discretionary hearing may be held on export or import licenses if a hearing would be in the public interest and would assist the Commission in making the statutory determinations required by the Atomic Energy Act; CLI-11-3, 73 NRC 613 (2011)
discretionary hearing to discuss the adequacy of information provided by applicant in a public forum would not assist the Commission in making its determinations on the export and import license applications because the applicant provided the information required by the Commission’s regulations; CLI-11-3, 73 NRC 613 (2011)
formal adjudicatory procedures are inappropriate in export or import licensing proceedings; CLI-11-3, 73 NRC 613 (2011)
no proximity presumption applies in an import/export licensing case because petitioners have not shown that the import or export involves a significant source of radioactivity producing an obvious potential for offsite consequences; CLI-11-3, 73 NRC 613 (2011)
petitioners’ claims of potential injury are so speculative, and separate from the import and export license, that they do not amount to cognizable harm for purposes of standing; CLI-11-3, 73 NRC 613 (2011)
request for waiver of 10 C.F.R. 51.22(c)(15) is denied; CLI-11-3, 73 NRC 613 (2011)
to determine if a petitioner has sufficient interest in a proceeding to be entitled to intervene as a matter of right under section 189a, the Commission has long applied contemporaneous judicial concepts of standing; CLI-11-3, 73 NRC 613 (2011)
to waive a Part 110 rule or regulation, petitioner must show special circumstances concerning the subject of the hearing such that application of the rule or regulation would not serve the purposes for which it was adopted; CLI-11-3, 73 NRC 613 (2011)
EXPOSURE
See Radiation Exposure
EXTENSION OF TIME
filing deadlines may be extended or shortened by either the Commission or the presiding officer for good cause, or by stipulation approved by the Commission or the presiding officer; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
filing deadlines will not be modified unless a party, in advance of the deadline, petitions the board for a change and demonstrates that there is good cause for such a change; LBP-14-11, 80 NRC 125 (2014)
health issues or an unexpected weather event are reasons that might constitute good cause for purposes of requesting an extension under section 2.307(a); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
if intervenor cannot meet the requirements for filing a contention under the new section 2.309(c)(1), he or she can still take advantage of an extension request if unanticipated events, such as a weather event or unexpected health issues, prevented the participant from filing for a reasonable period of time after the deadline; LBP-15-1, 81 NRC 15 (2015)
intervenors’ request for extension of time is granted because it is unopposed and intervenors have shown good cause for the modest extension; CLI-14-10, 80 NRC 157 (2014)
time for submitting a new/amended contention motion based on information that would be newly available, materially different, and otherwise timely submitted given the information’s availability can be extended if the extension request is based on good cause; LBP-13-10, 78 NRC 117 (2013)

FAIRNESS

a state’s regulations are not inherently unfair because they may be designed to effectuate a state-desired regulatory outcome; CLI-11-12, 74 NRC 460 (2011)
although there is no right to reciprocal cross-examination, the parties should be accorded equivalent treatment under the applicable regulatory standard; CLI-12-18, 76 NRC 371 (2012)
because applicant has not shown that it could not have addressed issues in its appeal, nor has presented genuinely new information in its reply, neither necessity nor fairness dictates that its reply should be permitted; CLI-14-3, 79 NRC 31 (2014)
Commission justifiably expects that all applicable provisions of the Rules of Practice will be observed in adjudicatory submissions, but it also expects the Staff to turn square corners with those with whom it deals, including applicants for SRO licenses; LBP-13-3, 77 NRC 82 (2013)
current adjudicatory procedures and policies provide a latitude to the Commission, its licensing boards, and presiding officers to instill discipline in the hearing process and ensure a prompt yet fair resolution of contested issues in adjudicatory proceedings; CLI-14-10, 80 NRC 157 (2014)
each side must be heard; LBP-15-5, 81 NRC 249 (2015)

fairness to all involved in NRC’s adjudicatory procedures requires that every participant fulfill the obligations imposed by and in accordance with applicable law and Commission regulations; LBP-13-2, 77 NRC 71 (2013)
filings not otherwise authorized by NRC rules are allowed only where necessity or fairness dictates; CLI-11-14, 74 NRC 801 (2011)
forcing a pro se intervenor to file monthly disclosures and closely follow a proceeding indefinitely solely to obtain a ruling on the merits of its claim would constitute significant unfairness and hardship; LBP-12-19, 76 NRC 184 (2012)
fundamental fairness requires that applicant and NRC Staff be estopped from asserting that petitioners’ contention is untimely; LBP-12-16, 76 NRC 44 (2012)
in assessing whether applicant/licensee adequately carries out a licensing directive, boards are to assume that NRC Staff will be fair and judge the matter of applicant/licensee’s compliance on the merits; LBP-15-3, 81 NRC 65 (2015)
it is no less good morals and good law that the government should turn square corners in dealing with the people than that the people should turn square corners in dealing with their government; LBP-13-3, 77 NRC 82 (2013)

NRC Staff improperly discharges its duties with respect to the grading of an operating test if the grading is inappropriate or unjustified or if the grading strays too far afield of the twin goals of equitable and consistent examination administration, thus becoming arbitrary or an abuse of discretion; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 is intended to ensure equitable and consistent administration of examinations for all applicants; LBP-14-2, 79 NRC 131 (2014)

petitioners would have no opportunity to be heard regarding a sua sponte objection by the board because they would only learn of it when they received the board’s ruling and thus would be deprived of the opportunity to file the response expressly provided in procedural rules; LBP-15-5, 81 NRC 249 (2015)
regardless of a party’s resources, fairness to all involved in NRC’s adjudicatory procedures requires that every participant fulfill the obligations imposed by and in accordance with applicable law and NRC regulations; CLI-14-10, 80 NRC 157 (2014)
to determine whether suspension of an adjudication or licensing decision is warranted, the Commission considers whether moving forward will jeopardize the public health and safety, prove an obstacle to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes; CLI-14-7, 80 NRC 1 (2014)
to say to appellants that the joke is on you, you shouldn’t have trusted us, is hardly worthy of our great government; LBP-13-3, 77 NRC 82 (2013)
when establishing a schedule, boards are to consider NRC’s interest in providing a fair and expeditious resolution of the issues sought to be admitted for adjudication in the proceeding, along with other factors; LBP-11-22, 74 NRC 259 (2011) where NRC Staff provided advice regarding timing that misled a petitioner, the Staff had conceded timeliness in light of such advice; LBP-12-16, 76 NRC 44 (2012)

FALSE STATEMENTS

effect of a pattern of quality assurance violations is not necessarily to show that particular safety-related information is false, but to erode confidence that NRC can reasonably have in, and create substantial uncertainty about the quality of, the work that is tainted by the alleged QA violations; LBP-12-23, 76 NRC 445 (2012)

lawyer is prohibited from knowingly making a false statement of law or fact to a tribunal; LBP-11-13, 73 NRC 534 (2011)

FAULTS

applicant’s site safety analysis report must provide sufficient data to enable the requisite determination of the potential for surface deformation as a result of growth faults at the site; LBP-11-16, 73 NRC 645 (2011)

even though a cooling pond is not a safety-related structure, knowledge of faulting under the pool and the impact this faulting might have on the pool’s operation are required; LBP-11-16, 73 NRC 645 (2011)

request that NRC order immediate shutdown of all nuclear power reactors that are known to be located on or near an earthquake fault line is denied; DD-15-6, 81 NRC 884 (2015)

severe accident mitigation alternatives analysis is required to discuss a recently discovered fault located near the plant; LBP-15-29, 82 NRC 246 (2015)

to evaluate the impact of a fault on current operations, a probabilistic risk assessment rather than a deterministic analysis is the accepted and standard practice in SAMA analyses; CLI-11-11, 74 NRC 427 (2011)

where seismic suitability of a site was evaluated at the early site permit stage, further litigation of a geologic fault issue is foreclosed at the combined license stage; LBP-14-8, 79 NRC 519 (2014)

FEDERAL EMERGENCY MANAGEMENT AGENCY

every 2 years, licensee stages full-participation emergency exercises, which are evaluated by both FEMA and NRC; CLI-12-9, 75 NRC 421 (2012)

in any NRC licensing proceeding, a FEMA finding will constitute a rebuttable presumption on questions of adequacy and implementation ability of state and local emergency plans; LBP-11-6, 73 NRC 149 (2011); LBP-15-4, 81 NRC 156 (2015)

NRC Staff considers FEMA’s findings on emergency plans in making its necessary finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; CLI-12-9, 75 NRC 421 (2012)

radiological emergency response plan was developed by the State and approved by the Federal Emergency Management Agency to ensure that the State is prepared to handle the offsite effects of a radiological emergency; LBP-15-4, 81 NRC 156 (2015)

FEDERAL REGISTER

boards may not rely on a Federal Register notice to put petitioner on constructive notice of a requirement that the board itself cannot discern in the regulations; LBP-13-3, 77 NRC 82 (2013)

even one lacking actual notice may be charged with constructive notice of regulations published in the Federal Register; LBP-13-3, 77 NRC 82 (2013)

for proceedings for which a Federal Register notice of agency action is published, the hearing request must be filed not later than the time specified in the notice of proposed action; CLI-14-11, 80 NRC 167 (2014)

NRC’s notice of opportunity for hearing on a confirmatory order provides the public a safety valve because conceivably the order might remove a restriction upon a licensee or otherwise have the effect of worsening the safety situation; LBP-14-4, 79 NRC 319 (2014)

publication in the Federal Register is legally sufficient notice to all affected people; LBP-15-5, 81 NRC 249 (2015)

publication of a regulation in the Federal Register constitutes notice to all persons residing in the United States; LBP-13-3, 77 NRC 82 (2013)
SUBJECT INDEX

FEDERAL RULES OF CIVIL PROCEDURE

in applying the summary disposition standard, it is appropriate for the board to look not only to NRC regulatory and case law, but also to federal court case law on summary judgment under Rule 56; LBP-11-4, 73 NRC 91 (2011); LBP-11-7, 73 NRC 254 (2011)

NRC applies summary disposition standards analogous to the standards used by the federal courts when ruling on motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

summary judgment, which is appropriate upon proper showings of the lack of a genuine, triable issue of material fact, is an integral part of the Federal Rules as a whole, which are designed to secure the just, speedy, and inexpensive determination of every action; LBP-11-4, 73 NRC 91 (2011)

FEDERAL RULES OF EVIDENCE

at the request of any party a court must order witnesses excluded so that they cannot hear other witnesses’ testimony; LBP-12-21, 76 NRC 218 (2012)

best evidence rule provides that an original or duplicate writing, recording, or photograph is required in order to prove its content unless an evidentiary rule or federal statute provides otherwise; CLI-13-5, 77 NRC 223 (2013)

courts may exclude relevant evidence if its probative value is substantially outweighed by a danger of unfair prejudice, confusing the issues, misleading the jury, undue delay, wasting time, or needlessly presenting cumulative evidence; LBP-12-21, 76 NRC 218 (2012)

federal rules are not directly applicable to NRC proceedings, but NRC adjudicatory boards often look to those rules for guidance; LBP-12-21, 76 NRC 218 (2012); LBP-15-20, 81 NRC 829 (2015)

in proceedings under Part 2, strict rules of evidence do not apply to written submissions; LBP-11-14, 73 NRC 591 (2011)

objection not timely made is considered to be waived; LBP-15-20, 81 NRC 829 (2015)

FEDERAL WATER POLLUTION CONTROL ACT

compliance with the environmental quality standards and requirements of the Act is not a substitute for, and does not negate the requirement for NRC to weigh all environmental effects of the proposed action, including the degradation, if any, of water quality; LBP-15-11, 81 NRC 401 (2015)

proposed plant will impact at least 668 acres of wetlands and therefore its construction and operation will require a permit from U.S. Army Corps of Engineers; LBP-13-4, 77 NRC 107 (2013)

FIFTH AMENDMENT

equal protection component of the Fifth Amendment’s Due Process Clause applies to federal action, and the Equal Protection Clause of the Fourteenth Amendment applies to state action; LBP-11-15, 73 NRC 629 (2011)

FILINGS

administrative challenges to EPA permits are to be filed 30 days after EPA’s final permit decision; LBP-14-4, 79 NRC 319 (2014)

amicus curiae filings are allowed at the Commission’s discretion or sua sponte; CLI-15-4, 81 NRC 221 (2015)

contention filing deadlines support the Commission’s interest in promoting efficient adjudication; LBP-15-11, 81 NRC 401 (2015)

parties are expected to adhere to page-limit requirements, or timely seek leave for an enlargement of the page limitation; CLI-11-14, 74 NRC 801 (2011)

there simply would be no end to NRC licensing proceedings if petitioners could disregard timeliness requirements; LBP-14-4, 79 NRC 319 (2014)

when a filing deadline is approaching, notwithstanding that an attorney is engaged in good-faith settlement discussions, prudence should compel the attorney to take all actions that are necessary to ensure the deadline will be met in the event that settlement discussions are unsuccessful; LBP-15-4, 81 NRC 156 (2015)

See also Briefs; Electronic Filing; Pleadings; Reply Briefs

FILTERS

petitioners question applicant’s failure to consider the qualitative benefits of installing engineered filters; LBP-15-5, 81 NRC 249 (2015)
SUBJECT INDEX

FINAL ENVIRONMENTAL IMPACT STATEMENT

additional content is required in a FEIS compared to a draft EIS; LBP-15-3, 81 NRC 65 (2015)

adequacy of the FEIS regarding site geology and hydrology is discussed; LBP-13-4, 77 NRC 107 (2013)

adjudicatory record and board decision and any Commission appellate decisions become, in effect, part of
the FEIS; CLI-11-6, 74 NRC 203 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71
(2012); LBP-13-13, 78 NRC 246 (2013)

agencies need not supplement an EIS every time new information comes to light after the EIS is
finalized; CLI-12-7, 75 NRC 379 (2012)

agencies shall prepare supplements to either draft or final EISs if there are significant new circumstances
or information relevant to environmental concerns and bearing on the proposed action or its impacts;

agency’s procedural obligation to discuss mitigation in sufficient detail to ensure that environmental
consequences have been fairly evaluated is distinguished from any substantive requirement to actually
develop and adopt a detailed mitigation plan; LBP-14-7, 79 NRC 451 (2014)

all significant environmental impacts, whether direct, indirect, cumulative, onsite, or offsite, that are a
reasonably foreseeable consequence of the proposed action must be reviewed and considered; LBP-13-4,
77 NRC 107 (2013)

although NEPA does not direct any particular substantive result, all environmental consequences of the
proposed action, including connected actions, must be fully evaluated in the FEIS; LBP-12-12, 75 NRC
742 (2012)

analysis and response to state’s extensive comments on the draft supplemental environmental impact
statement regarding state-specific energy conservation and efficiency as a replacement alternative fulfills
NRC Staff’s obligation to take a hard look at alternatives; LBP-13-13, 78 NRC 246 (2013)

analysis for all draft and final EISs, by virtue of section 51.90, will, to the fullest extent practicable,
quantify the various factors considered; LBP-15-3, 81 NRC 65 (2015)

appropriate inquiry under NEPA is not whether there are alternative models that NRC could have used,
or whether the analysis could have been refined, or improved by gathering additional data, but whether
the NRC’s chosen methodology is reasonable; LBP-13-4, 77 NRC 107 (2013)

as a NEPA analysis, the severe accident mitigation alternatives analysis is not based on either the
best-case or the worst-case accident scenarios, but on mean accident consequence values, averaged over
the many hypothetical severe accident scenarios; LBP-13-13, 78 NRC 246 (2013)

as part of its environmental review, NRC Staff must prepare a Record of Decision to accompany any
Commission decision on any action for which a final EIS has been prepared; LBP-13-13, 78 NRC 246
(2013)

assertion that FEIS inadequately addresses, and inappropriately characterizes as small, the plant’s
dewatering-associated impacts to wetlands, floodplains, special aquatic sites, and other waters is
litigated; LBP-13-4, 77 NRC 107 (2013)

because NEPA imposes no substantive requirement that mitigation measures actually be taken, it should
not be read to require agencies to obtain an assurance that third parties will implement particular
measures; LBP-14-7, 79 NRC 451 (2014)

because the FEIS had been issued and the board had ruled that a contention remained procedurally
defective, it was an appropriate point for board consideration of whether the contention merited sua
sponte review; LBP-14-9, 80 NRC 15 (2014)

board rules in favor of NRC Staff on contention challenging adequacy of assessment of impacts on the
eastern fox snake contained within the FEIS; LBP-14-7, 79 NRC 451 (2014)

board’s findings and the adjudicatory record are, in effect, part of the final supplemental environmental

board’s ultimate NEPA judgments can be made on the basis of the entire adjudicatory record in addition
to NRC Staff’s FEIS; LBP-15-3, 81 NRC 65 (2015)

bounding analysis provided in the final supplemental environmental impact statement, as supplemented in
the record, provides sufficient information about a reasonable range of hazardous constituent
concentration values associated with potential post-operational alternate concentration limits so as to
provide an appropriate NEPA assessment of the environmental impacts that will occur if applicant
cannot restore groundwater to primary or secondary limits; LBP-15-3, 81 NRC 65 (2015)
challenges to only the draft environmental impact statement apply equally to the FEIS under the migration tenet; LBP-12-5, 75 NRC 227 (2012)
Clean Water Act 404 permit review can be conducted after issuance of the FEIS; LBP-15-23, 82 NRC 55 (2015)
contention alleging that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner is decided; LBP-15-16, 81 NRC 618 (2015)
contention alleging that final supplemental environmental impact statement fails to include adequate hydrogeological information to demonstrate ability to contain fluid migration and assess potential impacts to groundwater is admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging that final supplemental environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-14-5, 79 NRC 377 (2014)
contention that challenges the legal sufficiency of the FEIS for a combined license is within the scope of the proceeding; LBP-12-18, 76 NRC 127 (2012)
contention that final supplemental environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 65 (2015)
contention that final supplemental environmental impact statement fails to comply with NRC regulations and NEPA because it lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is decided; LBP-15-3, 81 NRC 65 (2015)
contention that requiring the tribe to formulate contentions before a final EIS is released and failing to follow scoping process violates NEPA is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that the final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 377 (2014)
Council on Environmental Quality has recognized that information may be unavoidably incomplete or unavailable, and that under those circumstances, an FEIS can overcome this deficiency if it states that fact, explains how the missing information is relevant, sets forth the existing information, and evaluates the environmental impacts to the best of the agency’s ability; CLI-11-11, 74 NRC 427 (2011)
decision of the board or Commission becomes the record of decision, which may also incorporate the final supplemental environmental impact statement; CLI-15-6, 81 NRC 340 (2015)
distribution requirements for an FEIS (and a supplement thereto) are imposed by 10 C.F.R. 51.93; LBP-15-3, 81 NRC 65 (2015)
duty to supplement the FEIS is mandatory, is not avoidable through findings of compliance with the agency’s safety regulations, and is waivable only where the consequences are remote and highly improbable; CLI-12-11, 75 NRC 523 (2012)
even if contentions are based on NRC Staff’s FSEIS, intervenor still bears the responsibility of demonstrating that a new contention merits admission and meets all six admission requirements; LBP-15-16, 81 NRC 618 (2015)
even if the transmission corridor is a preconstruction activity and outside the NRC’s regulatory jurisdiction, the construction and maintenance of the transmission corridor likely qualifies as a connected action under governing NRC and Council on Environmental Quality regulations, and therefore must be analyzed in the FEIS; LBP-12-12, 75 NRC 742 (2012)
FEIS as amplified by both board and Commission decisions, provides adequate consideration of environmental impacts of near-surface waste disposal; CLI-15-6, 81 NRC 340 (2015)
FEIS does not comply with NEPA if it fails to meaningfully address EPA concerns in its decision; LBP-14-9, 80 NRC 15 (2014)
FEIS must comply with sections 102(2)(A), (C), and (E) of NEPA and NRC’s Part 51 regulations; LBP-14-9, 80 NRC 15 (2014)
SUBJECT INDEX

FEIS or supplement thereto must be considered in the agency’s decisionmaking; LBP-15-3, 81 NRC 65 (2015)

FEISs must be supplemented to provide complete, accurate, and up-to-date sources of information for members of the public and state and local governments; CLI-15-10, 81 NRC 535 (2015)

for new information to be sufficiently significant to merit the preparation of a supplemental FEIS, the information must paint a seriously different picture of the environmental landscape; CLI-12-11, 75 NRC 523 (2012)

FEISs must be supplemented to provide complete, accurate, and up-to-date sources of information for members of the public and state and local governments; CLI-15-10, 81 NRC 535 (2015)

for new information to be sufficiently significant to merit the preparation of a supplemental FEIS, the information must paint a seriously different picture of the environmental landscape; CLI-12-11, 75 NRC 523 (2012)

FSEIS is a snapshot in time of expected environmental consequences; CLI-15-6, 81 NRC 340 (2015)

FSEIS must include an analysis of cultural impacts; LBP-15-16, 81 NRC 618 (2015)

grounds were found for litigation regarding defendants’ assertion that treatment of highway interchanges and village development as cumulative impacts in the FEIS was sufficient under NEPA even if these actions should have been treated as connected actions under the statute’s implementing regulations; LBP-14-9, 80 NRC 15 (2014)

hearings on environmental issues must await issuance of FEIS; LBP-15-3, 81 NRC 65 (2015)

hearings on environmental issues addressed in the EIS may not commence before issuance of the final EIS; LBP-13-13, 78 NRC 246 (2013)

if a federal or state environmental agency issues a permit to the operator of a nuclear power plant that imposes numerical limits on the amount of pollution that the plant may emit, then NRC’s FEIS may reasonably assume that the company’s emissions will comply with those numerical limits; LBP-13-4, 77 NRC 107 (2013)

if an alternative is commercially feasible and capable of bringing about the ends of the proposed project, then Staff may not dismiss it merely because it is inconsistent with the preferences of interested parties, or for other reasons inconsistent with NEPA’s rule of reason; LBP-12-17, 76 NRC 71 (2012)

if attempting to raise a new issue based on new information in the final supplemental environmental impact statement, intervenor must file a new contention if information in the FSEIS is sufficiently different from information in the DSEIS that supported the original contention’s admission; LBP-14-5, 79 NRC 377 (2014)

if intervenors make reference to new material in the final supplemental environmental impact statement but do not address the six elements of 10 C.F.R. 2.309(f)(1), such references to new material do not give rise to either a new or an amended contention; LBP-14-5, 79 NRC 377 (2014)

if modification of the FEIS by NRC Staff testimony or the board’s decision is too substantial, recirculation of the FEIS would be required; LBP-13-13, 78 NRC 246 (2013)

inaccurate, incomplete, or misleading information in an environmental impact statement concerning the comparison of alternatives is itself sufficient to render the EIS unlawful and to compel its revision; LBP-12-17, 76 NRC 71 (2012)

intervenors fail to establish the validity of their various challenges to the adequacy of the final supplemental environmental impact statement description of the baseline water quality at the in situ recovery site; LBP-15-3, 81 NRC 65 (2015)

intervenors need not prove their case on the merits, but need only allege some facts or expert opinion that support their position and demonstrate a genuine dispute with the sufficiency of the FEIS; LBP-12-18, 76 NRC 127 (2012)

legal adequacy of the FEIS is assessed under the rule of reason; LBP-13-4, 77 NRC 107 (2013)

legal requirements applicable to a draft EIS, as specified in sections 51.70(b) and 51.71, are imposed on a final EIS; LBP-15-3, 81 NRC 65 (2015)

licensing board’s hearing arguably allows for additional and a more rigorous public scrutiny of the FEIS than does the usual circulation for comment; LBP-14-9, 80 NRC 15 (2014)

migration tenet applies when the information in the final supplemental environmental impact statement is sufficiently similar to information in the draft SEIS; LBP-14-5, 79 NRC 377 (2014)

NEPA does not require a fully developed plan that will mitigate all environmental harm before an agency can act, only that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fully evaluated; LBP-14-7, 79 NRC 451 (2014)

NEPA does not require that the FEIS be a Ph.D. dissertation on specific topics; LBP-13-4, 77 NRC 107 (2013)

NRC need not supplement an environmental impact statement with information in an area of research that is still developing; CLI-12-6, 75 NRC 352 (2012)
NRC rules provide a process to prepare supplemental draft or final EISs when the agency identifies new and significant information; CLI-14-7, 80 NRC 1 (2014)
NRC Staff is not obligated to fully adopt, or agree with, all comments to the draft supplemental EIS regarding the no-action alternative; LBP-13-13, 78 NRC 246 (2013)
NRC Staff is not required to analyze the need for the power for license renewal; LBP-13-13, 78 NRC 246 (2013)
NRC Staff is required to issue an EIS that thoroughly and objectively evaluates reasonable alternatives to the proposed action; LBP-12-17, 76 NRC 71 (2012)
NRC Staff may supplemented an EIS if, before a proposed action is taken, new and significant information comes to light that bears on the proposed action or its impacts; CLI-12-6, 75 NRC 352 (2012)
NRC Staff must include in the FSEIS an analysis of significant problems and objections raised by any affected Indian tribes and other interested persons; LBP-15-16, 81 NRC 618 (2015)
NRC Staff must prepare an FEIS in accordance with the requirements of 10 C.F.R. 51.71 for a draft EIS; LBP-12-18, 76 NRC 127 (2012)
NRC Staff must supplement the FEIS if there are substantial changes in the proposed action that are relevant to environmental concerns or there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-32, 74 NRC 654 (2011); LBP-11-33, 74 NRC 675 (2011)
NRC Staff need not discuss remote and speculative alternatives, but must consider only alternatives that bring about the ends of the proposed project; LBP-12-17, 76 NRC 71 (2012)
NRC Staff relies heavily on applicant’s environmental report in preparing its FEIS; LBP-12-17, 76 NRC 71 (2012)
NRC Staff will include responses to any comments on the draft EIS; LBP-13-13, 78 NRC 246 (2013)
NRC Staff will incorporate any new SAMA-related information that it finds to be significant in the final supplemental EIS; CLI-13-7, 78 NRC 199 (2013)
NRC Staff’s FEIS must be prepared in accordance with the requirements of 10 C.F.R. 51.71 for a draft environmental impact statement; LBP-14-9, 80 NRC 15 (2014)
NRC Staff’s FEIS, in conjunction with the adjudicatory record, becomes the relevant record of decision for the environmental portion of the proceeding; LBP-12-17, 76 NRC 71 (2012)
NRC’s analysis, in its FEIS, of issues relating to dewatering associated with construction and operation of the proposed plants is adequate and satisfies the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)
NRC’s position is that it need not compare the costs of alternatives to a proposed action if its FEIS does not identify an environmentally preferable alternative; LBP-12-18, 76 NRC 127 (2012)
parties agreed that additional analysis in the FEIS would be sufficient to address the only contention remaining in the proceeding; LBP-15-22, 82 NRC 49 (2015)
petitioner may amend its contentions or file new contentions if there are data or conclusions in the NRC DEIS or FEIS or any supplements thereto, that differ significantly from the data or conclusions in the applicant’s documents; LBP-11-33, 74 NRC 675 (2011)
petitioner will have an opportunity to submit contentions based on the FSEIS if appropriate; LBP-13-9, 78 NRC 37 (2013)
principal goals are to force agencies to take a hard look at the environmental consequences of a proposed project, and, by making relevant analyses openly available, to permit the public a role in the agency’s decisionmaking process; LBP-14-9, 80 NRC 15 (2014)
purpose of the final supplemental environmental impact statement is to inform the decisionmaking agency and the public of a broad range of environmental impacts that will result, with a fair degree of likelihood, from a proposed project, rather than to speculate about worst-case scenarios and how to prevent them; CLI-15-6, 81 NRC 340 (2015)
remote and speculative alternatives need not be addressed, but NEPA requires NRC Staff to consider reasonable alternatives that are likely to be available within the time frame of the proposed action; LBP-12-17, 76 NRC 71 (2012)
role of the FEIS is to expose the reasoning and data of the agency proposing the action to scrutiny by the public and by other branches of the government; LBP-12-18, 76 NRC 127 (2012)
severe accident mitigation alternatives analyses, as issues of mitigation, need only be discussed in sufficient detail to ensure that environmental consequences of the proposed project have been fairly evaluated; LBP-13-13, 78 NRC 246 (2013)
supplemental environmental impact statement is supplemented by the board’s decision as well as by the hearing record; CLI-15-6, 81 NRC 340 (2015)
that the Clean Water Act section 404 permit review is conducted after issuance of the FEIS does not impact an agency’s duty under NEPA, but rather serves to highlight the distinction between NEPA and the CWA; LBP-15-23, 82 NRC 55 (2015)
to satisfy its obligations under NEPA the final supplemental environmental impact statement need only explain any known shortcomings in available methodology, disclose incomplete or unavailable information and significant uncertainties, and make a reasoned evaluation of whether and to what extent these or other considerations credibly could alter the severe accident mitigation alternatives analysis conclusions; LBP-13-13, 78 NRC 246 (2013)
to the extent that any environmental findings by the presiding officer or the Commission differ from those in the final environmental impact statement, the FEIS is deemed modified by the decision; LBP-13-13, 78 NRC 246 (2013)
under the migration tenet, boards may construe an admitted contention contesting the environmental report as a challenge to the subsequently issued draft or final EIS without the necessity for Intervenors to file a new or amended contention; LBP-12-12, 75 NRC 742 (2012)
until NRC Staff issues its draft or final EIS, it cannot plausibly be argued that the document is inadequate or otherwise fails to satisfy NEPA; LBP-11-33, 74 NRC 675 (2011)
when considering continued storage in licensing reviews with previously completed final environmental impact statements, NRC Staff is expected to use a consistent and transparent process to ensure that all stakeholders are aware of how the environmental impacts of continued storage are considered in each licensing action affected by this regulation; CLI-15-10, 81 NRC 535 (2015)
when NRC Staff prepares a FEIS, then, until a record of decision is issued, no action concerning the proposal may be taken by the Commission that would have an adverse environmental impact or limit the choice of reasonable alternatives; LBP-14-9, 80 NRC 15 (2014)
where environmental impacts are practically quantifiable, NRC has a duty to discuss them in those terms in the final supplemental environmental impact statement; LBP-15-3, 81 NRC 65 (2015)

FINAL SAFETY ANALYSIS REPORT
any changes to the facility as described in the FSAR must be either submitted to the NRC for approval through a license amendment or changed in accordance with the appropriate regulations; DD-11-3, 73 NRC 375 (2011)
applicant can only make a change in its procedures if screening demonstrates that 10 C.F.R. 50.59 does not apply or if the review under this regulation demonstrates that there are no remaining unreviewed safety questions; LBP-13-13, 78 NRC 246 (2013)
applicant must identify particular plans pertaining to design, operational organization, and procedures that demonstrate how it intends to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20 including, but not limited to, LLRW handling and storage; LBP-12-4, 75 NRC 213 (2012)
apPLICANT’S commitment in the updated FSAR cannot be changed without NRC Staff oversight and, specifically, evaluation of the eight criteria listed in 10 C.F.R. 50.59; LBP-13-13, 78 NRC 246 (2013)
apPLICANT’S action plan is part of its FSAR and therefore is part of the licensing basis of the facility; LBP-14-3, 79 NRC 267 (2014)
circumstances under which licensee may make changes to its facility and procedures as described in its updated FSAR and conduct tests or experiments not otherwise described in the UFSAR without obtaining a license amendment are discussed; CLI-12-20, 76 NRC 437 (2012); CLI-14-11, 80 NRC 167 (2014)
combined license applicant’s FSAR must describe the quality assurance program applied to the design and to be applied to the fabrication, construction, and testing of the structures, systems, and components of the facility; LBP-14-7, 79 NRC 451 (2014)
combined license applications must contain an FSAR that describes the facility, presents the design bases and the limits on its operation, and presents a safety analysis of the structures, systems, and components and of the facility as a whole; LBP-14-8, 79 NRC 519 (2014)
commitments in the updated FSAR and aging management plan are legally binding as part of the current licensing basis throughout the period of extended operation and can only be changed through the section 50.59 process; LBP-13-13, 78 NRC 246 (2013)
critical aspects of an aging management plan such as a commitment for buried pipes can be captured in the updated FSAR supplement; LBP-13-13, 78 NRC 246 (2013)
contention that FSAR is deficient because it does not include information provided in applicant’s seismic evaluation process report is rejected; LBP-15-14, 81 NRC 591 (2015)
current licensing basis for an independent spent fuel storage installation includes plant-specific design-basis information defined in 10 C.F.R. 50.2 as documented in the most recent final safety analysis report; LBP-12-24, 76 NRC 503 (2012)
current licensing basis includes applicant’s commitments through incorporation of applicant’s updated FSAR supplement; LBP-13-13, 78 NRC 246 (2013)
current licensing basis includes plant-specific design-basis information as documented in the most recent FSAR; LBP-11-21, 74 NRC 115 (2011)
establishing safety limits for stored irradiated fuel is not appropriate, but measures to prevent a significant loss of coolant inventory under accident conditions that could challenge the cooling of the stored fuel are documented in the updated FSAR; DD-13-3, 78 NRC 571 (2013)
FSAR updates must reflect changes that licensee has made through a license amendment request and certain changes that do not require a license amendment; LBP-15-27, 82 NRC 184 (2015)
if a procedure is not specifically called out in the updated FSAR, licensee may change it without using the license amendment process described in 10 C.F.R. 50.59(c)(1); LBP-13-13, 78 NRC 246 (2013)
information about the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in Part 20 must be included; LBP-11-6, 73 NRC 149 (2011)
testimony that further review of certain issues might change some conclusions in the FSAR does not justify restarting the hearing process; LBP-11-20, 74 NRC 65 (2011)
it is permissible for the FSAR to give applicant several options for controlling and limiting radioactive effluents and radiation exposures, provided that each option is described with a level of information sufficient to enable the Commission to reach a final conclusion; LBP-11-31, 74 NRC 643 (2011)
licensee must periodically submit an updated FSAR to NRC to report information and analyses submitted to NRC by licensee or prepared by licensee pursuant to NRC requirements since the previous update; LBP-15-27, 82 NRC 184 (2015)
licensee must seek a license amendment before implementing a test or experiment that will result in a departure from a method of evaluation described in the updated final safety analysis report used in establishing the design basis or in the safety analysis; LBP-13-7, 77 NRC 307 (2013)
licensees may make changes in the procedures described in updated FSAR and conduct tests or experiments not otherwise described in the UFSAR, without obtaining a license amendment; CLI-14-4, 79 NRC 249 (2014)
licensees must periodically update their final safety analysis reports to reflect changes to the facility, make changes in the procedures as described in the UFSAR, and conduct tests or experiments not described in the UFSAR; LBP-13-7, 77 NRC 307 (2013)
licensees must update the final safety analysis report periodically throughout the licensed period of a plant’s operation; DD-15-11, 82 NRC 361 (2015)
standards are provided for a licensee to request a license amendment before it may make changes in the facility as described in the updated final safety analysis report; LBP-13-7, 77 NRC 307 (2013)
submittal of updated FSAR pages does not constitute a licensing action but is intended only to provide information; LBP-15-27, 82 NRC 184 (2015)
supplemental updated FSAR represents the capturing of the critical aspects of the program into the applicant’s current licensing basis; LBP-13-13, 78 NRC 246 (2013)
"tests or experiments not described in the UFSAR" constitute any activity where any structure, system, or component is utilized or controlled in a manner that is either outside the reference bounds of the design.
bases as described in the UFSAR or inconsistent with the analyses or descriptions in the UFSAR; LBP-13-7, 77 NRC 307 (2013) updated FSARs can be modified without a license amendment as long as the modifications do not involve a change to the technical specifications or an unreviewed safety question; LBP-13-7, 77 NRC 307 (2013) updating of FSARs is necessary so that NRC is aware of changes that are made that do not require prior NRC approval; CLI-12-2, 75 NRC 63 (2012) wear of steam generator tubes is of critical importance to evaluations performed in the final safety analysis report, because the tubes are part of the reactor coolant pressure boundary, and assurance of their integrity is required; LBP-13-7, 77 NRC 307 (2013) whether offsite low-level radioactive waste storage and disposal facilities will ultimately be available is not material to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 213 (2012)

FINAL SAFETY EVALUATION REPORT

NRC Staff’s steps in the geographic and demographic review in the FSER to determine whether the COL applicant has proposed an acceptable site, including acceptable site boundaries, with appropriate consideration of nearby populations and natural and manmade features, are described; CLI-12-9, 75 NRC 421 (2012) speculation that further review of certain issues might change some conclusions in the FSER does not justify restarting the hearing process; LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011) FINAILITY after a record has closed, finality attaches to the hearing process, and after that point, only timely, significant issues will be considered; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012) agency action is final at the consummation of the agency’s decisionmaking process, and when rights or obligations have been determined; LBP-15-2, 81 NRC 48 (2015) given the need for finality in adjudications, reopening the record is an extraordinary action imposing a deliberately heavy burden on intervenor; LBP-15-14, 81 NRC 591 (2015) if combined licenses issue without including license conditions, NRC regulations relevant to the finality of decisions could result in some additional administrative requirements to satisfy in imposing new requirements on licensee; CLI-12-9, 75 NRC 421 (2012)

importance of finality in adjudicatory proceedings is reflected in 10 C.F.R. 2.326; CLI-15-19, 82 NRC 151 (2015) in making the findings required for issuance of a combined license, finality is afforded to those matters resolved in connection with a design certification; LBP-11-7, 73 NRC 254 (2011) licensing board’s ruling resolving the last pending contention is equivalent to a final decision under 10 C.F.R. 2.341, and a licensing board’s jurisdiction ends after it has rendered a final decision; LBP-15-9, 81 NRC 396 (2015) NRC generally disfavors the filing of new contentions at the eleventh hour of an adjudication, a policy that is grounded in the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; CLI-11-2, 73 NRC 333 (2011) NRC proceedings would be incapable of attaining finality if contentions that could have been raised at the outset could be added later at will, regardless of the stage of the proceeding; CLI-12-10, 75 NRC 479 (2012); LBP-11-20, 74 NRC 65 (2011) only final NRC action is subject to judicial review; CLI-12-11, 75 NRC 523 (2012) partial initial decisions constitute a final decision of the Commission 40 days from the date of issuance or the first agency business day following that date if it is a Saturday, Sunday, or federal holiday unless a petition for review is filed in accordance with section 2.1212; LBP-12-5, 75 NRC 227 (2012) rationale for NRC’s policy of generally disfavoring the filing of new contentions at the eleventh hour of an adjudication is based on the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; LBP-11-20, 74 NRC 65 (2011) request for a protective stay to hold the proceeding in abeyance indefinitely pending potential future events is inconsistent with NRC’s longstanding interest in sound case management and regulatory finality and would be unfair to the other parties; CLI-14-6, 79 NRC 445 (2014)
FINANCIAL ASSURANCE

acceptable trustee includes an appropriate state or federal government agency or an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency; CLI-11-4, 74 NRC 1 (2011)

admissibility of contention that applicant submit a decommissioning plan and related updated financial plans is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental documents lack an adequate description of financial assurances sufficient to pay the costs of restoration and long-term monitoring of up to 30 years is decided; LBP-15-15, 81 NRC 598 (2015)

applicant is required to submit a report on its decommissioning funding assurance mechanism after combined licenses are issued and no later than 30 days after NRC publishes notice of intended operation in the Federal Register; CLI-12-2, 75 NRC 63 (2012)

applicant must submit information that demonstrates that it possesses or has reasonable assurance of obtaining the funds necessary to cover estimated operating costs for the period of the license; CLI-15-8, 81 NRC 500 (2015)

applicant seeks authorization to provide financial assurance for decommissioning funding on a forward-looking, incremental basis; LBP-11-11, 73 NRC 455 (2011)

applicant’s commitment to provide a letter of credit issued by a financial institution whose operations are regulated and examined by a federal or state agency is sufficient to satisfy decommissioning funding assurance requirements; CLI-11-4, 74 NRC 1 (2011); LBP-11-26, 74 NRC 499 (2011)

because it has chosen a surety method, licensee must ensure that the letter of credit is payable to a trust established for decommissioning costs; CLI-11-4, 74 NRC 1 (2011)

bond-issuing licensees may provide a self-guarantee of funds for decommissioning costs based on a financial test set forth in Appendix C of Part 30; CLI-13-1, 77 NRC 1 (2013)

certification of financial assurance may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material; CLI-11-4, 74 NRC 1 (2011)

certifications, which are used by applicants seeking to possess smaller quantities of material, are governed by 10 C.F.R. 70.25(b)(2); CLI-11-4, 74 NRC 1 (2011)

“credit facility” carries various definitions; CLI-13-1, 77 NRC 1 (2013)

decommissioning funding requirements encompass costs of low-level waste burial; CLI-15-8, 81 NRC 500 (2015)

deferral of execution of the financial instruments until after the license has issued is not allowed for a uranium enrichment facility; CLI-11-4, 74 NRC 1 (2011)

depending on the quantity of material, Part 70 license applicants must submit either a decommissioning funding plan or a certification of financial assurance; CLI-11-4, 74 NRC 1 (2011)

each decommissioning funding plan must include a signed original of the instrument obtained to provide financial assurance for decommissioning at the time the plan is submitted; CLI-11-4, 74 NRC 1 (2011)

exemption from the decommissioning financial assurance requirements is considered to be an extraordinary equitable remedy to be used only sparingly; CLI-13-1, 77 NRC 1 (2013)

exemption request is subject to a hearing where the plant already has a license and is seeking an exemption from the decommissioning financial assurance requirements based on an earlier exemption that it had received during its license renewal; LBP-15-24, 82 NRC 68 (2015)

financial qualifications review for decommissioning funding assurance is revisited every year until the license is terminated; DD-11-4, 73 NRC 713 (2011)

financial test for self-guarantee of the decommissioning funding obligation requires that licensee maintain a bond rating of “A” or better and have a tangible net worth at least 10 times the total current decommissioning cost estimate; LBP-12-6, 75 NRC 256 (2012)

financial tests for parent company guarantees and self-guarantees require that an independent certified public accountant review the data used in the financial test and require that the licensee inform NRC within 90 days of any matters coming to the auditor’s attention which cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test; CLI-11-4, 74 NRC 1 (2011)
intangible assets may be used to meet specified criteria in the financial tests for self-guarantees; CLI-13-1, 77 NRC 1 (2013)
license transfer applicant must show reasonable assurance of sufficient funds to decommission the facility; CLI-15-8, 81 NRC 500 (2015)
license transfer applicant must submit estimates for total annual operating costs for each of the first 5 years of facility operation; CLI-15-8, 81 NRC 500 (2015)
licensee must file an annual report to NRC certifying that financial assurance for decommissioning will be or has been provided in an amount that may be more, but not less, than the amount stated in the regulations, adjusted as appropriate for changes in labor, energy, and waste burial costs; DD-11-3, 73 NRC 375 (2011)
licensee that wishes to be the sole guarantor of its own liabilities must satisfy a stringent test; LBP-12-6, 75 NRC 256 (2012)
licensee must submit, with each operating license application, certification specifying how financial assurance for decommissioning will be provided; DD-15-8, 82 NRC 107 (2015)
nongovernment licensees must demonstrate financial assurance for decommissioning by prepayment, use of a surety method, insurance, or other guarantee method, or use of an external sinking fund; CLI-13-1, 77 NRC 1 (2013)
NRC requires a contingency factor for decommissioning funds to provide for unforeseen events that may happen during operations or decommissioning that could increase the overall costs of this activity; LBP-15-24, 82 NRC 68 (2015)
NRC Staff authorization permitting applicant to defer execution of any final letters of credit for decommissioning financial assurance until after a license is issued but before receipt of licensed material might be problematic; LBP-11-26, 74 NRC 499 (2011)
operating license applicant must submit information that demonstrates that it possesses, or has reasonable assurance of obtaining, funds necessary to cover estimated operating costs for the period of the license; DD-15-8, 82 NRC 107 (2015)
request for hearing on Staff denial of permission to use an alternative method for demonstrating decommissioning funding assurance is granted; LBP-11-19, 74 NRC 61 (2011)
request that NRC investigate licensee's current financial qualifications to determine whether it remains qualified to continue operating another plant is denied; DD-15-8, 82 NRC 107 (2015)
request that NRC issue a demand for information from licensee relating to adequacy of financial assurances for decommissioning is denied; DD-11-4, 73 NRC 713 (2011)
requirements for decommissioning are structured according to the quantity of material that will be authorized for possession and use; CLI-11-4, 74 NRC 1 (2011)
“revolving credit” arrangement is one type of credit facility, and may be used repeatedly up to the limit specified after partial or total repayments have been made; CLI-13-1, 77 NRC 1 (2013)
self-guaranteeing licensees must pass the financial test annually; CLI-13-1, 77 NRC 1 (2013)
source materials licensee must demonstrate that sufficient funds will be available to cover the cost of decommissioning its facility; LBP-12-6, 75 NRC 256 (2012)
source materials licensees can seek an exemption from the decommissioning financial assurance requirements; CLI-13-1, 77 NRC 1 (2013)
source materials licensees have numerous options for meeting their decommissioning funding obligations; LBP-12-6, 75 NRC 256 (2012)
source of funds for operating and maintenance expenses would be unaffected by a transaction for decommissioning funding; CLI-11-4, 74 NRC 1 (2011)
SUBJECT INDEX

Staff’s deference to the expertise of other federal and state agencies to set and monitor the financial soundness of institutions issuing letters of credit is reasonable; CLI-11-1, 74 NRC 1 (2011)

to qualify for the alternative method of self-funding for decommissioning, licensee must have, among other things, a bond rating of “A” or better, as issued by Standard and Poor’s or Moody’s; CLI-13-1, 77 NRC 1 (2013)

to use the self-guarantee mechanism to fulfill its decommissioning funding obligation, a licensee that issues bonds must annually satisfy the financial test set forth in 10 C.F.R. Part 30, Appendix C, § II.B.3; LBP-12-6, 75 NRC 256 (2012)

with limited exceptions, source material licensees must demonstrate that they can pay for the decommissioning of their regulated facilities; CLI-13-1, 77 NRC 1 (2013)

FINANCIAL ASSURANCE PLAN

financial surety arrangements must be established by each mill operator before the commencement of operations to ensure that sufficient funds will be available to carry out decontamination and decommissioning of the mill and site and for the reclamation of any tailings or waste disposal areas; LBP-15-15, 81 NRC 598 (2015)

NRC has authority to request that an established or newly formed entity submit additional or more detailed information respecting its financial arrangements and status of funds; DD-15-8, 82 NRC 107 (2015)

FINANCIAL ISSUES

when promulgating Subpart M, the Commission was well aware that most license transfer issues would be financial in nature; CLI-14-5, 79 NRC 254 (2014)

FINANCIAL QUALIFICATIONS

availability of construction funding for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)

five years of financial revenue-and-expense estimates must be submitted as part of a license transfer application; CLI-15-26, 82 NRC 408 (2015)

license applications must specifically state information that NRC, by rule or regulation, may determine to be necessary to decide technical and financial qualifications of applicant; DD-15-8, 82 NRC 107 (2015)

license conditions can be an acceptable method for providing reasonable assurance of financial qualifications; LBP-14-3, 79 NRC 267 (2014)

proposed transferee for an operating license must satisfy the same financial qualification requirements that apply to an applicant for an initial operating license; CLI-15-26, 82 NRC 408 (2015)

to be an acceptable method for providing reasonable assurance of financial qualifications, a proposed license condition must be ministerial and by its very nature require and be readily susceptible to post-licensing verification such that NRC Staff is not deferring its safety finding through the use of the license condition; LBP-14-3, 79 NRC 267 (2014)

FINANCIAL QUALIFICATIONS REVIEW

assurance of decommissioning funding is revisited every year until the license is terminated; DD-11-4, 73 NRC 713 (2011)

electric utility applicant for an operating license is exempt from a financial qualifications review; DD-15-8, 82 NRC 107 (2015)

if NRC Staff makes a finding of no reasonable assurance, NRC reserves the right to take steps to ensure a licensee’s adequate accumulation of decommissioning funds; DD-11-4, 73 NRC 713 (2011)

FINANCIAL RESOURCES

denial of license transfer applications typically is on grounds of operating costs and inability to pay the annual cost for spent fuel storage; CLI-14-5, 79 NRC 254 (2014)

FINDING OF NO SIGNIFICANT IMPACT

agency’s decision to issue a FONSI rather than prepare an environmental impact statement was arbitrary because the agency had obligated itself contractually to issue a FONSI before it conducted an environmental assessment; LBP-14-6, 79 NRC 404 (2014)

agency’s reliance on mitigation in making a finding of no significant impact is justified if the proposed mitigation is imposed by statute or regulation or has been so integrated into the initial proposal that it is impossible to define the proposal without mitigation; LBP-12-23, 76 NRC 445 (2012)

agency’s reliance on mitigation in making a FONSI must be justified; LBP-12-23, 76 NRC 445 (2012); LBP-14-7, 79 NRC 451 (2014)
alternatively to preparing an environmental impact statement, NRC can conduct an environmental assessment and make a finding of no significant impact; LBP-13-13, 78 NRC 246 (2013)  
Biological Opinion and its accompanying Incidental Take Statement issued by U.S. Fish and Wildlife Service were arbitrary and capricious because they were based in part on a conservation plan that was not enforceable under the Endangered Species Act; LBP-12-23, 76 NRC 445 (2012)  
environmental assessment, and associated FONSI, must contain sufficient discussion of environmental impacts and the reasons why the proposed action will not have a significant effect on the quality of the human environment; LBP-15-13, 81 NRC 456 (2015)  
if an agency determines that a particular action will have no effect on an endangered or threatened species, the U.S. Fish & Wildlife Service consultation requirements are not triggered; LBP-15-11, 81 NRC 401 (2015)  
increase in noise levels is a significant impact because the agency’s environmental assessment made no firm commitment to any noise mitigation measures; LBP-12-23, 76 NRC 445 (2012)  
issuance of an environmental assessment is appropriate where NRC Staff determines that the proposed project will result in no significant impacts; LBP-15-11, 81 NRC 401 (2015)  
level of analysis required by NEPA in an environmental impact statement is more rigorous than is required when the agency has determined on the basis of its environmental assessment that the project as proposed will not result in significant environmental impact; LBP-14-7, 79 NRC 451 (2014)  
mitigation measures that are a mandatory condition qualify as the type that can be relied upon for a FONSI; LBP-12-23, 76 NRC 445 (2012)  
NRC Staff may publish a draft finding of no significant impact for public comment, but it is not required to do so in all cases; CLI-15-17, 82 NRC 33 (2015)  
proposed mitigation measures are sufficient if they are supported by sufficient evidence, such as studies conducted by the agency, or are adequately policed; LBP-12-23, 76 NRC 445 (2012)  
reliance on mitigation is justified if the proposed mitigation underlying the FONSI is more than a possibility in that it is imposed by statute or regulation or has been so integrated into the initial proposal that it is impossible to define the proposal without mitigation; LBP-14-7, 79 NRC 451 (2014)  
there is no assurance of a mitigation measure efficacy where the government conducted no study of its likely effects, proposed no monitoring to determine how effective the proposed mitigation would be, and did not consider alternatives in the event the measure fails; LBP-12-23, 76 NRC 445 (2012)  
when conducting a NEPA-required environmental review, an agency may consider the ameliorative effects of mitigation in determining the environmental impacts of an activity; LBP-12-23, 76 NRC 445 (2012)  
where an environmental assessment resulted in a finding of no significant impact, a full environmental impact statement is unnecessary, CLI-15-17, 82 NRC 33 (2015)  

FINDINGS OF FACT  
board did not err in factual finding that applicant was not under foreign ownership, control, or domination; CLI-15-7, 81 NRC 481 (2015)  
Commission defers to board’s factual findings unless they are clearly erroneous and generally steps in only to correct factual findings not even plausible in light of the record reviewed in its entirety; CLI-15-6, 81 NRC 340 (2015); CLI-15-9, 81 NRC 512 (2015)  
Commission gives substantial deference to licensing board findings of fact, and it will not overturn a board’s factual findings unless they are not even plausible in light of the record viewed in its entirety; CLI-14-10, 80 NRC 157 (2014)  
defferece to a board’s factual determinations is particularly high when they are based in significant part on its assessment of expert testimony and credibility of the witnesses offering that testimony; CLI-13-1, 77 NRC 1 (2013)  
deferential clear error standard is applied in analyzing a board’s findings of fact; CLI-13-1, 77 NRC 1 (2013)  
fact-finding administrative body, such as a licensing board, with authority to develop an evidentiary record, is distinguished from reviewing adjudicatory and judicial bodies, generally with a more limited record-creating authority; LBP-15-3, 81 NRC 65 (2015)  
findings that NRC must make for issuance of a renewed license are set forth in 10 C.F.R. 54.29; CLI-15-21, 82 NRC 295 (2015)  
in making its combined license findings, the Commission will treat as resolved those matters resolved in the issuance of a design certification rule; LBP-11-38, 74 NRC 817 (2011)
licensing boards are the appropriate finders of fact in most circumstances, and referral of a matter for a
fact-specific dispute occurs in the ordinary course of business; CLI-15-14, 81 NRC 729 (2015)
question before the Commission is not whether it would have made different factual findings than those
of the board but whether the board’s findings of fact are so lacking in record support as to be clearly
erroneous; CLI-13-1, 77 NRC 1 (2013)
to determine whether the record facts before it established the position being advocated, the court looked
beyond the record by indicating that what everybody knows, the court must know; LBP-14-1, 79 NRC
39 (2014)
FIRE PROTECTION
objectives of licensee’s program to extend the concept of defense-in-depth to fire protection are discussed;
DD-12-3, 76 NRC 416 (2012)
request that NRC take enforcement action to correct alleged noncompliance with fire protection
regulations is granted; DD-12-3, 76 NRC 416 (2012)
use of operator manual actions in lieu of the protection methods specified in 10 C.F.R. Part 50, Appendix
R, § III.G.2 is not consistent with the regulations, and plants need regulatory approval for each specific
OMA proposed; DD-12-3, 76 NRC 416 (2012)
FIRE PROTECTION SYSTEMS
detection systems shall be automatic and capable of operating with or without offsite power; DD-12-3, 76
NRC 416 (2012)
licensee cited for violations for use of unapproved operator manual actions to mitigate safe shutdown
equipment malfunctions caused by a fire-induced single spurious actuation in lieu of protecting the
equipment; DD-12-3, 76 NRC 416 (2012)
means to ensure that a redundant train of safe-shutdown cables and equipment is free of fire damage in
instances in which redundant trains are located in the same fire area outside of primary containment are
described; DD-12-3, 76 NRC 416 (2012)
FIRE SAFETY
plants licensed to operate before January 1, 1979, must meet fire safety regulations; DD-12-3, 76 NRC
416 (2012)
underlying purpose of 10 C.F.R. Part 50, Appendix R, § III.G is to ensure that the ability to achieve and
maintain safe shutdown is preserved following a fire event; DD-12-3, 76 NRC 416 (2012)
FIRES
applying principles of statutory interpretation, the board declined to insert additional requirements into the
regulations to specify damage states or the number and magnitude of fires and explosions with
Commission intent to the contrary and without a showing that such a requirement is unavoidable or
imperatively required; CLI-11-9, 74 NRC 233 (2011)
COL applications must include a description and plans for implementation of the guidance and strategies
required by section 50.54(h)(2) for severe accident mitigation; CLI-11-9, 74 NRC 233 (2011)
contention concerning need under NEPA to include a discussion of the environmental impacts of spent
fuel pool leakage, SFP fires, and the lack of a spent fuel repository is held in abeyance; LBP-12-26, 76
NRC 559 (2012)
contention that applicant must include a discussion of environmental impacts of spent fuel pool leakage,
fires, and lack of a spent fuel repository is dismissed; LBP-14-12, 80 NRC 138 (2014)
contention that environmental report does not satisfy NEPA because it does not consider a range of
measures to mitigate the risk of catastrophic fires in densely packed, closed-frame spent fuel storage
pools is decided; LBP-15-5, 81 NRC 249 (2015)
in its Waste Confidence Decision, NRC failed to consider environmental impacts of a repository never
becoming available, its analysis of spent fuel pool leaks was not forward-looking, and it had not
sufficiently considered the consequences of spent fuel pool fires; CLI-15-4, 81 NRC 221 (2015)
licensee cited for violations for use of unapproved operator manual actions to mitigate safe shutdown
equipment malfunctions caused by a fire-induced single spurious actuation in lieu of protecting the
equipment; DD-12-3, 76 NRC 416 (2012)
licensees must develop and implement guidance and strategies to maintain or restore core cooling,
containment, and spent fuel pool cooling capabilities in case of loss of large areas of the plant due to
explosions or fire; CLI-11-5, 74 NRC 141 (2011)
licenses must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities to address loss of large areas from fires or explosions that arise from a beyond-design-basis event; CLI-12-2, 75 NRC 63 (2012)

NRC must include an evaluation of failure to secure permanent disposal, as well as an improved analysis of spent fuel pool leaks and spent fuel pool fires; CLI-14-8, 80 NRC 71 (2014)

underlying purpose of 10 C.F.R. Part 50, Appendix R, § III.G is to ensure that the ability to achieve and maintain safe shutdown is preserved following a fire event; DD-12-3, 76 NRC 416 (2012)

FIRST AMENDMENT

agencies are required to use alternative means for obtaining information to avoid unnecessary infringement of First Amendment associational rights; CLI-13-5, 77 NRC 223 (2013)

NRC subpoena was upheld notwithstanding assertion of First Amendment freedom of association rights, where the subpoena was narrowly tailored to documents supporting specific allegations; CLI-13-5, 77 NRC 223 (2013)

under appropriate circumstances First Amendment rights give way to the compelling government interest in nuclear safety; CLI-13-5, 77 NRC 223 (2013)

FISH AND WILDLIFE SERVICE

admissibility of contention that environmental assessment failed to conduct the required hard look at impacts of the proposed mine and fails to consult with the FWS is decided; LBP-15-11, 81 NRC 401 (2015)

agencies are required to confer with FWS on any action that is likely to jeopardize the continued existence of any proposed species or result in the destruction or adverse modification of proposed critical habitat; LBP-13-9, 78 NRC 37 (2013)

concurrence by FWS discharges NRC’s consultation responsibilities; LBP-15-11, 81 NRC 401 (2015)

consultation with FWS is legally mandated for any agency action that may affect listed species or critical habitat; LBP-15-11, 81 NRC 401 (2015)

federal agency is required to consult if an action may affect listed species or designated critical habitat, even if the effects are expected to be beneficial; LBP-15-11, 81 NRC 401 (2015)

federal agency need not initiate formal consultation if, as a result of the preparation of a biological assessment under section 402.12 or as a result of informal consultation with the Service under section 402.13, the federal agency determines, with the written concurrence of the FWS Director, that the proposed action is not likely to adversely affect any listed species or critical habitat; LBP-15-11, 81 NRC 401 (2015)

if an agency determines that a particular action will have no effect on an endangered or threatened species, the FWS consultation requirements are not triggered; LBP-15-11, 81 NRC 401 (2015)

if NRC engages in an informal consultation with FWS and it is determined that the project will not adversely affect listed species or critical habitat, it need not engage in formal consultation; LBP-13-9, 78 NRC 37 (2013)

“informal” consultation is an optional process that includes all discussions, correspondence, etc., between FWS and the federal agency designed to assist the federal agency in determining whether formal consultation or a conference is required with the Service under section 402.13; LBP-15-11, 81 NRC 401 (2015)

only species listed as threatened or endangered under the Endangered Species Act are covered by the act’s formal consultation requirements; LBP-15-11, 81 NRC 401 (2015)

portions of a contention relevant to the completion of the Endangered Species Act § 7 consultation process and the adequacy of the NRC Staff’s impact analyses relevant to the three named species meet the admissibility standards; LBP-13-9, 78 NRC 37 (2013)

when engaging in informal consultation, an agency must provide its determination as to whether the proposed action will affect threatened and endangered species to FWS and request FWS concurrence; LBP-15-11, 81 NRC 401 (2015)

FLOOD PROTECTION

admissibility of contention that licensee is undertaking modifications for protection against severe flooding in the event of upstream dam failures that will require a license amendment is decided; CLI-15-5, 81 NRC 329 (2015)
SUBJECT INDEX

if evidence subsequently indicates that the design basis of an operating nuclear power plant will not withstand a maximum flooding event, members of the public may file a request to institute a proceeding to modify, suspend, or revoke a license; LBP-11-15, 73 NRC 629 (2011)

NRC addressed concerns about flooding at GE Mark I and II boiling water reactors through a request for information; DD-15-1, 81 NRC 193 (2015)

NRC Staff ensures that applicant’s design basis for the new units will protect public health and safety by verifying that the design basis will withstand maximum flooding events; LBP-11-6, 73 NRC 149 (2011)

NRC Staff may impose additional requirements to protect against a reevaluated flood hazard; DD-15-5, 81 NRC 877 (2015)

petitioner’s request that the NRC take escalated enforcement action against licensee concerning flooding protection is being addressed by the NRC’s request for information; DD-15-5, 81 NRC 877 (2015)

request for enforcement action based on support beam deficiencies, flood protection inadequacy, flood risks from upstream dams, and primary reactor containment electrical penetration seals containing Teflon is denied because petitioner’s requests have been addressed through other actions; DD-15-4, 81 NRC 869 (2015)

request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 489 (2014)

structures, systems, and components important to safety shall be designed to withstand the effects of natural phenomena such as floods without loss of capability to perform their safety functions; LBP-13-8, 78 NRC 1 (2013)

FLOODS

because petitioner fails to show that the possibility of site inundation is based on new and materially different information added to the environmental report as part of applicant’s revised low-level radioactive waste management plan or identify any new and materially different information on which its site-inundation argument is based, this argument is not timely; LBP-12-7, 75 NRC 503 (2012)

contention that license renewal application fails to adequately address the risks of flooding from failure of upstream dams is inadmissible; LBP-13-8, 78 NRC 1 (2013)

flood hazard reevaluations being performed pursuant to a request for information are beyond the current design/licensing basis of operating plants; DD-15-4, 81 NRC 869 (2015)

“floodplain” is an area of normally dry or semi-dry land providing temporary natural storage areas for floodwater; LBP-13-4, 77 NRC 107 (2013)

petitioner fails to demonstrate that the issue of radiation dispersal due to site inundation is material to the findings NRC must make to support approving a combined license application; LBP-12-7, 75 NRC 503 (2012)

FOREIGN OWNERSHIP

absent a transfer, license renewal application will be denied where licensee remains under foreign ownership, control, or domination; CLI-14-5, 79 NRC 254 (2014)

all prospective co-licensees are subject to the limitations on foreign ownership, control, or domination; LBP-11-25, 74 NRC 380 (2011)

although pertinent language of the AEA is written in present tense, a board’s inquiry does not end with evaluating foreign ownership, control, or domination concerns posed only by the current corporate structure and financing; LBP-14-3, 79 NRC 267 (2014)

any person except one excluded by section 50.38 may file an application for a combined license for a nuclear power facility; CLI-13-4, 77 NRC 101 (2013); LBP-14-3, 79 NRC 267 (2014)

any person who is a citizen, national, or agent of a foreign country, or any corporation, or other entity that NRC knows or has reason to believe is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government, shall be ineligible to apply for and obtain a license; LBP-12-19, 76 NRC 184 (2012)

applicant with foreign ownership can still be eligible for a license if certain conditions are imposed, such as requiring that officers and employees of applicant responsible for special nuclear material be U.S. citizens; LBP-14-3, 79 NRC 267 (2014)
SUBJECT INDEX

applicants are found ineligible to obtain a combined license because they are owned by a U.S. corporation that is 100% owned by a foreign corporation; LBP-12-19, 76 NRC 184 (2012)

applicants are ineligible to obtain a license because they fail to meet the requirements of the AEA and NRC regulations regarding foreign ownership; LBP-12-22, 76 NRC 443 (2012)
because the application for a uranium enrichment facility is governed by Atomic Energy Act §§ 53 and 63, 42 U.S.C. § 2073, 2093, foreign ownership and control issues would be evaluated under sections 57 and 69; LBP-11-11, 73 NRC 455 (2011)

board did not err in factual finding that applicant was not under foreign ownership, control, or domination; CLI-15-7, 81 NRC 481 (2015)
combined license cannot be issued until the foreign ownership issue is properly corrected and then applicants may move to reopen the record; LBP-12-19, 76 NRC 184 (2012)
combined license will not be issued where applicants are 100% owned by a foreign corporation, which is 85% owned by the French government, and the foreign corporation has the power to exercise ownership, control, or domination over applicants, and the Negation Action Plan submitted by applicants does not negate this situation; LBP-12-19, 76 NRC 184 (2012)
commitments in the revised combined license application restrict foreign ownership share to no more than 10% and require NRC consent for any change in foreign ownership of 5% or more; LBP-14-3, 79 NRC 267 (2014)

Congress thought foreign ownership itself should be sufficient to require denial of a license in some circumstances; LBP-12-19, 76 NRC 184 (2012)
connection of the three prohibitions on foreign ownership with the conjunction “or” rather than “and” shows that a license may not be granted if any of the three prohibitions is violated; LBP-12-19, 76 NRC 184 (2012)
contention alleging that statutory and regulatory prohibitions on foreign ownership, control, or domination forbid the licensing of proposed units is decided in applicant’s favor; LBP-14-3, 79 NRC 267 (2014)
enrichment facility security clearance requires a determination that granting the clearance would not be inconsistent with the national interest, including a finding that the facility is not under foreign ownership, control, or influence to such a degree that a determination could not be made; LBP-11-11, 73 NRC 455 (2011)
extent is under foreign ownership, control, or domination whenever a foreign interest has the power, direct or indirect, whether or not exercised, to direct or decide matters affecting the management or operations of the applicant; LBP-11-25, 74 NRC 380 (2011)
even substantial foreign funding or involvement where a foreign entity contributes 50% or more of the costs of constructing a reactor or participates in the project review and is consulted on policy and cost issues does not require a finding of foreign control, where safeguards ensure U.S. national defense and security; LBP-11-25, 74 NRC 380 (2011)
for power reactors, NRC developed a Commission-approved standard review plan to assist in evaluating applications for reactor licenses or applications for the transfer of such licenses; LBP-11-11, 73 NRC 455 (2011)
foreign control must be interpreted in light of all the information that bears on who in the corporate structure exercises control over what issues and what rights may be associated with certain types of shares; LBP-11-25, 74 NRC 380 (2011)
foreign ownership, control, or domination analysis should be given an orientation toward safeguarding the national defense and security; CLI-15-7, 81 NRC 481 (2015)
if after conducting a threshold review, NRC Staff concludes that applicant may be considered to be foreign owned, controlled, or dominated, or that additional action would be necessary to negate the foreign ownership, control, or domination, applicant shall be promptly advised and requested to submit a negation action plan; LBP-11-11, 73 NRC 455 (2011)
if allegations are accurate that applicant is subject to foreign direction, it would be reasonable to expect that there would be manifestations of this in the corporate organization and management and that there would be recognition of such circumstances by those corporate officers who must furnish the Commission with the sworn information prescribed by 10 C.F.R. 50.33; LBP-14-3, 79 NRC 267 (2014)
if and when applicants file a revision of their application, NRC Staff should renotice the application as to its foreign ownership aspect; CLI-13-4, 77 NRC 101 (2013)
if applicant’s negation action plan can successfully wall off the foreign entity from influencing applicant’s
decisionmaking regarding nuclear safety, security, and reliability concerns, then the AEA’s prohibition
on foreign control or domination will not stand in the way of the applicant seeking that license;
LBP-14-3, 79 NRC 267 (2014)
in context with the other provisions of the Atomic Energy Act § 104d, the foreign control limitation
should be given an orientation toward safeguarding the national defense and security; LBP-14-3, 79
NRC 267 (2014)
in determining foreign ownership issues, boards may consider aspects of control that do not affect nuclear
safety or security; CLI-15-7, 81 NRC 481 (2015)
intent of Congress in the Atomic Energy Act is to prohibit relationships where an alien has the power to
direct the actions of the licensee; LBP-14-3, 79 NRC 267 (2014)
it would be impermissible to construe the prohibition of foreign ownership so as to make it redundant or
otherwise deprive it of operative effect; LBP-12-19, 76 NRC 184 (2012)
materials license regulations contain no express prohibition on foreign ownership, but require Staff to
make a finding that license issuance will not be inimical to the common defense and security or the
health and safety of the public; LBP-11-11, 73 NRC 455 (2011)
no bright line is established between control or domination, on the one hand, and their absence, on the
other; LBP-14-3, 79 NRC 267 (2014)
no license may be issued to an alien or any corporation or other entity if the Commission knows or has
reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign
government; LBP-11-25, 74 NRC 380 (2011)
no license may be issued to any person within the United States if, in the opinion of the Commission,
issuance of a license to such person would be inimical to the common defense and security or to the
health and safety of the public; LBP-14-3, 79 NRC 267 (2014)
NRC has discretion in specifying the level of foreign ownership that would constitute a violation of the
Atomic Energy Act; LBP-12-19, 76 NRC 184 (2012)
NRC has substantial discretion in determining the threshold percentage at which foreign ownership
becomes too great, but that threshold must at a minimum include 100% foreign ownership or the
prohibition in the Act would be rendered superfluous; LBP-12-19, 76 NRC 184 (2012)
NRC is prohibited from issuing a reactor license to any corporation or other entity if the Commission
knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation,
or a foreign government; CLI-13-4, 77 NRC 101 (2013); CLI-15-7, 81 NRC 481 (2015); LBP-12-19,
76 NRC 184 (2012)
NRC may deny uranium enrichment facility applicant a license based on foreign ownership, control, or
domination concerns to the extent it concludes granting such a license would be inimical to the
common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)
NRC Staff is directed to review foreign ownership issues outside the adjudicatory context, to consider
stakeholder input, and to recommend whether the Commission should consider modifications to agency
guidance or practice; CLI-13-4, 77 NRC 101 (2013)
NRC Staff procedures used to evaluate applications for issuance or transfer of control of a production or
utilization facility license in light of the prohibitions in Atomic Energy Act § 103d and 104d and in 10
C.F.R. 50.38 against foreign ownership or control are described; LBP-12-19, 76 NRC 184 (2012)
“owned, controlled or dominated” refers to relationships in which the will of one party is subjugated to
the will of another; CLI-15-7, 81 NRC 481 (2015); LBP-14-3, 79 NRC 267 (2014)
proceeding is terminated because applicants have failed to provide information to show that they have
changed their ownership situation so as to satisfy foreign ownership, control, and domination
requirements; LBP-12-22, 76 NRC 443 (2012)
relative to the issue of foreign ownership or control, NRC imposes restrictions on the physical security
and control of information at licensed facilities to safeguard restricted data and national security
information; LBP-11-11, 73 NRC 455 (2011)
there is generally no specific ownership percentage above which the NRC Staff would conclusively
determine that an applicant is per se controlled by foreign interests, but a 100% foreign ownership has
formed the basis for the licensing board’s grant of summary disposition in favor of intervenors;
LBP-11-25, 74 NRC 380 (2011); LBP-14-3, 79 NRC 267 (2014)
there is no blanket prohibition on indirect foreign ownership of an applicant or licensee; LBP-14-3, 79 NRC 267 (2014)
to be inimical to the common defense and security or to the health and safety of the public, control or domination must be of such a degree that the will of the licensee is subjugated to the will of the foreign entity, and the foreign entity must have the power to direct the actions of the licensee; LBP-14-3, 79 NRC 267 (2014)
to issue a combined license or entertain an application for a COL, the Commission cannot know or have reason to believe applicant is controlled by an alien, a foreign corporation, or a foreign government; LBP-11-25, 74 NRC 380 (2011)
where a foreign entity proposed to own 100% of the entire facility, a negation action plan was of no consequence; LBP-14-3, 79 NRC 267 (2014)
where the record did not show any means for foreign minority owner of applicant to control applicant's decisions, or any attempts by the foreign owner to do so, the board could permissibly conclude that the foreign minority owner did not “control” the applicant; CLI-15-7, 81 NRC 481 (2015)
whether a foreign entity has the ability to restrict or inhibit compliance with security or other regulations of the Commission is of greatest significance to a foreign ownership, control, or domination review; CLI-15-7, 81 NRC 481 (2015)
FORUM SHOPPING
quick resubmission of specific license amendment request without any change in circumstances would create the appearance of forum shopping; LBP-15-28, 82 NRC 233 (2015)
FRACTURE TOUGHNESS
applicant requests an operating license amendment to implement alternate fracture toughness requirements for protection against pressurized thermal shock events; LBP-15-17, 81 NRC 753 (2015)
ASTM Standard E 185 anticipates that during the course of a nuclear power plant’s life the surveillance capsule withdrawal schedule may need to be revised and allows and provides for such changes; LBP-15-20, 81 NRC 829 (2015)
equivalent margins analysis must demonstrate that the calculated energy will provide margins of safety against fracture that are equivalent to those required by Appendix G of Section XI of the ASME Code; CLI-15-23, 82 NRC 321 (2015)
if part of a reactor pressure vessel is expected to fall below the 50 ft-lb standard, licensee must demonstrate that lower values of Charpy upper-shelf energy will provide margins of safety against fracture equivalent to those required by the ASME Boiler and Pressure Vessel Code; LBP-15-20, 81 NRC 829 (2015)
licensees have the option of demonstrating that values of Charpy upper-shelf energy below 50 ft-lb will provide margins of safety against fracture equivalent to those required by Appendix G of Section XI of the ASME BPV Code; LBP-15-20, 81 NRC 829 (2015)
licensees must attach a particular number of surveillance capsules to specified areas within the reactor vessel, typically near the inside vessel wall at the beltline; LBP-15-20, 81 NRC 829 (2015)
long-term exposure to neutron radiation and elevated temperatures in a reactor vessel decrease the vessel materials’ fracture toughness, or resistance to fracture; LBP-15-20, 81 NRC 829 (2015)
materials in a reactor vessel must maintain a minimum level of 50 ft-lb of Charpy upper-shelf energy, which is a measurement of the amount of energy the material can absorb at high temperatures before it fractures and fails; LBP-15-20, 81 NRC 829 (2015)
minimum frequency with which surveillance capsules must be tested is set by ASTM Standard E 185 (1982 version), which is incorporated into Appendix H; LBP-15-20, 81 NRC 829 (2015)
neutron radiation embrittlement of reactor pressure vessel walls, decreasing their fracture toughness, is discussed; LBP-15-17, 81 NRC 753 (2015)
no reduction in the amount of fracture toughness testing is allowed without NRC approval; CLI-15-23, 82 NRC 321 (2015)
petitioners are not barred from contending that additional testing is necessary to show margins of safety equivalent to those of the ASME BPV Code, Section XI, Appendix G because the petitioners allege noncompliance with 10 C.F.R. Part 50, Appendix G and not Appendix H; LBP-15-20, 81 NRC 829 (2015)
physical specimens must come from near the inside vessel wall in the beltline region so that the specimen irradiation history duplicates the neutron spectrum, temperature history, and maximum neutron fluence experienced by the reactor vessel inner surface; LBP-15-17, 81 NRC 753 (2015)

plant-specific surveillance data must be integrated into the transition fracture toughness reference temperature estimate; LBP-15-17, 81 NRC 753 (2015)

results from plant-specific surveillance program must be integrated into the fracture toughness estimate if the plant-specific surveillance data have been deemed credible; LBP-15-17, 81 NRC 753 (2015)

under normal plant conditions, materials at the beltline of the reactor pressure vessel must maintain Charpy upper-shelf energy of no less than 50 ft-lb (68 joules); CLI-15-23, 82 NRC 321 (2015)

FREEDOM OF INFORMATION ACT
agencies must make available certain records to members of the public upon specific request for those records except to the extent that the records (or portions of them) are exempt from public disclosure by one of the nine enumerated exemptions or are excluded from disclosure; CLJ-13-5, 77 NRC 223 (2013)

agencies must make available for public inspection a broad range of information, including the agency’s organization, general methodology, rules of procedure, substantive rules, final opinions, and statements of policy and interpretation that have been adopted by the agency; LBP-13-5, 77 NRC 233 (2013)

any reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions that are exempt; LBP-11-5, 73 NRC 131 (2011)

board may employ case law interpreting FOIA Exemption 5 when determining whether the deliberative process privilege applies in an NRC proceeding; LBP-13-5, 77 NRC 233 (2013)

deliberative process privilege applied under 10 C.F.R. 2.390(a)(5) to interagency or intra-agency memorandums or letters is similar to Exemption 5 under the Freedom of Information Act; LBP-13-5, 77 NRC 233 (2013)

FOIA exemption for inter- or intra-agency materials incorporates the deliberative process privilege, which protects documents that are prepared to assist an agency, board, or official to arrive at a decision; LBP-13-5, 77 NRC 233 (2013)

FOIA’s purpose is to encourage disclosure, and, to that end, its exemptions are to be interpreted narrowly; LBP-13-5, 77 NRC 233 (2013)

government has the burden of proving that a requested document falls within one of FOIA’s exemptions; LBP-13-5, 77 NRC 233 (2013)

licensee’s concerns about NRC’s administration of FOIA cannot overcome the agency’s duty to investigate alleged violations; CLJ-13-5, 77 NRC 223 (2013)

licensee’s motion to quash a subpoena duces tecum because production of the requested file would compromise its employee concerns program by potentially subjecting information contained in the file to public disclosure as an official agency record under FOIA is denied; CLJ-13-5, 77 NRC 223 (2013)

nine categories of documents may be exempted from disclosure; LBP-13-5, 77 NRC 233 (2013)

NRC considers whether Exemption 7 would prevent public disclosure of allegation and investigation information from release; CLJ-13-5, 77 NRC 223 (2013)

requirements and exemptions under FOIA reflect a balancing of public disclosure with confidentiality, but this balancing does not affect the NRC’s authority to obtain requested information; CLJ-13-5, 77 NRC 223 (2013)

FUEL
contention alleging that license renewal application fails to consider plutonium fuel use, which would place it outside the current licensing basis, is inadmissible; LBP-13-8, 78 NRC 1 (2013)

See also Mixed Oxide Fuel

FUEL CLADDING
licensee must protect spent fuel cladding from degradation during storage or confine the fuel in such a way that degradation does not cause operational problems when removed from storage; LBP-12-24, 76 NRC 503 (2012)

FUEL FABRICATION FACILITY LICENSING
adequacy finding on applicant’s material control and accounting program requires the board to make a case-by-case determination, guided by the Atomic Energy Act’s mandate that no license to possess special nuclear material may be issued if issuance would be inimical to the common defense and security or would constitute an unreasonable risk to the health and safety of the public; LBP-14-1, 79 NRC 39 (2014)
applicant bears the ultimate burden of proof in materials licensing proceedings; LBP-14-1, 79 NRC 39 (2014)
applicant has demonstrated that its program of automated equipment, computer systems (and their verification), and the use of secured and tamper-safed item storage area boundaries, satisfactorily demonstrates the ability to verify the presence and integrity of all strategic special nuclear material items in storage; LBP-14-1, 79 NRC 39 (2014)
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to rapidly assess the validity of alleged thefts; LBP-14-1, 79 NRC 39 (2014)
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to resolve the nature and cause of any MC&A alarm within approved time periods in each of the four storage areas at issue; LBP-14-1, 79 NRC 39 (2014)
applicant’s proposal to seal and design strategic special nuclear material item storage locations to be tamper-safed or equivalent to tamper-safing such that confirmation that the physical boundary of these locations has not been breached ensures the integrity of these items; LBP-14-1, 79 NRC 39 (2014)
at the construction authorization request stage, the board dismissed a material control and accounting contention as moot, pending submittal of applicant’s Fundamental Nuclear Material Control Plan which would require inclusion of a detailed MC&A program; LBP-14-1, 79 NRC 39 (2014)
licensing of a MOX facility has been governed by a two-part licensing process designed specifically for it; LBP-14-1, 79 NRC 39 (2014)
material control and accounting system is required for a fuel fabrication facility; LBP-14-1, 79 NRC 39 (2014)
NRC may issue a license to possess and use 5 or more formula kilograms of strategic special nuclear material only if applicant can establish, implement, and maintain a Commission-approved material control and accounting system that will achieve general performance objectives; LBP-14-1, 79 NRC 39 (2014)
quantitative accuracy of the MMIS/PLC computer system data must be considered in determining whether requirements of 10 C.F.R. 74.55(b)(1) are satisfied by applicant’s plans; LBP-14-1, 79 NRC 39 (2014)
requirements for performance of applicant’s material control and accounting system neither prescribe nor proscribe any methodology for achievement of those performance requirements; LBP-14-1, 79 NRC 39 (2014)
to meet the reasonable assurance standard, applicant must make a showing that meets the preponderance-of-the-evidence threshold of compliance with the applicable regulations; LBP-14-1, 79 NRC 39 (2014)

