NRC Schedules Open House to Discuss Sequoyah Nuclear Power Plant Performance

The Nuclear Regulatory Commission staff has scheduled an open house for May 8 to provide information and answer questions regarding the safety performance of the Sequoyah nuclear power plant, including the recent annual assessment letter covering all of 2018.

The open house will run from 5-6 p.m. at the Sequoyah Training Center, 2600 Igou Ferry Rd., Soddy-Daisy, Tenn. NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available at the open house.

The two-unit Sequoyah plant, operated by the Tennessee Valley Authority, is located near Soddy-Daisy, approximately 16 miles northeast of Chattanooga.

The NRC concluded that the Sequoyah plant operated safely during 2018. At the end of the year, all inspection findings and performance indicators were green or of low safety significance.

Earlier in 2018, the two Sequoyah units were under increased NRC oversight due to an inspection finding in the security area. An NRC inspection determined that TVA's corrective actions were adequate and the plant returned to the NRC's normal level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Inspections are performed by the NRC resident inspectors and inspection specialists from the NRC Region II office in Atlanta.

The [annual assessment letter](#), which includes upcoming inspection plans for the plant, is available on the NRC [website](#). Current performance information for Sequoyah [Unit 1](#) and [Unit 2](#) is also on the website and is updated on a quarterly basis.
