 32,853
cubic yards of asphalt and concrete, screened 270,000 cubic yards of excavated soil, and
conducted thousands of surveys. All of this work was closely overseen and approved by
the Navy, in addition to regular review by state and federal regulatory agencies.

11

C. NRC Former Employee Investigations

Petitioner relies on the declarations of former NWE and TtEC employees in support of its request to reopen the NRC's prior investigation regarding the Site. These declarations include statements from Elbert Bowers, Archie Jackson, Arthur Jahr, and Susan Andrews, all of whom made prior complaints to the NRC in which they alleged they were harassed, discriminated against, or terminated for raising safety concerns at HPNS. As described below, the NRC investigated each of these claims and was unable to corroborate them.¹¹

In or about August 2010, TtEC was informed that Arthur Jahr, an NWE employee,
had made inappropriate comments while working at HPNS. NWE investigated and
confirmed the claims, at which point TtEC requested that Jahr be removed from the Site.
Jahr subsequently filed a complaint with the NRC alleging that he was subjected to
harassment and discrimination for raising safety concerns. The NRC determined that

24

²⁵ ¹⁰ See Letter from Tetra Tech EC, Inc. to U.S. Regulatory Commission, Region IV,
 ²⁶ Notification of License Use at Hunter Point Shipyard (Mar. 13, 2009), attached as <u>Exhibit</u>

²⁷ ¹¹ See generally, Letters from NRC to TtEC regarding these investigations, attached at 28 <u>Exhibit 3</u>.

-5-

1 || there was insufficient evidence to support Jahr's claims.¹²

2 In or about January 2011, Elbert Bowers, then a TtEC employee (following his 3 employment with NWE), was involved in a dispute with three Radiation Technician Supervisors, as well as with Bill Dougherty, TtEC's onsite Project Manager. Because of 4 Bowers' inappropriate behavior toward the Radiation Technician Supervisors, who 5 reported to him, TtEC management moved Bowers off HPNS to another TtEC project 6 7 site. He then alleged discrimination, and later in 2011, the NRC began an investigation to determine whether Bowers had been discriminated against by TtEC for raising safety 8 concerns. The investigation continued for over a year, and closed on or about May 29, 9 2013. The NRC was unable to substantiate Bowers' claims.¹³ 10

In December 2011, the Navy revised the scope of work for base wide support at
HPNS, which required a staff reduction of two Radiation Control Technicians. Andrews
and Jackson were selected for reduction and did not return to the project. Both Andrews
and Jackson later filed complaints with the NRC, each alleging that they were wrongfully
terminated for raising safety concerns at the Site. The NRC Investigated and was unable
to validate Jackson's and Andrews' allegations.¹⁴

17

D. 2012 TtEC Investigation of Soil Sampling Issues

18 In October 2012, during a routine conference call, a Navy official at RASO expressed concerns about certain TtEC sampling data.¹⁵ Final systemic samples at one 19 location (Building 517) appeared to report lower than expected Potassium-40 levels.¹⁶ 20 21 22 ¹² See Letter from NRC to Albert Perry, NRC Office of Investigations Case No. 1-2012-032 (July 8, 2013) at p.1, attached at Exhibit 3. 23 ¹³ See Letter from NRC to Albert Perry, NRC Office of Investigations Case No. 1-2012-24 002 (May 29, 2013), at p.1, attached at Exhibit 3. ¹⁴ See Letter from NRC to Albert Perry, NRC Office of Investigations Case Nos. 1-2012-25 019 and 1-2012-037 (Dec. 6, 2013) at p. 1, attached at Exhibit 3. 26 ¹⁵ See TtEC, Investigation Conclusion Anomalous Soil Samples at Hunters Point Naval Shipyard (Apr. 2014), Petition Exhibit H at ES-1, 1. 27 ¹⁶ Id. 28 -6

TtEC conducted an extensive investigation and identified a number of corrective actions,
 summarized in the TtEC "Investigation Conclusion Anomalous Soil Samples at Hunters
 Point Naval Shipyard" report, the first draft of which was submitted to the Navy on
 November 29, 2012, and to the NRC on December 3, 2012. After extensive discussions
 with the Navy and responding to multiple rounds of its comments, TtEC finalized the
 report in April 2014.¹⁷

7 To determine what happened, TtEC investigators conducted additional sampling at 8 identified locations, performed a database review of over 70,000 sampling results reported since 2008, and conducted in-person interviews with individuals identified on the 9 chain-of-custody ("COC") forms, as well as direct supervisors, members of sampling 10 11 crews, and lab workers.¹⁸ During the investigation, and despite repeated questioning, no individuals admitted to any improper sampling, resulting in an inconclusive determination 12 as to exactly what had occurred with the samples. However, investigators determined the 13 likely cause was that individuals identified as the sample collectors on certain COCs had 14 not collected soil from the COC-identified locations.¹⁹ The evidence indicated that 15 samples from twelve survey units were potentially not representative of the identified 16 locations and seven additional units were determined to be of potential concern.²⁰ 17

To ensure that all remediation was completed as required, TtEC resampled all
twelve survey units, as well as four of the additional seven units where potential issues
were identified, and then conducted remediation and re-sampling in those areas as
necessary.²¹ The three remaining potentially suspect areas were not resampled because
the uniform results were determined to be a result of naturally occurring soil

-7-

1 || homogeneity, and not the result of potential data manipulation.²²

TtEC took further actions to ensure the accuracy of future sampling and instituted
procedures to immediately identify and escalate any sampling issues. These procedures
included refresher training on sampling and filling out COC forms, training on ethical
behavior, quality control surveillance, and notification of the corporate Radiation Safety
Officer ("RSO") whenever samples were inconsistent with prior results.²³

7 The Radiation Control Technicians associated with the irregular samples at the 8 Site were permanently removed from TtEC projects following the investigation.²⁴ In addition, the two Radiation Task Supervisors overseeing the work were suspended 9 without pay for 30 days and placed on a one-year probation. Five years later in 2017, 10 11 those two individuals, Justin Hubbard and Steven Rolfe, admitted to the U.S. Department 12 of Justice that they switched certain soil samples at issue in the investigation so that 13 "clean" soil was analyzed rather than soil from the COC-identified sampling location. 14 Hubbard and Rolfe were prosecuted and sentenced to prison. TtEC fully supports the 15 Government's actions in those cases.