FUEL LOADING
holder of a combined license for a newly built reactor may not load fuel or operate except as provided in accordance with Part 50, Appendix E; LBP-15-4, 81 NRC 156 (2015)
upon docketing of certifications of permanent shutdown and fuel removal, licensee’s licenses no longer authorize operation of the reactors or placement or retention of fuel into the reactor vessels and licensee is prohibited from restarting or loading fuel; DD-15-7, 82 NRC 257 (2015)

FUEL REMOVAL
licensee must provide certifications to NRC Staff that it has permanently removed fuel from its reactors; DD-15-7, 82 NRC 257 (2015)
“permanent fuel removal” from a nuclear power reactor facility is defined as a certification by licensee to NRC that it has permanently removed all fuel assemblies from the reactor vessel; LBP-15-4, 81 NRC 156 (2015)
upon docketing of certifications for permanent cessation of operations and permanent removal of fuel from the reactor vessel, license will no longer authorize operation of the reactor or emplacement or retention of fuel in the reactor vessel; CLI-15-20, 82 NRC 211 (2015)

FUKUSHIMA ACCIDENT
accident does not provide a seriously different picture of the environmental impact of a proposed uranium enrichment facility from what was previously envisioned; LBP-11-26, 74 NRC 499 (2011)
accident does not significantly alter the overall environmental picture for severe reactor accidents at the site; CLI-12-15, 75 NRC 704 (2012)
accident-related contentions are rejected as premature, and would not have addressed the standards for reopening, contention admissibility, or rule waiver; CLI-12-6, 75 NRC 352 (2012)
although the Task Force Report on the Fukushima accident did not justify initiating a generic NEPA review, the Commission acknowledged that new and significant information may come to light that must be considered in individual reactor licensing proceedings; LBP-11-32, 74 NRC 654 (2011)

any changes adopted as a result of the Fukushima accident or the Task Force Report can and will be implemented through the normal regulatory process; LBP-11-28, 74 NRC 604 (2011); LBP-11-32, 74 NRC 654 (2011)

any evaluation of the Fukushima events will include consideration of lessons learned that may apply to spent fuel pools; LBP-12-1, 75 NRC 1 (2012)

any rule or policy changes NRC may make as a result of its post-Fukushima review may be made irrespective of whether a license renewal application is pending, or whether final action on an application has been taken; CLI-12-6, 75 NRC 352 (2012)

as part of the NRC post-Fukushima lessons-learned activities, NRC is requiring all licensees to reevaluate seismic hazards at their sites, and to this end, issued a request for information; DD-15-1, 81 NRC 193 (2015)

as tangible Fukushima lessons emerge, Fukushima-related contentions in individual adjudications may become more plausible, except insofar as NRC is taking generic steps to address them; LBP-12-18, 76 NRC 127 (2012)

because the full implications of the Fukushima events for U.S. facilities are unknown, any generic NEPA duty does not accrue; LBP-11-27, 74 NRC 591 (2011); LBP-12-8, 75 NRC 539 (2012)

board does not consider intervenor’s petition, which requests rulemaking and suspension of the proceeding, because the discussion in the petition’s body specifically directs those requests to the Commission, which has already responded to these requests; LBP-11-34, 74 NRC 685 (2011)

boards are encouraged to seek guidance from the Commission with regard to new contentions based on the accident; LBP-11-32, 74 NRC 654 (2011)

claims for relief from Fukushima-related events are premature; LBP-11-27, 74 NRC 591 (2011); LBP-11-28, 74 NRC 604 (2011); LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011); LBP-11-36, 74 NRC 768 (2011); LBP-11-37, 74 NRC 774 (2011); LBP-11-39, 74 NRC 862 (2011)

Commission declined to conduct a generic NEPA analysis on the effects of Fukushima-related events; CLI-12-7, 75 NRC 379 (2012)

Commission declined to suspend adjudications or any final licensing decisions because of the accident, finding no imminent risk to public health and safety or to common defense and security; CLI-11-8, 74 NRC 214 (2011); CLI-11-10, 74 NRC 251 (2011); CLI-12-5, 75 NRC 301 (2012); CLI-12-11, 75 NRC 523 (2012)

Commission responses to requests for suspension of reactor licensing reviews and associated adjudications in the wake of the Three Mile Island accident and 9/11 terrorist attacks are discussed; LBP-11-37, 74 NRC 774 (2011)

contention in a license renewal proceeding based on applicant’s failure to consider alleged new and significant information arising from NRC’s Fukushima Task Force Report was rejected; LBP-12-8, 75 NRC 539 (2012)

contention is denied for failure of its proponent to contact the other parties to resolve the issue presented by the contention prior to its submission; LBP-11-37, 74 NRC 774 (2011)

contention is denied for failure to reference any specific portion of the application at issue; LBP-11-37, 74 NRC 774 (2011)

contention is denied for failure to show the contention is within the scope of the proceeding or is material to the findings NRC must make to support the requested licensing action; LBP-11-37, 74 NRC 774 (2011)

contention that petitioners did not relate to any unique characteristics of the particular site at issue was akin to the generic type of NEPA review that the Commission declared premature; LBP-12-18, 76 NRC 127 (2012)

contention that the environmental report fails to satisfy 10 C.F.R. 51.53(c)(2) because it does not include information about plans to modify the facility in response to post-Fukushima enforcement order is inadmissible; LBP-12-15, 76 NRC 14 (2012)

contention was inadmissible because petitioner offered nothing to link the outcome of the Fukushima events to either the nuclear power plant or the license renewal application and thus failed to show any dispute with the application; CLI-12-13, 75 NRC 681 (2012)
contentions based on the Fukushima accident must be relevant to the present proceeding and must link the events at Fukushima to the risk of a severe accident at the site that is the subject of the proceeding; LBP-12-1, 75 NRC 1 (2012)
continuing licensing processes in accordance with current regulations pending completion of long-term analyses of the accident would cause no imminent risk to public health and safety because current regulations provide for incorporating new requirements into existing licenses as they are shown to be necessary; CLI-12-9, 75 NRC 421 (2012)
current regulatory approach and the resultant plant capabilities provide confidence to conclude that a sequence of events similar to the Fukushima accident is unlikely to occur in the U.S.; DD-15-6, 81 NRC 884 (2015); DD-15-6, 81 NRC 884 (2015)
depending on NRC Staff’s resolution of Fukushima-related rulemaking petitions, Staff could seek Commission permission to suspend one or more of the generic determinations in the license renewal environmental rules and include a new analysis in pending, plant-specific environmental impact statements; LBP-12-1, 75 NRC 1 (2012)
even for licenses that NRC issues before completing its review of hazards like those at Fukushima, any new Fukushima-driven requirements can be imposed later, if necessary, to protect public health and safety; CLI-15-19, 82 NRC 151 (2015)
events at Fukushima, and the ensuing NRC response, are not, at this point, to be considered new and significant information under NEPA; LBP-12-8, 75 NRC 539 (2012)
events of Fukushima do not present a sufficiently grave threat to public safety that reactor licensing proceedings should be suspended; LBP-12-1, 75 NRC 1 (2012)
for license renewal safety review, it is not clear at this point whether any enhancements or changes considered by the Fukushima Task Force will bear on license renewal regulations, which are focused more narrowly on the proper management of aging; CLI-12-10, 75 NRC 479 (2012)
for pending license renewal applications, where the period of extended operation will not begin for at least a year, there is no imminent threat to public health and safety that requires suspension of licensing proceedings or decisions; LBP-11-35, 74 NRC 701 (2011)
for suspension of licensing proceedings, petitioners must show that continuation of proceedings, pending consideration of a rulemaking petition, would jeopardize the public health and safety, prove an obstacle to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes that might emerge from NRC’s continued evaluation of the impacts of the Fukushima accident; LBP-11-33, 74 NRC 675 (2011)
Fukushima-related contention based on a Staff Requirements Memorandum are inadmissible because the SRM does not define or impose any new requirements arising from the Fukushima accident and thus fails to establish a genuine dispute on a material issue of law or fact; LBP-11-37, 74 NRC 774 (2011)
full implications of the Fukushima accident for U.S. facilities are unknown, and thus any generic NEPA duty, if one is appropriate at all, does not accrue now; LBP-11-33, 74 NRC 675 (2011)
given that NRC will have the opportunity to further consider the concerns that rulemaking petitioners have expressed, and as it further considers actions related to the Fukushima events, it declines to suspend any proceeding pending resolution of the rulemaking petition; CLI-14-7, 80 NRC 1 (2014)
however “significance” is defined, the accident and its aftermath have (as any such severe accident would do) clearly painted a seriously different picture of the environmental landscape; LBP-11-23, 74 NRC 287 (2011)
if new and significant information on Fukushima events comes to light that requires consideration as part of the ongoing preparation of application-specific NEPA documents, NRC will assess the significance of that information as appropriate; CLI-12-7, 75 NRC 379 (2012)
if recommendations of the NRC’s Near-Term Task Force review of the accident constitute relevant new and significant information, then the draft supplemental environmental impact statement must address them; LBP-11-28, 74 NRC 604 (2011)
imminent risk” reflects NRC’s determination that, post-Fukushima, continued operation of U.S. nuclear plants and continued licensing activities pose no imminent risk to public health and safety; CLI-15-19, 82 NRC 151 (2015)
in response to the Fukushima accident in Japan, NRC is conducting a comprehensive safety review of the requirements and guidance associated with accident mitigation measures; CLI-12-1, 75 NRC 39 (2012)
in the context of NRC’s post-Fukushima activities, nothing learned to date requires immediate cessation of NRC review of license applications; CLI-15-19, 82 NRC 151 (2015)
in the future the Commission might provide relevant guidance regarding the proper time frame for adjudicating Fukushima-related contentions; LBP-11-39, 74 NRC 862 (2011)
intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or other sources of new and materially different information, provided that it does so promptly after the new information becomes available and that it successfully fulfills the general contention admissibility requirements; LBP-11-22, 74 NRC 259 (2011)
isuance of a Staff Requirements Memorandum directing Staff to implement “without delay” the recommendations of the Fukushima Task Force does not render contentions admissible; LBP-11-36, 74 NRC 768 (2011)
motion to admit a new contention arguing that applicant’s environmental report fails to satisfy NEPA because it does not address findings and recommendations raised by Task Force Report on the Fukushima Dai-ichi accident is denied as premature and insufficiently focused on the license renewal application; LBP-11-28, 74 NRC 604 (2011)
motions and petitions related to the Fukushima events are denied as premature; CLI-12-2, 75 NRC 63 (2012); CLI-12-7, 75 NRC 379 (2012)
moving forward with decisions and proceedings will have no effect on NRC’s ability to implement necessary rule or policy changes that might come out of its review of the accident; LBP-11-32, 74 NRC 654 (2011); LBP-11-35, 74 NRC 701 (2011)neither new procedures nor a separate timetable for raising new issues related to the Fukushima events are warranted; CLI-12-3, 75 NRC 132 (2012); CLI-12-13, 75 NRC 681 (2012); CLI-12-15, 75 NRC 704 (2012)
new information from studies of the Fukushima event as to potential consequences of a severe accident at a U.S. nuclear power plant is irrelevant to any uncertainty that might exist regarding which agency has authority over cleanup after a severe accident; LBP-11-20, 74 NRC 65 (2011)
new information requiring NRC Staff to prepare supplemental environmental review documents must present a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; LBP-11-27, 74 NRC 591 (2011)
no imminent risk to public health and safety or to the common defense and security post-Fukushima necessitates suspensions; LBP-12-18, 76 NRC 127 (2012)
one of the post-Fukushima orders or information requests can be characterized as approvals that must be obtained in connection with renewal of an operating license; LBP-12-15, 76 NRC 14 (2012)
NRC continues to comprehensively assess the accident, including carefully reviewing all recommendations outlined by NRC’s Task Force studying the accident; CLI-12-10, 75 NRC 479 (2012)
NRC continues to consider the nuclear events in Japan, and the agency is in the process of implementing and prioritizing actions to be taken in response to the accident; CLI-11-14, 74 NRC 801 (2011)
NRC has in place well-established regulatory processes by which to impose any new requirements or other enhancements that may be needed; CLI-12-2, 75 NRC 63 (2012); CLI-12-6, 75 NRC 352 (2012)
NRC need not conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as a part of the environmental review for new reactor and license renewal decisions; LBP-11-32, 74 NRC 654 (2011)
NRC regulations and case law already provide clear and uniform standards to determine the timeliness of motions to add new contentions on the Fukushima accident; LBP-11-32, 74 NRC 654 (2011)
NRC Staff review of combined license application relative to regulatory actions that the NRC has taken in response to lessons learned from the accident is discussed; CLI-15-13, 81 NRC 555 (2015)
NRC Staff verification of Fukushima-related license conditions should be a straightforward matter of applying a defined set of requirements; CLI-12-2, 75 NRC 63 (2012)
SUBJECT INDEX

NRC understanding of the details of the failure modes at the Fukushima Dai-ichi site continues to evolve and NRC continues to learn more about the extent of the damage at the site; LBP-11-28, 74 NRC 604 (2011)

NRC will address any new information presenting a seriously different picture of the environmental impact of a proposed project than previously assessed; CLI-12-10, 75 NRC 479 (2012)

NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-11-5, 74 NRC 141 (2011); LBP-11-35, 74 NRC 701 (2011)

NRC’s post-Fukushima lessons learned and information-gathering process authorize NRC to collect information from licensees to determine whether licenses should be modified, suspended, or revoked; LBP-15-27, 82 NRC 184 (2015)

ongoing regulatory and oversight processes provide reasonable assurance that each plant continues to comply with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-12-3, 75 NRC 132 (2012); CLI-12-5, 75 NRC 301 (2012)

petitioner does not identify how the Fukushima accident paints a seriously different picture of the environment, given the bounding severe accident scenarios assumed in the GEIS analysis and its consideration of liquid pathways; CLI-12-15, 75 NRC 704 (2012)

petitioner fails to specifically explain why a materially different result would have been likely had information currently available from the Fukushima accident been considered ab initio in the severe accident mitigation alternatives analysis or why that information presents a significant safety or environmental issue; LBP-11-35, 74 NRC 701 (2011)

petitioner’s attempt to tie NEPA environmental justice claim to Fukushima Task Force report is an improper effort to interpose concerns that could have been raised at the outset of the proceeding; LBP-11-37, 74 NRC 774 (2011)

petitioner’s request to hold the license renewal proceeding in abeyance until the Commission resolves petitioner’s request to suspend the proceeding pending evaluation of the Fukushima accident is denied because the Commission has denied the suspension request; LBP-11-35, 74 NRC 701 (2011)

petitioners asserted that NRC actions following the events of September 11, 2001, and the accident at Fukushima Dai-ichi were insufficient to satisfy NRC’s general obligation under the Atomic Energy Act to protect public health and safety; CLI-15-4, 81 NRC 221 (2015)

petitioners’ request for a safety analysis relative to Fukushima-related concerns was granted to the extent that the requested analyses had already been undertaken; CLI-12-9, 75 NRC 421 (2012)

petitioners’ requests to suspend various licensing proceedings, pending completion of long-term analyses of the Fukushima events and the issuance of any resulting regulatory changes were denied; CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012)

petitions for suspension of proceeding and rescission of regulations that make generic conclusions about environmental impacts of severe reactor and spent fuel pool accidents and that preclude consideration of those issues in individual licensing proceedings are denied; LBP-11-39, 74 NRC 862 (2011)

post-Fukushima spent fuel pool concerns are being addressed through rulemaking on mitigation of beyond-design-basis events; DD-15-1, 81 NRC 193 (2015)

proper mechanism for raising Fukushima-related, application-specific concerns in ongoing combined license cases is to file a new contention, consistent with the applicable procedural rules; CLI-11-5, 74 NRC 141 (2011)

raising new issues related to the Fukushima events does not warrant new procedures or a separate timetable; CLI-12-6, 75 NRC 352 (2012)

reference to generic agency recommendations alone, without facts or expert opinion that explain their significance for the unique characteristics of the sites or reactors that are the subject of the petitions, does not provide sufficient support for the common contention; LBP-12-18, 76 NRC 127 (2012)

request for analysis of whether Fukushima events constitute new and significant information under NEPA is premature; LBP-12-1, 75 NRC 1 (2012)

request for suspension of proceedings and other relief after the Fukushima Dai-ichi accident was denied; CLI-15-13, 81 NRC 555 (2015)
request that NRC conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as part of the environmental review for new reactor and license renewal decisions is premature; LBP-12-18, 76 NRC 127 (2012)

request that NRC order licensees to comply with twelve specific recommendations in the Near-Term Task Force Report is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order the immediate suspension of the operating licenses of all General Electric boiling-water reactors that use the Mark I primary containment system, citing the Fukushima Dai-ichi accident in Japan as its basis, is resolved; DD-15-1, 81 NRC 193 (2015)

request to suspend licensing and rulemaking activities pending completion of the NRC Task Force’s evaluation of the implications of the Fukushima accident and issuance of any proposed regulatory decisions and/or environmental analyses is denied; LBP-12-18, 76 NRC 127 (2012)

request to suspend proceedings because of Fukushima accident is denied; CLI-12-14, 75 NRC 692 (2012)

requests for a generic NEPA analysis were premature where NRC evaluation of Fukushima Dai-ichi events was still ongoing; LBP-15-24, 82 NRC 68 (2015)

requests to suspend ongoing adjudicatory and licensing activities pending full consideration of the safety and environmental implications of the Fukushima accident are denied; LBP-11-34, 74 NRC 685 (2011)

spent fuel storage pool matters will be addressed, if studies of implications from Fukushima warrant, through more generic regulatory reform; LBP-11-35, 74 NRC 701 (2011)

suspension of license renewal proceedings in light of the Fukushima accident is unnecessary because current regulatory and oversight processes provide reasonable assurance that each plant continues to comply with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-12-6, 75 NRC 352 (2012)

suspension of reactor licensing proceedings in light of the events at Fukushima is denied; LBP-11-33, 74 NRC 675 (2011)

there is no imminent safety reason to halt new reactor licensing because there is sufficient time to implement new Fukushima-related requirements before operation; CLI-12-2, 75 NRC 63 (2012)

to the extent NRC’s review of the Fukushima accident leads to new rules applicable to any pending application, the Commission has sufficient authority and time to apply them to any new license that may be issued; CLI-11-5, 74 NRC 141 (2011)

to the extent that Fukushima events provide the basis for contentions appropriate for litigation in individual proceedings, NRC procedural rules contain ample provisions through which litigants may seek admission of new or amended contentions; LBP-12-18, 76 NRC 127 (2012)

unsupported speculation that fresh analysis might lead NRC to require additional mitigation measures simply does not raise a significant safety issue or an exceptionally grave issue; LBP-11-23, 74 NRC 287 (2011)

until NRC defines and imposes on licensees new requirements arising from the Fukushima events, such requirements are highly speculative; LBP-11-33, 74 NRC 675 (2011)

GENERAL DESIGN CRITERIA
applicant for a construction permit must include the principal design criteria for a proposed facility and the relationship of the design bases to the PDC as part of the preliminary safety analysis report; DD-15-11, 82 NRC 361 (2015)

GENERAL LICENSES
all Part 50 and Part 52 reactor licensees may be granted a general license to store spent fuel in an independent spent fuel storage installation; CLI-15-4, 81 NRC 221 (2015)

GENERATORS
See Diesel Generators

GENERIC ENVIRONMENTAL IMPACT STATEMENT
absent a rule waiver, NRC Staff is not expected to revisit the impact determinations made in the Continued Storage GEIS as part of its site-specific NEPA reviews; CLI-15-10, 81 NRC 535 (2015)

adjudicating Category 1 issues site by site based merely on a claim of new and significant information would defeat the purpose of resolving generic issues in a generic environmental impact statement; LBP-12-8, 75 NRC 539 (2012)
although NRC has issued a GEIS for in situ uranium recovery facilities that assesses potential ISR facility construction/operation/decommissioning impacts, for the initial licensing of each individual ISR facility, NRC Staff will first prepare a draft supplemental environmental impact statement; LBP-15-3, 81 NRC 65 (2015)

applicants should rely on the GEIS for terrorism-related issues in a license renewal application; CLI-11-11, 74 NRC 427 (2011)
as an alternative ground for excluding a NEPA terrorism contention, NRC Staff’s determination in the GEIS that the environmental impacts of a terrorist attack were bounded by those resulting from internally initiated events is sufficient to address the environmental impacts of terrorism; CLI-11-11, 74 NRC 427 (2011)

assumptions used in the analysis of impacts of continued storage of spent fuel are sufficiently conservative to bound the impacts such that variances that may occur between sites are unlikely to result in environmental impact determinations greater than those presented in the continued storage GEIS; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
because generic impact determinations on impacts of continued storage have been the subject of extensive public participation in the rulemaking process, they are excluded from litigation in individual proceedings; LBP-14-15, 80 NRC 151 (2014)
because the GEIS provides a severe accident impacts analysis that envelopes potential impacts at all existing plants, the environmental impacts of severe accidents during the license renewal term already have been addressed generically in bounding fashion; LBP-12-18, 76 NRC 127 (2012)
board improperly allowed petitioner to challenge the GEIS’s generic finding regarding severe accident consequences; CLI-15-6, 81 NRC 340 (2015)
Category 1 issues are those resolved generically by the GEIS and need not be addressed as part of license renewal; LBP-12-8, 75 NRC 539 (2012)
challenges to the GEIS’s determinations amount to attacks on NRC regulations and are not within the scope of license renewal proceedings; LBP-13-8, 78 NRC 1 (2013)
Commission adopted a GEIS to identify and analyze the environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-12, 81 NRC 452 (2015)
Commission directed licensing boards to reject pending waste confidence contentions after adopting a GEIS to identify and analyze environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-5, 81 NRC 249 (2015)
Commission sensibly has chosen to address high-level waste disposal generically rather than unnecessarily to revisit the same waste disposal questions, license by license, when reviewing individual applications; LBP-14-16, 80 NRC 183 (2014)
contention that supplementation of the environmental impact statement is necessary to allow members of the public to lodge placeholder contentions challenging Commission reliance, in individual licensing proceedings, on the Continued Storage GEIS and Rule is inadmissible; CLI-15-10, 81 NRC 535 (2015)
contentions on Category 1 issues amount to a challenge to the regulation barring challenges to generic environmental findings; CLI-12-19, 76 NRC 377 (2012)
Continued Storage Rule and supporting GEIS to assess the environmental impacts of spent fuel storage after the end of a reactor’s license term were approved; CLI-15-10, 81 NRC 535 (2015)
depending on NRC Staff’s resolution of Fukushima-related rulemaking petitions, NRC Staff could seek Commission permission to suspend one or more of the generic determinations in the license renewal environmental rules and include a new analysis in pending, plant-specific environmental impact statements; LBP-12-1, 75 NRC 1 (2012)
environmental impacts of license renewal are classified as either Category 1, which are generally addressed by the NRC’s GEIS for license renewal, or Category 2, which are analyzed on a site-specific basis; LBP-11-17, 74 NRC 11 (2011)
for each license renewal application, NRC Staff must prepare a plant-specific supplement to the GEIS that adopts applicable generic impact findings from the GEIS and analyzes site-specific impacts; LBP-12-8, 75 NRC 539 (2012); LBP-12-10, 75 NRC 633 (2012)
GEIS findings with respect to severe accident consequences are not subject to challenge in individual license renewal proceedings; CLI-15-6, 81 NRC 340 (2015)
GEIS for in-situ leach uranium milling facilities addresses, among other topics, matters specified in section 51.45; LBP-15-3, 81 NRC 65 (2015)
SUBJECT INDEX

GEIS for ISL mining is subject to an appropriate challenge in an adjudicatory proceeding; LBP-15-11, 81 NRC 401 (2015)

GEIS was adopted to identify and analyze the environmental impacts of continued storage of spent nuclear fuel; LBP-14-16, 80 NRC 183 (2014)

generic analyses of the environmental impacts of continued storage and disposal in the context of NRC reactor licensing proceedings are acceptable; CLI-15-4, 81 NRC 221 (2015)

generic approach to high-level waste disposal has been endorsed by higher courts; LBP-14-16, 80 NRC 183 (2014)

generic environmental analysis is incorporated into NRC regulations, and thus Category 1 generic findings may not be challenged in individual licensing proceedings unless accompanied by a petition for rule waiver; CLI-15-6, 81 NRC 340 (2015)

impact determinations in the Continued Storage GEIS shall be deemed incorporated into the environmental impact statements associated with combined license and license renewal applications; CLI-15-10, 81 NRC 535 (2015)

impacts of continued storage will not vary significantly across sites and can be analyzed generically; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

it is not clear NRC Staff relied upon the GEIS when preparing the draft supplemental environmental impact statement because it was not incorporated by reference or mentioned in any other manner; LBP-15-11, 81 NRC 401 (2015)

license renewal applicant can adopt findings of the GEIS, designated as Category 1 issues in Table B-1 of Appendix B to Subpart A of Part 51; LBP-13-13, 78 NRC 246 (2013)

license renewal applicant need not include analyses of the environmental impacts of Category 1 issues in its environmental report because NRC Staff incorporates the GEIS analysis of Category 1 issues as part of the overall cost-benefit balance in the supplemental environmental impact statement for license renewal; CLI-12-19, 76 NRC 377 (2012)

license renewal applicant’s environmental report may adopt the findings of the GEIS, but must also include site-specific analyses of Category 2 issues; CLI-15-6, 81 NRC 340 (2015)

license renewal provisions cover environmental issues relating to onsite spent fuel storage generically, and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

licensing boards were instructed to hold in abeyance any contentions on waste confidence matters until after the Commission’s issuance of a new GEIS; LBP-14-16, 80 NRC 183 (2014)

NRC has resolved many environmental impacts for license renewal through a GEIS and these issues need not be revisited in site-specific EISs; CLI-14-7, 80 NRC 1 (2014)

NRC need not conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as a part of the environmental review for new reactor and license renewal decisions; LBP-11-32, 74 NRC 654 (2011)

NRC need not incorporate a GEIS by reference where the Commission has already taken public comment and performed a comprehensive analysis of the environmental consequences of continued spent fuel storage; CLI-15-10, 81 NRC 535 (2015)

NRC Staff uses applicant’s environmental report as a starting point for its own environmental review of a license renewal application, the results of which are published as a supplement to the GEIS; CLI-15-5, 81 NRC 340 (2015)

public comment will be afforded in advance on any generic waste confidence document that NRC issues on remand, be it a fresh rule, a policy statement, an environmental assessment, or an environmental impact statement; CLI-12-16, 76 NRC 63 (2012)

request that NRC conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as part of the environmental review for new reactor and license renewal decisions is premature; LBP-12-18, 76 NRC 127 (2012)
spent fuel pool GEIS is not limited to discussing only normal operations, but also discusses potential accidents and other nonroutine events, and thus need not be included in the severe accident mitigation alternatives analysis for license renewal; LBP-15-5, 81 NRC 249 (2015)
to meet its environmental review burden in license renewal cases, NRC Staff developed the GEIS, which contains findings that apply to all nuclear power plants and are codified in Appendix B of Subpart A of 10 C.F.R. Part 51; LBP-13-13, 78 NRC 246 (2013)
to the extent that petitioner challenges the GEIS, its remedy is a petition for rulemaking or a petition for a waiver of the rules based on circumstances; CLI-11-11, 74 NRC 427 (2011)

**GENERIC ISSUES**

a severe accident mitigation alternative need not be implemented during a particular plant’s license renewal review if the Commission is concurrently resolving the safety improvement achieved by that SAMA through a generic process attached to the agency’s review of all plants’ current licensing bases; LBP-11-17, 74 NRC 11 (2011)

adjudicating Category 1 issues site by site based merely on a claim of new and significant information would defeat the purpose of resolving generic issues in a generic environmental impact statement; CLI-13-7, 78 NRC 199 (2013); LBP-12-8, 75 NRC 539 (2012)

admission of contentions that NRC may ultimately deal with generically through notice-and-comment rulemaking is precluded; LBP-11-32, 74 NRC 654 (2011)

agency did not need to assess site-specific impacts of continuing to store the spent fuel in either an onsite or offsite storage facility in new reactor licensing environmental impact statements or environmental assessments beyond the expiration dates of reactor licenses; LBP-14-16, 80 NRC 183 (2014)

all uranium fuel cycle and waste management issues, including low-level waste storage and disposal, mixed waste storage and disposal, onsite spent fuel storage, and transportation, are Category 1 issues with a small impact; LBP-11-2, 73 NRC 28 (2011)

as tangible Fukushima lessons emerge, Fukushima-related contentions in individual adjudications may become more plausible, except insofar as the NRC is taking generic steps to address them; LBP-12-18, 76 NRC 127 (2012)

because Category 1 issues already have been reviewed on a generic basis, applicant’s environmental report need not provide a site-specific analysis of these issues; CLI-11-11, 74 NRC 427 (2011)

because NRC does not know today the full implications of the Fukushima events for U.S. facilities, any generic NEPA duty, if one is appropriate at all, does not accrue now; LBP-12-8, 75 NRC 539 (2012)

because the full implications of the Fukushima events for U.S. facilities are unknown, any generic NEPA duty does not accrue; LBP-11-27, 74 NRC 591 (2011)

categories of actions are exempt from NEPA review where NRC has made a generic finding that the actions do not individually or cumulatively have a significant effect on the human environment; LBP-15-26, 82 NRC 163 (2015)

Category 1 impacts are those that NRC has determined are common across plants and are outside the scope of individual license renewal proceedings; LBP-13-33, 78 NRC 246 (2013)

Category 1 issues are environmental issues that NRC has resolved generically and therefore does not consider in specific license renewal proceedings; CLI-15-18, 82 NRC 135 (2015); LBP-12-8, 75 NRC 539 (2012)

Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-11-13, 73 NRC 354 (2011)

challenges to the generic environmental impact statement’s determinations amount to attacks on NRC regulations and are not within the scope of license renewal proceedings; LBP-13-8, 78 NRC 1 (2013)

Commission approval of a rule waiver could allow a contention on a Category 1 issue to proceed where special circumstances exist; CLI-15-6, 81 NRC 340 (2015)

comprehensive generic analysis may be used to evaluate onsite risks that are essentially common to all plants, as long as NRC provides the opportunity for concerned parties to raise site-specific differences at the time of a specific site’s licensing; LBP-12-18, 76 NRC 127 (2012)

concerns that apply to all spent fuel pools at all reactors are more appropriately addressed via rulemaking or other appropriate generic activity; CLI-12-6, 75 NRC 352 (2012)
consideration in adjudicatory proceedings of issues presently to be taken up by the Commission in rulemaking would be a wasteful duplication of effort; LBP-14-1, 79 NRC 39 (2014)

contention that applicant’s SAMA analysis improperly ignored radioactive waste disposal is outside the scope of the proceeding because it directly challenges the generic determinations in Table B-1 of Appendix B to Part 51; LBP-11-2, 73 NRC 28 (2011)

exception in 10 C.F.R. 51.53(c)(3)(ii)(L) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in certain license renewal adjudications; CLI-13-7, 78 NRC 199 (2013)

Fukushima contention that petitioners did not relate to any unique characteristics of the particular site at issue was akin to the generic type of NEPA review that the Commission declared premature; LBP-12-18, 76 NRC 127 (2012)

generic analysis remains appropriate for spent fuel pool accidents in license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)

generic determinations are appropriately excluded from litigation in individual proceedings; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

generic findings are reflected regarding impacts of spent fuel storage after the cessation of licensed operation of a nuclear power plant; CLI-14-8, 80 NRC 71 (2014)

generic, unsubstantiated claims regarding health, safety, and property devaluation impacts are insufficient to establish standing; LBP-12-3, 75 NRC 164 (2012)

generically applicable concerns are not appropriate for resolution in an adjudicatory proceeding, a rulemaking petition being the appropriate mechanism for raising those concerns; CLI-12-6, 75 NRC 352 (2012)

impacts of continued storage will not vary significantly across sites and can be analyzed generically; LBP-14-16, 80 NRC 183 (2014)

licensing proceedings are not the appropriate venue for generic issues, especially those that are about to become the subject of rulemaking; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

“new and significant information” requirement does not override, for purposes of litigating the issues in an adjudicatory proceeding, the exclusion of Category 1 issues in section 51.53(c)(3)(i) from site-specific review; CLI-12-19, 76 NRC 377 (2012)

NRC has discretion to resolve issues generically by rulemaking; CLI-11-11, 74 NRC 427 (2011)

NRC’s use of rulemaking to address generic issues has been approved by the Supreme Court; CLI-15-6, 81 NRC 340 (2015)

Part 51 license renewal provisions cover environmental issues relating to onsite spent fuel storage generically and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

pointing to alleged new and significant information is not enough to allow boards to adjudicate an issue resolved generically by regulation; LBP-15-5, 81 NRC 249 (2015)

structures and components associated only with active functions can be generically excluded from a license renewal aging management review; CLI-12-5, 75 NRC 301 (2012)

subsection (L) of 10 C.F.R. 51.53(c)(3)(ii) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in case-by-case license renewal adjudications; LBP-13-1, 77 NRC 57 (2013)

to the extent petitioner seeks to raise a generic challenge to the 10-mile plume exposure pathway EPZ, such an argument constitutes an impermissible challenge to NRC regulations; LBP-11-15, 73 NRC 629 (2011)

when engaging in rulemaking, the Commission is carving out issues from adjudication for generic resolution; CLI-13-7, 78 NRC 199 (2013)

where special circumstances make a generic rule inapplicable to a particular proceeding, participant may petition for a rule waiver or exception; CLI-15-6, 81 NRC 340 (2015)

GENERIC SAFETY ISSUES

Continued Storage Rule makes generic safety findings concerning feasibility and capacity of spent fuel disposal; LBP-15-9, 81 NRC 396 (2015)

if petitioner wishes to pursue its concerns about the safety of relocating certain surveillance frequencies generically, it may, at any time, file a petition for rulemaking to amend the regulation; CLI-13-10, 78 NRC 563 (2013)
subject index

geologic conditions
contention that materials license amendment application fails to provide sufficient information regarding
the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 11
(2014)
geologic and seismic siting factors considered for design must include a determination of the safe
shutdown earthquake ground motion for the site and the potential for surface tectonic and non-tectonic
deformations; LBP-11-16, 73 NRC 645 (2011)

geologic repositories
contention concerning need under NEPA to include a discussion of the environmental impacts of spent
fuel pool leakage, SFP fires, and the lack of a spent fuel repository is held in abeyance; LBP-12-24, 76
NRC 503 (2012)
DOE may incorporate in its application for geologic repository information from previous reports filed
with the Commission, provided that such references are clear and specific; LBP-12-24, 76 NRC 503
(2012)
in light of the dim prospects for moving forward with a geologic repository in the contemporary political
environment, NRC must consider the environmental effects of storing waste in spent fuel pools or casks
for extended periods; LBP-12-24, 76 NRC 503 (2012)

government parties
a governmental body’s interest in protecting the individuals and territory that fall under that body’s
authority establishes an organizational interest for standing purposes; LBP-11-6, 73 NRC 149 (2011)
a municipality is deemed to have standing in a reactor licensing proceeding that involves a facility
located within its boundaries; LBP-11-6, 73 NRC 149 (2011)
Commission grants standing to a governmental body within close proximity of a proposed nuclear reactor
under the proximity presumption, effectively dispensing with the need to make an affirmative showing
of injury, causation, and redressability; LBP-15-19, 81 NRC 815 (2015)
where a municipality seeks to participate in a reactor licensing proceeding that does not involve a facility
within the municipality’s boundaries, it can, for purposes of establishing standing, rely on the 50-mile
proximity presumption to the same extent as an individual or an organization; LBP-11-6, 73 NRC 149
(2011)

grandfathered conditions
if licensee amends any of its grandfathered license conditions that were related to the decommissioning
trust fund, from that point forward licensee must comply with all of the requirements of 10 C.F.R.
50.75(h); LBP-15-24, 82 NRC 68 (2015)
where license conditions predate issuance of 10 C.F.R. 50.75(h)(5), the plant was allowed to keep its
existing license conditions; LBP-15-24, 82 NRC 68 (2015)

greenhouse gas emissions
because federal agencies typically describe their consideration of the energy requirements of a proposed
action, in the context of that analysis agencies should evaluate GHG emissions; LBP-11-26, 74 NRC
499 (2011)
for power reactors, NRC Staff review should encompass emissions from the uranium fuel cycle as well as
from construction and operation of the facility to be licensed; LBP-11-26, 74 NRC 499 (2011)
if impacts are remote or speculative, the environmental impact statement need not discuss them, including
greenhouse gas emissions; LBP-11-7, 73 NRC 254 (2011)
in assessing GHG impacts, NRC must devote its resources to taking a hard look at the issue; LBP-11-26,
74 NRC 499 (2011)
under NEPA, NRC must assess the environmental impacts of a proposed facility, including those impacts
associated with GHG emissions by the proposed facility; LBP-11-26, 74 NRC 499 (2011)
under NEPA, NRC Staff must consider the cumulative impact of greenhouse gas emissions from a
proposed facility; LBP-11-7, 73 NRC 254 (2011)

groundwater
admissibility of contention that environmental assessment fails to adequately describe and analyze aquifer
restoration goals in light of new standards for determining alternative control limits is decided;
SUBJECT INDEX

admissibility of contention that environmental assessment fails to analyze impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 401 (2015)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 401 (2015)
“baseline” data describe results of applicant’s preoperational or baseline groundwater quality sampling program providing data on project-wide groundwater conditions; LBP-15-16, 81 NRC 618 (2015)
Commission-approved background cannot be established until after an ISR license has been issued; LBP-15-3, 81 NRC 65 (2015)
confinement of aquifers is material to the environmental impacts of the licensing action; CLI-14-2, 79 NRC 11 (2014)
contention alleging that final supplemental environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging that final supplemental environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-14-5, 79 NRC 377 (2014)
contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that draft environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)
contention that draft environmental impact statement fails to include adequate hydrogeological analysis to assess potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that draft environmental impact statement fails to include adequate hydrological information to demonstrate applicant’s ability to contain groundwater fluid migration is admissible; LBP-13-10, 78 NRC 117 (2013)
contention that draft environmental impact statement lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is admissible; LBP-13-10, 78 NRC 117 (2013)
contention that environmental assessment violates the National Environmental Policy Act in its failure to analyze groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 401 (2015)
contention that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner is decided; LBP-15-16, 81 NRC 618 (2015)
EPA drinking water maximum contaminant levels continue to be an accepted groundwater restoration standard; LBP-15-3, 81 NRC 65 (2015)
in situ recovery license applicant is barred from installing a complete wellfield and associated monitor well networks until after a license is issued; LBP-15-3, 81 NRC 65 (2015)
intervenors fail to establish the validity of their various challenges to the adequacy of the final supplemental environmental impact statement description of the baseline water quality at the ISR site; LBP-15-3, 81 NRC 65 (2015)
preslicensing monitoring program to characterize site groundwater constituents need not be coextensive with the Criterion 7A preoperational monitoring, license condition-based program intended to provide the information needed for setting Criterion 5B groundwater protection standards and UCLs; LBP-15-16, 81 NRC 618 (2015)
“primary groundwater restoration” is to return the constituent to background levels; LBP-15-3, 81 NRC 65 (2015)
regional groundwater flow modeling is discussed; LBP-13-4, 77 NRC 107 (2013)
restoration to an alternate concentration limit is permitted only when restoration to a primary or the secondary Table 5C standard is not practically achievable; LBP-15-3, 81 NRC 65 (2015)
waiting until after licensing, although before mining operations begin, to definitively establish the groundwater quality baselines and upper control limits is consistent with industry practice and NRC.
methodology, given the sequential development of in situ leach wellfields; LBP-15-16, 81 NRC 618 (2015)
“secondary groundwater restoration” is restoration of constituent levels to the drinking water limits enumerated in Appendix A, Table 5C; LBP-15-3, 81 NRC 65 (2015)

GROUNDWATER CONTAMINATION
activities associated with, and the data coming from, prelicensing groundwater monitoring activities are associated with compliance with the dictates of 10 C.F.R. Part 40, Appendix A, Criterion 7; LBP-15-3, 81 NRC 65 (2015)
although the Part 40, Appendix A criteria were developed for conventional uranium milling facilities, they have since been applied in limited fashion to ISR facilities; LBP-15-3, 81 NRC 65 (2015)
applicant for a uranium ISR license is required to provide data from a groundwater monitoring program that are sufficient to establish a prelicensing site characterization baseline for assessing the potential effects of facility operations on local groundwater quality; LBP-15-3, 81 NRC 65 (2015)
applicant’s monitoring program for establishing existing site characterization baseline values for certain site groundwater constituents prior to issuance of a source materials license for ISR facility construction and operation need not, to comply with NEPA and NRC’s Part 51 implementing regulations, be conducted so as to also provide background information needed to set Appendix A, Criterion 5B groundwater protection standards; LBP-15-3, 81 NRC 65 (2015)
as distance increases from the in situ recovery facility, petitioner with an upgradient water source must expect to provide the board with some analysis as to how any contamination will affect any wells alleged to be impacted by the facility; LBP-12-3, 75 NRC 164 (2012)
background water quality data are used to establish existing hazardous constituent concentrations in an aquifer, which can then be used to set post-operational concentration limits; LBP-15-16, 81 NRC 618 (2015)
bounding analysis provided in the final supplemental environmental impact statement, as supplemented in the record, provides sufficient information about a reasonable range of hazardous constituent concentration values associated with potential post-operational alternate concentration limits so as to provide an appropriate NEPA assessment of the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits; LBP-15-3, 81 NRC 65 (2015)
claim that application fails to adequately present the true extent of historical exploration drilling, borehole abandonment details, R&D testing, changes to groundwater water quality, and interconnections of geologic strata contains no alleged facts to support this opinion and thus does not raise a genuine dispute; LBP-12-3, 75 NRC 164 (2012)
contention about computer modeling methodology used to calculate groundwater quantity impacts is inadmissible as lacking sufficient factual or expert support and as failing to establish a material factual or legal dispute; LBP-12-3, 75 NRC 164 (2012)
contention alleging that final supplemental environmental impact statement fails to include adequate hydrogeological information to demonstrate ability to contain fluid migration and assess potential impacts to groundwater is admissible; LBP-14-5, 79 NRC 377 (2014)
contention asserting that because no previous ISL/ISR mining operation has been able to restore groundwater to baseline standards, applicant will be required to request that the Commission set an alternate concentration limit for aqueous contaminants is admissible; LBP-12-3, 75 NRC 164 (2012)
contention asserting that NEPA requires a groundwater baseline characterization for an in situ recovery site is admissible; LBP-12-3, 75 NRC 164 (2012)
contention contesting failure of applicant to evaluate groundwater impacts of in situ recovery is inadmissible for failure to present factual allegations and/or expert opinion to support the contention; LBP-11-16, 73 NRC 645 (2011)
contention contesting failure of applicant to evaluate groundwater impacts of in situ recovery is inadmissible for failure to present factual allegations and/or expert opinion to support the contention; LBP-13-6, 77 NRC 253 (2013)
contention that draft environmental impact statement fails to analyze the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)
subject index

contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess adequate confinement and potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that draft environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 456 (2015)

contention that environmental review documents fail to identify source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene in groundwater is inadmissible as untimely; LBP-15-19, 81 NRC 815 (2015)

contention that final supplemental environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 65 (2015)

contention that final supplemental environmental impact statement fails to comply with NRC regulations and NEPA because it lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner is decided; LBP-15-3, 81 NRC 65 (2015)

contention that the environmental report is deficient in concluding that environmental impacts from proposed deep injection wells will be small because the ER fails to identify the source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene is admissible; LBP-12-9, 75 NRC 615 (2012)

contention that wastewater contains chemical contaminants that are not discussed in the environmental report, and that when the wastewater is discharged via deep injection wells, the chemicals might migrate to an aquifer is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)

determination of background groundwater quality to include sampling of wells that are hydraulically upgradient of the waste management area is not required if non-upgradient well sampling will provide an indication of background groundwater quality that is representative, or more representative, than that provided by upgradient wells; LBP-15-3, 81 NRC 65 (2015)

dose limits from tritium in groundwater for individual members of the public were never approached; DD-11-1, 73 NRC 7 (2011)

environmental contention regarding cumulative impact on groundwater quantity of the in situ recovery project and the planned expansion satisfies admissibility requirements; LBP-12-3, 75 NRC 164 (2012)

for petitioners claiming to be using water from the same aquifer as for the uranium ore source, regardless of distance from the facility in question, licensing boards have found that a plausible pathway connecting the proposed mining operation to their water source has been shown so as to establish petitioners’ standing; LBP-12-3, 75 NRC 164 (2012)

groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

in exempting an aquifer from MCLs, EPA has to find that the aquifer cannot and will not serve as a source of drinking water because it is mineral producing and can be demonstrated to contain minerals that, considering their quantity and location, are expected to be commercially producible; LBP-15-3, 81 NRC 65 (2015)

licensee shall establish a detection monitoring program needed for NRC to set the site-specific groundwater protection standards, and the monitoring program must be in place when specified by NRC in license conditions; LBP-15-3, 81 NRC 65 (2015)

nineteen factors must be considered in making the “present and potential hazard” finding requisite to Commission approval of an alternate concentration limit; LBP-15-3, 81 NRC 65 (2015)

no in situ recovery facility has ever requested that all OZ aquifer groundwater hazardous constituents be restored to CAB concentrations or Criterion 5B(5)(b) MCLs, as those are currently defined; LBP-15-3, 81 NRC 65 (2015)

nothing in 10 C.F.R. Part 40, Appendix A, Criterion 5B precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate
SUBJECT INDEX

to provide the necessary information to characterize properly the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 65 (2015)
nothing in the definition of “construction” in 10 C.F.R. 40.4 precludes the installation of wells or the use of monitoring protocols as needed to provide those background data; LBP-15-3, 81 NRC 65 (2015)
NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater remains well below the ALARA dose objectives; DD-11-1, 73 NRC 7 (2011)
NRC regulations explicitly allow the use of alternate concentration limits for hazardous constituents; LBP-15-11, 81 NRC 401 (2015)
organizational interest in protecting the natural resources of the Black Hills of South Dakota with a focus on groundwater contamination from uranium mining is insufficient to establish organizational standing; LBP-13-6, 77 NRC 253 (2013)
petitioner whose property is upgradient but nonetheless located in close proximity to a proposed in situ recovery facility may be able to establish its plausible pathway with a less particularized showing; LBP-12-3, 75 NRC 164 (2012)
petitioners considerably upgradient of a mining area must provide scientific or technical support for how contaminated material from an in situ recovery site might plausibly enter their drinking water to fulfill the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)
petitioners’ request for cold shutdown because of radiological contamination of groundwater from tritium is denied; DD-11-3, 73 NRC 375 (2011)
post-licensing, preoperational activities conducted to comply with Part 40, Appendix A, Criterion 7 are associated with compliance with the dictates of 10 C.F.R. Part 40, Appendix A, Criteria 5B and 7A; LBP-15-3, 81 NRC 65 (2015)
proper sampling plan for establishing baseline values is described; LBP-15-3, 81 NRC 65 (2015)
purpose of ACLs is to address situations where restoring groundwater to baseline conditions or MCLs would not be practicable; LBP-13-9, 78 NRC 37 (2013)
requirements for groundwater restoration standards for ISR mining operations are set forth in 10 C.F.R. Part 40, Appendix A, Criterion 5B(5); LBP-15-3, 81 NRC 65 (2015)
results of review by NRC Staff and Indian tribe of applicant’s newly disclosed well log data did not paint a seriously different picture of the environmental landscape; LBP-15-16, 81 NRC 618 (2015)
site-specific data to confirm proper baseline quality values, and confirm whether existing rock units provide adequate confinement cannot be collected until an in situ leach well field has been installed; LBP-15-3, 81 NRC 65 (2015)
subset of the production and injection wells to be drilled within the boundaries of the ISR wellfield is to be used to sample groundwater from the aquifer prior to the commencement of operations to establish hazardous constituent Commission-approved background concentrations; LBP-15-3, 81 NRC 65 (2015)
three alternative standards for groundwater restoration at in situ recovery facilities are background concentrations, maximum values from chart 5C, or an alternate concentration limit; LBP-13-9, 78 NRC 37 (2013)
to have an alternate concentration limit approved, licensee must demonstrate that the hazardous constituent value is as low as reasonably achievable, after considering practicable corrective actions, and that the constituent will not pose a substantial present or potential hazard to human health or the environment as long as the ACL is not exceeded; LBP-15-3, 81 NRC 65 (2015)
waiting until after licensing (although before mining operations begin) to establish definitively the groundwater quality baselines and upper control limits is consistent with industry practice and NRC methodology, given the sequential development of in situ leach well fields; LBP-15-3, 81 NRC 65 (2015)
water samples taken from one well located hydrologically upgradient are part of the groundwater sampling protocol; LBP-15-3, 81 NRC 65 (2015)
when an ore zone and petitioner’s water source exist in separate aquifers, the injury/causation question is whether there is an interconnection between these aquifers; LBP-12-3, 75 NRC 164 (2012)
HARMLESS ERROR

doctrine has only limited application in NEPA cases, and none where the agency has failed to take the required hard look at environmental consequences and alternatives; LBP-12-17, 76 NRC 71 (2012)
if the agency error did not affect the outcome, it did not prejudice the petitioner; LBP-14-2, 79 NRC 131 (2014)

1012
HAZARDOUS MATERIALS
contention that environmental review documents fail to identify source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene in groundwater is inadmissible as untimely; LBP-15-19, 81 NRC 815 (2015)
NRC regulations explicitly allow the use of alternate concentration limits for hazardous constituents; LBP-15-11, 81 NRC 401 (2015)
uranium enrichment facility applications must identify radiological and chemical hazards, facility hazards that could affect safety of licensed materials, potential accident sequences and their consequences and likelihood of occurrence, and each item relied on for safety; LBP-12-21, 76 NRC 218 (2012)
HAZARDOUS WASTE
admissibility of contention that environmental assessment fails to adequately describe and analyze the impacts of maintaining post-operational wellfields as long-term hazardous waste facilities is decided; LBP-15-15, 81 NRC 598 (2015)
HEALTH AND SAFETY
admissibility of contention that final environmental assessment fails to adequately evaluate adverse impacts on public health and safety is decided; LBP-15-15, 81 NRC 598 (2015)
as a matter of policy, applicant’s decision to improve an existing program to promote health and safety or to boost public support and confidence ought not ordinarily be viewed as conferring petitioners with an automatic opportunity to advance a new contention; LBP-15-1, 81 NRC 15 (2015)
Atomic Energy Act is designed to regulate the radiological safety aspects involved in the construction and operation of a nuclear plant; LBP-11-6, 73 NRC 149 (2011)
because the shield building functions as a radiation and biological shield, failure or collapse of the shield building due to cracking propagation could lead to health and safety impacts and thus petitioner’s contention concerns a subject matter that could impact the grant or denial of a pending license application; LBP-15-1, 81 NRC 15 (2015)
before issuing a combined license, NRC must conclude that there is reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-11-6, 73 NRC 149 (2011)
claimed deficiencies in a decommissioning plan must have health and safety significance in order to be admissible; LBP-15-24, 82 NRC 68 (2015)
Commission relied on the exception to the Backfit Rule that applies when regulatory action is necessary to ensure that the facility provides adequate protection to the health and safety of the public; LBP-12-18, 76 NRC 127 (2012)
contention alleging a material deficiency must link the claimed deficiency to a public health and safety or an environmental impact; LBP-15-1, 81 NRC 15 (2015)
continued operation and continued licensing activities following the Fukushima accident do not pose an imminent risk to public health and safety; CLI-13-2, 77 NRC 39 (2013)
exceptionally grave issue is one that raises a sufficiently grave threat to public safety; LBP-12-1, 75 NRC 1 (2012)
for pending license renewal applications, where the period of extended operation will not begin for at least a year, there is no imminent threat to public health and safety that requires suspension of licensing proceedings or decisions; LBP-11-35, 74 NRC 701 (2011)
general and unparticularized references to health and safety significance and material deficiencies in the environmental report would not satisfy the rule that contentions be pled with specificity; CLI-15-18, 82 NRC 135 (2015)
generic, unsubstantiated claims regarding health, safety, and property devaluation impacts are insufficient to establish standing; LBP-12-3, 75 NRC 164 (2012)
health, safety, and environmental concerns do not constitute liberty or property subject to due process protection; LBP-11-4, 73 NRC 91 (2011)
important health and safety issue referred to a licensing board by the Commission satisfies the importance factor of the multifactor sanction test; LBP-13-2, 77 NRC 71 (2013)
in any NRC licensing proceeding, a FEMA finding will constitute a rebuttable presumption on questions of adequacy and implementation capability; LBP-11-6, 73 NRC 149 (2011)
in determining whether a federal action would significantly affect the environment, the agency should consider the degree to which the proposed action affects public health and safety; LBP-12-18, 76 NRC 127 (2012)

license transfer proceedings do not encompass a full-scale health-and-safety review of a plant; CLI-15-8, 81 NRC 500 (2015)

material condition of a plant’s reactor vessel obviously bears on the health and safety of members of the public who reside in the plant’s vicinity; LBP-15-20, 81 NRC 829 (2015)

materials license regulations contain no express prohibition on foreign ownership, but require Staff to make a finding that license issuance will not be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)

no imminent risk to public health and safety or to the common defense and security post-Fukushima necessitates suspensions; LBP-12-18, 76 NRC 127 (2012)

NRC can issue nuclear power reactor licenses to applicants only upon a finding that utilization of special nuclear material will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; CLI-15-4, 81 NRC 221 (2015)

NRC is prohibited from issuing a license to a nuclear power reactor if it would be inimical to the health or safety of the public; LBP-13-4, 77 NRC 107 (2013)

NRC may deny uranium enrichment facility applicant a license based on foreign ownership, control, or domination concerns to the extent it concludes granting such a license would be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)

NRC’s enforcement order does not state that any reportable illegal, unusual, or aberrant behavior must have a nexus to public health and safety or the common defense and security in order to be reportable; LBP-14-4, 79 NRC 319 (2014)

petitioners asserted that NRC actions following the events of September 11, 2001, and the accident at Fukushima Dai-ichi were insufficient to satisfy NRC’s general obligation under the Atomic Energy Act to protect public health and safety; CLI-15-4, 81 NRC 221 (2015)

prior to license issuance NRC must find reasonable assurance that activities authorized by the amendment can be conducted without endangering the health and safety of the public, and in compliance with Commission regulations; LBP-15-20, 81 NRC 829 (2015)

to be inimical to the common defense and security or to the health and safety of the public, control or domination must be of such a degree that the will of the licensee is subjugated to the will of the foreign entity, and the foreign entity must have the power to direct the actions of the licensee; LBP-14-3, 79 NRC 267 (2014)

to determine whether suspension of an adjudication or licensing decision is warranted, the Commission considers whether moving forward will jeopardize the public health and safety, prove an obstacle to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes; CLI-14-7, 80 NRC 1 (2014)

HEALTH EFFECTS
health-impact potential of facility traffic-associated dust, if properly pleaded, could provide a basis for standing; LBP-12-3, 75 NRC 164 (2012)

license renewal contention alleging higher cancer death rates in local counties than the state average is inadmissible because it is based on unsupported speculation; LBP-13-8, 78 NRC 1 (2013)

to challenge a Category 1 issue such as public health, petitioner must request a waiver and show that unique circumstances warrant a site-specific determination; LBP-15-5, 81 NRC 249 (2015)

HEARING FILE
any correspondence between the applicant/licensee and the NRC that is relevant to the proposed action must be included; LBP-14-2, 79 NRC 131 (2014)

NRC Staff is under a special obligation in Subpart L proceedings to create, maintain, and update a hearing file; LBP-14-2, 79 NRC 131 (2014)

HEARING PROCEDURES
absent a unanimous preference for a hearing consisting of written comments, the license transfer hearing will be an oral one; CLI-14-5, 79 NRC 254 (2014)

appeal of an order selecting a hearing procedure is permitted on the question as to whether the selection of the particular hearing procedure was in clear contravention of the criteria set forth in section 2.310; CLI-14-3, 79 NRC 31 (2014)
Atomic Energy Act does not prescribe a specific structure for the mandatory hearing requirement, and the Commission has granted licensing boards considerable flexibility to select the most appropriate approach in the circumstances of each individual case; LBP-12-21, 76 NRC 218 (2012)

formal adjudicatory procedures are inappropriate in export or import licensing proceedings; CLI-11-3, 73 NRC 613 (2011)

if the hearing on a contention is expected to take no more than 2 days to complete, the board can impose the Subpart N procedures for expedited proceedings with oral hearings specified in 10 C.F.R. 2.1400-1407; LBP-11-13, 73 NRC 534 (2011)

in the absence of any assertion that Subpart G procedures should be used to resolve any of the admitted contentions, the Subpart L hearing procedures will be used to adjudicate each admitted contention; LBP-11-2, 73 NRC 28 (2011)

intervenors in reactor licensing proceedings ordinarily cannot raise constitutional due process issues with respect to NRC hearing procedures, inasmuch as intervenors cannot claim government deprivation of life, liberty, or property as a result of the NRC’s licensing action; LBP-11-4, 73 NRC 91 (2011)

NRC may hold an informal hearing in which it requests and considers written materials without providing for traditional trial-type procedures such as oral testimony and cross-examination; LBP-11-4, 73 NRC 91 (2011)

petitioner may address the selection of hearing procedures, taking into account the provisions of 10 C.F.R. 2.310; LBP-11-6, 73 NRC 149 (2011)

petitioner requesting Subpart G procedures must demonstrate by reference to the contention and its bases and the specific procedures in Subpart G that resolving the contention will require resolution of material issues of fact that may be best determined through use of the identified procedures; LBP-11-2, 73 NRC 28 (2011)

selection of hearing procedures for contentions at the outset of a proceeding is not immutable because availability of Subpart G procedures under 10 C.F.R. 2.310(d) depends critically on whether the credibility of eyewitnesses is important in resolving a contention, and witnesses relevant to each contention are not identified, under 10 C.F.R. 2.336(a)(1), until after contentions are admitted; LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011)

Subpart G procedures are mandated for certain proceedings and parties are permitted to propound interrogatories, take depositions, and cross-examine witnesses without leave of the board; LBP-11-13, 73 NRC 534 (2011)

Subpart L procedures provide for a more informal proceeding in which discovery is generally prohibited except for specified mandatory disclosures under 10 C.F.R. 2.336 and the mandatory production of the hearing file under 10 C.F.R. 2.1203(a); LBP-11-13, 73 NRC 534 (2011)

Subpart L procedures will ordinarily be used in proceedings for the grant, renewal, licensee-initiated amendment, or termination of licenses or permits; LBP-11-6, 73 NRC 149 (2011)

upon admission of a contention in a licensing proceeding, the board must identify the specific hearing procedures to be used to adjudicate the contention; LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)

when using Subpart L procedures, the board has the primary responsibility for questioning the witnesses at any evidentiary hearing; LBP-11-13, 73 NRC 534 (2011)

within 15 days from an order granting a hearing, each party must indicate what kind of hearing it prefers; CLI-14-5, 79 NRC 254 (2014)

appeals of board rulings on hearing requests, petitions to intervene, and access to certain nonpublic information are governed by 10 C.F.R. 2.311(a); CLI-12-6, 75 NRC 352 (2012)

boards may grant requests for hearing and petitions to intervene if they determine that requestor/petitioner has standing and has proposed at least one admissible contention; LBP-13-8, 78 NRC 1 (2013)

boards must find that petitioner has standing and has proposed at least one admissible contention; CLI-12-19, 76 NRC 377 (2012)

Commission denies portions of a hearing request but refers petitioner’s underlying concerns to the Executive Director for Operations for consideration as an enforcement action; CLI-15-14, 81 NRC 729 (2015)

denial of hearing request on enforcement order is appealable as of right; CLI-13-2, 77 NRC 39 (2013)
for a request for hearing and petition to intervene to be granted, petitioner must establish that it has standing and propose at least one admissible contention; LBP-11-21, 74 NRC 115 (2011)
for proceedings for which a Federal Register notice of agency action is published, the hearing request must be filed not later than the time specified in the notice of proposed action; CLI-14-11, 80 NRC 167 (2014)
for proceedings in which a Federal Register notice is not published, the hearing request shall be filed by the later of 60 days after publication of notice on the NRC website or 60 days after the requestor receives actual notice of a pending application, but not more than 60 days after agency action on the application; CLI-14-11, 80 NRC 167 (2014)
hearing request on safety concerns over steam generator replacement is referred to the Executive Director for Operations for disposition; CLI-14-11, 80 NRC 167 (2014)
hearing request or petition to intervene must set forth with particularity the contentions sought to be raised by satisfying the six criteria; LBP-11-21, 74 NRC 115 (2011)
if the 20-day deadline for requesting a hearing in 10 C.F.R. 2.103(b) applies, NRC Staff’s failure to comply with its own responsibilities under that provision bars Staff from invoking it; LBP-11-19, 74 NRC 61 (2011)
in proceedings for which a Federal Register notice of agency action is published, a hearing request must be filed not later than the time specified in the notice or if no notice is specified, 60 days from the date of publication of the notice; CLI-15-5, 81 NRC 329 (2015)
in proceedings for which a notice of agency action is not published, a hearing request must be filed not later than the latest of 60 days after publication of notice on the NRC Web site or 60 days after the requestor receives actual notice of a pending application but not more than 60 days after agency action on the application; CLI-15-5, 81 NRC 329 (2015)
name and identity of requestor, nature of requestor’s right to be a party, and nature and extent of the requestor’s/petitioner’s property, financial, or other interests in the proceeding must be stated; LBP-14-4, 79 NRC 319 (2014)
notice failing to contain a specific time limit for administrative review, as required by federal regulations, does not trigger a time bar; LBP-11-19, 74 NRC 61 (2011)
one authorized to make a "request" is merely given permission to ask for something, not to demand it; LBP-13-3, 77 NRC 82 (2013)
regarding amendment of a license, NRC must grant a hearing upon the request of any person whose interest may be affected by the proceeding and admit any such person as a party; LBP-11-29, 74 NRC 612 (2011)
request for hearing and/or petition for leave to intervene will be granted if the board determines that requestor/petitioner has standing and has proposed at least one admissible contention; LBP-12-8, 75 NRC 539 (2012)
request for hearing on Staff denial of permission to use an alternative method for demonstrating decommissioning funding assurance is granted; LBP-11-19, 74 NRC 61 (2011)
requests for hearing and petitions for leave to intervene must set forth with particularity the contentions sought to be raised and must satisfy all six requirements of 10 C.F.R. 2.309(f)(1); CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)
requests for hearing must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact; LBP-13-3, 77 NRC 82 (2013)
section 2.311(d)(1) provides for appeals as of right on the question of whether a request for hearing should have been wholly denied; CLI-11-11, 74 NRC 427 (2011)
time for applicant to request a hearing should be tolled until notice is issued if NRC Staff fails to provide the notice and hearing opportunity mandated by 10 C.F.R. 2.103(b); LBP-11-19, 74 NRC 61 (2011)
to show standing, petitioner must state its name, address, and telephone number, nature of its right under the applicable statutes to be made a party, nature and extent of property, financial, or other interest in the proceeding, and possible effect of any decision or order that may be issued on its interest; LBP-11-29, 74 NRC 612 (2011)
usual rule of regulatory interpretation is that different language is intended to mean different things, and thus a demand for a hearing is not to be treated as a mere request for a hearing; LBP-13-3, 77 NRC 82 (2013)
where applicant has raised sufficient question as to the appropriate deadline, the board may conclude that it would be unfair to penalize applicant on account of what might be ambiguity in NRC’s own regulations; LBP-11-19, 74 NRC 61 (2011)

HEARING REQUESTS, LATE-FILED

Commission does not consider hearing requests after the deadline in section 2.309(b) has passed absent a determination that the petitioner has demonstrated good cause by showing the criteria of this section have been met; CLI-14-11, 80 NRC 167 (2014)

having no one to represent petitioners’ perspective if the hearing requests are denied is insufficient to excuse untimeliness; LBP-12-16, 76 NRC 44 (2012)

hearing requests were dismissed as untimely and referred to the Executive Director for Operations for consideration under section 2.206; CLI-12-20, 76 NRC 437 (2012)

HEARING REQUIREMENTS

NRC rules provide a mechanism for supplementing an original NEPA analysis, but the rules do not guarantee a hearing nor is a hearing necessary to satisfy NRC’s NEPA obligations; CLI-13-7, 78 NRC 199 (2013)

HEARING RIGHTS

actions taken by licensee under 10 C.F.R. 50.59 do not give rise to hearing rights under the AEA; LBP-15-27, 82 NRC 184 (2015)

agency actions not formally labeled as license amendments nevertheless can constitute de facto license amendments and accordingly trigger hearing rights for the public under Atomic Energy Act § 189a; CLI-15-5, 81 NRC 329 (2015); CLI-15-14, 81 NRC 729 (2015)

agency approval or authorization is a necessary component of NRC action that affords a hearing opportunity under Atomic Energy Act § 189a, but not all agency approvals granted to licensees constitute de facto license amendments; CLI-14-11, 80 NRC 167 (2014); CLI-15-14, 81 NRC 729 (2015)

allegation that agency conduct amounts to a legal wrong is sufficient to establish union’s right to judicial review; LBP-14-4, 79 NRC 319 (2014)

although the Commission retains broad authority to define standards and thresholds for determining when new information raises a material issue of a plant’s conformity with the Atomic Energy Act, if such information is presented, it must provide a hearing upon request; LBP-11-22, 74 NRC 259 (2011)

any amendment to an existing license as a result of NRC review of licensee seismic hazard reevaluations that leads to changes in the current licensing basis would be subject to a hearing opportunity; CLI-15-21, 82 NRC 295 (2015)

any person whose interest may be affected may request a hearing in a proceeding granting, suspending, revoking, or amending any license; CLI-13-2, 77 NRC 39 (2013)

applicant denied a senior reactor operator license has the right to demand a hearing, rather than being required to negotiate the contention admissibility requirements and a possible appeal in the event a hearing is granted; LBP-13-3, 77 NRC 82 (2013)

argument that applying heightened late-filing standards to contentions triggered by the NRC Staff’s review documents violates a petitioner’s AEA hearing rights has been considered and rejected; CLI-12-14, 75 NRC 692 (2012)

Atomic Energy Act § 189a has been interpreted to require that the hearing must encompass all material factors bearing on the licensing decision raised by the requester; LBP-11-22, 74 NRC 259 (2011)

automatic participation at a hearing may be denied only when the Commission is seeking to make a facility’s operation safer; CLI-13-2, 77 NRC 39 (2013)

because resolution of a rule exemption request directly affects licensability of the proposed facility, the exemption raises material questions directly connected to an agency licensing action and thus comes within the hearing rights of interested parties; CLI-13-1, 77 NRC 1 (2013)

board is directed to consider whether a confirmatory action letter issued to licensee constitutes a de facto license amendment that would be subject to a hearing opportunity under AEA § 189a, and, if so, whether the petition meets the standing and contention admissibility requirements; CLI-12-20, 76 NRC 437 (2012)

board need not address the issue of standing where petitioner has failed to demonstrate the existence of a licensing action subject to AEA hearing rights; LBP-15-27, 82 NRC 184 (2015)
SUBJECT INDEX

change to a facility that is allowed under 10 C.F.R. 50.59 without prior NRC approval is not a license amendment triggering hearing rights; LBP-15-27, 82 NRC 184 (2015)
Commission cannot restrict the opportunity for a hearing so much that it effectively removes from the hearing, issues that are material to the licensing decision; CLI-12-14, 75 NRC 692 (2012)
Commission is required to grant a hearing upon the request of any person whose interest may be affected by certain agency proceedings; CLI-11-3, 73 NRC 613 (2011); LBP-11-8, 73 NRC 349 (2011)
Commission refers a limited portion of the hearing request to the licensing board to determine whether petitioner has identified an NRC activity that requires an opportunity to request an adjudicatory hearing; CLI-15-14, 81 NRC 729 (2015)
Commission shall grant a hearing to, and admit as a party to, any licensing proceeding any person whose interest may be affected by the proceeding; LBP-11-22, 74 NRC 259 (2011); LBP-14-4, 79 NRC 319 (2014)
Congress assumed that individuals establishing a right to be heard in opposition to a license application would be heard with reasonable expedition; LBP-11-30, 74 NRC 627 (2011)
Congress intentionally limited the opportunity for a hearing to certain designated agency actions which do not include exemptions; LBP-15-18, 81 NRC 793 (2015); LBP-15-24, 82 NRC 68 (2015)
criteria of 10 C.F.R. 50.59 were used as an analytical tool to address the question of whether a confirmatory action letter issued to the licensee by NRC Staff constituted a de facto license amendment that would be subject to a hearing opportunity; LBP-13-11, 78 NRC 177 (2013)
de facto license amendment would exist, and hearing rights would be triggered, if NRC were to grant licensee greater operating authority or otherwise alter terms of the license or permit licensee to go beyond its existing license authority; LBP-15-27, 82 NRC 184 (2015)
demand for a hearing by the subject of an enforcement order is automatic without regard to satisfying section 2.309; LBP-14-4, 79 NRC 319 (2014)
demand for a hearing is understood to confer the right to a hearing; LBP-13-3, 77 NRC 82 (2013); LBP-14-4, 79 NRC 319 (2014)
demand for a hearing on denial of application for a senior reactor operator license is granted; LBP-13-3, 77 NRC 82 (2013)
direction is given on what licensee actions do and do not constitute a de facto license amendment triggering hearing rights; CLI-15-14, 81 NRC 729 (2015)
enforcement orders must inform licensee or any other person adversely affected by the order of his or her right to demand a hearing; LBP-14-4, 79 NRC 319 (2014)
extemption cannot remove a matter germane to a licensing proceeding from consideration in a hearing; LBP-15-24, 82 NRC 68 (2015)
extemption request is subject to a hearing where the plant already has a license and is seeking an exemption from the decommissioning financial assurance requirements based on an earlier exemption that it had received during its license renewal; LBP-15-24, 82 NRC 68 (2015)
extemptions ordinarily do not trigger hearing rights when an already-licensed facility is asking for relief from performing a duty imposed by NRC regulations; LBP-15-18, 81 NRC 793 (2015); LBP-15-24, 82 NRC 68 (2015)
extreme delay in the completion of the Staff’s environmental review, and thus the equal delay in hearing intervenors’ claim of injury, raises issues of compliance with section 189a of the Atomic Energy Act; LBP-11-30, 74 NRC 627 (2011)
general tendency of the law, when deciding which consequences give rise to actionable rights, is not to go beyond the first step; LBP-14-4, 79 NRC 319 (2014)
hearing on exemption-related matters is necessary insofar as resolution of the exemption request directly affects the licensability of a proposed fuel storage site and the exemption raises material questions directly connected to an agency licensing action; LBP-15-18, 81 NRC 793 (2015)
hearing rights are provided in licensing actions concerning the granting of any license upon the request of any person whose interest may be affected by the proceeding; LBP-15-16, 81 NRC 618 (2015)
if a hearing could be invoked each time NRC engaged in oversight or inquiry into plant conditions, NRC’s administrative process could be brought to a virtual standstill; CLI-14-11, 80 NRC 167 (2014); LBP-15-27, 82 NRC 184 (2015)
SUBJECT INDEX

if AEA § 189a is to serve its intended purpose, parties in interest must be afforded a meaningful opportunity to request a hearing before the Commission retroactively reinvents the terms of an extant license by voiding its implicit limitations on the licensee’s conduct; LBP-13-7, 77 NRC 307 (2013)

if an enforcement order blacklists a worker by name, under 10 C.F.R. 2.202(a)(3) he has the right to demand a hearing even though he may be motivated by purely economic concerns; LBP-14-4, 79 NRC 319 (2014)

if applicant subsequently wished to change its commitments to any significant extent, it would need to file a license amendment request, which could then be challenged by seeking a hearing; LBP-14-3, 79 NRC 267 (2014)

if licensee or other person to whom an order is issued consents to its issuance, or the order confirms actions agreed to by the licensee or such other person, that consent or agreement constitutes a waiver by the licensee or such other person of a right to a hearing and any associated rights; LBP-14-4, 79 NRC 319 (2014)

if licensee sought to relocate its surveillance frequencies from its operating license to a licensee-controlled document, then it would need to request a license amendment, which would trigger an opportunity for a member of the public to request a hearing; CLI-13-10, 78 NRC 563 (2013)

if NRC Staff finds that an application does not comply with regulatory requirements, it must inform applicant in writing of the nature of any deficiencies or the reason for the proposed denial and the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)

in any proceeding for the amending of any license, the Commission shall grant a hearing upon the request of any person whose interest may be affected by the proceeding, and shall admit any such person as a party to such proceeding; LBP-13-7, 77 NRC 307 (2013)

in denying an exemption request, Staff is required to inform applicant of the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)

in establishing the evidentiary standard of “relevant, material, and reliable evidence” being admissible in a hearing, 10 C.F.R. 2.337 thereby establishes the right of all parties to present such admissible evidence; LBP-11-4, 73 NRC 91 (2011)

issuance of power uprate license amendment in advance of hearing did not deprive intervenor of hearing rights because the license amendment may be revoked or conditioned after hearing; CLI-15-17, 82 NRC 33 (2015)

license amendments are subject to a hearing opportunity; CLI-13-9, 78 NRC 551 (2013)

license denial letter that contained apparent boilerplate that was incomplete and perforce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the Atomic Energy Act; LBP-13-3, 77 NRC 82 (2013)

licensee and any other person adversely affected by an enforcement order have equal rights to a hearing; LBP-14-4, 79 NRC 319 (2014)

licensing actions that alter the terms of a license or otherwise authorize additional operating activities trigger hearing rights for the public under section 189a of the Atomic Energy Act; CLI-15-5, 81 NRC 329 (2015)

meaning of “other person adversely affected by the order” in 10 C.F.R. 2.202(a)(3) is discussed; LBP-14-4, 79 NRC 319 (2014)

merely possibility of a future license amendment does not trigger a hearing opportunity today; LBP-15-27, 82 NRC 184 (2015)

neither licensee activities nor NRC inspection of or inquiry about those activities provides the opportunity for a hearing under the Atomic Energy Act because those activities only concern compliance with the terms of an existing license; CLI-14-11, 80 NRC 167 (2014)

no petition or other request for review of or hearing on the NRC Staff’s significant hazards determination will be entertained by the Commission; LBP-13-11, 78 NRC 177 (2013)

no significant hazards consideration determination is a procedural device to determine when, not whether, petitioners’ right to a hearing under the Atomic Energy Act will occur; LBP-15-26, 82 NRC 163 (2015)

nonlicensee with a purely economic interest has an automatic right to demand a hearing under section 2.202(a)(3) without showing standing or proffering an admissible contention; LBP-14-4, 79 NRC 319 (2014)
nonparty petitioners may not challenge a confirmatory order embodying a settlement if the order improves
the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014)
NRC approvals of plant restart and lifting suspensions did not trigger AEA § 189a hearing rights;
CLI-15-14, 81 NRC 792 (2015)
NRC has latitude to define who is an “affected person” within the meaning of Atomic Energy Act
§ 189a, 42 U.S.C. § 2239(a); LBP-12-3, 75 NRC 164 (2012)
NRC is required to provide an opportunity to request a hearing under the Atomic Energy Act on a
license amendment; CLI-15-21, 82 NRC 295 (2015)
NRC must afford interested persons an opportunity for a hearing on the granting, suspending, revoking, or
amending of any license; CLI-15-5, 81 NRC 329 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-18,
81 NRC 793 (2015)
NRC must afford interested persons an opportunity for a hearing on the granting, suspending, revoking, or
amending of any license; CLI-14-11, 80 NRC 167 (2014)
NRC must provide an opportunity for hearing in any proceeding under the Atomic Energy Act for the
granting, suspending, revoking, or amending of any license; LBP-15-27, 82 NRC 184 (2015)
NRC oversight activities gathering information about and evaluating plant performance, regardless of the
findings it makes, do not alter the conditions of a license and therefore cannot form the basis for the
right to request a hearing; CLI-14-11, 80 NRC 167 (2014)
NRC preserves the right to a hearing when an application is amended by allowing new or amended
contentions to be filed in response to material new information; LBP-11-22, 74 NRC 259 (2011)
NRC Staff inspections and confirmatory action letters are oversight activities normally conducted to
ensure that licensees comply with existing NRC requirements and license conditions and therefore do
not typically trigger the opportunity for a hearing under the AEA; CLI-15-5, 81 NRC 329 (2015)
NRC Staff’s decision at the conclusion of its administrative reviews is the final Staff position and hence
the only Staff position open to applicant’s challenge before the presiding officer; LBP-14-2, 79 NRC
131 (2014)
NRC Staff’s ongoing enforcement of regulations and license conditions does not trigger hearing rights;
opportunity for a hearing must be provided for an amendment to an operating license, combined license,
or manufacturing license; LBP-15-17, 81 NRC 753 (2015)
opportunity for a hearing on license amendments is provided; CLI-12-20, 76 NRC 437 (2012)
orders issued under 10 C.F.R. 2.202 alter the requirements of a license and therefore fall generally under
the terms of Atomic Energy Act § 189a; CLI-13-2, 77 NRC 39 (2013)
oversight activities at times involve enforcement actions, including orders and civil penalties, to which a
hearing right or opportunity attaches; CLI-15-5, 81 NRC 329 (2015)
party that has successfully intervened in a licensing proceeding may propose new contentions for litigation
until the license is issued; LBP-11-22, 74 NRC 259 (2011)
person adversely affected by an enforcement order has a legal right to demand a hearing; LBP-14-4, 79
NRC 319 (2014)
person does not need to wait until being charged with a crime and in the dock before he can challenge
an order that imposes new burdens and liabilities on him; LBP-14-4, 79 NRC 319 (2014)
person suffering legal wrong because of agency action, or adversely affected or aggrieved by agency
action within the meaning of a relevant statute, is entitled to judicial review thereof; LBP-14-4, 79
NRC 319 (2014)
petitioner cannot create a hearing opportunity merely by claiming that a facility is improperly operating
outside its licensing basis, but such claims are appropriately raised in a petition to initiate an
enforcement proceeding; LBP-15-27, 82 NRC 184 (2015)
petitioner failed to demonstrate the existence of a licensing action subject to hearing rights under section
petitioner is not entitled to request a hearing where NRC has neither granted greater authority than that
provided by its existing licenses nor otherwise altered the terms of those licenses; LBP-15-27, 82 NRC
184 (2015)
petitioner may obtain a hearing on a section 2.202 order only if the measures to be taken under the order
would, in themselves, harm the petitioner; CLI-13-2, 77 NRC 39 (2013)
petitioner must address its hearing request to a matter that triggers a hearing opportunity; CLI-15-5, 81 NRC 329 (2015)

petitioners’ reliance on loss of future opportunities to challenge by adjudicatory intervention licensee-initiated changes in the low-level effluent monitoring details fell short of an admissible contention; LBP-12-25, 76 NRC 540 (2012)

