

VOID SHEET

TO: License Fee Management Branch

FROM: RIII - Material Licensing Branch

SUBJECT: VOIDED APPLICATION

Control Number: 610421

Applicant: Washington University in St. Louis

License Number: 24-00167-11

Docket Number: 030-02271

Date Voided: January 31, 2019

Reason for Void: The licensee requested in letter dated January 4, 2019 (ML19009A301), to retract the amendment request submitted to NRC dated November 9, 2018, (ML18312A042) regarding the possession and human use of the *Galli Eo* Germanium-68/Gallium-68 Generator. The retraction was based on a previous telephone discussion with the Radiation Safety Officer (RSO), Maxwell Amurao, Ph.D., MBA, on December 4, 2018, in which it was discussed and determined that the use of the *Galli Eo* Germanium-68/Gallium-68 Generator would be authorized as human research. Since human use (for the requested possession limit and isotopes) is currently authorized on the license, the initial submitted amendment request dated January 4, 2019 would be withdrawn. The RSO was contacted on January 31, 2019 (attached telephone conversation), to discuss the retraction and informed that the licensing action (Mail Control No. 610421) would be voided per our telephone conversation. The RSO agreed and understood the void and had no further questions. This voided action was discussed with the Chief, Material Licensing Branch on January 29, 2019. Therefore, in accordance with the licensee's letter dated January 4, 2019 and the January 31, 2019 telephone conversation with the RSO and a discussion on January 29, 2019, with the Chief, Material Licensing Branch the licensing action is voided.

SUBJECT
Retraction of the License amendment to conduct human research using the Galli Eo Germanium-68/Gallium-68 Generator.

SUMMARY
Discussed with Maxwell Amurao, Radiation Safety Officer (RSO), the licensee's request dated January 4, 2019 (ML19009A301), to retract an amendment request submitted to NRC dated November 9, 2018, (ML18312A042) regarding the possession and human use of the Galli Eo Germanium-68/Gallium-68 Generator. It was agreed that the use of the Germanium-68/Gallium-68 Generator could be used under the existing license for human research and development, and that the possession limits and isotopes would also be covered under the existing license. Therefore, I informed the RSO that this action would be voided. The RSO agreed and understood the void and had no further questions.

Additional Note: Discussed (Nov/Dec.) the above license amendment request regarding the possession and human use of the Galli Eo Germanium-68/Gallium-68 Generator, with Dr. Donna-Beth Howe (NMSS), who also agreed that the Generator could be used by Washington University under the exiting authorization (broadscope).
