Docket Nos. 50-280
50-281
License Nos. DPR-32
DPR-37

Attn: Mr. Robert W. Reid, Chief
Operating Reactors Branch 4

Dear Mr. Case:

Our letter serial number 374A/082977 dated September 1, 1977 described a modification which would allow throttling of low head safety injection pump discharge valves from the control room. The purpose of this letter is to document the fact that an Unreviewed Safety Question review in accordance with 10CFR50.59 has been accomplished. The review shows that an Unreviewed Safety Question does not exist as a result of this modification. The Design Change Package required by the VEPCO Quality Assurance Manual contains a complete discussion of the 10CFR50.59 Unreviewed Safety Question evaluation. This package is on file at the Surry Power Station for inspection.

Very truly yours,

C. M. Stallings
Vice President - Power Supply
and Production Operations

cc: Mr. Robert W. Reid, Chief
Operating Reactors Branch 4