16 No TtEC managers were indicted for having any knowledge of, or involvement in, 17 Hubbard's or Rolfe's activities. Further, the NRC fully investigated the soil sampling 18 incident (as discussed further below) and concluded that TtEC management was not involved in the misconduct.²⁵ The outcome of the NRC investigation and the apparent 19 20 result of the Department of Justice's criminal investigation are consistent with the 21 conclusion of TtEC's and the Navy's investigation of the data issues identified in 2012: 22 isolated instances of misconduct by low-level employees had taken place. TtEC 23 investigated and resampled the affected areas and implemented procedures to prevent

2014 NRC Investigation of Soil Sampling Issues

In June 2014, the NRC notified TtEC that it too was investigating the soil sampling
issues identified in TtEC's April 2014 report. The NRC's investigation began on or about
April 29, 2014, and lasted over a year.²⁶ The NRC took sworn statements from TtEC
HPNS managers, including Dennis McWade and Bill Dougherty, as well as numerous
Radiation Control Technicians and Radiation Task Supervisors involved in soil sampling
and remediation activities at the Site.

9 The NRC investigation covered the same time period as the TtEC and Navy 10 investigations of soil sampling issues at the Site. During the course of the NRC investigation, it was revealed that a Radiation Control Technician and a Radiation Task 11 12 Supervisor deliberately falsified soil samples by gathering samples from an area other than where the samples were identified as having originated.²⁷ The NRC determined that 13 14 both individuals were acting outside of established TtEC protocols.²⁸ The NRC further 15 concluded that TtEC management was not involved in any of the data falsification.²⁹ Despite the breadth of the NRC's investigation, the NRC did not identify any further 16 17 sampling issues, and the NRC's conclusions were consistent with the results of TtEC's 18 and the Navy's investigations.

19 20

24

F. Petitioner Makes False and Implausible Allegations of Widespread Fraud at HPNS

Petitioner is a community organization with an anti-development agenda. It
disagrees with the City of San Francisco's decision to support the development of
thousands of units of sorely needed housing at the HPNS site. Petitioner's goals for the

²⁶ See Letter from NRC to Andrew Bolt, NRC Office of Investigations Report No. 1-2014-018 (Feb. 11, 2016), Petition Exhibit I at p.1 (noting that the NRC investigation began
 ²⁶ April 29, 2014 and was completed September 15, 2015).

-9-

27 ²⁷ *Id.* at Encl. 1, p. 1.

28 ²⁸ *Id*.

²⁹ See Petition, Exhibit J, Encl. 1 at p. 2, NRC Response to Point #3.

Site are ill-defined; the main purpose of its campaign appears to be to generate political
 and financial support by opposing development, without offering plausible alternatives for
 the reuse of a large plot of vacant land in a densely populated urban area with the
 highest housing costs in the nation.

To advance this agenda, Petitioner has joined forces with attorney David Anton to
suborn perjury. As discussed in detail below, the declarations of the former NWE and
TtEC employees submitted in support of the Petition are rife with statements that are
demonstrably false, or so implausible that anyone with even a passing familiarity with the
investigation and remediation of contaminated property would know they are not true.

10 Anton and Petitioner's other attorneys-who clearly drafted these false statements-are apparently not familiar with environmental site cleanup. Anton, however, 11 12 is familiar with falsifying evidence. Anton has been suspended twice by the California State Bar, and one of those suspensions is based on his admission that he "fabricated 13 evidence" in a wrongful termination case filed in federal court.³⁰ He has done so again 14 here, encouraging Declarants to periure themselves to advance Petitioner's interests-as 15 well as their own, as the Declarants have a financial stake in potential claims against 16 17 TtEC.

As discussed below, Declarants' false allegations do not provide a credible basis
for reopening the NRC's closed investigation of TtEC's work at HPNS. The NRC should
disregard Petitioner's false allegations, and should reject the Petition because it is
improper under 10 C.F.R. § 2.206.

22 II. LEGAL STANDARD

The Petition is brought pursuant to 10 C.F.R. § 2.206, which provides that "[a]ny person may file a request to institute a proceeding pursuant to [10 C.F.R.] § 2.202 to modify, suspend, or revoke a license, or for any other action as may be proper." NRC Management Directive 8.11 ("MD 8.11") governs the NRC's internal review process for

27

^{28 &}lt;sup>30</sup> See Attorney Licensee Profile, David C. Anton, State Bar No. 94852, available at <u>http://members.calbar.ca.gov/fal/Licensee/Detail/94852</u>.

