Stephen,

The Category 2 shipment coming from Eckert & Ziegler Cesio in the Czech Republic is for Landauer, Inc. a manufacturer of radiation dosimetry and health physics instrument calibration laboratory. The sources will be shipped directly to Landauer, Inc. in Illinois and then installed in a Hopewell Designs irradiator system. The timely arrival of the source to Landauer, Inc. is of high importance to get the irradiator working so the calibration laboratory can resume their work. The installation of the irradiator and sources is expected to begin the week of October 22nd and there is a narrow window to get the sources from Czech Republic to Landauer. IEMA is aware of the installation and is expecting the project to take place during this period.

If it is possible to import the sources and not delay 7 days it will allow Landauer Inc. to get its operations back up and running so calibration of instrumentation can resume and allow the project to be completed as expected.

Thanks,
Chris
