Dear Mr. Case:

This is in response to your letter of May 6, 1977 wherein you requested information regarding probe data for those steam generator tubes which have been probed more than once with various sized probes. The information you requested is not available since we have probed each Surry unit only once for purposes of determining denting rates. The probe data resulting from the next Surry steam generator inspection will be analyzed for rate of change of dent diameter as requested in your letter.

Very truly yours,

*C. M. Stallings*