	1	10 C.F.R. § 2.206 petitions. Petitions must meet certain criteria in order to be accepted
	2	by the NRC and considered under § 2.206, including:
	3	 the petition must contain a "request for enforcement related action;"
	4	 the facts that constitute the bases for taking the particular action must be
	5	specified, supported "beyond the bare assertion," and be "credible and sufficient to
	6	warrant further inquiry;" and
	7	 there must be no available NRC proceeding "in which the petitioner is, or could be,
	8	a party and through which the petitioner's concerns could be addressed." ³¹
	9	Additionally, the M.D. 8.11 specifies criteria for rejecting petitions. These criteria are:
	10	the "correspondence does not ask for an enforcement-related action," or "fails to
	11	provide sufficient facts to support the petition;"
	12	the "petitioner raises issues that have already been the subject of NRC staff
	13	review and evaluation for which a resolution has been achieved, the issues
	14	have been resolved, and the resolution is applicable to the facility in question;"
	15	 the "request is to deny a license application or amendment;" and
	16	 the "request addresses deficiencies within existing NRC rules."³²
	17	The PRB is tasked with determining whether a petitioner's request meets the criteria for
	18	review as outlined above. ³³ The PRB then makes a recommendation to the appropriate
	19	Director as to whether to accept or reject the petition. ³⁴
	20	III. THE PETITION IS BASED PRIMARILY ON ALLEGATIONS THAT ARE
	21	UNRELATED TO TTEC'S MATERIALS LICENSE.
	22	Until March 30, 2009, TtEC subcontractor NWE, dba New World Technology, held
	23	the NRC license for work performed at HPNS. NWE was employed as a subcontractor at
	24

. 2	26	³² <i>Id.</i> , Part III(C)(2) at p.12.
	27	³³ <i>Id.</i> , Part III(D) at p.13.
	28	³⁴ <i>Id.</i> , Part III(G) at p.15-16.
		-11- -11-
		Response to 10 CFR § 2.206 Petition to Revoke Materials License No. 29-31396-01

1	the Site at the direction of the Navy. ³⁵ TtEC's license was invoked on March 30, 2009. ³⁶
2	The allegations in the Petition rely in large part, and in some cases entirely, on
3	alleged misconduct that took place prior to March 30, 2009, under NWE's NRC license.
4	For example:
5	Petitioner alleges that "sometime in early 2006 Joe Levell substantially
6	increased" the speed at which a conveyor belt for scanning potentially
7	contaminated soil operated. ³⁷ The conveyor speed issue is mentioned throughout
8	the declarations in support of the Petition, but all of these allegations fall outside
9	the time period that TtEC's license was in effect. In fact, TtEC and NWE identified
10	and corrected a scan speed issue in 2006, and took all necessary precautions to
11	ensure that all affected soil was rescanned as necessary. ³⁸
12	 Petitioner alleges that inadequate remediation was conducted in Building 351A in
13	
14	```````````````````````````````
15 16	³⁵ See Memorandum from Laurie Lowman, Director, Radiation Support and Navy Low- Level Radioactive Waste, Naval Sea Systems Command Detachment, Radiological Affairs Support Office (RASO), Qualification of Radiological Subcontractor at HPNS, (Jan. 23, 2007), attached as Exhibit 1.
17	³⁶ See Letter from Tech EC, Inc. to U.S. Regulatory Commission, Region IV, Notification
18	of License Use at Hunter Point Shipyard (Mar. 13, 2009), attached as <u>Exhibit 2</u> .
19	 ³⁷ Petition at p. 24, In. 3-4. ³⁸ During the week of May 29, 2006, a contaminated button was identified at the portal
20	monitor. The portal monitor ensured the adequacy of soil scanning processes by
21	checking truckloads of soil departing HPNS. TtEC and NWE quality control and radiological staff conducted an investigation to determine how the button was missed
22	during scanning. The investigation consisted of field inspections, reviewing compliance with procedures, contacting the conveyor vendor and maintenance providers, and
23	interviewing over twenty-four TtEC and NWE staff at the relevant scanning sites. The investigation determined that the scan speeds were likely altered during a partial
24	disassembly and reassembly of the conveyor during a winter shutdown. The investigation
25	identified other potential causes of inadequate scanning, including a lack of consistent staff training. In response, TtEC and NWE adjusted procedures to ensure compliance.
26	Affected soil was rescanned, twice daily checks of conveyor belt speed were instituted as well as routine quality control checks, additional staff refresher training was provided, and
27 28	procedures were adjusted to ensure the effectiveness of the soil scanning process. The Navy was notified, oversaw, and approved TtEC's response.
	-12-

1		2008 and 2009. ³⁹ Building 351A remediation was complete in January 2009, ⁴⁰
2		before TtEC's license was invoked on March 30, 2009.
3	-	Allegations regarding Jane Taylor's purportedly questionable resume and
4		subsequent hiring by NWE occurred in 2006.41 TtEC was not involved in NWE's
5		hiring decisions.
6	-	All of the allegations contained in Richard Stoney's declaration occurred prior to
7	· ·	Stoney's resignation on May 28, 2006.42
8		The allegations in Robert McLean's declaration all relate to his work for NWE at
9		HPNS until the fall of 2006, when he was transferred offsite.43
10		Because the Petition seeks to revoke TtEC's license, the NRC's review should be
11	confir	ned to those allegations that occurred on or after March 30, 2009, during the use of
12	TtEC'	s license at HPNS.
13	IV.	PETITIONER HAS NOT PRESENTED "SIGNIFICANT NEW INFORMATION" TO
14	1	THE NRC.
15		The NRC must reject a petition under 10 C.F.R. § 2.206 if the petitioner "raises
16	issue	s that have already been the subject of NRC staff review and evaluation."44
17	Requ	ests for NRC action "will not be treated as a 2.206 petition unless they present
18	signifi	cant new information." ⁴⁵ Petitioner's allegations are little more than a rehashing and
19	repac	kaging of allegations that were the subject of the NRC's prior investigation of TtEC
20	and d	o not meet this threshold criteria for acceptance of the Petition.

		-13-
	Respo	onse to 10 CFR § 2.206 Petition to Revoke Materials License No. 29-31396-01
I	I	

The NRC has already completed its investigation of the sampling Α. issues alleged in the Petition.