“rational basis review” was applied to intervenor’s challenge to the NRC’s 2004 changes to its procedural rules, citing cases involving challenges to laws regulating aspects of prisoners’ right to access to the courts; LBP-11-4, 73 NRC 91 (2011)

referrals may be made when a petition does not satisfy the legal requirements for a hearing or intervention and it is determined that referral to the section 2.206 process is appropriate; CLI-12-20, 76 NRC 437 (2012)

request for exemption from a rule, by itself, does not give rise to an opportunity for hearing; CLI-13-1, 77 NRC 1 (2013)

scope of the referral is limited to whether NRC granted licensee greater authority than that provided by its existing licenses or otherwise altered the terms of its existing licenses, thereby entitling petitioner to an opportunity to request a hearing; CLI-15-14, 81 NRC 729 (2015)

senior reactor operator license applicant who does not accept a proposed license denial may, within 20 days of the date of the denial letter, demand a hearing; LBP-14-2, 79 NRC 151 (2014)

significant delays in NRC Staff’s review potentially deprive an Indian tribe of its hearing rights; CLI-12-4, 75 NRC 154 (2012)

standing criteria for federally recognized Indian tribes are less stringent, but only where the facility at issue is within the tribe’s boundaries; LBP-12-24, 76 NRC 503 (2012)

standing is refused only when congressional intent specifically precludes the party or issue from obtaining judicial review; LBP-14-4, 79 NRC 319 (2014)

submittal of updated final safety analysis report pages does not constitute a licensing action but is only intended to provide information; LBP-15-27, 82 NRC 184 (2015)

substance of the NRC action determines entitlement to a section 189a hearing, not the particular label that NRC chooses to assign to its action; LBP-13-7, 77 NRC 307 (2013)

target of an enforcement order has the right to demand and receive, not merely request, a hearing; LBP-14-11, 80 NRC 125 (2014)

terms of section 2.202 orders often have been negotiated with the affected licensee or licensees, who would have little incentive to negotiate if so doing would expose them to formal litigation over additional terms or requirements that third-party petitioners would like to see imposed; CLI-13-2, 77 NRC 39 (2013)

there is no fundamental right to participate in administrative adjudications; LBP-11-4, 73 NRC 91 (2011)

to obtain a hearing, petitioner must show that its request is timely, that it has standing to obtain a hearing, and that it has proposed at least one admissible contention; CLI-14-11, 80 NRC 167 (2014)

union’s argument that it may demand a hearing on a confirmatory order without complying with intervention requirements of section 2.309(a) is incorrect; LBP-14-4, 79 NRC 319 (2014)

when licensee requests a rule exemption in a related license amendment application, hearing rights on the amendment application are considered to encompass the exemption request as well; CLI-13-1, 77 NRC 1 (2013); LBP-15-18, 81 NRC 793 (2015); LBP-15-24, 82 NRC 68 (2015)

when the police power of the federal government is deployed to order a person to perform certain actions, under pain of losing his or her livelihood, liberty, and/or property, then that person has a right to challenge the order, and have a hearing to determine what the order means and whether it comports with the law; LBP-14-4, 79 NRC 319 (2014)

where an enforcement order imposes measures to enhance safety, a petitioner cannot obtain a hearing to litigate whether additional safety measures should be imposed; CLI-13-2, 77 NRC 39 (2013)

where plaintiff is not itself the subject of the contested regulatory action, the zone-of-interests test denies a right of review if plaintiff’s interests are so marginally related to or inconsistent with the purposes implicit in the statute that it cannot be assumed that Congress intended to permit the suit; LBP-14-4, 79 NRC 319 (2014)

whether licensee employees, as represented by a union, have a right to demand a hearing because they are persons adversely affected by a confirmatory order is discussed; LBP-14-4, 79 NRC 319 (2014)
whether licensee or other person consents to an order, other persons adversely affected by an order issued under section 2.202 to modify, suspend or revoke a license will be offered an opportunity for a hearing consistent with current practice and the authority of the Commission to define the scope of the proceeding on an enforcement order; LBP-14-4, 79 NRC 319 (2014)

See also Deferral of Hearing

HEAT SINK

plants must employ an ultimate heat sink to transfer heat from structures, systems, and components that are important to safety; LBP-15-13, 81 NRC 456 (2015)

request that NRC take enforcement action until the licensee completes an independent root-cause assessment for the rise in ultimate heat sink temperature is denied; DD-15-10, 82 NRC 201 (2015)

system must be provided to transfer heat from structures, systems, and components important to safety to an ultimate heat sink under normal operating and accident conditions, and must be able to perform this safety function with either onsite or offsite power, assuming a single component failure; DD-15-11, 82 NRC 361 (2015)

HIGH-BURNUP FUEL

if NRC Staff safety review reveals any new and significant information relating to the environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 404 (2014)

HIGH-LEVEL WASTE REPOSITORY APPLICATION

before a final decision approving or disapproving a construction authorization application may be reached, not only must the Staff complete its safety and environmental reviews but a formal hearing must be conducted, and the Commission’s own review of both contested and uncontested issues must take place; CLI-13-8, 78 NRC 219 (2013)

Department of Energy may be required to supplement its final environmental impact statement when there is new information relevant to environmental concerns and bearing on the proposed action or its impacts; CLI-13-8, 78 NRC 219 (2013)

NRC is directed to adopt the Department of Energy environmental impact statement to the extent practicable; CLI-13-8, 78 NRC 219 (2013)

NRC is ordered to promptly resume the licensing process for the high-level radioactive waste repository construction authorization application unless and until Congress authoritatively says otherwise or there are no appropriated funds remaining; CLI-13-8, 78 NRC 219 (2013)

presiding officer in the adjudication will determine the extent to which adoption by the NRC of the Department of Energy’s repository environmental impact statement and its supplements is practicable, which in turn will satisfy NRC’s NEPA obligations; CLI-13-8, 78 NRC 219 (2013)

HIGH-LEVEL WASTE REPOSITORY PROCEEDING

Commission exercises its inherent supervisory authority to direct the board to complete all necessary and appropriate case management activities, including disposal of all matters currently pending before it and comprehensively documenting the full history of the adjudicatory proceeding; CLI-11-7, 74 NRC 212 (2011)

given the posture of the case, the Commission declines to decide a petition for review but will allow petitioner to file a motion to reinstate its petition should the proceeding be reactivated at a future time; CLI-11-15, 74 NRC 815 (2011)

in light of current fiscal constraints, the board suspends the proceeding; LBP-11-24, 74 NRC 368 (2011)

procedural rule governing appeals in a 10 C.F.R. Part 2, Subpart J proceeding provides for review only in the limited circumstances prescribed in the rule; CLI-11-13, 74 NRC 635 (2011)

HIGH-LEVEL WASTE REPOSITORY

Congress expressly recognized and impliedly approved NRC’s regulatory scheme and practice under which the safety of interim storage of high-level wastes at commercial nuclear power reactor sites has been determined separately from the safety of government-owned permanent storage facilities that have not yet been established; CLI-15-4, 81 NRC 221 (2015)

in its Waste Confidence Decision, NRC failed to consider environmental impacts of a repository never becoming available, its analysis of spent fuel pool leaks was not forward-looking, and it had not sufficiently considered the consequences of spent fuel pool fires; CLI-15-4, 81 NRC 221 (2015)
NRC’s Waste Confidence Decision Update and Temporary Storage Rule were invalidated because there was not even a prospective site for a repository, let alone progress toward the actual construction of one; LBP-14-16, 80 NRC 183 (2014)

responsibility for constructing and operating a waste repository was assigned to the Department of Energy, not NRC; CLI-15-4, 81 NRC 221 (2015)
waste confidence rule expressed the Commission’s reasonable assurance that a repository was likely to be available by 2007-2009; LBP-14-16, 80 NRC 183 (2014)

HISTORIC SITES
agencies must take a hard look at preserving important historic and cultural aspects of our national heritage; LBP-15-16, 81 NRC 618 (2015)

Class III archeological survey involves a professionally conducted, pedestrian survey of an entire target area to identify properties that may be eligible for inclusion on the National Register of Historic Places; LBP-15-16, 81 NRC 618 (2015)
demolition of a historic unit to build a new unit will result in a finding of adverse effect under applicable criteria in 36 C.F.R. 800.5; CLI-15-13, 81 NRC 555 (2015)

failure to have made any effort to evaluate the cumulative impact of the independent spent fuel storage installation expansion on archaeological sites has been held to be one of the most egregious shortfalls of the environmental assessment; LBP-14-6, 79 NRC 404 (2014)

federal agency must assess the effects of the undertaking on any eligible historic properties found; LBP-15-16, 81 NRC 618 (2015)
federal agency must confer with a State Historic Preservation Officer and seek the approval of the ACHP; LBP-15-16, 81 NRC 618 (2015)
federal agency must determine whether identified properties are eligible for listing on the National Register based on the criteria in 36 C.F.R. 60.4; LBP-15-16, 81 NRC 618 (2015)
federal agency must make a reasonable and good-faith effort to identify historic properties; LBP-15-16, 81 NRC 618 (2015)
historical/cultural resources are considered eligible for listing on the National Register of Historic Places if they meet one or more of four criteria; LBP-11-26, 74 NRC 499 (2011)

in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC 618 (2015)

materials license application must provide analyses that are adequate, accurate, and complete in all material respects to demonstrate that cultural and historic resources are identified and protected; LBP-15-16, 81 NRC 618 (2015)

HYDRODYNAMICS
contention that draft EIS is deficient because its evaluation of the operation of the radial collector wells does not preclude the possibility that they will change the plume dynamics of the industrial wastewater facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 815 (2015)

HYDROGEN CONTROL
request that licensee replace passive autocatalytic recombiners in the containment electrically powered thermal hydrogen recombiners is denied; DD-13-1, 77 NRC 347 (2013)
suppositions/speculation regarding effectiveness of hydrogen control mechanisms are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)

HYDROGEOLOGY
adequacy of the final environmental impact statement regarding site geology and hydrology is discussed; LBP-13-4, 77 NRC 107 (2013)
admissibility of contention that environmental assessment failed to analyze impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 401 (2015)
admissibility of contention that environmental assessment fails to describe and analyze the environmental impacts of new porosity and permeability in the aquifer caused by mining activity is decided; LBP-15-15, 81 NRC 598 (2015)

confinement of aquifers is material to the environmental impacts of the licensing action; CLI-14-2, 79 NRC 11 (2014)
contention alleging that final supplemental environmental impact statement fails to include adequate hydrogeological information to demonstrate ability to contain fluid migration and assess potential impacts to groundwater is admissible; LBP-14-5, 79 NRC 377 (2014)

contention contesting adequacy of hydrogeologic information provided in application regarding fluid migration is admissible; LBP-13-6, 77 NRC 253 (2013)

contention that draft environmental impact statement fails to include adequate hydrological information to demonstrate applicant’s ability to contain groundwater fluid migration is admissible; LBP-13-10, 78 NRC 117 (2013)

contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess adequate confinement and potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 37 (2013)

site-specific data to confirm proper baseline quality values, and confirm whether existing rock units provide adequate confinement, cannot be collected until an in situ leach wellfield has been installed; LBP-15-3, 81 NRC 65 (2015)

ICE CONDENSER
contention that ice condenser containments lack acceptable aging management plans to adequately maintain critical components of the containment for 20 years of additional operation is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that license renewal application lacks supporting documentation providing analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 1 (2013)

IMMEDIATE EFFECTIVENESS
Commission temporarily suspended the immediate effectiveness rule following the Three Mile Island accident; CLI-11-5, 74 NRC 141 (2011)

immediately effective enforcement orders must be based on preliminary investigation or other emerging information that is reasonably reliable and indicates the need for immediate action; LBP-11-8, 73 NRC 349 (2011)

license amendment will be effective on issuance, even if adverse public comments have been received and even if an interested person meeting the provisions for intervention has filed a request for a hearing; LBP-15-17, 81 NRC 753 (2015)

licensee or other person to whom the Commission has issued an immediately effective order may move the presiding officer to set aside the immediate effectiveness of the order; LBP-14-4, 79 NRC 319 (2014)

no significant hazards consideration determination permits NRC to make an authorized license amendment effective immediately rather than awaiting the outcome of an adjudicatory challenge; LBP-15-26, 82 NRC 163 (2015)

NRC Staff may determine that exigent circumstances exist such that there is insufficient time for a full 30-day public comment period on a license amendment request; LBP-15-13, 81 NRC 456 (2015)

standard that must be met before NRC Staff can issue an immediately effective enforcement order is one of adequate evidence, which is akin to the test for probable cause; LBP-11-8, 73 NRC 349 (2011)

when an adjudicatory proceeding has been initiated with respect to a license amendment issued with a no significant hazards determination, once the presiding officer’s initial decision becomes effective, the appropriate official shall take action with respect to that amendment in accordance with the initial decision; LBP-15-13, 81 NRC 456 (2015)

IMMEDIATE EFFECTIVENESS REVIEW
licensure challenged NRC Staff’s use of immediately effective orders after fulfilling the underlying requirements of those orders; CLI-13-9, 78 NRC 551 (2013)

IMPARTIALITY
NRC Staff is but one of the parties to a licensing proceeding, and the positions that it may take are in no way binding upon the licensing board; LBP-12-23, 76 NRC 445 (2012)

IMPORT LICENSES
categorical exclusion from the NEPA requirement to prepare an environmental assessment or environmental impact statement for the issuance of import licenses involving low-level radioactive waste is provided; CLI-11-3, 73 NRC 613 (2011)
Department of State provides the Commission with Executive Branch views on the merits of import/export applications; CLI-11-3, 73 NRC 613 (2011)
discretionary hearing may be held on export or import licenses if a hearing would be in the public interest and would assist the Commission in making the statutory determinations required by the Atomic Energy Act; CLI-11-3, 73 NRC 613 (2011)
discretionary hearing to discuss policy issues related to import of foreign low-level radioactive waste and domestic incineration and transportation issues is not warranted because these issues are either challenges to the Commission’s regulations or are outside the scope of the proceeding; CLI-11-3, 73 NRC 613 (2011)
discretionary hearing to discuss the adequacy of information provided by applicant in a public forum would not assist the Commission in making its determinations on the export and import license applications because the applicant provided the information required by the Commission’s regulations; CLI-11-3, 73 NRC 613 (2011)
formal adjudicatory procedures are inappropriate in export or import licensing proceedings; CLI-11-3, 73 NRC 613 (2011)
key action that will allow incineration of imported low-level-radioactive waste material is the domestic license authorizing such processing, not NRC’s grant of an import license; CLI-11-3, 73 NRC 613 (2011)
no proximity presumption applies in an import/export licensing case because petitioners have not shown that the import or export involves a significant source of radioactivity producing an obvious potential for offsite consequences; CLI-11-3, 73 NRC 613 (2011)
petitioners’ claims of potential injury are also so speculative, and separate from the import and export license, that they do not amount to cognizable harm for purposes of standing; CLI-11-3, 73 NRC 613 (2011)
petitioners’ generalized institutional interest in public forums and in preventing processing of foreign waste is insufficient to confer standing; CLI-11-3, 73 NRC 613 (2011)
request for waiver of 10 C.F.R. 51.22(c)(15) is denied; CLI-11-3, 73 NRC 613 (2011)
state reviewed the applications and the authorizations and found no technical reason to prohibit processing of imported waste; CLI-11-3, 73 NRC 613 (2011)
to determine if a petitioner has sufficient interest in a proceeding to be entitled to intervene as a matter of right under section 189a, the Commission has long applied contemporaneous judicial concepts of standing; CLI-11-3, 73 NRC 613 (2011)
to waive a Part 110 rule or regulation, petitioner must show special circumstances concerning the subject of the hearing such that application of the rule or regulation would not serve the purposes for which it was adopted; CLI-11-3, 73 NRC 613 (2011)

IN CAMERA PROCEEDINGS
in camera hearing sessions may be held when information sought to be withheld from public disclosure is offered into evidence; CLI-15-24, 82 NRC 331 (2015)
IN CAMERA REVIEW
boards can request that a document for which a deliberative process privilege is claimed be provided to it for in camera inspection; LBP-13-5, 77 NRC 233 (2013)
presiding officers may make a determination about the validity of a deliberative process privilege claim without reviewing a document in camera if the affidavit outlining the reasons for nondisclosure is sufficiently detailed; LBP-13-5, 77 NRC 233 (2013)

IN SITU LEACH MINING
admissibility of contention that environmental assessment fails to adequately describe and analyze impacts of maintaining post-operational wellfields as long-term hazardous waste facilities is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that environmental assessment fails to adequately describe and analyze proposed mitigation measures is decided; LBP-15-11, 81 NRC 401 (2015)
admissibility of contention that environmental assessment fails to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 401 (2015)
although 10 C.F.R. Part 40 applies to ISL mining, some of the specific requirements in Part 40, such as
many of those found in Appendix A, address hazards posed only by conventional uranium milling
operations, and do not carry over to ISL mining; LBP-15-16, 81 NRC 618 (2015)
although NRC has issued a generic environmental impact statement for in situ uranium recovery facilities
that assesses potential ISR facility construction/operation/decommissioning impacts, for the initial
licensing of each individual ISR facility, NRC Staff will first prepare a draft supplemental
although the Part 40, Appendix A criteria were developed for conventional uranium milling facilities, they
have since been applied in limited fashion to ISR facilities; LBP-15-3, 81 NRC 65 (2015)
any NEPA-based challenge to the efficacy of, or the Staff’s reliance on, the state permitting process
relative to the Staff’s environmental review must await the Staff’s initial environmental review
document; LBP-13-6, 77 NRC 253 (2013)
applicant for a license to possess and use source and AEA §11e(2) byproduct material for the purpose of
in situ uranium recovery must submit an environmental report with its application; LBP-15-3, 81 NRC
65 (2015)
applicant for a uranium ISR license is required to provide data from a groundwater monitoring program
that are sufficient to establish a prelicensing site characterization baseline for assessing the potential
effects of facility operations on local groundwater quality; LBP-15-3, 81 NRC 65 (2015)
applicant’s monitoring program for establishing existing site characterization baseline values for certain
site groundwater constituents prior to issuance of a source materials license for ISR facility construction
and operation need not, to comply with NEPA and NRC’s Part 51 implementing regulations, be
directed so as to also provide background information needed to set Appendix A, Criterion 5B
as distance increases from the in situ recovery facility, petitioner with an upgradient water source must
expect to provide the board with some analysis as to how any contamination will affect any wells
alleged to be impacted by the facility; LBP-12-3, 75 NRC 164 (2012)
claim that alternate concentration limit could not be accurately generated until the post-operational
decommissioning process did not account for the possible creation of a bounding analysis based on the
historical experience at other ISR sites; LBP-13-10, 78 NRC 117 (2013)
confinement of aquifers is material to the environmental impacts of the licensing action; CLI-14-2, 79
NRC 11 (2014)
“construction” does not include site exploration, including preconstruction monitoring to establish
background information related to the environmental impacts of construction or operation, or the
protection of environmental values; LBP-15-3, 81 NRC 65 (2015)
contention asserting that because no previous ISL/ISR mining operation has been able to restore
groundwater to baseline standards, applicant will be required to request that NRC set an alternate
concentration limit for aqueous contaminants is admissible; LBP-12-3, 75 NRC 164 (2012)
contention asserting that NEPA requires a groundwater baseline characterization for an in situ recovery
site is admissible; LBP-12-3, 75 NRC 164 (2012)
contention contesting adequacy of hydrogeologic information provided in application regarding fluid
migration is admissible; LBP-13-6, 77 NRC 253 (2013)
contention contesting failure of applicant to evaluate groundwater impacts of in situ recovery is
inadmissible for failure to present factual allegations and/or expert opinion to support the contention;
LBP-13-6, 77 NRC 253 (2013)
contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as
untimely; LBP-15-11, 81 NRC 401 (2015)
contention that environmental assessment violates the National Environmental Policy Act in its failure to
analyze groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 401 (2015)
contention that final environmental assessment fails to conduct the required hard look at impacts of the
proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11,
81 NRC 401 (2015)
contention that FSEIS fails to analyze environmental impacts that will occur if applicant cannot restore
groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 65 (2015)
contention that the draft environmental impact statement fails to adequately assess cumulative impacts of the proposed action and another proposed ISL uranium mining operation is inadmissible; LBP-13-10, 78 NRC 117 (2013)

environmental contention regarding cumulative impact on groundwater quantity of the in situ recovery project and the planned expansion satisfies admissibility requirements; LBP-12-3, 75 NRC 164 (2012)

environmental impact statement must discuss any adverse environmental effects that cannot be avoided should the proposal be implemented and must provide a reasonably complete discussion of possible mitigation measures; LBP-15-11, 81 NRC 401 (2015)

EPA-approved state permitting authority for Class I injection wells is the regulatory entity from which applicant must seek and obtain the permit necessary to allow it to operate a deep injection well at the site; LBP-13-6, 77 NRC 253 (2013)

for petitioners claiming to be using water from the same aquifer as for the uranium ore source, regardless of distance from the facility in question, licensing boards have found that a plausible pathway connecting the proposed mining operation to their water source has been shown so as to establish petitioners’ standing; LBP-12-3, 75 NRC 164 (2012)

generic environmental impact statement for in-situ leach mining is subject to an appropriate challenge in an adjudicatory proceeding; LBP-15-11, 81 NRC 401 (2015)

generic environmental impact statement for in-situ leach uranium milling facilities addresses, among other topics, matters specified in section 51.45; LBP-15-3, 81 NRC 65 (2015)

in situ recovery license applicant is barred from installing a complete wellfield and associated monitor well networks until after a license is issued; LBP-15-3, 81 NRC 65 (2015)

in situ recovery process, which is also referred to as the in situ leach process, is described; LBP-12-3, 75 NRC 164 (2012)

intervenors fail to establish the validity of their various challenges to the adequacy of the FSEIS description of the baseline water quality at the ISR site; LBP-15-3, 81 NRC 65 (2015)

licensee shall establish a detection monitoring program needed for NRC to set the site-specific groundwater protection standards, and the monitoring program must be in place when specified by NRC in license conditions; LBP-15-3, 81 NRC 65 (2015)

licensing strategy whereby applicant seeks initial in situ recovery licensing authorization to mine a particular area on which a central processing plant is located, followed thereafter by additional license amendments to cover ISR activities on contiguous or nearby areas, has been employed previously under the agency’s ISR facility licensing regime; LBP-13-10, 78 NRC 117 (2013)

no in situ recovery facility has ever requested that all OZ aquifer groundwater hazardous constituents be restored to CAB concentrations or Criterion 5B(5)(b) MCLs, as those are currently defined; LBP-15-3, 81 NRC 65 (2015)

nothing in 10 C.F.R. Part 40, Appendix A, Criterion 5B precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to characterize properly the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 65 (2015)

NRC could consider adopting, at least for the initial construction/operation authorization of in situ recovery facilities, a standing regime by which persons living or having substantial contacts within a 50-mile radius of the facility are afforded standing; LBP-12-3, 75 NRC 164 (2012)

NRC regulations explicitly allow the use of alternate concentration limits for hazardous constituents; LBP-15-11, 81 NRC 401 (2015)

NRC Staff must prepare an environmental impact statement in connection with a license to possess and use source and AEA §11e(2) byproduct material for the purpose of in situ uranium recovery; LBP-15-3, 81 NRC 65 (2015)

pertinent to the question of whether a facility is a connected action is whether the facility lacks any independent utility in the absence of the completion of the other sites; LBP-13-10, 78 NRC 117 (2013)

petitioner whose property is upgradient but nonetheless located in close proximity to a proposed in situ recovery facility may be able to establish its plausible pathway with a less particularized showing; LBP-12-3, 75 NRC 164 (2012)

petitioners considerably upgradient of a mining area must provide scientific or technical support for how contaminated material from an in situ recovery site might plausibly enter their drinking water to fulfill the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)
relative to an individual ISR facility, when NRC Staff formulates its draft and final supplemental
environmental impact statement conclusions regarding the environmental impacts of a proposed action or
alternative actions, it uses as guidance a standard scheme to categorize or quantify the impacts;
requirements for groundwater restoration standards for ISR mining operations are set forth in 10 C.F.R.
Part 40, Appendix A, Criterion S5(b); LBP-15-3, 81 NRC 65 (2015)
“source material” is defined as uranium being extracted through the ISL process; LBP-15-16, 81 NRC
618 (2015)
section 40.31(b) applies to uranium mills, but not to in situ recovery facilities; LBP-14-5, 79 NRC 377
(2014)
site-specific data to confirm proper baseline quality values, and confirm whether existing rock units
provide adequate confinement cannot be collected until an in situ leach well field has been installed;
standing was found for petitioner fishing a river 60 miles downstream from a proposed in situ recovery
facility expansion alleged to allow drainage into the river from operations; LBP-12-3, 75 NRC 164
(2012)
subset of the production and injection wells to be drilled within the boundaries of the ISR wellfield is to
be used to sample groundwater from the aquifer prior to the commencement of operations to establish
hazardous constituent Commission-approved background concentrations; LBP-15-3, 81 NRC 65 (2015)
surface water contamination has played a significant role in standing determinations in in situ recovery
cases; LBP-12-3, 75 NRC 164 (2012)
waiting until after licensing (although before mining operations begin) to establish definitively the
groundwater quality baselines and upper control limits is consistent with industry practice and NRC
methodology, given the sequential development of in situ leach well fields; LBP-15-3, 81 NRC 65
(2015)
when an ore zone and petitioner’s water source exist in separate aquifers, the injury/causation question is
whether there is an interconnection between those aquifers; LBP-12-3, 75 NRC 164 (2012)
when petitioners considerably upgradient of the mining area fail to explain how contaminated material
from the in situ recovery site might plausibly enter their drinking water, they fail to demonstrate that
they fulfill the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)
INCINERATION
discretionary hearing to discuss policy issues related to import of foreign low-level radioactive waste and
domestic incineration and transportation issues is not warranted because these issues are either
challenges to the Commission’s regulations or are outside the scope of the proceeding; CLI-11-3, 73
NRC 613 (2011)
key action that will allow incineration of imported low-level-radioactive waste material is the domestic
license authorizing such processing, not NRC’s grant of an import license; CLI-11-3, 73 NRC 613
(2011)
INCORPORATION BY REFERENCE
absence of any reference to “cumulative impacts” in a document incorporated by reference negates any
intention to incorporate any discussion of cumulative impacts from these prior documents into an
environmental report, consistent with the maxim of expressio unius est exclusio alterius, i.e., the
expression of one thing is the exclusion of another; LBP-12-24, 76 NRC 503 (2012)
agencies can, consistent with NEPA regulations, incorporate by reference analyses and information from
existing documents into an environmental assessment or environmental impact statement provided the
material has been appropriately cited and described; LBP-15-11, 81 NRC 401 (2015)
although the entire record is considered on appeal, including pleadings that appellants ask to be adopted
by reference, the Commission’s decision responds to the arguments made explicitly in the appellate
brief; CLI-11-8, 74 NRC 214 (2011)
applicant may incorporate material by reference that the applicant itself has previously submitted, not
material prepared by NRC Staff; LBP-12-24, 76 NRC 503 (2012)
ASME Code for Operation and Maintenance of Nuclear Power Plants is incorporated by reference;
CLI-12-9, 75 NRC 421 (2012)
briefs on appeal must be comprehensive, concise, and self-contained and incorporation of pleadings or
arguments by reference is discouraged; CLI-12-3, 75 NRC 132 (2012)
SUBJECT INDEX

“deemed incorporated” function of 10 C.F.R. 51.23(b) provides administrative efficiency by adding the environmental impacts of continued storage to site-specific environmental impact statements without additional work by the Staff; CLI-15-10, 81 NRC 535 (2015)
DOE may incorporate, in its geologic repository application, information from previous reports filed with the Commission, provided that such references are clear and specific; LBP-12-24, 76 NRC 503 (2012)
environmental report for a limited work authorization application for a site where a construction permit was issued but construction of the plant was never completed may incorporate the earlier environmental impact statement; LBP-12-24, 76 NRC 503 (2012)
environmental report for application for land disposal of radioactive waste may incorporate by reference information contained in the application or in any previous application, statement, or report filed with the Commission provided that such references are clear and specific; LBP-12-24, 76 NRC 503 (2012)
environmental reports prepared under 10 C.F.R. 51.53(a) may incorporate by reference any information contained in a prior environmental report or supplement thereto that relates to the production or utilization facility or site, or any information contained in a related final environmental document previously prepared by NRC Staff; LBP-12-24, 76 NRC 503 (2012)
for a contract to incorporate the terms of extrinsic material by reference, it must explicitly, or at least precisely, identify the written material being incorporated and must clearly communicate that the purpose of the reference is to incorporate the referenced material into the contract; LBP-12-24, 76 NRC 503 (2012)
for materials licenses amendment or renewal applications or other forms of permission for which applicant has previously submitted an environmental report, the supplement to applicant’s ER may be limited to incorporating by reference the written material being incorporated; LBP-15-11, 81 NRC 401 (2015)
it is not clear that NRC Staff relied upon the generic environmental impact statement when preparing the draft supplemental environmental impact statement because it was not incorporated by reference or mentioned in any other manner; LBP-15-11, 81 NRC 401 (2015)
it is not sufficient to incorporate by reference large portions of material where doing so would force one to sift through it in search of asserted factual support that is not otherwise specified; LBP-12-24, 76 NRC 503 (2012)
language used to incorporate extrinsic material by reference must explicitly, or at least precisely, identify the written material being incorporated; LBP-12-24, 76 NRC 503 (2012)
latest edition and addenda of the ASME Boiler and Pressure Vessel Code has been incorporated by reference in 10 C.F.R. 50.55a(b)(2); LBP-15-20, 81 NRC 829 (2015)
license application for byproduct material may incorporate information contained in previous applications, statements, or reports filed with the Commission, provided that the reference is clear and specific; LBP-12-24, 76 NRC 503 (2012)
license for source material may incorporate information contained in previous applications, statements, or reports filed with the Commission, provided that the reference is clear and specific; LBP-12-24, 76 NRC 503 (2012)
notice of incorporated terms is reasonable where, under the particular facts of the case, a reasonably prudent person should have seen them; LBP-12-24, 76 NRC 503 (2012)
NRC need not undertake incorporation by reference of a generic environmental impact statement where the Commission has already taken public comment and performed a comprehensive analysis of the environmental consequences of continued spent fuel storage; CLI-15-10, 81 NRC 535 (2015)
NRC Staff is incorporating the 2012 edition of the ASME code by reference into 10 C.F.R. 50.55a; CLI-15-13, 81 NRC 555 (2015)
operating license application may incorporate any pertinent information submitted with a construction permit application; LBP-12-24, 76 NRC 503 (2012)

paper to be incorporated into a written instrument by reference must be so referred to and described in the instrument that the paper may be identified beyond all reasonable doubt; LBP-12-24, 76 NRC 503 (2012)

post-operating license stage supplement to applicant’s environmental report may incorporate by reference any information contained in applicant’s construction permit stage ER; LBP-12-24, 76 NRC 503 (2012)

reference by the contracting parties to an extraneous writing for a particular purpose makes it a part of their agreement only for the purpose specified; LBP-12-24, 76 NRC 503 (2012)

reference to applicable sections of the GALL Report is permissible, but applicant must also provide sufficient plant-specific information to demonstrate that its aging management plan will be designed and implemented consistent with the report; LBP-13-13, 78 NRC 246 (2013)

requirements of section XI of the ASME Boiler and Pressure Vessel Code on inservice inspections are incorporated by reference in 10 C.F.R. 50.55a(b) and 50.55a(g)(4); CLI-11-8, 74 NRC 214 (2011)

special nuclear materials license applications may incorporate by reference information contained in previous applications, statements, or reports filed with the Commission if the references are clear and specific; LBP-12-24, 76 NRC 503 (2012)

where extraneous writing is incorporated for a specific purpose, the writing will be incorporated only to the extent of the reference and for the specific purpose intended, and the reference must be clear and unequivocal; LBP-12-24, 76 NRC 503 (2012)

wholesale incorporation by reference does not serve the purposes of a pleading; LBP-15-5, 81 NRC 249 (2015)

INDEPENDENT SPENT FUEL STORAGE INSTALLATION

applications for renewal of an ISFSI license must describe the aging management plan for management of issues associated with aging that could adversely affect structures, systems, and components important to safety; LBP-12-24, 76 NRC 503 (2012)

current licensing basis for an ISFSI includes plant-specific design-basis information defined in 10 C.F.R. 50.2 as documented in the most recent final safety analysis report; LBP-12-24, 76 NRC 503 (2012)

failure to have made any effort to evaluate the cumulative impact of the ISFSI expansion on archaeological sites has been held to be one of the most egregious shortfalls of the environmental assessment; LBP-14-6, 79 NRC 404 (2014)

general license may be granted to all Part 50 and Part 52 reactor licensees to store spent fuel in an ISFSI; CLI-15-4, 81 NRC 221 (2015)

it is not necessary or appropriate to throw open the full gamut of provisions in a facility’s current licensing basis to reanalysis during the license renewal review, because the current licensing basis is effectively addressed and maintained by ongoing agency oversight, review, and enforcement; LBP-12-24, 76 NRC 503 (2012)

license applicants were permitted to omit any discussion of any environmental impact of spent fuel storage in independent spent fuel storage installations for the period following the term of the initial ISFSI license in any environmental report, environmental impact statement, environmental assessment, or other analysis; LBP-12-24, 76 NRC 503 (2012)

licensees must limit releases of radioactive materials to as low as is reasonably achievable, and establish operational limits to prevent doses to the public that exceed the limits of 10 C.F.R. 72.104(a)-(c); LBP-12-24, 76 NRC 503 (2012)

pressure monitoring system that functions to alert ISFSI operators of potential storage problems, specifically a leak of one of the seals, is intended to meet the requirements for monitoring of dry spent fuel storage; LBP-12-24, 76 NRC 503 (2012)

section 51.61 applies to an application for an ISFSI; LBP-15-24, 82 NRC 68 (2015)

spent nuclear fuel can be stored safely at licensed nuclear facilities until such time as a long-term geologic storage facility is constructed; LBP-12-24, 76 NRC 503 (2012)

stringent safety requirements apply to construction and operation of reactor spent fuel pools and ISFSIs; CLI-15-4, 81 NRC 221 (2015)
INDEPENDENT SPENT FUEL STORAGE INSTALLATION PROCEEDINGS

board applied the late-filing standards to a post-9/11 contention related to the risk of a terrorist attack on the ISFSI and found the contention timely but denied admission of both the safety and environmental aspects of the contention; CLI-11-5, 74 NRC 141 (2011)

challenge to the adequacy of the acceptance criteria or any other component of the current licensing basis is not within the scope of the license renewal proceeding; LBP-12-24, 76 NRC 503 (2012)

contention that draft environmental assessment fails to adequately address potential impacts of the reasonably foreseeable expansion of an independent spent fuel storage installation on cultural and historic resources is admissible; LBP-14-6, 79 NRC 404 (2014)

petitioner in materials licensing actions is entitled to a presumption of standing if petitioner resides in the zone of reasonably foreseeable harm from the source of radioactivity and the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-12-24, 76 NRC 503 (2012)

ruling on petitions for waiver of application of the waste confidence rule in ISFSI license renewal proceeding is deferred and held it in abeyance; LBP-12-24, 76 NRC 503 (2012)

INFORMAL PROCEEDINGS

NRC may hold an informal hearing in which it requests and considers written materials without providing for traditional trial-type procedures such as oral testimony and cross-examination; LBP-11-4, 73 NRC 91 (2011)

INITIAL DECISIONS

board shall include additional NRC Staff actions necessary if inconsistent with prior Staff action approving or denying the application; CLI-15-17, 82 NRC 33 (2015)

denial of summary disposition does not constitute a full or partial initial decision warranting immediate Commission review; CLI-11-10, 74 NRC 251 (2011)

if the board’s findings after the evidentiary hearing affect NRC Staff’s conclusions in the environmental assessment, then those conclusions would have to be revisited; CLI-15-17, 82 NRC 33 (2015)

NRC Staff typically prepares the record of decision, but when a hearing is held, the board’s initial decision constitutes the record of decision as to those issues that were litigated during the hearing; LBP-13-13, 78 NRC 246 (2013)

petitions for review are allowed after a full or partial initial decision, both of which are considered final decisions; CLI-11-10, 74 NRC 251 (2011); CLI-11-14, 74 NRC 301 (2011)

when an adjudicatory proceeding has been initiated with respect to a license amendment issued with a no significant hazards determination, once the presiding officer’s initial decision becomes effective, the appropriate official shall take action with respect to that amendment in accordance with the initial decision; LBP-15-13, 81 NRC 456 (2015)

See also Partial Initial Decisions

INJUNCTIVE RELIEF

district court did not abuse its discretion in balancing the harms in favor of an injunction related to an electric utility’s Clean Water Act permit for the construction of a new power plant; LBP-14-6, 79 NRC 404 (2014)

irreparable harm element of the test for issuance of injunctive relief was met where the tribe’s evidence showed that a phase of the project would involve damage to at least one known site, and virtually ensure some loss or damage; LBP-15-2, 81 NRC 48 (2015)

movant must show that the harm is certain and great and of such imminence that there is a clear and present need for equitable relief; LBP-15-2, 81 NRC 48 (2015)

preliminary injunction halting a solar energy project was granted based on a tribal claim that the project would not avoid most of the 459 cultural sites identified, and that the NEPA and NHPA process had been insufficient; LBP-15-2, 81 NRC 48 (2015)

when considering stays or other forms of temporary injunctive relief, the Commission has applied the stay factors outlined in 10 C.F.R. 2.342(e), which restate commonplace principles of equity; CLI-14-6, 79 NRC 445 (2014)

See also Stay

INJURY IN FACT

aesthetic harms may amount to an injury in fact sufficient for standing; CLI-12-12, 75 NRC 603 (2012)
although a party who is not injured by a board’s ruling has no right to appeal that ruling, it may file a supporting brief at the appropriate time; CLI-12-6, 75 NRC 352 (2012)

cause of injury to intervention petitioner need not flow directly from the challenged action, but the chain of causation must be plausible; CLI-15-25, 82 NRC 389 (2015)

extreme delay in the completion of Staff’s environmental review, and thus the equal delay in hearing intervenors’ claim of injury, raises issues of compliance with section 189a of the Atomic Energy Act; LBP-11-30, 74 NRC 627 (2011)

increases in risk can at times be injuries in fact sufficient to confer standing; LBP-14-4, 79 NRC 319 (2014)

individual tribal member who does not reside on a tribal reservation where a facility is proposed to be located must show injury in fact relative to that member’s activities on the reservation even when the reservation is asserted to be on aboriginal tribal lands; LBP-13-6, 77 NRC 253 (2013)

injury can result when the risk of encountering environmental harms prevents a plaintiff from taking an action; LBP-14-4, 79 NRC 319 (2014)

intervention petitioner must allege an injury in fact that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; CLI-15-25, 82 NRC 389 (2015)

intervention petitioner must demonstrate that the asserted injury is plausibly linked to the challenged action; CLI-15-25, 82 NRC 389 (2015)

litigants are not entitled to challenge a board ruling unless and until that ruling has worked a concrete injury to his personal interests; CLI-12-6, 75 NRC 352 (2012)

mere potential exposure to minute doses of radiation within regulatory limits does not constitute a distinct and palpable injury on which standing can be founded; CLI-11-3, 73 NRC 613 (2011)

nonradiological impacts can be a basis for standing; LBP-13-6, 77 NRC 253 (2013)

organizational standing in an agency adjudicatory proceeding could arise based on an asserted injury to a tangible asset, such as a building or land owned or regularly utilized by an organization, that is located near a proposed licensing activity; LBP-13-6, 77 NRC 253 (2013)

organizational standing is rooted in the capacity of an organization to show a discrete injury to its organizational interests; LBP-13-6, 77 NRC 253 (2013)

party seeking a stay must specifically and reasonably demonstrate an injury, not merely allege generalized harm; LBP-15-2, 81 NRC 48 (2015)

petitioner need only show that a cognizable injury is associated with a proposed licensing action and that granting the relief sought will address that injury; LBP-13-6, 77 NRC 253 (2013)

petitioners are not required to demonstrate their asserted injury with certainty at the admission stage of the proceeding; CLI-15-25, 82 NRC 389 (2015)

potential harm necessary to demonstrate standing in NRC proceedings need not relate to physical or bodily injury; CLI-12-12, 75 NRC 603 (2012)

risk of future harm as an injury is both actual and imminent; LBP-14-4, 79 NRC 319 (2014)

standing can be based on diminishment of recreational enjoyment of wildlife area due to, among other factors, an increase in dust due to traffic on adjacent highway; CLI-12-12, 75 NRC 603 (2012)

when a radiological health or safety impact is asserted to provide the basis for a petitioner’s injury in fact, in lieu of the usual injury and causation showings, petitioner can attempt to establish its standing based on the proximity plus protocol by showing that the proposed licensing action involves a significant source of radiation, which has an obvious potential for offsite consequences; LBP-13-6, 77 NRC 253 (2013)

whether petitioner could be affected by the licensing action must be determined on a case-by-case basis, taking into account the petitioner’s distance from the source, the nature of the licensed activity, and the significance of the radioactive source; LBP-13-6, 77 NRC 253 (2013)

See also Irreparable Injury

INSPECTION

although intervenors disagree with applicant’s opportunistic inspection strategy for managing rebar corrosion, they merely assert, and do not plausibly explain, how applicant’s approach will lead to a material safety impact; LBP-15-1, 81 NRC 15 (2015)

basis of NRC Staff’s reasonable assurance finding on combined license applicant’s squib valve inspection program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75 NRC 63 (2012)
SUBJECT INDEX

inservice testing and inspection program for squib valves in combined license applications is discussed; CLI-15-13, 81 NRC 555 (2015)

inservice visual inspection of containment system must comply with ASME Boiler and Pressure Vessel Code Section XI; LBP-15-26, 82 NRC 163 (2015)

inspection to determine effects of wet or underwater conditions on underground safety-related electrical cables is discussed; DD-15-1, 81 NRC 193 (2015)

intervenor must do more than point to issues with the shield building, but must also indicate what is wrong with applicant’s response and its amended inspection program and why intervenor believes the particular inspection program makes the license renewal application unacceptable; LBP-15-1, 81 NRC 15 (2015)

neither licensee activities nor NRC inspection of or inquiry about those activities provides the opportunity for a hearing under the Atomic Energy Act because those activities only concern compliance with the terms of an existing license; CLI-14-11, 80 NRC 167 (2014)

NRC Staff inspections and confirmatory action letters are oversight activities normally conducted to ensure that licensees comply with existing NRC requirements and license conditions and therefore do not typically trigger the opportunity for a hearing under the AEA; CLI-15-5, 81 NRC 329 (2015)

NRC’s inspection process is separate from its licensing process; LBP-15-27, 82 NRC 184 (2015)

periodic visual inspections of the accessible interior and exterior surfaces of the containment system are required to identify structural deterioration that may affect containment integrity; LBP-15-26, 82 NRC 163 (2015)

request for an Office of the Inspector General inspection on why different NRC regions have different analysis criteria for similar primary coolant pump events was forwarded on to the OIG; DD-15-3, 81 NRC 713 (2015)

request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 489 (2014)

requirements of section XI of the ASME Boiler and Pressure Vessel Code on inservice inspections are incorporated by reference in 10 C.F.R. 50.55a(b), 50.55a(g)(4); CLI-11-8, 74 NRC 214 (2011)

through the regulatory process, which includes plant inspections, notice and guidance to licensees, and enforcement actions, NRC takes a host of measures to improve the ability to timely detect and correct inadvertent leaks to assure compliance with public dose limits; LBP-11-2, 73 NRC 28 (2011)

under 10 C.F.R. 40.41(g) and 70.32(k), a uranium enrichment facility cannot be operated until the agency verifies through inspection that the facility has been constructed in accordance with the license; LBP-11-11, 73 NRC 455 (2011)

walkdowns and inspections performed by licensee, industry, and NRC personnel following an earthquake that exceeded the plant’s design basis are described; DD-12-2, 76 NRC 391 (2012)

See also NRC Inspection INSPECTION REPORTS

even reports documenting violations are not de facto license amendments; LBP-15-27, 82 NRC 184 (2015)

such reports could be seen as objective evidence that applicant may not adequately manage aging in the future; CLI-11-11, 74 NRC 427 (2011)

INSPECTION REPORTS

Commission administratively exempted from the backfit rule, an order to the combined license holder to address spent fuel pool instrumentation requirements not specified in the certified design as enhanced protective measures that represent a substantial increase in the protection of public health and safety; CLI-12-9, 75 NRC 421 (2012)

modernization plans for seismic instrumentation following failure of an annunciation panel in the main control room are discussed; DD-12-2, 76 NRC 391 (2012)

request for additional instrumentation for all Mark I spent fuel storage pools has been addressed through an order modifying licenses with regard to reliable spent fuel pool instrumentation; DD-15-1, 81 NRC 193 (2015)
request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise technical specifications for spent fuel pool instrumentation is denied; DD-13-3, 78 NRC 571 (2013)
request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)
request that technical specification for control room emergency ventilation system instrumentation be changed to require that the control building air intake radiation-high function be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)
request that technical specification for secondary containment isolation instrumentation be changed to require the reactor building exhaust radiation-high function to be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

INTEGRATED PLANT ASSESSMENT
applicant must demonstrate that effects of aging will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-13-13, 78 NRC 246 (2013)
contention that does not actually challenge any specific part of the integrated plant assessment or time-limited aging analyses fails to demonstrate the existence of a genuine dispute with applicant; LBP-15-6, 81 NRC 314 (2015)
each application must contain an IPA that is a detailed assessment, conducted at a component and structure level, rather than at a more generalized system level; LBP-13-13, 78 NRC 246 (2013)
license renewal applicant must demonstrate that effects of aging for each structure and component will be managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 340 (2015)
license renewal applicant must perform an IPA to identify structures and components that are subject to aging management review; CLI-15-6, 81 NRC 340 (2015)
license renewal applications must include an IPA demonstrating that effects of aging on plant systems, structures, and components will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-13-8, 78 NRC 1 (2013); LBP-13-13, 78 NRC 246 (2013)

INTEGRATED SAFETY ANALYSIS
all credible accident sequences must be identified in the ISA Summary as well as items relied on for safety and necessary safety controls; LBP-12-21, 76 NRC 218 (2012)
along with the requirement to perform an ISA is the requirement for applicant to provide the NRC Staff with an ISA summary, the content of which is specified in 10 C.F.R. 70.65(b); LBP-11-11, 73 NRC 455 (2011)
apPLICANT FOR A PART 70 LICENSE IS REQUIRED TO ESTABLISH AND MAINTAIN A SAFETY PROGRAM, WHICH INCLUDES PERFORMING AN ISA; LBP-11-11, 73 NRC 455 (2011)
apPlicant must consider potential accident sequences caused either by deviations in the processes that will be conducted at the proposed facility or by credible external events, including natural phenomena; LBP-11-11, 73 NRC 455 (2011)
items relied on for safety that are a central focus of the ISA process for a uranium enrichment facility are the subject of three proposed license conditions; LBP-11-11, 73 NRC 455 (2011)
items relied upon for safety in uranium enrichment facilities should be described in sufficient detail to allow a Staff reviewer to understand the IROFS’s functions in relation to the performance standards in section 70.61, which specifies limitations on the levels of risk for credible high- and intermediate-consequence accidents and nuclear criticality accidents; LBP-11-11, 73 NRC 455 (2011)
Process designs for uranium enrichment facilities should be described in a level of detail sufficient to allow a Staff reviewer to understand the theory of operation for the process; LBP-11-11, 73 NRC 455 (2011)
Requirements for uranium enrichment facility licensing are detailed; LBP-12-21, 76 NRC 218 (2012)
SUMMARY MUST ACCOMPANY THE URANIUM ENRICHMENT FACILITY LICENSE APPLICATION AND CONTAIN A GENERAL DESCRIPTION OF THE SITE AND THE FACILITY WITH EMPHASIS ON FACTORS THAT COULD AFFECT SAFETY AND DESCRIPTION OF EACH PROCESS ANALYZED IN THE ISA; LBP-12-21, 76 NRC 218 (2012)
to perform an appropriate ISA, NUREG-1520 standard review plan guidance for fuel cycle facilities
indicates that applicant should identify the process designs, accident sequences, and items relied upon
for safety that are associated with the facility; LBP-11-11, 73 NRC 455 (2011)
uranium enrichment facility licensee must submit an annual update of the ISA summary; LBP-12-21, 76
NRC 218 (2012)

INTENT
affirmative misconduct means an affirmative misrepresentation or affirmative concealment of a material
fact by the government, although it does not require that the government intended to mislead a party;
LBP-12-16, 76 NRC 44 (2012)
estoppel claimant must prove a false representation by the government, that the government had the intent
to induce the plaintiff to act on the misrepresentation, plaintiff’s lack of knowledge or inability to
obtain the true facts, and plaintiff’s reliance on the misrepresentation to his detriment; LBP-12-16, 76
NRC 44 (2012)

INTEREST
governmental body’s interest in protecting the individuals and territory that fall under that body’s
authority establishes an organizational interest for standing purposes; LBP-11-6, 73 NRC 149 (2011)
prospective intervenors must show a direct, substantial, and legally protectable interest, the test for which
is primarily a practical guide to disposing of lawsuits by involving as many apparently concerned
persons as is compatible with efficiency and due process; LBP-11-4, 73 NRC 91 (2011)

INTERESTED GOVERNMENTAL ENTITY
entities who failed to raise admissible contentions were eligible to participate in the license renewal
proceeding; LBP-13-13, 78 NRC 246 (2013)
governmental entity is permitted to participate in the proceeding as an interested local governmental body
and will thus have the opportunity to support intervenors’ already-admitted contention; LBP-15-19, 81
NRC 815 (2015)
if at least one petitioner demonstrates standing and proffers an admissible contention so that its petition to
intervene is granted, section 2.315(c) allows a local governmental body that has not been admitted as a
party to participate in a hearing as an interested nonparty; LBP-11-6, 73 NRC 149 (2011)
litigation opportunities available to an entity participating as a local governmental body pursuant to 10
C.F.R. 2.315(c) are discussed; LBP-15-19, 81 NRC 815 (2015)
local governmental body that is not admitted as a party shall, upon request, be permitted to participate in
a hearing as an interested nonparty; LBP-11-6, 73 NRC 149 (2011)
representative of a governmental entity that wishes to participate as a nonparty in the proceeding must
identify those contentions on which it will participate in advance of any hearing held; LBP-15-11, 81
NRC 401 (2015)
such a nonparty may introduce evidence, interrogate witnesses where cross-examination by the parties is
permitted, advise the Commission without being required to take a position with respect to the issue,
file proposed findings, and petition for review by the Commission; LBP-11-6, 73 NRC 149 (2011)

INTERESTED STATE PARTICIPATION
brief stay of the close of a licensing proceeding was ordered to allow a state the opportunity to request
status as an interested governmental entity; CLI-12-6, 75 NRC 352 (2012)

INTERPRETATION
board may employ case law interpreting FOIA Exemption 5 when determining whether the deliberative
process privilege applies in an NRC proceeding; LBP-13-5, 77 NRC 233 (2013)
Commission precedent interprets the term, “severe accidents,” to encompass only reactor accidents and not
spent fuel pool accidents; LBP-11-2, 73 NRC 28 (2011)
FOIA’s purpose is to encourage disclosure, and, to that end, its exemptions are to be interpreted
narrowly; LBP-13-5, 77 NRC 233 (2013)
intervenors’ allegations are viewed in a light favorable to intervenors; LBP-15-11, 81 NRC 401 (2015)
NRC must consider varying interpretations and the wisdom of its policy on a continuing basis; LBP-14-4,
79 NRC 319 (2014)
principle of exprèsio unis est exclusio alterius is discussed; LBP-15-11, 81 NRC 401 (2015)
See also Construction of Meaning; Regulations, Interpretation; Statutory Construction
SUBJECT INDEX

INTERROGATORIES
NRC Staff counsel may file written interrogatories that the target of an enforcement order must answer; LBP-14-11, 80 NRC 125 (2014)
target of an enforcement order may serve interrogatories on NRC Staff, must show that answers to the interrogatories are necessary to a proper decision in the proceeding, and may ask the board to direct NRC Staff to answer those interrogatories; LBP-14-11, 80 NRC 125 (2014)

INTERVENORS
although applicant carries the burden of proof on safety issues, intervenors have the initial burden of going forward with each contention and must provide sufficient evidence to support the claims made; LBP-14-1, 79 NRC 39 (2014)
because the scope of intervenors’ participation in adjudications is limited to their admitted contentions, they are barred from participation in the uncontested portion of the hearing; LBP-14-9, 80 NRC 15 (2014)
by participating in NRC proceedings, intervenors accept the obligation of uncovering relevant, publicly available information; CLI-12-13, 75 NRC 681 (2012); CLI-12-21, 76 NRC 491 (2012)
NRC Staff and licensee may file interlocutory appeals on the admission of a contention, but intervenors are prohibited from filing such appeals on the denial of a contention unless all contentions have been denied; LBP-14-4, 79 NRC 319 (2014)
party that has successfully intervened in a licensing proceeding may propose new contentions for litigation until the license is issued; LBP-11-22, 74 NRC 259 (2011)
petitioners are obliged to present factual allegations and/or expert opinion necessary to support its contention; LBP-15-1, 81 NRC 15 (2015); LBP-15-5, 81 NRC 249 (2015)
petitioners are required to provide factual allegations or expert testimony to show a potential deficiency in applicant’s aging management plan; LBP-15-5, 81 NRC 249 (2015)

INTERVENTION
admissible contention is required for grant of a hearing request; LBP-15-17, 81 NRC 753 (2015)
any person or organization seeking to intervene as a party in an NRC adjudicatory proceeding addressing a proposed licensing action must establish standing and proffer at least one admissible contention; LBP-11-13, 73 NRC 534 (2011)
board determined that confirmatory action letter was a de facto license amendment, which allows for public intervention; LBP-14-1, 79 NRC 39 (2014)
Commission denies a request for a hearing and to intervene in this license transfer proceeding; CLI-15-8, 81 NRC 300 (2015)
Commission did not intend to relieve third-party individuals who are not the subject of an enforcement order, but who nonetheless seek a hearing on the order, from satisfying the requirements for a petition for intervention in section 2.309; LBP-14-4, 79 NRC 319 (2014)
confirmatory action letter is an enforcement process that does not allow for public intervention; LBP-14-1, 79 NRC 39 (2014)
Congress called upon the Commission to make fundamental changes in its public hearing process to ensure that hearings adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; LBP-11-6, 73 NRC 149 (2011)
contention admissibility criteria are strict by design but should not be turned into a fortress to deny intervention; LBP-15-20, 81 NRC 829 (2015)
contention admissibility rule should not serve as a fortress to deny intervention; LBP-11-6, 73 NRC 149 (2011)
court will examine a specific barrier to participation, in isolation, and generally conclude that it is not illegal; LBP-14-4, 79 NRC 319 (2014)
hearing request and party status as an intervenor may only be granted to a petitioner if it demonstrates standing and proffers at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f); CLI-15-23, 82 NRC 321 (2015); LBP-11-22, 74 NRC 259 (2011); LBP-11-29, 74 NRC 612 (2011); LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015)
interested stakeholders who stand to benefit from a confirmatory order’s safety measures may intervene in a contested enforcement proceeding to protect its interest in ensuring that the order is upheld as issued; CLI-13-2, 77 NRC 39 (2013)
legal standards in sections 2.309(d) and (f) are relevant when evaluating a third-party petition for hearing on a confirmatory order; LBP-14-4, 79 NRC 319 (2014)

licensing boards must consider the nature of petitioner’s right under the AEA or the National Environmental Policy Act to be made a party to the proceeding, nature and extent of petitioner’s property, financial, or other interest in the proceeding, and possible effect of any decision or order that may be issued in the proceeding on petitioner’s interest; LBP-15-17, 81 NRC 753 (2015)

participation in a licensing proceeding requires a demonstration of standing; LBP-15-17, 81 NRC 753 (2015)

to become a party, petitioner must establish standing and proffer at least one admissible contention; LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011); LBP-11-16, 73 NRC 645 (2011)
to intervene as a party, a union must establish standing and proffer at least one admissible contention; LBP-14-4, 79 NRC 319 (2014)
to obtain a hearing, petitioner must show that its request is timely, that it has standing to obtain a hearing, and that it has proposed at least one admissible contention; LBP-14-4, 79 NRC 319 (2014)
too freely allowing third parties to contest enforcement settlements at hearings would undercut NRC’s policy favoring enforcement settlements; LBP-14-4, 79 NRC 319 (2014)

See also Standing to Intervene

INTERVENTION, DISCRETIONARY

discretionary hearing may be held on export or import licenses if a hearing would be in the public interest and would assist the Commission in making the statutory determinations required by the Atomic Energy Act; CLI-11-3, 73 NRC 613 (2011)
discretionary intervention is permitted only where at least one petitioner has established standing and at least one contention has been admitted; CLI-14-11, 80 NRC 167 (2014); CLI-15-14, 81 NRC 729 (2015); LBP-14-4, 79 NRC 319 (2014)

if petitioner fails to show standing pursuant to section 2.309(d), a board may grant discretionary standing when at least one requestor/petitioner has established standing and at least one admissible contention has been admitted so that a hearing will be held; LBP-11-29, 74 NRC 612 (2011)

six criteria have been articulated; LBP-14-4, 79 NRC 319 (2014)

See also Standing to Intervene

SUBJECT INDEX
INTERVENTION PETITIONERS
petitioner has the right to file a reply; LBP-15-13, 81 NRC 456 (2015)
Petitioners, not just parties, may request a rule waiver in NRC adjudicatory proceedings; CLI-12-19, 76 NRC 377 (2012)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-15-13, 81 NRC 456 (2015)

INTERVENTION PETITIONS
although a board may view petitioner’s supporting information in a light favorable to the petitioner, NRC contention admissibility rules require petitioner (not the board) to supply all elements for a valid intervention petition; LBP-11-16, 73 NRC 645 (2011); LBP-11-29, 74 NRC 612 (2011); LBP-13-8, 78 NRC 1 (2013)
any person whose interests may be affected by the license renewal proceeding, and who wishes to participate as a party, must file a petition for leave to intervene within 60 days of the notice of hearing in accordance with 10 C.F.R. 2.309; LBP-12-8, 75 NRC 539 (2012)
arguments not raised before the board or not clearly articulated in the petition for review are deemed waived; LBP-15-5, 81 NRC 249 (2015)
boards are to construe intervention petitions in favor of petitioners in determining whether petitioner has demonstrated standing; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
boards may grant requests for hearing and petitions to intervene if they determine that petitioner has standing and has proposed at least one admissible contention; LBP-11-21, 74 NRC 115 (2011); LBP-12-8, 75 NRC 539 (2012); LBP-12-25, 76 NRC 540 (2012); LBP-13-8, 78 NRC 1 (2013); LBP-13-11, 78 NRC 177 (2013); LBP-13-12, 78 NRC 239 (2013)
cause of injury to intervention petitioner need not flow directly from the challenged action, but the chain of causation must be plausible; CLI-15-25, 82 NRC 389 (2015)
Commission denies hearing request, but refers the matters raised to the Executive Director of Operations for consideration as a request for enforcement action; CLI-15-5, 81 NRC 329 (2015)
deadline for answer to hearing petition is specified; CLI-11-3, 73 NRC 613 (2011)
hearing request is granted where petitioners have submitted a timely petition, established representational standing, and proffered an admissible contention; LBP-15-20, 81 NRC 829 (2015)
hearing request or petition to intervene must set forth with particularity the contentions sought to be raised by satisfying six criteria; CLI-12-5, 75 NRC 301 (2012); CLI-15-20, 82 NRC 211 (2015); LBP-11-21, 74 NRC 115 (2011)
intervention petition must be filed within the time specified in any notice of proposed action; LBP-15-13, 81 NRC 456 (2015)
intervention petitioner must allege an injury in fact that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision; CLI-15-25, 82 NRC 389 (2015)
intervention petitions must be filed within 60 days based on the documents then in existence, meaning that the petition must be based on the documents submitted with the application; LBP-11-22, 74 NRC 259 (2011)
issues raised in an intervention petition or answer are within the appropriate scope of a reply brief; LBP-15-5, 81 NRC 249 (2015)
license amendment will be effective on issuance, even if adverse public comments have been received and even if an interested person meeting the provisions for intervention has filed a request for a hearing; LBP-15-17, 81 NRC 753 (2015)
name, address, and phone number of the requestor or petitioner must be provided; LBP-15-20, 81 NRC 829 (2015)
NRC is lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-11-13, 73 NRC 534 (2011)
petition is denied for failure to proffer an admissible contention; LBP-11-21, 74 NRC 115 (2011)
petition pursuant to 10 C.F.R. 2.714, which was abolished in 2004, is treated as though filed under section 2.309; LBP-13-12, 78 NRC 239 (2013)
petitioner has some latitude to supplement or cure a standing showing in its reply pleading, but any additional arguments should be supported by either the declaration that accompanied the original hearing request or a supplemental affidavit; LBP-12-3, 75 NRC 164 (2012)
petitioner must demonstrate standing and propose at least one contention that meets the criteria of 10 C.F.R. 2.309(f)(1)(i)-(vi); CLI-15-21, 82 NRC 295 (2015)
petitioner must satisfy the six pleading requirements of 10 C.F.R. 2.309(f)(1); LBP-15-13, 81 NRC 456 (2015)
petitioner must set forth with particularity the contentions it seeks to have litigated in a hearing; CLI-15-8, 81 NRC 500 (2015)
petitioner must state the nature of petitioner’s statutory right to be made a party to the proceeding, nature and extent of petitioner’s property, financial, or other interest in the proceeding, and possible effect of any decision or order that might be issued on petitioner’s interest; LBP-15-13, 81 NRC 456 (2015); LBP-15-19, 81 NRC 815 (2015)
petitioners must include their name, address, and telephone contact information, nature of their right under the AEA to be made a party, nature of their interest in the proceeding, and possible effect of any decision or order that might be issued on their interest; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)
pleadings submitted by pro se petitioners are afforded greater leniency than petitions drafted with the assistance of counsel; LBP-15-5, 81 NRC 329 (2015); LBP-15-6, 81 NRC 314 (2015)
requests for hearing and petitions for leave to intervene must set forth with particularity the contentions sought to be raised and must satisfy all six requirements of 10 C.F.R. 2.309(f)(1); CLI-12-8, 75 NRC 393 (2012)
timeliness of an initial hearing petition in different situations is defined as being filed between 20 and 60 days after certain specified events; LBP-15-11, 81 NRC 401 (2015)
INTERVENTION PETITIONS, LATE-FILED
although an intervention petition itself was timely filed, the board must balance the eight factors to determine whether petitioner’s late-filed exhibits are admissible; LBP-11-13, 73 NRC 534 (2011)
because a pro se first-time filer experienced problems with the NRC E-Filing system, the board concludes that petitioners’ efforts demonstrate the requisite good cause for acceptance of the non timely exhibits for consideration with the timely filed petition; LBP-11-13, 73 NRC 534 (2011)
boards must balance the eight factors to determine whether petitioner’s late-filed petition will be considered; LBP-11-13, 73 NRC 534 (2011)
determination as to whether requests or petitions are filed in a timely manner shall be subject to a reasonableness standard and are not subject to the 30-day deadline applicable to motions by existing parties to add or amend contentions; LBP-15-6, 81 NRC 314 (2015)
electronic filing is only complete when the filer performs the last act that it must perform to transmit a document in its entirety; LBP-11-13, 73 NRC 534 (2011)
failure to comply with pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests; LBP-11-7, 73 NRC 254 (2011)
good cause for the failure to file on time is the most important of the late-filing factors; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
if any portion of a filing is untimely tendered, it must be accompanied by a motion to file out of time; LBP-11-13, 73 NRC 534 (2011)
intervention petitioner can justify filing a petition after the initial deadline has expired by showing that the contention is based on new information and that the petition was filed promptly after the new information became available; LBP-12-25, 76 NRC 540 (2012)
intervention petitioner must either file its petition by the date specified in the Federal Register notice or show good cause for filing after the deadline; LBP-12-25, 76 NRC 540 (2012)
lack of prejudice, standing alone, does not excuse an untimely filing, but it is a factor the Commission has considered in determining whether good cause exists; LBP-15-4, 81 NRC 156 (2015)
persistent difficulties with the NRC electronic filing system despite petitioners’ good-faith efforts is good cause for late filing; LBP-11-2, 73 NRC 28 (2011)
persons not currently parties may file timely petitions to intervene provided that they satisfy the good-cause criteria; LBP-15-6, 81 NRC 314 (2015)
petitioners who are proceeding pro se should be shown greater leeway on the question of whether they have demonstrated good cause for lateness than petitioners represented by counsel; LBP-11-13, 73 NRC 534 (2011)
prejudice is not a factor in the balancing test for nontimely filings; LBP-11-13, 73 NRC 534 (2011)
State intervenor provided good cause for its late E-filing submission because the State submitted its petition to NRC by e-mail before the deadline lapsed and the delay was purely a matter of obtaining digital credentials for the system, not an attempt to gain extra time to prepare a pleading or otherwise to flout NRC’s procedural requirements; LBP-15-4, 81 NRC 156 (2015)

INTERVENTION RULINGS

absent error of law or abuse of discretion, the Commission generally defers to board rulings on contention admissibility; CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)
appeal as of right from a board’s ruling on an intervention petition is permitted only upon denial of a petition to intervene and/or request for hearing, on the question as to whether it should have been granted or upon the granting of a petition to intervene and/or request for hearing, on the question as to whether it should have been wholly denied; CLI-14-3, 79 NRC 31 (2014)
appeal as of right on the question of whether an initial intervention petition should have been wholly denied or, alternatively, was granted improperly are governed by 10 C.F.R. 2.311; CLI-12-7, 75 NRC 379 (2012); CLI-12-12, 75 NRC 603 (2012)
appeal as of right on the question whether a hearing request should have been wholly denied is allowed; CLI-12-19, 76 NRC 377 (2012)
appeals of board rulings on hearing requests, petitions to intervene, and access to certain nonpublic information are governed by 10 C.F.R. 2.311(a); CLI-12-6, 75 NRC 352 (2012)
appeal is not appropriate for boards to decide what additional information, if any, is necessary to cure a claimed deficiency in a license application; CLI-11-11, 74 NRC 427 (2011)
automatic right exists to appeal a board decision on the question whether a petition to intervene should have been wholly denied; CLI-15-25, 82 NRC 380 (2015)
broad is free to decide contention admissibility on a theory different from those argued by the litigants, but only if it explains the specific basis of its ruling and gives litigants a chance to present arguments (and, where appropriate, evidence) regarding the board’s new theory; LBP-14-4, 79 NRC 319 (2014)
board examines the information, facts, and expert opinions provided by petitioners to confirm that they do provide adequate support for the contention; LBP-15-20, 81 NRC 829 (2015)
board is directed to consider whether a confirmatory action letter issued to licensee constitutes a de facto license amendment that would be subject to a hearing opportunity under AEA § 189a, and, if so, whether the petition meets the standing and contention admissibility requirements; CLI-12-20, 76 NRC 437 (2012)
board is free to decide contention admissibility on a theory different from those argued by the litigants, but only if it explains the specific basis of its ruling and gives litigants a chance to present arguments (and, where appropriate, evidence) regarding the board’s new theory; LBP-14-4, 79 NRC 319 (2014)
board may grant a timely filed petition to intervene if it concludes that petitioner has established standing and proffered at least one admissible contention; LBP-15-26, 82 NRC 163 (2015)
boards do not adjudicate disputed facts at contention admissibility stage; LBP-12-8, 75 NRC 539 (2012)
boards have an independent obligation to determine whether petitioners meet the threshold criterion for intervention even if their standing is uncontested; LBP-12-24, 76 NRC 503 (2012)
boards may appropriately view petitioner’s supporting information in a light favorable to petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-12-25, 76 NRC 540 (2012); LBP-13-6, 77 NRC 253 (2013)
boards must do more than uncritically accept a party’s mere assertion that a particular document supplies the basis for its contention, without even reviewing the document itself to determine if it appears to support a litigable contention; LBP-11-6, 73 NRC 149 (2011)

boards should not supply new information not otherwise present in the adjudicatory record in order to cure deficiencies in a petition; CLI-12-12, 75 NRC 603 (2012)

Commission affirmed the board’s standing ruling, but declined to accept review of challenges to the board’s admission of two contentions because petitioner had failed to perfect its appeal by challenging the validity of the board’s admissibility rulings regarding other contentions; LBP-15-3, 81 NRC 65 (2015)

Commission generally defers to board threshold rulings on contention admissibility, unless it finds an error of law or abuse of discretion; CLI-11-11, 74 NRC 427 (2011); CLI-12-12, 75 NRC 603 (2012); CLI-12-14, 75 NRC 692 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-15-18, 82 NRC 135 (2015)

Commission generally prefers that licensing boards make initial factual determinations; CLI-14-2, 79 NRC 11 (2014)

even if there are no objections to petitioners’ representational standing, boards have an independent obligation to determine whether they have adequately demonstrated standing; LBP-11-2, 73 NRC 28 (2011)

for a hearing petitioner to take an appeal pursuant to section 2.311(c), petitioner must claim that, after considering all pending contentions, the board has erroneously denied a hearing; CLI-14-3, 79 NRC 31 (2014)

if petitioner’s factual claims in support of its standing are contested, untenable, conjectural, or conclusory, a board need not uncritically accept such assertions, but may weigh those informational claims and exercise its judgment about whether standing has been satisfied; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)

in assessing whether petitioner has demonstrated its standing, licensing boards are to construe petitions in favor of petitioners; CLI-15-25, 82 NRC 389 (2015); LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)

interlocutory review of a board’s dismissal of a new contention is granted only upon a showing of extraordinary circumstances; CLI-12-13, 75 NRC 681 (2012)

intervenor normally is not allowed to challenge a board’s rejection of contentions where the board has granted a hearing on any contention; CLI-12-12, 75 NRC 603 (2012)

license applicant may take an appeal under 2.311(d)(1) if it contends that, after considering all pending contentions, the board has erroneously granted a hearing to the petitioner; CLI-14-3, 79 NRC 31 (2014)

licensing board order granting a request for hearing on the question whether the request should have been wholly denied is appealable; CLI-15-23, 82 NRC 321 (2015)

licensing board rulings will be addressed by the Commission after a licensing board has issued a final decision in a case, barring extraordinary circumstances; CLI-13-3, 77 NRC 51 (2013)

licensing boards must specify each basis relied upon for admitting a contention; CLI-12-5, 75 NRC 301 (2012)

limited interlocutory appeal right attaches only when the board has fully ruled on the initial intervention petition, that is, when it has admitted or rejected all proposed contentions; CLI-14-3, 79 NRC 31 (2014); LBP-14-8, 79 NRC 519 (2014); LBP-15-1, 81 NRC 15 (2015)

merits determination cannot be resolved at the contention admissibility stage of the proceeding; LBP-11-6, 73 NRC 149 (2011)

NRC rules of practice provide for an automatic right to appeal a licensing board decision deciding standing and contention admissibility, on the question whether a petition to intervene and request for hearing should have been granted, or denied in its entirety; CLI-12-8, 75 NRC 393 (2012); CLI-14-2, 79 NRC 11 (2014)

NRC Staff and licensee may file interlocutory appeals on the admission of a contention, but intervenors are prohibited from filing such appeals on the denial of a contention unless all contentions have been denied; LBP-14-4, 79 NRC 319 (2014)

once the board makes its determination that petitioner has articulated sufficient detail as to how the proposed action would affect its members, it would not be appropriate for the board to weigh the evidence to determine whether the harm to petitioner’s members is certain; CLI-15-25, 82 NRC 389 (2015)
proximity-based standing based on frequent contacts is a determination to be made by a licensing board after weighing all the information provided; LBP-15-17, 81 NRC 753 (2015)

to define scope of an admitted contention properly, the board should have specified which bases were admitted; LBP-13-6, 77 NRC 253 (2013)

to evaluate petitioner’s standing, boards construe the petition in favor of petitioner; LBP-14-4, 79 NRC 319 (2014)

to grant a hearing request, boards must find that petitioner has standing and has proposed at least one admissible contention; CLI-12-19, 76 NRC 377 (2012)

under 10 C.F.R. 2.311, appeal of a ruling on contentions is allowed only if the order wholly denies an intervention petition or a party other than the petitioner alleges that a petition for leave to intervene or a request for hearing should have been wholly denied; CLI-12-7, 75 NRC 379 (2012)

where petitioner has made no effort to establish that any proximity plus presumption should be applicable in determining standing relative to the challenged licensing action, boards must look to traditional standing precepts of injury and causation, as well as redressibility, to determine whether a sufficient factual and legal demonstration of standing has been made; LBP-13-6, 77 NRC 253 (2013)

INVESTIGATION

Congress has vested NRC with authority to issue subpoenas in conjunction with investigations that the NRC deems necessary to protect public health or to minimize danger to life or property in matters involving nuclear materials; CLI-13-5, 77 NRC 223 (2013)

licensee’s concerns about NRC’s administration of FOIA cannot overcome the agency’s duty to investigate alleged violations; CLI-13-5, 77 NRC 223 (2013)

NRC has authority to conduct any investigations it deems necessary and proper to the administration or enforcement of its authority, which includes any regulations or orders issued pursuant to the Atomic Energy Act; CLI-13-5, 77 NRC 223 (2013)

INVESTIGATIVE REPORTS

NRC considers whether Exemption 7 would prevent public disclosure of allegation and investigation information from release; CLI-13-5, 77 NRC 223 (2013)

IRREPARABLE INJURY

absent a showing of irreparable injury, stay standards can only be met if movant can demonstrate a virtual certainty of success on the merits; CLI-15-17, 82 NRC 33 (2015)

claim of violation of the National Historic Preservation Act did not in itself establish irreparable harm warranting interlocutory review; CLI-15-17, 82 NRC 33 (2015)

Commission will consider taking discretionary interlocutory review where the requesting party shows that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-15-17, 82 NRC 33 (2015)

denial of summary disposition neither threatens NRC Staff with immediate and serious irreparable impact that could not be alleviated through a petition for review of the presiding officer’s final decision nor affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-10, 74 NRC 251 (2011)

even if a party moving for a stay fails to show irreparable injury, a board may still grant a stay if movant has made an overwhelming showing or a demonstration of virtual certainty that it will prevail on the merits; LBP-15-2, 81 NRC 48 (2015)

expense is not irreparable harm; CLI-15-24, 82 NRC 331 (2015)

for a potential injury to be irreparable, it must be shown to be imminent, certain, and great; LBP-15-2, 81 NRC 48 (2015)

harming Native American artifacts would constitute an irreparable injury because artifacts are, by their nature, unique, and their historical and cultural significance make them difficult to value monetarily; LBP-15-2, 81 NRC 48 (2015)

if motions for stay of effectiveness demonstrate neither irreparable injury nor that reversal of the licensing board is a virtual certainty, then the remaining factors need not be considered; CLI-12-11, 75 NRC 523 (2012)

immediate, irreparable harm is not presumed by a NEPA violation, even assuming such a violation has occurred; CLI-15-17, 82 NRC 33 (2015)
injury that has never been the focus of a lawsuit cannot constitute irreparable harm; LBP-15-2, 81 NRC 48 (2015)
irreparable injury is the most important of the factors for grant or denial of a stay; LBP-15-2, 81 NRC 48 (2015)
labor and expense of pursuing litigation that petitioner sought to curtail do not constitute irreparable harm; CLI-11-10, 74 NRC 251 (2011)
merely raising the specter of a nuclear accident does not demonstrate irreparable harm; CLI-14-4, 79 NRC 249 (2014)
most important of the stay criteria is irreparable injury; CLI-12-11, 75 NRC 523 (2012)
ordinary burden to parties in pursuing litigation pending rulemaking does not justify disrupting ongoing license review; CLI-11-1, 73 NRC 1 (2011)
parties seeking a stay must show that they face imminent, irreparable harm that is both certain and great; CLI-12-11, 75 NRC 523 (2012)
rejection of contention where petitioner has other contentions pending for hearing does not constitute serious and irreparable harm or affect the structure of the proceeding in a pervasive or unusual manner; CLI-15-17, 82 NRC 33 (2015)
test for issuance of injunctive relief was met where the tribe’s evidence showed that a phase of the project would involve damage to at least one known site, and virtually ensure some loss or damage; LBP-15-2, 81 NRC 48 (2015)
to qualify as irreparable harm justifying a stay, the asserted harm must be related to the underlying claim; CLI-12-11, 75 NRC 523 (2012); LBP-15-2, 81 NRC 48 (2015)
to show imminent, irreparable harm to cultural resources, petitioner must describe with specificity the resources and the manner in which they are threatened; CLI-15-17, 82 NRC 33 (2015)
upon a strong showing of irreparable injury, stay movant need not always establish a high probability of success on the merits; LBP-15-2, 81 NRC 48 (2015)
without a showing of irreparable injury, petitioners seeking a stay of effectiveness must make an overwhelming showing of likely success on the merits; CLI-12-11, 75 NRC 523 (2012)

See also Injury in Fact

JURISDICTION
National Labor Relations Board is the agency equipped to handle alleged violations of the National Labor Relations Act, including collective bargaining disputes; LBP-14-4, 79 NRC 319 (2014)
petitions for reconsideration may not be filed except upon leave of the adjudicatory body that rendered the decision and that procedural deficiency is reason enough to deny the request; CLI-12-17, 76 NRC 207 (2012)
radon emissions are regulated by EPA; LBP-15-16, 81 NRC 618 (2015)
See also Licensing Boards, Jurisdiction; Nuclear Regulatory Commission, Jurisdiction; Presiding Officer, Jurisdiction

LABOR ISSUES
labor disputes are not within the scope of enforcement proceedings; LBP-14-4, 79 NRC 319 (2014)
licensee is obliged to give local union notice and an opportunity to bargain over the effects of its decision to implement changes in the terms and conditions of the employees’ employment regarding behavioral observations of security concerns; CLI-15-16, 81 NRC 810 (2015)
National Labor Relations Board is the agency equipped to handle alleged violations of the National Labor Relations Act, including collective bargaining disputes; LBP-14-4, 79 NRC 319 (2014)

LABOR UNIONS
both the union employee and the insured can be viewed as having incurred legal fees insofar as they have paid for legal services in advance as a component of the union dues or insurance premiums; LBP-11-8, 73 NRC 349 (2011)
licensing board rejected union’s claim to standing, but the appeal board under the rules then in effect permitted discretionary intervention; LBP-14-4, 79 NRC 319 (2014)
to establish representational standing, union must show that the interests it seeks to protect are germane to its own purposes, identify by name and address at least one member who qualifies for standing in his or her own right, show that it is authorized by that member to request a hearing on his or her behalf, and show that neither the claim asserted nor the relief requested requires that member’s participation in the proceeding in an individual capacity; LBP-14-4, 79 NRC 319 (2014)
to intervene as a party, a union must establish standing and proffer at least one admissible contention; LBP-14-4, 79 NRC 319 (2014)
union’s argument that it may demand a hearing on a confirmatory order without complying with intervention requirements of section 2.309(a) is incorrect; LBP-14-4, 79 NRC 319 (2014)
union’s organizational standing argument was rejected in an indirect license transfer proceeding initiated before the Commission because it was merely the Local’s representational standing argument dressed up in different clothes; LBP-14-4, 79 NRC 319 (2014)
whether licensee employees, as represented by a union, have a right to demand a hearing because they are persons adversely affected by a confirmatory order is discussed; LBP-14-4, 79 NRC 319 (2014)

LEAKAGE

acceptance criteria for Type A leak rate limits embodied in the technical specification are established to ensure that, in the event of a design-basis accident, the dose received by a member of the general public will not exceed the regulatory limits; LBP-15-26, 82 NRC 163 (2015)
because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the ability of buried structures to perform their intended functions as defined by 10 C.F.R. 54.4(a)(1)-(3), the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 28 (2011)
containments must be designed to remain essentially leaktight during postulated accidents; LBP-13-8, 78 NRC 1 (2013)
contention that applicant must include a discussion of environmental impacts of spent fuel pool leakage, fires, and lack of a spent fuel repository is dismissed; LBP-14-12, 80 NRC 138 (2014)
contention that license renewal application lacks supporting documentation providing analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 1 (2013)
in its Waste Confidence Decision, NRC failed to consider environmental impacts of a repository never becoming available, its analysis of spent fuel pool leaks was not forward-looking, and it had not sufficiently considered the consequences of spent fuel pool fires; CLI-15-4, 81 NRC 221 (2015)
intervenor’s reliance on long-available documents regarding leakages and notices of violation made a contention untimely as filed; LBP-15-11, 81 NRC 401 (2015)
key functions of buried structures, systems, and components that are the focus of the license renewal safety review under Part 54 do not include the prevention of inadvertent radioactive leaks from buried structures; LBP-11-2, 73 NRC 28 (2011)
leakage rate acceptance limit is based on minimizing leakage that would occur at the calculated peak containment internal pressure related to the design-basis loss-of-coolant accident; LBP-15-26, 82 NRC 163 (2015)
licensees must conduct periodic containment leakage tests to ensure that leakage does not exceed allowable rates; LBP-15-26, 82 NRC 163 (2015)
liquid released from a pipe where the pressure boundary is maintained would not be sufficient to exceed the dose limits specified in 10 C.F.R. Part 54; LBP-13-13, 78 NRC 246 (2013)
NRC argument that leaks from spent fuel pools will not occur because the NRC is on duty was rejected; LBP-13-4, 77 NRC 107 (2013)
NRC must include an evaluation of failure to secure permanent disposal, as well as an improved analysis of spent fuel pool leaks and spent fuel pool fires; CLI-14-8, 80 NRC 71 (2014)
overall integrated leakage rate must not exceed the allowable leakage rate with margin, as specified in the Technical Specifications; LBP-15-26, 82 NRC 163 (2015)
petitioners’ request for cold shutdown because of radiological contamination of groundwater from tritium is denied; DD-11-3, 73 NRC 375 (2011)
request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)
request for immediate action on leakage from the safety injection refueling water tank did not meet the criteria for review; DD-15-3, 81 NRC 713 (2015)
required Type A containment leakage test measures total leakage rate from all potential leakage paths, including containment liner welds, valves, fittings, and components that penetrate the containment; LBP-15-26, 82 NRC 163 (2015)
simply referencing a study without explaining the information’s significance relative to the potential containment leakage monitored by the testing at issue does not establish its materiality; LBP-15-26, 82 NRC 163 (2015)

through the regulatory process, which includes plant inspections, notice and guidance to licensees, and enforcement actions, NRC takes a host of measures to improve the ability to timely detect and correct inadvertent leaks to assure compliance with public dose limits; LBP-11-2, 73 NRC 28 (2011)

