

CHAIRMAN

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D.C. 20555-0001

November 21, 2018

The Honorable Richard Shelby  
Chairman, Committee on Appropriations  
United States Senate  
Washington, DC 20510

Dear Mr. Chairman:

On behalf of the U.S. Nuclear Regulatory Commission (NRC), I am submitting the sixth quarterly report related to the NRC's progress on certain licensing actions and right-sizing commitments as first directed in the Joint Explanatory Statement accompanying the Consolidated Appropriations Act, 2017, and continued in the Joint Explanatory Statement accompanying the Consolidated Appropriations Act, 2019.

The Joint Explanatory Statement directed the Commission to report: 1) "the on-board strength of full-time equivalent (FTE) employees, including any identified areas of critical skill shortages and targeted hiring strategies against these shortage areas"; 2) "actions taken to right-size the NRC in accordance with the recommendations of the Project Aim report, to include re-baselining assumptions and projection of FTEs and required budget authority"; 3) "progress to eliminate the backlog of pending licensing actions in the Office of Nuclear Reactor Regulation by 2017"; and 4) "progress to complete the licensing reviews of pending reactor license renewal applications (power and research reactors), combined license applications, early site permit applications, design certification applications, and uranium recovery applications (initial and renewal) against currently projected schedules."

The fiscal year (FY) 2019 staffing level in the agency's enacted appropriation is 3,114 FTE. NRC's current projection would utilize 2,989 FTE in 2019, which is approximately 80 FTE below the FY 2018 utilization. The FTE resources cited include the Office of the Inspector General resources.

Hiring of additional agency staff will continue to be limited to only those skills that are critical to the agency operations or not available within the existing agency workforce. The NRC has identified additional skill needs in the areas of cybersecurity, cloud computing, probabilistic risk assessment, health physics, fuel technology, acquisitions, and advanced reactors (non-light water reactors); and is implementing strategies to mitigate any future critical skill gaps in these areas. These strategies include retraining and redeploying current agency staff, partnering with other Federal agencies, and supplementing the NRC workforce with contractor support.

The status of licensing activities, as requested in the Joint Explanatory Statement, is provide in Enclosure 1. Enclosure 1 also provides additional information on the staff's efforts to improve the request for additional information process. The NRC continues to

implement activities resulting from Project Aim, as described in Enclosure 2.

Please feel free to contact me or have your staff contact Eugene Dacus, Director of the Office of Congressional Affairs, at (301) 415-1776 if you have questions or need additional information.

Sincerely,

Kristine L. Svinicki