3 NRC's investigation into sampling issues at the HPNS Site, which began in 2014. was extensive. The investigation took over a year and involved numerous interviews of 5 HPNS staff.⁴⁶ The investigation identified that a Radiation Control Technician and a Radiation Task Supervisor had falsified soil samples and completed inaccurate COC 6 7 forms.⁴⁷ These are the same substantive allegations regarding fraudulent sampling that appear in the Petition. 8

9 The NRC investigation confirmed that any suspect data at the Site was limited to 10 the conduct of one Radiation Control Technician and one Radiation Task Supervisor who 11 falsified soil samples and one Radiation Task Supervisor who falsified chain-of-custody 12 forms. The investigators found no evidence that TtEC managers participated in or 13 directed this unlawful conduct.

On October 11, 2016, the NRC issued a Confirmatory Order that identified a single 14 violation of TtEC's license conditions that occurred sometime between November 11, 15 2011, and June 4, 2012, and noted that "TtEC remains in good standing with respect to 16 the terms and conditions of its NRC license."48 The NRC therefore agreed to waive 17 imposition of civil penalty, and TtEC in turn agreed to conduct safety and worker 18 awareness training for employees engaged in licensed activities, among other 19 20 conditions.49

21

1

2

4

Petitioner had the opportunity to object to the Confirmatory Order and request a

-14-

hearing within 30 days of the Order's issuance.⁵⁰ But rather than intervene in the process
at the appropriate time, Petitioner waited eight months to file this Petition and request that
the NRC reopen a completed and properly closed investigation.⁵¹ Petitioner gives no
explanation as to why it was unable to file a timely request for intervention. Petitioner's
disregard of other available procedural mechanisms to raise the untimely arguments it
now attempts to make provides further justification for NRC's rejection of the Petition.⁵²

7 Indeed, Petitioner acknowledges that the NRC has already investigated the 8 allegations in the Petition, but nonetheless claims that the investigation was "inadequate" because Petitioner disagrees with the methodology and conclusions of the NRC's 9 10 investigation.⁵³ In support of this assertion. Petitioner cites the declarations of Elbert Bowers, Susan Andrews, and Archie Jackson.⁵⁴ However, the Declarants' statements do 11 12 not support Petitioner's claims. The cited portion of Bowers' declaration alleges only that 13 Bowers "became aware" after he left HPNS that there was a violation of soil sampling 14 procedures. Jackson's and Andrews' declarations state that they felt the NRC did not 15 adequately address their concerns, but there is nothing to substantiate this assertion.55 Moreover, Bowers left the site in January 2011, before any sampling issues were 16 identified or believed to have occurred.⁵⁶ And neither Andrews nor Jackson were involved 17 with cleanup at specific locations, nor were they part of the sample collection teams. In 18

1.

truth, the NRC performed multiple investigations that addressed the allegations made
 regarding TtEC's work at the Site, primarily by the same former employees whose
 declarations now support the Petition.

4 5

The NRC investigated Elbert Bowers' allegations, beginning in 2011, and found insufficient evidence to substantiate his claims.

Following a complaint filed by Bowers, the NRC initiated an investigation into
whether Bowers was discriminated against for raising safety concerns.⁵⁷ Bowers alleged
that TtEC management removed him from HPNS because he was strictly enforcing
safety rules at the Site--the same allegations contained in his declaration in support of the
Petition.⁵⁸ However, the NRC found insufficient evidence to substantiate Bowers'
claims.⁵⁹

The limited issues that Bowers claims to have personal knowledge of do not justify 12 a new investigation, much less revocation of TtEC's license. Bowers repeatedly asserts 13 that he was unaware of any fraud at the Site, and has no personal knowledge of any 14 purported fraud concerning sampling, COC forms, or building scans.⁶⁰ Bowers alleges 15 only that he has "since been informed" that there was an alert system in place to prevent 16 his knowledge of any "obvious cheating."⁶¹ However, neither Bowers nor any other 17 Declarant has explained how this system operated or what exactly it was designed to 18 prevent Bowers from witnessing. Bowers is merely speculating as to alleged conduct-an 19 "alert system"-of which he has no first-hand knowledge or credible evidence. 20

21Bowers also states that he caught and corrected a number of health and safety22issues at the Site, which is precisely what he was hired to do. For example, Bowers

- 23

27 60 See e.g., Bowers Decl. at ¶¶ 6, 12, 13, 21, 24, 74-78.

28 6¹ *Id.* at ¶ 9.

identifies a number of instances in which he found unsecured areas or improper
controlled area postings.⁶² The fact that Bowers was doing his job to identify and correct
these relatively routine issues does not warrant further NRC investigation. Nowhere in
Bowers' declaration does he state that he made any complaint to the NRC, prior to
leaving TtEC, about safety concerns he had at the Site. Nor does he indicate he brought
any concerns about safety issues to the attention of TtEC management. There is no
substance to Bowers' allegations, and the PRB should disregard them.

8

9

2. The NRC investigated the allegations made by Susan Andrews, Archie Jackson, and Arthur Jahr, beginning in 2012, and found insufficient evidence to substantiate their claims.

10 Susan Andrews' 2012 NRC complaint identified the same issues as those that 11 allegedly support the Petition: ungualified and/or untrained workers, falsification of COC 12 forms, inadequate employee training and/or certification, a culture where production took 13 precedence over safety, inaccurate data input, incorrect instrument calibration, failure to 14 follow procedures for frisking when entering or exiting an identified contaminated area, and failure to follow procedures when eating or drinking in a posted contaminated area.⁶³ 15 16 Based on discussions TtEC had with the NRC during the course of the 17 investigations, TtEC is aware that the concerns raised by Archie Jackson and Arthur Jahr were substantially identical to those raised by Andrews in 2012.⁶⁴ In each case, the NRC 18 19 found there was insufficient evidence to substantiate the claims made by these 20 individuals. The Andrews, Jackson, and Jahr declarations repeat the same allegations 21 that the NRC investigated and found to be without merit. Thus, the NRC's prior, thorough 22 investigation of these allegations requires the NRC to reject the Petition. 23 24 25 62 Id. at ¶¶ 56-59. 26

⁶³ See Letter from NRC to Susan Andrews (Jan. 5, 2012), attached at <u>Exhibit 3</u>.

