ATTN: Document Control Desk  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555-0001

Dear Sirs:

Subject: **Palo Verde Nuclear Generating Station (PVNGS)  
Units 1, 2, and 3  
Docket Nos. STN 50-528/529/530  
2018 Annual Environmental Operating Report**

Enclosed please find the 2018 Annual Environmental Operating Report for PVNGS Units 1, 2, and 3. Arizona Public Service Company is submitting this report pursuant to Section 5.4.1 of Appendix B to the PVNGS Units 1, 2, and 3 Renewed Operating License Nos. NPF-41, NPF-51, and NPF-74, respectively.

No new commitments are being made to the NRC by this letter.

Should you need further information regarding this submittal, please contact Matthew S. Cox, Licensing Section Leader, at (623) 393-5753.

Sincerely,

Michael D. DiLorenzo  
Department Leader, Regulatory Affairs

MDD/MSC/mg

Enclosure: Palo Verde Nuclear Generating Station Units 1, 2, and 3  
2018 Annual Environmental Operating Report

cc: S. A. Morris                   NRC Region IV Regional Administrator  
S. P. Lingam                    NRC NRR Project Manager for PVNGS  
C. A. Peabody                 NRC Senior Resident Inspector for PVNGS

# **Enclosure**

**Palo Verde Nuclear Generating Station  
Units 1, 2, and 3  
2018 Annual Environmental Operating Report**

## I. INTRODUCTION

Palo Verde Nuclear Generating Station (PVNGS) is located in Maricopa County, Arizona, approximately 50 miles west of the Phoenix metropolitan area. The PVNGS site comprises approximately 4,280 acres. Site elevations range from 890 feet above mean sea level at the southern boundary to 1,030 feet above mean sea level at the northern boundary. The station consists of three pressurized water reactor electrical generating units. Units 1, 2, and 3 have a rated thermal power of 3,990 MW each.

Arizona Public Service (APS) was issued low power operating licenses NPF-34, NPF-46 and NPF-65 for Units 1, 2, and 3 by the United States Nuclear Regulatory Commission (NRC) on December 31, 1984, December 9, 1985, and March 25, 1987, respectively. APS was issued full power operating licenses NPF-41, NPF-51 and NPF-74 for Units 1, 2, and 3 on June 1, 1985, April 24, 1986, and November 25, 1987, respectively. These licenses were renewed for 20 additional years on April 21, 2011. The renewed operating licenses expire on June 1, 2045, April 24, 2046, and November 25, 2047 for NPF-41, NPF-51, and NPF-74, respectively.

Appendix B to these operating licenses is entitled the *Environmental Protection Plan (Non-Radiological)*. The environmental protection plan (EPP) for each of the current operating licenses are identical.

The purpose of the EPP is to provide for the protection of environmental values during the construction and operation of the nuclear facility. The principal objectives of the EPP are as follows:

- (1) Verify that the station is operated in an environmentally acceptable manner, as established by the final environmental statement (FES) and other NRC environmental impact assessments.
- (2) Coordinate NRC requirements and maintain consistency with other federal, state, and local requirements for environmental protection.
- (3) Keep the NRC informed of the environmental effects of facility construction and operation and actions taken to control those effects.

This Annual Environmental Operating Report is required by Section 5.4.1 of the EPP. This report describes the activities related to the PVNGS EPP during the 2018 calendar year. For purposes of this report, references to the EPP are considered to be the EPP of NPF-41, NPF-51, and NPF-74.

## **II. ENVIRONMENTAL MONITORING SUMMARIES AND ANALYSIS**

### **A. Cultural Resources**

Section 4.2.1 of the EPP requires that an archaeological survey be performed when final alignment of the PVNGS-to-Saguaro transmission line is completed. As of the date of this report, plans for this transmission line have been indefinitely suspended. Therefore, there has been no activity with regard to this requirement of the EPP.

### **B. Terrestrial Ecology Monitoring**

As communicated in a letter to the NRC dated December 30, 1991 (Reference 1), the salt deposition monitoring program was discontinued at the end of 1991.

## **III. PLANT DESIGN AND OPERATION CHANGES**

Section 3.1 of the EPP allows changes in station design, operation, or the performance of tests or experiments affecting the environment provided that such changes, tests, or experiments do not involve an unreviewed environmental question and do not involve a change to the EPP. Changes, tests, or experiments in which all measurable non-radiological effects are confined to the onsite areas previously disturbed during site preparation and plant construction or in which the environment is not affected are exempt from the evaluation and reporting requirements of Section 3.1.

Section 3.2 of the EPP also exempts changes, tests, or experiments which are required to comply with other federal, state, or local environmental regulations.

No design and operational changes were initiated in 2018 that required an evaluation to determine if they involved either an unreviewed environmental question or constituted a change in the EPP.

## **IV. EPP NON-COMPLIANCES**

There were no instances of non-compliance with the EPP identified during 2018.

## **V. NON-ROUTINE REPORTS**

There were no non-routine reports required by Section 5.4.2 of the EPP during 2018.
