REGULATORY DOCKET FILE COPY

Director of Nuclear Reactor Regulation
Att: Mr Albert Schwencer, Chief
Operating Reactor Branch No 1
US Nuclear Regulatory Commission
Washington, DC 20555

DOCKET 50-255, LICENSE DPR-20 -
PALISADES PLANT - BORON CONCENTRATION -
LONG-TERM COOLING

In our letter of August 27, 1975, we indicated that we would advise you, on a bimonthly basis, of the status of our program to prevent unacceptable chemical concentrations during the long term after a LOCA. This program involves the qualification of equipment required to provide independent flow paths to the reactor vessel.

As indicated in previous bimonthly reports, most of the items are complete or will be completed during the next Palisades Plant refueling outage. Therefore, it is no longer necessary to provide bimonthly status reports. Consumers Power will provide a final report following the next refueling outage to document all modifications made to provide final resolution of long-term cooling requirements following a LOCA.
