LER 78 - 001/03-L-0

VIRGINIA ELECTRIC AND POWER COMPANY
DOCKET NO: 050-0281
EVENT DATE: 1-8-78

During normal unit operation while tagging out condenser box B, it was found that condenser circulating water outlet valve MOV-CW-200B would not close electrically. The valve was cycled manually and an operator was assigned for its emergency operation. The inlet valve was operable. A maintenance order (2801081315) was submitted to repair the motor operator. The investigation revealed the motor was grounded due to water incursion. The motor was removed, cleaned, tested and reinstalled.

The source of water which grounded the limit switch was diverted to a drain. The valve was tested satisfactorily and returned to service. The health and safety of the public was not affected because the operability of the valve was maintained by administrative control.
