## General Comment

UT MDACC has both a Perfexion and an Icon. Substantial time and funds have been expended in sending AU's and AMP's for training for both the Perfexion and for the Icon.

UT MDACC has treated thousands of patients with this medical device.

These are essentially the same unit when the invasive frame is used.

The oncologists, in particular, regard the requirement for a second training experience as quite wasteful of their time. As the RSO for these devices, my unsatisfactory answer is that regulations must be adhered to.