-17-

1 2	3. Anthony Smith's allegations are substantially similar to those alleged by the other Declarants, all of which were thoroughly investigated by the NRC.
3	While Anthony Smith did not previously file a complaint with the NRC, his
4	allegations are essentially identical to those investigated by the NRC, which requires the
5	NRC to deny the Petition. Smith alleges that he witnessed untrained or unqualified
6	workers at HPNS, falsification of soil sampling, falsification of chain of custody
7	documentation, fraudulent building surveys conducted, and data manipulation at the
8	Site. ⁶⁵ The NRC's investigation considered similar allegations made by the other
9	Declarants, as explained above. Smith's allegations add nothing new, and certainly not
10	"significant new information" that would justify acceptance of the Petition.
11	Smith's allegations are also unsubstantiated, and in many instances verifiably
12	false, as discussed in Section V. A., below. The NRC should not reopen its investigation
13	based on Smith's claims, because they do not present significant, new, credible
14	information, as is required for acceptance of the Petition under 10 C.F.R. § 2.206.
15	4. The NRC has already investigated the Declarants' allegations of
16	unqualified and untrained employees at HPNS.
17	In addition to the allegations discussed above, Petitioners make allegations about
18	the qualifications and conduct of Health Physics Specialist Jane Taylor and Radiological
19	Data Analyst Thorpe Miller. ⁶⁶ TtEC understands that the NRC investigated these claims
20	(in Case Nos. 1-2012-002, 1-2012-019, 1-2012-032, and 1-2012-037) based upon
21	multiple conversations and inquiries from the NRC related to these allegations. The NRC
22	took no enforcement action against TtEC in response to these claims. ⁶⁷
23	The reasons for the NRC's inaction are apparent from the flimsiness of Petitioner's
24	
25	⁶⁵ See Declaration of Anthony Smith ("Smith Decl.") at ¶¶ 4, 7.
26	⁶⁶ See Petition at p. 26, In. 7 to p.28, In. 17.
27 28	⁶⁷ See Letters from NRC to Albert Perry, NRC Office of Investigations Case Nos. 1-2012-002 (May 29, 2013); 1-2012-032 (July 8, 2013); and 1-2012-019 and 1-2012-037 (Dec. 6, 2013), attached at <u>Exhibit 3</u> .
	40
	-18- Response to 10 CFR § 2.206 Petition to Revoke Materials License No. 29-31396-01

1 current allegations. Petitioner's assertion that Taylor and Miller "saw to it that the large 2 majority of soil excavated from the sewer trenches was not treated as radioactively contaminated soil" is based on a single example of an area where a low percentage of 3 contaminated soil was identified and removed.⁶⁸ The absence of significant 4 5 contamination in this area is the most likely explanation for this example, and cherry-6 picking the results of one excavation among the hundreds of trenches and excavations 7 investigated and remediated at the Site does not constitute evidence of "fraud or 8 incompetence."

9 Petitioner also ignores the fact that Taylor was hired by NWE, not by TtEC. TtEC 10 did not have control over internal personnel hiring decisions made by NWE. In fact, 11 Bowers was the Radiation Safety Officer Representative at NWE at the time Taylor was 12 hired,⁶⁹ and presumably would have been involved in her initial hiring. At the time TtEC 13 invoked its license in March 2009, Taylor had been working at HPNS for three years and 14 was more than sufficiently gualified for the position she held at that time-notwithstanding 15 Petitioner's stated concerns about NWE's hiring practices.

16 Likewise, Thorpe Miller had adequate experience for his role at HPNS. Because 17 Miller is the son of Laurie Lowman, who worked at the Navy RASO, TtEC requested that 18 the Navy review whether any conflict of interest existed in hiring Miller. The Navy determined that there was no conflict, and TtEC relied on the Navy's interpretation.⁷⁰ 19 20 Miller's work managing the database onsite was valued, and TtEC followed the Navy's 21 direction to minimize the appearance of a conflict when his employment by TtEC was 22 questioned by competing contractors.⁷¹

23

In any event, Petitioner's spurious allegations regarding Taylor's and Thorpe's 24 employment at the Site have already been investigated by the NRC. There is no new,

25

⁶⁸ Petition at p.28, In. 25 to p.29, In. 4. 26

⁶⁹ See Bowers Decl. at ¶ 4. 27

⁷⁰ See Email from Andrew Bolt to Erik Abkemeir et al., Bowers Decl., Exhibit 3 at p. 1. 28 ⁷¹ Id.

-19-

significant information in these allegations, or any of the other allegations made by
 Petitioner, that would justify the NRC's acceptance of the Petition. Section 2.206 requires
 the NRC to reject the Petition on that basis.

4 5

6

7

V. THE SMITH DECLARATION AND THE NAVY'S DRAFT DATA EVALUATION REPORTS DO NOT CONTAIN FACTS THAT ARE "CREDIBLE AND SUFFICIENT TO WARRANT FURTHER INQUIRY."

A. Anthony Smith is a criminal who has demonstrated his willingness to lie to advance his own financial interests.

As discussed above, Anthony Smith's declaration in support of the Petition either
repeats or repackages allegations that have been previously investigated by the NRC.
But even if Smith's declaration raised new information, Petitioner must still provide
"supporting facts" that are "credible and sufficient to warrant further inquiry."⁷² The
allegations in Smith's declaration are either demonstrably false or so implausible as to be
completely lacking in credibility.

