**Subject:** Watts Bar Unit 2 - Acceptance for Review - Application to Revise Technical Specifications Regarding Essential Raw Cooling Water on a One-Time Basis (L-2018-LLA-0020)

Russ,

By letter dated February 7, 2019 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML19038A483), the Tennessee Valley Authority (TVA, the licensee) submitted a license amendment request (LAR) to Facility Operating License No. NPF-96 for Watts Bar Nuclear Plant (Watts Bar), Unit 2. The proposed amendment would modify technical specification requirements related to the Essential Raw Cooling Water system on a one-time basis to support performance of electrical board maintenance.

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with 10 CFR 50.90, an amendment to the license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed TVA's application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. TVA will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

Based on the information provided in TVA's submittal, the NRC staff has estimated that this licensing request will take approximately 350 hours to complete. The NRC staff expects to complete this review in approximately 11 months, which is February 2020, as requested in TVA's application. If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date or significant changes in the forecasted hours, the reasons for the changes, along with the new estimates, will be communicated during routine interactions with the assigned project manager.

These estimates are based on the NRC staff's initial review of the application and they could change, due to several factors including requests for additional information, and unanticipated addition of scope to the review. Additional delay may occur if the submittal is provided to the NRC in advance or in parallel with industry program initiatives or pilot applications.

If you have any questions, please contact me by e-mail at [Robert.Schaaf@nrc.gov](mailto:Robert.Schaaf@nrc.gov) or at 301-415-6020, or Farideh Saba by e-mail at [Farideh.Saba@nrc.gov](mailto:Farideh.Saba@nrc.gov) or at 301-415-1447.

Regards,

*Robert G. Schaaf*
