Mr. Macatangay,

I appreciate your time with me last week to review activities performed under Standard Testing Services' NRC license. Attached to this email is the record of my inspection documenting that I did not identify any violations of more than minor significance. I have also attached Troxler's public dose assessment calculation worksheet for your reference.

Regarding the issue of getting portable gauges into or out of Guam, I have identified that the cause is with the courier (e.g. FedEx) not having a HAZMAT qualified individual, to sign-off on the shipments, available in Guam. I have informed Guam's Department of Public Health and Social Services of this issue and I believe that they are intending to follow-up to see if the concern can be resolved.

Please verify receipt of this email. Thank you and have a good weekend!
