Subject: [External_Sender] Media inquiry: 'threat' posed by UAE nuclear plant

Dear Kristine,

I hope my email finds you well.

This is Mohamed Mansour, Science journalist for one of the most popular news paper in middle east which called AlmasryAlyoum.

Today, Qatar said that UEA APR 1400: **Barakah plant poses a serious threat to regional stability and the environment and calls for a framework to ensure the safe operation of nuclear energy in the Gulf.**

I wish you could tell me If the APR1400 is safe to run or not? and if there are any safety issues concerns on it?

Thanks

Best regards,

Mohamed
