

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

November 23, 2018

Mr. Matthew F. Ostdiek
Rendezvous Engineering, PC
25 South Gros Ventre Street
Jackson, Wyoming 83001

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

Sincerely,

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

November 23, 2018

Mr. Eric M. Roe
Roetech of Sheridan, Inc.
2058 Dana Avenue
Sheridan, Wyoming 82801

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

Sincerely,

/RA S Atack for:/

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

Sincerely,

/RA S Atack for:/

Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

Sincerely,

/RA S Atack for:/

Mr. Dustin L. Jones
C&J Spec-Rent Services, Inc.
2503 East Fox Farm Road
Cheyenne, Wyoming 82007

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

Sincerely,

/RA S Atack for:/

SUBJECT: NOTICE OF AGREEMENT WITH THE STATE OF WYOMING

Dear Sir:

This is to inform you that the U.S. Nuclear Regulatory Commission (NRC) has approved an Agreement with the State of Wyoming under Section 274 of the Atomic Energy Act of 1954, as amended (the Act). The Commission has determined that the Wyoming program for the regulation of materials covered by the Agreement is compatible with the Commission's program and is adequate to protect public health and safety. Under this Agreement, Wyoming has assumed regulatory authority over the management and disposal of byproduct material as defined in Section 11e.(2) of the Act and a subcategory of source material or ores involved in extraction or concentration of uranium or thorium milling in the State. As such, the State of Wyoming has assumed regulatory authority over 14 uranium mill licenses. The remaining academic, medical, industrial and commercial licenses authorized to possess, use, or store byproduct, source and special nuclear materials in the State of Wyoming will remain under NRC's jurisdiction. The Agreement became effective on September 30, 2018.

The NRC staff will conduct periodic reviews of the Wyoming program to ensure that the terms of the Agreement continue to be met.

To clarify, even though 14 licenses associated with uranium or thorium milling activities transferred to the State of Wyoming, your license to possess, use, or store byproduct material in the State of Wyoming remains under NRC jurisdiction.

If you have any questions, you may contact Paul Michalak at (301) 415-5804 or via e-mail at Paul.Michalak@nrc.gov.

Sincerely,

/RA S Atack for:/
