Subject: [External\_Sender] Docket No. 72-1050 NRC-2016-0231

Dear Nuclear Regulatory Commission,

Please reject the WCS proposal for a consolidated interim storage site, where numerous used, highly radioactive fuel cores would be stored at one location.

I am concerned that the proposed site is potentially seismically active and if re-injection of produced water from fracking may significantly increase earthquake risk.

Further concern with the proposed site is the possibility of severe weather and climatic conditions that could endanger nuclear-waste containers.

Please consider acts of sabotage en route to and at the proposed site, including potential drone attacks. Concentrating all this waste at one location raises the likelihood of terrorist attacks.

It is my understanding that the storage containers cannot be monitored for potential cracks and leaks, inspected, repaired or replaced even though we know the waste will be dangerous longer than they will last.

Thank you for your serious consideration of my concerns.

Sincerely,

Tylka Vetula