Type B pneumatic tests detect and measure local leakage rates across pressure-retaining, leakage-limiting boundaries other than valves; LBP-15-26, 82 NRC 163 (2015)

Type C pneumatic tests measure containment isolation valve leakage rates; LBP-15-26, 82 NRC 163 (2015)

LEGAL AUTHORITIES
grant of discretionary review must show that a board’s ruling was a departure from, or contrary to, established law; CLI-15-7, 81 NRC 481 (2015)

petition for review must raise a substantial question with respect to whether a necessary legal conclusion is without governing precedent or is contrary to established law; CLI-15-7, 81 NRC 481 (2015)

specific regulations control over general regulations; CLI-15-10, 81 NRC 535 (2015)

LEGAL STANDARDS
contention frames a legal dispute over the meaning of a regulation’s direction that a license amendment shall be in accord with the provisions of 10 C.F.R. 50.75(h)(5); LBP-15-24, 82 NRC 68 (2015)

LIABILITY INSURANCE
award of attorneys’ fees under the Equal Access to Justice Act can include fees paid by a third-party liability insurer; LBP-11-8, 73 NRC 349 (2011)

claimant with a legally enforceable right to full indemnification of attorney fees from a solvent third party cannot be deemed to have incurred that expense for purposes of the Equal Access to Justice Act, and hence is not eligible for an award of fees under that Act; LBP-11-8, 73 NRC 349 (2011)

denying Equal Access to Justice Act awards in insurance contexts would undermine the dual purposes of EAJA by both maintaining financial deterrents for those who would want to challenge unjust government action and not deterring unreasonable government actions; LBP-11-8, 73 NRC 349 (2011)

holders of a Parts 40/70 uranium enrichment facility license are required to maintain adequate nuclear liability insurance, with proof of such insurance necessary prior to a license being issued; LBP-11-11, 73 NRC 455 (2011)

in an actuarial sense the cost of the defense, to the extent borne by the insurance company, is a cost that the insured paid for, just as he would have paid a lawyer for his defense had he had no insurance; LBP-11-8, 73 NRC 349 (2011)

nothing in the Equal Access to Justice Act suggests a purpose to prevent a contractual agreement, or more broadly, to discourage the purchase of liability insurance; LBP-11-8, 73 NRC 349 (2011)

LICENSE AMENDMENT PROCEEDINGS
Commission shall grant a hearing upon the request of any person whose interest may be affected by the proceeding, and shall admit any such person as a party to such proceeding; LBP-13-7, 77 NRC 307 (2013)

LICENSE AMENDMENTS
agency actions not formally labeled as license amendments nevertheless can constitute de facto license amendments and accordingly trigger hearing rights for the public under section 189a of the AEA; CLI-15-14, 81 NRC 729 (2015)

agency approval or authorization is a necessary component of Commission action that affords a hearing opportunity under AEA § 189a, but not all agency approvals granted to licensees constitute de facto licensee amendments; CLI-15-14, 81 NRC 729 (2015)

amendment requests do not require an updated or separate emergency plan unless such a plan would be germane to the type of amendment request under review or is part of a licensee’s periodic update of emergency plans; LBP-11-20, 74 NRC 612 (2011)

any changes to the facility as described in the final safety analysis report must be either submitted to the NRC for approval through a license amendment or changed in accordance with the provisions of this section; DD-11-3, 73 NRC 375 (2011)

board determined that confirmatory action letter was a de facto license amendment, which allows for public intervention; LBP-14-1, 79 NRC 39 (2014)
considerations that NRC should review for grant of a license amendment are defined in 10 C.F.R. 50.40; LBP-15-17, 81 NRC 753 (2015)
deviations from the original design must be evaluated against the criteria in 10 C.F.R. 70.72 to determine if a license amendment is required or if applicant could make the change without NRC approval; LBP-12-21, 76 NRC 218 (2012)
direction is given on what licensee actions do and do not constitute a de facto license amendment triggering hearing rights; CLI-15-14, 81 NRC 729 (2015)
if a license were amended, the public’s only means to participate in future schedule changes would be through a request for action under 10 C.F.R. 2.206; LBP-15-17, 81 NRC 753 (2015)
if applicant subsequently wished to change its commitments to any significant extent, it would need to file a license amendment request, which could then be challenged by seeking a hearing; LBP-14-3, 79 NRC 267 (2014)
in determining whether a license or permit amendment will be issued to applicant, the Commission is to be guided by the considerations that govern issuance of initial licenses, construction permits, or early site permits to the extent applicable and appropriate; LBP-15-17, 81 NRC 753 (2015)
licensee action without NRC approval of an increase in authority or alteration of the terms of the license does not constitute a de facto amendment; CLI-15-14, 81 NRC 729 (2015)
licensee cannot amend the terms of its license unilaterally; CLI-15-14, 81 NRC 729 (2015)
licenses may be amended to add appropriate conditions, depending on whether the conditions are within the scope of the certified design; CLI-12-9, 75 NRC 421 (2012)
NRC is empowered to issue an order amending any license as it deems necessary to effectuate the provisions of the Act to promote the common defense and security or to protect health or to minimize danger to life or property; LBP-13-7, 77 NRC 307 (2013)
NRC may at any time before expiration of a license, require further written statements from licensee to determine whether a license should be modified; LBP-13-7, 77 NRC 307 (2013)
petitioners’ premise that a series of NRC Staff communications relating to plant oversight should be considered as an element of a single, overarching de facto license amendment was rejected; CLI-15-14, 81 NRC 729 (2015)
whenever licensee desires to amend the license, application for an amendment must be filed with the Commission; CLI-15-14, 81 NRC 729 (2015)
See also Materials License Amendment Applications; Materials License Amendment Proceedings; Materials License Amendments; Operating License Amendments
LICENSE APPLICATIONS
all information that applicant uses to support its license renewal application has to be maintained in an auditable and retrievable form; LBP-13-13, 78 NRC 246 (2013)
although environmental contentions ultimately challenge NRC’s compliance with the National Environmental Policy Act, applicant may advocate for a particular challenged position set forth in the environmental impact statement; LBP-12-5, 75 NRC 227 (2012)
applicant may incorporate material by reference that the applicant itself has previously submitted, not material prepared by NRC Staff; LBP-12-24, 76 NRC 503 (2012)
applicants must provide information that is complete and accurate in all material respects; LBP-15-24, 82 NRC 68 (2015)
each reactor license renewal application must contain a list of structures and components subject to aging management review; LBP-13-13, 78 NRC 246 (2013)
if an application is withdrawn prior to issuance of a notice of hearing, the Commission shall dismiss the proceeding; CLI-13-10, 78 NRC 563 (2013)
if NRC Staff detects deficiencies in an application before or after a notice of hearing opportunity is issued, applicant will freely be given (outside the adjudicatory process) ample opportunity to amend it; LBP-11-9, 73 NRC 391 (2011)
intervention petitions must be filed within 60 days based on the documents then in existence, meaning that the petition must be based on the documents submitted with the application; LBP-11-22, 74 NRC 259 (2011)
license applications must specifically state information that NRC, by rule or regulation, may determine to be necessary to decide technical and financial qualifications of applicant; DD-15-8, 82 NRC 107 (2015)
NRC preserves the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information; LBP-11-22, 74 NRC 259 (2011) permitting an application to be modified or improved throughout the NRC’s review is compatible with the dynamic licensing process followed in Commission licensing proceedings; CLI-11-2, 73 NRC 333 (2011) public interest can well be served by revisions to an application that end up “getting it right” and by the Staff’s expected thorough analysis of such revisions; LBP-11-9, 73 NRC 391 (2011) See also Combined License Application; Contested License Applications; Early Site Permit Application; License Renewal Applications; Materials License Amendment Applications; Materials License Applications; Operating License Amendment Applications; Operating License Applications; Uncontested License Applications

LICENSE CONDITIONS

although NRC takes the position that it lacks authority to impose environmental restrictions on transmission corridors, those impacts should have been analyzed as a direct effect of the NRC action even under NRC’s new interpretation; LBP-14-9, 80 NRC 15 (2014) although the Commission found NRC Staff’s review of combined license applications rigorous, it imposed a condition requiring implementation of a squib-valve surveillance program prior to fuel load; CLI-15-13, 81 NRC 555 (2015) boards cannot assume that applicants will not comply with its regulatory responsibilities, including its license conditions; LBP-15-3, 81 NRC 65 (2015) Commission imposed a license condition requiring licensees to develop and implement strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities following a beyond-design-basis external event, including a simultaneous loss of all AC power and loss of normal access to the normal heat sink; CLI-12-9, 75 NRC 421 (2012) Commission may incorporate in any license at the time of issuance, or thereafter, by appropriate rule, regulation, or order, such additional requirements and conditions with respect to licensee’s receipt, possession, use, and transfer of source or byproduct material as it deems appropriate or necessary in order to protect health or to minimize danger of life or property; LBP-15-16, 81 NRC 618 (2015) current licensing basis of an operating license shall continue during the license renewal period, but these conditions may be supplemented or amended as necessary to protect the environment during the term of the renewed license and will be derived from information contained in the supplement to the environmental report, as analyzed and evaluated in the NRC record of decision; LBP-11-17, 74 NRC 11 (2011) current reactor licensees comply with the requirements of section 50.54(hh)(2) through conditions on their operating licenses; LBP-11-21, 74 NRC 115 (2011) even if licensee chooses to satisfy a license condition by incorporating the condition into its inservice testing program, it still must comply with 10 C.F.R. 50.55a(f)(4) throughout the life of the plant; CLI-12-9, 75 NRC 421 (2012) future actions on which the draft environmental impact statement purports to rely in its analysis of impacts constitute a license condition, the use of which is permitted in NEPA documents; LBP-13-9, 78 NRC 37 (2013) if a board determines after full adjudication that the license amendment should not have been granted, it may be revoked or conditioned; LBP-15-16, 81 NRC 618 (2015) if combined licenses issue without including license conditions, NRC regulations relevant to the finality of decisions could result in some additional administrative requirements to be satisfied in imposing new requirements on licensee; CLI-12-9, 75 NRC 421 (2012) if licensee amends any of its grandfathered license conditions that were related to the decommissioning trust fund, from that point forward licensee must comply with all requirements of 10 C.F.R. 50.75(h); LBP-15-24, 82 NRC 68 (2015); LBP-15-28, 82 NRC 233 (2015) if licensee with existing license conditions relating to decommissioning trust agreements elects to amend those conditions, the license amendment shall be in accordance with the provisions of 10 C.F.R. 50.75(h); LBP-15-24, 82 NRC 68 (2015) implication that any agency prerequisite with which applicant must comply to operate a plant during an extended term constitutes an “approval” under 10 C.F.R. 51.45(d) would entail an unreasonably strained definition of “approval”; LBP-12-15, 76 NRC 14 (2012)
in a combined license proceeding, the Commission may require implementation of mitigation measures it deems necessary and appropriate by imposing conditions in the license; LBP-12-18, 76 NRC 127 (2012)
in granting a proposed license, board may condition it upon some precautionary measures required at the chosen site; LBP-15-16, 81 NRC 618 (2015)
in NEPA context, path that licensee and NRC Staff must follow relative to a license condition is sufficiently clear that continuing to hold the hearing open while it is completed would be an unnecessary extension of the adjudicatory process; LBP-15-3, 81 NRC 65 (2015)
in setting license conditions, NRC Staff may assume that a licensee will comply with all requirements imposed by the license; LBP-15-16, 81 NRC 618 (2015)
issued licenses can be revoked, conditioned, modified, or affirmed based on the evidence reviewed at the evidentiary hearing; LBP-15-16, 81 NRC 618 (2015)
items relied on for safety that are a central focus of the integrated safety analysis process are the subject of three proposed license conditions for a uranium enrichment facility; LBP-11-11, 73 NRC 455 (2011)
licensee cannot be exempted from license conditions without a license amendment modifying such conditions; LBP-15-28, 82 NRC 233 (2015)
licensee may take reasonable action that departs from a license condition or a technical specification in an emergency when the action is immediately needed to protect the public health and safety and no action consistent with license conditions and technical specifications that can provide adequate or equivalent protection is immediately apparent; DD-11-6, 74 NRC 420 (2011)
licensee shall establish a detection monitoring program needed for NRC to set the site-specific groundwater protection standards, and the monitoring program must be in place when specified by NRC in license conditions; LBP-15-3, 81 NRC 65 (2015)
licenses may be altered as a result of the evidentiary hearing; CLI-15-17, 82 NRC 33 (2015)
licenses may be amended to add appropriate conditions, depending on whether the conditions are within the scope of the certified design; CLI-12-9, 75 NRC 421 (2012)
licensing board imposes a license condition directing implementation of a surveillance program for explosively actuated valves prior to fuel load; CLI-12-2, 75 NRC 63 (2012)
not all licensee commitments must be converted into license conditions in order to be enforceable; LBP-14-3, 79 NRC 267 (2014)
NRC authority to review offsite impacts of transmission lines goes beyond merely factoring them into a final cost-benefit balance and includes as well the authority where necessary to impose license conditions to minimize those impacts; LBP-11-6, 73 NRC 149 (2011)
NRC can, as a condition of licensure, insist that offsite transmission lines built solely to serve a nuclear facility be designed to minimize environmental disturbance; LBP-14-9, 80 NRC 15 (2014)
NRC has authority to impose environmental restrictions on new transmission lines intended to serve new nuclear power plants; LBP-14-9, 80 NRC 15 (2014)
NRC has the authority to ensure that certified designs and combined licenses include appropriate Commission-directed changes before operation; CLI-11-10, 74 NRC 251 (2011)
NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse environmental impacts that might otherwise be caused by the construction or operation of a nuclear power plant; LBP-14-9, 80 NRC 15 (2014)
NRC licensees require a license amendment to modify license conditions; LBP-15-24, 82 NRC 68 (2015)
NRC may impose such additional conditions, requirements, and limitations on a license as may be necessary to effectuate the purposes of the Atomic Energy Act and the agency’s regulations; LBP-11-11, 73 NRC 455 (2011)
NRC Staff granted an exemption from 10 C.F.R. 74.33(c)(5) subject to license conditions that require applicant to submit, for the Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 218 (2012)
NRC Staff has authority to require implementation of non-aging-management severe accident mitigation alternatives through its current licensing basis backfit review under Part 50 or through setting conditions of the license renewal; LBP-11-17, 74 NRC 11 (2011)
NRC Staff may impose additional requirements to protect against a reevaluated flood hazard; DD-15-5, 81 NRC 877 (2015)
NRC Staff verification of Fukushima-related license conditions should be a straightforward matter of applying a defined set of requirements; CLI-12-2, 75 NRC 63 (2012)

NRC uses environmental impact information to determine, after weighing the environmental, economic, technical, and other benefits against environmental and other costs, whether the combined license should be issued, denied, or appropriately conditioned to protect environmental values; LBP-14-9, 80 NRC 15 (2014)

NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-11-11, 74 NRC 427 (2011); LBP-11-35, 74 NRC 701 (2011)

Pentapartite Agreement between the United States and four European governments to prevent new restricted data from being disseminated to European nationals will be a prerequisite to the NRC Staff issuing a facility clearance; LBP-11-11, 73 NRC 455 (2011)

qualifications of nuclear criticality safety manager for uranium enrichment facility are imposed as a license condition; LBP-11-11, 73 NRC 455 (2011)

reasonable assurance of financial qualifications can be ensured through license conditions; LBP-14-3, 79 NRC 267 (2014)

record of decision must also summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-12-18, 76 NRC 127 (2012); LBP-13-9, 78 NRC 37 (2013)

regulation of offsite transmission lines is within NRC’s authority under section 101 of the Atomic Energy Act and nothing in the AEA precludes NRC from implementing, through issuance of conditional licenses, NEPA’s environmental mandate; LBP-14-9, 80 NRC 15 (2014)

request under 10 C.F.R. 50.54(f) is to enable the Commission to determine whether or not the license should be modified, suspended, or revoked; CLI-15-14, 81 NRC 729 (2015)

Staff imposed a license condition on a uranium enrichment facility to ensure that clearances are obtained before classified matter is processed, stored, reproduced, transmitted, handled, or accessed; LBP-11-11, 73 NRC 455 (2011)

there is no time limit on when licensee can seek an amendment to the license conditions relating to its decommissioning trust fund; LBP-15-24, 82 NRC 68 (2015)

to be an acceptable method for providing reasonable assurance of financial qualifications, a proposed license condition must be ministerial and by its very nature require and be readily susceptible to post-licensing verification such that the NRC Staff is not deferring its safety finding through the use of the license condition; LBP-14-3, 79 NRC 267 (2014)

to reach a finding of reasonable assurance that the public health and safety will be protected, the Commission imposed a license condition relating to a testing program for squib valves; CLI-12-9, 75 NRC 421 (2012)

under the Atomic Energy Act, NRC can issue conditional licenses for regulatory purposes, and thus there can be no objection to its use of the same means to achieve environmental ends as well; LBP-14-9, 80 NRC 15 (2014)

uranium enrichment facility license must have a condition requiring the licensee to maintain and follow a source material control and accounting program and maintain records of any MC&A program changes made without Commission approval for 5 years from the date of the change; LBP-11-11, 73 NRC 455 (2011)

when contentions in contested hearings are purportedly resolved by license conditions, the Commission has stated that such conditions must be drawn very precisely; LBP-12-21, 76 NRC 218 (2012)

where license conditions predate issuance of 10 C.F.R. 50.75(b)(5), the plant was grandfathered and allowed to keep its existing license conditions; LBP-15-24, 82 NRC 68 (2015)

where the combined license application references a certified design, elements of the licensing basis already have been established, and thus NRC would have to establish a regulatory basis for any change to the established design regardless of whether the COLs have issued; CLI-12-9, 75 NRC 421 (2012)

LICENSE EXPIRATION

contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 239 (2013)
each specific license expires at the end of the day on the date stated in the license unless licensee has filed an application for renewal not less than 30 days before that expiration date; CLI-15-17, 82 NRC 33 (2015)
earliest that a license renewal application may be submitted is 20 years before the expiration date of the operating license in effect; CLI-13-7, 78 NRC 199 (2013)
existing license will not be deemed to have expired until the license renewal application has been finally determined; CLI-15-6, 81 NRC 340 (2015)
licensee may continue to operate a reactor under an expired license if a license renewal application is timely submitted; CLI-14-5, 79 NRC 254 (2014); LBP-13-13, 78 NRC 246 (2013)
power reactor licensee may preserve its license by filing a renewal application at least 5 years before its license is set to expire, affording NRC Staff ample time to complete the required environmental and safety reviews; LBP-11-30, 74 NRC 627 (2011)
specific licenses expire on the date stated in the license unless licensee has filed a request for renewal not less than 30 days prior to that date, and a license in timely renewal expires on the day on which NRC makes a final determination to deny the request, or, if the determination states an expiration date, then the stated expiration date; CLI-12-4, 75 NRC 154 (2012)
time frame for SAMA analysis is inherent in NRC’s regulatory scheme, which provides for a 40-year license term, with the possibility of license renewal for an additional 20-year period; CLI-13-7, 78 NRC 199 (2013)
when licensee has made timely and sufficient application for a renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency; LBP-11-30, 74 NRC 627 (2011); LBP-15-2, 81 NRC 48 (2015; LBP-15-11, 81 NRC 401 (2015)
LICENSE RENEWAL APPLICATIONS
absent a transfer, license renewal application will be denied where licensee remains under foreign ownership, control, or domination; CLI-14-5, 79 NRC 254 (2014)
applicant is required to list structures and components subject to an aging management review; LBP-13-8, 78 NRC 1 (2013)
applicant must update its LRA annually to reflect changes in its current licensing basis, but such updating does not explicitly extend to the environmental report; LBP-11-32, 74 NRC 654 (2011)
contention fails because it contests NRC Staff’s safety review rather than the license renewal application; LBP-15-15, 81 NRC 598 (2015)
earliest that a license renewal application may be submitted is 20 years before the expiration date of the operating license in effect; CLI-13-7, 78 NRC 199 (2013)
licensee may continue to operate a reactor under an expired license if a license renewal application is timely submitted; CLI-14-5, 79 NRC 254 (2014)
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)
petitioners request that NRC amend 10 C.F.R. 54.17(c) to permit a reactor licensee to file a license renewal application no sooner than 10 years before the expiration of the current license; CLI-11-1, 73 NRC 1 (2011)
petitioner’s request that the Commission defer a decision on the license renewal applications pending disposition of its forthcoming rulemaking and other potential events is premature and is therefore denied; CLI-14-6, 79 NRC 445 (2014)
severe accident mitigation alternatives analysis for relicensing must be performed by licensee and included in the license renewal application; LBP-12-26, 76 NRC 559 (2012)
there was no prejudice to intervenor where the board considered licensee’s supplement to the application, which contained the updated aging management plan, because intervenor could have sought to amend its contention to respond to the supplement; CLI-12-10, 75 NRC 479 (2012)
timing of license issuance is informed by instruction for NRC Staff to promptly issue its approval or denial of the application consistent with its findings, and despite the pendency of a hearing; LBP-15-2, 81 NRC 48 (2015)
when licensee has made timely and sufficient application for a license renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined
SUBJECT INDEX

by the agency; LBP-11-30, 74 NRC 627 (2011); LBP-15-2, 81 NRC 48 (2015); LBP-15-11, 81 NRC 401 (2015)
See also Operating License Renewal

LICENSE RENEWAL PROCEEDINGS
brief stay of the close of a licensing proceeding was ordered to allow a state the opportunity to request
status as an interested governmental entity; CLI-12-6, 75 NRC 352 (2012)
challenges to the design of the nuclear power plant are outside the scope of a license renewal proceeding;
LBP-11-23, 74 NRC 287 (2011)
nothing in NRC case law or regulations suggests that license renewal is an occasion for far-reaching
speculation about unimplemented and uncertain plans; LBP-14-6, 79 NRC 404 (2014)
See also Operating License Renewal; Operating License Renewal Proceedings

LICENSE RENEWALS
in context of a renewal application, reasonable assurance is based on sound technical judgment of the
particulars of a case and on compliance with NRC regulations; LBP-14-1, 79 NRC 39 (2014)
proceedings have been consolidated for the renewal of a materials license and to contest NRC Staff’s
denial of that renewal in order to, among other things, litigate a common issue only once; CLI-14-5, 79
NRC 254 (2014)
See also Materials License Renewal; Operating License Renewal; Operating License Renewal Proceedings

LICENSE TRANSFER APPLICATIONS
applicant must show reasonable assurance of sufficient funds to decommission the facility; CLI-15-8, 81
NRC 500 (2015)
applicant must submit estimates for total annual operating costs for each of the first 5 years of facility
operation; CLI-15-8, 81 NRC 500 (2015)
Commission decision does not foreclose NRC Staff’s ability to request additional information on any part
of the license transfer application; CLI-15-26, 82 NRC 408 (2015)
de novo standard is applicable to review of an NRC Staff decision on a license transfer application;
CLI-15-26, 82 NRC 408 (2015)
denial of applications typically is on grounds of operating costs and inability to pay the annual cost for
spent fuel storage; CLI-14-5, 79 NRC 254 (2014)
environmental analysis under NEPA need not be included; CLI-15-8, 81 NRC 500 (2015)
five years of financial revenue-and-expense estimates must be submitted as part of a license transfer
application; CLI-15-26, 82 NRC 408 (2015)
formulas, based on reactor type and power level, are provided in 10 C.F.R. 50.75(c) for determining
minimum dollar amounts required to demonstrate reasonable assurance of decommissioning funding;
CLI-15-8, 81 NRC 500 (2015)
general information required for an application is provided in 10 C.F.R. 50.33; CLI-14-5, 79 NRC 254
(2014)
issuance of a request for additional information does not alone establish deficiencies in an application or
that NRC Staff will go on to find any of applicant’s clarifications, justifications, or other responses to
be unsatisfactory; CLI-15-8, 81 NRC 500 (2015)
licensee is required to submit an application to NRC; CLI-14-5, 79 NRC 254 (2014)
NEPA and 10 C.F.R. Part 52 requirements do not apply in the license transfer context; CLI-15-8, 81
NRC 500 (2015)
subject areas that license transfer applications must address are outlined in 10 C.F.R. 50.80(b)(1)(i), (2);
CLI-15-8, 81 NRC 500 (2015)
when promulgating Subpart M, the Commission was well aware that most license transfer issues would
be financial in nature; CLI-14-5, 79 NRC 254 (2014)

LICENSE TRANSFER PROCEEDINGS
absent a unanimous preference for a hearing consisting of written comments, the license transfer hearing
will be an oral one; CLI-14-5, 79 NRC 254 (2014)
although NRC Staff is not required to be a party to a license transfer adjudication, the Commission
directs the Staff to become a party; CLI-14-5, 79 NRC 254 (2014)
any discretionary diversion from the usual Subpart M procedural track will be rare, requiring
extraordinary and unusual circumstances, and all requests to date to provide a non-Subpart M hearing in
a license transfer case have been denied; CLI-14-5, 79 NRC 254 (2014)

1051
SUBJECT INDEX

Commission denies a request for a hearing and to intervene in a license transfer proceeding; CLI-15-8, 81 NRC 500 (2015)
Commission has authority to rule that a license transfer case be adjudicated under Subpart L; CLI-14-5, 79 NRC 254 (2014)
distance of 3 miles in a license transfer proceeding between facility and organization’s offices does not qualify for organizational standing; LBP-13-6, 77 NRC 253 (2013)
following an evidentiary proceeding, presiding officer certifies the record of the proceeding to the Commission for its final decision; LBP-14-10, 80 NRC 85 (2014)
full-scale health-and-safety reviews of a plant are not required; CLI-15-8, 81 NRC 500 (2015)
hearings are to be oral in nature unless the parties unanimously move for a hearing consisting of written comments; CLI-14-5, 79 NRC 254 (2014)
NRC Staff is not required to be a party to a license transfer adjudication; CLI-14-5, 79 NRC 254 (2014)
NRC Staff is required to notify the presiding officer and the parties whether it desires to participate as a party in a license transfer proceeding; CLI-14-5, 79 NRC 254 (2014)
once the nature of a license transfer hearing is settled, Subpart M and NRC Model Milestones set a default schedule for the remainder of the proceeding; CLI-14-5, 79 NRC 254 (2014)
onordinarily, the Commission itself presides over license transfer hearings, but NRC rules allow the Commission to designate one or more Commissioners or any other person permitted by law to preside; CLI-14-5, 79 NRC 254 (2014)
procedural rules in Subpart M govern adjudications on transfer applications; CLI-14-5, 79 NRC 254 (2014)
provisions of 10 C.F.R. Part 2, Subpart M, together with the generally applicable intervention provisions in 10 C.F.R. Part 2, Subpart C, govern adjudicatory proceedings on license transfer applications; CLI-14-5, 79 NRC 254 (2014)
record of licensing board evidentiary hearing on application must be certified to the Commission; CLI-15-26, 82 NRC 408 (2015)
scope of Subpart M proceedings covers all adjudicatory proceedings on an application for transfer of control of an NRC license, without distinction as to how the proceeding commences; CLI-14-5, 79 NRC 254 (2014)
Subpart M logically applies to all license transfer hearing requests, regardless of who files them, because the types of issues litigated (e.g., financial assurance, technical qualifications, foreign ownership, and staffing levels) are likely to be similar regardless of whether they are initiated by intervention petitions or by challenges to a Staff action; CLI-14-5, 79 NRC 254 (2014)
union’s organizational standing argument was rejected in an indirect license transfer proceeding initiated before the Commission because it was merely the Local’s representational standing argument dressed up in different clothes; LBP-14-4, 79 NRC 319 (2014)
upon completion of a license transfer hearing, the Commission will issue a written opinion including its decision on the license transfer application and the reasons for the decision; CLI-14-5, 79 NRC 254 (2014)
where the Commission does not preside over a license transfer proceeding, the presiding officer will certify the completed hearing record to the Commission, which may then issue its decision on the hearing or provide that additional testimony be presented; CLI-14-5, 79 NRC 254 (2014)
LICENSE TRANSFERS
absent a transfer, license renewal application will be denied where licensee remains under foreign ownership, control, or domination; CLI-14-5, 79 NRC 254 (2014)
for power reactors, NRC developed a Commission-approved standard review plan to assist in evaluating applications for reactor licenses or applications for the transfer of such licenses; LBP-11-11, 73 NRC 455 (2011)
license transfer applicant must demonstrate that the proposed transferee is qualified to hold the license; CLI-15-26, 82 NRC 408 (2015)
licensee must obtain NRC’s written consent prior to transferring an NRC license; CLI-15-26, 82 NRC 408 (2015)
proposed transferee for an operating license must satisfy the same financial qualification requirements that apply to an applicant for an initial operating license; CLI-15-26, 82 NRC 408 (2015)
written consent from NRC is required for all direct or indirect license transfers; CLI-15-8, 81 NRC 500 (2015)

LICENSEE CHARACTER

absent documentary support, NRC has declined to assume that licensees will contravene its regulations; CLI-11-9, 74 NRC 233 (2011)
Commission has long declined to assume that licensees will refuse to meet their obligations under their licenses or NRC regulations; CLI-14-11, 80 NRC 167 (2014); LBP-15-4, 81 NRC 156 (2015)
management integrity contentions are admissible in license renewal proceedings only if they rely on specific supporting information, including references to a serious incident involving shutdown where management responsible for the incident remained in place, a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert in support of the contention; LBP-13-8, 78 NRC 1 (2013)
more subjective appraisal of declining property values might be permissible in the context of a licensing action associated with an applicant or facility shown to have engaged in a continuous and pervasive course of illegal conduct; LBP-12-3, 75 NRC 164 (2012)
See also Management Character and Competence

LICENSEE EMPLOYEES

adequacy of nuclear criticality safety manager qualifications for uranium enrichment facility is discussed and a license condition is imposed; LBP-11-11, 73 NRC 455 (2011)
an applicant with foreign ownership can still be eligible for a license if certain conditions are imposed, such as requiring that officers and employees of applicant responsible for special nuclear material be U.S. citizens; LBP-14-3, 79 NRC 267 (2014)
as de facto targets of an enforcement order, licensee employees have automatic standing if they are adversely affected by an enforcement order; LBP-14-4, 79 NRC 319 (2014)
boards lack authority to order NRC Staff to bring licensee employees into settlement negotiations; LBP-14-4, 79 NRC 319 (2014)
contention that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on the off-duty employees of licensee not otherwise required by the NRC to observe and report the offsite, off-duty conduct of fellow employees is inadmissible; LBP-14-4, 79 NRC 319 (2014)
employees are protected against unnecessary or excessive restrictions on their conduct; LBP-14-4, 79 NRC 319 (2014)
individuals who are subject to an access authorization program shall, at a minimum, report any concerns arising from behavioral observation and are individually liable if they fail to do so; LBP-14-4, 79 NRC 319 (2014)
licensee is obliged to give local union notice and an opportunity to bargain over the effects of its decision to implement changes in the terms and conditions of the employees' employment regarding behavioral observations of security concerns; CLI-15-16, 81 NRC 810 (2015)
under certain circumstances, a licensee or vendor might be required to disclose confidential ECP information (including the identity of a concerned individual) at the behest of a government agency (including the NRC), or in response to a subpoena; CLI-13-5, 77 NRC 223 (2013)
whether licensee employees, as represented by a union, have a right to demand a hearing because they are persons adversely affected by a confirmatory order is discussed; LBP-14-4, 79 NRC 319 (2014)

LICENSEE EVENT REPORTS

current licensing basis includes licensee’s commitments remaining in effect that were made in docketed licensing correspondence such as licensee responses to NRC bulletins, generic letters, and enforcement actions, as well as licensee commitments documented in NRC safety evaluations or licensee event reports; LBP-11-21, 74 NRC 115 (2011)
relief valve failure and inoperability found during the refueling outage, which potentially affected the ability of the SRVs to satisfy design actuation requirements, meets the requirements for an LER; DD-11-6, 74 NRC 420 (2011)

LICENSEES

during a nuclear emergency in the United States, the individual licensee and the appropriate state and local government officials have direct responsibilities for the coordinated response to the event; LBP-11-15, 73 NRC 629 (2011)
licensee is required to ensure that the site can be safely maintained and decommissioned, even in the face of unexpected costs; LBP-15-24, 82 NRC 68 (2015)

licensees cannot amend the terms of their license unilaterally; CLI-14-11, 80 NRC 167 (2014)

NRC Staff and licensee may file interlocutory appeals on the admission of a contention, but intervenors are prohibited from filing such appeals on the denial of a contention unless all contentions have been denied; LBP-14-4, 79 NRC 319 (2014)

protecting against the threat of air attacks is not within licensees’ responsibilities because a private security force cannot reasonably be expected to defend against such attacks and adequate protection is ensured through the actions of other federal agencies with defense capabilities and air-safety expertise; CLI-11-4, 74 NRC 1 (2011)

responsibility for constructing and operating a waste repository was assigned to the Department of Energy, not NRC; CLI-15-4, 81 NRC 221 (2015)

See Materials Licensees

LICENSES

applicants for utilization or production facilities for industrial or commercial purposes must comply with the terms of AEA § 103; LBP-14-3, 79 NRC 267 (2014)

by its nature a license is presumptively an exclusive (not an inclusive) regulatory device; LBP-13-7, 77 NRC 307 (2013)

licensing board takes official notice of NRC-issued licenses; LBP-15-3, 81 NRC 65 (2015)

regulated conduct that is neither delineated nor reasonably encompassed within delineated categories of authorized conduct presumptively remains unlicensed; LBP-13-7, 77 NRC 307 (2013)

LICENSING

NRC will not issue licenses dependent upon the Waste Confidence Decision or the Temporary Storage Rule until the court’s remand is appropriately addressed; CLI-12-17, 76 NRC 207 (2012)

LICENSING BOARD DECISIONS

adjudicatory records and board decisions and any Commission appellate decisions become, in effect, part of final environmental impact statements; CLI-12-1, 75 NRC 39 (2012); LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012)

board is directed to rule within 140 days of the date of the referral on whether the hearing request should be granted; CLI-15-14, 81 NRC 729 (2015)

Commission affords substantial deference to licensing boards’ contention admission decisions; CLI-15-6, 81 NRC 340 (2015); CLI-15-9, 81 NRC 512 (2015)

Commission decision to vacate an unreviewed board decision does not intimate any opinion on the soundness of the board’s decision; CLI-13-9, 78 NRC 551 (2013); CLI-13-10, 78 NRC 565 (2013)

Commission expects its licensing boards to review testimony, exhibits, and other evidence carefully and to resolve factual disputes; CLI-13-9, 78 NRC 551 (2013)

Commission gives substantial deference to licensing board findings of fact, and it will not overturn a board’s factual findings unless they are not even plausible in light of the record viewed in its entirety; CLI-14-10, 80 NRC 157 (2014)

Commission will not overturn a board’s factual findings unless they are not even plausible in light of the record viewed in its entirety; CLI-15-9, 81 NRC 512 (2015)

decision of the board or Commission becomes the record of decision, which may also incorporate the final supplemental environmental impact statement; CLI-15-6, 81 NRC 340 (2015)

final environmental impact statement or supplement thereto must be considered in the agency’s decisionmaking; LBP-15-3, 81 NRC 65 (2015)

final supplemental environmental impact statement is supplemented by the board’s decision as well as by the hearing record; CLI-15-6, 81 NRC 340 (2015)

following an evidentiary hearing, presiding officer certifies the record of the proceeding to the Commission for its final decision; LBP-14-10, 80 NRC 85 (2014)

four factors must be addressed when the Commission or presiding officer is asked to stay effectiveness of a presiding officer’s decision or action during pendency of an appeal; CLI-15-17, 82 NRC 33 (2015)

if modification of the final environmental impact statement by NRC Staff testimony or the board’s decision is too substantial, recirculation of the FEIS would be required; LBP-13-13, 78 NRC 246 (2013)
SUBJECT INDEX

licensing board erred in concluding that it is impossible to waive the exception in 10 C.F.R. 51.53(c)(3)(iii)(L); CLI-13-7, 78 NRC 199 (2013)

licensing board was not justified in rendering a final judgment in the face of unfolding developments having a decided bearing and conceivably crucial effect on the issue that shaped that judgment; LBP-12-19, 76 NRC 184 (2012)

NRC will not issue final licenses dependent upon the Waste Confidence Rule until the court’s remand is appropriately addressed; LBP-12-21, 76 NRC 218 (2012)

presiding officer’s approval of settlement must give due consideration to public interest; LBP-15-21, 82 NRC 1 (2015)

proposed questions filed by all parties will be publicly released by order of the board 30 days after its decision; LBP-13-13, 78 NRC 246 (2013)

ruling that supplements the record should state clearly what evidence the board found credible, whether the evidence supports or alters NRC Staff’s conclusions in the environmental impact statement, and what the impact of the proposed action for the specific issue is expected to be; CLI-15-6, 81 NRC 340 (2015)

to define the scope of an admitted contention properly, boards should specify which bases are admitted; LBP-13-10, 78 NRC 117 (2013)

to the extent that any environmental findings by the presiding officer or the Commission differ from those in the final environmental impact statement, the FEIS is deemed modified by the decision; LBP-13-13, 78 NRC 246 (2013)

unreviewed board decisions are not binding on future boards; CLI-13-10, 78 NRC 563 (2013)

 LICENSING BOARD ORDERS

all parties are obliged to follow the procedures in 10 C.F.R. Part 2 and board scheduling orders; CLI-14-10, 80 NRC 157 (2014)

board order is appealable when it disposes of a major segment of the case or terminates a party’s right to participate; CLI-11-10, 74 NRC 251 (2011)

boards are expected to explain the necessity of cross-examination in greater detail than a broad-brush reference to a proceeding’s voluminous or technical nature; CLI-12-18, 76 NRC 371 (2012)

 LICENSING BOARDS

for mandatory proceedings on uranium enrichment facility licensing, licensing boards are to conduct a simple sufficiency review rather than a de novo review on both AEA and NEPA issues; LBP-11-11, 73 NRC 455 (2011)
in mandatory proceedings for uranium enrichment facility licensing, boards are to make independent environmental judgments with respect to certain NEPA findings; LBP-11-11, 73 NRC 455 (2011)
in mandatory proceedings on uranium enrichment facility licensing, boards should inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact; LBP-11-11, 73 NRC 455 (2011)

 LICENSING BOARDS, AUTHORITY

although a board may view petitioner’s supporting information in a light favorable to the petitioner, it cannot do so by ignoring NRC contention admissibility rules, which require petitioner (not the board) to supply all of the required elements for a valid intervention petition; LBP-11-20, 74 NRC 65 (2011)

although a licensing board is not required to recast contentions to make them acceptable, it is also not precluded from doing so; LBP-11-13, 73 NRC 534 (2011)

although boards are accorded considerable discretion to manage proceedings before them, they need not exercise it; LBP-15-15, 81 NRC 598 (2015)

although boards do not decide the merits or resolve conflicting evidence at the contention admission stage, materials cited as the basis for a contention are subject to scrutiny by the board to determine whether they actually support the facts alleged; LBP-15-20, 81 NRC 829 (2015)

although Commission approval is required before a board exercises its sua sponte authority, that authority still exists; LBP-14-9, 80 NRC 15 (2014)
at contention admission stage, the board should view petitioner’s support for its contention in a light favorable to petitioner, but cannot do so by ignoring the requirements set forth in 10 C.F.R. 2.309(f)(1); CLI-15-23, 82 NRC 321 (2015); LBP-15-5, 81 NRC 249 (2015); LBP-15-20, 81 NRC 829 (2015)
Atomic Energy Act does not prescribe a specific structure for the mandatory hearing requirement, and the Commission has granted licensing boards considerable flexibility to select the most appropriate approach in the circumstances of each individual case; LBP-12-21, 76 NRC 218 (2012)

authority empowering a licensing board to impose sanctions is found in 10 C.F.R. §§ 2.314(c) and 2.319; LBP-13-2, 77 NRC 71 (2013)

board admitted a contention without deciding if it was a contention of omission or a contention of inadequacy; LBP-15-5, 81 NRC 249 (2015)

board considered a letter written after the original petition was filed and submitted with petitioner’s reply; LBP-15-5, 81 NRC 249 (2015)

board considered evidence submitted with petitioner’s reply to which opposing parties didn’t object; LBP-15-5, 81 NRC 249 (2015)

board decisions that have inferred additional bases for contentions beyond those supplied by the petitioner have been overturned; CLI-14-2, 79 NRC 11 (2014)

board decisions that have revised inadmissible contentions to render them admissible have been overturned; CLI-14-2, 79 NRC 11 (2014)

board has discretion to consider an untimely motion to reopen if the motion presents an exceptionally grave issue; LBP-15-14, 81 NRC 591 (2015)

board is free to decide contention admissibility on a theory different from those argued by litigants, but only if it explains the specific basis of its ruling and gives the litigants a chance to present arguments (and, where appropriate, evidence) regarding the board’s new theory; LBP-14-4, 79 NRC 319 (2014)

board is prohibited from imposing restrictions on the use of 10 C.F.R. 50.61a that go beyond the requirements in the regulation; CLI-15-22, 82 NRC 310 (2015)

board may construe an admitted contention contesting the environmental report as a challenge to a subsequently issued draft environmental impact statement or final EIS without the necessity for Intervenors to file a new or amended contention; LBP-14-5, 79 NRC 377 (2014)

board may not supply its own bases for a contention; CLI-15-17, 82 NRC 33 (2015)

board merits determination is inappropriate at the contention admissibility stage; LBP-13-6, 77 NRC 253 (2013)

board takes official notice of the contents of a document that was discussed at the hearing, but was not submitted as an exhibit by any party; LBP-13-13, 78 NRC 246 (2013)

board’s authority is not confined to a specific set of previously admitted contentions, but rather is sufficient to permit it to keep adjudication open to take account of the dynamic nature of the licensing process; LBP-11-22, 74 NRC 259 (2011)

boards (as opposed to the Commission) are not empowered to grant a request to suspend a licensing proceeding pending disposition of a rulemaking petition; LBP-11-33, 74 NRC 675 (2011)

boards are authorized to refer a ruling to the Commission if the board determines that the decision or ruling involves a novel issue that merits Commission review at the earliest opportunity; LBP-11-32, 74 NRC 654 (2011)

boards are empowered to approve settlements proposed by the parties; LBP-15-30, 82 NRC 339 (2015)

boards are given broad discretion in the conduct of NRC adjudicatory proceedings, and the Commission generally defers to board case-management decisions; LBP-15-15, 81 NRC 598 (2015)

boards are not empowered to reword the clear language of the Commission’s regulations; LBP-13-12, 78 NRC 239 (2013)

boards are not empowered to supervise or direct NRC Staff regulatory reviews; LBP-13-7, 77 NRC 307 (2013)

boards are not free to reexamine fundamental policy judgments that are reflected in Commission regulations by creating exceptions to them in situations that will frequently recur; LBP-12-6, 75 NRC 256 (2012)

boards are not to proceed with sua sponte issues absent the Commission’s approval; LBP-11-9, 73 NRC 391 (2011)

boards are to make independent environmental judgments with respect to certain NEPA findings, though even then they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-26, 74 NRC 499 (2011)

boards can request that a document for which a deliberative process privilege is claimed be provided to it for in camera inspection; LBP-13-5, 77 NRC 233 (2013)
boards cannot grant summary disposition unless movant discharges its burden of demonstrating that it is entitled to a decision as a matter of law; LBP-12-4, 75 NRC 213 (2012)

boards cannot logically infer that identified members of one organization are also members of another organization for purpose of representational standing determinations; LBP-13-8, 78 NRC 1 (2013)

boards cannot prohibit what regulations allow except under specific conditions; LBP-15-17, 81 NRC 753 (2015)

boards cannot reconstruct intervenor’s pleadings to find that they might be interpreted to satisfy the requirements for reopening a record where the intervenor itself has explicitly argued it need not; LBP-11-20, 74 NRC 65 (2011)

boards do not sit to “‘flyspeck’” environmental documents or to add details or nuances, but the environmental report or environmental impact statement must come to grips with all important considerations; LBP-15-5, 81 NRC 249 (2015)

boards have all the powers necessary to perform their duties, including powers to regulate the conduct of the participants and to issue orders necessary to carry out their duties and responsibilities; LBP-13-2, 77 NRC 71 (2013)

boards have an important but limited role in mandatory proceedings; LBP-12-21, 76 NRC 218 (2012)

boards have authority to adjudicate exemption issues, but NRC Staff serves as an initial reviewer of exemption requests; LBP-12-6, 75 NRC 256 (2012)

boards have authority to impose reasonable conditions on voluntary withdrawals in appropriate circumstances; LBP-15-28, 82 NRC 233 (2015)

boards have authority under 10 C.F.R. 2.319 to further define petitioners’ admitted contentions when redrafting would clarify the scope of the contentions; LBP-11-13, 73 NRC 534 (2011)

boards have considered the merits of motions to reconsider in the context of other prior decisions; LBP-11-20, 74 NRC 65 (2011)

boards have closed their hearings even when they were concerned with less sensitive (i.e., nonpublic but unclassified) types of information; LBP-12-21, 76 NRC 218 (2012)

boards have considerable discretion in their evidentiary rulings; CLI-15-6, 81 NRC 340 (2015)

boards have limited authority to consider matters in addition to those properly put into controversy by the parties; LBP-11-9, 73 NRC 391 (2011)

boards have no authority to hear challenges to actions taken under 10 C.F.R. 50.59; LBP-13-11, 78 NRC 177 (2013)

boards have some discretion to reformulate or narrow contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding, but this authority is limited; CLI-15-18, 82 NRC 135 (2015); LBP-15-17, 81 NRC 753 (2015)

boards have the power to take necessary and appropriate actions consistent with the Atomic Energy Act to conduct a fair hearing; LBP-15-15, 81 NRC 598 (2015)

boards lack authority to order NRC Staff to bring licensee employees into settlement negotiations; LBP-14-4, 79 NRC 319 (2014)

boards lack authority to supervise NRC Staff’s review; CLI-12-4, 75 NRC 154 (2012); LBP-12-19, 76 NRC 184 (2012)

boards may appropriately view petitioner’s supporting information in a light favorable to the petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-12-27, 76 NRC 583 (2012); LBP-15-1, 81 NRC 15 (2015)

boards may consider any matter, but only to the extent that the board determines that a serious safety, environmental, or common defense and security matter exists, and the Commission approves of an examination of and decision on the matter upon its referral by the board; LBP-11-9, 73 NRC 391 (2011)

boards may examine both the statements in the document that support petitioner’s assertions and those that do not; LBP-15-20, 81 NRC 829 (2015)

boards may exclude the public from adjudicatory hearings or actions that involve restricted data, defense information, safeguards information protected from disclosure under the authority of AEA §147, or information protected from disclosure under the authority of section 148; LBP-11-5, 73 NRC 131 (2011)

boards may grant requests for hearing and petitions to intervene if they determine that petitioner has standing and has proposed at least one admissible contention; LBP-13-8, 78 NRC 1 (2013)
SUBJECT INDEX

boards may make findings of fact and conclusions of law on any matter not put into controversy by the parties, but only to the extent that the presiding officer determines that a serious safety, environmental, or common defense and security matter exists, and the Commission approves of an examination of and decision on the matter upon its referral by the presiding officer; LBP-14-9, 80 NRC 15 (2014)

boards may not assume that licensee intends to contravene NRC regulations; LBP-15-24, 82 NRC 68 (2015)

boards may not raise issues sua sponte when the sole intervenor has withdrawn from the proceeding; LBP-11-22, 74 NRC 259 (2011)

boards may not rely on a Federal Register notice to put petitioner on constructive notice of a requirement that the board itself cannot discern in the regulations; LBP-13-3, 77 NRC 82 (2013)

boards may not supply information that is lacking in a contention that otherwise would be inadmissible; CLI-15-18, 82 NRC 135 (2015)

boards may on motion or on their own initiative strike any portion of a written presentation that is unreliable; LBP-11-14, 73 NRC 591 (2011)

boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-15-25, 82 NRC 389 (2015); LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-12-18, 76 NRC 127 (2012); LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015)

boards may take disciplinary action against a party that fails to comply with any prehearing order, as long as the action is just; CLI-14-10, 80 NRC 157 (2014)

boards may take official notice of any fact of which a court of the United States may take judicial notice or of any technical or scientific fact within the knowledge of the Commission as an expert body; LBP-11-20, 74 NRC 259 (2011)

boards may view petitioner’s support for its contention in a light favorable to petitioner but cannot do so by ignoring admissibility requirements; CLI-15-18, 82 NRC 135 (2015)

boards may view petitioner’s supporting information in a light favorable to the petitioner, but petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; LBP-12-25, 76 NRC 540 (2012)

boards must exercise all the powers necessary to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-11-22, 74 NRC 259 (2011)

boards must request Commission approval to undertake sua sponte review; CLI-15-1, 81 NRC 1 (2015)

boards should not supply new information not otherwise present in the adjudicatory record in order to cure deficiencies in a petition; CLI-12-12, 75 NRC 603 (2012)

boards will not consider exemption requests that were not made to the NRC Staff in the first instance; LBP-12-6, 75 NRC 256 (2012)

broad discretion is given to NRC licensing boards in the conduct of NRC adjudicatory proceedings, and the Commission generally defers to board case management decisions; CLI-11-13, 74 NRC 635 (2011); CLI-14-10, 80 NRC 157 (2014)

Commission, but not a licensing board, has the power to address a protracted delay in the proceeding and to direct appropriate remedial measures; LBP-11-30, 74 NRC 627 (2011)

contention pleading rules are designed to ensure that only well-defined issues are admitted for hearing and a board should not add material not raised by a petitioner in order to render a contention admissible; CLI-11-11, 74 NRC 427 (2011)

even if there are no objections to petitioners’ representational standing, boards have an independent obligation to determine whether they have adequately demonstrated standing; LBP-11-2, 73 NRC 28 (2011)

fact-finding administrative body, such as a licensing board, with authority to develop an evidentiary record, is distinguished from reviewing adjudicatory and judicial bodies, generally with a more limited record-creating authority; LBP-15-3, 81 NRC 65 (2015)

for the mandatory uncontested proceeding on a uranium enrichment facility license, a licensing board is to conduct a simple sufficiency review rather than a de novo review on both safety and environmental issues; LBP-11-26, 74 NRC 499 (2011)

guidance documents do not bind the board, and so applicant’s compliance with guidance does not ensure grant of a license; LBP-14-1, 79 NRC 39 (2014)
hearing notices are the means by which the Commission identifies the subject matters of the hearings and delegates to the boards the authority to conduct proceedings; LBP-11-22, 74 NRC 259 (2011)

if a board grants summary disposition of a foreign ownership contention, it could terminate the proceeding or move ahead with a pending environmental contention; LBP-12-19, 76 NRC 184 (2012)

if no genuine dispute remains, then the board may dispose of all arguments based on the pleadings; LBP-11-7, 73 NRC 254 (2011)

if petitioner neglects to provide the requisite support for its contentions, it is not within the board’s power to make assumptions or draw inferences that favor the petitioner, nor may the board supply information that is lacking; LBP-12-3, 75 NRC 164 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-12-27, 76 NRC 583 (2012)

if petitioner’s factual claims in support of its standing are contested, untenable, conjectural, or conclusory, boards need not uncritically accept such assertions, but may weigh those informational claims and exercise its judgment about whether the standing element at issue has been satisfied; LBP-13-6, 77 NRC 253 (2013)

in a mandatory hearing, a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-11-26, 74 NRC 499 (2011)

in granting a proposed license, board may condition it upon some precautionary measures required at the chosen site; LBP-15-16, 81 NRC 618 (2015)

it is for the Commission, not licensing boards, to revise its ruling; LBP-15-18, 81 NRC 793 (2015)

it is not the function of a licensing board to comb through the record searching for arguments in support of a proffered contention; LBP-11-6, 73 NRC 149 (2011)

it is the role of the Commission to review licensing board decisions, and not the role of licensing boards to review and to reconsider the wisdom of the Commission’s regulations; LBP-12-6, 75 NRC 256 (2012); LBP-13-12, 78 NRC 239 (2013)

licensing board may modify or waive the provisions of its scheduling orders as it deems appropriate in the interest of sound case management; LBP-15-29, 82 NRC 246 (2015)

licensing board opinion on appealability of an order does not bind the Commission, which will make its own decision whether an appeal may be filed; LBP-14-8, 79 NRC 519 (2014)

licensing board role is not confined to arbitration of those environmental controversies as may happen to have been placed before them by the litigants in the particular case; LBP-14-9, 80 NRC 15 (2014)

licensing boards are expected to examine cited materials to verify that they do, in fact, support a contention; CLI-15-22, 82 NRC 310 (2015)

licensing boards are expected to set procedures to ensure the case is managed efficiently, in a manner that is fair to all parties; CLI-14-10, 80 NRC 157 (2014)

licensing boards are the appropriate finders of fact in most circumstances, and referral of a matter for a fact-specific dispute occurs in the ordinary course of business; CLI-13-9, 78 NRC 551 (2013); CLI-15-14, 81 NRC 729 (2015)

licensing boards can refer potentially significant safety issues that cannot be addressed through the adjudicatory process to NRC Staff for review; LBP-15-1, 81 NRC 15 (2015)

licensing boards cannot superintend the conduct of NRC Staff’s technical reviews; LBP-15-2, 81 NRC 48 (2015)

licensing boards have broad powers to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-15-30, 82 NRC 339 (2015)

licensing boards lack authority to direct the NRC Staff’s nonadjudicatory actions; CLI-11-14, 74 NRC 801 (2011); LBP-11-30, 74 NRC 627 (2011)

licensing boards may certify novel legal or policy questions to the Commission; CLI-11-5, 74 NRC 141 (2011)

licensing boards may not disregard binding Commission case law; CLI-13-7, 78 NRC 199 (2013)
licensing boards may not stretch the scope of admitted contentions beyond their reasonably inferred bounds, but may consider issues that, although not expressly stated, can reasonably be inferred from the arguments presented; LBP-12-17, 76 NRC 71 (2012)
licensing boards must be vested with considerable latitude in determining the course of the proceedings that they are called upon to conduct, and the Commission will enter that arena only to the extent necessary to ensure that no party has been denied a fair opportunity to advance its cause; LBP-15-29, 82 NRC 246 (2015)
licensing boards must judiciously exercise sua sponte authority when faced with a serious, and unraised, issue; LBP-14-9, 80 NRC 15 (2014)
NRC may hold an informal hearing in which it requests and considers written materials without providing for traditional trial-type procedures such as oral testimony and cross-examination; LBP-11-4, 73 NRC 91 (2011)
NRC Rules of Practice provide the board with substantial authority to regulate hearing procedures; CLI-14-10, 80 NRC 157 (2014); LBP-15-15, 81 NRC 598 (2015)
NRC Staff’s independent finding of license renewal applicant’s consistency with GALL does not prevent the board from reviewing the substance of the applicant’s commitments and exploring deficiencies alleged by intervenors in its proceedings; LBP-13-13, 78 NRC 246 (2013)
NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-26, 74 NRC 499 (2011)
piecemeal review of licensing board decisions is disfavored, but boards may refer rulings that, although interlocutory, raise significant and novel legal or policy issues or require Commission resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 199 (2013)
presiding officer may restrict irrelevant, immaterial, unreliable, duplicative, or cumulative evidence and/or arguments; LBP-11-13, 73 NRC 534 (2011)
referring serious safety, environmental, or common defense and security matter to the Staff for resolution is not an adequate solution; LBP-11-9, 73 NRC 391 (2011)
requesting authorization from the Commission for the board, on its own motion, to examine and decide the serious safety or common defense and security matters underlying contentions is allowed to be used for matters that were initially raised by a party, where that party later withdraws; LBP-11-9, 73 NRC 391 (2011)
role of the board when a rule waiver request is filed is limited to determining whether petitioner has made a prima facie showing that it has satisfied 10 C.F.R. 2.335(b), and if not, the board may not further consider the matter; LBP-13-1, 77 NRC 57 (2013)
seeking to trigger review in extraordinary circumstances is within a board’s authority and has been put to good use; LBP-11-9, 73 NRC 391 (2011)
settlement agreement approval process in 10 C.F.R. 2.338(i) is discussed; LBP-15-21, 82 NRC 1 (2015)
to eliminate the inadmissible issue of tribal notification and to clarify the scope of the subsistence consumption issue, board narrows and reformulates a contention; LBP-15-5, 81 NRC 249 (2015)
untimely motions to reopen that present an exceptionally grave issue may be admitted at the board’s discretion; LBP-12-16, 76 NRC 44 (2012)
upon receipt of a motion to withdraw an application, the board may place terms and conditions on the withdrawal, deny the application, or dismiss the application with prejudice; CLI-13-10, 78 NRC 563 (2013)
when petitioner neglects to provide the requisite support for its contentions, it is not within the board’s power to make assumptions or draw inferences that favor petitioner, nor may the board supply information that is lacking; LBP-15-1, 81 NRC 15 (2015)
when the Commission has determined that compliance with a regulation is sufficient to provide for reasonable assurance of public health and safety, a licensing board cannot impose requirements that exceed those in the regulation; LBP-15-20, 81 NRC 829 (2015)
SUBJECT INDEX

where contentions are defective for any reason, licensing boards have no duty to make them acceptable under 10 C.F.R. 2.309; LBP-13-9, 78 NRC 37 (2013)

where no Staff guidance was available for the particular type of facility undergoing license review, the board reasonably selected a standard for a facility most like the facility under review; CLI-15-6, 81 NRC 340 (2015)

where NRC guidance document is not directly applicable to the issue at hand, the presiding officer is afforded greater leeway in its application; CLI-15-6, 81 NRC 340 (2015)

where the board allowed petitioners to file a corrected version of an expert declaration that contained numerous typographical errors, and where some of petitioners’ corrections clearly went beyond what the board expected, the board did not try to parse which changes were authorized and did not consider or rely on the corrected version; LBP-11-2, 73 NRC 28 (2011)

where the licensing board independently analyzed the data in the record and made its own need-for-power projection based thereon, the NRC did not abdicate its NEPA responsibilities by placing heavy reliance on the judgment of local regulatory bodies; LBP-13-4, 77 NRC 107 (2013)

where the meaning of a regulation is clear and obvious, the regulatory language is conclusive, and the board may not disregard the letter of the regulation, but rather must enforce the regulation as written; LBP-14-7, 79 NRC 451 (2014)

with Commission’s express approval, a licensing board may make findings on a serious safety, environmental, or common defense and security matter not put into controversy by the parties; CLI-15-1, 81 NRC 1 (2015)

LICENSING BOARDS, JURISDICTION

after a petition to review a final order has been filed with the Commission, the board no longer has jurisdiction to consider a motion to reopen and the motion is properly filed with the Commission; CLI-12-14, 75 NRC 692 (2012)

applying the rule of statutory construction that the mention of one thing implies the exclusion of another, the fact that the regulation sets forth three specific circumstances in which a board’s jurisdiction ends implies that jurisdiction does not end in other circumstances not listed; LBP-11-22, 74 NRC 259 (2011)

board’s jurisdiction terminates when there are no longer any contested matters pending before it; CLI-15-13, 81 NRC 555 (2015); LBP-15-12, 81 NRC 452 (2015); LBP-15-29, 82 NRC 246 (2015)

boards do not have jurisdiction to determine whether other government entities have properly followed their regulations or procedures; LBP-12-16, 76 NRC 44 (2012)

boards lack jurisdiction to adjudicate challenges to NRC Staff’s proposed no significant hazards consideration determination; LBP-13-11, 78 NRC 177 (2013)

boards may exercise only the jurisdiction conferred upon them by the Commission; LBP-11-22, 74 NRC 259 (2011)

generally, once there has been an appeal or petition to review a Board order, jurisdiction passes to the Commission; CLI-12-14, 75 NRC 692 (2012)

hearing notices are the means by which the Commission identifies the subject matter of the hearings and delegates to the boards the authority to conduct proceedings; LBP-11-22, 74 NRC 259 (2011)

in light of the board’s limited jurisdiction, it concludes that petitioner may appeal its decision immediately; LBP-14-8, 79 NRC 519 (2014)

intervenor’s failure to address the reopening standards in 10 C.F.R. 2.326 creates a yawning deficiency in its submissions because the evidentiary record has been closed and the board’s jurisdiction in the proceeding does not extend beyond the narrow scope of the remand; LBP-11-20, 74 NRC 65 (2011) it is not the province of NRC and thus the board to enforce another agency’s regulations; LBP-12-12, 75 NRC 742 (2012)

licensing board lacks authority to hold a hearing on the adequacy of a different agency’s regulations; LBP-15-5, 81 NRC 249 (2015)

licensing board’s ruling resolving the last pending contention is equivalent to a final decision under 10 C.F.R. 2.341, and a licensing board’s jurisdiction ends after it has rendered a final decision; LBP-15-9, 81 NRC 396 (2015)

matters within the purview of the state public service board are outside the jurisdiction of the licensing board, which is limited to considering only the license amendment request and NRC regulations; LBP-15-24, 82 NRC 68 (2015)

1061
newly constituted board applied the reopening standard to new contentions filed after the prior proceeding was terminated for want of pending or admitted contentions; LBP-11-22, 74 NRC 259 (2011)
NRC’s transfer of regulatory authority to the State of New Jersey is now final and the licensing board no longer has the jurisdiction it bad retained over the proceeding, and the board terminates the proceeding; LBP-15-10, 81 NRC 399 (2015)
section 2.318(a) does not purport to provide an exhaustive list of every situation where board jurisdiction lapses; CLI-12-14, 75 NRC 692 (2012); CLI-12-17, 76 NRC 210 (2012); CLI-12-17, 76 NRC 207 (2012)
when the period within which the Commission may direct that the record be certified to it for final decision expires, when the Commission renders a final decision, or when the presiding officer withdraws from the case, board jurisdiction terminates; CLI-12-14, 75 NRC 692 (2012)
where an amended version of a dismissed contention is pending before the board, the board retains jurisdiction to decide whether to admit the proposed contention; LBP-11-22, 74 NRC 259 (2011)
the hearing notice does not restrict the hearing to any particular set of issues, the hearing should be understood as encompassing all issues raised by a party to the licensing proceeding that may properly be litigated under Atomic Energy Act § 189a; LBP-11-22, 74 NRC 259 (2011)

LICENSING PROCEEDINGS
As long as license review is ongoing, the licensing proceeding is still in existence; CLI-12-14, 75 NRC 692 (2012)
Atomic Energy Act does not mandate on-the-record hearings for reactor licensing proceedings and the Commission therefore has the option of replacing existing procedural requirements with more informal ones; LBP-11-8, 73 NRC 349 (2011)
individual licensing proceedings are not the appropriate forum for evaluating SAMAs; LBP-13-1, 77 NRC 57 (2013)
reconsideration of the agency’s guidance, as a general matter, should not be resolved in an application-specific proceeding; CLI-13-4, 77 NRC 101 (2013)
rulemaking petitioner may request a suspension of a licensing proceeding in which petitioner is a participant, pending disposition of the rulemaking petition; CLI-14-6, 79 NRC 445 (2014)
rulemaking petitioner who is not a party to a licensing proceeding has no right under NRC rules to request a stay of that proceeding; CLI-12-6, 75 NRC 352 (2012)
See Abeyance of Proceeding; Combined License Proceedings; Independent Spent Fuel Storage Installation Proceedings; License Renewal Proceedings; Mandatory Hearings; Materials License Amendment Proceedings; Operating License Proceedings; Operating License Renewal Proceedings; Subpart G Proceedings

LICENSING SUPPORT NETWORK
licensing board directed parties defending depositions to make efforts to identify and obtain Licensing Support Network documents that must be indexed for the benefit of other parties and to circulate those indexes as soon as practicable; CLI-11-13, 74 NRC 635 (2011)

LICENSING, PERFORMANCE-BASED
past or current performance could inform the review of a license renewal application; CLI-11-11, 74 NRC 427 (2011)

LIGHTING
licensing board, construing the petition in favor of petitioners, based its standing finding on potential harm from traffic-generated dust and light pollution; CLI-12-12, 75 NRC 603 (2012)
light pollution is a matter of concern as a proposed nuclear materials facility undergoes agency licensing review; LBP-12-3, 75 NRC 164 (2012)

LIMITED APPEARANCE STATEMENTS
board accepted written limited appearance statements from members of the public in connection with the hearing; LBP-14-3, 79 NRC 267 (2014)
boards may entertain oral and written limited appearance statements from members of the public in connection with a mandatory uncontested proceeding; LBP-11-26, 74 NRC 499 (2011); LBP-13-13, 78 NRC 246 (2013)
limited appearance statement is not considered evidence in a proceeding; LBP-15-27, 82 NRC 184 (2015)
no duty is imposed on a board to respond to such statements as litigable concerns; LBP-11-11, 73 NRC 455 (2011)

[Page 1062]
such statements do not constitute evidence but may assist the board and/or parties in defining the issues being considered; LBP-13-13, 78 NRC 246 (2013)

LIMITED WORK AUTHORIZATION

certain "construction" activities are allowed at a reactor site pursuant to a limited work authorization as long as a site redress plan is submitted; LBP-11-11, 73 NRC 455 (2011)

Commission must determine whether NRC Staff review of a combined license application has been adequate to support the findings listed in 10 C.F.R. 52.97 and 51.107(a) for each of the licenses to be issued and in 10 C.F.R. 50.10 and 51.107(d) with respect to the limited work authorizations; CLI-12-2, 75 NRC 63 (2012)

environmental report for LWA application for a site where a construction permit was issued but construction of the plant was never completed may incorporate the earlier environmental impact statement; LBP-12-24, 76 NRC 503 (2012)

in the 2007 LWA rule, NRC decided that the building of transmission lines to serve a nuclear power plant would no longer be classified as a construction activity and would no longer require authorization from NRC; LBP-14-9, 80 NRC 15 (2014)

in the area of impacts of combined licenses and limited work authorizations, NRC Staff, in its review of new and significant information, identified a change in impacts associated with terrestrial ecology; CLI-12-2, 75 NRC 63 (2012)

scope of activities requiring permission from NRC in the form of LWAs was narrowed by eliminating the concept of commencement of construction formerly described in section 50.10(c) and the authorization formerly described in section 50.10(c)(1); LBP-14-9, 80 NRC 15 (2014)

transmission lines are expressly excluded from the delineated construction activities that would require NRC approval before being undertaken; CLI-15-1, 81 NRC 1 (2015)

uranium enrichment facility applicant seeks an exemption from regulations to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 455 (2011)

See also Preconstruction Activities

LITIGATION EXPENSES

opposing party’s litigation expenses do not provide a basis for departing from the usual rule that a dismissal should be without prejudice; CLI-13-10, 78 NRC 563 (2013)

LOCAL GOVERNMENTAL BODIES

applications for water use permits are evaluated by local governmental agencies; LBP-13-4, 77 NRC 107 (2013)

during a nuclear emergency in the United States, the individual licensee and the appropriate state and local government officials have direct responsibilities for the coordinated response to the event; LBP-11-15, 73 NRC 629 (2011)

where state and local governmental bodies that have jurisdiction over the area in which adverse effects need to be addressed and since they have the authority to mitigate them, it would be incongruous to conclude that a federal agency has no power to act until the local agencies have reached a final conclusion on what mitigation measures they consider necessary; LBP-13-4, 77 NRC 107 (2013)

where the licensing board independently analyzed the data in the record and made its own need-for-power projection based thereon, the NRC did not abdicate its NEPA responsibilities by placing heavy reliance on the judgment of local regulatory bodies; LBP-13-4, 77 NRC 107 (2013)

LOSS OF LARGE AREAS

combined license applications must include a description and plans for implementation of the guidance and strategies required by section 50.54(hh)(2) for severe accident mitigation; CLI-11-9, 74 NRC 233 (2011)

contentions that challenge applicant’s compliance with the LOLA requirements of 10 C.F.R. 50.54(hh)(2) are not admissible because they are not within the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)

licensees must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities in case of loss of large areas of the plant due to explosions or fire; CLI-11-5, 74 NRC 141 (2011); CLI-12-2, 75 NRC 63 (2012)

section 52.80(d) mandates compliance with the agency’s LOLA requirements in 10 C.F.R. 50.54(hh)(2), but does not apply to a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)
LOW-INCOME POPULATIONS

Federal agencies shall identify and consider whether their actions will cause disproportionate environmental impacts on minority, low-income, or other sensitive populations; LBP-12-24, 76 NRC 503 (2012)

Magnuson-Stevens Fishery Conservation and Management Act consultation duty on essential fish habitats applies to license renewals; LBP-12-10, 75 NRC 633 (2012)

Contention asserting that NRC’s environmental review of the license renewal application has not met the requirements of the act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633 (2012)

Direct consultation obligation is imposed on NRC if NRC determines that approval of a requested license renewal may adversely affect any essential fish habitat; LBP-12-10, 75 NRC 633 (2012)

Essential fish habitat assessment must describe the action, its potential effects on EFH, and proposed mitigation activities, if any; LBP-12-10, 75 NRC 633 (2012)

For any federal action that may adversely affect essential fish habitats, federal agencies must provide the National Marine Fisheries Service with a written assessment of the effects of that action; LBP-12-10, 75 NRC 633 (2012)

Goal of the act is to preserve commercial and recreational fishery resources through the protection of essential fish habitat; LBP-12-10, 75 NRC 633 (2012)

National Marine Fisheries Service will not recommend that state or federal agencies take actions beyond their statutory authority; LBP-12-10, 75 NRC 633 (2012)

Secretary of the Interior may promulgate such regulations as may be necessary to carry out any other provision of this act; LBP-12-10, 75 NRC 633 (2012)

MAINTENANCE

Monitoring a component’s performance or condition is required by the maintenance rule; CLI-15-6, 81 NRC 340 (2015)

Power reactor licensees are required to monitor the performance or condition of systems, structures, and components against licensee-established goals in a manner sufficient to provide reasonable assurance that these SSCs are capable of fulfilling their intended functions; CLI-15-6, 81 NRC 340 (2015)

MAINTENANCE PROGRAMS

All structures and components that are important to safety must be maintained to manage the effects of aging, but most systems, structures, and components are adequately maintained under existing programs as required by the Maintenance Rule; CLI-15-6, 81 NRC 340 (2015)

Any member of the public may seek enforcement action associated with matters affecting plant operation, including the vitality of component maintenance programs; CLI-15-6, 81 NRC 340 (2015)

Because irradiated fuel is continually present in the spent fuel pool once the reactor discharges the first batch of spent fuel, and conditions are most challenging during reactor shutdown for refueling, maintenance of equipment related to the safe storage of spent fuel is typically addressed as part of shutdown risk management; DD-13-3, 78 NRC 571 (2013)

Relay switches and snubbers do not rely on time-limited assumptions based on the plant’s operating term, but rather are subject to ongoing maintenance programs; LBP-15-6, 81 NRC 314 (2015)

Request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 489 (2014)

MANAGEMENT

Applicant must establish and maintain a configuration management system to evaluate, implement, and track changes to the site, structures, processes, systems, equipment, components, computer programs, and activities of personnel; LBP-12-21, 76 NRC 218 (2012)

See also Case Management

MANAGEMENT CHARACTER AND COMPETENCE

Admission of a management integrity contention relied on references to a serious incident involving shutdown of the reactor, management responsible for the incident remaining in place, and a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert witness in support of the contention; CLI-11-11, 74 NRC 427 (2011)
claims of past and current mismanagement are outside the scope of the license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011)

contentions alleging that applicants’ handling of past safety issues at the plants demonstrated that the applicants could not provide reasonable assurance that they would manage the effects of aging during the license renewal term are inadmissible; LBP-13-8, 78 NRC 1 (2013)

for management integrity and character to be a viable contention, there must be a direct and obvious relationship between these issues and the challenged licensing action; CLI-11-8, 74 NRC 214 (2011)

inspection reports could be seen as objective evidence that applicant may not adequately manage aging in the future; CLI-11-11, 74 NRC 427 (2011)

licensing boards may not assume that applicants will violate NRC regulations; LBP-12-3, 75 NRC 164 (2012)

management integrity contentions are admissible in license renewal proceedings only if they rely on specific supporting information, including references to a serious incident involving shutdown where management responsible for the incident remained in place, a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert in support of the contention; LBP-13-8, 78 NRC 1 (2013)

more subjective appraisal of declining property values might be permissible in the context of a licensing action associated with an applicant or facility shown to have engaged in a continuous and pervasive course of illegal conduct; LBP-12-3, 75 NRC 164 (2012)

narrow and specific contention that alleges facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; CLI-11-11, 74 NRC 427 (2011)

past violations of NRC regulations would indicate a deficiency in an application only if they are directly germane to the licensing action, rather than being of simply historical interest; CLI-12-2, 75 NRC 63 (2012)

proximity presumption was applied in a license amendment proceeding where management’s lack of the required character and competence was alleged; LBP-15-17, 81 NRC 753 (2015)

this issue is beyond the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)

the extent petitioner believes there are existing management competence questions that merit immediate action, then its remedy is to direct the Staff’s attention to those matters by filing a request for action in accordance with 10 C.F.R. 2.206; CLI-11-11, 74 NRC 427 (2011)

See also Licensee Character

MANDATORY HEARINGS

although safety issues are reviewed under the adequacy and sufficiency standard, licensing boards must independently consider the final balance among the conflicting costs and benefits when reviewing National Environmental Policy Act issues; LBP-12-21, 76 NRC 218 (2012)

Atomic Energy Act does not prescribe a specific structure for the hearing requirement, and the Commission has granted licensing boards considerable flexibility to select the most appropriate approach in the circumstances of each individual case; LBP-12-21, 76 NRC 218 (2012)

based on Staff’s and applicant’s written responses to board questions, and on the resumes, CVs, and SPQs admitted as part of the evidentiary record to respond to the questions, the board considers safety issues resolved for the proceeding; LBP-11-11, 73 NRC 455 (2011)

because petitioners did not participate in the mandatory hearing, and were not parties to it, they may not challenge the mandatory hearing decision, as such, in court; CLI-12-11, 75 NRC 523 (2012)

because the scope of intervenors’ participation in adjudications is limited to their admitted contentions, they are barred from participation in the uncontested portion of the hearing; LBP-14-9, 80 NRC 15 (2014)
boards are to make independent environmental judgments with respect to certain NEPA findings, though even then they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-26, 74 NRC 499 (2011)

boards may entertain oral and written limited appearance statements from members of the public in connection with a mandatory uncontested proceeding; LBP-11-26, 74 NRC 499 (2011)

board’s role in mandatory hearings is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but the NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-11, 73 NRC 455 (2011)

boards should not second-guess the underlying technical or factual findings by the NRC Staff; LBP-12-21, 76 NRC 218 (2012)

Commission addresses the sufficiency of NRC Staff’s review of a combined license application rather than a making a de novo review; CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012)

Commission discussion regarding alternative site review supplements the environmental impact statement; LBP-11-26, 74 NRC 499 (2011)

Commission does not review combined license application de novo, but rather considers the sufficiency of NRC Staff’s review of the application; CLI-15-13, 81 NRC 555 (2015)

Commission examines whether the Staff’s safety review of the combined license application under 10 C.F.R. 52.97(a)(1)(i)-(v) has been adequate to support its findings; CLI-12-9, 75 NRC 421 (2012)

Commission must determine whether NRC Staff review of a combined license application has been adequate to support the findings listed in 10 C.F.R. 52.97 and 51.107(a) for each of the licenses to be issued and in 10 C.F.R. 50.10 and 51.107(d) with respect to the limited work authorizations; CLI-12-2, 75 NRC 63 (2012)

Commission shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 455 (2011)

Commission does not review combined license application de novo, but rather considers the sufficiency of NRC Staff’s review of the application; CLI-15-13, 81 NRC 555 (2015)

Commission does not review combined license application de novo, but rather considers the sufficiency of NRC Staff’s review of the application; CLI-15-13, 81 NRC 555 (2015)

Commission must determine whether NRC Staff review of a combined license application has been adequate to support the findings listed in 10 C.F.R. 52.97 and 51.107(a) for each of the licenses to be issued and in 10 C.F.R. 50.10 and 51.107(d) with respect to the limited work authorizations; CLI-12-2, 75 NRC 63 (2012)

Commission shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 455 (2011)

for the mandatory uncontested proceeding on a uranium enrichment facility license, a licensing board is to conduct a simple sufficiency review rather than a de novo review on both safety and environmental issues; LBP-11-26, 74 NRC 499 (2011)

for uranium enrichment facility licensing, boards should inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact; LBP-11-11, 73 NRC 455 (2011)

function of uncontested hearings is only to review the adequacy of NRC Staff’s work, not to make a de novo inquiry into NEPA issues; LBP-14-9, 80 NRC 15 (2014)

giving appropriate deference to NRC Staff technical expertise, boards are to probe the logic and evidence supporting NRC Staff findings and decide whether those findings are sufficient to support license issuance; LBP-12-21, 76 NRC 218 (2012)

hearing must be held on each application to construct a nuclear power plant, regardless of whether an interested member of the public requests a hearing on the application; CLI-15-13, 81 NRC 555 (2015)

in a combined license proceeding, the Commission considers safety issues pursuant to Atomic Energy Act § 189a and environmental issues as required by National Environmental Policy Act § 102(2)(A), (C), and (E); CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012)

in addition to contested hearings on combined licenses, where interested members of the public have the right to participate and air their concerns, uncontested safety and environmental issues are considered in a mandatory hearing; CLI-12-11, 75 NRC 523 (2012)

in uranium enrichment facility licensing proceedings, boards are to make independent environmental judgments with respect to certain NEPA findings; LBP-11-11, 73 NRC 455 (2011)

license conditions imposed on applicant as a result of NRC Staff’s review process and applicant-requested exemptions from agency regulatory requirements that are granted by Staff have a strong potential to fall into a “nonroutine matter” category; LBP-11-11, 73 NRC 455 (2011)
licensing boards are to conduct a simple sufficiency review rather than a de novo review on both AEA and NEPA issues for uranium enrichment facility licensing; LBP-11-11, 73 NRC 455 (2011)
licensing boards conducting hearings on uncontested issues are expected to take an independent hard look at NRC Staff safety and environmental findings but are not to replicate NRC Staff work; LBP-12-21, 76 NRC 218 (2012)
licensing boards conducting hearings on uncontested issues should conduct a simple sufficiency review of uncontested issues, not a de novo review; LBP-12-21, 76 NRC 218 (2012)
licensing boards have an important but limited role in mandatory proceedings; LBP-12-21, 76 NRC 218 (2012)
licensing boards must narrow their inquiry to topics or sections in Staff documents that they deem most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
mandatory hearings, which are required by section 189a of the Atomic Energy Act, do not involve public participation, regardless of whether a contested hearing with public participation has occurred; CLI-12-11, 75 NRC 523 (2012)
Notice of Hearing for an uncontested combined license proceeding sets the parameters for the Commission’s review; CLI-12-2, 75 NRC 63 (2012)
NRC must conduct a hearing on the uncontested environmental and safety aspects of the proposed plant; LBP-13-4, 77 NRC 107 (2013)
NRC needs to conduct only a single licensing action and adjudicatory proceeding to authorize construction and operation of a uranium enrichment facility; LBP-12-21, 76 NRC 218 (2012)
NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-26, 74 NRC 499 (2011)
principal focus of the Commission will be on nonroutine matters; LBP-11-11, 73 NRC 455 (2011)
purpose of a mandatory hearing is to determine whether NRC Staff’s review of the application has been adequate to support the required regulatory findings; CLI-12-11, 75 NRC 523 (2012)
relative to NEPA, in uranium enrichment facility licensing proceedings, boards are to determine whether the review conducted by NRC Staff has been adequate, but they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-11, 73 NRC 455 (2011)
safety issues that the Commission must consider in the mandatory portion of a combined license proceeding are outlined; CLI-15-13, 81 NRC 555 (2015)
to satisfy requirements of NEPA for a combined license, the Commission independently considers the final balance among conflicting factors in the record; CLI-12-9, 75 NRC 421 (2012)
contested early site permit proceeding is subject to mandatory hearing requirements; LBP-11-10, 73 NRC 424 (2011)
with respect to the environmental impacts of a combined license, the Commission determines whether the requirements of NEPA §102(2)(A), (C), and (E), and 10 C.F.R. 51.107(a)(1)-(4) have been met; CLI-12-9, 75 NRC 421 (2012)
MATERIAL CONTROL AND ACCOUNTING
ability to detect the loss of plutonium in a timely manner, to allow for an effective response, is a crucial security requirement; LBP-11-9, 73 NRC 391 (2011)
accuracy is an integral component of the portion of the regulatory requirement that addresses item presence verification; CLI-15-9, 81 NRC 512 (2015)
adequacy finding on applicant’s program requires the board to make a case-by-case determination, guided by the Atomic Energy Act’s mandate that no license to possess special nuclear material may be issued