14

1. Smith's claims about Building 351A are verifiably false.

Smith alleges that he and Josh Hooper were instructed by HPNS Project Manager
Bill Dougherty to destroy highly contaminated radioactive samples taken from Building
351A in order to cut costs and avoid further costly remediation.⁷³ Smith also alleges that
he and Hooper were instructed to take new samples from the areas in the building
crawlspace known to be clean.⁷⁴ These claims are inconsistent with uncontroverted
evidence and are demonstrably false.

In fact, multiple rounds of remediation and resampling were conducted at Building
 351A, beginning in April 2008 and continuing into January 2009.⁷⁵ Smith alleges that
 TtEC Project Manager Bill Dougherty was motivated by a desire to avoid the expense of

- ²⁶ ⁷³ Smith Decl. at ¶ 10.

27 ⁷⁴ *Id.* at ¶¶ 10-11.

28 ⁷⁵ See Portions of Building 351A Logbook, attached as Exhibit 4.

-20-

renting a vacuum truck to remediate. However, TtEC did hire an independent
subcontractor to remediate Building 351A using a vacuum truck, not once but twice—in
both October and December 2008.⁷⁶ This evidence contradicts Smith's allegation that
Dougherty did not want to rent a vacuum truck. Following the initial remediation, ten
samples were determined to be above the release criterion, requiring a second round of
vacuum remediation and sampling, which was conducted in December 2008.⁷⁷
Confirmatory sampling was conducted after each round of remediation. Final status
survey samples demonstrated that remediation goals were met.⁷⁸

9 Even more implausible is Smith's allegation that Dougherty instructed Hooper and 10 him to "destroy" the soil samples and "any related documentation," after laboratory test 11 results showed that the samples had "some of the highest radioactive readings ever seen 12 on the Hunters Point site."⁷⁹ This allegation assumes, without explanation, that Smith and 13 Hooper had access to the samples after they were turned over to the laboratory, and the laboratory results after they were produced by the laboratory.⁸⁰ In fact, once samples 14 15 were turned over to the lab, they were maintained in a secure area, which was inaccessible to the Radiation Control Technicians (Smith and Hooper included). But even 16 17 if Smith or Hooper could have re-gained access to the physical samples after the lab obtained them, copies of the chain of custody forms and electronic records of the 18 19 sampling data would remain in the lab's files.

20 21

22

 $23 ||^{76}$ See Sterling Environmental Corporation Invoices, attached as Exhibit 5.

⁷⁷ See Final Status Survey Results, Bldg. 351A at 5-3 and 5-4 (ECSD-3211-0018-0009), attached as <u>Exhibit 6</u>.

Smith's allegation that he was able to identify clean soil from areas "marked with

25 ⁷⁸ Id.

 $_{26} \parallel^{79}$ Smith Decl. at ¶ 10.

⁸⁰ Logbook records demonstrate that samples were gathered and "turned in" following the completion of the removal of contaminated soil in Building 351A. See Portions of Building 351A Logbook, attached as <u>Exhibit 4</u>.

flags"⁸¹ is also inconsistent with protocols used at the Site. Site engineers determined
 random sampling locations by use of an EPA-approved software program, and then
 precisely marked them in the field. Determining whether soil was clean required lab
 sampling. Smith does not allege that he had access to the location software or
 knowledge of the engineer's field markings.

Finally, although Smith claims that TtEC management was attempting to avoid
additional remediation to save costs, there was no profit motive for faking the results of
this sampling. The work was performed under a cost reimbursable contract with the
Navy, with billing of actual costs allowed on a monthly basis. There was no reason for
TtEC management to avoid the required remediation.

11 Given these facts, the only plausible conclusion is that Smith's statements 12 regarding Building 351A are fabricated.

13

14

2. Smith's claims regarding the Parcel A sample are also demonstrably false.

Smith asserts that in 2009 he was instructed to collect a sample at Parcel A and
the following morning was instructed to put it back because it was "hot."⁸² Smith alleges
that the sample showed a cesium-137 (Cs-137) concentration of 2-3 picocuries per gram
(pCi/g).⁸³

This sample was never taken. 9,649 samples from the Site were collected and
analyzed in 2009, and of those samples, only 183 identified Cs-137 activities above the
release criterion. The highest concentration measured in 2009 was 1.0335 pCi/g.
Moreover, none of the samples taken in 2009 were taken in the area along the Parcel A

23 fence line that is described in the Smith Declaration.

24 Smith's allegations are also inconsistent with management practices at the Site.

25

26

27 81 Smith Decl. at ¶ 11.

⁸² See Smith Decl. at ¶¶ 12-13.

²⁸ 8³ See id. at ¶ 13.

-22-

1 TtEC management would have immediately known of a sampling result that had such a 2 high concentration of Cs-137. Such an unexpectedly high concentration would have 3 triggered a report to management immediately, as it would have required revising the 4 scope of work for Parcel A. There is no conceivable way that Smith could have submitted 5 a single sample for lab testing, and then retrieved and destroyed it-all outside of 6 established Site protocols—without anyone in the lab or management being informed of 7 such an abnormal sampling result. Yet after multiple investigations by the Navy and the 8 NRC, there is nothing to suggest that anyone onsite was notified or aware of any such 9 sample.

Finally, Smith claims to have been instructed to collect a single sample to
determine background radiation levels.⁸⁴ However, taking a single sample would have
been completely contrary to established site protocols. Single samples are not
representative of background levels due to statistical variations; collecting a large enough
set is critical for accurate analysis (typically 20 samples). Smith would not have been
instructed to collect a single sample to determine background radiation levels as he
claims.

