General Comment

I am against the proposed changes offered by the NRC for reduced training and limited experience of the physicians who treat patients with the radio pharmaceuticals addressed herein. Patient safety is paramount, with highly qualified, experienced MDs, and professionals to ensure the best possible care and safety for patients. The therapies require a nuclear medical team experienced,and specialized in this valuable care and treatment for this patient population. Additionally, the medical management of complex, and acute side effects associated with these life sustaining therapies, and complex medication regimes. Patients deserve centers of excellence for their care and safety.