SUBJECT INDEX
if issuance would be inimical to the common defense and security or would constitute an unreasonable
risk to the health and safety of the public; LBP-14-1, 79 NRC 39 (2014)
alarm’s are not required to be resolved within any particular time frame, only that a time period be
approved by NRC Staff; LBP-14-1, 79 NRC 39 (2014)
any statistical sampling plan for verifying the presence and integrity of strategic special nuclear material
items must have at least 99 percent power of detecting item losses that total 5 formula kg or more,
plantwide, within 30 calendar days for Category IA items and 60 calendar days for Category IB items
contained in a vault or in a permanently controlled access area isolated from the rest of the material
access area; CLI-15-9, 81 NRC 512 (2015)
applicant for a license to possess and use strategic special nuclear material must establish, implement, and
maintain a Commission-approved MC&A system that will address the loss or theft of such material;
CLI-15-9, 81 NRC 512 (2015)
applicant has demonstrated that its program of automated equipment, computer systems (and their
verification), and the use of secured and tamper-safed item storage area boundaries, satisfactorily
demonstrates the ability to verify the presence and integrity of all strategic special nuclear material
items in storage; LBP-14-1, 79 NRC 39 (2014)
algorithm’s preliminary program satisfactorily demonstrates the ability to rapidly assess the validity of
alleged thefts; LBP-14-1, 79 NRC 39 (2014)
algorithm’s preliminary program satisfactorily demonstrates the ability to resolve the nature and cause of
any MC&A alarm within approved time periods in each of the four storage areas at issue; LBP-14-1,
79 NRC 39 (2014)
algorithm’s program must show how compliance with the requirements of section 74.51 will be
accomplished; LBP-14-1, 79 NRC 39 (2014)
algorithm’s proposal to seal and design strategic special nuclear material item storage locations to be
tamper-safed or equivalent to tamper-safing such that confirmation that the physical boundary of these
locations has not been breached ensures the integrity of these items; LBP-14-1, 79 NRC 39 (2014)
algorithm’s sampling method, which examines data representative of the entire set of strategic special
nuclear material items, and not a limited subset, samples 100% of SSNM items and thus complies with
the requirement to sample a sufficient number of items to result in at least 99% power of detecting the
specified losses; LBP-14-1, 79 NRC 39 (2014)
algorithm’s strategic special nuclear material item monitoring approach, as enhanced by an item
verification procedure, provides reasonable assurance that the quantitative accuracy of the MMIS/PLC
data is sufficient to enable the procedures employing those data to meet the regulatory requirements;
LBP-14-1, 79 NRC 39 (2014)
algorithm’s verification of the integrity of the strategic special nuclear material vault boundaries on a daily
basis exceeds the regulatory requirement to verify the integrity of the items every 30 or 60 days;
LBP-14-1, 79 NRC 39 (2014)
algorithms applying to possess 5 or more formula kilograms of strategic special nuclear material must
maintain alarm resolution capabilities designed to achieve the performance objectives of section
74.51(a); LBP-14-1, 79 NRC 39 (2014)
at the construction authorization request stage, the board dismissed an MC&A contention as moot,
pending submittal of applicant’s Fundamental Nuclear Material Control Plan which would require
inclusion of a detailed MC&A program; LBP-14-1, 79 NRC 39 (2014)
by verifying integrity of storage area boundaries, applicant can verify the integrity of all strategic special
nuclear material items in storage within the required 30- and 60-day time frames; LBP-14-1, 79 NRC
39 (2014)
capability to rapidly assess the validity of alleged thefts is aimed at the rapid determination of whether an
actual loss of 5 or more formula kilograms occurred; LBP-14-1, 79 NRC 39 (2014)
capability to resolve alarms within approved time periods is most clearly aimed at the prompt
investigation of anomalies potentially indicative of strategic special nuclear material losses; LBP-14-1,
79 NRC 39 (2014)
capability under 10 C.F.R. 74.51(a)(1) to verify presence is most clearly aimed at ongoing confirmation of
the presence of strategic special nuclear material in assigned locations; LBP-14-1, 79 NRC 39 (2014)
SUBJECT INDEX

capability under 10 C.F.R. 74.51(a)(4) to verify integrity is most clearly aimed at the prompt investigation of anomalies potentially indicative of strategic special nuclear material losses; LBP-14-1, 79 NRC 39 (2014)

contention challenging applicant’s ability to rapidly assess the validity of alleged thefts is decided; LBP-14-1, 79 NRC 39 (2014)

contention that applicant’s revised MC&A plan fails to show how confirmation and verification of theft of plutonium will be carried out in the specified timelines is inadmissible; CLI-15-9, 81 NRC 512 (2015)

contention that applicant’s revised MC&A plan is deficient because its item monitoring program does not have the capability to verify, on a statistical sampling basis, the presence and integrity of strategic special nuclear material losses within the time frames specified by the regulation is inadmissible; CLI-15-9, 81 NRC 512 (2015)

contention that applicant’s revised MC&A plan is inadequate to satisfy the alarm resolution requirements is inadmissible; CLI-15-9, 81 NRC 512 (2015)

definition of “power of detection” does not explicitly require a demonstration of data accuracy; LBP-14-1, 79 NRC 39 (2014)

determination regarding item integrity under 10 C.F.R. 74.55(b)(1) refers to the ability to determine that a container holding strategic special nuclear material items has not been breached and that the amount of SSNM within has not been altered; LBP-14-1, 79 NRC 39 (2014)

“formula kilogram” means strategic special nuclear material in any combination in a quantity of 1000 grams computed by the formula, grams = (grams contained U-235) + 2.5 (grams U-233 + grams plutonium); CLI-15-9, 81 NRC 512 (2015)

if applicant decides to remove a method from the approved list of alarm resolution methods, it would have to follow the prescribed change process or the license amendment process; LBP-14-1, 79 NRC 39 (2014)

intervenors fail to provide any information or support for their proposition that applicant’s automated systems do not comply with the regulatory requirements and their challenges to applicant’s item monitoring approach on these grounds fail; LBP-14-1, 79 NRC 39 (2014)

licensee must be able to rapidly assess the validity of alleged thefts; CLI-15-9, 81 NRC 512 (2015)

licensee must show with reasonable assurance that its proposed methodology for MC&A will not be inimical to the common defense and security and will not constitute an unreasonable risk to the health and safety of the public; CLI-15-9, 81 NRC 512 (2015)

licensees are not required to conduct assessments of alleged thefts without the use of their records systems, or by first verifying the integrity and accuracy of those records systems; LBP-14-1, 79 NRC 39 (2014)

licensees must establish and maintain systems to protect against acts of radiological sabotage and to prevent the theft or diversion of special nuclear material; CLI-11-4, 74 NRC 1 (2011)

licensees must satisfy 10 C.F.R. 74.55(b)’s detection requirements for tamper-safed strategic special nuclear material items in order to achieve the performance objectives set out in section 74.51(a); LBP-14-1, 79 NRC 39 (2014)

licensees must verify on a statistical sampling basis, the presence and integrity of strategic special nuclear material items; CLI-15-9, 81 NRC 512 (2015)

licensees shall resolve the nature and cause of any MC&A alarm within approved time periods; LBP-14-1, 79 NRC 39 (2014)

materials license amendment applications must contain a full description of the applicant’s program for control and accounting of special nuclear material to show how it will comply with the 10 C.F.R. Part 74 requirements; LBP-11-9, 73 NRC 391 (2011)

meaning of “verify” in the context of item presence verification is discussed; CLI-15-9, 81 NRC 512 (2015)

neither the plain language of 10 C.F.R. 74.55(b)(1) nor its regulatory history suggests that verifications of item integrity must be in any way physical; LBP-14-1, 79 NRC 39 (2014)

no requirement to quantify the potential for an adversary to take measures to conceal any abnormalities in MMIS and PLC mapping can reasonably be found in (or implied by) the language of 10 C.F.R. 74.55(b)(1); LBP-14-1, 79 NRC 39 (2014)
NRC may issue a license to possess and use 5 or more formula kilograms of strategic special nuclear material only if applicant can establish, implement, and maintain a Commission-approved MC&A system that will achieve general performance objectives; LBP-14-1, 79 NRC 39 (2014)

NRC must be notified within 24 hours of failure to resolve an alarm within the approved time period; LBP-14-1, 79 NRC 39 (2014)

NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 63 (2012)

NRC Staff granted an exemption from 10 C.F.R. 74.33(c)(5) subject to license conditions that require applicant to submit, for the Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 218 (2012)

Part 74 requires an MC&A system for a fuel fabrication facility; LBP-14-1, 79 NRC 39 (2014)

petitioner provides no support for the proposition that applicant must demonstrate that each individual resolution method can be completed, by itself, within the approved time period; LBP-14-1, 79 NRC 39 (2014)

“power of detection” means the probability that the critical value of a statistical test will be exceeded when there is an actual loss of a specific quantity of strategic special nuclear material; LBP-14-1, 79 NRC 39 (2014)

NRC 39 (2014)

quantitative accuracy of the MMIS/PLC computer system data must be considered in determining whether requirements of 10 C.F.R. 74.55(b)(1) are satisfied by applicant’s plans; LBP-14-1, 79 NRC 39 (2014)

rapid determination of strategic special nuclear material theft assessment should be completed within an 8- or 72-hour timeline; LBP-14-1, 79 NRC 39 (2014)

reports to the agency regarding unapproved changes made to the MC&A program must be filed within no more than 6 months after the changes; LBP-11-11, 73 NRC 455 (2011)

requirement in 10 C.F.R. 74.55(b) for 99% power of detection means that there must be a 99% probability that a missing item will be included within the sample chosen for inspection and would thus be detected; LBP-14-1, 79 NRC 39 (2014)

requirements for performance of applicant’s material control and accounting system neither prescribe nor proscribe any methodology for achievement of those performance requirements; LBP-14-1, 79 NRC 39 (2014)

section 74.55 is not rendered superfluous by a reading that verifying the integrity of a storage area boundary will suffice to verify the integrity of the items contained therein; LBP-14-1, 79 NRC 39 (2014)

statistical sampling is to be used to achieve verification of item presence and integrity but 10 C.F.R. 74.55(b) does not prescribe a particular method of sampling, only that statistical sampling must result in at least 99% power of detecting strategic special nuclear material losses that total 5 formula kg or more; LBP-14-1, 79 NRC 39 (2014)

“strategic special nuclear material” means uranium-235 (contained in uranium enriched to 20 percent or more in the U-235 isotope), uranium-233, or plutonium; CLI-15-9, 81 NRC 512 (2015)

“tamper-safing” refers to use of devices on containers or vaults in a manner and at a time that ensures a clear indication of any violation of the integrity of previously made measurements of special nuclear material within the container or vault; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

there is a general overarching requirement that applicant’s strategic special nuclear material item monitoring method be sufficiently accurate to provide reasonable assurance that the specific regulatory requirement is satisfied; LBP-14-1, 79 NRC 39 (2014)

to achieve strategic special nuclear material loss-related performance objectives, the system must provide the capabilities described in sections 74.55 and 74.57; LBP-14-1, 79 NRC 39 (2014)

to meet the reasonable assurance standard, applicant must make a showing that meets the preponderance-of-the-evidence threshold of compliance with the applicable regulations; LBP-14-1, 79 NRC 39 (2014)

“unit process” means an identifiable segment or segments of processing activities for which the amounts of input and output strategic special nuclear material are based on measurements; CLI-15-9, 81 NRC 512 (2015)

uranium enrichment facility license must have a condition requiring the licensee to maintain and follow a source material control and accounting program and maintain records of any MC&A program changes

1070
SUBJECT INDEX

made without Commission approval for 5 years from the date of the change; LBP-11-11, 73 NRC 455 (2011)

whether applicant’s item monitoring program has the capability to verify, on a statistical sampling basis, the presence and integrity of strategic special nuclear material items is decided; LBP-14-1, 79 NRC 39 (2014)

MATERIAL FALSE STATEMENTS

information provided to NRC by license applicant shall be complete and accurate in all material respects; DD-14-4, 79 NRC 506 (2014)

request that NRC revoke license for falsification of information is addressed; DD-14-4, 79 NRC 506 (2014)

MATERIAL INFORMATION

applicants must provide information that is complete and accurate in all material respects; LBP-15-24, 82 NRC 68 (2015)

applicants shall notify NRC of information identified by the applicant as having, for the regulated activity, a significant implication for public health and safety or common defense and security; LBP-11-32, 74 NRC 654 (2011)

information provided to NRC by an applicant must be complete and accurate in all material respects; LBP-11-32, 74 NRC 654 (2011)

licensee or applicant must notify NRC of information that applicant or licensee has identified as having a significant implication for public health and safety or common defense and security; LBP-15-15, 81 NRC 598 (2015)

regulatory approach of relying on licensees to submit complete and accurate information and auditing that information as appropriate is consistent with sound regulatory practice; LBP-15-24, 82 NRC 68 (2015)

MATERIAL MISREPRESENTATIONS

affirmative misconduct means an affirmative misrepresentation or affirmative concealment of a material fact by the government, although it does not require that the government intended to mislead a party; LBP-12-16, 76 NRC 44 (2012)

estoppel claimant must prove a false representation by the government, that the government had the intent to induce the plaintiff to act on the misrepresentation, plaintiff’s lack of knowledge or inability to obtain the true facts, and plaintiff’s reliance on the misrepresentation to his detriment; LBP-12-16, 76 NRC 44 (2012)

incorrect information in a license amendment application is prohibited by NRC regulations; LBP-15-24, 82 NRC 68 (2015)

petitioner’s concern that information provided by licensee concerning training received by its employees was not accurate and in violation was not substantiated; DD-14-4, 79 NRC 506 (2014)

request that NRC shut down or prohibit restart of nuclear power plants until a criminal investigation of a licensee contractor is complete and everything has been verified safe is denied; DD-14-1, 79 NRC 7 (2014)

MATERIALITY

all contentions must proffer an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-12-27, 76 NRC 583 (2012)

although NRC Staff’s argument against contention admission appears to have some weight, the board need not resolve it, because the contention is inadmissible for failing to raise a genuine dispute of material fact or law with the environmental report; LBP-11-6, 73 NRC 149 (2011)

boards accord each exhibit weight to the extent it is relevant, material, and reliable; LBP-11-18, 74 NRC 29 (2011)

boards make threshold decisions on materiality on a case-by-case basis, given the nature of the issue and the record presented; LBP-15-24, 82 NRC 68 (2015)

contention is inadmissible for failing to raise a material issue; LBP-15-15, 81 NRC 15 (2015)

contention that does not focus at all on the technical specifications that are the subject of its request raises no issues that are material to any findings the NRC must make to approve the license amendment request; LBP-13-11, 78 NRC 177 (2013)
contentions alleging deficiencies or errors in an application must also indicate some significant link between the claimed deficiency and either the public health and safety or the environment; LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012)

contentions must demonstrate that the issue raised is material to the findings NRC must make for the licensing action at issue; CL-14-15, 75 NRC 704 (2012); LBP-12-13, 75 NRC 784 (2012)

correctness of assurance that the license conditionswill be replaced by sections 50.75(h) and 50.82(a)(8) is a genuine concern relative to the appropriateness of the license amendment request, and therefore the board concludes that the state has shown the materiality of its contention; LBP-15-24, 82 NRC 68 (2015)

deference to board rulings on contention admissibility is appropriate even where the Commission may consider that the support for the contention is weak, or where the claim’s materiality presents a close question; CL-14-2, 79 NRC 11 (2014)

dispute at issue is material if its resolution would make a difference in the outcome of the licensing proceeding; CL-14-2, 79 NRC 11 (2014)

if a contention makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-15-5, 81 NRC 249 (2015)

in explaining why there is a genuine material dispute, contention must give the board a reason to believe that the alleged deficiency will lead to a material safety or environmental outcome, based on factual or expert support; LBP-15-1, 81 NRC 15 (2015)

inadequacy in the severe accident mitigation alternatives analysis is material if license renewal applicant failed to consider complete information without justifying why particular information was omitted; LBP-15-5, 81 NRC 249 (2015)

inasmuch as NRC Staff relies on the benefits of proposed units to satisfy an otherwise unmet need for power, the adequacy of the need-for-power assessment is material to granting the proposed combined license; LBP-11-7, 73 NRC 254 (2011)

intervenors need only demonstrate that the issue raised in the contention is material to a licensing decision, i.e., that it would make a difference in the decision; LBP-11-7, 73 NRC 254 (2011)

issue of alleged failure to consult with a tribe is material and within the scope of materials license proceeding; LBP-15-16, 81 NRC 618 (2015)

issue raised must fall within the scope of the proceeding and be material to the findings that the NRC must make; CL-15-8, 81 NRC 500 (2015)

material issue is one where resolution of the dispute would make a difference in the outcome of the licensing proceeding; LBP-11-23, 74 NRC 287 (2011)

materiality depends on whether the information is capable of influencing the decisionmaker, not on whether the decisionmaker would have relied on it; LBP-15-24, 82 NRC 68 (2015)

new contention is inadmissible because it relies on information that is not materially different from information previously available and already in the record; LBP-15-16, 81 NRC 618 (2015)

new contentions must be based on information materially different than the information previously available; LBP-14-5, 79 NRC 377 (2014)

petitioner fails to demonstrate that the issue of radiation dispersal due to site inundation is material to the findings the NRC must make to support approval of a combined license application; LBP-12-7, 75 NRC 503 (2012)

petitioner is required to show why the alleged error or omission is of possible significance to the grant or denial of a pending license application; LBP-15-24, 82 NRC 68 (2015)

petitioner must also show that its contention is material to the findings NRC must make to support issuance of the license amendments; CL-15-25, 82 NRC 389 (2015)

petitioner must demonstrate that a contention asserts an issue of law or fact that is material to the findings the NRC must make to support the action that is involved in the proceeding; LBP-12-3, 75 NRC 164 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-15-19, 81 NRC 815 (2015); LBP-15-20, 81 NRC 829 (2015); LBP-15-23, 82 NRC 55 (2015)

petitioner must show why the alleged error or omission is of possible significance to the result of the proceeding; LBP-15-20, 81 NRC 829 (2015)
requests for hearing must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact; LBP-13-3, 77 NRC 82 (2013)

SAMA contention’s admissibility is based on whether it purports to show that an additional SAMA should have been identified as potentially cost-beneficial; CLI-11-11, 74 NRC 427 (2011)
simply referencing a study without explaining the information’s significance relative to the potential containment leakage monitored by the testing at issue does not establish its materiality; LBP-15-26, 82 NRC 163 (2015)
speculation that NRC would consider other SAMAs than have been previously considered does not demonstrate that the issue raised is material to NRC’s decision; LBP-12-15, 76 NRC 14 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-15-20, 81 NRC 829 (2015)
test for materiality that would require petitioners to demonstrate quantitatively how an alleged defect would result in a violation of pertinent requirements is rejected; LBP-11-7, 73 NRC 254 (2011) under 10 C.F.R. 2.309(f)(1), in meeting materiality requirement, petitioner need only properly allege a defect; LBP-11-7, 73 NRC 254 (2011)

unless petitioner sets forth a supported contention pointing to an apparent error or deficiency that may have significantly skewed the environmental conclusions, there is no genuine material dispute for hearing; LBP-15-29, 82 NRC 246 (2015)

where implementation of a building code could not make a difference in the outcome of the proceeding, it cannot be material; LBP-11-7, 73 NRC 254 (2011)

where the hearing notice does not restrict the hearing to any particular set of issues, the hearing should be understood as encompassing all issues raised by a party to the licensing proceeding that may properly be litigated under Atomic Energy Act § 189a; LBP-11-22, 74 NRC 259 (2011)

whether the safe shutdown earthquake exceedance in applicant’s exemption request does in fact comply with 10 C.F.R. Part 50, Appendix S and 10 C.F.R. 100.23 is a question currently before the NRC Staff and is thus material to the NRC’s licensing decision in this proceeding; LBP-11-10, 73 NRC 424 (2011)

MATERIALS LICENSE AMENDMENT APPLICATIONS

applicant’s environmental report is to discuss any irreversible and irretrievable commitments of resources that would be involved in the proposed action; LBP-12-3, 75 NRC 164 (2012)
because resolution of a rule exemption request directly affects licensability of the proposed facility, the exemption raises material questions directly connected to an agency licensing action and thus comes within the hearing rights of interested parties; CLI-13-1, 77 NRC 1 (2013)

for application or other form of permission for which applicant has previously submitted an environmental report, the supplement to applicant’s ER may be limited to incorporating by reference, updating, or supplementing the information previously submitted to reflect any significant environmental change, including any resulting from operational experience or a change in operations or proposed decommissioning activities; LBP-12-24, 76 NRC 503 (2012)

if NRC Staff finds that an application does not comply with regulatory requirements, it must inform applicant in writing of the nature of any deficiencies or the reason for the proposed denial and the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)

if the 20-day deadline for requesting a hearing in 10 C.F.R. 2.103(b) applies, NRC Staff’s failure to comply with its own responsibilities under that provision bars Staff from invoking it; LBP-11-19, 74 NRC 61 (2011)

request for hearing on Staff denial of permission to use an alternative method for demonstrating decommissioning funding assurance is granted; LBP-11-19, 74 NRC 61 (2011)

when licensee requests a rule exemption in a related license amendment application, hearing rights on the amendment application are considered to encompass the exemption request as well; CLI-13-1, 77 NRC 1 (2013)

MATERIALS LICENSE AMENDMENT PROCEEDINGS

completion of NRC Staff’s final environmental review document always must precede the conduct of hearings on environmental issues; LBP-11-30, 74 NRC 627 (2011)
contention that application fails to provide sufficient information regarding the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 11 (2014)
contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 401 (2015)
generic environmental impact statement for ISL mining is subject to an appropriate challenge in an adjudicatory proceeding; LBP-15-11, 81 NRC 401 (2015)
if proximity-based standing cannot be demonstrated, then standing must be established according to traditional principles of redressability, injury, and causation; LBP-12-3, 75 NRC 164 (2012)
in lieu of the injury and causation showings for standing, petitioner has been able to establish proximity-plus by showing that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; LBP-12-3, 75 NRC 164 (2012)
NRC could consider adopting, at least for the initial construction/operation authorization of in situ recovery facilities, a standing regime by which persons living or having substantial contacts within a 50-mile radius of the facility are afforded standing; LBP-12-3, 75 NRC 164 (2012)
whether petitioner could be affected by a materials licensing action must be determined on a case-by-case basis, taking into account petitioner’s distance from the source, nature of the licensed activity, and significance of the radioactive source; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)
source materials licensee must demonstrate that sufficient funds will be available to cover the cost of decommissioning its facility; LBP-12-6, 75 NRC 256 (2012)
applicant for a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery must submit an environmental report with its application; LBP-15-3, 81 NRC 65 (2015)
applicant must provide a full description of its program for control and accounting of special nuclear material to show how it will comply with the 10 C.F.R. Part 74 requirements; LBP-11-9, 73 NRC 391 (2011)
applicant must provide analyses that are adequate, accurate, and complete in all material respects to demonstrate that cultural and historic resources are identified and protected; LBP-15-16, 81 NRC 618 (2015)
applicants applying to possess 5 or more formula kilograms of strategic special nuclear material must maintain alarm resolution capabilities designed to achieve the performance objectives of section 74.51(a); LBP-14-1, 79 NRC 39 (2014)
environmental reports must contain a description of the proposed action, a statement of its purposes, and a description of the environment affected; LBP-15-3, 81 NRC 65 (2015)
environmental reports must discuss the five elements of 10 C.F.R. 51.45(b)(1)-(5); LBP-15-3, 81 NRC 65 (2015)
Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 499 (2011)
timing of source materials license renewal application enables licensee to operate under NRC’s timely renewal provision until the agency renews the license; LBP-15-2, 81 NRC 48 (2015)
applicant bears the ultimate burden of proof in materials licensing proceedings; LBP-14-1, 79 NRC 39 (2014)
application or other form of permission for which applicant has previously submitted an environmental report, the supplement to applicant’s ER may be limited to incorporating by reference, updating, or supplementing the information previously submitted to reflect any significant environmental change, including any resulting from operational experience or a change in operations or proposed decommissioning activities; LBP-12-24, 76 NRC 503 (2012)
issue of alleged failure to consult with a tribe is material and within the scope of materials license proceeding; LBP-15-16, 81 NRC 618 (2015)
MATERIALS LICENSE RENEWAL
admissibility of contention that applicant submit a decommissioning plan and updated financial plans related to decommissioning is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that environmental documents lack an adequate description of financial assurances sufficient to pay the costs of restoration and long-term monitoring of up to 30 years is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that final environmental assessment fails to satisfy NRC’s requirement for an environmental impact statement when there are unresolved conflicts concerning reasonable alternatives is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 401 (2015)
applicant is not required to assess cumulative impacts in its environmental report, but NUREG-1748 requests that applicant discuss any past, present, or reasonably foreseeable future actions that could result in cumulative impacts when combined with the proposed action; LBP-12-24, 76 NRC 503 (2012)
applications for renewal of an ISFSI license must describe the aging management plan for management of issues associated with aging that could adversely affect structures, systems, and components important to safety; LBP-12-24, 76 NRC 503 (2012)
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)
specific licenses expire on the date stated in the license unless licensee has filed a request for renewal not less than 30 days prior to that date, and a license in timely renewal expires on the day on which NRC makes a final determination to deny the request, or, if the determination states an expiration date, then on the stated expiration date; CLI-12-4, 75 NRC 154 (2012)
stay of an NRC license is an extraordinary remedy, and a rare occurrence in NRC practice; LBP-15-2, 81 NRC 48 (2015)
timing of license issuance is informed by instruction for NRC Staff to promptly issue its approval or denial of the application consistent with its findings, and despite the pendency of a hearing; LBP-15-2, 81 NRC 48 (2015)
timing of source materials license renewal application enables licensee to operate under NRC’s timely renewal provision until the agency renews the license; LBP-15-2, 81 NRC 48 (2015)
when licensee has made timely and sufficient application for a renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency; LBP-15-2, 81 NRC 48 (2015); LBP-15-11, 81 NRC 401 (2015)
MATERIALS LICENSE RENEWAL PROCEEDINGS
challenge to the adequacy of the acceptance criteria or any other component of the current licensing basis is not within the scope of the proceeding; LBP-12-24, 76 NRC 503 (2012)
petitioner is entitled to a presumption of standing if petitioner resides in the zone of reasonably foreseeable harm from the source of radioactivity and the proposed action involves a significant source of radioactivity producing an obvious potential for on-site consequences; LBP-12-24, 76 NRC 503 (2012)
ruling on petitions for waiver of application of the waste confidence rule in independent spent fuel storage installation license renewal proceeding is deferred and held it in abeyance; LBP-12-24, 76 NRC 503 (2012)
there is no predefined distance marking the area of potential on-site consequences on which to establish standing and thus this must be judged on a case-by-case basis; LBP-12-24, 76 NRC 503 (2012)
SUBJECT INDEX

MATERIALS LICENSEES

adequacy finding on applicant’s material control and accounting program requires the board to make a case-by-case determination, guided by the Atomic Energy Act’s mandate that no license to possess special nuclear material may be issued if issuance would be inimical to the common defense and security or would constitute an unreasonable risk to the health and safety of the public; LBP-14-1, 79 NRC 39 (2014)
grounds for license denial exist if, prior to issuance of a license to possess and use source and byproduct materials for uranium milling, there is commencement of construction by an applicant; LBP-12-3, 75 NRC 164 (2012)
making control and accounting system is required for a fuel fabrication facility; LBP-14-1, 79 NRC 39 (2014)
NRC may issue a license to possess and use 5 or more formula kilograms of strategic special nuclear material only if applicant can establish, implement, and maintain a Commission-approved material control and accounting system that will achieve general performance objectives; LBP-14-1, 79 NRC 39 (2014)
section 74.55(b)(1) applies only to licensees that are authorized to possess 5 or more formula kilograms of strategic special nuclear material; LBP-14-1, 79 NRC 39 (2014)
source materials licensees have numerous options for meeting their decommissioning funding obligations; LBP-12-6, 75 NRC 256 (2012)

MATERIALS LICENSEES

along with the requirement to perform an integrated safety analysis is the requirement for applicant to provide the NRC Staff with an ISA summary, the content of which is specified in 10 C.F.R. 70.65(b); LBP-11-11, 73 NRC 455 (2011)
applicant for a Part 70 license is required to establish and maintain a safety program, which includes performing an integrated safety analysis; LBP-11-11, 73 NRC 455 (2011)
applicant must indicate the period of time for which a Part 70 license is requested; LBP-11-11, 73 NRC 455 (2011)
applicant’s integrated safety analysis must consider potential accident sequences caused either by deviations in the processes that will be conducted at the proposed facility or by credible external events, including natural phenomena; LBP-11-11, 73 NRC 455 (2011)
for a proposed nuclear materials-related activity, commencement of construction relative to that activity prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-26, 74 NRC 499 (2011)
key action that will allow incineration of imported low-level-radioactive waste material is the domestic license authorizing such processing, not NRC’s grant of an import license; CLI-11-3, 73 NRC 613 (2011)
licensing strategy whereby applicant seeks initial in situ recovery licensing authorization to mine a particular area on which a central processing plant is located, followed thereafter by additional license amendments to cover ISR activities on contiguous or nearby areas, has been employed previously under the agency’s ISR facility licensing regime; LBP-13-10, 78 NRC 117 (2013)
materials license suspension proceeding is not an adversarial adjudication for purposes of the Equal Access to Justice Act because the Atomic Energy Act does not require such a hearing to be on the record pursuant to Administrative Procedure Act § 554; LBP-11-8, 73 NRC 349 (2011)
Pentapartite Agreement between the United States and four European governments to prevent new restricted data from being disseminated to European nationals will be a prerequisite to the NRC Staff issuing a facility clearance; LBP-11-11, 73 NRC 455 (2011)
preconstruction activities that are allowed under Part 50 are also allowed for materials licenses; LBP-11-26, 74 NRC 499 (2011)
regulations contain no express prohibition on foreign ownership, but require Staff to make a finding that license issuance will not be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)
Staff imposed a license condition on a uranium enrichment facility to ensure that clearances are obtained before classified matter is processed, stored, reproduced, transmitted, handled, or accessed; LBP-11-11, 73 NRC 455 (2011)
See Byproduct Materials Licenses; Source Materials Licenses

1076
SUBJECT INDEX

MAXIMUM CONTAMINANT LEVELS
EPA drinking water MCLs continue to be an accepted groundwater restoration standard; LBP-15-3, 81 NRC 65 (2015)
in exempting an aquifer from MCLs, EPA has to find that the aquifer cannot and will not serve as a source of drinking water because it is mineral producing and can be demonstrated to contain minerals that, considering their quantity and location, are expected to be commercially producible; LBP-15-3, 81 NRC 65 (2015)
no in situ recovery facility has ever requested that all OZ aquifer groundwater hazardous constituents be restored to CAB concentrations or Criterion 5B(5)(b) MCLs, as those are currently defined; LBP-15-3, 81 NRC 65 (2015)

MEMORANDUM OF UNDERSTANDING
NRC Staff’s environmental review was conducted in cooperation with the U.S. Army Corps of Engineers, with NRC acting as lead agency and ACE as cooperating agency under a memorandum of understanding because applicants also needed permits from ACE to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012)

MERITS
See Decision on the Merits

METEOROLOGICAL FACTORS
accounting for the meteorological patterns, atmospheric transport modeling, and data issues raised by intervenor cannot credibly alter which severe accident mitigation alternatives are potentially cost-beneficial to implement; LBP-11-18, 74 NRC 29 (2011)
sea-breeze effect and hot-spot effect must cause the expected average offsite damages to increase by at least a factor of 2 for the next most costly severe accident mitigation alternative to be cost-effective; LBP-11-18, 74 NRC 29 (2011)

MIGRATION TENET
absent timely analysis of the section 2.309(c)(1) and (f)(1) new/amended contention precepts by the contention’s sponsor, a board is not obligated to determine whether those new/amended contention requirements could have been met relative to a migrated environmental contention; LBP-13-10, 78 NRC 117 (2013)
admitted contentions challenging applicant’s environmental report may, in appropriate circumstances, function as challenges to similar portions of NRC Staff’s environmental impact statement; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
admitted contentions fall under the migration tenet when information in the draft environmental impact statement is sufficiently similar to information in the environmental report; LBP-13-9, 78 NRC 37 (2013)
although contention contesting applicant’s environmental report generally may be viewed as a challenge to NRC Staff’s subsequent draft environmental impact statement, new claims must be raised in a new or amended contention; LBP-13-10, 78 NRC 117 (2013)
because primary responsibility to address and comply with AEA safety-related requirements resides with a license applicant, that application, not NRC Staff’s application review, is the focus of any safety-related contentions and thus the migration tenet does not apply; LBP-13-10, 78 NRC 117 (2013)
boards may construe an admitted contention contesting the environmental report as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-12-12, 75 NRC 742 (2012); LBP-12-23, 76 NRC 445 (2012); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-15-11, 81 NRC 401 (2015)
challenges to only the draft environmental impact statement apply equally to the final environmental impact statement; LBP-12-5, 75 NRC 227 (2012)
challenging the environmental report preserves petitioner’s right to challenge the environmental impact statement at a later stage of the proceedings; LBP-12-8, 75 NRC 539 (2012)
contention challenging sufficiency of draft environmental impact statement as it pertains to protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 37 (2013)
contention migrates when a licensing board construes a contention challenging the environmental section of an application as a challenge to a subsequently issued Staff NEPA document without petitioner amending the contention; CLI-15-17, 82 NRC 33 (2015)

1077
contention that the final supplemental environmental impact statement violates the National Environmental
Policy Act and implementing regulations by failing to conduct the required hard-look analysis of
impacts of the proposed mine on species of birds and bats receiving special protection migrates as an
admissible contention; LBP-14-5, 79 NRC 377 (2014)
contentions migrate because the underlying issue and concern raised in response to the draft supplemental
environmental impact statement remain, and because a motion for summary disposition has not been
filed; LBP-14-5, 79 NRC 377 (2014)
in certain instances, contentions challenging an environmental report are deemed to migrate from
challenging applicant’s environmental report to challenging NRC Staff’s environmental assessment;
LBP-14-6, 79 NRC 404 (2014)
migration of a contention is appropriate only where the environmental analysis or discussion at issue is
essentially in pari materia with applicant’s analysis or discussion that is the focus of the contention;
LBP-12-12, 75 NRC 742 (2012); LBP-15-11, 81 NRC 401 (2015)
tenet applies where information in the draft environmental impact statement is sufficiently similar to
information in the environmental report; LBP-14-6, 79 NRC 404 (2014)
tenet helps to expedite hearings by obviating the need to file and litigate the same contention up to three
times, once against the ER, once against the DEIS, and one final time against the FEIS; LBP-12-12, 75
NRC 742 (2012); LBP-12-23, 76 NRC 445 (2012)
when information in the draft environmental impact statement is sufficiently similar to information in
applicant’s environmental report, previously admitted contentions challenging the environmental report
apply to relevant portions of the DSEIS; LBP-15-16, 81 NRC 618 (2015)
when the information in the final supplemental environmental impact statement is sufficiently similar to
information in the draft SEIS, the tenet applies; LBP-14-5, 79 NRC 377 (2014)
MIGRATORY BIRD TREATY ACT
claim that NRC Staff did not engage in the consultation process relevant to issues addressed by the
Migratory Bird Treaty Act and that impacts to wildlife with respect to this Act are inadequately
analyzed is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that draft environmental impact statement fails to comply with NEPA with regard to impacts
on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is
admissible in part; LBP-13-9, 78 NRC 37 (2013)
contention that the final supplemental environmental impact statement violates the National Environmental
Policy Act and implementing regulations by failing to conduct the required hard-look analysis of
impacts of the proposed mine on species of birds and bats receiving special protection migrates as an
admissible contention; LBP-14-5, 79 NRC 377 (2014)
MINORITIES
federal agencies shall identify and consider whether their actions will cause disproportionate environmental
impacts on minority, low-income, or other sensitive populations; LBP-12-24, 76 NRC 503 (2012)
MISCONDUCT
although petitioner’s inadvertent publication of protected information was a serious offense that exposed
movant to potential economic harm and undermined integrity of the adjudicative proceeding, the
significance of petitioner’s misconduct is alleviated to some degree by the immediate corrective action
taken by petitioner; LBP-13-2, 77 NRC 71 (2013)
board denies a motion seeking sanctions against petitioner for violating the governing protective order and
nondisclosure agreement, but imposes a document review requirement upon petitioner in light of its
misconduct and to enhance future compliance with the proceeding’s protective order; LBP-13-2, 77
NRC 71 (2013)
licensing boards may impose reprimands, censures, or suspensions from proceedings on contumacious
parties or their representatives; LBP-13-2, 77 NRC 71 (2013)
MISREPRESENTATION
estoppel claims must rely on its adversary’s conduct in such a manner as to change his position for the
worse, and that reliance must have been reasonable in that the party claiming the estoppel did not
know nor should it have known that its adversary’s conduct was misleading; LBP-12-16, 76 NRC 44
(2012)
See also Material Misrepresentation
MITIGATION PLANS

admissibility of contention that environmental assessment fails to adequately describe or analyze proposed mitigation measures is decided; LBP-15-11, 81 NRC 401 (2015)

agency preparing the NEPA document must explain the statutory or regulatory requirements it is relying on and its reasons for concluding that the application of those requirements will actually result in the mitigation and monitoring it assumes will occur; LBP-15-11, 81 NRC 401 (2015)

agency’s procedural obligation to discuss mitigation in sufficient detail to ensure that environmental consequences have been fairly evaluated is distinguished from any substantive requirement to actually develop and adopt a detailed mitigation plan; LBP-14-7, 79 NRC 451 (2014)

agency’s record of decision must include a concise discussion of mitigation measures; LBP-15-16, 81 NRC 618 (2015)

agency’s reliance on mitigation in making a finding of no significant impact must be justified; LBP-14-7, 79 NRC 451 (2014)

alternate pressurized thermal shock rule specifies mitigation processes for licensees if they project they will exceed (or they do exceed) the rules’ screening criteria; LBP-15-17, 81 NRC 753 (2015)

because NEPA imposes no substantive requirement that mitigation measures actually be taken, it should not be read to require agencies to obtain an assurance that third parties will implement particular measures; LBP-14-7, 79 NRC 451 (2014)

before being granted a Clean Water Act section 404 permit, applicant must demonstrate to the Corps of Engineers that it has taken all appropriate and practicable steps to avoid and minimize adverse impacts; LBP-15-23, 82 NRC 55 (2015)

contention alleging deficiencies in Corp of Engineers’ compensatory mitigation methods under the Clean Water Act lacks alleged facts or expert opinions; LBP-15-23, 82 NRC 55 (2015)

courts decide whether a mitigation plan was adequately or inadequately discussed, but the line between these two options is not well defined; LBP-15-16, 81 NRC 618 (2015)

environmental impact statement must discuss any adverse environmental effects that cannot be avoided should the proposal be implemented and must provide a reasonably complete discussion of possible mitigation measures; LBP-15-11, 81 NRC 401 (2015)

environmental mitigation options must be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-14-9, 80 NRC 15 (2014)

if impacts are unavoidable, applicant shall provide mitigation measures that must be, to the extent practicable, sufficient to replace lost aquatic resource functions; LBP-15-23, 82 NRC 55 (2015)

in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC 618 (2015)

lead agency must make available to the public the results of relevant monitoring of mitigation measures; LBP-15-16, 81 NRC 618 (2015)

licensees must develop strategies to mitigate a simultaneous loss of all a.c. power and loss of normal access to the ultimate heat sink; DD-15-5, 81 NRC 877 (2015)

monitoring and enforcement program must be adopted where applicable for any mitigation; LBP-15-16, 81 NRC 618 (2015)

NEPA does not demand the presence of a fully developed plan that will mitigate environmental harm before an agency can act; LBP-14-7, 79 NRC 451 (2014); LBP-15-16, 81 NRC 618 (2015); LBP-15-23, 82 NRC 55 (2015)

NEPA imposes procedural requirements on an agency to consider mitigation options but does not mandate particular results; LBP-15-23, 82 NRC 55 (2015)

NEPA requires that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fully evaluated; LBP-14-7, 79 NRC 451 (2014); LBP-15-23, 82 NRC 55 (2015)

NEPA requires the draft environmental impact statement to contain a detailed discussion of possible mitigation measures; LBP-15-23, 82 NRC 55 (2015)

NRC issued an order on station blackout mitigation strategies requiring strategies to protect against, among many other hazards, postulated seismic events; DD-15-1, 81 NRC 193 (2015)
proposed mitigation measures are sufficient if they are supported by sufficient evidence, such as studies conducted by the agency, or are adequately policed; LBP-14-7, 79 NRC 451 (2014)
reasonably complete discussion of possible mitigation measures must be included in a NEPA document, to allow the agency and the public a chance to properly evaluate the severity of the adverse effects; LBP-15-16, 81 NRC 618 (2015)
reliance on mitigation is justified if the proposed mitigation underlying the finding of no significant impact is more than a possibility in that it is imposed by statute or regulation or has been so integrated into the initial proposal that it is impossible to define the proposal without mitigation; LBP-14-7, 79 NRC 451 (2014)
request that NRC order licensees to modify the technical guidelines to include emergency operations procedures, severe accident mitigation guidelines, and extensive damage mitigation guidelines in an integrated manner, specify clear command and control strategies for their implementation, and stipulate appropriate qualification and training for those who make decisions during emergencies is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
there must be some assurance that mitigation measures constitute an adequate buffer against the negative impacts that result from the authorized activity to render such impacts so minor as to not warrant an environmental impact statement; LBP-14-7, 79 NRC 451 (2014)
though mitigation measures must be discussed in an environmental impact statement, NEPA does not guarantee that federally approved projects will have no adverse impacts; LBP-15-16, 81 NRC 618 (2015)
when an agency otherwise complies with NEPA’s requirement of a reasonably thorough mitigation analysis, there is no error in the agency’s reliance on the Clean Water Act section 404’s substantive requirements as mitigation measures even though the section 404 permit review is not yet complete; LBP-15-23, 82 NRC 55 (2015)
when conducting a NEPA-required environmental review, an agency may consider the ameliorative effects of mitigation in determining the environmental impacts of an activity; LBP-14-7, 79 NRC 451 (2014)
when the adequacy of an EIS mitigation strategy is challenged, the determining issue is whether the agency took a sufficiently hard look at environmental consequences, and ensured that its decision was supported by a completely informed record; LBP-15-16, 81 NRC 618 (2015)
where the agency has found mitigation strategies necessary to alleviate a potential impact, the associated discussion should be reasonably complete to properly evaluate the severity of the adverse effects; LBP-15-11, 81 NRC 401 (2015)
MIXED OXIDE FUEL
if licensee endeavors to use MOX fuel during the license renewal term, it will need to seek a license amendment; LBP-13-8, 78 NRC 1 (2013)
MODELS/MODELING
agency’s failure to adequately validate a quantitative model on which it relies may lead the reviewing court to conclude that the agency’s decision is arbitrary, capricious, or contrary to law; LBP-15-20, 81 NRC 829 (2015)
MODIFICATION ORDER
none of the post-Fukushima orders or information requests can be characterized as approvals that must be obtained in connection with renewal of an operating license; LBP-12-15, 76 NRC 14 (2012)
request for additional instrumentation for all Mark I spent fuel storage pools has been addressed through an order modifying licenses with regard to reliable spent fuel pool instrumentation; DD-15-1, 81 NRC 193 (2015)
MONITORING
activities associated with, and the data coming from, prelicensing groundwater monitoring activities are associated with compliance with the dictates of 10 C.F.R. Part 40, Appendix A, Criterion 7; LBP-15-3, 81 NRC 65 (2015)
agencies may provide for monitoring to ensure that their decisions are carried out and should do so in important cases; LBP-15-16, 81 NRC 618 (2015)
although the Part 40, Appendix A criteria were developed for conventional uranium milling facilities, they have since been applied in limited fashion to ISR facilities; LBP-15-3, 81 NRC 65 (2015)
applicant for a uranium ISR license is required to provide data from a groundwater monitoring program that are sufficient to establish a prelicensing site characterization baseline for assessing the potential effects of facility operations on local groundwater quality; LBP-15-3, 81 NRC 65 (2015)
applicant must establish a preoperational monitoring program that must be conducted to provide complete baseline data on a milling site and its environs; LBP-15-16, 81 NRC 618 (2015)
applicant’s program for establishing existing site characterization baseline values for certain site groundwater constituents prior to issuance of a source materials license for ISR facility construction and operation need not, to comply with NEPA and NRC’s Part 51 implementing regulations, be conducted so as to also provide background information needed to set Appendix A, Criterion 5B groundwater protection standards; LBP-15-3, 81 NRC 65 (2015)
applicant’s strategic special nuclear material item monitoring approach, as enhanced by an item verification procedure, provides reasonable assurance that the quantitative accuracy of the MMIS/PLC data is sufficient to enable the procedures employing those data to meet the regulatory requirements; LBP-14-1, 79 NRC 39 (2014)
as a matter of law and logic, if applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring program was a fortiori inadequate, and intervenor had a regulatory obligation to challenge it in its original petition to intervene; LBP-11-20, 74 NRC 65 (2011)
comprehensive system of planned and periodic audits shall be carried out to verify compliance with all aspects of the quality assurance program and to determine effectiveness of the program; LBP-14-7, 79 NRC 451 (2014)
contention that final supplemental environmental impact statement fails to comply with NRC regulations and NEPA because it lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is decided; LBP-15-3, 81 NRC 65 (2015)
determination of background groundwater quality to include sampling of wells that are hydraulically upgradient of the waste management area is not required if non-upgradient well sampling will provide an indication of background groundwater quality that is representative, or more representative, than that provided by upgradient wells; LBP-15-3, 81 NRC 65 (2015)
ERDS is a direct electronic data link between licensees of operating reactors and the NRC Operations Center, and its objective is to allow NRC to monitor critical parameters during an emergency; LBP-15-4, 81 NRC 156 (2015)
fir detection systems shall be automatic and capable of operating with or without offsite power; DD-12-3, 76 NRC 416 (2012)
for agency decisions such as a combined license that are based on an environmental impact statement, a monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation; LBP-12-23, 76 NRC 445 (2012)
given that legally binding monitoring and mitigation measures have been imposed via a certificate of compliance issued by the appropriate state and local agencies, board has reasonable assurance that these measures will be implemented and that these agencies will actively monitor and enforce appropriate compliance with these environmental monitoring and mitigation measures; LBP-13-4, 77 NRC 107 (2013)
if applicant’s enhanced monitoring program, which was the topic of a late-filed contention, was insufficient, it must have been insufficient beforehand too; CLI-12-10, 75 NRC 479 (2012)
if, as interveners allege, applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring program embodied in its license renewal application was a fortiori inadequate, and interveners had a regulatory obligation to challenge it in their original petition to intervene; LBP-15-1, 81 NRC 15 (2015)
in situ recovery license applicant is barred from installing a complete wellfield and associated monitor well networks until after a license is issued; LBP-15-3, 81 NRC 65 (2015)
intervenors must point to the specific ways in which the shield building monitoring aging management plan is wrong or inadequate to raise a genuine dispute with applicant’s license renewal application; LBP-12-27, 76 NRC 583 (2012)
licensee shall establish a detection monitoring program needed for NRC to set the site-specific groundwater protection standards, and the monitoring program must be in place when specified by NRC in license conditions; LBP-15-3, 81 NRC 65 (2015)
licensees must assess the condition of their components, monitor performance of structures, systems, and components to ensure that can of fulfill their intended functions, and establish a suitable test program to demonstrate that components will perform satisfactorily in-service; DD-13-2, 78 NRC 185 (2013)
licensees must monitor structures, systems, and components in a manner sufficient to provide reasonable assurance that the SSCs are capable of supporting their intended function; DD-15-3, 81 NRC 713 (2015)
monitoring and enforcement program must be adopted where applicable for any mitigation; LBP-15-16, 81 NRC 618 (2015)
nothing in 10 C.F.R. Part 40, Appendix A, Criterion 5B precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to characterize properly the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 65 (2015)
nothing in the definition of “construction” in 10 C.F.R. 40.4 precludes the installation of wells or the use of monitoring protocols as needed to provide those background data; LBP-15-3, 81 NRC 65 (2015)
NRC Staff’s reliance in an environmental impact statement on predicted future monitoring and regulatory compliance program to prevent environmental impacts is not permitted; LBP-14-9, 80 NRC 15 (2014)
NRC, in its capacity as the federal agency charged with regulating the nuclear industry in a manner that protects public health and safety, monitors nuclear emergencies; LBP-11-15, 73 NRC 629 (2011)
post-licensing, preoperational activities conducted to comply with Part 40, Appendix A, Criterion 7 are associated with compliance with the dictates of 10 C.F.R. Part 40, Appendix A, Criteria 5B and 7A; LBP-15-3, 81 NRC 65 (2015)
prefilling monitoring program to characterize site groundwater constituents need not be coextensive with the Criterion 7A preoperational monitoring, license condition-based program intended to provide the information needed for setting Criterion 5B groundwater protection standards and UCLs; LBP-15-16, 81 NRC 618 (2015)
pressure monitoring system that functions to alert ISFSI operators of potential storage problems, specifically a leak of one of the seals, is intended to meet the requirements for monitoring of dry spent fuel storage; LBP-12-24, 76 NRC 503 (2012)
record of decision must also summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-12-18, 76 NRC 127 (2012)
request that NRC order licensees to complete the Emergency Response Data System modernization initiative by June 2012 to ensure multunit site monitoring capability is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)
subset of the production and injection wells to be drilled within the boundaries of the ISR wellfield is to be used to sample groundwater from the aquifer prior to the commencement of operations to establish hazardous constituent Commission-approved background concentrations; LBP-15-3, 81 NRC 65 (2015)
surveillance program to monitor pressurized water reactor pressure vessel is described; LBP-15-17, 81 NRC 753 (2015)
there is a general overarching requirement that applicant’s strategic special nuclear material item monitoring method be sufficiently accurate to provide reasonable assurance that the specific regulatory requirement is satisfied; LBP-14-1, 79 NRC 39 (2014)
there is no assurance of a mitigation measure efficacy where the government conducted no study of its likely effects, proposed no monitoring to determine how effective the proposed mitigation would be, and did not consider alternatives in the event the measure fails; LBP-12-23, 76 NRC 445 (2012)
uranium enrichment facility applicant’s commitment to monitoring and the corrective action program provides reasonable assurance that public health and safety will be protected and applicant has a program in compliance with the regulations; LBP-12-21, 76 NRC 218 (2012)
waiting until after licensing, but before mining operations begin, to definitively establish groundwater quality baselines and upper control limits is consistent with industry practice and NRC methodology, given the sequential development of in situ leach well fields; LBP-15-3, 81 NRC 65 (2015)
water samples taken from one well located hydrologically upgradient are part of the groundwater sampling protocol; LBP-15-3, 81 NRC 65 (2015)
See also Radioisotopic Monitoring

MOOTNESS

absent compelling reasons, the Commission adheres to the case or controversy doctrine in its adjudicatory proceedings; LBP-13-7, 77 NRC 307 (2013)
admitted contenions of omission may be rendered moot by subsequent license-related documents filed by NRC Staff that address the alleged omission; LBP-13-9, 78 NRC 37 (2013)
alleged defects in applicant’s environmental report may be mooted by the content of NRC’s environmental impact statement or supplemental environmental impact statement; LBP-11-28, 74 NRC 604 (2011)
at the construction authorization request stage, the board dismissed a material control and accounting contention as moot, pending submittal of applicant’s Fundamental Nuclear Material Control Plan which would require inclusion of a detailed MC&A program; LBP-14-1, 79 NRC 39 (2014)
because the plant is now permanently shut down and will not restart, no live controversy remains between the litigants; CLI-13-9, 78 NRC 551 (2013)
cases will be moot when the issues are no longer live, or the parties lack a cognizable interest in the outcome; CLI-13-9, 78 NRC 551 (2013)
contention based solely upon omissions from the environmental report is rendered moot when the missing information is supplied; LBP-11-14, 73 NRC 591 (2011)
contention dismissal based on mootness is a jurisdictional ruling, not a decision on the merits of the claim; LBP-11-22, 74 NRC 259 (2011)
contention of omission that has been admitted may be rendered moot by subsequent license-related documents filed by NRC Staff that address the alleged omission; LBP-14-5, 79 NRC 377 (2014)
controversy often ends during the pendency of appeals before the Commission or the Appeal Board; CLI-13-9, 78 NRC 551 (2013)
exception to the mootness doctrine occurs if the challenged action is too short in duration to be litigated and there is a reasonable expectation that the same party will be subjected to the same action again; CLI-13-9, 78 NRC 551 (2013); CLI-13-10, 78 NRC 563 (2013)
exception to the mootness doctrine occurs when a case is capable of repetition, yet evading review; CLI-13-10, 78 NRC 563 (2013)
future cases are appropriately decided in the context of a concrete dispute, with self-interested parties vigorously advocating opposing positions; CLI-13-9, 78 NRC 551 (2013)
general proposition that an appeal is not moot if there is a possibility of similar acts recurring in the future applies to instances where the same litigants likely will be subject to similar future action; CLI-13-9, 78 NRC 551 (2013)
hearing request was dismissed as moot where petitioner’s claim was not susceptible to meaningful adjudicative relief; LBP-13-7, 77 NRC 307 (2013)
if a board were to adjudicate either the admissibility of a moot contention or the standing of a petitioner who sought to adjudicate a moot contention, it would be issuing an advisory opinion in derogation of Commission precedent; LBP-13-7, 77 NRC 307 (2013)
if a contention is rendered moot by information supplied by applicant or considered by NRC Staff in a draft environmental impact statement, the party that filed the original contention of omission must file a new or amended contention if it wishes to challenge the adequacy or sufficiency of the NRC Staff’s treatment of the relevant issue; LBP-13-9, 78 NRC 37 (2013)
if a party believes an admitted contention is mooted by the inclusion of additional information, that party may file a motion for summary disposition; LBP-14-5, 79 NRC 377 (2014)

1083
if all matters at issue in a contention of omission are addressed by NRC Staff in its draft environmental impact statement through the actual provision of information on all such matters, then no legal interest in that contention remains, and the contention is moot; LBP-11-4, 73 NRC 91 (2011)

if applicant cures the omission cited in a contention, the contention will become moot unless revised by intervenors; LBP-15-5, 81 NRC 249 (2015)

if applicants believe that their actions render a contention moot, then they should promptly file a motion for summary disposition; LBP-12-19, 76 NRC 184 (2012)

if the environmental impact statement addresses the concerns alleged in the contention, the original contention becomes moot and the intervenor must raise a new contention if it claims the EIS discussion is still inaccurate or incomplete; LBP-14-6, 79 NRC 404 (2014)

in ruling on whether a contention is moot, boards look to whether a justiciable controversy still exists and whether an issue is still live, such that a party still has a legal interest in the issue; LBP-11-4, 73 NRC 91 (2011)

intervenors’ challenges to adequacy of applicant’s environmental report with respect to environmental impacts of dewatering associated with the proposed nuclear plant continue to serve as viable challenges to similar sections of Staff’s draft environmental impact statement and thus are not moot; LBP-11-1, 73 NRC 19 (2011)

it is the Commission’s customary practice to vacate a challenged licensing board decision when, during the pendency of an appeal, the proceeding becomes moot; CLI-13-10, 78 NRC 563 (2013)

licensee challenged NRC Staff’s use of immediately effective orders after fulfilling the underlying requirements of those orders; CLI-13-9, 78 NRC 551 (2013)

NRC Staff’s issuance of an environmental assessment under NEPA does not necessarily moot contentions challenging an applicant’s environmental report; LBP-14-6, 79 NRC 404 (2014)

petitioner’s request for action relating to containment structural damage is mooted by licensee’s decision to shut down and defuel the facility; DD-14-3, 79 NRC 500 (2014)

publication of NRC Staff’s draft environmental impact statement may moot a contention challenging the environmental analysis in the applicant’s environmental report, if the DEIS dispenses with the issues raised in the original contention challenging the ER; LBP-11-1, 73 NRC 19 (2011)

request that NRC order licensee to submit a license amendment application for the design and installation of replacement steam generators and for additional enforcement action is moot; DD-15-7, 82 NRC 257 (2015)

resolution of a mooted contention requires no more than a finding by the presiding officer that the matter has become moot; LBP-12-5, 75 NRC 227 (2012)

stare decisis is not implicated where the board decision is unreviewed and therefore not binding on future tribunals, but as a prudential matter, the Commission vacates such decisions when appellate review is cut short by mootness; CLI-13-9, 78 NRC 551 (2013)

stare decisis is not implicated where the board decision is unreviewed and therefore not binding on future tribunals, but as a prudential matter, the Commission vacates such decisions when appellate review is cut short by mootness; CLI-13-9, 78 NRC 551 (2013)

to show that a case is not moot, movant must show a reasonable expectation that it will be subjected to the same action again; CLI-13-9, 78 NRC 551 (2013)

vacatur is not automatic; but will depend on the nature and character of the conditions that have caused the case to become moot; CLI-13-9, 78 NRC 551 (2013)

when petitioner obtains the relief it is seeking before the admissibility of its contention is resolved, the admissibility vel non of the contention is no longer justiciable, because it no longer presents a live controversy involving a true clash of interests that is susceptible to meaningful adjudicative relief; LBP-13-7, 77 NRC 307 (2013)

where a contention alleges omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by NRC Staff in a draft environmental impact statement, the contention is moot, and intervenors must timely file a new or amended contention to raise specific challenges regarding the new information; LBP-12-5, 75 NRC 227 (2012)

where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant, the contention is moot; LBP-11-16, 73 NRC 645 (2011); LBP-12-27, 76 NRC 583 (2012)

with license’s withdrawal of license amendment request, the proceeding is now moot; CLI-13-10, 78 NRC 563 (2013)
SUBJECT INDEX

MOTIONS
all motions must include a certification that movant has made a sincere effort to contact other parties in the proceeding and resolve the issue raised in the motion, and that the movant’s efforts to resolve the issue have been unsuccessful; LBP-11-2, 73 NRC 28 (2011); LBP-11-15, 73 NRC 629 (2011)
although NRC rules require that motions be addressed to the presiding officer when a proceeding is pending, suspension motions are best addressed to the Commission; CLI-11-5, 74 NRC 141 (2011)
failure to read NRC regulations carefully does not constitute good cause for accepting late-filed motions; LBP-11-34, 74 NRC 685 (2011)
if any portion of a filing is untimely tendered, it must be accompanied by a motion to file out of time; LBP-11-13, 73 NRC 534 (2011)
motions must be filed no later than 10 days after the occurrence or circumstance from which the motion arises; LBP-12-26, 76 NRC 559 (2012)
motions must be rejected if they do not include a certification by the attorney or representative of the moving party that movant has made a sincere effort to contact other parties in the proceeding and resolve the issue(s) raised in the motion, and that movant’s efforts to resolve the issue(s) have been unsuccessful; LBP-12-27, 76 NRC 583 (2012)
NRC rules do not contemplate motions filed as placeholders for a further motion to be filed later; CLI-14-6, 79 NRC 445 (2014)
parties’ other professional obligations do not relieve them of their obligations to meet regulatory deadlines; LBP-11-34, 74 NRC 685 (2011)
state’s motion for cross-examination was granted, insofar as it would have a reasonable opportunity to examine witnesses pursuant to NRC regulations; LBP-13-13, 78 NRC 246 (2013)
when a party requests action from the presiding officer in an NRC adjudicatory proceeding, the request must come in the form of a motion; CLI-15-13, 81 NRC 555 (2015)

MOTIONS FOR RECONSIDERATION
if leave to file the motion is granted, the motion must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have reasonably been anticipated, which renders the decision invalid; CLI-12-17, 76 NRC 207 (2012)
lateness is a sufficient ground on which to deny a motion; CLI-12-17, 76 NRC 207 (2012)
motion is denied for failure to meet the high standard of 10 C.F.R. 2.323(e); LBP-12-26, 76 NRC 559 (2012)
motion is procedurally defective, out of time, and fails to assert compelling circumstances justifying reconsideration; CLI-13-7, 78 NRC 199 (2013)
motion should not include new arguments or evidence unless it relates to a board concern that applicant could not reasonably have anticipated; LBP-14-7, 79 NRC 451 (2014)
motions must be filed within 10 days of the action for which reconsideration is requested; CLI-12-17, 76 NRC 207 (2012); CLI-14-10, 80 NRC 157 (2014); LBP-11-15, 73 NRC 629 (2011)
motions should be based on an elaboration of an argument already made, an overlooked controlling decision or principle of law, or a factual clarification; CLI-12-17, 76 NRC 207 (2012)
motions should not simply reargue matters already considered but rejected; CLI-12-17, 76 NRC 207 (2012)
movant must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid; CLI-14-1, 79 NRC 1 (2014); LBP-14-7, 79 NRC 451 (2014)
petitioners’ request, though styled a petition for review, asked the Commission to reconsider its own prior ruling, and was therefore properly considered according to the standards governing a motion for reconsideration; CLI-12-17, 76 NRC 207 (2012)
petitions for reconsideration may not be filed except upon leave of the adjudicatory body that rendered the decision and that procedural deficiency is reason enough to deny the request; CLI-12-17, 76 NRC 207 (2012)
requests to stay effectiveness of future licensing action pending judicial appeal are more appropriately styled motions to reconsider and motions to hold in abeyance; CLI-12-11, 75 NRC 523 (2012)
showing of compelling circumstances, such as the existence of a clear and material error in a decision that renders the decision invalid, is required; LBP-11-15, 73 NRC 629 (2011)
when a petition for review is filed with the Commission at the same time as a motion for reconsideration is filed with the board, the Commission will delay considering the petition for review until after the board has ruled; CLI-12-5, 75 NRC 301 (2012)

MOTIONS TO COMPEL

overriding need or special circumstances would support granting a motion to compel; LBP-13-5, 77 NRC 233 (2013)

senior reactor operator license applicant’s motion to compel NRC Staff to produce documents that had been withheld under a claim of deliberative process privilege is granted; LBP-13-5, 77 NRC 233 (2013)

MOTIONS TO DISMISS

courts may treat motions to dismiss for failure to state a claim upon which relief can be granted and motions for judgment on the pleadings as motions for summary judgment under Rule 56 if matters outside the pleadings are presented to and not excluded by the court; LBP-12-2, 75 NRC 159 (2012)

MOTIONS TO QUASH

licensee’s motion to quash a subpoena duces tecum because production of the requested file would compromise its employee concerns program by potentially subjecting information contained in the file to public disclosure as an official agency record under FOIA is denied; CLI-13-5, 77 NRC 223 (2013)

NRC subpoenas have been quashed or limited when the subpoena was not closely drawn or NRC did not consider alternative means for obtaining the requested information to avoid unnecessary infringement of First Amendment associational rights; CLI-13-5, 77 NRC 223 (2013)

recipient of a subpoena issued by the NRC’s Office of Investigations may move to quash the subpoena pursuant to 10 C.F.R. 2.702(f); CLI-13-5, 77 NRC 223 (2013)

MOTIONS TO REOPEN

ability of a totally unfunded group to provide testimony from experts is not taken into account in ruling on motions to reopen; LBP-11-20, 74 NRC 65 (2011)

absence of a competent affidavit deprives the board of the ability or even the opportunity to substantively consider whether a materially different result would be obtained as is required by the regulatory reopening standards; LBP-11-23, 74 NRC 287 (2011)

affidavits accompanying motions to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-12-6, 75 NRC 352 (2012); LBP-15-14, 81 NRC 591 (2015)

affidavits accompanying the motion must set forth the factual and/or technical bases for the movant’s claim that the criteria of paragraph (a) of this section have been satisfied; LBP-12-10, 75 NRC 633 (2012)

affidavits setting forth factual and/or technical bases for the reopening criteria must address each criterion separately and provide a specific explanation of why it has been met; CLI-12-10, 75 NRC 479 (2012); LBP-11-20, 74 NRC 65 (2011)

affidavits shall set forth such facts as would be admissible in evidence and shall show affirmatively that the affiant is competent to testify to the matters stated therein; LBP-11-23, 74 NRC 287 (2011)

after a petition to review a final order has been filed with the Commission, the board no longer has jurisdiction to consider a motion to reopen and the motion is properly filed with the Commission; CLI-12-14, 75 NRC 692 (2012)

after a record has closed, finality attaches to the hearing process, and after that point, only timely, significant issues will be considered; CLI-12-3, 75 NRC 132 (2012)

all of the criteria of 10 C.F.R. 2.326(a) must be satisfied; CLI-11-8, 74 NRC 214 (2011)

although the quality of evidence presented for reopening must be at least of a level sufficient to withstand a motion for summary disposition, more is required; CLI-12-10, 75 NRC 479 (2012)

any contention, regardless of when it is filed, must meet the requirements of 10 C.F.R. 2.309(f)(3)(i)-(vi); LBP-11-20, 74 NRC 65 (2011)

arguments that more conservative severe accident mitigation alternatives analysis needs to be performed, using 95th percentile computations, and not using a discount factor to evaluate the time effects of cleanup costs are policy matters that are solely within Commission jurisdiction and represent inadmissible challenges to binding Commission rulings; LBP-11-20, 74 NRC 65 (2011)

bare assertions and speculation do not supply the requisite support to satisfy the standards for reopening a record; CLI-11-2, 73 NRC 333 (2011); CLI-11-8, 74 NRC 214 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011)
bare assertions are insufficient to demonstrate a genuine dispute on a material issue of law or fact under
general contention admissibility requirements in section 2.309(f)(1)(vi), let alone a motion to reopen,
because petitioner’s claim of likelihood of success on the merits is conclusory, with no attempt to show
how they would be likely to prevail, the motion to reopen falls far short of meeting the requirements
of section 2.326(a)(3); LBP-12-10, 75 NRC 633 (2012)
because the motion to reopen and contention are based on information that is neither new nor materially
different from information that was previously available, the motion and contention are untimely;
LBP-12-11, 75 NRC 731 (2012)
board denies as untimely a motion to reopen and admit a new contention alleging that the licensee lacks
certain required environmental permits and approvals from state and federal agencies; LBP-12-16, 76
NRC 44 (2012)
board has discretion to consider an untimely motion to reopen if the motion presents an exceptionally
groove issue; LBP-15-14, 81 NRC 591 (2015)
boards are in a better position than the Commission to consider any expert affidavit or affidavits that
petitioner submits to support its motion to reopen; CLI-12-14, 75 NRC 692 (2012)
boards cannot reconstruct intervenor’s pleadings to find that they might be interpreted to satisfy the
requirements for reopening a record where the intervenor itself has explicitly argued it need not;
LBP-11-20, 74 NRC 65 (2011)
boards should not have to hunt for information that the agency’s procedural rules require be explicitly
identified and fully explained; CLI-11-8, 74 NRC 214 (2011); CLI-12-3, 75 NRC 132 (2012);
LBP-12-10, 75 NRC 633 (2012)
both the reopening and contention admissibility criteria require that new contentions be timely presented,
generally within 30-60 days of the availability of the information on which the contention is based;
CLI-12-21, 76 NRC 491 (2012)
burden of satisfying the reopening requirements is a heavy one and rests with movant; CLI-11-2, 73 NRC
333 (2011); CLI-12-21, 76 NRC 491 (2012); CLI-15-19, 82 NRC 151 (2015)
challenge to the inputs and methodology in the SAMA analysis is impermissibly late; CLI-12-10, 75 NRC
479 (2012)
contention asserting that the NRC’s environmental review of the license renewal application has not met
the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and
Management Act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633
(2012)
contention regarding limitations and phenomena that were widely known, and should have been known to
intervenor, at the outset of the proceeding, and thus could have been raised long ago, is untimely;
LBP-11-23, 74 NRC 287 (2011)
contention that final safety analysis report is deficient because it does not include information provided in
applicant’s seismic evaluation process report is rejected; LBP-15-14, 81 NRC 591 (2015)
denial or conditioning of a license would obviously be a materially different result; CLI-12-14, 75 NRC
692 (2012)
during pendency of remand, intervenors are free to submit a motion to reopen the record pursuant to 10
C.F.R. 2.326, should they seek to address any genuinely new issues related to the license renewal
application that previously could not have been raised; LBP-11-20, 74 NRC 65 (2011)
each of the criteria for reopening a record must be separately addressed in an affidavit, with a specific
explanation of why it has been met; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
environmental issue raised in untimely motion to reopen could be exceptionally grave depending on the
circumstances of the case and the facts presented but will be granted rarely and only in truly
extraordinary circumstances; CLI-12-21, 76 NRC 491 (2012)
evidence contained in affidavits supporting a motion to reopen must meet the admissibility standards, i.e.,
be relevant, material, and reliable; CLI-12-3, 75 NRC 132 (2012); LBP-11-23, 74 NRC 287 (2011);
LBP-15-14, 81 NRC 591 (2015)
evidence contained in affidavits supporting a motion to reopen must meet the standards of 10 C.F.R.
2.337, CLI-12-6, 75 NRC 352 (2012)
evidence in affidavits supporting a motion to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-12-3, 75 NRC 132 (2012)

exceptionally grave issue is one that raises a sufficiently grave threat to public safety; LBP-12-1, 75 NRC 1 (2012); LBP-12-11, 75 NRC 731 (2012)

exceptionally grave issues may be considered in the discretion of the presiding officer even if untimely presented; LBP-12-1, 75 NRC 1 (2012)

expert’s affidavit supporting a motion to reopen must supply the factual and legal foundation for assertions that the reopening criteria are satisfied; LBP-11-20, 74 NRC 65 (2011)

for a motion to be timely presented, movant must show that the issue sought to be raised could not have been raised earlier; LBP-11-20, 74 NRC 65 (2011)

for a motion to reopen to be granted and a new contention admitted after termination of a proceeding, the motion must meet all of the requirements of 10 C.F.R. 2.326 for reopening a record, and the new contention must have been submitted in a timely fashion and demonstrate admissibility as required at 10 C.F.R. 2.309; LBP-12-11, 75 NRC 731 (2012)

for an environmental issue to be “significant” for the purposes of reopening a record, new information must paint a seriously different picture of the environmental landscape; LBP-12-1, 75 NRC 1 (2012)

Fukushima-related motions have been denied as premature; CLI-12-2, 75 NRC 63 (2012); CLI-12-7, 75 NRC 379 (2012)

heavier burden applies to motions to reopen than to proponents of contentions in ongoing proceedings; CLI-11-5, 74 NRC 141 (2011)

in affidavits accompanying motions to reopen, each of the criteria must be separately addressed, with a specific explanation of why it has been met; CLI-11-8, 74 NRC 214 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-10, 75 NRC 633 (2012)

in codifying the reopening requirements, the more neutral “exceptionally grave issue” language was chosen over the case law-based “sufficiently grave threat to public safety” phrasing; CLI-12-21, 76 NRC 491 (2012)

in weighing the timeliness factors for motions to reopen, greatest weight is accorded to good cause for failure to file on time; CLI-11-8, 74 NRC 214 (2011)

intervenors must file a motion demonstrating, among other things, that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; LBP-12-19, 76 NRC 184 (2012)

intervenors seeking a new hearing on a new contention after the board has closed the evidentiary record must move to reopen the evidentiary record and meet a deliberately higher threshold standard than that for an ordinary late-filed contention; CLI-12-15, 75 NRC 704 (2012)

intervenors seeking to have new evidence admitted after a licensing board has closed the evidentiary record must demonstrate sufficient grounds for reopening the record; CLI-12-10, 75 NRC 479 (2012)

intervenor’s vague claim that it will rely on testimony from an expert witness and government documents does not provide the requisite concise statement of facts or expert support; LBP-11-23, 74 NRC 287 (2011)

intervenors’ speculation that further review of certain issues might change some conclusions in the final safety evaluation report does not justify restarting the hearing process; LBP-11-23, 74 NRC 287 (2011)

issues not previously litigated must satisfy the balancing test of 10 C.F.R. 2.309(c) in addition to the reopening standards; CLI-12-3, 75 NRC 132 (2012)

level of support required to sustain a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012)

like issues related to standing and contention admissibility, the question whether a pleading satisfies the requirements of section 2.326 and therefore justifies reopening a closed proceeding is a threshold issue; CLI-11-8, 74 NRC 214 (2011)

litigants seeking to reopen a record must comply fully with section 2.326(b); LBP-12-10, 75 NRC 633 (2012)

“materially different result” requirement of section 2.326(a)(3) is analyzed using the Commission’s test of whether it has been shown that a motion for summary disposition could be defeated; LBP-12-1, 75 NRC 1 (2012)
mere mention of the future filing of an affidavit does not satisfy the requirement of section 2.326(b); LBP-14-8, 79 NRC 519 (2014)
motion relating to a contention not previously in controversy among the parties must also satisfy the requirements for non timely contentions in section 2.309(c); CLI-11-8, 74 NRC 214 (2011); LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-15-14, 81 NRC 591 (2015)
motion to file new or amended contentions must address the motion to reopen standards after an intervention petition has been denied; LBP-11-20, 74 NRC 65 (2011)
motion to reopen will not be granted unless movant satisfies all three criteria in 10 C.F.R. 2.326(a) and the motion is accompanied by an affidavit that satisfies section 2.326(b); CLI-15-19, 82 NRC 151 (2015)
motions could be rejected solely on the basis of the appellants’ failure to address the reopening standards in the supporting affidavit; LBP-12-10, 75 NRC 633 (2012)
motions must be accompanied by affidavits that set forth the factual and/or technical bases for the movant’s claim that the criteria of 10 C.F.R. 2.326(a) have been satisfied; CLI-11-8, 74 NRC 214 (2011); CLI-12-3, 75 NRC 132 (2012); LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-15-14, 81 NRC 591 (2015)
motions must be supported by affidavit, be timely, address a significant safety or environmental issue, and demonstrate that a materially different result would have been likely if the evidence had been available; LBP-14-8, 79 NRC 519 (2014)
motions must be supported by an affidavit written by an individual with knowledge of the facts alleged, and the affidavit must explain why each of the criteria has been met; CLI-12-15, 75 NRC 704 (2012)
motions must be timely (or, if untimely, raise an exceptionally grave matter), address a significant safety or environmental issue, and demonstrate that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-12-6, 75 NRC 352 (2012); CLI-12-15, 75 NRC 704 (2012); LBP-11-20, 74 NRC 65 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-1, 75 NRC 1 (2012); LBP-15-14, 81 NRC 591 (2015)
motions must be timely; CLI-12-21, 76 NRC 491 (2012)
motions relating to a contention not previously in controversy among the parties must also satisfy the requirements for non timely contentions in 10 C.F.R. 2.309(c) and the admissibility requirements of 10 C.F.R. 2.309(f)(1); LBP-12-10, 75 NRC 633 (2012)
motions that relate to a contention not previously in controversy among the parties must also satisfy the requirements for non timely contentions in 10 C.F.R. 2.309(c); LBP-12-1, 75 NRC 1 (2012)
motions to admit a new contention must be submitted in a timely fashion, based on new information that is materially different from information previously available or a balancing of the factors in 10 C.F.R. 2.326 must weigh in favor of admitting the contention; LBP-12-16, 76 NRC 44 (2012)
motions to reopen may be granted, even if untimely presented, when the motion presents an exceptionally grave issue; LBP-12-11, 75 NRC 731 (2012)
motions to reopen must be accompanied by a supporting affidavit; CLI-12-14, 75 NRC 692 (2012)
motions to reopen the record in NRC adjudicatory proceedings are governed by 10 C.F.R. 2.326; CLI-15-19, 82 NRC 151 (2015)
movant has the burden to present information in a manner that complies with section 2.326(b); LBP-12-10, 75 NRC 633 (2012)
movant must demonstrate that a materially different result would be likely had the newly proffered evidence been considered initially; CLI-12-10, 75 NRC 479 (2012)
moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition; CLI-11-2, 73 NRC 333 (2011)
new contention filed after the record has closed must also satisfy general contention admissibility requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-12-16, 76 NRC 44 (2012)
new contentions must paint a seriously different picture of the environmental landscape that would require supplementation of an environmental impact statement; LBP-12-10, 75 NRC 633 (2012)
new or amended contentions not related to the question of foreign ownership that an interested person may wish to file during the pendency of the combined license application are subject to usual rules of practice, including rules governing reopening the record of a closed proceeding; CLI-13-4, 77 NRC 101 (2013)
NRC generally disfavors the filing of new contentions at the eleventh hour of an adjudication, a policy that is grounded in the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; CLI-11-2, 73 NRC 333 (2011)

NRC imposes a deliberately heavy burden on petitioners seeking to reopen a record, even with respect to an existing contention; CLI-11-2, 73 NRC 333 (2011)

NRC proceedings would be incapable of attaining finality if contentions that could have been raised at the outset could be added later at will, regardless of the stage of the proceeding; CLI-12-10, 75 NRC 479 (2012)

NRC’s demanding regulatory requirements for reopening the record regarding contentions submitted after the record has closed must be satisfied; LBP-11-20, 74 NRC 65 (2011)

NRC’s standard for motions to reopen was upheld and the court deferred to the NRC’s application of its rules as long as it is reasonable; CLI-15-19, 82 NRC 151 (2015)

once a proceeding has closed, the mechanism to raise a new issue no longer would be a contention accompanied by a motion to reopen, but rather a request for action under 10 C.F.R. 2.206 or a petition for rulemaking under 10 C.F.R. 2.802; CLI-12-3, 75 NRC 132 (2012)

party may move to reopen the case to allow it to litigate a new version of a previously rejected contention, even if the licensing board has closed the evidentiary record and the Commission has issued its final decision authorizing the Staff to issue the license for the proposed facility; LBP-11-22, 74 NRC 259 (2011)

petitioner failed to satisfy NRC standards for reopening because its motion was untimely and it failed to demonstrate that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-11-2, 73 NRC 333 (2011)

petitioner must act reasonably and promptly after learning of the new information on which its motion to reopen is based; LBP-11-23, 74 NRC 287 (2011)

petitioner proffers no new information on station blackout or mitigation measures, and the events therefore cannot form the basis for an assertion of timeliness of a motion to reopen; LBP-11-35, 74 NRC 701 (2011)

petitioner who seeks both to reopen the record and to submit a late contention must successfully satisfy two elevated standards; CLI-11-2, 73 NRC 333 (2011)

petitioner’s assertion that recriticality is demonstrated by the relative quantities of radionuclides released is not self-evident and is clearly of the class of statements that must be supported by expert opinion; LBP-11-23, 74 NRC 287 (2011)

post-9/11 motion to reopen satisfied rules for reopening because its motion was untimely and it failed to demonstrate that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-11-2, 73 NRC 333 (2011)

petitioner involving a license amendment request for reconfiguring a spent fuel pool was inadmissible; LBP-11-20, 74 NRC 65 (2011)

presiding officer has discretion to consider an exceptionally grave issue even if untimely presented; LBP-11-20, 74 NRC 65 (2011)

proper inquiry under 10 C.F.R. 2.326(a)(3) goes to the likelihood that a different result will be reached if the information is considered; CLI-12-10, 75 NRC 479 (2012)

proponent must show that the motion is timely, addresses a significant safety or environmental issue, and a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-11-2, 73 NRC 333 (2011); CLI-12-3, 75 NRC 132 (2012)

proponent necessarily faces a heavy burden; CLI-12-3, 75 NRC 132 (2012)

proponents of contentions must challenge aspects of license applications with specificity, backed up with substantive technical support, mere conclusions or speculation being insufficient, but an even heavier burden applies to motions to reopen; LBP-11-35, 74 NRC 701 (2011)

rationale for NRC’s policy of generally disfavoring the filing of new contentions at the eleventh hour of an adjudication is based on the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; LBP-11-20, 74 NRC 65 (2011)

rehearings are not matters of right, but are pleas to discretion; LBP-11-20, 74 NRC 65 (2011)

reopening standards expressly contemplate contentions that raise issues not previously litigated; CLI-12-3, 75 NRC 132 (2012)
reopening will only be allowed where proponent presents material, probative evidence that either could not have been discovered before or could have been discovered but is so grave that, in the judgment of the presiding officer, it must be considered anyway; CLI-12-10, 75 NRC 479 (2012)

reply affidavit that did not accompany the motion to reopen will not be considered in determining whether petitioners have satisfied 10 C.F.R. 2.326(b); LBP-12-10, 75 NRC 633 (2012)

request for hearing regarding a newly proffered contention cannot be admitted unless it satisfies the stringent standards for reopening the record; LBP-11-20, 74 NRC 65 (2011)

rule governing motions to reopen sets a high standard; LBP-14-4, 79 NRC 319 (2014)