Despite the utter lack of plausibility of Smith's allegations, the California
Department of Public Health ("CDPH") is currently performing radiological gamma
scanning surveys of Parcel A-1 to ensure there is no risk to the public. Initial scanning
reports demonstrate that there is no contamination or risk to the public, and no evidence
of elevated concentrations of Cs-137.⁸⁵ Final data analysis and reporting is expected in

22 ||

28

23 ⁸⁴ Smith Decl. at ¶ 12.

⁸⁵ California Department of Public Health, Radiation Health and Safety Scanning Survey: Progress Update No.'s 1-8 (July 20 and 27, Aug. 3, 10, 17, 24 and 31, and Sept. 13, 2018), *available at* <u>https://www.cdph.ca.gov/Programs/CEH/DRSEM/Pages/RHB-Environment/Hunters-Point-Naval-Shipyard-Parcel-A-1-Survey.aspx</u>, attached at <u>Exhibit</u>
<u>7</u>. CDPH Progress Update No. 8 reported the discovery of a single radium deck marker that posed no risk to the residents living in the area. See Progress Update No. 8 at p.1 ("Radiation readings before removal indicate that there would not have been any health

or safety hazard to anyone who happened to be at that spot previously.").

the coming months.⁸⁶ The CDPH's sampling will undoubtedly confirm that Smith is lying,
 and that the story he tells about finding elevated Cs-137 concentrations on Parcel A is
 fictional.

4 5

3. Petitioner's allegations relating to fraudulent building scans and data reporting rely on Smith's unreliable and unsubstantiated claims.

6 Petitioner's allegations relating to improper building scans and building survey 7 data reporting also rely on the Declaration of Anthony Smith.⁸⁷ Smith alleges that he and 8 other technicians at the Site were instructed to "just get numbers," and that they did so by 9 holding the radiation detector in the same spot or putting it down in one place for up to 10 thirty minutes while readings were recorded.⁸⁸ Smith also asserts that building survey 11 data was altered to "avoid additional radiological remediation work" at the Site, and that 12 other Radiation Control Technicians and Supervisors were aware of the data 13 manipulation.89

Smith's allegations make no sense. The only reason to put his radiation detector
down in one spot and "just get the numbers" would be Smith's own motivation to not
perform the repetitive, monotonous action of moving the scanner throughout the building.
TtEC managers would have no motivation to pay Smith to sit around generating fake
data.

With respect to the alleged data alteration, Smith played no role in data entry, as
his declaration makes clear. The majority of this work was completed by professionals
working in trailers at the Site. Smith would not have been in these areas, nor would he
have had knowledge of these tasks. Moreover, the data entry process at the Site required

-24-

significant amounts of manual spreadsheet work—which Smith now mischaracterizes,
 deliberately or otherwise, as intentional data manipulation. His contentions that TtEC
 managers directed him and others to intentionally falsify building scan data are not
 credible.

5 6

4. Smith's claims regarding falsified chain of custody documents are unsupported.

Smith claims that one individual, Tina Rolfe, would fill out COC forms while others
were in the field.⁹⁰ While it is possible that some chain of custody information, such as
the sample identification numbers, was filled in before sampling was conducted, each
sampler was required to sign off on the sample COC before the forms were delivered to
the lab. Even if the handwriting on some portions of the COC is different, it does not
mean that the COC forms are inaccurate.

Additionally, TtEC and the NRC have all investigated claims of falsified soil
samples and associated COC documents. Hubbard and Rolfe have admitted to falsifying
limited sampling data in 2012, and the disparity in sampling times was identified during
the course of these investigations. However, none of these prior investigations
determined that there was systemic, rampant fraud in the COC documentation, as Smith
falsely alleges.

19

20

5. Smith's has no direct knowledge to support his claim that contaminated soil was shipped offsite.

Smith alleges that a conveyor system utilized in 2006 resulted in contaminated
 soils being shipped offsite.⁹¹ Yet, Smith himself admits that he did not work on the
 conveyor operation.⁹² Smith's allegations that the speed was increased and monitors

28 9² *Id.* at ¶ 29.

Response to 10 CFR § 2.206 Petition to Revoke Materials License No. 29-31396-01

-25-

TtEC identified a limited issue with the conveyor in 2006, when NWE's license was
active at the Site. TtEC investigated, identified the issue, remedied the problem, and
ensured that all impacted soil was appropriately rescanned.⁹⁴ Smith's claims demonstrate
his lack of understanding of Site remediation protocols, and his willingness to make false
allegations based on speculation and hearsay.

8

9

6. Anthony Smith is currently being prosecuted on felony charges and has financial problems that explain why he is willing to make false statements to the NRC.

Apart from the implausible nature of his allegations, Smith is simply not a credible 10 witness. Smith is an abusive person and is currently being prosecuted for assault, 11 battery, family violence, and terroristic threats, arising from his threats to kill his former 12 girlfriend.⁹⁵ In addition, Smith has had two contempt of court orders filed against him.⁹⁶ 13 has been cited for operating a vehicle while impaired,⁹⁷ and failed to pay debts owed to a 14 creditor, resulting in a default judgment against him.98 15 Smith has apparently chosen to falsify evidence to support legal action he hopes 16 will result in a financial windfall for himself, to allow him to escape from his financial 17 troubles. His attorney David Anton is also familiar with the falsification of evidence, 18 having been suspended by the California State Bar after he "admitted he fabricated 19 evidence" in a wrongful termination case filed in federal court.⁹⁹ The NRC should not 20 21 22 ⁹³ See id. 23 ⁹⁴ See explanation above at footnote 38. ⁹⁵ State of Georgia v. Anthony James Smith, Union County Superior Court Case No. 24 2017-CR-221-SG, attached at Exhibit 8. 25 ⁹⁶ See Smith v. Smith, Contempt Orders 2002 and 2003, attached at Exhibit 8. 26 ⁹⁷ See e.g., A. -26-

spend taxpayer resources further investigating false allegations advanced by a criminal 1 2 and an admitted fraudster.

