### 16.1 PRELIMINARY TECHNICAL SPECIFICATION (PSAR)

This section is not applicable to the Shearon Harris Nuclear Power Plant.

### 16.2 FINAL TECHNICAL SPECIFICATIONS

See Appendix A to the Facility Operating License.

### 16.3 TECHNICAL SPECIFICATIONS EQUIPMENT LIST

Historically, the information provided in Tables 16.3-1 through 16.3-7 was included as part of the Technical Specifications. During NRC review of the Harris Technical Specifications, the NRC approved of the removal of these lengthy lists from the Technical Specifications. The NRC approval required incorporation of the appropriate lists into a plant procedure and the FSAR. This section provides that information.

Tables 16.3-1 through 16.3-9 provide information on the following:

- 1) Reactor Trip System Instrumentation Response Times
- 2) Engineered Safety Feature Actuation System Response Times
- 3) Reactor Vessel Material Surveillance Program
- 4) Snubbers
- 5) Containment Isolation Valves
- 6) Containment Penetration Conductor Overcurrent Protection Devices
- 7) Motor-Operated Valve Thermal Overload Protection
- 8) Safeguards Systems Isolation Valves in Closed Systems, documents valves which perform a safety function but are not formally classified as containment isolation valves because the closed system containing the valves is considered as a containment boundary.
- 9) Instrument uncertainties associated with Reactor Vessel Pressure - Temperature Limits and Low Temperature Overpressure Protection System.

Plant Procedure PLP-106, "Technical Specification Equipment List Program and Core Operating Limits Report", is incorporated by reference per FSAR Section 1.6, Table 1.6-4, "Procedures, Programs, or Manuals Incorporated by Reference." Refer to the applicable PLP-106 attachment for current approved information as directed in each of Tables 16.3-1 through 16.3-9.
