General Comment

I am very concerned and strongly disbelieve loosening of current training requirements for authorized users of therapeutic radiopharmaceuticals. Current requirements for authorized user (AU) of therapeutic radiopharmaceuticals are essential for safe and effective use of radiopharmaceuticals in diagnosis and treatment of patients suffering from cancer and other diseases. Any further loosening of current requirements for authorized user of radiopharmaceuticals will be detrimental to a high standard in practice of nuclear medicine and above all compromise patient care. In view of high demand for scientific understanding and clinical experience in use of therapeutic radiopharmaceuticals, current requirements for authorized user of therapeutic radiopharmaceuticals should be maintained without any loosening for the best interests of cancer patients.