3 4

The Draft Navy Data Evaluation Reports are scientifically unsound. Β. and in any event do not find actual evidence of data manipulation.

The Draft Data Evaluation Reports ("Draft Reports") discussed in Petitioner's 5 supplemental pleadings are not new, credible evidence that would justify accepting the 6 7 Petition.

8 First, even if taken at face value, the Draft Reports only tentatively conclude that there is "potential evidence" of "potential data manipulation." Whatever the term "potential 9 10 evidence" means, it is not specific, credible evidence that would support reopening the 11 NRC's closed investigation of TtEC.

12 Second, and more fundamentally, the methodology of the Draft Reports is deeply flawed, and the Reports' conclusions are not based on sound science. The Draft Reports 13 14 do not base their analysis on the contractual and regulatory requirements that governed 15 TtEC's work at HPNS. Rather, they rely on arbitrary logic tests, inappropriate statistical analyses, and misleading graphics, all of which are misapplied and misinterpreted to 16 17 incorrectly identify areas of potential data manipulation. The misuse of the logic tests, statistical analyses, and misleading graphics results in a large percentage of HPNS data 18 being incorrectly identified as potentially suspect. In addition, the Draft Reports do not 19 20 consider alternative scientific explanations for any potential data issues, such as the well-21 documented, highly variable soil conditions at HPNS or sensitivity to background radiation levels. 22

The "logic tests" used in the Draft Reports impose a series of arbitrary 23 24 requirements on the conditions under which samples are collected (e.g., the relative 25 timing of sample collection and analysis) and identify any deviation from those arbitrary requirements as evidence or "potential evidence" of "potential data manipulation." 26 27 However, the logic tests have no foundation in the contractual requirements for work at the Site, nor do they have any scientific or technical foundation. For example, re-analysis 28

1 of samples according to the laboratory Standard Operating Procedures approved by the 2 Navy, which is part of ordinary field sampling or laboratory operations, results in failure of 3 at least one logic test used in the Draft Reports. Moreover, the Draft Reports fail to 4 account for benign or innocent errors in data and information processing that are 5 unavoidable in large scale projects. In addition, the Draft Reports simply assume that any 6 location downgradient from a contaminated area is potentially suspect, without any actual 7 evidence of irregularities in the data or in data collection procedures. Failure to meet the 8 requirements imposed by these arbitrary logic tests is not evidence of data irregularities. 9 The "statistical tests" used in the Draft Reports are also flawed, and in some 10 cases, they are not actually statistical tests at all. For example, the defects in the Draft 11 Reports' statistical analysis include the following:

The Draft Reports' use of the Kolmogorov-Smirnov ("KS") test to identify
 "statistically different" populations of data ignores natural heterogeneity in
 soils at the Site and differences in conditions under which samples were
 collected.

16

17

18

19

20

21

22

23

24

25

26

- The application of Benford's Law tests to data with an insufficiently wide range of values (e.g., Ac-228 data) incorrectly identifies hundreds of data points as potentially suspect.
- The Draft Reports identify data as suspect based on information that is intended solely to trigger further investigation (*e.g.*, scan surveys), and not based on release criteria established by the Navy and the EPA, contrary to established NRC guidance.¹⁰⁰
 - The hierarchical "clustering" analysis performed in the Draft Reports is not a statistical test at all, but rather, a subjective approach to data assessment.
 - The confidence intervals in the Draft Reports are either computed
- ²⁷ ¹⁰⁰ NRC *et al.*, Multi-Agency Radiation Survey and Site Investigation Manual
 ²⁸ ("MARSSIM") (Aug. 2000), available at <u>https://www.epa.gov/sites/production/files/2017-09/documents/marssim_manual_rev1.pdf</u>.

incorrectly or based on arbitrary unstated assumptions.

The Draft Reports do not provide any information about the procedures used to identify "outliers" in the dataset or to flag unusual data, and the large number of outliers identified in the Draft Reports strongly suggest the methodology generated results that are meaningless. Further, the flagging of outlying values is inconsistent, and is inappropriately based on a univariate as opposed to a multivariate analysis.

8 The misapplication of these statistical tests results in a large percentage of data 9 being incorrectly identified as potentially suspect. Moreover, even where statistical 10 differences may be present, the Draft Reports do not consider alternative scientific 11 explanations for the differences, such as the highly variable soil conditions, or variations in background radiation levels (which are in some cases very close to the remediation 12 goals at the Site). Thus, it is clear that the Draft Reports do not provide an objective 13 analysis of the data collected at HPNS, and they are certainly not credible, new evidence 14 15 of alleged license violations that would support accepting the Petition under 10 C.F.R. 16 § 2.206.

17 VI. CONCLUSION

1

2

3

4

5

6

7

The NRC should reject the Petition because Petitioner has failed to meet the 18 19 criteria for acceptance set forth in 10 C.F.R. § 2.206. Petitioner has not presented significant new information or demonstrated why the NRC's prior investigations are 20 insufficient to address Petitioner's concerns. The evidence that Petitioner submitted in 21 support of its allegations of fraudulent conduct are either demonstrably false or utterly 22 lacking in credibility. There is no indication that upper level TtEC management had any 23 24 knowledge of the admitted or alleged falsifications that the NRC previously investigated. TtEC has never knowingly provided false data to the NRC and has fully complied with the 25 confirmatory orders issued by the NRC following its investigation. Moreover, the EPA, the 26 27 Navy, and state and local officials all agree that the Site is safe and there is no health risk 28

Response to 10 CFR § 2.206 Petition to Revoke Materials License No. 29-31396-01