Secretary of the Commission refers motions to reopen to the Atomic Safety and Licensing Board Panel pursuant to her authority; CLI-12-14, 75 NRC 692 (2012)

section 2.326(a)(3) expressly refers to a motion to reopen a closed record to consider additional evidence and newly proffered evidence; LBP-11-22, 74 NRC 259 (2011)

speculation that further review of certain issues might change some conclusions in the final safety evaluation report does not justify restarting the hearing process; LBP-11-23, 74 NRC 287 (2011)

standard for a motion to reopen is measured using the Commission’s test of whether it has been shown that a motion for summary disposition could be defeated; LBP-11-23, 74 NRC 287 (2011)

standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-11-8, 74 NRC 214 (2011); CLI-12-10, 75 NRC 479 (2012); LBP-11-20, 74 NRC 65 (2011); LBP-11-35, 74 NRC 701 (2011)

standard for determining whether a materially different result would be obtained is measured using the Commission’s test of whether it has been shown that a motion for summary disposition could be defeated; CLI-11-8, 74 NRC 214 (2011); LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011)

standard for when an issue is “significant” in the context of reopening a closed record is the same as the standard for when supplementation of an environmental impact statement is required, i.e., the new and significant information must paint a seriously different picture of the environmental landscape; LBP-11-23, 74 NRC 287 (2011)

support required for a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-3, 75 NRC 132 (2012)

supporting affidavits must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-11-8, 74 NRC 214 (2011); LBP-11-35, 74 NRC 701 (2011)

supporting evidence must be sufficiently compelling to suggest a likelihood of materially affecting the ultimate results in the proceeding; CLI-12-10, 75 NRC 479 (2012)

to accept the argument that a reopening standard may never be applied in situations where a petitioner seeks to add previously unlitigated material would effectively render the regulation meaningless; CLI-12-3, 75 NRC 132 (2012)

to have a new contention admitted after the contested proceeding has terminated, petitioner must meet three criteria; CLI-12-14, 75 NRC 692 (2012)

to the extent that petitioner challenges the board’s decision to apply the reopening standards strictly, its challenge constitutes an improper collateral attack on NRC regulations; CLI-11-2, 73 NRC 333 (2011)

unsupported speculation that fresh analysis might lead NRC to require additional mitigation measures simply does not raise a significant safety issue or an exceptionally grave issue; LBP-11-23, 74 NRC 287 (2011)

untimeliness constitutes sufficient grounds on its own for denying the motion to reopen and thus the board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 44 (2012)

untimely motion to reopen the proceeding and admit a new contention concerning licensee’s impacts on the roseate tern, a federally listed endangered species, is denied; LBP-12-11, 75 NRC 731 (2012)

untimely motions that present an exceptionally grave issue may be admitted at the board’s discretion; CLI-12-21, 76 NRC 491 (2012); LBP-12-16, 76 NRC 44 (2012)

when a motion to reopen is untimely, the section 2.326(a)(1) “exceptionally grave” test supplants the section 2.326(a)(2) “significant safety or environmental issue” test; CLI-11-8, 74 NRC 214 (2011); LBP-12-1, 75 NRC 1 (2012); LBP-12-10, 75 NRC 633 (2012)
when determining whether a new contention is timely for purposes of reopening a record, the
Commission looks to whether the information on which it is based was previously available or whether
it is materially different from what was previously available, and whether it has been submitted in a
timely fashion based on the information’s availability; CLI-12-21, 76 NRC 491 (2012)

where a motion to reopen relates to a contention not previously in controversy, the motion must
demonstrate that the balance of the nontimely filing factors in section 2.309(c) favors granting the
motion to reopen; LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74
NRC 701 (2011)

where the proceeding remained open during the pendency of a remand, but the record remained closed,
any contentions raising genuinely new issues would have to be accompanied by a motion to reopen;
CLI-12-3, 75 NRC 132 (2012)

whether a proposed alternative method for estimating a macroscopic frequency of occurrence of a severe
offsite radiological release should have been used in the severe accident mitigation alternatives analysis
could have been raised when the original license renewal application was submitted and thus is not
timely; LBP-11-35, 74 NRC 701 (2011)

See also Reopening a Record

MOTIONS TO STRIKE

motion to strike may be granted where a pleading or other submission contains information that is
irrelevant; LBP-14-6, 79 NRC 404 (2014)

proper method for raising an issue addressed in a motion to strike is to seek leave to file a reply in
support of the summary disposition motion; LBP-11-14, 73 NRC 591 (2011)

MOTIONS TO WITHDRAW

conditions set by boards on voluntary withdrawals are set on a case-by-case basis, with any conditions
tailored to address the particular circumstances of that proceeding; LBP-15-28, 82 NRC 233 (2015)
motion to withdraw application without prejudice is granted and proceeding is terminated; CLI-14-8, 80
NRC 71 (2014)

when a motion to withdraw an application is unopposed and the withdrawal causes no apparent harm to
the public or any party, it is appropriate to grant the motion without prejudice or imposition of
additional terms; LBP-12-20, 76 NRC 215 (2012)

when the board has issued a Notice of Hearing, withdrawal of a license amendment request shall be on
such terms as the presiding officer may prescribe; LBP-15-28, 82 NRC 233 (2015)

withdrawal of an application after issuance of a notice of hearing shall be on such terms as the presiding
officer may prescribe; LBP-12-20, 76 NRC 215 (2012)

MULTIUNIT EVENTS

request that NRC order licensees to add guidance to emergency plans that documents how to perform a
multiunit dose assessment (including releases from spent fuel pools) using licensee’s site-specific dose
assessment software and approach until rulemaking is complete is addressed; DD-14-2, 79 NRC 489
(2014)

request that NRC order licensees to conduct periodic training and exercises for multiunit and prolonged
station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to determine and implement required staff to fill all necessary positions
for responding to a multiunit event until rulemaking is complete is addressed; DD-14-2, 79 NRC 489
(2014)

request that NRC order licensees to add equipment as needed to address multiunit events while other
requirements are being revised and implemented is addressed; DD-14-2, 79 NRC 489 (2014)

MUNICIPALITY

interests a municipality seeks to represent on behalf of its residents are germane to its own purposes in
the context or standing; LBP-11-6, 73 NRC 149 (2011)

municipality is deemed to have standing in a reactor licensing proceeding that involves a facility located
within its boundaries; LBP-11-6, 73 NRC 149 (2011)
where a municipality seeks to participate in a reactor licensing proceeding that does not involve a facility within the municipality’s boundaries, it can, for purposes of establishing standing, rely on the 50-mile proximity presumption to the same extent as an individual or an organization; LBP-11-6, 73 NRC 149 (2011)

MUNITIONS

possession of depleted uranium at multiple installations without an NRC license and performance of decommissioning at a military installation without proper NRC authorization is a violation of 10 C.F.R. 40.3; DD-11-5, 74 NRC 399 (2011)

request for enforcement action against U.S. Army for post-license-expiration possession and release into the environment of depleted uranium from spent spotting rounds is granted in part and denied in part; DD-11-5, 74 NRC 399 (2011)

NATIONAL ENVIRONMENTAL POLICY ACT

absent a valid regulation limiting NRC’s NEPA obligations, the consideration of alternative severe accident mitigation measures may not be excluded from the agency’s NEPA reviews; LBP-12-18, 76 NRC 127 (2012)

accident sequence with a probability conservatively estimated at $2.0 \times 10^{-7}$ per reactor year is remote and speculative for the purposes of NEPA; LBP-11-38, 74 NRC 817 (2011)

act is intended to require federal agencies to consider the environmental consequences of their actions and to foster informed public participation in the decision-making process; LBP-12-12, 75 NRC 742 (2012)

act itself does not mandate particular results, but simply prescribes the necessary process; LBP-12-12, 75 NRC 742 (2012)

actions requiring an environmental impact statement or a supplement to an EIS are a limited work authorization, construction permit for a nuclear power reactor, testing facility, or fuel reprocessing plant, or an early site permit; LBP-11-10, 73 NRC 424 (2011)

actual range of alternatives must be considered so that agencies are precluded from defining the objectives of their actions in terms so unreasonably narrow that they can be accomplished by only applicant’s proposed project; LBP-15-15, 81 NRC 598 (2015)

admissible contention challenging consideration of alternatives must show that a particular alternative was not discussed in the draft environmental impact statement and provide some support that the alternative is reasonable; LBP-13-9, 78 NRC 37 (2013)

adverse environmental effects that must be assessed under NEPA include aesthetic, historic, cultural, economic, social, or health effects; LBP-15-16, 81 NRC 618 (2015)

aesthetic impacts of energy sources may vary according to individual location; LBP-11-4, 73 NRC 91 (2011)

agencies are afforded considerable discretion to decide the extent to which public involvement is practicable; CLI-15-17, 82 NRC 33 (2015)

agencies are encouraged to coordinate the National Historic Preservation Act § 106 process with the agency’s process for complying with NEPA; LBP-12-23, 76 NRC 445 (2012)

agencies are encouraged to incorporate consultation procedures on endangered/threatened species and essential fish habitat into their NEPA review; LBP-12-10, 75 NRC 633 (2012)

agencies are given broad discretion to keep their NEPA inquiries within appropriate and manageable boundaries; LBP-15-3, 81 NRC 65 (2015)

agencies are not permitted to define the objectives of a proposed action so narrowly as to preclude a reasonable consideration of alternatives; LBP-12-17, 76 NRC 71 (2012)

agencies are not required to analyze impacts of alternatives that are speculative, remote, impractical, or unviable; CLI-12-5, 75 NRC 301 (2012)

agencies are not required to consider the possible environmental impacts of less imminent actions when preparing the impact statement on proposed actions; LBP-13-10, 78 NRC 117 (2013)

agencies are not required to elevate environmental concerns over other appropriate considerations; LBP-12-18, 76 NRC 127 (2012); LBP-14-9, 80 NRC 15 (2014)

agencies are not required to wait until inchoate information matures into something that later might affect its review; CLI-12-7, 75 NRC 379 (2012)

agencies are permitted to select their own methodology for mitigation analysis as long as that methodology is reasonable; LBP-11-7, 73 NRC 254 (2011)
SUBJECT INDEX

agencies are required to create an environmental impact statement, and the moment at which an agency
must have a final statement ready is the time at which it makes a recommendation or report on a
proposal for federal action; LBP-13-10, 78 NRC 117 (2013)
agencies are required to exercise a degree of skepticism in dealing with self-serving statements from the
prime beneficiary of a project and to look at the general goal of the project, rather than only those
alternatives preferred by the applicant; LBP-12-17, 76 NRC 71 (2012)
agencies are required to study, develop, and describe appropriate alternatives; CLI-12-9, 75 NRC 421
(2012)
agencies are required to take a hard look at the environmental consequences of an action before
proceeding; LBP-12-10, 75 NRC 633 (2012)
agencies are required to use a systematic, interdisciplinary approach that will ensure the integrated use of
the natural and social sciences and the environmental design arts in decisionmaking that may impact the
environment; CLI-12-9, 75 NRC 421 (2012)
agencies are to consider environmental impacts of their actions to the fullest extent possible; LBP-12-21,
76 NRC 218 (2012)
agencies have an obligation to consider every significant aspect of the environmental impact of a
proposed action and inform the public that it has indeed considered environmental concerns in its
decisionmaking process; LBP-11-7, 73 NRC 254 (2011)
agencies may select their own methodology as long as that methodology is reasonable; CLI-12-6, 75 NRC
352 (2012); LBP-13-4, 77 NRC 107 (2013)
agencies must consider the environmental impacts of major federal actions significantly affecting the
quality of the human environment, as well as alternatives to the proposed action, in an environmental
impact statement; LBP-12-23, 76 NRC 445 (2012)
agencies must devote substantial treatment to each alternative considered in detail including the proposed
action so that reviewers may evaluate their comparative merits; LBP-12-17, 76 NRC 71 (2012)
agencies must prepare an environmental impact statement before approving any major federal action that
will significantly affect the quality of the human environment; LBP-11-38, 74 NRC 817 (2011);
LBP-12-5, 75 NRC 227 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-12-17, 76 NRC 71 (2012)
agencies must rigorously explore and objectively evaluate all reasonable alternatives and briefly discuss
reasons for eliminating alternatives; LBP-12-17, 76 NRC 71 (2012)
agencies must take a hard look at preserving important historic and cultural aspects of our national
heritage; LBP-15-16, 81 NRC 618 (2015)
agencies must take a hard look at the environmental consequences before taking a major action and to
report the result of that hard look in an environmental impact statement; LBP-11-6, 73 NRC 149 (2011)
agencies need not discuss alternatives that are infeasible, ineffective, or inconsistent with the basic policy
objectives for the management of the area; LBP-13-9, 78 NRC 37 (2013)
agencies need only address reasonably foreseeable impacts, not those that are remote and speculative or
inconsequentially small; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)
agencies need only discuss those alternatives that are reasonable and will bring about the ends of the
proposed action; LBP-11-13, 73 NRC 534 (2011)
agencies shall plan for involving the public in the National Historic Preservation Act § 106 process but
may use the agency’s procedures for public involvement under NEPA if they provide adequate
opportunities for public involvement; LBP-12-23, 76 NRC 445 (2012)
agencies shall use the criteria for scope in 40 C.F.R. 1508.25 to determine which proposal shall be the
subject of a particular environmental impact statement; LBP-11-10, 73 NRC 424 (2011)
agencies should consider both the context and intensity of environmental impacts; LBP-11-26, 74 NRC
499 (2011)
agencies violate NEPA when their EIS fails to adequately respond to the critical opinions of their own
experts; LBP-12-18, 76 NRC 127 (2012)
agency cannot relinquish its NEPA responsibility to evaluate environmental impacts by relying on
expected compliance with environmental standards of another agency; LBP-15-23, 82 NRC 55 (2015)
agency decisions regarding the need to supplement an environmental impact statement based on new and
significant information are subject to the rule of reason; LBP-11-26, 74 NRC 499 (2011)
agency is required to consider all reasonable alternatives; LBP-15-15, 81 NRC 598 (2015)
agency responsibilities in situations where an agency has no ability because of lack of statutory authority to address the impact is distinguished from situations where an agency is only constrained by its own regulations from considering impacts; LBP-14-9, 80 NRC 15 (2014)

agency responsible for preparing the environmental impact statement must define the scope of the issues it will address; LBP-11-10, 73 NRC 424 (2011)

agency that has prepared an EIS cannot simply rest on the original document but must be alert to new information that may alter the results of its original environmental analysis, and continue to take a hard look at the environmental effects of its planned action, even after a proposal has received initial approval; LBP-12-18, 76 NRC 127 (2012)

agency’s consideration of three alternative routes is sufficient to meet its NEPA obligations to consider reasonable transmission line route alternatives; LBP-11-6, 73 NRC 149 (2011)

agency’s narrowed construction of its statutory authority, as distinct from an express prohibition by Congress, may not be used to limit the agency’s obligations under NEPA; LBP-14-9, 80 NRC 15 (2014)

aging-based safety review set out in Part 54 is analytically separate from Part 51’s environmental inquiry and does not in any sense restrict NEPA; LBP-11-17, 74 NRC 11 (2011)

allowing agencies to avoid a NEPA violation through a subsequent, conclusory statement that it would not have reached a different result even with the proper analysis would significantly undermine the statutory scheme; LBP-12-17, 76 NRC 71 (2012)

alternative energy sources that will be dependent on future environmental safeguards and technological developments may be excluded from the NEPA alternatives discussion; LBP-15-3, 81 NRC 65 (2015)

alternative that fails to meet the purpose of the project does not need to be further examined in the environmental report; LBP-11-6, 73 NRC 149 (2011)

alternatives analysis is the heart of the environmental impact statement; CLI-12-9, 75 NRC 421 (2012); LBP-11-16, 73 NRC 645 (2011); LBP-12-17, 76 NRC 71 (2012)

alternatives discussion need not include every possible alternative, but rather every reasonable alternative; LBP-15-3, 81 NRC 65 (2015)

alternatives might not be feasible for a variety of reasons, including a failure of an alternative to meet the project’s purpose and need; LBP-13-9, 78 NRC 37 (2013)

alternatives must be considered as they exist and are likely to exist, not merely as they exist at the present time; LBP-12-17, 76 NRC 71 (2012)

although a SAMA analysis considers safety issues, it is actually an environmental review that must be judged under NEPA’s rule of reason and not under the safety requirements of the Atomic Energy Act; LBP-15-29, 82 NRC 246 (2015)

although an agency may coordinate and, where practicable, integrate its NEPA and National Historic Preservation Act review efforts, the two statutes impose separate and distinct obligations; LBP-15-16, 81 NRC 618 (2015)

although NEPA does not direct any particular substantive result, all environmental consequences of the proposed action, including connected actions, must be fully evaluated in the FEIS; LBP-12-12, 75 NRC 742 (2012)

although NEPA does not explicitly mention cost-benefit balancing, courts have interpreted the statute as requiring federal agencies to balance the environmental costs against the anticipated benefits of a proposed action; LBP-11-7, 73 NRC 254 (2011)

although NEPA does not mention mitigation, by administrative practice and regulation, mitigation plays an important role in the discharge by federal agencies of their procedural duty under NEPA to prepare an EIS; LBP-12-18, 76 NRC 127 (2012)

although NEPA does not require an agency preparing an environmental impact statement to respond to EPA concerns, an agency’s failure even to address them in the EIS at the very least brings into question the sufficiency of the agency’s analysis; LBP-14-9, 80 NRC 15 (2014)

although NEPA establishes a national policy in favor of protecting the human environment, NEPA does not require the agency to select the most environmentally benign alternative, but rather merely prohibits uninformed rather than unwise agency action; LBP-13-4, 77 NRC 107 (2013)

although NEPA mandates that an agency prepare an environmental impact statement and take a hard look at the environmental impacts of a proposed agency action, NEPA itself does not mandate particular results, but simply prescribes the necessary process; LBP-13-4, 77 NRC 107 (2013)
SUBJECT INDEX

although NEPA’s requirements are procedural, federal agencies are held to a strict standard of compliance with the Act’s requirements; LBP-12-18, 76 NRC 127 (2012)
although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants, NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review; LBP-12-26, 76 NRC 559 (2012)
although NRC may regard preconstruction activities as outside the scope of a combined license application, these activities are within the scope of the NEPA review because they are all connected actions; LBP-14-9, 80 NRC 15 (2014)
although there are many possible combinations of wind and solar power, storage, and natural gas, it is not necessary to examine every possible combination; LBP-11-4, 73 NRC 91 (2011)
although there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-12-5, 75 NRC 227 (2012); LBP-13-4, 77 NRC 107 (2013)
among the limited issues within the scope of a license renewal proceeding are alternatives for reducing adverse environmental impacts listed as Category 2 issues in Appendix B to Subpart A of 10 C.F.R. Part 51; LBP-11-2, 73 NRC 28 (2011)
analysis of cumulative impacts must give a sufficiently detailed catalogue of past, present, and future projects, and provide adequate analysis about how these projects, and differences between the projects, are thought to have impacted the environment; LBP-13-9, 78 NRC 340 (2015)
appeal board’s ruling that the environmental impact statement was deemed modified by the parties’ stipulations at hearing did not violate the letter or spirit of NEPA; CLI-15-6, 81 NRC 340 (2015)
applicant and Staff treatment of need for the construction and operation of uranium enrichment facilities should explain why the proposed action is needed, describe the underlying need for the proposed action, but should not be written merely as a justification of the proposed action or to alter the choice of alternatives; LBP-11-26, 74 NRC 499 (2011)
applicant’s alternatives analysis need not discuss every conceivable alternative to the proposed action, but rather only feasible, non speculative, and reasonable alternatives; LBP-11-13, 73 NRC 534 (2011)
applicant’s environmental report must contain a sufficient analysis of potential environmental consequences and alternatives to enable the NRC Staff to prepare an environmental impact statement that fulfills the agency’s obligations under NEPA; LBP-11-14, 73 NRC 591 (2011)
applicant’s environmental report must describe reasonably foreseeable environmental impacts, discussed in proportion to their significance, and adverse environmental effects that cannot be avoided should the proposal be implemented; LBP-11-6, 73 NRC 149 (2011)
applicant’s environmental report must discuss appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-11-6, 73 NRC 149 (2011)
applicant’s obligation is to consider alternatives as they exist and are likely to exist; LBP-11-2, 73 NRC 28 (2011)
applicant’s use of the MAAP code to generate fission product source terms for use in its severe accident mitigation alternatives analysis is reasonable under NEPA; LBP-12-26, 76 NRC 559 (2012)
application-specific NEPA review represents a snapshot in time, and although NEPA requires that NRC conduct its environmental review with the best information available at that time, it does not require that NRC wait until inchoate information matures into something that later might affect its review; LBP-12-10, 75 NRC 633 (2012)
appropriate inquiry under NEPA is not whether there are alternative models that NRC could have used, or whether the analysis could have been refined, or improved by gathering additional data, but whether the NRC’s chosen methodology is reasonable; LBP-13-4, 77 NRC 107 (2013)
as a NEPA analysis, the severe accident mitigation alternatives analysis is not based on either the best-case or the worst-case accident scenarios, but on mean accident consequence values, averaged over the many hypothetical severe accident scenarios; LBP-13-13, 78 NRC 246 (2013)
as a tool for assessing the significance of potential impacts, NRC regulations establish a standard scheme; LBP-11-26, 74 NRC 499 (2011)

1096
as long as the adverse effects of the proposed action are adequately identified and evaluated, the agency
is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-13-4, 77 NRC 107 (2013)
as part of its NEPA analysis, NRC must provide information that addresses the purpose and need for the
proposed action; LBP-11-26, 74 NRC 499 (2011)
as part of NRC’s NEPA analysis for licensing a nuclear power plant, the agency must balance the costs
and benefits resulting from issuance of a license, but the environmental impact statement need not
always contain a formal or mathematical cost-benefit analysis; LBP-11-7, 73 NRC 254 (2011)
Atomic Energy Act and NEPA and the regulations promulgated under each must be viewed in pari
materia; LBP-14-9, 80 NRC 15 (2014)
because a solely wind- or solar-powered facility could not satisfy the project’s purpose, there was no
need to compare the impact of such facilities to the impact of the proposed nuclear plant; LBP-11-7, 73
NRC 254 (2011)
because NEPA imposes no substantive requirement that mitigation measures actually be taken, it should
not be read to require agencies to obtain an assurance that third parties will implement particular
measures; LBP-14-7, 79 NRC 451 (2014)
because NEPA is premised on a rule of reason, NRC need only consider reasonable alternatives to a
proposed action; LBP-11-26, 74 NRC 499 (2011)
because NRC does not know today the full implications of the Fukushima events for U.S. facilities, any
generic NEPA duty, if one is appropriate at all, does not accrue now; LBP-12-8, 75 NRC 539 (2012)
because NRC has established a requirement to provide information to be used by NRC Staff in
fulfillment of its obligation under NEPA, suitability of applicant’s severe accident mitigation alternatives
analysis must be judged by the requirements of NEPA; LBP-11-18, 74 NRC 29 (2011)
because severe accident mitigation alternatives analysis is site-specific, NEPA demands no fully developed
plan or detailed examination of specific measures that will be used to mitigate adverse environmental
effects; LBP-11-18, 74 NRC 29 (2011); LBP-11-23, 74 NRC 287 (2011)
because the full implications of the Fukushima events for U.S. facilities are unknown, any generic NEPA
duty does not accrue; LBP-11-27, 74 NRC 591 (2011)
before implementing any major federal action significantly affecting the quality of the human
environment, NRC must prepare an environmental impact statement that describes the action, its effects,
and alternatives to the proposed action; LBP-12-10, 75 NRC 633 (2012)
Biological Opinion and its accompanying Incidental Take Statement issued by U.S. Fish and Wildlife
Service were arbitrary and capricious because they were based in part on a conservation plan that was
not enforceable under the Endangered Species Act; LBP-12-23, 76 NRC 445 (2012)
blindly adopting applicant’s statement of the purpose of the action is a losing position because it does not
allow for the full consideration of alternatives required by NEPA; LBP-12-17, 76 NRC 71 (2012)
board’s ultimate NEPA judgments can be made on the basis of the entire adjudicatory record in addition
to NRC Staff’s final environmental impact statement; LBP-15-3, 81 NRC 65 (2015)
boards are required to consider alternatives as they exist and are likely to exist; CLI-12-5, 75 NRC 301
(2012)
boards are to make independent environmental judgments with respect to certain NEPA findings, though
even then they need not rethink or redo every aspect of the NRC Staff’s environmental findings or
undertake their own fact-finding activities; LBP-11-26, 74 NRC 499 (2011)
broad national commitment to protecting and promoting environmental quality is declared by the Act;
LBP-13-13, 78 NRC 246 (2013)
burden of NEPA compliance lies with NRC Staff; LBP-15-2, 81 NRC 48 (2015); LBP-15-3, 81 NRC 65
careful consideration of severe accident mitigation design alternatives is required under NEPA, and NRC’s
failure to consider them is a violation of NEPA; LBP-12-8, 75 NRC 539 (2012)
case-by-case balancing judgment by the federal agency conducting the NEPA review is mandated;
cask certification for transportation poses such a minimal environmental impact that it merits a categorical
exclusion from NEPA; LBP-14-6, 79 NRC 404 (2014)
SUBJECT INDEX

categorical exclusion from the NEPA requirement to prepare an environmental assessment or environmental impact statement for the issuance of import licenses involving low-level radioactive waste is provided; CLI-11-3, 73 NRC 613 (2011)
certainty or precision is not required in environmental documents, but rather an estimate of anticipated (not unduly speculative) impacts; LBP-12-9, 75 NRC 615 (2012); LBP-12-18, 76 NRC 127 (2012)
certification by agencies without overall responsibility for the particular federal action in question that its own environmental standards are satisfied attend only to one aspect of the problem without considering the broad range of environmental concerns and considerations mandated by NEPA; LBP-15-23, 82 NRC 55 (2015)
circulation of a draft environmental assessment is not required in all cases; CLI-15-17, 82 NRC 33 (2015)
Clean Water Act imposes substantive restrictions on agency action, and NEPA imposes procedural requirements aimed at integrating environmental concerns into the very process of agency decision-making; LBP-15-23, 82 NRC 55 (2015)
Commission declined to conduct a generic NEPA analysis on the effects of Fukushima-related events; CLI-12-7, 75 NRC 379 (2012)
complete mitigation plan does not have to be actually formulated and adopted before the agency makes its decision; LBP-13-4, 77 NRC 107 (2013)
compliance with NEPA is a primary duty of every federal agency, and fulfillment of this responsibility should not depend on vigilance and limited resources of environmental plaintiffs; LBP-12-18, 76 NRC 127 (2012)
compliance with the act is ultimately the responsibility of NRC; CLI-12-13, 75 NRC 681 (2012)
concept of alternatives evolves, and agencies must explore alternatives as they become better known and understood; LBP-11-13, 73 NRC 534 (2011)
conducting Clean Water Act section 404 permit review after issuance of the final environmental impact statement does not impact an agency’s duty under NEPA, but rather serves to highlight the distinction between NEPA and the CWA; LBP-15-23, 82 NRC 55 (2015)
consideration of alternatives is the heart of the environmental impact statement; LBP-11-35, 74 NRC 701 (2011)
consideration of alternatives under NEPA that are technologically unproven is unnecessary; LBP-15-3, 81 NRC 65 (2015)
consideration of impacts with either a low probability of occurrence, or where the link between the agency action and the claimed impact is too attenuated to find the proposed federal action to be the proximate cause of that impact are excluded under NEPA; LBP-13-4, 77 NRC 107 (2013)
consideration of reasonable alternatives is required for operating license renewal; CLI-12-8, 75 NRC 393 (2012)
consideration of remote and speculative impacts in an environmental impact statement is not required; LBP-12-5, 75 NRC 227 (2012)
consideration of severe accident mitigation alternatives in its environmental impact statements and supplements thereto is required at the operating license stage; LBP-12-15, 76 NRC 14 (2012)
considering alternatives under NEPA, agencies should take into account the needs and goals of the parties involved in the application; LBP-12-17, 76 NRC 71 (2012)
consistent with NEPA’s rule of reason, applicant and NRC Staff acted on the basis of best available information and analysis in completing the SAMA evaluation; LBP-13-13, 78 NRC 246 (2013)
contention asserting that NEPA requires a groundwater baseline characterization for an in situ recovery site is admissible; LBP-12-3, 75 NRC 164 (2012)
contention that draft environmental impact statement fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 37 (2013)
contention that environmental assessment violates NEPA in its failure to analyze groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 401 (2015)
contention that NRC has failed to engage other relevant federal, state, and local agencies and has not analyzed impacts subject to jurisdiction and control of these other agencies, and has thus failed to
SUBJECT INDEX

comply with NEPA’s action-forcing mandate and general purpose is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contention that NRC has promulgated a regulation that violates NEPA is inadmissible; LBP-13-12, 78 NRC 239 (2013)

contention that the draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 37 (2013)

Continued Storage Rule and supporting generic environmental impact statement to assess the environmental impacts of spent fuel storage after the end of a reactor’s license term were approved; CLI-15-10, 81 NRC 535 (2015)

Corps of Engineers improperly constrained NEPA analysis; LBP-14-6, 79 NRC 404 (2014)

Council on Environmental Quality regulation requiring an environmental impact statement to consider reasonably foreseeable impacts rather than a worst-case analysis is entitled to substantial deference and NEPA does not require a worst-case analysis in an EIS; LBP-13-4, 77 NRC 107 (2013)

court may not substitute its own judgment for that of an agency, and agencies are not constrained by NEPA to select only the most environmentally benign option; LBP-15-16, 81 NRC 618 (2015)

cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time; LBP-11-26, 74 NRC 499 (2011)

defining the scope of effects of a project requires engagement with governments of affected tribes through an early and open process aimed at identifying concerns, potential impacts, relevant effects of past actions, and possible alternative actions; LBP-15-16, 81 NRC 618 (2015)

DEIS, like the environmental report, must cover all significant environmental impacts associated with the combined license, including offsite environmental impacts; LBP-11-1, 73 NRC 19 (2011)

development and discussion of a wide range of alternatives to any proposed federal action is so important that it is mandated by NEPA when any proposal involves unresolved conflicts concerning alternative uses of available resources, and the requirement is independent of and of wider scope than the duty to file an EIS; LBP-13-13, 78 NRC 246 (2013)

direct impacts are those caused by the action that is the subject of the environmental impact statement, and occurring at the same time and place as that action, while indirect impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-11-26, 74 NRC 499 (2011)

discussion necessary to support a NEPA alternatives contention in a reactor license renewal proceeding is compared with that for a Part 52 combined license proceeding; LBP-12-15, 76 NRC 14 (2012)

discussion of alternatives that present severe engineering requirements or are imprudent for reasons including their high cost, safety hazards, and operational difficulties is excluded under NEPA; LBP-15-3, 81 NRC 65 (2015)

discussion of mitigation measures is an important part of an agency’s hard look at the environmental consequences of a proposed federal action; LBP-14-7, 79 NRC 451 (2014)

discussion of steps that can be taken to mitigate adverse environmental consequences plays an important role in the environmental analysis under NEPA; LBP-12-18, 76 NRC 127 (2012)

doctrine of harmless error has only limited application in NEPA cases, and none where the agency has failed to take the required hard look at environmental consequences and alternatives; LBP-12-17, 76 NRC 71 (2012)

draft environmental impact statement must contain a detailed discussion of possible mitigation measures; LBP-15-23, 82 NRC 55 (2015)

draft environmental impact statement need not include a fully formulated or adopted mitigation plan, but its discussion must provide sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-15-23, 82 NRC 55 (2015)

duty to prepare an environmental impact statement and to identify and consider every significant environmental impact is tempered by the rule of reason; LBP-13-4, 77 NRC 107 (2013)

duty to supplement the final environmental impact statement is mandatory, is not avoidable through findings of compliance with the agency’s safety regulations, and is waivable only where the consequences are remote and highly improbable; CLI-12-11, 75 NRC 523 (2012)

ensuring continued availability of diverse, reliable sources of domestic enrichment services to provide low-enriched uranium for domestic power reactors supports a finding of need for the facility; LBP-11-26, 74 NRC 499 (2011)
environmental considerations that the environmental report must discuss are equivalent to, and in most instances verbatim restatements of, environmental considerations that NEPA requires the agency to describe in detail in the environmental impact statement; LBP-15-5, 81 NRC 249 (2015)

environmental contentions are initially based on applicant’s environmental report which will inform the Staff’s NEPA review; LBP-13-10, 78 NRC 117 (2013)

environmental documents need consider only those environmental impacts that are reasonably foreseeable, not those that are remote and speculative possibilities; LBP-12-9, 75 NRC 615 (2012)

environmental impact statement must consider the direct, indirect, and cumulative impacts of an action; LBP-11-7, 73 NRC 254 (2011)

environmental impact statement must describe the potential environmental impact of the proposed action and discuss any reasonable alternatives; LBP-11-7, 73 NRC 254 (2011)

environmental impact statement must include a detailed statement by the responsible agency official on, among other things, the environmental impact of the proposed action, any unavoidable adverse environmental effects that cannot be avoided, and alternatives to the proposed action; LBP-11-10, 73 NRC 424 (2011)

environmental impact statement must only address those environmental impacts that are reasonably foreseeable; LBP-13-4, 77 NRC 107 (2013)

environmental impact statements are not intended to be research documents, reflecting the frontiers of scientific methodology, studies, and data; CLI-12-5, 75 NRC 301 (2012); LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-13-4, 77 NRC 107 (2013)

environmental impact statements are required to furnish only such information as appears reasonably necessary under the circumstances for evaluation of the project, rather than to be so all-encompassing in scope that the task of preparing it would become either fruitless or well nigh impossible; LBP-13-4, 77 NRC 107 (2013)

environmental impact statements are subject to a rule of reason that grants the agency a degree of deference exempting it from examining impacts that it in good faith deems to be remote and speculative or inconsequentially small; LBP-11-39, 74 NRC 862 (2011)

environmental impact statements are to include a detailed statement by the responsible official on alternatives to the proposed action; LBP-12-17, 76 NRC 71 (2012)

environmental impact statements must address the cumulative impact of the proposed action; LBP-13-4, 77 NRC 107 (2013)

environmental impact statements must include a detailed statement of reasonable alternatives to the proposed action; LBP-13-4, 77 NRC 862 (2011)

environmental impact statements must address the cumulative impact of the proposed action; LBP-13-4, 77 NRC 107 (2013)

environmental impact statements must include a detailed discussion of measures that might mitigate the adverse environmental consequences of the proposed action; LBP-13-4, 77 NRC 107 (2013)

environmental impact statements must include a detailed statement of reasonable alternatives to the proposed action; LBP-14-9, 80 NRC 15 (2014)

environmental impacts of license renewal are classified as either Category 1, which are generically addressed by NRC’s generic environmental impact statement for license renewal, or Category 2, which are analyzed on a site-specific basis; LBP-11-17, 74 NRC 11 (2011)

environmental implications of new and significant information must be considered under NEPA before NRC may grant renewed operating licenses; LBP-11-32, 74 NRC 654 (2011)

environmental justice, as applied to the NRC, means that the agency will make an effort under NEPA to become aware of the demographic and economic circumstances of local communities; LBP-13-13, 78 NRC 246 (2013)

environmental report need only consider the range of alternatives that are capable of achieving the goals of the proposed action; LBP-11-13, 73 NRC 534 (2011)

environmental report’s adequacy is examined under NEPA as well as under Part 51 because the ER is the basis upon which the NRC’s environmental impact statement will be prepared; LBP-11-13, 73 NRC 534 (2011); LBP-11-14, 73 NRC 591 (2011)

environmental reports need only discuss reasonably foreseeable environmental impacts of a proposed action; LBP-12-7, 75 NRC 503 (2012)

environmental review must provide a sufficient discussion of alternatives to enable the decisionmaker to take a hard look at environmental factors, and to make a reasoned decision; LBP-11-13, 73 NRC 534 (2011)
SUBJECT INDEX

establishment of baseline conditions of the affected environment is a fundamental requirement of the NEPA process; LBP-13-9, 78 NRC 37 (2013)
events at Fukushima, and the ensuing NRC response, are not, at this point, to be considered new and significant information under NEPA; LBP-12-8, 75 NRC 539 (2012)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
every federal decision need not be verified by reduction to mathematical absolutes for insertion into a precise formula; LBP-11-7, 73 NRC 254 (2011)
evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
examination of every conceivable aspect of federally licensed projects is not required, but only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)

SUBJECT INDEX

for an alternative energy source to be considered reasonable for an operating license renewal proceeding, the alternative should be commercially viable and technically capable of producing an equal amount of baseload power now or in the near future, but no later than the expiration date of the current operating license; CLI-12-8, 75 NRC 393 (2012)

for environmental contentions, the burden of proof falls on NRC Staff because NRC, not the applicant, bears the ultimate responsibility for complying with NEPA’s dictates; LBP-12-5, 75 NRC 227 (2012)

for NEPA contentions, the burden of proof shifts to NRC Staff, because NRC, not applicant, bears the ultimate burden of complying with NEPA; LBP-11-38, 74 NRC 817 (2011)

for new information to be sufficiently significant to merit the preparation of a supplemental final environmental impact statement, the information must paint a seriously different picture of the environmental landscape; CLI-12-11, 75 NRC 523 (2012)

for siting alternatives, an agency’s duty under NEPA is to study all alternatives that appear reasonable and appropriate for study at the time of drafting the environmental impact statement; CLI-12-5, 75 NRC 301 (2012)

Fukushima contention that petitioners did not relate to any unique characteristics of the particular site at issue was akin to the generic type of NEPA review that the Commission declared premature; LBP-12-18, 76 NRC 127 (2012)

full implications of the Fukushima accident for U.S. facilities are unknown, and thus any generic NEPA duty, if one is appropriate at all, does not accrue now; LBP-11-33, 74 NRC 675 (2011)

general statements by an agency about possible effects and some risk do not constitute the hard look required by NEPA absent a justification of why more definitive information could not be provided; LBP-12-5, 75 NRC 227 (2012)

generation of baseload power is an acceptable purpose for a licensing action and has been determined to be broad enough to permit consideration of a host of energy-generating alternatives; LBP-11-13, 73 NRC 534 (2011)

goals of NEPA are to ensure that agency decisionmakers will have detailed information concerning significant environmental impacts of proposed projects when they make their decisions and to guarantee that such information will be available to the larger audience that may also play a role in the decisionmaking process; LBP-12-17, 76 NRC 71 (2012); LBP-13-13, 78 NRC 246 (2013)

government agencies are required to comply with NEPA to the fullest extent possible; LBP-14-9, 80 NRC 15 (2014)

hard look at the environmental effects of the planned action, not a circular restatement of NRC Staff’s own conclusions, is required; LBP-15-11, 81 NRC 401 (2015)

hard look is subject to a rule of reason, and consideration of environmental impacts need not address all theoretical possibilities, but only those that have some reasonable possibility of occurring; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

hard look must emerge from an engagement in informed and reasoned decisionmaking, as the agency obtains opinions from its own experts and experts outside the agency and gives careful scientific scrutiny and responds to all legitimate concerns that are raised; LBP-15-16, 81 NRC 618 (2015)

hard look under NEPA is intended to foster both informed agency decisionmaking and informed public participation so as to ensure that the agency does not act upon incomplete information, only to regret its decision after it is too late to correct; LBP-15-3, 81 NRC 65 (2015)

hard-look requirement is tempered by a rule of reason that requires agencies to address only impacts that are reasonably foreseeable, not those that are remote and speculative; LBP-14-7, 79 NRC 451 (2014)

if an alternative is commercially feasible and capable of bringing about the ends of the proposed project, then Staff may not dismiss it merely because it is inconsistent with the preferences of interested parties, or for other reasons inconsistent with NEPA’s rule of reason; LBP-12-17, 76 NRC 71 (2012)

if important factors in the cost-benefit balancing cannot be quantified, they may be discussed qualitatively; LBP-11-7, 73 NRC 254 (2011)

if new and significant information on Fukushima events comes to light that requires consideration as part of the ongoing preparation of application-specific NEPA documents, NRC will assess the significance of that information as appropriate; CLI-12-7, 75 NRC 379 (2012)

if NRC Staff had in hand new information that could render invalid the original site-specific analysis, then such information should be identified and evaluated by Staff for its significance, consistent with NEPA requirements; CLI-12-19, 76 NRC 377 (2012)
if the adverse environmental effects of a proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 391 (2011); LBP-12-18, 76 NRC 127 (2012); LBP-13-4, 77 NRC 107 (2013)

if the NRC Staff safety review reveals any new and significant information relating to the environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 404 (2014)

in mandatory hearings on uranium enrichment facility licensing, boards are to determine whether the review conducted by NRC Staff has been adequate, but they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-11, 73 NRC 455 (2011)

in mandatory proceedings for uranium enrichment facility licensing, boards are to make independent environmental judgments with respect to certain NEPA findings; LBP-11-11, 73 NRC 455 (2011)

in NEPA context, path that licensee and NRC Staff must follow relative to a license condition is sufficiently clear that continuing to hold the hearing open while it is completed would be an unnecessary extension of the adjudicatory process; LBP-15-3, 81 NRC 65 (2015)

impacting a proposed action on public safety is an issue that must be considered under both NEPA and the Atomic Energy Act; LBP-12-18, 76 NRC 127 (2012)

importing analysis from a previously completed environmental assessment while disregarding intervening events would render meaningless NEPA’s requirement to supplement an environmental impact statement or environmental assessment; LBP-15-13, 81 NRC 456 (2015)

immediate, irreparable harm is not presumed by a NEPA violation, even assuming such a violation has occurred; CLI-15-17, 82 NRC 33 (2015)

immediate, irreparable harm is not presumed by a NEPA violation, even assuming such a violation has occurred; CLI-15-17, 82 NRC 33 (2015)

impact of a proposed action on public safety is an issue that must be considered under both NEPA and the Atomic Energy Act; LBP-12-18, 76 NRC 127 (2012)

implicit in NEPA’s demand that an agency prepare a detailed environmental impact statement is an understanding that the EIS will discuss the extent to which adverse effects can be avoided; LBP-12-18, 76 NRC 127 (2012)

in importing analysis from a previously completed environmental assessment while disregarding intervening events would render meaningless NEPA’s requirement to supplement an environmental impact statement or environmental assessment; LBP-15-13, 81 NRC 456 (2015)

in assessing greenhouse gas impacts, NRC must devote its resources to taking a hard look at the issue; LBP-11-26, 74 NRC 499 (2011)

in assessing greenhouse gas impacts, NRC must devote its resources to taking a hard look at the issue; LBP-11-26, 74 NRC 499 (2011)

in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the Council on Environmental Quality; LBP-11-7, 73 NRC 254 (2011)

in enacting NEPA, Congress’s twin aims were to require an agency to consider every significant aspect of the environmental impact of a proposed action and ensure that the agency will inform the public that it has considered environmental concerns in its decisionmaking process; LBP-11-6, 73 NRC 149 (2011)

in enacting NEPA, Congress’s twin aims were to require an agency to consider every significant aspect of the environmental impact of a proposed action and ensure that the agency will inform the public that it has considered environmental concerns in its decisionmaking process; LBP-11-6, 73 NRC 149 (2011)

in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit NEPA; LBP-13-8, 78 NRC 1 (2013)

in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit NEPA; LBP-13-8, 78 NRC 1 (2013)

in parallel with NRC Staff’s role under NEPA to assess environmental impacts, the Environmental Protection Agency possesses authority under the Clean Air Act to set numerical standards for air pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)

in ruling that NRC had appropriately interpreted the Atomic Energy Act to include regulatory authority over attendant transmission lines, the court did not decide whether NEPA is an independent source of substantive jurisdiction; LBP-14-9, 80 NRC 15 (2014)

if the adverse environmental effects of a proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 391 (2011); LBP-12-18, 76 NRC 127 (2012); LBP-13-4, 77 NRC 107 (2013)

in parallel with NRC Staff’s role under NEPA to assess environmental impacts, the Environmental Protection Agency possesses authority under the Clean Air Act to set numerical standards for air pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)

in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit NEPA; LBP-13-8, 78 NRC 1 (2013)

in uncontested hearings, it is NRC’s duty to ensure, among other things, that it has adhered to its obligations under NEPA; CLI-15-1, 81 NRC 1 (2015)

in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit NEPA; LBP-13-8, 78 NRC 1 (2013)

in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit NEPA; LBP-13-8, 78 NRC 1 (2013)

intervenors litigated whether the performance-based licensing complies with the Atomic Energy Act and NEPA, and whether undue discretion was accorded to licensee; LBP-15-16, 81 NRC 638 (2015)

irrespective of the cause of the impact or the appropriate level of administrative scrutiny, for the purpose of NEPA evaluation, NRC regulations categorize impacts as direct, indirect, and cumulative; LBP-11-26, 74 NRC 499 (2011)

issuance of a renewed operating license for a nuclear power reactor is a major federal action under NEPA; LBP-12-8, 75 NRC 539 (2012)
issuance of an early site permit and the subsequent authorization of construction and operation of a new nuclear power plant qualify as connected actions under 40 C.F.R. 1508.25 and should be evaluated in one environmental impact statement; LBP-11-10, 73 NRC 424 (2011)
it is not necessary that every alternative device and thought conceivable by the mind of man be considered, but a hard look must be taken at the environmental consequences; LBP-12-1, 75 NRC 1 (2012)
it is NRC Staff, not petitioners, that has the burden of complying with NEPA; LBP-15-5, 81 NRC 249 (2015)
it would be incongruous with NEPA’s approach to environmental protection, and with the Act’s manifest concern with preventing uninformed action, for the blinders to adverse environmental effects, once unequivocally removed, to be restored prior to the completion of agency action simply because the relevant proposal has received initial approval; LBP-15-13, 81 NRC 456 (2015)
it would be inconsistent with NEPA’s reliance on procedural mechanisms, as opposed to substantive, result-based standards, to demand the presence in an environmental impact statement of a fully developed plan that will mitigate environmental harm before an agency can act; LBP-13-4, 77 NRC 107 (2013)
language of NEPA indicates that Congress did not intend that it be precluded by the Atomic Energy Act; LBP-12-18, 76 NRC 127 (2012)
level of analysis required in an environmental impact statement is more rigorous than is required when the agency has determined on the basis of its environmental assessment that the project as proposed will not result in significant environmental impact; LBP-14-7, 79 NRC 451 (2014)
license renewal applicant’s environmental report must address environmental impacts of the proposed action and compare them to impacts of alternative actions; CLI-12-5, 75 NRC 301 (2012)
license transfer applications need not include an environmental analysis under NEPA; CLI-15-8, 81 NRC 500 (2015)
“major construction activity” is defined as a construction project, or other undertaking having similar physical impacts, that is a major federal action significantly affecting the quality of the human environment as referred to in NEPA; LBP-12-10, 75 NRC 633 (2012)
mere listing of proposed mitigation measures in the draft environmental impact statement is insufficient under NEPA; LBP-15-23, 82 NRC 55 (2015)
merely describing an alternative is insufficient to comply with NEPA; LBP-11-14, 73 NRC 591 (2011)
merely offering general statements about possible effects and some risk does not constitute a hard look at environmental impacts absent a justification regarding why more definitive information could not be provided; LBP-11-38, 74 NRC 817 (2011)
merely pointing to a government compliance program is insufficient to demonstrate compliance with NEPA’s requirement that agencies take a hard look at the environmental consequences of their proposed actions; LBP-12-23, 76 NRC 445 (2012)
merely referencing an actual or anticipated certification by another agency fails to satisfy NEPA requirements; LBP-14-9, 80 NRC 15 (2014)
mitigation measures assessed in the SAMA analysis under NEPA are supplemental to those already required under NRC safety regulations for reasonable assurance of safe operation and likewise to those NRC may order or require under ongoing regulatory oversight over reactor safety, pursuant to the Atomic Energy Act; CLI-12-15, 75 NRC 704 (2012)
maintenance must be discussed only in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-11-7, 73 NRC 254 (2011)
northeast need for power is a shorthand expression for the benefit side of the cost-benefit balance that NEPA mandates for a proceeding considering the licensing of a nuclear power plant; LBP-11-6, 73 NRC 149 (2011)
neither a fully developed plan nor a detailed explanation of specific measures that will be employed to mitigate the adverse impacts of a proposed action is required; LBP-11-7, 73 NRC 254 (2011)
neither certainty nor precision is called for, but rather an estimate of anticipated, not unduly speculative, impacts; LBP-15-16, 81 NRC 618 (2015)

neither NRC nor applicant need consider any alternative that does not bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)

NEPA allows agencies to select their own methodology as long as that methodology is reasonable; LBP-11-2, 73 NRC 28 (2011); LBP-13-13, 78 NRC 246 (2013)

NEPA applies to agencies of the federal government, not to private parties such as applicants for NRC licenses; LBP-11-32, 74 NRC 654 (2011)

NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-13-13, 78 NRC 246 (2013)

NEPA does not demand the presence of a fully developed plan that will mitigate environmental harm before an agency can act; LBP-15-16, 81 NRC 618 (2015)

NEPA does not impose a substantive obligation for a reviewing agency to require or enforce mitigation measures discussed in an environmental assessment; LBP-14-6, 79 NRC 404 (2014)

NEPA does not mandate how an agency must fulfill its obligations; LBP-11-23, 74 NRC 287 (2011)

NEPA does not mandate particular results, but simply prescribes the necessary process that agencies must follow in evaluating environmental impacts; LBP-12-17, 76 NRC 71 (2012); LBP-15-19, 81 NRC 815 (2015)

NEPA does not mandate substantive results but rather imposes procedural restraints on agencies, requiring them to take a hard look at the environmental impacts of a proposed action and reasonable alternatives to that action; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)

NEPA does not require a worst-case analysis; LBP-11-38, 74 NRC 817 (2011)

NEPA does not require adoption of best practices, particularly in the face of a potentially significant resource commitment; LBP-15-3, 81 NRC 65 (2015)

NEPA does not require agencies to elevate environmental concerns over other appropriate considerations; LBP-12-17, 76 NRC 71 (2012)

NEPA does not require NRC Staff to analyze every conceivable aspect of the proposed project; LBP-15-16, 81 NRC 618 (2015)

NEPA does not require NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-11-11, 74 NRC 427 (2011)

NEPA ensures that agencies will not act on incomplete information, only to regret their decision after it is too late to correct; LBP-12-17, 76 NRC 71 (2012)

NEPA imposes no legal duty on NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

NEPA imposes no substantive requirement that mitigation measures actually be taken; LBP-11-14, 73 NRC 591 (2011); LBP-13-4, 77 NRC 107 (2013)

NEPA imposes on NRC a disclosure obligation that NRC publicly discuss its evaluation of the reasonably foreseeable effects of a proposed action; CLI-15-25, 82 NRC 389 (2015)

NEPA imposes procedural restraints on agencies, which require them to take a hard look at the environmental impacts of a proposed action and the reasonable alternatives to that action; LBP-12-17, 76 NRC 71 (2012)

NEPA is a procedural statute and although it requires a hard look at mitigation measures, it does not, in and of itself, provide the statutory basis for their implementation; CLI-11-14, 74 NRC 801 (2011); LBP-11-39, 74 NRC 862 (2011)
NEPA is intended to ensure that environmental impacts will not be overlooked or underestimated only to be discovered after resources have been committed or the die otherwise cast; LBP-13-4, 77 NRC 107 (2013)
NEPA is not intended to encompass every possible impact, and does not encompass potential losses due to individuals' perception of a risk; CLI-12-15, 75 NRC 704 (2012); LBP-12-24, 76 NRC 503 (2012)
NEPA is not violated when an agency issues a supplemental environmental impact statement before the Corps of Engineers completes a Clean Water Act section 404 permit review; LBP-15-23, 82 NRC 55 (2015)
NEPA itself does not mandate a cost-benefit analysis, but the statute is generally regarded as calling for some sort of a weighing of the environmental costs against the economic, technical, or other public benefits of a proposal; LBP-11-6, 73 NRC 149 (2011)
NEPA mandates a case-by-case balancing judgment on the part of federal agencies, not the private parties seeking federal action; LBP-14-9, 80 NRC 15 (2014)
NEPA obligations supplement existing statutory authority and must be complied with to the fullest extent, unless there is a clear conflict of statutory authority; LBP-14-9, 80 NRC 15 (2014)
NEPA only mandates an examination of reasonably foreseeable environmental impacts of the proposed project; LBP-11-33, 74 NRC 675 (2011)
NEPA requirements are subject to a rule of reason, and an environmental impact statement need not address remote and highly speculative consequences; LBP-14-9, 80 NRC 15 (2014)
NEPA requires a hard look at severe accident mitigation measures; LBP-12-26, 76 NRC 559 (2012)
NEPA requires a reasonably complete discussion of possible mitigation measures; LBP-15-11, 81 NRC 401 (2015)
NEPA requires acknowledgment of tribal hunting and fishing rights, as well as an analysis of how the project will affect those rights; LBP-15-5, 81 NRC 249 (2015)
NEPA requires consideration of reasonable alternatives, not all conceivable ones; CLI-12-5, 75 NRC 301 (2012)
NEPA requires that agencies provide a reasonably complete discussion of possible severe accident mitigation measures; LBP-12-18, 76 NRC 127 (2012)
NEPA review in license renewal proceedings is not limited to aging management-related issues; LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)
NEPA severe accident mitigation alternatives analysis need not reflect the most conservative, or worst-case, analysis; LBP-12-26, 76 NRC 559 (2012)
NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-11-38, 74 NRC 817 (2011); LBP-13-4, 77 NRC 107 (2013); LBP-13-13, 78 NRC 246 (2013)
NEPA’s “hard look” is tempered by a rule of reason; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012)
NEPA’s hard-look requirement does not allow sweeping generalities about possible effects and risk without a justification as to why more definitive information was not provided; LBP-13-13, 78 NRC 246 (2013)
NEPA’s legislative history reflects Congress’s concern that agencies might attempt to avoid any compliance with NEPA by narrowly constraining other statutory directives to create a conflict with NEPA; LBP-14-9, 80 NRC 15 (2014)
NEPA’s procedural obligation is carried out through an agency’s issuance of an environmental impact statement documenting the agency’s hard look at potential environmental impacts of the proposed action and reasonable alternatives thereto; LBP-11-39, 74 NRC 862 (2011)
NEPA’s purpose is to influence the decisionmaking process by focusing the federal agency’s attention on the environmental consequences of a proposed project, so as to ensure that important effects will not be overlooked or underestimated only to be discovered after resources have been committed or the die otherwise cast; LBP-14-9, 80 NRC 15 (2014)
NEPA’s requirements, like publication of the environmental impact statement, implement NEPA’s sweeping policy goals by ensuring that agencies will take a hard look at environmental consequences; LBP-13-13, 78 NRC 246 (2013)
NEPA’s rule of reason is a judicial device to ensure that common sense and reason are not lost in the rubric of regulation and thus requires only reasonable forecasting; LBP-13-13, 78 NRC 246 (2013)
no agency shall utilize an excessively narrow construction of its existing statutory authorizations to avoid compliance with NEPA; LBP-14-9, 80 NRC 15 (2014)
nondiscretionary duty is imposed on NRC to amend an environmental impact statement if new and significant information comes to light; LBP-12-18, 76 NRC 127 (2012)
non-NEPA document, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 401 (2015)
nonspeculative irreversible and irretrievable commitment of resources requires that an ER provide an impacts analysis of such an occurrence; LBP-13-10, 78 NRC 117 (2013)
nothing in NEPA, which applies to agencies of the federal government, can be read to require an applicant to update its environmental report; LBP-11-34, 74 NRC 685 (2011)
NRC cannot delegate its NEPA responsibilities to a private party; LBP-11-32, 74 NRC 654 (2011)
NRC cannot look to the sufficiency of safety standards enacted under the Atomic Energy Act to avoid its NEPA obligations; LBP-12-18, 76 NRC 127 (2012)
NRC failed to comply with NEPA in issuing its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule; CLI-14-8, 80 NRC 71 (2014)
NRC generally defers to an applicant’s stated purpose as long as that purpose is not so narrow as to eliminate alternatives; LBP-11-13, 73 NRC 534 (2011)
NRC has a continuing duty to take a hard look at new and significant information for each major federal action to be taken; CLI-13-7, 78 NRC 199 (2013)
NRC has established small, moderate, and large levels of impacts; LBP-11-26, 74 NRC 499 (2011)
NRC hearings on NEPA issues focus entirely on the adequacy of NRC Staff’s work; LBP-15-16, 81 NRC 618 (2015)
NRC is neither required nor authorized to order implementation of mitigation measures analyzed in an environmental analysis; CLI-12-10, 75 NRC 479 (2012)
NRC is not required to suspend its licensing decisions upon receipt of a claim of new and significant information; CLI-14-7, 80 NRC 1 (2014)
NRC is not required to use the absolutely best scientific methodology available; LBP-13-4, 77 NRC 107 (2013)
NRC is not required to wait until inchoate information matures into something that might affect its review; CLI-12-15, 75 NRC 704 (2012)
NRC is precluded from avoiding the Act’s requirements by simply relying on another agency’s conclusions about a federal action’s impact on the environment; LBP-13-4, 77 NRC 107 (2013)
NRC is required to analyze potential terrorist attacks as part of its NEPA review with regard to facilities located in the Ninth Circuit; LBP-12-21, 76 NRC 218 (2012)
NRC is required to assess the relationship between local short-term uses of the environment and the long-term productivity of the environment; CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012)
NRC is required to consider severe accident mitigation alternatives; LBP-13-1, 77 NRC 57 (2013)
NRC is required to construe its existing statutory authority consistently with NEPA’s goals; LBP-14-9, 80 NRC 15 (2014)
NRC is required to describe the irreversible and irretrievable commitments of resources associated with the proposed action; CLI-12-9, 75 NRC 421 (2012)
NRC is required to describe unavoidable adverse environmental impacts; CLI-12-9, 75 NRC 421 (2012)
NRC is required to take a hard look at alternatives, including severe accident mitigation alternatives, and to provide a rational basis for rejecting alternatives that are cost-effective; LBP-12-8, 75 NRC 539 (2012)
NRC is required to take a hard look at the environmental impacts of a proposed action; LBP-14-7, 79 NRC 451 (2014)
NRC is required to undertake research needed to adequately expose environmental harms; LBP-14-9, 80 NRC 15 (2014)
NRC may decline to examine remote and speculative risks or events with inconsequentially small probabilities; LBP-11-26, 74 NRC 499 (2011)
NRC may not abdicate its duty under NEPA to other agencies to consider environmental impacts, even if those agencies have special expertise relating to environmental impacts; LBP-13-4, 77 NRC 107 (2013)
SUBJECT INDEX

NRC must adequately consider impacts to visual and aesthetic resources in its NEPA review; LBP-12-3, 75 NRC 164 (2012)

NRC must assess the environmental impacts of a proposed facility, including those impacts associated with greenhouse gas emissions by the proposed facility; LBP-11-26, 74 NRC 499 (2011)

NRC must conduct its environmental review with the best information available at that time; CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012)

NRC must consider reasonably foreseeable environmental impacts of the proposed licensing action, but need not consider remote and speculative impacts, particularly if the impact cannot easily be estimated at the current time, and an appropriate future opportunity will exist for the agency to analyze the impact; LBP-12-3, 75 NRC 164 (2012)

NRC must make a diligent effort to involve the public in implementation of NEPA procedures; LBP-15-16, 81 NRC 618 (2015)

NRC must rigorously explore and objectively analyze environmental impacts, so that merely offering general statements about possible effects and some risk does not constitute a hard look absent a justification regarding why more definitive information could not be provided; LBP-11-26, 74 NRC 499 (2011)

NRC must take a hard look at environmental consequences of each agency action; LBP-13-4, 77 NRC 107 (2013)

NRC must use a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in decisionmaking that may impact the environment; CLI-12-2, 75 NRC 63 (2012)

NRC need not conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as a part of the environmental review for new reactor and license renewal decisions; LBP-11-32, 74 NRC 654 (2011)

NRC need only address reasonably foreseeable impacts, not those that are remote and speculative or inconsequentially small; LBP-13-13, 78 NRC 246 (2013)

NRC policy statement is not a sufficient vehicle to preclude consideration of severe accident mitigation design alternatives, and NRC must take the requisite hard look at them, giving them the careful consideration and disclosure required by the National Environmental Policy Act; CLI-12-19, 76 NRC 377 (2012)

NRC Staff is not required to examine every conceivable aspect of federally licensed projects in preparing its environmental impact statement; LBP-15-3, 81 NRC 65 (2015)

NRC Staff is obliged to undertake a full and independent evaluation of the environmental impacts of applicant’s proposed action; LBP-12-9, 75 NRC 615 (2012)

NRC Staff is required to conduct its environmental review with the best information available when the review is undertaken; CLI-12-15, 75 NRC 704 (2012); LBP-12-8, 75 NRC 539 (2012)

NRC Staff is required to reevaluate any prior analysis if it is presented with any new and significant information that would cast doubt on a previous environmental analysis; LBP-12-8, 75 NRC 539 (2012)

NRC Staff is to consider and weigh the environmental, technical, and other costs and benefits of a proposed action and alternatives, and, to the fullest extent practicable, quantify the various factors considered; LBP-11-7, 73 NRC 254 (2011)

NRC Staff must assess the relationship between local short-term uses and long-term productivity of the environment, consider alternatives, and describe the unavoidable adverse environmental impacts and the irreversible and irretrievable commitments of resources associated with the proposed action; CLI-15-13, 81 NRC 555 (2015)

NRC Staff must consider the cumulative impact of greenhouse gas emissions from a proposed facility; LBP-11-7, 73 NRC 254 (2011)

NRC Staff must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-11-26, 74 NRC 499 (2011)

NRC Staff must include new and significant information in a supplemental draft environmental impact statement; LBP-11-34, 74 NRC 685 (2011)

NRC Staff, not the applicant, bears the ultimate burden of establishing compliance with NEPA; LBP-12-17, 76 NRC 71 (2012)

NRC Staff’s environmental impact statement need only discuss those alternatives that will bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)
SUBJECT INDEX

NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 149 (2011)
NRC Staff’s obligations under Part 51 and NEPA are not limited to only those severe accident mitigation alternatives that address aging management; LBP-11-17, 74 NRC 11 (2011)
NRC Staff’s reference to, and reliance in its draft environmental impact statement on, state issuance of a site certification order and associated certificate of compliance on groundwater use does not dispense with NRC’s duty under NEPA to conduct an independent hard look at environmental impacts related to active dewatering during operations at a nuclear plant; LBP-11-1, 73 NRC 19 (2011)
NRC violated the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule; CLI-12-16, 76 NRC 63 (2012)
NRC will supplement an EIS if there are substantial changes in the proposed action relevant to environmental concerns or new and significant circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; CLI-12-7, 75 NRC 379 (2012)
NRC, as an independent regulatory agency, is not bound by those portions of Council on Environmental Quality NEPA regulations that have a substantive impact on the way in which the Commission performs its regulatory functions; LBP-11-35, 74 NRC 701 (2011)
NRC, not applicant, bears the ultimate burden of establishing compliance with NEPA; LBP-14-7, 79 NRC 451 (2014)
NRC’s AEA safety review under Part 54 does not compromise or limit NEPA; LBP-15-5, 81 NRC 249 (2015)
NRC’s analysis, in its final environmental impact statement, of issues relating to dewatering associated with construction and operation of the proposed plants is adequate and satisfies the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)
NRC’s decision to include transmission lines that serve a nuclear power plant within the definition of “utilization facility” in 42 U.S.C. § 2014(cc) was upheld; LBP-14-9, 80 NRC 15 (2014)
NRC’s environmental analysis need only consider environmental impacts that are reasonably foreseeable, and need not consider remote and speculative scenarios; LBP-11-16, 73 NRC 645 (2011)
on issues arising under NEPA, intervenor must file contentions based on the applicant’s environmental report, but may amend those contentions or file new contentions; CLI-13-7, 78 NRC 199 (2013);
LBP-11-7, 73 NRC 254 (2011)
one important component of an environmental impact statement is the discussion of possible actions that might mitigate adverse environmental consequences; LBP-11-7, 73 NRC 254 (2011)
only reasonable forecasting of need for power is required in an environmental impact statement; LBP-12-5, 75 NRC 227 (2012)
Part 40, Appendix A, Criteria 4(e) and 5G(2) refer to safety criteria that apply to applicants and licensees and are not relevant to the NEPA review; LBP-13-9, 78 NRC 37 (2013)
particular decisions that an agency must reach are not mandated, but rather only the process the agency must follow while reaching decisions; LBP-11-17, 74 NRC 11 (2011)
particular results are not mandated and, accordingly, a fully developed mitigation plan is not demanded before an agency can act; LBP-15-23, 82 NRC 55 (2015)
petitioner’s assertion that continued operation of an independent spent fuel storage installation causes fear and anxiety among its members is not a valid claim under NEPA; LBP-12-24, 76 NRC 503 (2012)
policies set forth by NEPA prevent NRC Staff from segmenting the disposal issues from the inquiry into whether applicant will be allowed to create 11e(2) byproduct material in the first instance; LBP-13-9, 78 NRC 37 (2013)
preliminary injunction halting a solar energy project was granted based on a tribal claim that the project would not avoid most of the 459 cultural sites identified, and that the NEPA and NHPA process had been insufficient; LBP-15-2, 81 NRC 48 (2015)
preparation of the biological assessment may be consolidated with interagency cooperation procedures required by other statutes, such as NEPA; LBP-12-11, 75 NRC 731 (2012)
presiding officer in the adjudication will determine the extent to which adoption by the NRC of DOE’s repository EIS and its supplements is practicable, which in turn will satisfy NRC’s NEPA obligations; CLI-13-8, 78 NRC 219 (2013)

previously recognized availability policy for domestic enrichment services supports a NEPA finding of a need for the construction and operation of uranium enrichment facilities; LBP-11-26, 74 NRC 499 (2011)

primary obligation of satisfying the requirements of NEPA rests on the agency; LBP-12-18, 76 NRC 127 (2012)

principal goals of NEPA’s environmental impact statement requirement are to force agencies to take a hard look at the environmental consequences of a proposed project, and, by making relevant analyses openly available, to permit the public a role in the agency’s decision-making process; LBP-11-14, 73 NRC 591 (2011)

procedural requirement is imposed on an agency’s decisionmaking process by mandating that an agency consider the environmental impacts of a proposed action and inform the public that it has taken those impacts into account in making its decision; LBP-11-17, 74 NRC 11 (2011)

procedural requirements are imposed on an agency to consider mitigation options, but particular results are not mandated; LBP-15-23, 82 NRC 55 (2015)

project goals determine the alternatives that are considered reasonable; LBP-12-17, 76 NRC 71 (2012)

proper question is not whether there are plausible alternative choices for use in the SAMA analysis, but whether the analysis that was done is reasonable under NEPA; LBP-15-29, 82 NRC 246 (2015)

proposals or parts of proposals that are related to each other closely enough to be, in effect, a single course of action shall be evaluated in a single impact statement; LBP-11-10, 73 NRC 424 (2011)

psychological fears or stigma effects are not cognizable NEPA claims; CLI-12-5, 75 NRC 301 (2012)

purpose of EIS preparation is to obviate the need for speculation by ensuring that available data are gathered and analyzed prior to the implementation of the proposed action; LBP-15-23, 82 NRC 55 (2015)

purpose of NEPA is to help public officials make decisions that are based on understanding of environmental consequences, and take decisions that protect, restore, and enhance the environment; LBP-11-23, 74 NRC 287 (2011)

purpose of the supplemental-SAMA-analysis exception in 10 C.F.R. 51.53(c)(3)(ii)(L) is to reflect NRC’s view that one SAMA analysis, as a general matter, satisfies NRC’s NEPA obligation to consider measures to mitigate both the risk and the environmental impacts of severe accidents; CLI-13-7, 78 NRC 199 (2013)

quibbling over the details of an economic analysis would effectively stand NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-11-7, 73 NRC 254 (2011); LBP-12-5, 75 NRC 227 (2012)

reasonable alternatives under NEPA are limited to those alternatives that will bring about the ends of the proposed action; LBP-11-21, 74 NRC 115 (2011)

reasonable alternatives under NEPA do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-15-3, 81 NRC 65 (2015)

reasonably close causal relationship between the environmental effect and the alleged cause is required; LBP-12-21, 76 NRC 218 (2012)

regardless of their classification as direct, indirect, or cumulative, impacts that are reasonably foreseeable are to be assessed in an environmental impact statement; LBP-11-26, 74 NRC 499 (2011)

regulation of offsite transmission lines is within NRC’s authority under section 101 of the Atomic Energy Act and nothing in the AEA precludes NRC from implementing, through issuance of conditional licenses, NEPA’s environmental mandate; LBP-14-9, 80 NRC 15 (2014)

relationship between the uranium enrichment facility’s product and production of high-level waste is too attenuated to show the requirement of a reasonably close causal relationship required by NEPA; LBP-12-21, 76 NRC 218 (2012)

reliance on a state permit, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 401 (2015)

remote and speculative alternatives need not be addressed in a final environmental impact statement, but NEPA requires NRC Staff to consider reasonable alternatives that are likely to be available within the time frame of the proposed action; LBP-12-17, 76 NRC 71 (2012)
remote and speculative alternatives need not be addressed in an applicant’s environmental report; LBP-11-2, 73 NRC 28 (2011)
request for analysis of whether Fukushima events constitute new and significant information under NEPA is premature; LBP-12-1, 75 NRC 1 (2012)
requirement that an environmental impact statement contain a detailed discussion of possible mitigation measures flows both from the language of the Act and, more expressly, from the Council on Environmental Quality’s implementing regulations; LBP-13-4, 77 NRC 107 (2013)
requirement that federal agencies prepare an environmental impact statement when considering a major action serves the statute’s action-forcing purpose in two ways; LBP-11-7, 73 NRC 254 (2011)
requirement to discuss alternatives to the proposed action does not extend to the construction of transmission line corridors, because it is not “construction” as defined in 10 C.F.R. 50.10; LBP-11-6, 73 NRC 149 (2011)
requirement to prepare an environmental impact statement is a procedural mechanism designed to ensure that agencies give proper consideration to the environmental consequences of their actions; LBP-12-18, 76 NRC 127 (2012)
requirement to prepare an environmental impact statement places upon an agency the obligation to consider every significant aspect of the environmental impact of a proposed action; LBP-13-4, 77 NRC 107 (2013)
rule of reason excludes consideration of remote and speculative impacts or worst-case scenarios; LBP-13-4, 77 NRC 107 (2013)
“rule of reason” is a judicial device to ensure that common sense and reason are not lost in the rubric of regulation; LBP-11-26, 74 NRC 499 (2011)
rule of reason is inherent in NEPA and its implementing regulations; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012)
rule of reason means that an agency must only consider reasonably foreseeable impacts in its environmental impact statement, and need not address those that are remote and speculative or inconsequentially small; LBP-12-17, 76 NRC 71 (2012)
rule of reason would not exclude consideration of demand-side management as part of an alternatives analysis when applicant is a state-regulated utility; LBP-11-6, 73 NRC 149 (2011)
rule that excluded certain environmental impacts from NEPA consideration and deferred totally to environmental quality standards devised and administered by other agencies violated NEPA; LBP-15-23, 82 NRC 55 (2015)
separate actions may be considered connected if, among other things, they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-11-10, 73 NRC 424 (2011)
severe accident mitigation alternatives analyses need not reflect the most conservative, or worst-case, analysis; CLI-12-10, 75 NRC 479 (2012)
severe accident mitigation alternatives analysis evaluates the degree to which specific additional mitigation measures may reduce the probability or consequences of various accident scenarios on a site-specific basis; LBP-13-13, 78 NRC 246 (2013)
severe accident mitigation alternatives analysis fulfills the requirement to provide a consideration of alternatives to mitigate severe accidents and therefore is governed by NEPA’s rule of reason; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
severe accident mitigation alternatives analysis is based on mean accident consequence values, averaged over the many hypothetical severe accident scenarios; LBP-13-13, 78 NRC 246 (2013)
severe accident mitigation alternatives analysis is conducted pursuant to NEPA, and thus is an environmental issue, not a safety issue; LBP-15-1, 81 NRC 15 (2015)
severe accident mitigation alternatives analysis is neither a worst-case nor a best-case impacts analysis, and the agency’s obligations under NEPA are tempered by a practical rule of reason; LBP-11-18, 74 NRC 29 (2011)
severe accident mitigation alternatives analysis is neither a worst-case nor a best-case impacts analysis; CLI-12-1, 75 NRC 39 (2012); LBP-13-13, 78 NRC 246 (2013)
severe accident mitigation alternatives analysis is not part of the agency’s safety review for license renewal under the Atomic Energy Act, but is instead a mitigation alternatives analysis conducted pursuant to NEPA; LBP-13-8, 78 NRC 1 (2013)

SUBJECT INDEX
Subject Index

Staff’s environmental impact statement need only discuss those alternatives that will bring about the ends of the proposed action; LBP-12-15, 76 NRC 14 (2012)

standing claims based on economic impacts are only cognizable in NRC proceedings with regard to NEPA-based concerns; LBP-12-3, 75 NRC 164 (2012)

statute itself does not mandate particular results, but simply prescribes the necessary process; LBP-11-7, 73 NRC 254 (2011)

subject of postdecision supplemental environmental impact statements is not expressly addressed in NEPA; LBP-12-18, 76 NRC 127 (2012)

taking a hard look at environmental impacts fosters informed decisionmaking and public participation and thus ensures that the agency does not act upon incomplete information, only to regret its decision after it is too late to correct it; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)

test for determining when a nonfederal project should be analyzed under NEPA as a major federal action is discussed; LBP-14-9, 80 NRC 15 (2014)

there exists an obligation to consider alternatives as they exist and are likely to exist; LBP-11-13, 73 NRC 534 (2011)

there is no NEPA requirement to use the best scientific methodology; LBP-11-38, 74 NRC 817 (2011)

there is no NEPA requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-11-3, 81 NRC 65 (2015)

there is no requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-12-5, 75 NRC 227 (2012)

there will always be more data that could be gathered, but agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-13-13, 78 NRC 246 (2013)

though mitigation measures must be discussed in an environmental impact statement, NEPA does not guarantee that federally approved projects will have no adverse impacts; LBP-15-16, 81 NRC 618 (2015)

to be analyzed under NEPA as a major federal action, a nonfederal project must restrict or limit the statutorily prescribed federal decisionmakers’ choice of reasonable alternatives; LBP-14-9, 80 NRC 15 (2014)

to bring NEPA into play, a possible future action must at least constitute a proposal pending before the agency (i.e., ripeness), and must be in some way interrelated with the action that the agency is actively considering (i.e., nexus); LBP-13-10, 78 NRC 117 (2013); LBP-14-6, 79 NRC 404 (2014)

to constitute a basis for supplementing an EIS, the new information must present a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; CLI-12-7, 75 NRC 379 (2012)

to ensure that the Act’s broad national commitment to protecting and promoting environmental quality is infused in the actions of the federal government, NEPA establishes certain action-forcing procedures on each federal agency; LBP-13-4, 77 NRC 107 (2013)

to evaluate an operating license renewal application, NRC reviews the management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011)

to issue an early site permit, NRC must include in an environmental impact statement a detailed statement on the environmental impacts of the proposed action, any unavoidable adverse environmental effects that cannot be avoided, and alternatives to the proposed action; LBP-11-10, 73 NRC 424 (2011)

to make an impact statement something more than an exercise in frivolous boilerplate, the concept of alternatives must be bounded by some notion of feasibility; LBP-13-4, 77 NRC 107 (2013)

to require worst-case analyses can easily lead to limitless NEPA analyses because it is always possible to introduce yet another variable to a hypothetical scenario to conjure up a worse worst case; CLI-12-1, 75 NRC 39 (2012)

to satisfy requirements of NEPA for a combined license, the Commission independently considers the final balance among conflicting factors in the record; CLI-12-9, 75 NRC 421 (2012)
SUBJECT INDEX

to the extent that applicant proposes modifications to the facility in response to a request for information, NEPA also requires the consideration of the effectiveness and relative costs of a range of alternatives for satisfying the NRC’s concerns; LBP-12-15, 76 NRC 14 (2012)
to the extent there are important NEPA qualitative considerations or factors that cannot be quantified, these considerations or factors will be discussed in qualitative terms; LBP-15-5, 81 NRC 249 (2015)
to the fullest extent possible, all federal agencies shall include in every major federal action significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-13-4, 77 NRC 107 (2013)
under the rule of reason governing NEPA, the concept of alternatives must be bounded by some notion of feasibility; CLI-12-15, 75 NRC 704 (2012)
under the rule of reason, NRC’s environmental analysis need only consider environmental impacts that are reasonably foreseeable, and need not consider remote and speculative scenarios; LBP-13-13, 78 NRC 246 (2013)
until NRC defines and imposes on licensees new requirements arising from the Fukushima events, such requirements are highly speculative; LBP-11-33, 74 NRC 675 (2011)
weighing of the merits and drawbacks of the various alternatives need not be displayed in a monetary cost-benefit analysis and should not be when there are important qualitative considerations; LBP-11-7, 73 NRC 254 (2011)
when a decision to which NEPA obligations attach is made without the informed environmental consideration that NEPA requires, the harm that NEPA intends to prevent has been suffered; LBP-14-9, 80 NRC 15 (2014)
when agencies propose major federal actions significantly affecting the quality of the human environment, preparation of an environmental impact statement is required; LBP-12-18, 76 NRC 127 (2012); LBP-14-9, 80 NRC 15 (2014)
when an agency otherwise complies with NEPA’s requirement of a reasonably thorough mitigation analysis, there is no error in the agency’s reliance on the Clean Water Act section 404’s substantive requirements as mitigation measures even though the section 404 permit review is not yet complete; LBP-15-23, 82 NRC 55 (2015)
when NEPA contentions are involved, the burden of proof shifts to NRC Staff; LBP-15-16, 81 NRC 618 (2015)
when the purpose is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; CLI-12-5, 75 NRC 301 (2012)
where increased air pollution in California resulting from two export turbines at a Mexican plant was a direct effect of the new transmission lines, DOE was required to evaluate the air pollution impacts under NEPA; LBP-14-9, 80 NRC 15 (2014)
with regard to reasonably foreseeable impacts, NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-15-3, 81 NRC 65 (2015)
within the geographic boundary of the Ninth Circuit, NRC may not exclude NEPA terrorism contentions categorically; CLI-11-11, 74 NRC 427 (2011)
within the rule of reason, an environmental impact statement must address both the direct and indirect effects or impacts; LBP-13-4, 77 NRC 107 (2013)
without substantive, comparative environmental impact information regarding other possible courses of action, the ability of an environmental impact statement to inform agency deliberation and facilitate public involvement would be greatly degraded; LBP-12-17, 76 NRC 71 (2012)
worst-case analysis is not required; LBP-12-5, 75 NRC 227 (2012); LBP-13-13, 78 NRC 246 (2013)

