## General Comment

I believe this topic requires more attention. This is a very important discussion to have considering the recent contamination of groundwater sources across the country. I absolutely agree that there should be at least basic rules to ensure groundwater protection. I think there should be heavy oversight on this operation to determine if there is in fact and contamination. This would add accountability to the process as well as responsibility if there were any issues discovered with the groundwater. I believe discussing this should not even be needed as safety culture should be the norm. If we do not adopt at least the most basic safety protections, we are setting ourselves up for problems down the road.
