RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,

ruthy@toxicsaction.org

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living on Cape Cod, the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have well justified grave financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site given the likelihood of cost overruns and the sordid history of this project, a very real potential for leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of extraordinarily poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action. [1] [SEP]

We look forward to a hearing required to protect our communities now and into the future

given the grave and virtually everlasting catastrophic consequences of anything less than the most impeccable closure process.

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of this nuclear power plant that must be adequately addressed before that process is allowed to go forward.

I fully support the contentions, bases and facts brought forward in both petitions, and contend that:

- * Evidence of sufficient funds to decommission the Pilgrim site is insufficient; this risks making the Commonwealth the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim power plant has a long history of poor management.
- * To accurately determine necessary decommissioning actions for Pilgrim to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process. This process will be necessary in order to determine the cost of the clean-up process and to determine whether adequate funding from the responsible entities is being assured.
- * Pilgrim's clean-up will affect all communities facing both Cape Cod Bay and Massachusetts Bay into which it drains.
- * NEPA requires an analysis, since decommissioning is a major federal action. ^[1]_{SEP} Previous documents on this are inadequate.

I look forward to a hearing, which will be necessary to protect our current and future

communities. Thank you for this opportunity to provide input into this process.

Sincerely,
Virginia Harris

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_{SEP}

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,

Jeremiah Silbert

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,
Andrew

Those of us who have lived on Cape Cod for many years have also lived with knowing how dangerous this power plant is and what a threat it is to the Cape, to the lives of the people who live on the Cape and to those who live close to the Cape. That's a lot of people and a lot of worry. Please ensure that this threat is finally, carefully, and permanently removed from the Cape and from our minds.

Sincerely,
Stephen Manning

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,

Joanne Geary

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,

pwaas@comcast.net

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,

J. David Pope

- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,
Stephanie Agnew

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,
Melody Masi

I am in the danger zone as are many, many others. This must be done correctly. NO excuses.

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

* There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.

* The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.

* Pilgrim Station has a long history of poor management.

* In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.

* Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.

* Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_{SEP}

- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
- * Previous documents do not bound environmental impact, and NEPA requires an analysis, as decommissioning is a major federal action.^[1]_[SEP]

We look forward to a hearing required to protect our communities now and into the future. Thank you for this opportunity to provide input into this process.

Sincerely,

Palma Ryan

RE: Docket ID NRC-2018-0279 Pilgrim Nuclear: Consideration of Approval of Transfer of License and Conforming Amendment

As a concerned citizen living within the affected area, I am writing in support of both the Commonwealth of Massachusetts Petition for Leave to Intervene and Hearing Request in Docket No. 50-293 & 72-1044 and Pilgrim Watch's in the same proceeding filed February 20, 2019.

The Commonwealth and its citizens have ongoing financial, health, safety, and environmental concerns related to the decommissioning of Pilgrim that must be adequately addressed before that process is allowed to go forward.

I support in full the contentions, bases and facts brought forward in both petitions, and submit that:

- * There is insufficient evidence to provide reasonable assurance that there are sufficient funds to decommission the site, risking leaving the Commonwealth as the payer of last resort.
- * The NRC agrees that a shortfall in funding would place public health, safety and the environment at risk.
- * Pilgrim Station has a long history of poor management.
- * In order to accurately determine decommissioning costs and identify what requires cleaning up in order to protect public health, safety and the environment, a thorough site analysis must be performed at the beginning of the decommissioning process.
- * Pilgrim's location is unique - all communities facing Cape Cod Bay require a clean environment, and Cape Cod Bay drains into Massachusetts Bay.