NATIONAL HISTORIC PRESERVATION ACT

Act and its implementing regulations do not require that the agency implement any mitigation measures, let alone that those measures meet a certain standard of protection for historic properties; LBP-12-23, 76 NRC 445 (2012)
agencies are encouraged to coordinate the NHPA §106 process with the agency’s process for complying with NEPA; LBP-12-23, 76 NRC 445 (2012)
agencies shall plan for involving the public in the NHPA §106 process but may use the agency’s procedures for public involvement under NEPA if they provide adequate opportunities for public involvement; LBP-12-23, 76 NRC 445 (2012)
agency official must consult with any Indian tribe or Native Hawaiian organization that attaches religious and cultural significance to historic properties that may be affected by an undertaking; LBP-13-6, 77 NRC 253 (2013)
agency officials must, except where appropriate to protect confidentiality concerns of affected parties, provide the public with information about an undertaking and its effects on historic properties and seek public comment and input; LBP-12-23, 76 NRC 445 (2012)
all adverse effects to any NRHP-eligible historic or cultural resource must be considered during any federal undertaking; LBP-11-26, 74 NRC 499 (2011)
alleged failure to consult with a tribe on historic and cultural resources is material and within the scope of a materials license proceeding; LBP-13-9, 78 NRC 37 (2013)
although an agency may coordinate and, where practicable, integrate its National Environmental Policy Act and NHPA review efforts, the two statutes impose separate and distinct obligations; LBP-15-16, 81 NRC 618 (2015)
before licensing any federally assisted undertaking, federal agencies must take into account the effect of the undertaking on any site that is included or eligible for inclusion in the National Register of Historic Places; LBP-12-23, 76 NRC 445 (2012)
burden of fulfilling the Act’s consultation requirements rests exclusively with the NRC, not with the applicant; LBP-12-23, 76 NRC 445 (2012)
claim of violation of NHPA did not in itself establish irreparable harm warranting interlocutory review; CLI-15-17, 82 NRC 33 (2015)
Commission approved NRC Staff completion of some NHPA documents after the environmental impact statement process was complete, but before the license was issued; LBP-15-16, 81 NRC 618 (2015)
compliance with NHPA does not relieve a federal agency of the duty of complying with the environmental impact statement requirement to the fullest extent possible; LBP-15-16, 81 NRC 618 (2015)
contention alleging a failure to protect historic and cultural resources is admissible; LBP-13-9, 78 NRC 37 (2013)
contention alleging that an Indian tribe had not been consulted concerning cultural resources, in violation of the Act, was premature because NRC Staff, not applicant, has the duty to consult with the tribe under the Act, and Staff had not completed its review process; LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)
contention contesting how the consultation mandate is being carried out can be raised in the first instance only after the Staff’s draft environmental impact statement; LBP-13-6, 77 NRC 253 (2013)
demolition of a historic unit to build a new unit will result in a finding of adverse effect under applicable criteria in 36 C.F.R. 800.5; CLI-15-13, 81 NRC 555 (2015)
the federal agency must assess the effects of the undertaking on any eligible historic properties found; LBP-15-16, 81 NRC 618 (2015)
the federal agency must confer with a State Historic Preservation Officer and seek the approval of the ACHP; LBP-15-16, 81 NRC 618 (2015)
the federal agency must determine whether identified properties are eligible for listing on the National Register based on the criteria in 36 C.F.R. 60.4; LBP-15-16, 81 NRC 618 (2015)
the federal law not only recognizes that Native American tribes have a protected interest in cultural resources found on their aboriginal land, but as well has imposed on federal agencies a consultation requirement under NHPA to ensure protection of tribal interests in cultural resources; CLI-14-2, 79 NRC 11 (2014)
in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC 618 (2015)
it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site in the context of a National Historic Preservation Act contention; LBP-15-5, 81 NRC 249 (2015)
NRC must also allow the federal Advisory Council on Historic Preservation a reasonable opportunity to comment with regard to a combined license; LBP-12-23, 76 NRC 445 (2012)
NRC Staff is required to consult with interested parties, including Indian tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 11 (2014)
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)

petitioner should not wait for NRC Staff to perform its responsibilities under NHPA before it raises a claim that information is lacking; CLI-14-2, 79 NRC 11 (2014)

preliminary injunction halting a solar energy project was granted based on a tribal claim that the project would not avoid most of the 459 cultural sites identified, and that the NEPA and NHPA process had been insufficient; LBP-15-2, 81 NRC 48 (2015)

procedures for an agency to follow in complying with section 106 are listed; LBP-12-23, 76 NRC 445 (2012)

programmatic agreement may be used to implement the NHPA § 106 process in situations where the effects on historic properties cannot be fully determined prior to the approval of an undertaking, such as where an applicant proposes a phased approach to developing its project; LBP-15-16, 81 NRC 618 (2015)

that NRC Staff will develop additional information relevant to cultural resources, as part of its NHPA review, does not preclude a challenge to the application’s cultural resources discussion; CLI-14-2, 79 NRC 11 (2014)

though the materials license has already been issued, the land disturbance in the project area will proceed in stages in compliance with NHPA § 106; LBP-15-16, 81 NRC 618 (2015)

to the extent that intervenors’ proposed contention is based on asserted deficiencies in NRC Staff’s process for soliciting public participation pursuant to the National Historic Preservation Act, the contention fails to demonstrate a genuine dispute on a material issue of fact or law; LBP-12-23, 76 NRC 445 (2012)

tribal member who regularly visits tribal migratory route on national monument land to pursue cultural undertakings has standing under NHPA to raise concerns; LBP-13-6, 77 NRC 253 (2013)

tribes have a procedural right to be consulted regarding historic preservation matters; LBP-13-6, 77 NRC 253 (2013)

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMIT

applicant for a federal discharge permit must provide a certification from the state that the proposed activity will not violate state water pollution control standards; LBP-12-16, 76 NRC 44 (2012)

it is appropriate for NRC Staff to give substantial weight to state agency’s decision that issuing the NPDES permit would be environmentally acceptable; LBP-15-11, 81 NRC 401 (2015)

NRC is precluded from second-guessing the conclusions in NPDES permits; LBP-12-16, 76 NRC 44 (2012)

NATIONAL SECURITY INFORMATION

boards may exclude the public from adjudicatory hearings or actions that involve restricted data, defense information, safeguards information protected from disclosure under the authority of AEA § 147, or information protected from disclosure under the authority of section 148; LBP-11-5, 73 NRC 131 (2011)

relative to the issue of foreign ownership or control, NRC imposes restrictions on the physical security and control of information at licensed facilities to safeguard restricted data and national security information; LBP-11-11, 73 NRC 455 (2011)

NATIVE AMERICAN GRAVES PROTECTION AND REPATRIATION ACT

NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)

NATIVE AMERICAN RESERVATIONS

individual tribal member who does not reside on a tribal reservation where a facility is proposed to be located must show injury in fact relative to that member’s activities on the reservation even when the reservation is asserted to be on aboriginal tribal lands; LBP-13-6, 77 NRC 253 (2013)

NATIVE AMERICANS

agencies are to ensure that the federal government operates within a government-to-government relationship with federally recognized Native American tribes, reflecting respect for the rights of self-government due the sovereign tribal governments; LBP-15-16, 81 NRC 618 (2015)

agency official must consult with any Indian tribe or Native Hawaiian organization that attaches religious and cultural significance to historic properties that may be affected by an undertaking; LBP-13-6, 77 NRC 253 (2013)
allegation that the Continued Storage Rule and generic environmental impact statement fail to address the
trust responsibility that NRC owes an Indian tribe represents a collateral attack on the Continued
Storage Rule and GEIS; LBP-14-16, 80 NRC 183 (2014)
although it might be fatal for standing purposes if an Indian tribe were seeking to have intervenors
represent their interests in the proceeding, intervenors’ lack of authority to represent them is not a bar
to intervenors raising the tribe’s contention; LBP-12-12, 75 NRC 742 (2012)
applicant is not required to discuss the federal government’s trust responsibility to Indian tribes in its
environmental report; LBP-12-24, 76 NRC 503 (2012)
areas of potential effect of a federal undertaking must be designated, and the lead federal agency must
consult with the state historic preservation office regarding the presence and protection of historic and
cultural resources in the designated area, as well as any federally recognized Native American groups
with an ancestral interest in the property, to determine if resources important to the tribe are present;
LBP-11-26, 74 NRC 499 (2011)
argument that, in addition to the tribe, individual tribal representative has standing to sue under NHPA
section 106 consultation provisions is rejected; LBP-13-6, 77 NRC 253 (2013)
as a sovereign body, Native American tribes maintain a strong interest in its members’ welfare such that
its organizational purpose is germane to the interests it seeks to represent in proceeding; LBP-13-6, 77
NRC 253 (2013)
consultation must provide an Indian tribe with a reasonable opportunity to identify its concerns about
historic properties and advise on their identification and evaluation, articulate its views on the
undertaking’s effects on such properties, and participate in the resolution of adverse effects; LBP-15-16,
81 NRC 618 (2015)
contention alleging failure to involve or consult all interested tribes as required by federal law is
admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging that an Indian tribe had not been consulted concerning cultural resources, in violation
of the National Historic Preservation Act, was premature because NRC Staff, not applicant, has the duty
to consult with the tribe under the Act, and Staff had not completed its review process; LBP-12-19, 76
NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)
contention claiming that NRC Staff’s consultation was inadequate does not ripen until issuance of NRC
Staff’s draft environmental impact statement; LBP-15-5, 81 NRC 249 (2015)
contention contesting how the consultation mandate is being carried out can be raised in the first instance
only after the Staff’s draft environmental impact statement; LBP-13-6, 77 NRC 253 (2013)
federal agencies must consult with any Indian tribe that attaches religious and cultural significance to the
sites; LBP-15-16, 81 NRC 618 (2015)
federal government bears a trust responsibility to Native American tribes, and the NRC, as a federal
agency, owes a fiduciary duty to tribes and their members; LBP-11-30, 74 NRC 627 (2011)
federal government owes a trust responsibility to Indian tribes; LBP-12-24, 76 NRC 503 (2012)
federal law not only recognizes that tribes have a protected interest in cultural resources found on their
aboriginal land, but as well has imposed on federal agencies a consultation requirement under the
National Historic Preservation Act to ensure the protection of tribal interests in cultural resources;
CLI-14-2, 79 NRC 11 (2014)
federal trust responsibility to Indian tribes extends not just to the Interior Department, but attaches to the
federal government as a whole; LBP-12-24, 76 NRC 503 (2012)
federal trust responsibility to Indian tribes rests solely with the federal government and cannot be
discharged by applicants; LBP-12-24, 76 NRC 503 (2012)
First Nations in Canada must receive invitations to participate in the environmental impact statement
scoping process when there are transboundary environmental impacts from a project; LBP-12-12, 75
NRC 742 (2012)
for federal agencies that do not manage, control, or supervise Indian affairs, unless there is a specific
duty that has been placed on the agency with respect to Indians, this responsibility is discharged by the
agency’s compliance with general regulations and statutes not specifically aimed at protecting Indian
tribes; LBP-14-6, 79 NRC 404 (2014)
government fulfills its trust duties by executing federal law, not by waiving federal law; LBP-14-16, 80
NRC 183 (2014)
government’s trust responsibility is at its apex when it comes to managing tribal resources and preventing confiscation or environmental degradation of those resources; LBP-14-16, 80 NRC 183 (2014)
harming Native American artifacts would constitute an irreparable injury because artifacts are, by their nature, unique, and their historical and cultural significance make them difficult to value monetarily; LBP-15-2, 81 NRC 48 (2015)

Indian tribe’s treaty-based claims of ownership of mining site and international treaty-based claims cannot support the admission of environmental assessment contention; LBP-15-11, 81 NRC 401 (2015)
individual tribal member who does not reside on a tribal reservation where a facility is proposed to be located must show injury in fact relative to that member’s activities on the reservation even when the reservation is asserted to be on aboriginal tribal lands; LBP-13-6, 77 NRC 253 (2013)
individual tribal member’s assertion of an interest based on cultural resource concerns must show that there is a concrete or particularized injury to herself as an individual; LBP-13-6, 77 NRC 253 (2013)
irreparable harm element of the test for issuance of injunctive relief was met where the tribe’s evidence showed that a phase of the project would involve damage to at least one known site, and virtually ensure some loss or damage; LBP-15-2, 81 NRC 48 (2015)

issue of the alleged failure to consult with a tribe on historic and cultural resources is material and within the scope of a materials license proceeding; LBP-13-9, 78 NRC 37 (2013); LBP-15-16, 81 NRC 618 (2015)
it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site in the context of a National Historic Preservation Act contention; LBP-15-5, 81 NRC 249 (2015)
NEPA requires acknowledgment of tribal hunting and fishing rights, as well as an analysis of how the project will affect those rights; LBP-15-5, 81 NRC 249 (2015)
NRC considered Indian tribe’s trust responsibility concerns during its rulemaking; LBP-14-16, 80 NRC 183 (2014)
NRC exercises its fiduciary duty in the context of its authorizing statutes, including the Atomic Energy Act, and implements any fiduciary responsibility by ensuring that tribal members receive the same protections under implementing regulations that are available to other persons; LBP-14-16, 80 NRC 183 (2014)
NRC must prepare an environmental impact statement that adequately evaluates the environmental impacts of relicensing, including impacts to tribal hunting and fishing rights and subsistence consumption; LBP-15-5, 81 NRC 249 (2015)
NRC Staff is required to consult with interested parties, including tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 11 (2014)

NRC Staff must include in the final supplemental environmental impact statement an analysis of significant problems and objections raised by any affected Indian tribes, and by other interested persons; LBP-15-16, 81 NRC 618 (2015)

preliminary injunction halting a solar energy project was granted based on a tribal claim that the project would not avoid most of the 459 cultural sites identified, and that the NEPA and NHPA process had been insufficient; LBP-15-2, 81 NRC 48 (2015)

standing criteria for federally recognized Indian tribes are less stringent, but only where the facility at issue is within the tribe’s boundaries; LBP-12-24, 76 NRC 503 (2012)
to eliminate the inadmissible issue of tribal notification and to clarify the scope of the subsistence consumption issue, board narrows and reformulates a contention; LBP-15-5, 81 NRC 249 (2015)
tribal member who regularly visits tribal migratory route on national monument land to pursue cultural undertakings has standing under NHPA to raise concerns; LBP-13-6, 77 NRC 253 (2013)
tribe has an organizational interest in protecting cultural artifacts connected with it; CLI-14-2, 79 NRC 11 (2014)
tribes have a procedural right to be consulted regarding historic preservation matters; LBP-13-6, 77 NRC 253 (2013)

tribe’s statutorily recognized interest in tribal cultural resources that may still be extant on its recognized aboriginal lands provides a cognizable interest for the purpose of establishing its standing; LBP-13-6, 77 NRC 253 (2013)
under NEPA, defining the scope of effects of a project requires engagement with governments of affected tribes through an early and open process aimed at identifying concerns, potential impacts, relevant effects of past actions, and possible alternative actions; LBP-15-16, 81 NRC 618 (2015)

when a governmental organization, including a federally recognized Native American tribe, is unable to establish standing because the facility or nuclear material in question does not fall within its jurisdictional boundaries, that entity nonetheless may be accorded standing if its boundaries come within a distance from the nuclear facility or material that otherwise would establish standing for an individual or nongovernmental organization, whether via a proximity presumption or otherwise; LBP-13-6, 77 NRC 253 (2013)

NEED FOR POWER

applicant who is a state-regulated utility is in a position to implement and promote programs such as energy conservation, efficiency, and load management such that the need for additional generation capacity may be reduced; LBP-11-6, 73 NRC 149 (2011)

assessment need not precisely identify future market conditions and energy demand, or develop detailed analyses of system generating assets, costs of production, capital replacement ratios, and the like in order to establish with certainty that the construction and operation of a nuclear power plant is the most economical alternative for generation of power; LBP-11-7, 73 NRC 254 (2011)

assessments must be only at a level of detail sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-12-5, 75 NRC 227 (2012)
because the assessment necessarily entails forecasting power demands in light of substantial uncertainty and the duty of providing adequate and reliable service to the public, need-for-power assessments are properly conservative; LBP-11-7, 73 NRC 254 (2011); LBP-12-5, 75 NRC 227 (2012)

contention that applicant fails to include need-for-power analyses in its environmental reports for operating license renewal is inadmissible; LBP-11-13, 73 NRC 534 (2011); LBP-13-12, 78 NRC 239 (2013)
demand for electricity is the justification for building any power plant, and satisfaction of that demand is the principal beneficial factor weighed against the environmental costs in striking the balance that NEPA requires; LBP-11-7, 73 NRC 254 (2011)
discussion of need for power is required in an environmental report, but applicant need not precisely identify future market conditions and energy demand or develop other detailed analyses in order to establish with certainty that construction and operation of a nuclear power plant are the most economical alternative; LBP-11-6, 73 NRC 149 (2011)

forecasts need not precisely identify future market conditions and energy demand, or develop detailed analyses of system generating assets, costs of production, capital replacement ratios, and the like in order to establish with certainty that the construction and operation of a nuclear power plant is the most economical alternative for generation of power; LBP-12-5, 75 NRC 227 (2012)
given the legal responsibility imposed upon a public utility to provide at all times adequate, reliable service, and the severe consequences that may attend upon a failure to discharge that responsibility, the most that can be required is that the forecast be a reasonable one in light of what is ascertainable at the time made; LBP-11-7, 73 NRC 254 (2011); LBP-12-5, 75 NRC 227 (2012)

if demand for power turns out to be less than predicted, it cannot be argued that the cost of the unneeded generating capacity may turn up in customers' electric bills because the surplus can be profitably marketed to other systems or the new capacity can replace older, less efficient units; LBP-12-5, 75 NRC 227 (2012)
in its analysis, NRC Staff may rely on studies and forecasts prepared by expert, independent agencies charged with the duty of ensuring that the utilities within their jurisdiction fulfill the legal obligation to meet customer demands; LBP-11-7, 73 NRC 254 (2011)
inasmuch as NRC Staff relies on the benefits of proposed units to satisfy an otherwise unmet need for power, the adequacy of the need-for-power assessment is material to granting the proposed combined license; LBP-11-7, 73 NRC 254 (2011)
inherent in any forecast of future electric power demands is a substantial margin of uncertainty; LBP-11-6, 73 NRC 149 (2011)
it is sufficient if the analysis is at a level of detail to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-11-7, 73 NRC 254 (2011)

license renewal applicants need not include a need-for-power discussion in their environmental reports; CLI-14-6, 79 NRC 445 (2014); LBP-11-21, 74 NRC 115 (2011)

1118
NEPA only requires reasonable forecasting; LBP-12-5, 75 NRC 227 (2012)
NRC must address any purported need for additional power during its environmental review of a combined license application; LBP-11-7, 73 NRC 254 (2011)
NRC Staff is not required to analyze the need for the power for license renewal; LBP-13-13, 78 NRC 246 (2013)
NRC Staff’s need-for-power analysis may accord an expert, independent agency’s forecasts and studies great weight and may give heavy reliance to those forecasts and studies absent a showing that they contain a fundamental error; LBP-11-7, 73 NRC 254 (2011)
operating license renewal applications need not discuss the need for power; LBP-11-2, 73 NRC 28 (2011)
potential legislative action that might result in a reduction in demand is speculative and therefore does not provide a basis for admission of a contention on need for power; LBP-11-7, 73 NRC 254 (2011)
regardless of whether NRC itself conducts the need-for-power assessment or relies on another agency’s forecasts and studies, that assessment need only be reasonable; LBP-11-7, 73 NRC 254 (2011)
state public service commission’s determination of need for power may be relied on by the NRC in its own analysis, as long as that determination is neither shown nor appears on its face to be seriously defective; LBP-11-6, 73 NRC 149 (2011)
regardless of whether NRC itself conducts the need-for-power assessment or relies on another agency’s forecasts and studies, that assessment need only be reasonable; LBP-11-7, 73 NRC 254 (2011)
where the licensing board independently analyzed the data in the record and made its own need-for-power projection based thereon, NRC did not abdicate its NEPA responsibilities by placing heavy reliance on the judgment of local regulatory bodies; LBP-13-4, 77 NRC 107 (2013)
supplemental environmental impact statements for license renewal are not required to include discussion of need for power or the economic costs and economic benefits of the proposed action or of alternatives to the proposed action; LBP-13-13, 78 NRC 246 (2013)
this is a shorthand expression for the benefit side of the cost-benefit balance that NEPA mandates for a proceeding considering the licensing of a nuclear power plant; LBP-11-6, 73 NRC 149 (2011)
where the licensing board independently analyzed the data in the record and made its own need-for-power projection based thereon, NRC did not abdicate its NEPA responsibilities by placing heavy reliance on the judgment of local regulatory bodies; LBP-13-4, 77 NRC 107 (2013)
NEED TO KNOW
board determination of expert’s need to know with regard to a document withheld as safeguards information was reversed; LBP-11-9, 73 NRC 391 (2011)
lack of clarity in the terms and application of the agency’s newly established SUNSI policy contributed to intervenors’ misapprehension that they were required to demonstrate a need for the information in order to request SUNSI documents; LBP-11-9, 73 NRC 391 (2011)
NRC Staff was admonished for having imposed a stricter-than-necessary standard of “need” for access to SUNSI; LBP-11-9, 73 NRC 391 (2011)
petitioner was denied access to a safeguards-protected design-related document on the basis of his lacking a need to know; LBP-11-9, 73 NRC 391 (2011)
NEGATION ACTION PLAN
applicant’s plan addresses not only how it avoids foreign ownership, control, or domination now, but how it will continue to avoid foreign ownership, control, or domination throughout the entire license period; LBP-14-3, 79 NRC 267 (2014)
applicant’s plan is part of its final safety analysis report and therefore is part of the licensing basis of the facility; LBP-14-3, 79 NRC 267 (2014)
combined license will not be issued where applicants are 100% owned by a foreign corporation, which is 85% owned by the French government, and the foreign corporation has the power to exercise ownership, control, or domination over applicants, and the Negation Action Plan submitted by applicants does not negate this situation; LBP-12-19, 76 NRC 184 (2012)
if applicant’s plan can successfully wall off the foreign entity from influencing applicant’s decisionmaking regarding nuclear safety, security, and reliability concerns, then the AEA’s prohibition on foreign control or domination will not stand in the way of the applicant seeking that license; LBP-14-3, 79 NRC 267 (2014)
where a foreign entity proposed to own 100% of the entire facility, a negation action plan was of no consequence; LBP-14-3, 79 NRC 267 (2014)
NEUTRON FLUENCE
consistency check is required if three or more surveillance data points measured at three or more different neutron fluences exist for a specific material; LBP-15-17, 81 NRC 753 (2015)

1119
consistency check seeks to compare, for a specific material type, the model’s projected embrittlement with the actual embrittlement values at the same fluence provided by material samples; LBP-15-17, 81 NRC 753 (2015)
if three or more surveillance data points measured at three or more different neutron fluences exist for a specific material, licensee shall determine if the surveillance data show a significantly different trend than the embrittlement model predicts; LBP-15-17, 81 NRC 753 (2015)
in calculating embrittlement reference temperatures, licensee must calculate neutron flux through the reactor pressure vessel using a methodology that has been benchmarked to experimental measurements and with quantified uncertainties and possible biases; LBP-15-17, 81 NRC 753 (2015)
surveillance data must be used in the consistency check when it is a heat-specific match for one or more of the materials for which the reference temperature is being calculated and three or more different neutron fluences exist for a specific material; LBP-15-17, 81 NRC 753 (2015)
when fluence of a material sample is known, it must be used in the consistency check if it is of the appropriate chemical composition; CLI-15-22, 82 NRC 310 (2015)

NEUTRON IRRADIATION
embrittlement of reactor pressure vessel walls, decreasing their fracture toughness, is discussed; LBP-15-17, 81 NRC 753 (2015)
exemption from the surveillance program is allowed if a reactor’s lifetime irradiation levels are below a certain threshold; LBP-15-17, 81 NRC 753 (2015)
long-term exposure to neutron radiation and elevated temperatures in a reactor vessel decrease the vessel materials’ fracture toughness, or resistance to fracture; LBP-15-20, 81 NRC 829 (2015)

NO SIGNIFICANT HAZARDS DETERMINATION
apart from discretionary review by the Commission, NRC Staff’s no significant hazards consideration determination is a procedural decision barred from litigation; LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015)
determination permits NRC to make an authorized license amendment effective immediately rather than awaiting the outcome of an adjudicatory challenge; LBP-15-26, 82 NRC 163 (2015)
eligibility conditions for a no significant hazards consideration determination on a proposed amendment are discussed; LBP-15-26, 82 NRC 163 (2015)
final determination allows the Commission to issue the challenged license amendment before the petitioner’s request for a hearing is adjudicated; LBP-15-17, 81 NRC 753 (2015)
final determination does not either prevent the adjudication from proceeding or restrict the licensing board’s substantive determination on public health and safety issues; LBP-15-17, 81 NRC 753 (2015)
license amendment request is not categorically exempt from environmental review if it involves a significant hazards consideration that excludes it from categorical exemption pursuant to the criteria in section 51.22(c)(9)(i); LBP-15-26, 82 NRC 163 (2015)
licensing boards lack jurisdiction to adjudicate challenges to NRC Staff’s proposed no significant hazards consideration determination; LBP-13-11, 78 NRC 177 (2013)
preparation of an environmental impact statement for the proposed action is unnecessary if NRC Staff determines that the proposed action will not have a significant effect on the quality of the human environment; CLI-15-25, 82 NRC 389 (2015)
process for making the determination is discussed; LBP-15-26, 82 NRC 163 (2015)
this procedural device determines when, not whether, petitioners’ right to a hearing under the Atomic Energy Act will occur; LBP-15-26, 82 NRC 163 (2015)
when an adjudicatory proceeding has been initiated with respect to a license amendment issued with such a determination, once the presiding officer’s initial decision becomes effective, the appropriate official shall take action with respect to that amendment in accordance with the initial decision; LBP-15-13, 81 NRC 456 (2015)
when licensee submits its license amendment application to NRC, it must provide the agency with its analysis about the issue using the standards in 10 C.F.R. 50.92; LBP-15-17, 81 NRC 753 (2015)
where NRC Staff takes action pursuant to this determination and issues a license amendment prior to a presiding officer’s initial decision, the Staff will thereafter take appropriate action (if necessary) in accordance with the presiding officer’s decision; CLI-15-25, 82 NRC 389 (2015)
where the Commission finds that exigent circumstances exist and it also determines that an amendment involves no significant hazards considerations, it will provide a hearing after issuance, if one has been requested by a person who satisfies the intervention requirements of 10 C.F.R. 2.309; CLI-15-25, 82 NRC 389 (2015)

NO-ACTION ALTERNATIVE

applicant must provide a discussion of the no-action alternative in its environmental report; LBP-12-8, 75 NRC 539 (2012)
discussion of the no-action alternative need only include feasible, nonspeculative alternatives; LBP-12-8, 75 NRC 539 (2012)
environmental impact statements must consider the alternative of no action; LBP-12-8, 75 NRC 539 (2012)
extent of the no-action discussion is governed by a rule of reason; LBP-12-8, 75 NRC 539 (2012)
NRC Staff is not obligated to fully adopt, or agree with, all comments to the draft supplemental environmental impact statement regarding the no-action alternative; LBP-13-13, 78 NRC 246 (2013)
there need not be much discussion in the environmental documents because it is most simply viewed as maintaining the status quo; LBP-12-8, 75 NRC 539 (2012)
when taking the requisite hard look at environmental consequences of the alternatives to the proposed licensing action, the environmental impact statement must discuss the no-action alternative; LBP-13-13, 78 NRC 246 (2013)

NOISE

increase in noise levels is a significant impact because the agency’s environmental assessment made no firm commitment to any noise mitigation measures; LBP-12-23, 76 NRC 445 (2012)

NONCOMPLIANCES

request that NRC take enforcement action to correct alleged noncompliance with fire protection regulations is granted; DD-12-3, 76 NRC 416 (2012)
use of operator manual actions in lieu of the protection methods specified in 10 C.F.R. Part 50, Appendix R, § III.G.2 is not consistent with the regulations, and plants need regulatory approval for each specific OMA proposed; DD-12-3, 76 NRC 416 (2012)

NONDISCLOSURE AGREEMENTS

board denies a motion seeking sanctions against petitioner for violating the governing protective order and nondisclosure agreement, but imposes a document review requirement on petitioner in light of its misconduct and to enhance future compliance with the proceeding’s protective order; LBP-13-2, 77 NRC 71 (2013)
party moving for sanctions has the burden of establishing by a preponderance of the evidence that petitioner violated the protective order; LBP-13-2, 77 NRC 71 (2013)

NONPARTIES

Commission did not intend to relieve third-party individuals who are not the subject of an enforcement order, but who nonetheless seek a hearing on the order, from satisfying the requirements for a petition for intervention in section 2.309; LBP-14-4, 79 NRC 319 (2014)
nonparty petitioners may not challenge a confirmatory order embodying a settlement if the order improves the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014)
persons who are not parties may file an amicus curiae brief if a matter is taken up by the Commission under 10 C.F.R. 2.341 or sua sponte; CLI-15-1, 81 NRC 1 (2015)
petitioner may act to vindicate its own rights, but it has no standing to assert the rights of others; CLI-12-6, 75 NRC 352 (2012)
representative of a governmental entity that wishes to participate as a nonparty in the proceeding must identify those contentions on which it will participate in advance of any hearing held; LBP-15-11, 81 NRC 401 (2015)
rulemaking petitioner who is not a party to a licensing proceeding has no right under NRC rules to request a stay of that proceeding; CLI-12-6, 75 NRC 352 (2012)
third-party requests for a hearing on an enforcement order have been treated as a petition for intervention under the Commission’s generally applicable rules; LBP-14-4, 79 NRC 319 (2014)
too freely allowing third parties to contest enforcement settlements at hearings would undercut NRC’s policy favoring enforcement settlements; LBP-14-4, 79 NRC 319 (2014)
SUBJECT INDEX

NONS AfEY-RELATED

even though a cooling pond is not a safety-related structure, knowledge of faulting under the pool and the
impact this faulting might have on the pool’s operation are required; LBP-11-16, 73 NRC 645 (2011)

protection of regulatory treatment of nonsafety systems equipment from external hazards at the site is
discussed; CLI-15-13, 81 NRC 555 (2015)
scope of license renewal consists of all nonsafety-related structures, systems, and components whose
failure could prevent satisfactory accomplishment of any safety functions including control of excessive
dose exposures; LBP-13-13, 78 NRC 246 (2013)

NOTICE

Administrative Procedure Act requires no more than a description of the subjects and issues involved in a
notice of proposed rulemaking; LBP-15-15, 81 NRC 598 (2015)

advance notice of proposed rulemaking is a formal invitation to participate in shaping the proposed rule;

advance notice of proposed rulemaking was withdrawn due to changes in market demand; LBP-15-15, 81
NRC 598 (2015)

agency can cease a rulemaking all together after a notice of proposed rulemaking has been issued;

agency is generally not required to issue a new notice of proposed rulemaking if it changes its position,
as long as the final rule is a logical outgrowth of the proposed rule; LBP-15-15, 81 NRC 598 (2015)

agency need not submit a full draft of a rule in a notice of proposed rulemaking; LBP-15-15, 81 NRC
598 (2015)

boards may not rely on a Federal Register notice to put petitioner on constructive notice of a requirement
that the board itself cannot discern in the regulations; LBP-13-3, 77 NRC 82 (2013)

contention admissibility requirements do not apply to hearing demands submitted under section 2.103(b)(2)
and petitioner lacked actual and constructive notice of the contention admissibility requirements that
NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)

contention quotes text from a notice of proposed rulemaking, but it never ties the statements from the
NOPR to any specific section of the environmental assessment, and thus fails to raise a genuine dispute
with the EA; LBP-15-15, 81 NRC 598 (2015)

even one lacking actual notice may be charged with constructive notice of regulations published in the
Federal Register; LBP-13-3, 77 NRC 82 (2013)

if and when applicants file a revision of their application, NRC Staff should renotice the application as to
its foreign ownership aspect; CLI-13-4, 77 NRC 101 (2013)

information notice merely summarizes information that has long been publicly available and does not
provide new information that would constitute good cause for the late filing; CLI-12-10, 75 NRC 479
(2012)

NRC cannot take advantage of applicant’s ignorance of information the agency itself was obligated to
provide; LBP-13-3, 77 NRC 82 (2013)

preamble to notice of proposed rulemaking addresses agency’s duty to identify and make available
technical studies and data that it has employed in reaching the decisions to propose particular rules;

publication of a regulation in the Federal Register constitutes notice to all persons residing in the United
States; LBP-13-3, 77 NRC 82 (2013)

requirement for a notice of proposed rulemaking is to sufficiently and fairly apprise interested parties of
the issues involved, rather than to specify every precise proposal that the agency may ultimately adopt;

where the basis behind the determination not to proceed with a rulemaking was a final agency ruling
allowing for judicial review, the earlier advance notice of proposed rulemaking itself was not held to
have any binding effect on the public; LBP-15-15, 81 NRC 598 (2015)

NOTICE AND COMMENT PROCEDURES

legislative history of the Administrative Procedure Act emphasized the notice requirement for proposed
rulemaking in order to fairly apprise the public of the agency’s potential action; LBP-15-15, 81 NRC
598 (2015)
many agency statements, including statements sometimes called “rules,” do not have force and effect, and advance notice and public participation are required for rules that carry the force of law; LBP-15-15, 81 NRC 598 (2015)

NRC Staff may determine that exigent circumstances exist such that there is insufficient time for a full 30-day public comment period on a license amendment request; LBP-15-13, 81 NRC 456 (2015)

purpose of notice of proposed rulemaking is not to set binding law or policy, but instead to provide interested members of the public an opportunity to comment in a meaningful way on the agency’s proposal; LBP-15-15, 81 NRC 598 (2015)

NOTICE OF APPEARANCE
although the better practice would be to file a notice of appearance, pursuant to section 2.304(d), the signature of a person signing a pleading is a representation that the document has been subscribed in the capacity specified with full authority; LBP-13-12, 78 NRC 239 (2013)

duly authorized member or officer may represent his or her partnership, corporation, or unincorporated association even if he or she is not an attorney at law, but the representative’s notice of appearance must state the basis of his or her authority to act on behalf of the party; LBP-11-13, 73 NRC 534 (2011)

NOTICE OF HEARING
all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-12-3, 75 NRC 164 (2012)

although NRC regulations mandate that a petition contain the name, address, and telephone number of petitioner, the Commission’s hearing notice advises prospective petitioners not to include personal privacy information, such as home addresses or home phone numbers, in their filings; LBP-11-21, 74 NRC 115 (2011)

board finds that it is not necessary for a notice of hearing to be issued before the board can approve a settlement; LBP-15-30, 82 NRC 339 (2015)

contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and directive referring the proceeding to the licensing board; LBP-12-15, 76 NRC 14 (2012)

for an uncontested combined license proceeding, the Notice of Hearing sets the parameters for the Commission’s review; CLI-12-2, 75 NRC 63 (2012)

for proceedings for which a Federal Register notice of agency action is published, the hearing request must be filed not later than the time specified in the notice of proposed action; CLI-14-11, 80 NRC 167 (2014)

hearing notices are the means by which the Commission identifies the subject matter of the hearings and delegates to the boards the authority to conduct proceedings; LBP-11-22, 74 NRC 259 (2011)

if an application is withdrawn prior to issuance of a notice of hearing, the Commission shall dismiss the proceeding; CLI-13-10, 78 NRC 563 (2013)

notice of combined license applications must be published in the Federal Register for 4 consecutive weeks; CLI-12-2, 75 NRC 63 (2012)

NRC will hold a hearing under 10 C.F.R. Part 2, Subparts A, C, G, and I, on each application for issuance of a license for construction and operation of a uranium enrichment facility and will publish public notice of the hearing in the Federal Register at least 30 days before the hearing; LBP-12-21, 76 NRC 218 (2012)

NRC’s notice of opportunity for hearing on a confirmatory order provides the public a safety valve because conceivably the order might remove a restriction upon a licensee or otherwise have the effect of worsening the safety situation; LBP-14-4, 79 NRC 319 (2014)

only 10 C.F.R. 2.203 refers to a notice of hearing as part of the settlement procedure; LBP-15-30, 82 NRC 339 (2015)

scope of a proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-12-18, 76 NRC 127 (2012)

scope of an adjudicatory hearing is limited to the notice of hearing, which in licensing matters normally extends only to the application at issue; CLI-14-11, 80 NRC 167 (2014)
when the board has issued a Notice of Hearing, withdrawal of a license amendment request shall be on such terms as the presiding officer may prescribe; LBP-15-28, 82 NRC 233 (2015)

where the hearing notice does not restrict the hearing to any particular set of issues, the hearing should be understood as encompassing all issues raised by a party to the licensing proceeding that may properly be litigated under Atomic Energy Act §189a; LBP-11-22, 74 NRC 259 (2011)

withdrawal of an application after issuance of a notice of hearing shall be on such terms as the presiding officer may prescribe; LBP-12-20, 76 NRC 215 (2012)

NOTICE OF INTENT
licensee must provide a 30-day notice for all withdrawals other than ordinary administrative expenses to operate the decommissioning fund, but those notices are no longer required once decommissioning has begun and withdrawals are made; LBP-15-24, 82 NRC 68 (2015)

where licensee has not included discovery of unexpected levels of contaminants, and contamination in places not previously expected, in the decommissioning cost estimate, such fund withdrawals would require a 30-day notice; LBP-15-24, 82 NRC 68 (2015)

NOTICE OF VIOLATION
intervenor’s reliance on long-available documents regarding leakages and notices of violation made a contention untimely as filed; LBP-15-11, 81 NRC 401 (2015)

NRC Staff may not issue a notice of violation for failure to satisfy Appendix B requirements during the preapplication period, but may deny a combined license for failure to satisfy the standards and requirements of NRC regulations; LBP-14-7, 79 NRC 451 (2014)

NOTICE PLEADING
contention pleading standards require petitioners to plead specific grievances, not simply to provide general notice pleadings; CLI-15-18, 82 NRC 135 (2015)

mere notice pleading is insufficient, but requirement for contention specificity and factual support rather than vague or conclusory statements is not intended to prevent intervention when material and concrete issues exist; LBP-15-20, 81 NRC 829 (2015)

to the extent that the board relied on a precedent that allowed notice pleading under 10 C.F.R. 2.714(b) in making its contention admissibility determination, it erred; CLI-15-23, 82 NRC 321 (2015)

NOTIFICATION
dismissal of license amendment request is conditioned on requirement that licensee provide notice to petitioner of submission of a similar LAR so that petitioner has a fair opportunity to relitigate issues previously found admissible; LBP-15-28, 82 NRC 233 (2015)

enforcement orders must inform licensee or any other person adversely affected by the order of his or her right to demand a hearing; LBP-14-4, 79 NRC 319 (2014)

licensee must notify NRC as soon as practical, and in all cases within 1 hour of the occurrence, of any deviation from a plant’s technical specifications; DD-11-6, 74 NRC 420 (2011)

notice of renewal of source materials license triggers the 5-day filing deadline to apply for a stay of the license; LBP-15-2, 81 NRC 48 (2015)

NRC must be notified within 24 hours of failure to resolve an alarm within the approved time period; LBP-14-1, 79 NRC 39 (2014)

publication in the Federal Register is legally sufficient notice to all affected people; LBP-15-5, 81 NRC 249 (2015)

to eliminate the inadmissible issue of tribal notification and to clarify the scope of the subsistence consumption issue, board narrows and reformulates a contention; LBP-15-5, 81 NRC 249 (2015)

when licensee requests an amendment, it must notify the state in which its facility is located of its request by providing that state with a copy of its application; LBP-15-28, 82 NRC 233 (2015)

when preparation of the essential fish habitat assessment is consolidated with other environmental review procedures, the National Marine Fisheries Service is to have timely notification of actions that may adversely affect EFH, and whenever possible, at least 60 days’ notice prior to a final decision on an action; LBP-12-10, 75 NRC 633 (2012)

NOZZLES
request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)
NRC GUIDANCE DOCUMENTS

acceptable methods for designing a radiological monitoring program and submitting required semiannual
reports specifying principal radionuclide releases to unrestricted areas for the purpose of estimating
maximum potential annual public doses from such releases are outlined; LBP-11-26, 74 NRC 499
(2011)

although a standard review plan lacks the legal force of regulations, it is to be given special weight as a
guidance document that has been approved by the Commission but is nonbinding guidance; LBP-14-3,
79 NRC 267 (2014)

although boards may give reasonable deference to NRC guidance, such agency guidance does not
substitute for regulations, is not binding authority, and does not prescribe NRC requirements;
LBP-11-16, 73 NRC 645 (2011)

although NRC guidance documents are not legally binding, and compliance with them is not required,
they describe an acceptable approach to compliance with NRC rules; CLI-11-4, 74 NRC 1 (2011)

although NUREGs are not legally binding, they are guidance documents and applicant’s failure to comply
with such documents could give rise to an admissible contention; LBP-11-6, 73 NRC 149 (2011)

applicability of a guidance document may be challenged in an individual proceeding; LBP-15-20, 81 NRC
829 (2015)

assertion by applicant that its aging management plan is consistent with the GALL Report does not
immunize it against a challenge to the AMP; CLI-12-5, 75 NRC 301 (2012)

boards should accord special weight to NRC Staff guidance; LBP-15-16, 81 NRC 618 (2015)

document’s unavailability does not render NRC Staff’s or applicant’s reliance on the NUREG-1150
decontamination cost values altogether unreasonable under NEPA; LBP-13-13, 78 NRC 246 (2013)

GALL Report and the Standard Review Plan are guidance documents, and therefore not binding, but they
do carry special weight; CLI-12-5, 75 NRC 301 (2012)

GALL Report is a nonbinding guidance document which, in the case of revisions, does not have the
force of the law; LBP-13-13, 78 NRC 246 (2013)

guidance documents do not bind the board, and so applicant’s compliance with guidance does not ensure
grant of a license; LBP-14-1, 79 NRC 39 (2014)

guidance documents do not have the force of law, but the Standard Review Plan for the Review of a
License Application for a Fuel Cycle Facility has benefited from extensive consideration within the
agency, with which the Commission has never expressed disagreement; LBP-12-21, 76 NRC 218 (2012)

guidance documents set neither minimum nor maximum regulatory requirements; CLI-15-6, 81 NRC 340
(2015)

guidance documents that are developed to assist in compliance with applicable regulations are entitled to
special weight; CLI-15-6, 81 NRC 340 (2015)

if NRC concludes that an aging management program is consistent with the GALL Report, then it accepts
applicant’s commitment to implement that AMP, finding the commitment itself to be an adequate
demonstration of reasonable assurance under section 54.29(a); CLI-12-5, 75 NRC 301 (2012);
CLI-12-10, 75 NRC 479 (2012)
in assessing whether applicant satisfies the burden of establishing that NRC Staff’s determination of
applicant’s performance was inappropriate, unjustified, arbitrary, or an abuse of discretion, the board
should consult NUREG-1021; LBP-14-2, 79 NRC 131 (2014)
incorporation by reference of the applicable section of the GALL Report is permissible, but applicant
must also provide sufficient plant-specific information to demonstrate that its aging management plan
will be designed and implemented consistent with the report; LBP-13-13, 78 NRC 246 (2013)

information that should be provided in the environmental report and the environmental impact statement
regarding a radiological monitoring program and monitoring program acceptance criteria is set forth;
LBP-11-26, 74 NRC 499 (2011)

license renewal applicant’s use of an aging management program identified in NUREG-1801, Generic
Aging Lessons Learned Report, constitutes reasonable assurance that it will manage the targeted aging
effect during the renewal period; LBP-13-13, 78 NRC 246 (2013)

NRC guidance cannot prescribe requirements; LBP-14-9, 80 NRC 15 (2014)

NRC has addressed pressure suppression containment system vulnerability to early failure under severe
accident conditions including overpressurization in NUREG-0474; DD-15-1, 81 NRC 193 (2015)
NRC is not bound by guidance documents, which do not carry the force of regulations and do not impose legal requirements on licensees; CLI-12-5, 75 NRC 301 (2012)

NRC regional office shall not assign an examiner who failed an applicant on an operating test to administer any part of that applicant’s operating test retake; LBP-14-2, 79 NRC 131 (2014)

NRC Staff guidance documents do not have the force of law and boards are not bound to follow them; CLI-15-6, 81 NRC 340 (2015)

NRC Staff guidance is entitled to special weight in a decision on the merits; LBP-15-20, 81 NRC 829 (2015)

NRC-endorsed guidance on severe accident mitigation alternatives analysis methodology specifies use of the mean annual offsite dose and economic impact; CLI-12-1, 75 NRC 39 (2012)

NUREG-1021 criteria that apply to the preparation of written reactor operator examinations and operating tests are binding upon NRC Staff; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 includes conflict of interest provisions that address the assignment of examiners to an examination team; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 is intended to ensure equitable and consistent administration of examinations for all applicants; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 provides that NRC’s regional offices shall obtain approval from the Office of Nuclear Reactor Regulation operator licensing program office before knowingly deviating from the intent of any of the NUREG-1021 standards; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 specifies NRC Staff policies, procedures, and practices for administering reactor operator initial and requalification written examinations and operating tests, listing goals and specific procedures for preparation, administration, and grading; LBP-14-2, 79 NRC 131 (2014)

NUREGs and Regulatory Guides are, by nature, only advisory and need not apply in all situations and do not themselves impose legal requirements on licensees; LBP-13-13, 78 NRC 246 (2013)

processes that licensees use to define and deploy strategies to enhance their ability to cope with beyond-design-basis external events, including station blackout are provided; DD-15-5, 81 NRC 877 (2015)

pursuant to 10 C.F.R. 55.40, NRC Staff shall use the criteria in NUREG-1021 in effect 6 months before the examination date to prepare written reactor operator examinations required by sections 55.41 and 55.43 and the operating tests required by section 55.45; LBP-14-2, 79 NRC 131 (2014)

reconsideration of the agency’s guidance, as a general matter, should not be resolved in an application-specific proceeding; CLI-13-4, 77 NRC 101 (2013)

reference to an aging management plan in the GALL Report does not insulate that program from challenge in litigation; LBP-13-13, 78 NRC 246 (2013)

standard review plan does not in itself impose requirements on an applicant but provides guidance to NRC Staff in reviewing an application; CLI-14-2, 79 NRC 11 (2014)

such documents are not legally binding, and compliance with them is not required; LBP-15-20, 81 NRC 829 (2015)

such documents describe particular means of satisfying regulatory requirements in ways acceptable to NRC Staff, but do not bind applicants, who remain free to choose different means; LBP-14-1, 79 NRC 39 (2014)

sufficiency of an aging management program that meets the GALL Report’s recommendations can be challenged if the contention admissibility requirements are otherwise met; CLI-12-10, 75 NRC 479 (2012)

under 10 C.F.R. 55.40, NRC Staff shall use NUREG-1021 to prepare and evaluate reactor operator licensing examinations; LBP-14-2, 79 NRC 131 (2014)

where no Staff guidance was available for the particular type of facility undergoing license review, the board reasonably selected a standard for a facility most like the facility under review; CLI-15-6, 81 NRC 340 (2015)

where NRC guidance document is not directly applicable to the issue at hand, the presiding officer is afforded greater leeway in its application; CLI-15-6, 81 NRC 340 (2015)

See also Regulatory Guides
actions taken to assess the integrity of the North Anna plant following a seismic event that exceeded the operating basis and design basis earthquake are described; DD-12-1, 75 NRC 573 (2012)

during the license renewal period, the regulations of 10 C.F.R. Part 50, Appendix B concerning ongoing inspections and audits apply; LBP-13-13, 78 NRC 246 (2013)

NRC is required to verify through inspection that the facility has been constructed in accordance with the requirements of the license; LBP-12-21, 76 NRC 218 (2012)

written policies, implementing procedures, site-specific analysis, and other supporting technical information developed to implement cyber security plans are subject to periodic inspection by NRC Staff; CLI-12-2, 75 NRC 63 (2012)

challenges to NRC rules and regulations are generally prohibited with limited exceptions in view of expanding opportunities for participation in Commission rulemaking proceedings and increased emphasis on rulemaking proceedings as the appropriate forum for settling basic policy issues; CLI-13-7, 78 NRC 199 (2013)

Commission disfavors issuance of advisory opinions; CLI-13-10, 78 NRC 563 (2013)

Criterion 25 of NRC’s agreement state policy statement does not relate to substantive standards or the regulatory outcome of a pending license application, even where a license application has been pending at the NRC for an extended period; CLI-11-12, 74 NRC 460 (2011)

for suspension of licensing proceedings, petitioners must show that continuation of proceedings, pending consideration of a rulemaking petition, would jeopardize the public health and safety, prove an obstacle to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes that might emerge; LBP-11-34, 74 NRC 685 (2011)

intervention petitioner may not attack generic NRC requirements or regulations or express generalized grievances about NRC policies; CLI-15-9, 81 NRC 512 (2015)

licensing boards should only use sua sponte review in extraordinary circumstances; LBP-14-9, 80 NRC 15 (2014)

NRC generally disfavors the filing of new contentions at the eleventh hour of an adjudication, a policy that is grounded in the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; CLI-11-2, 73 NRC 333 (2011)

NRC has a strong policy in favor of openness and transparency; LBP-11-5, 73 NRC 131 (2011)

NRC’s agreement state policy statement does not relate to substantive standards or the regulatory outcome of a pending license application, even where a license application has been pending at the NRC for an extended period; CLI-11-12, 74 NRC 460 (2011)

for suspension of licensing proceedings, petitioners must show that continuation of proceedings, pending consideration of a rulemaking petition, would jeopardize the public health and safety, prove an obstacle to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes that might emerge; LBP-11-34, 74 NRC 685 (2011)

intervention petitioner may not attack generic NRC requirements or regulations or express generalized grievances about NRC policies; CLI-15-9, 81 NRC 512 (2015)

licensing boards should only use sua sponte review in extraordinary circumstances; LBP-14-9, 80 NRC 15 (2014)

NRC generally disfavors the filing of new contentions at the eleventh hour of an adjudication, a policy that is grounded in the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; CLI-11-2, 73 NRC 333 (2011)

NRC has a strong policy in favor of openness and transparency; LBP-11-5, 73 NRC 131 (2011)

NRC’s agreement state policy statement does not relate to substantive standards or the regulatory outcome of a pending license application, even where a license application has been pending at the NRC for an extended period; CLI-11-12, 74 NRC 460 (2011)

NRC’s encouragement of settlements specifically recognizes that settlements are not inviolate, and the presiding officer or Commission may order adjudication of the issues that the presiding officer or Commission finds is required in the public interest to dispose of the proceeding; LBP-14-4, 79 NRC 319 (2014)

piecemeal appeals during ongoing licensing board proceedings are generally disfavored; CLI-11-6, 74 NRC 203 (2011); CLI-13-3, 77 NRC 51 (2013)

purpose of Criterion 25 of NRC’s agreement state policy statement is to ensure that licensing records are transferred to and received by the new agreement state in an orderly manner that ensures that no pending licensing actions will be significantly delayed or that no records will be lost or misplaced as a result of the transition of authority; CLI-11-12, 74 NRC 460 (2011)

rationale for NRC’s policy of generally disfavoring the filing of new contentions at the eleventh hour of an adjudication is based on the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; LBP-11-20, 74 NRC 65 (2011)

to determine whether suspension of an adjudication or licensing decision is warranted, the Commission considers whether moving forward will jeopardize the public health and safety, prove an obstacle to fair
and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes; CLI-14-7, 80 NRC 1 (2014)
too freely allowing third parties to contest enforcement settlements at hearings would undercut NRC’s policy favoring enforcement settlements; LBP-14-4, 79 NRC 319 (2014)
See also Policy Statements

NRC PROCEEDINGS

even if a witness’s testimony was entirely hearsay, evidence of that character is generally admissible in administrative proceedings; LBP-11-14, 73 NRC 591 (2011)
Federal Rules of Evidence are not directly applicable to NRC proceedings, but NRC adjudicatory boards often look to those rules for guidance; LBP-12-21, 76 NRC 218 (2012); LBP-15-20, 81 NRC 829 (2015)

NRC STAFF

actions by the NRC Staff constitute a de facto license amendment when they authorize a licensee to engage in activities beyond the scope of its original license; LBP-13-7, 77 NRC 307 (2013)
agencies of the government must scrupulously observe its rules, regulations, or procedures; LBP-14-2, 79 NRC 131 (2014)
although NRC Staff is free to carry on internecine warfare, it is not free to wage it in an adjudicatory proceeding where all elements of the NRC Staff appear as a single party; LBP-14-2, 79 NRC 131 (2014)
although Staff is not required to be a party to a license transfer adjudication, the Commission directs Staff to become a party; CLI-14-5, 79 NRC 254 (2014)
applicants may prevail against NRC Staff if they prove that a particular contested assessment of a deficiency was inappropriate, unjustified, arbitrary, or an abuse of discretion; LBP-14-2, 79 NRC 131 (2014)
because it relates to Staff’s position on the reviewability of the Board’s decision, Staff’s statement regarding its inclination not to revise the final supplemental environmental impact statement is presented for the first time in Staff’s answer; CLI-11-14, 74 NRC 801 (2011)
boards lack authority to order NRC Staff to bring licensee employees into settlement negotiations; LBP-14-4, 79 NRC 319 (2014)
burden of fulfilling the National Historic Preservation Act’s consultation requirements rests exclusively with the NRC, not with the applicant; LBP-12-23, 76 NRC 445 (2012)
burden of NEPA compliance lies with NRC Staff; LBP-15-2, 81 NRC 48 (2015); LBP-15-16, 81 NRC 618 (2015)
Commission has inherent authority to supervise both NRC Staff’s work and adjudicatory proceedings relating to license applications; CLI-14-1, 79 NRC 1 (2014)
Commission justifiably expects that all applicable provisions of the Rules of Practice will be observed in adjudicatory submissions, but it also expects NRC Staff to turn square corners with those with whom it deals, including applicants for senior reactor operator licenses; LBP-13-3, 77 NRC 82 (2013)
contents of licensee’s behavioral observation program cannot substitute for the duty of NRC Staff to be reasonably clear as to what is required of workers who are trying to comply with their legal obligation to report on their co-workers; LBP-14-4, 79 NRC 319 (2014)
counsel may file interrogatories that the target of an enforcement order must answer; LBP-14-11, 80 NRC 125 (2014)
counsel may take the deposition of the target of an enforcement order or any other person; LBP-14-11, 80 NRC 125 (2014)
due weight must be given to Staff’s position in an enforcement proceeding; LBP-15-21, 82 NRC 1 (2015)
every 2 years, licensee stages full-participation emergency exercises, which are evaluated by both FEMA and NRC; CLI-12-9, 75 NRC 421 (2012)
for NEPA contentions, the burden of proof shifts to NRC Staff, because NRC, not applicant, bears the ultimate burden of complying with NEPA; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)
in denying an exemption request, Staff is required to inform applicant of the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)
SUBJECT INDEX

in Subpart L proceedings, Staff is under a special obligation to create, maintain, and update a hearing file; LBP-14-2, 79 NRC 131 (2014)
license denial letter that contained apparent boilerplate that was incomplete and perforce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the Atomic Energy Act; LBP-13-3, 77 NRC 82 (2013)
NRC cannot take advantage of applicant’s ignorance of information the agency itself was obligated to provide; LBP-13-3, 77 NRC 82 (2013)
NRC, not applicant, bears the ultimate burden of establishing compliance with NEPA; LBP-14-7, 79 NRC 451 (2014)
NUREG-1021 criteria that apply to the preparation of written reactor operator examinations and operating tests are binding on NRC Staff; LBP-14-2, 79 NRC 131 (2014)
parties, including NRC Staff, may be sanctioned for noncompliance with the disclosure regulations;
LBP-14-2, 79 NRC 131 (2014)
regardless of the issuance of the license, the burden at hearing remains on applicant and, with respect to NEPA compliance, on NRC Staff; CLI-15-17, 82 NRC 33 (2015)
Staff and its counsel, like the board and its staff, are federal government employees and are thus subject to stringent sanctions for the unauthorized disclosure of the protected information or protected documents; LBP-11-5, 73 NRC 131 (2011)
Staff and licensee may file interlocutory appeals on the admission of a contention, but intervenors are prohibited from filing such appeals on the denial of a contention unless all contentions have been denied; LBP-14-4, 79 NRC 319 (2014)
Staff is but one of the parties to a licensing proceeding, and the positions that it may take are in no way binding upon the licensing board; LBP-12-23, 76 NRC 445 (2012)
Staff is not required to be a party to a license transfer adjudication; CLI-14-5, 79 NRC 254 (2014)
Staff is obliged to lay all relevant materials before the board to enable it to adequately dispose of the issues before it; LBP-14-2, 79 NRC 131 (2014)
Staff is required to notify the presiding officer and the parties whether it desires to participate as a party in a license transfer proceeding; CLI-14-5, 79 NRC 254 (2014)
Staff will become a party to cases involving an application denial; CLI-14-5, 79 NRC 254 (2014)
Staff’s position in an enforcement proceeding is not itself dispositive of whether an enforcement agreement should be approved, but regulatory instruction to accord that position due weight is dispositive proof of the importance of Staff’s views; LBP-15-21, 82 NRC 1 (2015)
there is nothing in the record to suggest that applicant or NRC Staff will not act in good faith to ensure that applicant’s regulatory responsibilities, including its license conditions, are honored, and the board cannot assume noncompliance; LBP-15-11, 81 NRC 401 (2015)
violations will be dispositioned by Staff as part of its ongoing reactor oversight process, and evidentiary hearings before NRC at the request of third parties are not a part of this process; DD-12-3, 76 NRC 416 (2012)
when it denied a senior reactor operator license, Staff acted inconsistently with its own guidance and applied that guidance in an inconsistent manner; LBP-14-2, 79 NRC 131 (2014)
See also Discovery Against NRC Staff
NRC STAFF REVIEW

absent a rule waiver, NRC Staff is not expected to revisit the impact determinations made in the Continued Storage GEIS as part of its site-specific NEPA reviews; CLI-15-10, 81 NRC 535 (2015)
absent a valid regulation limiting NRC’s NEPA obligations, the consideration of alternative severe accident mitigation measures may not be excluded from the agency’s NEPA reviews; LBP-12-18, 76 NRC 127 (2012)
absent compelling circumstances, Staff is expected to accord sufficient priority and devote sufficient resources to meeting its estimated safety and environmental review schedules; CLI-12-4, 75 NRC 154 (2012); LBP-15-2, 81 NRC 48 (2015)
adequacy of NRC Staff’s review is not a litigable issue in a licensing case; CLI-15-9, 81 NRC 512 (2015)
adequacy of Staff’s review of transmission-corridor impacts might be appropriate for the board’s consideration sua sponte; CLI-15-1, 81 NRC 1 (2015)
after a licensing board in an uncontested proceeding determines that Staff’s NEPA review is adequate, it must then independently consider the final balance among conflicting factors that is struck in the Staff’s recommendation; LBP-12-21, 76 NRC 218 (2012)

agencies are encouraged to incorporate consultation procedures on endangered/threatened species and essential fish habitat into their NEPA review; LBP-12-10, 75 NRC 633 (2012)

agencies are given broad discretion to keep their NEPA inquiries within appropriate and manageable boundaries; LBP-15-3, 81 NRC 65 (2015)

agency cannot relinquish its NEPA responsibility to evaluate environmental impacts by relying on expected compliance with environmental standards of another agency; LBP-15-23, 82 NRC 55 (2015)

agency conducting a NEPA review shall independently evaluate the information submitted and shall be responsible for its accuracy; LBP-15-11, 81 NRC 401 (2015)

agency responsible for preparing the environmental impact statement must define the scope of the issues it will address; LBP-11-10, 73 NRC 424 (2011)

agency’s reliance on mitigation in making a finding of no significant impact is justified if the proposed mitigation is imposed by statute or regulation or has been so integrated into the initial proposal that it is impossible to define the proposal without mitigation; LBP-12-23, 76 NRC 445 (2012)

agency’s reliance on mitigation in making a finding of no significant impact must be justified; LBP-12-23, 76 NRC 445 (2012)

agency’s reliance on mitigation in making a finding of no significant impact is justified if the proposed mitigation is imposed by statute or regulation or has been so integrated into the initial proposal that it is impossible to define the proposal without mitigation; LBP-12-23, 76 NRC 445 (2012)

agency’s reliance on mitigation in making a finding of no significant impact must be justified; LBP-12-23, 76 NRC 445 (2012)

aging-based safety review set out in Part 54 is analytically separate from Part 51’s environmental inquiry and does not in any sense restrict NEPA; LBP-11-17, 74 NRC 11 (2011)

although a draft supplemental environmental impact statement may rely in part on applicant’s environmental report, NRC Staff must independently evaluate and be responsible for the reliability of all information used in the DSEIS; LBP-15-3, 81 NRC 65 (2015)

although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants, NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review; LBP-12-26, 76 NRC 559 (2012)

although NRC must respond to the significant views of other agencies, particularly if they are critical of NRC’s analysis, that duty applies at the final environmental impact statement stage after the draft EIS has been circulated to interested federal and state agencies for their review and comment; LBP-12-12, 75 NRC 742 (2012)

although NRC must take a hard look under NEPA, NEPA itself does not mandate particular results; LBP-13-13, 78 NRC 246 (2013)

although NRC regulations do not require NRC Staff to analyze the environmental impacts of NRC licensing actions on the environment of foreign nations, the Staff extended its outreach to international organizations to inform its analysis of the potential environmental impacts of the project; CLI-15-13, 81 NRC 555 (2015)

although Staff reviews submissions under 10 C.F.R. 50.71(e) for compliance with such administrative requirements as timeliness and content, it does not approve substantive changes, such as to a seismic analysis, as part of the process; LBP-15-27, 82 NRC 184 (2015)

although sufficiency of the application and NRC Staff’s environmental review of that application are proper targets of contentions, sufficiency of NRC Staff’s safety review of the application is not; LBP-11-29, 74 NRC 612 (2011)

although the Commission found NRC Staff’s review of combined license applications rigorous, it imposed a condition requiring implementation of a squib-valve surveillance program prior to fuel load; CLI-15-13, 81 NRC 555 (2015)

any NEPA-based challenge to the efficacy of, or the Staff’s reliance on, the state permitting process relative to the Staff’s environmental review must await the Staff’s initial environmental review document; LBP-13-6, 77 NRC 253 (2013)

applicant’s environmental report is not the vehicle for the NRC Staff’s safety review; LBP-11-6, 73 NRC 149 (2011)

as part of its NEPA analysis, NRC must provide information that addresses the purpose and need for the proposed action; LBP-11-26, 74 NRC 499 (2011)

basis of Staff’s reasonable assurance finding on combined license applicant’s squib valve inspection program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75 NRC 63 (2012)
because agency practice is one indicator of how the agency interprets regulations, a consistently held
NRC Staff view on an operator testing policy matter will not be disturbed; LBP-14-2, 79 NRC 131
(2014)
because NEPA is premised on a rule of reason, NRC need only consider reasonable alternatives to a
proposed action; LBP-11-26, 74 NRC 499 (2011)
before a final decision approving or disapproving a construction authorization application may be reached,
not only must the Staff complete its safety and environmental reviews but a formal hearing must be
conducted, and the Commission’s own review of both contested and uncontested issues must take place;
CLI-13-8, 78 NRC 219 (2013)
blanket reliance by NRC Staff on Clean Water Act permits is not permitted; LBP-14-9, 80 NRC 15
(2014)
board rules in favor of NRC Staff on contention challenging adequacy of the assessment of impacts on
the eastern fox snake contained within the final environmental impact statement; LBP-14-7, 79 NRC
451 (2014)
boards conducting mandatory hearings should not second-guess the underlying technical or factual findings
by NRC Staff; LBP-12-21, 76 NRC 218 (2012)
boards lack authority to direct NRC Staff’s regulatory reviews; LBP-12-19, 76 NRC 184 (2012)
burden of establishing compliance with NEPA falls on NRC Staff, not applicant; LBP-12-17, 76 NRC 71
(2012)
careful consideration of severe accident mitigation design alternatives is required under NEPA, and NRC’s
failure to consider them is a violation of NEPA; LBP-12-8, 75 NRC 539 (2012)
Commission addresses the sufficiency of Staff’s review of a combined license application rather than a
making a de novo review; CLI-12-2, 75 NRC 63 (2012)
Commission directs Staff to devote sufficient resources to complete its review in a timely manner;
CLI-15-17, 82 NRC 33 (2015)
Commission does not review combined license application de novo, but rather considers the sufficiency of
NRC Staff’s review of the application; CLI-15-13, 81 NRC 555 (2015)
Commission examines whether Staff’s safety review of the combined license application under 10 C.F.R.
52.97(a)(1)(ii)-(v) has been adequate to support its findings; CLI-12-9, 75 NRC 421 (2012)
Commission must determine whether NRC Staff review of a combined license application has been
adequate to support the findings listed in 10 C.F.R. 52.97 and 51.107(a) for each of the licenses to be
issued and in 10 C.F.R. 50.10 and 51.107(d) with respect to the limited work authorizations; CLI-12-2,
75 NRC 63 (2012)
completion of NRC Staff’s final environmental review document always must precede the conduct of
hearings on environmental issues; LBP-11-30, 74 NRC 627 (2011)
compliance with the Clean Water Act does not negate the requirement for NRC to weigh all
environmental effects of a proposed action; LBP-12-16, 76 NRC 44 (2012)
compliance with the environmental quality standards and requirements of the Federal Water Pollution
Control Act is not a substitute for, and does not negate the requirement for NRC to weigh all
environmental effects of the proposed action, including the degradation, if any, of water quality; 
compliance with the National Environmental Policy Act is ultimately the responsibility of the NRC;
CLI-12-13, 75 NRC 681 (2012)
contention alleging that an Indian tribe had not been consulted concerning cultural resources, in violation
of the National Historic Preservation Act, was premature because NRC Staff, not applicant, has the duty
to consult with the tribe under the Act, and Staff had not completed its review process; LBP-12-19, 76
NRC 184 (2012)
contention asserting that the NRC’s environmental review of the license renewal application has not met
the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and
Management Act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633
(2012)
contention claiming that NRC Staff’s consultation was inadequate does not ripen until issuance of the
Staff’s draft environmental review document; CLI-14-2, 79 NRC 11 (2014)
contention fails because it contests NRC Staff’s safety review rather than the license renewal application;
contention that draft environmental impact statement fails to demonstrate adequate technical sufficiency and fails to present information in a clear, concise manner is inadmissible; LBP-13-9, 78 NRC 37 (2013)
deficiencies in Staff’s analysis of a combination alternative is not harmless error; LBP-12-17, 76 NRC 71 (2012)
definition of the scope of the environmental impact statement is the responsibility of the NRC Staff; LBP-14-9, 80 NRC 15 (2014)
determination of minimal environmental impact would make little sense when an agency lacks essential information and has not sought to compile it through independent research; LBP-14-9, 80 NRC 15 (2014)
determination of possible effects on an endangered species is ultimately the acting agency’s responsibility; LBP-12-10, 75 NRC 633 (2012)
directing NRC Staff to investigate a safety issue that the board could not reach through the adjudicatory process may put the Commission in a position, after receiving views of applicant if it desired, to assure itself about the significance, or lack thereof, of the shield building cracking issues raised by intervenors, and to direct such followup proceedings, if any, as it might deem appropriate; LBP-15-1, 81 NRC 15 (2015)
duty to exercise independent judgment does not mean that NRC must reinvent every wheel or duplicate competent and professional environmental data and studies that have already been done on a proposed site; LBP-13-4, 77 NRC 107 (2013)
environmental impact statement must be prepared in connection with a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery; LBP-15-3, 81 NRC 65 (2015)
environmental impact statements must consider the alternative of no action; LBP-12-8, 75 NRC 539 (2012)
environmental, technical, and other costs and benefits of a proposed action and alternatives are to be considered and weighed, and, to the fullest extent practicable, quantified; LBP-11-7, 73 NRC 254 (2011)
extpert, independent agency’s forecasts and studies may be accorded great weight and heavy reliance given to those forecasts and studies absent a showing that they contain a fundamental error; LBP-11-7, 73 NRC 254 (2011)
the fact that a competent and responsible state authority has approved the environmental acceptability of a site or a project after extensive and thorough environmentally sensitive hearings is properly entitled to substantial weight in the conduct of NRC’s own NEPA analysis; LBP-15-11, 81 NRC 401 (2015)
the federal agency would be acting arbitrarily and capriciously if it did not look at relevant data and sufficiently explain a rational nexus between the facts found in its review and the choice it makes as a result of that review; LBP-11-17, 74 NRC 11 (2011)
for a proposed nuclear materials-related activity, including uranium enrichment, commencement of construction prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-11, 73 NRC 455 (2011)
for each license renewal application, NRC Staff must prepare a plant-specific supplement to the generic environmental impact statement that adopts applicable generic impact findings from the GEIS and analyzes site-specific impacts; LBP-12-8, 75 NRC 539 (2012)
for power plant license renewals, NRC Staff prepares a supplement to its generic environmental impact statement; LBP-12-10, 75 NRC 633 (2012)
for power reactors, NRC developed a Commission-approved standard review plan to assist in evaluating applications for reactor licenses or applications for the transfer of such licenses; LBP-11-11, 73 NRC 455 (2011)
for power reactors, NRC Staff review should encompass emissions from the uranium fuel cycle as well as from construction and operation of the facility to be licensed; LBP-11-26, 74 NRC 499 (2011)
generalized grievances with sufficiency of NRC Staff’s analysis or the adequacy of included documentation are not enough to raise a proposed contention to the level of admissibility; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
giving appropriate deference to NRC Staff technical expertise, boards are to probe the logic and evidence supporting Staff findings and decide whether those findings are sufficient to support license issuance; LBP-12-21, 76 NRC 218 (2012)

if after conducting a threshold review, NRC Staff concludes that the applicant may be considered to be foreign owned, controlled, or dominated, or that additional action would be necessary to negate the foreign ownership, control, or domination, applicant shall be promptly advised and requested to submit a negation action plan; LBP-11-11, 73 NRC 455 (2011)

if applicant did not pursue an early site permit, all relevant site characteristics, including site geology, hydrology, seismology, and man-made hazards, as well as potential environmental impacts of the project, were studied as part of NRC Staff’s combined license review and are within the scope of the Commission decision; CLI-15-13, 81 NRC 555 (2015)

if NRC lacks sufficient information to reach an informed decision, then the agency has a duty to collect further information and conduct further analysis; CLI-13-1, 77 NRC 1 (2013)

if NRC Staff had in hand new information that could render invalid the original site-specific analysis, then such information should be identified and evaluated by Staff for its significance, consistent with NEPA requirements; CLI-12-19, 76 NRC 377 (2012)

if NRC Staff has not previously considered severe accident mitigation alternatives for the applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment, a consideration of SAMAs must be provided in license renewal applicant’s environmental report; LBP-11-21, 74 NRC 115 (2011)

if the board’s findings after the evidentiary hearing affect Staff’s conclusions in the environmental assessment, then those conclusions would have to be revisited; CLI-15-17, 82 NRC 33 (2015)

if the NRC Staff safety review reveals any new and significant information relating to the environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 404 (2014)

in a mandatory hearing, a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-11-26, 74 NRC 490 (2011)

in analyzing predictions of water availability in a report, NRC Staff consulted with the other government agencies to determine whether data from either of those agencies could be obtained to prepare a new water availability prediction; LBP-13-4, 77 NRC 107 (2013)

in assessing whether applicant/licensee adequately carries out a licensing directive, boards are to assume that NRC Staff will be fair and judge the matter of applicant/licensee’s compliance on the merits; LBP-15-3, 81 NRC 65 (2015)

in its need-for-power analysis, NRC Staff may rely on studies and forecasts prepared by expert, independent agencies charged with the duty of ensuring that the utilities within their jurisdiction fulfill the legal obligation to meet customer demands; LBP-11-7, 73 NRC 254 (2011)

in the area of impacts of combined licenses and limited work authorizations, Staff, in its review of new and significant information, identified a change in impacts associated with terrestrial ecology; CLI-12-2, 75 NRC 63 (2012)

in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013)

in uncontested hearings, it is NRC’s duty to ensure, among other things, that it has adhered to its obligations under the National Environmental Policy Act; CLI-15-1, 81 NRC 1 (2015)

inasmuch as NRC Staff relies on the benefits of proposed units to satisfy an otherwise unmet need for power, the adequacy of the need-for-power assessment is material to granting the proposed combined license; LBP-11-7, 73 NRC 254 (2011)

incident to its preparation of the safety evaluation report, NRC Staff is obligated to ensure that applicant’s design basis for the new units will protect public health and safety; LBP-11-6, 73 NRC 149 (2011)

intervenor is not entitled to Staff’s review documents as a discovery tool; CLI-12-17, 76 NRC 207 (2012)

it is appropriate for NRC Staff to give substantial weight to state agency’s decision that issuing the NPDES permit would be environmentally acceptable; LBP-15-11, 81 NRC 401 (2015)
it is not clear that NRC Staff relied upon the generic environmental impact statement when preparing the draft supplemental environmental impact statement because it was not incorporated by reference or mentioned in any other manner; LBP-15-11, 81 NRC 401 (2015)

it is not necessary or appropriate to throw open the full gamut of provisions in a facility’s current licensing basis to reanalysis during the license renewal review, because the CLB is effectively addressed and maintained by ongoing agency oversight, review, and enforcement; LBP-12-24, 76 NRC 503 (2012)

it is NRC Staff, not petitioners, that has the burden of complying with NEPA; LBP-15-5, 81 NRC 249 (2015)

it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site in the context of a National Historic Preservation Act contention; LBP-15-5, 81 NRC 249 (2015)

it is unnecessary to include in license renewal review all those issues already monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight; LBP-13-6, 78 NRC 1 (2013)

license applications, not Staff’s review, are to be the focus of a licensing adjudication; LBP-13-6, 77 NRC 253 (2013)

licensing boards are not empowered to superintend, to any extent, the conduct of Staff technical reviews; CLI-11-14, 74 NRC 801 (2011); CLI-12-4, 75 NRC 154 (2012); LBP-11-30, 74 NRC 627 (2011); LBP-13-7, 77 NRC 307 (2013); LBP-15-2, 81 NRC 48 (2015)

licensing boards can refer potentially significant safety issues that cannot be addressed through the adjudicatory process to NRC Staff for review; LBP-15-1, 81 NRC 15 (2015)

licensing boards conducting mandatory hearings on uncontested issues are expected to take an independent hard look at Staff safety and environmental findings but are not to replicate Staff work; LBP-12-21, 76 NRC 218 (2012)

licensing boards have authority to adjudicate exemption issues, but Staff serves as an initial reviewer of exemption requests; LBP-12-6, 75 NRC 256 (2012)

mere existence of comments and questions generated by NRC Staff do not, in and of themselves, demonstrate a material deficiency in applicant’s combined license application; LBP-11-6, 73 NRC 149 (2011)

NEPA does not impose a substantive obligation for a reviewing agency to require or enforce mitigation measures discussed in an environment assessment; LBP-14-6, 79 NRC 404 (2014)

NEPA does not require NRC Staff to examine every conceivable aspect of federally licensed projects in preparing its environmental impact statement; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

NEPA does not require that the agency wait until inchoate information matures into something that later might affect its review; CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012); CLI-12-15, 75 NRC 704 (2012)

NEPA encourages state participation when appropriate and authorized, but coordination between a federal agency and a state requires active involvement between the two in order for the federal agency to meet its independent review burden; LBP-15-11, 81 NRC 401 (2015)

NEPA imposes on NRC a disclosure obligation that NRC publicly discuss its evaluation of the reasonably foreseeable effects of a proposed action; CLI-15-25, 82 NRC 389 (2015)

NEPA obligates NRC Staff to undertake a full and independent evaluation of the environmental impacts of applicant’s proposed action; LBP-12-9, 75 NRC 615 (2012)

NEPA precludes an agency from avoiding the NEPA’s requirements by simply relying on another agency’s conclusions about a federal action’s impact on the environment; LBP-13-4, 77 NRC 107 (2013)

NEPA requires a hard look at the environmental effects of the planned action, not a circular restatement of NRC Staff’s own conclusions; LBP-15-11, 81 NRC 401 (2015)

NEPA requires that NRC conduct its environmental review with the best information available at that time; CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012); CLI-12-15, 75 NRC 704 (2012); LBP-12-8, 75 NRC 539 (2012)

NRC does not mandate a specific approach to SAMA analyses, but instead, reviews each severe accident mitigation consideration provided by a license renewal applicant on its merits and determines whether it is reasonable; CLI-13-7, 78 NRC 199 (2013)

NRC hearings on NEPA issues focus entirely on the adequacy of NRC Staff’s work; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)
SUBJECT INDEX

NRC is required to independently assess the validity of the information that applicant submits in its environmental report; LBP-13-4, 77 NRC 107 (2013)

NRC is required to prepare a detailed statement discussing the environmental impacts, alternatives, and mitigation measures for any major federal action significantly affecting the quality of the human environment; CLI-13-7, 78 NRC 199 (2013)

NRC may decline to examine remote and speculative risks or events with inconsequentially small probabilities; LBP-11-26, 74 NRC 499 (2011)

NRC may not abdicate its duty under NEPA to other agencies to consider environmental impacts, even if those agencies have special expertise relating to environmental impacts; LBP-13-4, 77 NRC 107 (2013)

NRC must address any purported need for additional power during its environmental review of a combined license application; LBP-11-7, 73 NRC 254 (2011)

NRC must include an evaluation of failure to secure permanent disposal, as well as an improved analysis of spent fuel pool leaks and spent fuel pool fires; CLI-14-8, 80 NRC 71 (2014)

NRC must rigorously explore and objectively analyze environmental impacts, so that merely offering general statements about possible effects and some risk does not constitute a hard look absent a justification regarding why more definitive information could not be provided; LBP-11-26, 74 NRC 499 (2011)

NRC reserves the right to review, as necessary, the rate of accumulation of decommissioning funds and to take additional actions, as appropriate on a case-by-case basis, to ensure an adequate accumulation of decommissioning funds; DD-11-7, 74 NRC 787 (2011)

NRC Staff cannot defend its decision on a basis inconsistent with its own informal review; LBP-14-2, 79 NRC 131 (2014)

NRC Staff examined special pathways of exposure that could lead to a higher level of radiation exposure in minority and low-income populations in the area, including subsistence consumption of fish, native vegetation, surface waters, sediments, and local produce; CLI-15-6, 81 NRC 340 (2015)

NRC Staff improperly discharges its duties with respect to the grading of an operating test if the grading is inappropriate or unjustified or if the grading strays too far afield of the twin goals of equitable and consistent examination administration, thus becoming arbitrary or an abuse of discretion; LBP-14-2, 79 NRC 131 (2014)

NRC Staff is directed to review foreign ownership issues outside the adjudicatory context, to consider stakeholder input, and to recommend whether the Commission should consider modifications to agency guidance or practice; CLI-13-4, 77 NRC 101 (2013)

NRC Staff is required to prepare environmental impact statements for reactor licensing proceedings; CLI-14-7, 80 NRC 1 (2014)

NRC Staff may not take a position or assert facts before the presiding officer contrary to a matter decided by the appeal board (i.e., the Staff itself) on applicant’s informal appeal absent an explicit confession of error; LBP-14-2, 79 NRC 131 (2014)

NRC Staff may rely on the scientific data and inferences drawn by another government agency but need not slavishly defer to that agency’s findings or its conclusions about water quality; LBP-13-4, 77 NRC 107 (2013)

NRC Staff must assess the relationship between local short-term uses and long-term productivity of the environment, consider alternatives, and describe the unavoidable adverse environmental impacts and the irreversible and irretrievable commitments of resources associated with the proposed action; CLI-15-13, 81 NRC 555 (2015)

NRC Staff must correctly evaluate basic issues whether or not they were raised by intervenors; LBP-14-9, 80 NRC 15 (2014)

NRC Staff must have some discretion to draw the line and move forward with decisionmaking; LBP-15-16, 81 NRC 618 (2015)

