Subject: RE: turkey point requested conservation measures

Lindsay,

I made some recommended edits in red below. I also suggest better defining or explaining what “approved management method” and “approved format” is in the fourth conservation measure. (I apologize if I am out of the loop on this and it is defined elsewhere already!)

Thanks!

Briana

Subject: [External_Sender] turkey point requested conservation measures

I've compiled a draft list of requested conservation measures. I've tried to capture the vagueness that everyone wanted while also being specific. Let me know if have any suggested edits. I had one for indigo snakes that I added at the end.

- Continue salinity and temperature monitoring program within Turkey Point and in Biscayne Bay
- Continue crocodile nest and hatchling monitoring at Turkey Point and in Biscayne Bay for the life of the license. Every five years, FPL, the Service, **the NRC**, and any relevant researchers will meet to discuss the monitoring methods and the need for continuation.
- Continue the crocodile health and condition surveys for the life of this **renewed facility operating** license **unless otherwise agreed upon by FPL, the Service, the NRC, and any relevant researchers**. Every five years, FPL, the Service, **the NRC**, and any relevant researchers will meet to discuss the monitoring methods and the need for continuation.
- Crocodile data will follow the standard approved management method. Data will be keep in the approved format.
- Continue following the Habitat Management Plan and the Nutrient Management Plan
- Continue to follow the most current version of FPL's Crocodile Management Plan
- Continue to conduct employee training for eastern indigo snake awareness and posts educational signs around the plant.