NRC Staff must include new and significant information in the supplemental draft environmental impact statement; LBP-11-34, 74 NRC 685 (2011)

NRC Staff must prepare a summary of determinations and conclusions and provide it to scoping participants; LBP-13-9, 78 NRC 37 (2013)

NRC Staff must provide a reasonably thorough discussion of the significant aspects of the probable environmental consequences of a proposed action; LBP-15-16, 81 NRC 618 (2015)
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)
NRC Staff must weigh unavoidable adverse environmental impacts and resource commitments (costs) against the project’s benefits; CLI-15-13, 81 NRC 555 (2015)
NRC Staff need not perform a wholly independent analysis from scratch, but may rely on the scientific data and inferences drawn by another federal agency; LBP-13-4, 77 NRC 107 (2013)
NRC Staff uses applicant’s environmental report as a starting point for its own environmental review of a license renewal application, the results of which are published as a supplement to the generic environmental impact statement; CLI-15-6, 81 NRC 340 (2015)
NRC Staff will independently evaluate and be responsible for the reliability of all information used in the draft environmental impact statement; LBP-13-4, 77 NRC 107 (2013)
NRC Staff’s decision at the conclusion of its administrative reviews is the final Staff position and hence the only Staff position open to applicant to challenge before the presiding officer; LBP-14-2, 79 NRC 131 (2014)
NRC Staff’s independent finding of license renewal applicant’s consistency with the GALL Report does not prevent the board from reviewing the substance of the applicant’s commitments, and exploring deficiencies alleged by intervenors in its proceedings; LBP-13-13, 78 NRC 246 (2013)
NRC Staff’s reliance in an environmental impact statement on predicted future monitoring and regulatory compliance program to prevent environmental impacts is not permitted; LBP-14-9, 80 NRC 15 (2014)
NRC Staff’s responsibilities, parallel to the adjudicatory process, include seeking additional information from applicant after docketing of a pending license application; LBP-12-9, 75 NRC 615 (2012)
NRC’s analysis, in its final environmental impact statement, of issues relating to dewatering associated with construction and operation of the proposed plants was adequate and satisfied the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)
NRC’s independent technical evaluation of information submitted by licensee to demonstrate that no functional damage occurred as a result of an earthquake is described; DD-15-9, 82 NRC 274 (2015)
NRC’s review of a COL application is the type of proposed action obliging the Staff to prepare an environmental impact statement or a supplement thereto; LBP-11-39, 74 NRC 862 (2011)
obligations under Part 51 and NEPA are not limited to only those severe accident mitigation alternatives that address aging management; LBP-11-17, 74 NRC 11 (2011)
NRC completes its environmental review, its record of decision must state whether NRC has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm from the alternative selected, and if not, to explain why those measures were not adopted, and summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-11-17, 74 NRC 11 (2011)
petitioner should not wait for the Staff to perform its responsibilities under the National Historic Preservation Act before it raises a claim that information is lacking; CLI-14-2, 79 NRC 11 (2014)
petitioner’s issue of NRC Staff’s compliance with its NEPA obligation to undertake a full evaluation of the environmental impacts associated with a proposed federal action is within the scope of an operating license amendment proceeding and material to the findings NRC must make; LBP-15-13, 81 NRC 456 (2015)
presiding officer must take into consideration NRC Staff’s projected schedule for completion of its safety and environmental evaluations to ensure that the hearing schedule does not adversely impact Staff’s ability to complete its reviews in a timely manner; LBP-13-13, 78 NRC 246 (2013)
procedures used to evaluate applications for issuance or transfer of control of a production or utilization facility license in light of the prohibitions in Atomic Energy Act §§ 103d and 104d and in 10 C.F.R. 50.38 against foreign ownership or control are described; LBP-12-19, 76 NRC 184 (2012)
process for making the no significant hazards consideration determination is discussed; LBP-15-26, 82 NRC 163 (2015)
purpose of a mandatory hearing is to determine whether NRC Staff’s review of the application has been adequate to support the required regulatory findings; CLI-12-11, 75 NRC 523 (2012)
regardless of whether a hearing request is granted, NRC Staff performs a full safety review of every license amendment request and no request is approved until all necessary public health and safety findings have been made; CLI-15-22, 82 NRC 310 (2015)
regardless of whether NRC itself conducts the need-for-power assessment or relies on another agency’s forecasts and studies, that assessment need only be reasonable; LBP-11-7, 73 NRC 254 (2011) relative to factual matters, to carry burden of proof, NRC Staff and/or applicant must establish that its position is supported by a preponderance of the evidence; LBP-15-3, 81 NRC 65 (2015) release of Staff’s environmental review document may be the first opportunity for petitioner to question accuracy of Staff’s environmental analysis; CLI-15-17, 82 NRC 33 (2015) review method chosen by NRC in creating its models with the best information available when it began its analysis and then checking the assumptions of those models as new information becomes available is a reasonable means of balancing competing considerations, particularly given the many months required to conduct full modeling with new data; CLI-12-7, 75 NRC 379 (2012) review of combined license application relative to regulatory actions that the NRC has taken in response to lessons learned from the Fukushima Dai-ichi accident is discussed; CLI-15-13, 81 NRC 555 (2015) rulemaking petitioners assert that NRC Staff’s review of the expedited-transfer issue generated new and significant information regarding the environmental impacts of spent fuel storage; CLI-14-7, 80 NRC 1 (2014) safety review for license renewal applications is guided by NUREG-1800, Standard Review Plan for Review of License Renewal Applications for Nuclear Power Plants, and NUREG-1801, Generic Aging Lessons Learned Report; LBP-13-13, 78 NRC 246 (2013) significant delays in Staff’s review potentially deprive an Indian tribe of its hearing rights; CLI-12-4, 75 NRC 154 (2012) Staff considers FEMA’s findings on emergency plans in making its necessary finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; CLI-12-9, 75 NRC 421 (2012) Staff ensures that applicant’s design basis for the new units will protect public health and safety by verifying that the design basis will withstand maximum flooding events; LBP-11-6, 73 NRC 149 (2011) Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 63 (2012) Staff has conducted cumulative impact analyses of covered actions that were not interdependent with the proposed action; LBP-14-6, 79 NRC 404 (2014) Staff is authorized to issue a license when it has completed its review during the pendency of a hearing as long as it provides the board and parties notice and an explanation why the public health and safety are protected and why the action is in accord with the common defense and security despite the pendency of the contested matter; CLI-15-17, 82 NRC 33 (2015) Staff is empowered to issue requests for additional information relevant to an applicant’s environmental report; LBP-11-32, 74 NRC 654 (2011); LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011) Staff is required to consult with interested parties, including Indian tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 11 (2014) Staff must draw its own independent conclusion as to whether applicant’s programs are in fact consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013) Staff must make a recommendation of the environmental acceptability of the license renewal action, and the Commission shall determine whether the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; CLI-12-8, 75 NRC 393 (2012) Staff must prepare a final environmental impact statement in accordance with the requirements of 10 C.F.R. 51.71 for a draft environmental impact statement; LBP-12-18, 76 NRC 127 (2012) Staff relies heavily on applicant’s environmental report in preparing its final environmental impact statement; LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012) Staff’s environmental review was conducted in cooperation with the U.S. Army Corps of Engineers, with NRC acting as lead agency and ACE as cooperating agency under a memorandum of understanding, because applicants also needed permits from ACE to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012) Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 149 (2011)
Staff’s steps in the geographic and demographic review in the final safety evaluation report to determine whether the COL applicant has proposed an acceptable site, including acceptable site boundaries, with appropriate consideration of nearby populations and natural and manmade features, are described; CLI-12-9, 75 NRC 421 (2012)

Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-26, 74 NRC 499 (2011)

standard review plan does not in itself impose requirements on an applicant but provides guidance to NRC Staff in reviewing an application; CLI-14-2, 79 NRC 11 (2014)

sufficiency of the NRC’s hard look at the benefits of severe accident mitigation alternatives in comparison to their costs is subject to litigation in a license renewal proceeding; LBP-11-17, 74 NRC 11 (2011)

supplemental environmental review documents must be prepared when there are substantial changes in the proposed action that are relevant to environmental concerns or significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-12-18, 76 NRC 127 (2012)

taking a hard look at environmental impacts fosters both informed decisionmaking and informed public participation, and thus ensures that NRC does not act on incomplete information, only to regret its decision after it is too late to correct it; LBP-11-26, 74 NRC 499 (2011)

that NRC Staff will develop additional information relevant to cultural resources, as part of its National Historic Preservation Act review, does not preclude a challenge to the application’s cultural resources discussion; CLI-14-2, 79 NRC 11 (2014)

to evaluate a power reactor license renewal application, NRC reviews management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components and environmental impacts and alternatives to the proposed action in accordance; LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)

to issue an early site permit, NRC must comply with the National Environmental Policy Act by including in an environmental impact statement a detailed statement on the environmental impact of the proposed action, any unavoidable adverse environmental effects that cannot be avoided, and alternatives to the proposed action; LBP-11-10, 73 NRC 424 (2011)

to meet its environmental review burden in license renewal cases, NRC Staff developed the generic environmental impact statement, which contains findings that apply to all nuclear power plants and are codified in Appendix B of Subpart A of 10 C.F.R. Part 50; LBP-13-13, 78 NRC 246 (2013)

to satisfy the hard look requirement, NRC must provide detailed analysis of new information and a reasonable explanation of the agency’s decision concerning supplementation, not merely a conclusory assertion that the agency has reviewed the new information and concluded that no supplement is required; LBP-12-18, 76 NRC 127 (2012)

under NEPA, NRC is required to take a hard look at the environmental impacts of a proposed action; LBP-14-7, 79 NRC 451 (2014)

waiver of a rule pertaining to the agency’s environmental responsibilities is possible; CLI-13-7, 78 NRC 199 (2013)

whatever the ground for the agency’s departure from prior norms, it must be clearly set forth so that the reviewing court may understand the basis of the agency’s action; LBP-14-2, 79 NRC 131 (2014)

when conducting a NEPA-required environmental review, an agency may consider the ameliorative effects of mitigation in determining the environmental impacts of an activity; LBP-12-23, 76 NRC 445 (2012); LBP-14-7, 79 NRC 451 (2014)

when considering continued storage in licensing reviews with previously completed final environmental impact statements, NRC Staff is expected to use a consistent and transparent process to ensure that all stakeholders are aware of how the environmental impacts of continued storage are considered in each licensing action affected by this regulation; CLI-15-10, 81 NRC 535 (2015)

whether and how NRC Staff fulfills its consultation obligations are issues that could form the basis for a new contention that might appropriately be made in a timely fashion after Staff issues its draft environmental impact statement; CLI-15-18, 82 NRC 135 (2015)
with respect to the environmental impacts of a combined license, the Commission determines whether the
requirements of NEPA § 102(2)(A), (C), and (E), and 10 C.F.R. 51.107(a)(1)-(4) have been met;
CLI-12-9, 75 NRC 421 (2012)

NUCLEAR NON-PROLIFERATION
issues are dependent upon the actions and decisions of the President, Congress, international organizations,
and officials of other nations, and constitute issues of international policy unrelated to NRC’s licensing
criteria; LBP-12-21, 76 NRC 218 (2012)
issues span a host of factors far removed from and far afield from the NRC’s decision whether to license
a uranium enrichment facility; LBP-12-21, 76 NRC 218 (2012)

NUCLEAR POWER PLANT OPERATIONS
holder of a combined license for a newly built reactor may not load fuel or operate except as provided in
accordance with Part 50, Appendix E; LBP-15-4, 81 NRC 156 (2015)
“permanent cessation of operations” for a nuclear power reactor facility is defined as a certification by a
licensee to NRC that it has permanently ceased or will permanently cease reactor operations; LBP-15-4,
81 NRC 156 (2015)
when licensees certify permanent cessation of operations and permanent removal of fuel from the reactor
vessel, the license no longer authorizes operation of the reactor or emplacement or retention of fuel into
the reactor vessel, and physically the reactor can’t be operated; LBP-15-4, 81 NRC 156 (2015)

NUCLEAR POWER PLANTS
all operational nuclear power plants except Big Rock Point must participate in the ERDS program by
providing onsite hardware at each unit to interface with the NRC receiving station; LBP-15-4, 81 NRC
156 (2015)
any facility with an operating reactor unit is required to provide ERDS for that unit, regardless of the
status of other reactors at the facility; LBP-15-4, 81 NRC 156 (2015)
Congress expressly recognized and impliedly approved NRC’s regulatory scheme and practice under which
the safety of interim storage of high-level wastes at commercial nuclear power reactor sites has been
determined separately from the safety of government-owned permanent storage facilities that have not
yet been established; CLI-15-4, 81 NRC 221 (2015)
facility arguably exists until final decommissioning, which may take up to 60 years, or longer if approved
by the Commission; LBP-15-4, 81 NRC 156 (2015)
section 50.72(a)(4) directing licensees to activate ERDS during exigent circumstances applies only to
operating nuclear power reactors; LBP-15-4, 81 NRC 156 (2015)
utilization facilities include commercial nuclear power reactors; LBP-13-7, 77 NRC 307 (2013)

NUCLEAR REGULATORY COMMISSION
NRC violated the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence
Decision and accompanying Temporary Storage Rule; CLI-12-16, 76 NRC 63 (2012)

NUCLEAR REGULATORY COMMISSION, AUTHORITY
adjudicatory hearings can be closed if the Commission orders it; LBP-11-5, 73 NRC 131 (2011)
administrative agencies are allowed to address issues of general applicability through rulemaking instead
of individual adjudications, and the choice made between proceeding by general rule or by individual,
ad hoc, litigation is one that lies primarily within the informed discretion of the administrative agency;
LBP-14-16, 80 NRC 183 (2014)
admissibility of contention questioning whether a confirmatory order imposes overly broad reporting
obligations on licensee employees, e.g., that exceed NRC’s authority under section 73.56(f)(3), is
discussed; LBP-14-4, 79 NRC 319 (2014)
agencies are permitted to impose requirements or thresholds for parties seeking to reopen a record;
agencies cannot unilaterally determine that an action will not jeopardize species listed under the
Endangered Species Act; LBP-12-10, 75 NRC 633 (2012)
agencies have discretion on the manner in which they determine whether information is new or significant
to warrant supplementation of an environmental impact statement, including the application of its
procedural rules; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
agencies must abide by their own regulations; LBP-14-4, 79 NRC 319 (2014); LBP-15-17, 81 NRC 753
(2015)
agency has discretion to choose between rulemaking and adjudication; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

agency NEPA responsibilities in situations where an agency has no ability because of lack of statutory authority to address the impact is distinguished from situations where an agency is only constrained by its own regulations from considering impacts; LBP-14-9, 80 NRC 15 (2014)

agency’s narrowed construction of its statutory authority, as distinct from an express prohibition by Congress, may not be used to limit the agency’s obligations under NEPA; LBP-14-9, 80 NRC 15 (2014)

although contention ultimately was resolved in NRC Staff’s favor, Commission takes review as a matter of discretion because the board’s ruling raises substantial questions of precedential importance; CLI-15-6, 81 NRC 340 (2015)

although NRC does not license construction or operation of a transmission corridor, it has the authority to deny the license for a proposed nuclear plant if, for example, the total environmental costs of the new reactor and connected actions exceed the benefits; LBP-12-12, 75 NRC 742 (2012)

although NRC rules do not provide for filing of amicus curiae briefs on motions filed pursuant to 10 C.F.R. 2.323, as a matter of discretion, the Commission has reviewed both the brief and NRC Staff’s opposition; CLI-13-9, 78 NRC 551 (2013); CLI-14-11, 80 NRC 167 (2014); CLI-15-5, 81 NRC 329 (2015)

although NRC Staff is not required to be a party to a license transfer adjudication, the Commission directs Staff to become a party; CLI-14-5, 79 NRC 254 (2014)

although NRC takes the position that it lacks authority to impose environmental restrictions on transmission corridors, those impacts should have been analyzed as a direct effect of the NRC action even under NRC’s new interpretation; LBP-14-9, 80 NRC 15 (2014)

although rules do not provide for filing of reply briefs, as a matter of discretion the Commission reviews a reply brief; CLI-15-7, 81 NRC 481 (2015)

although the Commission has authority to undertake a de novo factual review, where a board’s decision rests on a weighing of extensive fact-specific evidence presented by technical experts, the Commission generally will defer to the board’s factual findings, unless there appears to be a clearly erroneous factual finding or related oversight; CLI-13-1, 77 NRC 1 (2013)

although the Commission retains broad authority to define standards and thresholds for determining when new information raises a material issue of a plant’s conformity with the Atomic Energy Act, if such information is presented, it must provide a hearing upon request; LBP-11-22, 74 NRC 259 (2011)

amicus curiae filings are allowed at the Commission’s discretion or sua sponte; CLI-15-1, 81 NRC 1 (2015); CLI-15-4, 81 NRC 221 (2015); CLI-15-10, 81 NRC 535 (2015)

as an exercise of its inherent supervisory authority over adjudications, the Commission directed that waste confidence contentions and any related contentions that may be filed in the near term be held in abeyance pending further order; LBP-12-24, 76 NRC 503 (2012); LBP-13-1, 77 NRC 57 (2013); LBP-13-8, 78 NRC 1 (2013); LBP-14-6, 79 NRC 404 (2014)

as an exercise of the Commission’s inherent supervisory authority over agency proceedings, it need not address procedural issues that would merit further consideration in adjudications; CLI-12-16, 76 NRC 63 (2012)

at its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review; CLI-12-12, 75 NRC 603 (2012)

Atomic Energy Act does not grant NRC the discretion to eliminate from the hearing, material issues in its licensing decision; LBP-11-22, 74 NRC 259 (2011)

basis for NRC authority to regulate the use of special nuclear material in facilities like nuclear power reactors is established; CLI-15-4, 81 NRC 221 (2015)

because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petition and motions itself; CLI-14-9, 80 NRC 147 (2014)

because the Commission finds that the suspension petition and new contention fail on the merits, and it considers and takes action on the petition and motions in its supervisory capacity, it need not address procedural issues; CLI-15-4, 81 NRC 221 (2015)

boards must request Commission approval to undertake sua sponte review; CLI-15-1, 81 NRC 1 (2015)
choice between rulemaking and adjudication (i.e., issuing orders or other license revisions) is within the agency’s discretion; LBP-11-11, 73 NRC 455 (2011)
Commission authority to reconsider or clarify a decision, if needed, is inherent in its authority to render the decision in the first instance; CLI-14-1, 79 NRC 1 (2014)
Commission directs NRC Staff to devote sufficient resources to complete its review in a timely manner; CLI-15-17, 82 NRC 33 (2015)
Commission exercised its inherent supervisory authority over agency adjudications to review motion and petition addressing the spent fuel storage issue; CLI-15-13, 81 NRC 555 (2015); LBP-14-16, 80 NRC 183 (2014); LBP-15-1, 81 NRC 15 (2015); LBP-15-9, 81 NRC 396 (2015)
Commission exercises its discretion to consider briefs that were not filed via the agency’s E-Filing system; LBP-15-4, 81 NRC 156 (2015)
Commission exercises its discretion to review a board decision that raises a potentially recurring procedural issue of some importance; CLI-12-14, 75 NRC 692 (2012)
Commission exercises its inherent supervisory authority to direct the board to complete all necessary and appropriate case management activities, including disposal of all matters currently pending before it and comprehensively documenting the full history of the adjudicatory proceeding; CLI-11-7, 74 NRC 212 (2011)
Commission has authority to rule that a license transfer case be adjudicated under Subpart L; CLI-14-5, 79 NRC 254 (2014)
Commission has authority to set the scope of its own hearings; LBP-14-4, 79 NRC 319 (2014)
Commission has inherent authority to supervise both NRC Staff’s work and adjudicatory proceedings relating to license applications; CLI-14-1, 79 NRC 1 (2014)
Commission may at its discretion grant a party’s request for interlocutory review of a board decision; CLI-12-18, 76 NRC 371 (2012)
Commission may consider requests to suspend or hold proceedings in abeyance pursuant to its inherent supervisory authority over agency proceedings; CLI-11-5, 74 NRC 141 (2011)
Commission may consider the rulemaking request of a nonparty as an exercise of its inherent supervisory powers over proceedings; CLI-11-5, 74 NRC 141 (2011)
Commission may direct further proceedings as it considers appropriate to aid its determination; CLI-11-11, 74 NRC 427 (2011)
Commission may incorporate in any license at the time of issuance, or thereafter, by appropriate rule, regulation, or order, such additional requirements and conditions with respect to licensee’s receipt, possession, use, and transfer of source or byproduct material as it deems appropriate or necessary in order to protect health or to minimize danger of life or property; LBP-15-16, 81 NRC 618 (2015)
Commission may, as a matter of discretion, grant review of a full or partial initial decision, giving due weight to the existence of a substantial question with respect to any of the considerations outlined in 10 C.F.R. 2.341(b)(4); CLI-15-2, 81 NRC 213 (2015)
Commission on its own motion may review a decision that modifies, suspends, or revokes a license; CLI-15-14, 81 NRC 729 (2015)
Commission temporarily suspended the immediate effectiveness rule following the Three Mile Island accident; CLI-11-5, 74 NRC 141 (2011)
Commission, in deciding an issue, can take into consideration a matter beyond reasonable controversy and one that is capable of immediate and accurate determination by resort to easily accessible sources of indisputable accuracy; LBP-11-7, 73 NRC 254 (2011)
Congress has severely limited the scope of NRC’s inquiry into Clean Water Act § 316(a) determinations; LBP-12-16, 76 NRC 44 (2012)
Congress has vested NRC with authority to issue subpoenas in conjunction with investigations that the
NRC deems necessary to protect public health or to minimize danger to life or property in matters
involving nuclear materials; CLI-13-5, 77 NRC 223 (2013)

contention that NRC or licensee has abused or exceeded its lawful discretion with respect to nuclear
safety programs is not admissible because it fails to provide sufficient information to show that a
genuine dispute exists on a material issue of law or fact; LBP-14-4, 79 NRC 319 (2014)

Council on Environmental Quality guidance does not bind NRC, but NRC gives it substantial deference;
LBP-12-17, 76 NRC 71 (2012)
courts give controlling weight to an agency’s interpretation of its own regulation unless it is plainly
erroneous or inconsistent with the regulation; LBP-12-19, 76 NRC 184 (2012)
determination of what constitutes adequate protection under the Atomic Energy Act, absent specific
guidance from Congress, is just such a situation in which NRC should be permitted to have discretion
to make case-by-case judgments; LBP-14-1, 79 NRC 39 (2014)
discretionary hearing may be held on export or import licenses if a hearing would be in the public
interest and would assist the Commission in making the statutory determinations required by the Atomic
Energ Act; CLI-11-3, 73 NRC 613 (2011)
even absent an express provision authorizing such relief, the Commission has occasionally considered
requests to suspend proceedings or hold them in abeyance in the exercise of its inherent supervisory
powers over proceedings; CLI-11-1, 73 NRC 1 (2011)
except upon a showing of substantial prejudice to the complaining party, it is always within the discretion
of a court or an administrative agency to relax or modify its procedural rules adopted for the orderly
transaction of business before it when in a given case the ends of justice require it; CLI-13-8, 78 NRC
219 (2013)
existence of a specific appropriation for licensing activities prevents NRC, under well-settled principles of
appropriations law, from using its general appropriations for those activities; CLI-13-8, 78 NRC 219
(2013)
general scope of NRC’s authority is established in Atomic Energy Act § 161, but it does not discuss
spent fuel disposal; CLI-15-4, 81 NRC 221 (2015)
if a party fails to file an answer or pleading within the time prescribed in 10 C.F.R. Part 2 or as
specified in the notice of hearing or pleading, to appear at a hearing or prehearing conference, to
comply with any prehearing order entered by the presiding officer, or to comply with any discovery
order entered by the presiding officer, the Commission or the presiding officer may make any orders in
regard to the failure that are just; CLI-14-2, 79 NRC 11 (2014)
if Congress does not appropriate enough money to meet the needs of a class of beneficiaries prescribed
by Congress, and if Congress is silent on how to handle this predicament, the law sensibly allows the
administering agency to establish reasonable priorities and classifications; CLI-13-8, 78 NRC 219 (2013)
if the adverse environmental effects of a proposed action are adequately identified and evaluated, the
agency is not constrained by NEPA from deciding that other values outweigh the environmental costs;
LBP-11-7, 73 NRC 254 (2011)
in any enforcement action, especially one that has been settled to NRC’s satisfaction without creating a
formal record, NRC’s choice of sanctions is quintessentially a matter of the Commission’s sound
discretion; LBP-14-4, 79 NRC 319 (2014)
in parallel with NRC Staff’s role under NEPA to assess environmental impacts, the Environmental
Protection Agency possesses authority under the Clean Air Act to set numerical standards for air
pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)
interpretation of statutes at issue and the regulations governing their implementation falls within the
Commission’s province; LBP-15-5, 81 NRC 249 (2015)
it is for the Commission, not licensing boards, to revise its rulings; LBP-15-18, 81 NRC 793 (2015)
it is the role of the Commission to review licensing board decisions, and not the role of licensing boards
to review and to reconsider the wisdom of the Commission’s regulations; LBP-12-6, 75 NRC 256
(2012)
it is well within NRC’s discretion to impose specific requirements that clarify or go beyond those already
established by regulations; LBP-14-4, 79 NRC 319 (2014)
it would be inconsistent with NRC’s statutorily mandated responsibilities to spend time and resources on
matters that are of no substantive regulatory significance; CLI-13-7, 78 NRC 199 (2013)
licensee’s concerns about NRC’s administration of FOIA cannot overcome the agency’s duty to investigate alleged violations; CLI-13-5, 77 NRC 223 (2013)
limited grounds for creation of exemptions are inherent in the administrative process, and agencies may use equitable discretion to afford case-by-case treatment, taking into account circumstances peculiar to individual parties in the application of a general rule or even in appropriate cases to grant dispensation from the rule’s operation; CLI-13-1, 77 NRC 1 (2013)
NEPA allows agencies to select their own methodology as long as that methodology is reasonable; LBP-11-2, 73 NRC 28 (2011)
NEPA neither requires nor authorizes NRC to order implementation of mitigation measures analyzed in an environmental analysis; CLI-12-10, 75 NRC 479 (2012)
NEPA requires NRC to construe its existing statutory authority consistently with NEPA’s goals; LBP-14-9, 80 NRC 15 (2014)
NEPA’s legislative history reflects Congress’s concern that agencies might attempt to avoid any compliance with NEPA by narrowly construing other statutory directives to create a conflict with NEPA; LBP-14-9, 80 NRC 15 (2014)
NRC addresses agreement-state performance concerns through its Integrated Materials Performance Evaluation Program process or through an independent agreement-state performance concern evaluation, depending on the performance concern raised; CLI-11-12, 74 NRC 460 (2011)
NRC authority to review offsite impacts of transmission lines goes beyond merely factoring them into a final cost-benefit balance and includes as well the authority where necessary to impose license conditions to minimize those impacts; LBP-11-6, 73 NRC 149 (2011)
NRC can issue an order suspending an individual from working anywhere in the nuclear industry who fails to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)
NRC can issue nuclear power reactor licenses to applicants only upon a finding that utilization of special nuclear material will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; CLI-15-4, 81 NRC 221 (2015)
NRC can, as a condition of licensure, insist that offsite transmission lines built solely to serve a nuclear facility be designed to minimize environmental disturbance; LBP-14-9, 80 NRC 15 (2014)
NRC cannot delegate its NEPA responsibilities to a private party; LBP-11-32, 74 NRC 654 (2011)
NRC defers to other agencies with greater expertise on an issue; CLI-11-4, 74 NRC 1 (2011)
NRC has authority to conduct any investigations it deems necessary and proper to the administration or enforcement of its authority, which includes any regulations or orders issued pursuant to the Atomic Energy Act; CLI-13-5, 77 NRC 223 (2013)
NRC has authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit challenges solely on whether an order should be sustained; LBP-12-14, 76 NRC 1 (2012)
NRC has authority to determine, and to prescribe by rule or regulation, what additional information should be included in technical specifications to ensure public health and safety; LBP-12-25, 76 NRC 540 (2012)
NRC has authority to impose environmental restrictions on new transmission lines intended to serve new nuclear power plants; LBP-14-9, 80 NRC 15 (2014); LBP-13-7, 77 NRC 307 (2013)
NRC has authority to request that an established or newly formed entity submit additional or more detailed information respecting its financial arrangements and status of funds; DD-15-8, 82 NRC 107 (2015)
NRC has clear statutory authority to regulate the construction and operation of a uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
NRC has discretion to resolve issues generically by rulemaking; CLI-11-11, 74 NRC 427 (2011)
NRC has discretion to transact its business broadly, through rulemaking, or case-by-case, through adjudication; CLI-13-7, 78 NRC 199 (2013)
NRC has latitude to define who is an “affected person” within the meaning of Atomic Energy Act § 198a, 42 U.S.C. § 2239(a); LBP-12-3, 75 NRC 164 (2012)
NRC has long interpreted its statutory authority under the Atomic Energy Act to include conditioning approval of nuclear power plant licenses on environmentally acceptable routing of transmission lines; LBP-14-9, 80 NRC 15 (2014)
NRC has substantial discretion in determining the threshold percentage at which foreign ownership becomes too great, but that threshold must at a minimum include 100% foreign ownership or the prohibition in the Act would be rendered superfluous; LBP-12-19, 76 NRC 184 (2012)

NRC has the authority to ensure that certified designs and combined licenses include appropriate Commission-directed changes before operation; CLI-11-8, 74 NRC 214 (2011); CLI-11-10, 74 NRC 251 (2011)

NRC has the ongoing responsibility to oversee the safety and security of operating nuclear reactors and maintains an aggressive and ongoing program to oversee plant operation and to maintain compliance with the current licensing basis; LBP-13-8, 78 NRC 1 (2013)

NRC has the right to prepare an independent environmental impact statement whenever NRC has regulatory authority over an activity; LBP-13-9, 78 NRC 37 (2013)

NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse environmental impacts that might otherwise be caused by the construction or operation of a nuclear power plant; LBP-14-9, 80 NRC 15 (2014)

NRC is bound by the unambiguous language of its own regulations; LBP-11-22, 74 NRC 259 (2011)

NRC is clearly authorized to require licensees to protect the environment and to prevent them from causing adverse environmental impacts; LBP-13-4, 77 NRC 107 (2013)

NRC is empowered to issue an order amending any license as it deems necessary to effectuate the provisions of the Act to promote the common defense and security or to protect health or to minimize danger to life or property; LBP-13-7, 77 NRC 307 (2013)

NRC is not required, as a precondition to issuing or renewing operating licenses for nuclear power plants, to make definitive findings concerning technical feasibility of a repository for the disposal of spent nuclear fuel; CLI-15-4, 81 NRC 221 (2015)

NRC is authorized to issue any necessary subpoenas; CLI-13-5, 77 NRC 223 (2013)

NRC may impose reasonable requirements on new contentions when those requirements are related to legitimate agency goals such as avoiding needless duplication and delay; LBP-11-22, 74 NRC 259 (2011)

NRC may impose such additional conditions, requirements, and limitations on a license as may be necessary to effectuate the purposes of the Atomic Energy Act and the agency’s regulations; LBP-11-11, 73 NRC 455 (2011)

NRC may, upon application of any interested person or upon its own initiative, grant such exemptions from the requirements of the regulations as it determines are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest; LBP-12-21, 76 NRC 218 (2012)

NRC possesses the authority to change its procedures on a case-by-case basis; CLI-13-8, 78 NRC 219 (2013)

NRC is empowered to issue an order amending any license as it deems necessary to effectuate the purposes of the Atomic Energy Act and the agency’s regulations; LBP-11-11, 73 NRC 455 (2011)

NRC may enter into agreements with the governor of any state providing for transfer of regulatory authority to the state over specified categories of nuclear material; CLI-11-12, 74 NRC 460 (2011)

NRC may hold an informal hearing in which it requests and considers written materials without providing for traditional trial-type procedures such as oral testimony and cross-examination; LBP-11-4, 73 NRC 455 (2011)

NRC may hold an informal hearing in which it requests and considers written materials without providing for traditional trial-type procedures such as oral testimony and cross-examination; LBP-11-4, 73 NRC 91 (2011)

NRC may enter into agreements with the governor of any state providing for transfer of regulatory authority to the state over specified categories of nuclear material; CLI-11-12, 74 NRC 460 (2011)

NRC may hold an informal hearing in which it requests and considers written materials without providing for traditional trial-type procedures such as oral testimony and cross-examination; LBP-11-4, 73 NRC 91 (2011)

NRC may enter into agreements with the governor of any state providing for transfer of regulatory authority to the state over specified categories of nuclear material; CLI-11-12, 74 NRC 460 (2011)

NRC may, upon application of any interested person or upon its own initiative, grant such exemptions from the requirements of the regulations as it determines are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest; LBP-12-21, 76 NRC 218 (2012)

NRC possesses the authority to change its procedures on a case-by-case basis; CLI-13-8, 78 NRC 219 (2013)
NRC regional office has discretion to grant a waiver for retesting on a passed test for a senior reactor operator applicant who has failed only one part of the test if it determines that sufficient justification is presented; LBP-14-2, 79 NRC 131 (2014)
NRC reserves the right to review, as necessary, the rate of accumulation of decommissioning funds and to take additional actions, as appropriate on a case-by-case basis, to ensure an adequate accumulation of decommissioning funds; DD-11-7, 74 NRC 787 (2011)
NRC retains power under AEA § 274j to revoke agreements with states and to restore NRC regulatory authority; CLI-11-12, 74 NRC 460 (2011)
NRC rules enable it to supplement an EIS if, before a proposed action is taken, new and significant information comes to light that bears on the proposed action or its impacts; CLJ-12-7, 75 NRC 379 (2012)
NRC Staff has authority to require implementation of non-aging-management severe accident mitigation alternatives through its current licensing basis backfit review under Part 50 or through setting conditions of the license renewal; LBP-11-17, 74 NRC 11 (2011)
NRC, as an independent regulatory agency, is not bound by those portions of Council on Environmental Quality NEPA regulations that have a substantive impact on the way in which the Commission performs its regulatory functions; LBP-11-35, 74 NRC 701 (2011)
NRC, in its capacity as the federal agency charged with regulating the nuclear industry in a manner that protects public health and safety, monitors nuclear emergencies; LBP-11-15, 73 NRC 629 (2011)
NRC’s ability to issue orders to unlicensed persons is limited; LBP-14-4, 79 NRC 319 (2014)
NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLJ-11-5, 74 NRC 141 (2011)
NRC’s policy of encouraging settlements specifically recognizes that settlements are not inviolate, and the presiding officer or Commission may order adjudication of the issues that the presiding officer or Commission finds is required in the public interest to dispose of the proceeding; LBP-14-4, 79 NRC 319 (2014)
NRC’s standard for motion to reopen has been upheld and court deferred to the NRC’s application of its rules as long as it is reasonable; CLJ-15-19, 82 NRC 151 (2015)
NRC’s statutory authority to adopt rules of general application entails a concomitant authority to provide exemption procedures in order to allow for special circumstances; CLJ-13-1, 77 NRC 1 (2013)
NRC’s use of rulemaking to address generic issues has been approved by the Supreme Court; CLJ-15-6, 81 NRC 340 (2015)
ordinarily, the Commission itself presides over license transfer hearings, but NRC rules allow the Commission to designate one or more Commissioners or any other person permitted by law to preside; CLJ-14-5, 79 NRC 254 (2014)
parties should not seek interlocutory review by invoking the grounds under which the Commission might exercise its supervisory authority; CLJ-11-14, 74 NRC 801 (2011)
permissive “may” language of 40 C.F.R. 1508.25(a)(3) affords an agency more discretion in making a choice about whether a single EIS is the best way to assess similar actions; LBP-13-10, 78 NRC 117 (2013)
promulgation of state regulations falls within the broad reach of any fact of which a court of the United States may take judicial notice or of any technical or scientific fact within the knowledge of the Commission as an expert body; LBP-11-7, 73 NRC 254 (2011)
regulation of offsite transmission lines is within NRC’s authority under section 101 of the Atomic Energy Act and nothing in the AEA precludes NRC from implementing, through issuance of conditional licenses, NEPA’s environmental mandate; LBP-14-9, 80 NRC 15 (2014)
requirements and exemptions under FOIA reflect a balancing of public disclosure with confidentiality, but this balancing does not affect the NRC’s authority to obtain requested information; CLJ-13-5, 77 NRC 223 (2013)
to the extent NRC’s review of the Fukushima accident leads to new rules applicable to any pending application, the Commission has sufficient authority and time to apply them to any new license that may be issued; CLJ-11-5, 74 NRC 141 (2011)
when a matter is not strictly adjudicatory in nature or otherwise does not fit cleanly within the procedures described in NRC rules of practice, the Commission undertakes a decision as an exercise of its inherent supervisory authority over agency proceedings; CLI-13-8, 78 NRC 219 (2013)

with respect to new reactor licenses, the Commission has authority to ensure that certified designs and combined licenses include appropriate Commission-directed changes before operation; CLI-11-6, 74 NRC 203 (2011)

written consent from NRC is required for all direct or indirect license transfers; CLI-15-8, 81 NRC 500 (2015)

NUCLEAR REGULATORY COMMISSION, JURISDICTION

after a petition to review a final order has been filed with the Commission, the board no longer has jurisdiction to consider a motion to reopen and the motion is properly filed with the Commission; CLI-12-14, 75 NRC 692 (2012)

agency’s interpretation of what is properly within its jurisdictional scope is entitled to great deference, and will not be overturned if reasonably related to the language and purposes of the statute; LBP-14-9, 80 NRC 15 (2014)

although NRC has no specific rule governing stays of agency action pending judicial review, federal law requires parties seeking such stays in court to come to the agency first; CLI-12-11, 75 NRC 523 (2012)

byproduct material category was created in 1978 by the Uranium Mill Tailings and Reclamation Act to afford NRC regulatory jurisdiction over mill tailings at active and inactive uranium milling sites; LBP-12-3, 75 NRC 164 (2012)

Commission has considered whether to exercise pendent jurisdiction of otherwise nonappealable issues, such as where those issues are inextricably intertwined with a related legal question properly before it, or where consideration of the issues together has the potential to resolve the entire litigation; CLI-12-12, 75 NRC 603 (2012)

Commission retained authority to provide ultimate direction on the waste confidence contentions being held in abeyance; LBP-14-8, 79 NRC 519 (2014)

contention that NRC has failed to engage other relevant federal, state, and local agencies and has not analyzed impacts subject to jurisdiction and control of these other agencies, and has thus failed to comply with NEPA’s action-forcing mandate and general purpose is inadmissible; LBP-13-9, 78 NRC 37 (2013)

degree to which pendency of a new contention at the time of the board’s ruling on an initial hearing petition tolled the time for filing any appeals from that decision regarding the admissibility of the contentions would be a matter for Commission determination; LBP-14-12, 80 NRC 138 (2014)

even if the transmission corridor is a preconstruction activity and outside the NRC’s regulatory jurisdiction, the construction and maintenance of the transmission corridor likely qualifies as a connected action under governing NRC and Council on Environmental Quality regulations, and therefore must be analyzed in the FEIS; LBP-12-12, 75 NRC 742 (2012)

generally, once there has been an appeal or petition to review a board order, jurisdiction passes to the Commission; CLI-12-14, 75 NRC 692 (2012)

in ruling that NRC had appropriately interpreted the Atomic Energy Act to include regulatory authority over attendant transmission lines, the court did not decide whether NEPA is an independent source of substantive jurisdiction; LBP-14-9, 80 NRC 15 (2014)

it is not the province of NRC and thus the board to enforce another agency’s regulations; LBP-12-12, 75 NRC 742 (2012)

labor-related disputes are within the exclusive competence of the National Labor Relations Board; LBP-14-4, 79 NRC 319 (2014)

NRC does not have authority to rule on challenges to Fish and Wildlife’s compliance with the Endangered Species Act; CLI-12-21, 76 NRC 491 (2012)

NRC is not permitted to retain jurisdiction over a site at a licensee’s request where the state seeks to assume regulatory authority over the site and meets the “adequacy” and “compatibility” criteria; CLI-13-6, 78 NRC 155 (2013)

NRC is precluded from second-guessing the conclusions in NPDES permits; LBP-12-16, 76 NRC 44 (2012)

1146
NRC’s adjudicatory process is not the proper forum for investigating alleged violations that are primarily the responsibility of other federal, state, or local agencies; LBP-11-6, 73 NRC 149 (2011)

petitioner’s demand for compliance with U.S. Army Corps of Engineers requirements is not within the scope of a combined license proceeding, because it is not the province of the NRC to enforce another agency’s regulations; LBP-11-6, 73 NRC 149 (2011)

where state and local governmental bodies that have jurisdiction over the area in which adverse effects need to be addressed and since they have the authority to mitigate them, it would be incongruous to conclude that a federal agency has no power to act until the local agencies have reached a final conclusion on what mitigation measures they consider necessary; LBP-13-4, 77 NRC 107 (2013)

where the agency has no ability to prevent a certain effect due to its limited statutory authority over the relevant actions, the agency cannot be considered a legally relevant cause of the effect; LBP-12-12, 75 NRC 742 (2012)

NUCLEAR WASTE POLICY ACT

NRC is directed to adopt the Department of Energy environmental impact statement to the extent practicable; CLI-13-8, 78 NRC 219 (2013)

OBJECTIONS

evidentiary objections made for the first time after briefing has been completed unfairly deprive the petitioners of the opportunity to file the response expressly provided in the NRC’s procedural rules; LBP-15-20, 81 NRC 829 (2015)
in absence of objection, hearsay evidence is treated as being properly admitted and may be given such probative effect and value to which it is entitled; LBP-15-20, 81 NRC 829 (2015)

petitioners would have no opportunity to be heard regarding a sua sponte objection by the board because they would only learn of it when they received the board’s ruling and thus would be deprived of the opportunity to file the response expressly provided in procedural rules; LBP-15-5, 81 NRC 249 (2015)

OFFICIAL NOTICE

although 10 C.F.R. 2.337(f), by its terms, applies to evidence at hearings, the bounds this rule places on official notice is also appropriate for the contention admissibility stage of a proceeding; LBP-11-7, 73 NRC 254 (2011)
because NRC’s decision to grant the exemptions is a matter of public record, the board takes notice that the exemptions have now been approved; LBP-15-24, 82 NRC 68 (2015)

board takes official notice of the contents of a document that was discussed at the hearing, but was not submitted as an exhibit by any party; LBP-13-13, 78 NRC 246 (2013)

boards may take official notice of any fact of which a court of the United States may take judicial notice or of any technical or scientific fact within the knowledge of the Commission as an expert body; LBP-11-20, 74 NRC 65 (2011)

Commission, in deciding an issue, can take into consideration a matter beyond reasonable controversy and one that is capable of immediate and accurate determination by resort to easily accessible sources of indisputable accuracy; LBP-11-7, 73 NRC 254 (2011)

judicial notice may be taken at any stage of the proceeding; LBP-11-7, 73 NRC 254 (2011)

judicial notice may be taken of any fact not subject to reasonable dispute in that it is either generally known within the territorial jurisdiction of the trial court or capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned; LBP-11-20, 74 NRC 65 (2011)

licensing board takes official notice of NRC regulatory guide; LBP-15-3, 81 NRC 65 (2015)

promulgation of state regulations falls within the broad reach of any fact of which a court of the United States may take judicial notice or of any technical or scientific fact within the knowledge of the Commission as an expert body; LBP-11-7, 73 NRC 254 (2011)

OFFSITE POWER

consequences of loss of offsite power to uranium enrichment facility are discussed; LBP-11-11, 73 NRC 455 (2011)

for purposes of the license renewal rule, NRC Staff has determined that the plant system portion of the offsite power system that is used to connect the plant to the offsite power source should be included within the scope of the station blackout rule; CLI-12-5, 75 NRC 301 (2012)

inspections of electrical systems and components following an earthquake that resulted in loss of offsite power are described; DD-12-1, 75 NRC 573 (2012)
under its certified design, the Economic Simplified Boiling Water Reactor could maintain circulation long enough to permit safe shutdown of the reactor even if it were to lose offsite power and all of its backup generators failed to operate; LBP-15-5, 81 NRC 249 (2015)

OPERATING BASIS EARTHQUAKE

following an earthquake exceeding the design basis, the plant must remain shut down until licensee demonstrates to NRC that no functional damage occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-2, 76 NRC 391 (2012)

licensee is required to submit a license amendment request following an earthquake that exceeded the plant’s design basis; DD-12-2, 76 NRC 391 (2012)

request that NRC suspend the operating licenses until completion of a set of activities related to the effects of an earthquake that exceeded the plant’s operating basis earthquake is granted in part and denied in part; DD-12-2, 76 NRC 391 (2012)

request that, following an earthquake that exceeded the operating basis, NRC suspend the operating licenses until completion of a set of activities described in the petition, is addressed; DD-15-9, 82 NRC 274 (2015)

there is no requirement for licensee to submit a license amendment request following an earthquake that exceeds its design basis; DD-12-2, 76 NRC 391 (2012)

walkdowns and inspections performed by licensee, industry, and NRC personnel following an earthquake that exceeded the plant’s design basis are described; DD-12-2, 76 NRC 391 (2012)

when an earthquake results in ground accelerations greater than those assumed in the design of the nuclear power plant, the plant is required to be shut down and to remain shut down until licensee demonstrates to NRC that no functional damage occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 573 (2012)

OPERATING LICENSE AMENDMENT APPLICATIONS

applicant is exempt from including in its environmental report a site-specific severe accident mitigation alternatives analysis because NRC Staff previously considered severe accident mitigation design alternatives in its final environmental impact statement; CLI-13-7, 78 NRC 199 (2013)

applicants must include in their environmental report any new and significant information regarding the environmental impacts of license renewal of which applicant is aware; LBP-11-29, 74 NRC 612 (2011)

application to use alternate pressurized thermal shock rule must contain an assessment of flaws in the reactor pressure vessel; LBP-15-17, 81 NRC 753 (2015)

application to use alternate pressurized thermal shock rule must contain the projected embrittlement reference temperatures along various portions of the reactor pressure vessel, from the present to a future point, compared to the alternate screening criteria; LBP-15-17, 81 NRC 753 (2015)

because changes to technical specifications require a license amendment, technical specifications should be limited to those plant conditions most important to safety; LBP-13-7, 77 NRC 307 (2013)

if petitioner can provide a sound basis to dispute compliance-related statements in a license amendment request, then the contention is within the scope of the proceeding; LBP-15-24, 82 NRC 68 (2015)

information that license amendment request must contain to use updated embrittlement model is described; CLI-15-22, 82 NRC 310 (2015)

license amendment request is not categorically exempt from environmental review if it involves a significant hazards consideration that excludes it from categorical exemption pursuant to the criteria in section 51.22(c)(9)(i); LBP-15-26, 82 NRC 163 (2015)

license amendment request must be complete and accurate in all material respects; LBP-15-24, 82 NRC 68 (2015)

license amendment request must provide sufficient documentation and analysis to show that licensee has complied with relevant requirements, thereby demonstrating that the amended license will continue to provide reasonable assurance of adequate protection of public health and safety; CLI-15-22, 82 NRC 310 (2015)

licensee must request an amendment if the proposed action requires that existing technical specifications be changed; LBP-13-7, 77 NRC 307 (2013)

standards are provided for a licensee to request a license amendment before it may make changes in the facility as described in the updated final safety analysis report; LBP-13-7, 77 NRC 307 (2013)

to amend a license, including technical specifications in the license, an application for amendment must be filed, fully describing the changes desired; CLI-15-22, 82 NRC 310 (2015)
upon receipt of a motion to withdraw an application, the board may place terms and conditions on the
withdrawal, deny the application, or dismiss the application with prejudice; CLI-13-10, 78 NRC 563
(2013)
when licensee requests an exemption in a related license amendment application, hearing rights on the
amendment application are considered to encompass the exemption request as well; LBP-15-18, 81 NRC
when licensee submits its license amendment application to NRC, it must provide the agency its analysis
about the issue of no significant hazards consideration using the standards in 10 C.F.R. 50.92;
LBP-15-17, 81 NRC 753 (2015)
when the board has issued a Notice of Hearing, withdrawal of a license amendment request shall be on
such terms as the presiding officer may prescribe; LBP-15-28, 82 NRC 233 (2015)
whether a potential future license amendment request shares those same alleged deficiencies as a
previously withdrawn one would require a new analysis; LBP-15-28, 82 NRC 233 (2015)
when licensee’s withdrawal of license amendment request, the proceeding is now moot; CLI-13-10, 78
NRC 563 (2013)
OPERATING LICENSE AMENDMENT PROCEEDINGS
admissible contention must meet the six requirements of 10 C.F.R. 2.309(f)(1); LBP-15-24, 82 NRC 68
(2015)
challenges based on 10 C.F.R. 50.61a and the question of whether applicant demonstrated substantial
advantage under 10 C.F.R. Part 50, Appendix H as a reason to not test capsules are beyond the scope
of a license amendment proceeding, which concerns compliance with Appendix G of 10 C.F.R. Part 50;
contention that challenges the entire steam generator replacement project, rather than any aspect of the
proposed changes to four technical specifications identified in the license amendment request is outside
the scope of this proceeding; LBP-13-11, 78 NRC 177 (2013)
contention that does not focus at all on the technical specifications that are the subject of its request
raises no issues that are material to any findings the NRC must make to approve the license
amendment request; LBP-13-11, 78 NRC 177 (2013)
contentions that attack provisions of the current license that are not being changed and that are not fairly
related to the license amendment request are outside the scope; LBP-12-25, 76 NRC 540 (2012)
de facto license amendment proceeding is not initiated merely because licensee takes an action that
requires some type of NRC approval; LBP-15-27, 82 NRC 184 (2015)
determinations on whether to grant an applied-for license amendment are to be guided by the
considerations that govern the issuance of initial licenses or construction permits to the extent applicable
and appropriate; CLI-15-22, 82 NRC 310 (2015)
dismissal with prejudice is a harsh sanction reserved for unusual situations because it is the equivalent of
a decision on the merits of the license amendment request; LBP-15-28, 82 NRC 233 (2015)
exemptions are the sort of directly related and dependent exemption-related issues that are within the
scope of a license amendment proceeding; LBP-15-24, 82 NRC 68 (2015)
generic analyses of environmental impacts of continued storage and disposal in the context of NRC
reactor licensing proceedings are acceptable; CLI-15-4, 81 NRC 221 (2015)
intervention petition was not sufficiently specific when it merely repeated the contents of petitioner’s
earlier petition concerning a prior license amendment; LBP-15-17, 81 NRC 753 (2015)
license amendments related to reactor pressure vessel embrittlement present an obvious potential for
offsite public health and safety consequences; LBP-15-17, 81 NRC 753 (2015)
opportunity for a hearing on license amendments is provided; CLI-12-20, 76 NRC 437 (2012)
petitioner must explain, with specificity, particular safety or legal reasons why moving a requirement from
the license into a licensee-controlled document would be improper; LBP-12-25, 76 NRC 540 (2012)
petitioners may not claim standing simply upon a residence or visits near the plant, unless the proposed
action quite obviously entails an increased potential for offsite consequences; LBP-11-29, 74 NRC 612
(2011)
SUBJECT INDEX

petitioners’ contention challenges the sufficiency of the equivalent margins analysis to provide reasonable assurance of reactor safety and is therefore within the scope of the proceeding; LBP-15-20, 81 NRC 829 (2015)

portion of a contention asserting that applicant failed to consider the results of a particular study in its SAMA analysis is admissible; CLI-11-11, 74 NRC 427 (2011)

prior to license issuance, NRC must find reasonable assurance that activities authorized by the amendment can be conducted without endangering the health and safety of the public and are in compliance with NRC regulations; LBP-15-17, 81 NRC 753 (2015)

proximity presumption applied where petitioners’ contention concerned a license amendment to move the schedule for the withdrawal of reactor vessel material specimens from the technical specifications to the updated safety analysis report; LBP-15-17, 81 NRC 753 (2015)

proximity presumption applies in more limited license amendment proceedings only if the proposed amendment obviously entails an increased potential for offsite consequences; LBP-15-17, 81 NRC 753 (2015)

proximity presumption was applied in a license amendment proceeding where management’s lack of the required character and competence was alleged; LBP-15-17, 81 NRC 753 (2015)

radiological claims that represent a direct challenge to prior license amendments authorizing extended power uprates are outside the scope of a license amendment proceeding; LBP-15-13, 81 NRC 456 (2015)

request that board impose additional discovery activities as a requirement of withdrawal of license amendment request is too broad because it goes beyond the scope of the admitted contentions and discovery is peculiarly related to particular proceedings and particular contentions; LBP-15-28, 82 NRC 233 (2015)

scope of any hearing should include the proposed license amendments, and any health, safety, or environmental issues fairly raised by them; LBP-12-25, 76 NRC 540 (2012)

scope of proceeding is limited to the license amendment request, and petitioners typically cannot challenge a Commission regulation; LBP-15-24, 82 NRC 68 (2015)

section 50.40 requires that NRC be persuaded that applicant will comply with all applicable regulations, that health and safety of the public will not be endangered, and that issuance of the amendment will not be inimical to the health and safety of the public; LBP-15-20, 81 NRC 829 (2015)

state’s claim that licensee’s amendment request contains incomplete and incorrect statements concerning its use of the trust fund is within the scope of a license amendment proceeding as defined in the notice of opportunity to request a hearing; LBP-15-24, 82 NRC 68 (2015)

when an adjudicatory proceeding has been initiated with respect to a license amendment issued with a no significant hazards determination, once the presiding officer’s initial decision becomes effective, the appropriate official shall take action with respect to that amendment in accordance with the initial decision; LBP-15-13, 81 NRC 456 (2015)

where the Commission finds that exigent circumstances exist and it also determines that an amendment involves no significant hazards considerations, it will provide a hearing after issuance, if one has been requested by a person who satisfies the intervention requirements of 10 C.F.R. 2.309; CLI-15-25, 82 NRC 389 (2015)

OPERATING LICENSE AMENDMENTS

actions by NRC Staff constitute a de facto license amendment when they authorize a licensee to engage in activities beyond the scope of its original license; LBP-13-7, 77 NRC 307 (2013)

activities the licensee may pursue without submitting a license amendment request, including certain tests or experiments, are defined in 10 C.F.R. 50.59(c)(1); LBP-15-17, 81 NRC 753 (2015)

adjudicatory proceeding on license amendment is not terminated by issuance of the amendment; CLI-15-17, 82 NRC 33 (2015)

admissibility of contention that a license amendment will be required for licensee to update and maintain accurate design basis documents is decided; CLI-15-5, 81 NRC 329 (2015)

admissibility of contention that licensee is undertaking modifications for protection against severe flooding in the event of upstream dam failures that will require a license amendment is decided; CLI-15-5, 81 NRC 329 (2015)

1150
agency actions not formally labeled as license amendments nevertheless can constitute de facto license amendments and accordingly trigger hearing rights for the public under Atomic Energy Act § 189a; CLI-15-5, 81 NRC 329 (2015)

agency approval or authorization is a necessary component of NRC action that affords a hearing opportunity under Atomic Energy Act § 189a, but not all agency approvals granted to licensees constitute de facto license amendments; CLI-14-11, 80 NRC 167 (2014)

analytic framework for assessing whether a confirmatory action letter process constitutes a de facto license amendment proceeding is provided; LBP-13-7, 77 NRC 307 (2013)

any amendment to an existing license as a result of NRC review of licensee seismic hazard reevaluations that leads to changes in the current licensing basis would be subject to a hearing opportunity; CLI-15-21, 82 NRC 295 (2015)

any changes to the material specimen withdrawal schedule that conform to the ASTM standard referenced in Appendix H will not alter the plant’s license; LBP-15-20, 81 NRC 829 (2015)

any operation of that might result in in-plane vibrations due to fluid elastic instability is inconsistent with the analyses or descriptions in the UFSAR is the type of test or experiment that triggers the obligation to seek a license amendment; LBP-13-7, 77 NRC 307 (2013)

applicant requests an operating license amendment to implement alternate fracture toughness requirements for protection against pressurized thermal shock events; LBP-15-17, 81 NRC 753 (2015)

applicant seeks to replace 30-day notice requirement and other plant-specific license conditions with the decommissioning fund requirements; LBP-15-28, 82 NRC 233 (2015)

because current levels of emergency planning are required by regulation, licensee cannot make changes contemplated in its license amendment request without first receiving certain regulatory exemptions; LBP-15-18, 81 NRC 793 (2015)

because technical specifications are an integral part of an operating license, changes to technical specifications require a license amendment; LBP-13-7, 77 NRC 307 (2013)

board is directed to consider whether a confirmatory action letter issued to licensee constitutes a de facto license amendment that would be subject to a hearing opportunity under AEA § 189a, and, if so, whether the petition meets the standing and contention admissibility requirements; CLI-12-20, 76 NRC 437 (2012)

change to a facility that is allowed under 10 C.F.R. 50.59 without prior NRC approval is not a license amendment triggering hearing rights; LBP-15-27, 82 NRC 184 (2015)

changes with respect to components (i.e., steam generators) are permitted without a license amendment under prescribed conditions that assure that the replacement components are sufficiently similar to the original so that safety requirements are maintained or improved; LBP-13-7, 77 NRC 307 (2013)

circumstances under which licensee may or may not make changes in a facility without obtaining a license amendment are set forth; LBP-13-11, 78 NRC 177 (2013)

claims of inadequacies in licensee’s technical evaluations or noncompliance with its license, standing alone, do not identify an activity that may constitute a license amendment; CLI-15-14, 81 NRC 729 (2015)

commitments in the updated final safety analysis report and aging management plan are legally binding as part of the current licensing basis throughout the period of extended operation and can only be changed through the section 50.59 process; LBP-13-13, 78 NRC 246 (2013)

conditions under which licensee must seek a license amendment are specified in 10 C.F.R. 50.59(c)(2); LBP-13-7, 77 NRC 307 (2013)

correctness of assurance that the license conditions will be replaced by sections 50.75(b) and 50.82(a)(8) is a genuine concern relative to the appropriateness of the license amendment request, and therefore the petitioner has shown materiality of its contention; LBP-15-24, 82 NRC 68 (2015)

court recognized the long-term nature of the concerns associated with spent fuel storage and disposal when it declined to vacate the license amendments that were the subject of the case, noting that doing so would effectively shut down the plants; CLI-15-4, 81 NRC 221 (2015)
criteria of 10 C.F.R. 50.59 were used as an analytical tool to address the question of whether a confirmatory action letter issued to the licensee by the NRC Staff constituted a de facto license amendment that would be subject to a hearing opportunity; LBP-13-11, 78 NRC 177 (2013)
de facto license amendment would exist, and hearing rights would be triggered, if NRC were to grant licensee greater operating authority or otherwise alter terms of the license or permit licensee to go beyond its existing license authority; LBP-15-27, 82 NRC 184 (2015)
eligibility conditions for a no significant hazards consideration determination on a proposed amendment are discussed; LBP-15-26, 82 NRC 163 (2015)
factors material to determining whether NRC actions constitute a de facto license amendment are described; LBP-13-7, 77 NRC 307 (2013)
final safety analysis report updates must reflect changes that licensee has made through a license amendment request and certain changes that do not require a license amendment; LBP-15-27, 82 NRC 184 (2015)
if a procedure is not specifically called out in the updated final safety analysis report, licensee may change it without using the license amendment process described in 10 C.F.R. 50.59(c)(1); LBP-13-13, 78 NRC 246 (2013)
if AEA § 189a is to serve its intended purpose, parties in interest must be afforded a meaningful opportunity to request a hearing before the Commission retroactively reinvents the terms of an extant license by voiding its implicit limitations on the licensee’s conduct; LBP-13-7, 77 NRC 307 (2013)
if license amendment request is approved, licensee will no longer have to provide 30-day notice to the Commission once it begins decommissioning and starts making withdrawals from the decommissioning fund; LBP-15-28, 82 NRC 233 (2015)
if licensee amends any license conditions related to the decommissioning trust fund, from that point forward it will have to comply with all requirements of 10 C.F.R. 50.75(h); LBP-15-28, 82 NRC 233 (2015)
if licensee endeavors to use MOX fuel during the license renewal term, it will need to seek a license amendment; LBP-13-8, 78 NRC 1 (2013)
if licensee is unable to operate a reactor in strict accordance with its license, it must seek authorization from the NRC for a license amendment; LBP-13-7, 77 NRC 307 (2013)
if licensee sought to make a change to a surveillance frequency that did not conform to the NEI 04-10 standard, then it would need to request a license amendment; CLI-13-10, 78 NRC 563 (2013)
if licensee sought to relocate its surveillance frequencies from its operating license to a licensee-controlled document, then it would need to request a license amendment, which would trigger an opportunity for a member of the public to request a hearing; CLI-13-10, 78 NRC 563 (2013)
if licensee with existing license conditions relating to decommissioning trust agreements elects to amend those conditions, the license amendment shall be in accordance with the provisions of 10 C.F.R. 50.75(h); LBP-15-24, 82 NRC 68 (2015)
in determining whether a license amendment, construction permit, or early site permit will be issued to applicant, the Commission is guided by the considerations that govern issuance of initial licenses, construction permits, or early site permits to the extent applicable and appropriate; LBP-15-20, 81 NRC 829 (2015)
issuance of power uprate license amendment in advance of hearing did not deprive intervenor of hearing rights because the license amendment may be revoked or conditioned after hearing; CLI-15-17, 82 NRC 33 (2015)
key factors to consider when determining whether agency action constitutes a de facto license amendment are whether the agency action granted licensee any greater authority or otherwise altered the original terms of the license; CLI-15-5, 81 NRC 329 (2015)
license amendment to eliminate numerous detailed procedures for monitoring routine radioactive releases from the technical specifications and transfer them to a licensee-controlled document would allow licensee to make future changes to the radiation monitoring procedures without going through another license amendment; LBP-12-25, 76 NRC 540 (2012)
license amendment will be effective on issuance, even if adverse public comments have been received and even if an interested person meeting the provisions for intervention has filed a request for a hearing; LBP-15-17, 81 NRC 753 (2015)
license amendments are not contingent upon any additional safety determination regarding spent fuel storage under the Atomic Energy Act; CLI-15-4, 81 NRC 221 (2015)

license amendments are subject to a hearing opportunity; CLI-13-9, 78 NRC 551 (2013)

licensee cannot amend the terms of its license unilaterally, but rather must request and obtain agency approval; CLI-14-11, 80 NRC 167 (2014); CLI-15-5, 81 NRC 329 (2015); LBP-15-27, 82 NRC 184 (2015)

licensee cannot be exempted from license conditions without a license amendment modifying such conditions; LBP-15-28, 82 NRC 233 (2015)

licensee must obtain a license amendment from the NRC if a change to its facility triggers the safety standards described in 10 C.F.R. 50.59; LBP-13-7, 77 NRC 307 (2013)

licensee must seek a license amendment before implementing a test or experiment that will result in a departure from a method of evaluation described in the updated final safety analysis report used in establishing the design basis or in the safety analysis; LBP-13-7, 77 NRC 307 (2013)

licensees are allowed to make changes to a facility without obtaining a license amendment if certain criteria are satisfied; CLI-14-11, 80 NRC 167 (2014)

licensees may make changes in the procedures described in the updated final safety analysis report and conduct tests or experiments not otherwise described in the UFSAR, without obtaining a license amendment; CLI-14-4, 79 NRC 249 (2014)

licensees must maintain records of changes in the facility made pursuant to section 50.59(c)(1) that include a written evaluation that provides the bases for the determination that the change does not require a license amendment pursuant to section 50.59(c)(2); CLI-14-11, 80 NRC 167 (2014)

licensees must obtain NRC approval before implementing changes to the facility or facility procedures that do not meet certain criteria; DD-13-3, 78 NRC 571 (2013)

licensees seeking to use the updated methodology in 10 C.F.R. 50.61a must submit a license amendment request; CLI-15-22, 82 NRC 310 (2015)

mere possibility of a future license amendment does not trigger a hearing opportunity today; LBP-15-27, 82 NRC 184 (2015)

no significant hazards consideration determination permits NRC to make an authorized license amendment effective immediately rather than awaiting the outcome of an adjudicatory challenge; LBP-15-26, 82 NRC 163 (2015)

NRC authorization to restart a plant following NRC Staff’s review of forty-seven ordered modifications is not a license amendment; LBP-15-27, 82 NRC 184 (2015)

NRC inspection reports, even those documenting violations, are not de facto license amendments; LBP-15-27, 82 NRC 184 (2015)

NRC licensees require a license amendment to modify license conditions; LBP-15-24, 82 NRC 68 (2015)

NRC must grant a hearing upon the request of any person whose interest may be affected by the proceeding and admit any such person as a party to such proceeding; CLI-15-21, 82 NRC 295 (2015); LBP-11-29, 74 NRC 612 (2011)

NRC regulations appropriately require a hearing before the proposed license amendment becomes effective whenever the amendment creates the possibility of a new or different kind of accident; LBP-15-20, 81 NRC 829 (2015)

NRC Staff may determine that exigent circumstances exist such that there is insufficient time for a full 30-day public comment period on a license amendment request; LBP-15-13, 81 NRC 456 (2015)

NRC Staff’s inspection and oversight of licensee’s actions are part of an ongoing de facto license amendment; CLI-14-11, 80 NRC 167 (2014)

NRC’s actions constitute de facto license amendment when they authorize licensee to engage in activities beyond the ambit of its original license; LBP-13-7, 77 NRC 307 (2013)

NRC’s lifting of license suspension and authorizing restart under stipulated restrictions was not a license amendment because nothing in the record indicates that license amendments are necessary to permit the licensee to operate in accordance with the restrictions that have been imposed; LBP-13-7, 77 NRC 307 (2013)

petitioners challenged NRC’s approval of operating license amendments to allow for the use of higher-density spent-fuel-storage racks in the reactors’ spent fuel pools; CLI-15-4, 81 NRC 221 (2015)
prior to license issuance NRC must find reasonable assurance that activities authorized by the amendment can be conducted without endangering the health and safety of the public, and in compliance with Commission regulations; LBP-15-20, 81 NRC 829 (2015)

regardless of whether a hearing request is granted, NRC Staff performs a full safety review of every license amendment request and no request is approved until all necessary public health and safety findings have been made; CLI-15-22, 82 NRC 310 (2015)

request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise technical specifications for spent fuel pool instrumentation is denied; DD-13-3, 78 NRC 571 (2013)

request that NRC order licensee to submit a license amendment application for the design and installation of replacement steam generators and for additional enforcement action is moot; DD-15-7, 82 NRC 257 (2015)

revisions to technical specifications that are necessary to allow licensee to operate safely with the replacement steam generators after they have been installed require a license amendment; LBP-13-11, 78 NRC 177 (2013)

section 51.53(c)(3)(iv) does not apply to license amendment applicants requesting a power uprate; LBP-11-29, 74 NRC 612 (2011)

there can be no actual license amendment until (and unless) it is issued by the NRC Staff; LBP-13-7, 77 NRC 307 (2013)

there is no requirement for licensee to submit a license amendment application following an earthquake that exceeds its design basis; DD-12-2, 76 NRC 391 (2012)

there is no time limit on when a licensee can seek an amendment to the license conditions relating to its decommissioning trust fund; LBP-15-24, 82 NRC 68 (2015)

there must be reasonable assurance that the activities at issue will not endanger the health and safety of the public; CLI-15-22, 82 NRC 310 (2015)

there must be some significant link between the claimed deficiency and the agency’s ultimate determination whether granting the LAR will adequately protect the health and safety of the public and the environment; LBP-15-24, 82 NRC 68 (2015)

to determine whether an approval constitutes a de facto license amendment, NRC must consider whether the approval granted the licensee any greater operating authority or otherwise altered the original terms of a license; CLI-14-11, 80 NRC 167 (2014)

to determine whether an ongoing CAL process constitutes a de facto license amendment proceeding, the board must determine whether the requested change in operating authority sought by licensee is strictly in accordance with the terms and technical specifications in its existing license; LBP-13-7, 77 NRC 307 (2013)

to take advantage of the alternate pressurized thermal shock rule, licensee must request approval from the Office of Nuclear Reactor Regulation, in accordance with the procedures for submitting a license amendment; LBP-15-17, 81 NRC 753 (2015)

types of changes, tests, or experiments that may be undertaken without prior NRC approval as well as those that would require a license amendment are outlined in 10 C.F.R. 50.59(c); CLI-15-14, 81 NRC 729 (2015)

unilateral licensee activities can constitute de facto license amendments; CLI-14-11, 80 NRC 167 (2014)

updated final safety analysis reports can be modified without a license amendment as long as the modifications do not involve a change to the technical specifications or an unreviewed safety question; LBP-13-7, 77 NRC 307 (2013)

when licensee requests an amendment, it must notify the state in which its facility is located of its request by providing that state with a copy of its application; LBP-15-28, 82 NRC 233 (2015)

where NRC approval does not permit a licensee to operate in any greater capacity than originally authorized and all relevant safety regulations and license terms remain applicable, NRC approval does not amend the license; LBP-15-27, 82 NRC 184 (2015)
where NRC has temporarily exempted the licensee, on the basis of an existing rule, from one of many rules made generally applicable by the license does not amount to a license amendment; CLI-14-11, 80 NRC 167 (2014)

where NRC Staff takes action pursuant to a determination of no significant hazards consideration and issues a license amendment prior to a presiding officer’s initial decision, the Staff will thereafter take appropriate action (if necessary) in accordance with the presiding officer’s decision; CLI-15-25, 82 NRC 389 (2015)

where there was no reasonable likelihood that a change in the method of evaluation would have required a license amendment, the change was a minor violation; DD-15-7, 82 NRC 257 (2015)

OPERATING LICENSE APPLICATIONS

applicant must present the design bases of the facility and safety analyses of the facility as a whole in the final SAR; DD-15-11, 82 NRC 361 (2015)

applicant must submit information that demonstrates that it possesses, or has reasonable assurance of obtaining, funds necessary to cover estimated operating costs for the period of the license; DD-15-8, 82 NRC 107 (2015)

applicants for nuclear power plant operating licenses must include technical specifications as part of the license; DD-13-3, 78 NRC 571 (2013)

application may incorporate any pertinent information submitted with application for construction permit; LBP-12-24, 76 NRC 503 (2012)

electric utility applicant for an operating license is exempt from financial qualifications review; DD-15-8, 82 NRC 107 (2015)

information is specified in Atomic Energy Act § 182 that must be provided by applicant for a license and it has no reference to spent fuel disposal; CLI-15-4, 81 NRC 221 (2015)

OPERATING LICENSE PROCEEDINGS

claims in a contention that did not genuinely stem from the specific amendments to the aging management plan or from particular information in the revised GALL Report were untimely under standards for admission of new or amended contentions; CLI-12-10, 75 NRC 479 (2012)

environmental justice is a Category 2 issue, within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)

in an uncontested proceeding, the Commission would informally review the Staff recommendations, and the license would issue only after Commission action; CLI-11-5, 74 NRC 141 (2011)

OPERATING LICENSE RENEWAL

active components are not subject to an aging management review because existing regulatory programs, including required maintenance programs, can be expected to directly detect the effects of aging on active functions; CLI-15-6, 81 NRC 340 (2015); LBP-11-2, 73 NRC 28 (2011)

adjudicating Category 1 issues site by site based merely on a claim of new and significant information would defeat the purpose of resolving generic issues in a generic environmental impact statement; LBP-12-8, 75 NRC 539 (2012)

aging management review consists of identifying the aging effects, and the aging management plans will manage aging effects and demonstrate that passive, long-lived structures, systems, and components will perform their intended functions during the period of extended operation; LBP-13-13, 78 NRC 246 (2013)

aging management review is required only for equipment that performs its intended function without moving parts or without a change in configuration or property; CLI-15-6, 81 NRC 340 (2015); LBP-13-13, 78 NRC 246 (2013); LBP-15-6, 81 NRC 314 (2015)

aging-based safety review set out in Part 54 is analytically separate from Part 51’s environmental inquiry and does not in any sense restrict NEPA; LBP-11-17, 74 NRC 11 (2011)

all information that applicant uses to support its license renewal application has to be maintained in an auditable and retrievable form; LBP-13-13, 78 NRC 246 (2013)

alternatives to mitigate severe accidents must be considered for all plants that have not considered such alternatives; LBP-11-2, 73 NRC 28 (2011)

although commitment to implement an aging management plan consistent with the GALL Report is an acceptable method for compliance with 10 C.F.R. 54.21(c)(1)(iii), such a commitment does not absolve the applicant from demonstrating, prior to issuance of a renewed license, that plan is indeed consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)
although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants, NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review; LBP-12-26, 76 NRC 559 (2012)
although potential severe accident mitigation alternatives must be considered for license renewal, no site-specific severe accident impacts analysis needs to be done; CLI-12-15, 75 NRC 704 (2012)
although the current licensing basis is not evaluated in the license renewal process, its provisions and protections remain in effect, complementing and supplementing any additional measures added due to aging management requirements; LBP-13-13, 78 NRC 246 (2013)
appl icant can adopt findings of the generic environmental impact statement, designated as Category 1 issues in Table B-1 of Appendix B to Subpart A of Part 51; LBP-13-13, 78 NRC 246 (2013)
appl icant for a federal discharge permit must provide a certification from the state that the proposed activity will not violate state water pollution control standards; LBP-12-16, 76 NRC 44 (2012)
appl icant for a renewed license must first identify all structures, systems, and components that serve a function relating directly or indirectly to safety, as defined by this regulation; CLI-15-6, 81 NRC 340 (2015)
appl icant has the burden of providing reasonable assurance that the current licensing basis will be maintained throughout the renewal period; LBP-15-5, 81 NRC 249 (2015)
appl icant is compelled to implement safety-related severe accident mitigation alternatives that deal with aging management; LBP-11-17, 74 NRC 11 (2011)
appl icant is required to show that safety features will fulfill their intended function, not that every structure will maintain its current licensing basis throughout the renewal period; LBP-15-5, 81 NRC 249 (2015)
appl icant may seek license renewal as early as 20 years prior to expiration; LBP-11-2, 73 NRC 28 (2011)
appl icant must perform an integrated plant assessment to identify structures and components that are subject to aging management review; CLI-15-6, 81 NRC 340 (2015)
appl icant must present an aging management plan with sufficient information that NRC will be able to draw its own independent conclusion as to whether the applicant’s programs are in fact consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)
appl icant must provide a general description of the corporate-wide and plant-specific procedures sufficient to show that the ten elemental attributes of GALL have been addressed so as to demonstrate that the effects of aging on buried pipes will be adequately managed throughout the period of extended operation; LBP-13-13, 78 NRC 246 (2013)
appl icant need not include analyses of the environmental impacts of Category 1 issues in its environmental report because NRC Staff incorporates the GEIS analysis of Category 1 issues as part of the overall cost-benefit balance in the supplemental environmental impact statement for license renewal; CLI-12-19, 76 NRC 377 (2012)
appl icant need not provide an analysis of severe accident mitigation alternatives in its environmental report if NRC Staff has already considered SAMAs for applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment; LBP-12-8, 75 NRC 539 (2012)
appl icant’s environmental report is required to consider any new and significant information that might alter previous environmental conclusions; LBP-12-8, 75 NRC 539 (2012)
appl icant’s environmental report must adopt the generic findings of the generic environmental impact statement, but must also include site-specific analyses of Category 2 issues; CLI-15-6, 81 NRC 340 (2015)
appl icant’s environmental report must address environmental impacts of the proposed action and compare them to impacts of alternative actions; CLI-12-5, 75 NRC 301 (2012); LBP-12-8, 75 NRC 539 (2012)
appl icant’s environmental report must contain a consideration of alternatives for reducing adverse impacts for all Category 2 license renewal issues in Appendix B; LBP-11-21, 74 NRC 115 (2011)
appl icant’s environmental report must include a consideration of alternatives to mitigate severe accidents if NRC Staff has not previously considered them for applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment; CLI-12-19, 76 NRC 377 (2012)
appl icant’s use of an aging management program identified in NUREG-1801, Generic Aging Lessons Learned Report, constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; LBP-13-13, 78 NRC 246 (2013)
applicants are not required to base their severe accident mitigation alternatives analysis on consequence values at the 95th percentile consequence level; LBP-11-2, 73 NRC 28 (2011)

applicants are required to reassess any time-limited aging analyses that were based upon a particular time period, such as an assumed service life of a specific number of years or some period of operation defined by the original 40-year license term; LBP-13-13, 78 NRC 246 (2013)

applicants must assess the impact of the proposed action on threatened or endangered species in accordance with the Endangered Species Act as part of their environmental report; LBP-12-10, 75 NRC 633 (2012)

applicants must conduct aging management reviews of any structure, system, or component that performs one of these intended functions if the SSC is passive (performs its intended function(s) without moving parts or without a change in configuration or properties); CL-12-5, 75 NRC 301 (2012)

applicants must demonstrate how their programs will be effective in managing the effects of aging during the proposed period of extended operation, at a detailed component and structure level, rather than at a more generalized 'system level'; LBP-11-21, 74 NRC 115 (2011); LBP-15-5, 81 NRC 249 (2015)

applicants must demonstrate reasonable assurance that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the current licensing basis for the period of extended operation; CLI-12-5, 75 NRC 301 (2012)

applicants must demonstrate that they have programs in place that will effectively manage the effects of aging for specific types of structures and components during the period of extended operation; LBP-13-13, 78 NRC 246 (2013)

applicants must include in their environmental reports any new and significant information of which they are aware; CLI-12-19, 76 NRC 377 (2012); CLI-13-7, 78 NRC 199 (2013)

applicants must provide a severe accident mitigation alternatives analysis in their application if NRC Staff has not previously considered SAMAs for the applicant’s plant in its environmental documents; CL-12-5, 75 NRC 301 (2012); CL-15-18, 82 NRC 135 (2015)

applicants must reassess any time-limited aging analyses to show either that the analyses will remain valid throughout the period of extended operation or that the effects of aging on the subject component will be managed during that time period; CLI-15-6, 81 NRC 340 (2015)

applicants must submit documentation of compliance with sections 316(a) and (b) of the Clean Water Act concerning thermal discharges; LBP-12-16, 76 NRC 44 (2012)

applicants need not include a need-for-power discussion in their environmental reports; CLI-14-6, 79 NRC 445 (2014); LBP-11-2, 73 NRC 28 (2011)

applicants need not submit an analysis of Category 1 issues in their site-specific environmental reports; LBP-11-2, 73 NRC 28 (2011)

applicants should rely on the generic environmental impact statement for terrorism-related issues in a license renewal application; CL-11-11, 74 NRC 427 (2011)

applicants’ use of an aging management program identified in the GALL Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; CL-12-10, 75 NRC 479 (2012)

application must demonstrate that licensee will adequately manage effects of aging on passive, long-lived components so that their intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 340 (2015)

applications are subject to an environmental review; CL-12-5, 75 NRC 301 (2012)

applications must contain any significant new information relevant to environmental impacts of license renewal of which applicant is aware, and new information generally may be challenged in individual adjudications; CL-12-19, 76 NRC 377 (2012)

applications must include an environmental report to assist NRC Staff in preparing its environmental impact statement; CL-12-13, 75 NRC 681 (2012); LBP-12-8, 75 NRC 539 (2012)

applications must include an integrated plant assessment demonstrating that effects of aging on plant systems, structures, and components will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-13-8, 78 NRC 1 (2013)

backfitting includes the modification of or addition to systems, structures, components, or designs of a facility; LBP-11-17, 74 NRC 11 (2011)
because all aspects of licensee’s current licensing basis will remain in effect during the period of extended operation, in the event that renewed licenses are issued, the corrective action requirements of 10 C.F.R. Part 50, Appendix B will apply; LBP-13-13, 78 NRC 246 (2013)
because it is a Category 1 issue, license renewal applicants need not address bird collisions in their environmental reports unless they are aware of relevant new and significant information; CLI-13-7, 78 NRC 199 (2013)
because SAMA analysis is site-specific, NEPA demands no fully developed plan or detailed examination of specific measures that will be used to mitigate adverse environmental effects; LBP-11-18, 74 NRC 29 (2011)
bird collisions have not been found to be a problem at operating nuclear power plants and are not expected to be a problem during the license renewal term; CLI-13-7, 78 NRC 199 (2013)
Category 1 issues are those resolved generically by the generic environmental impact statement and need not be addressed as part of license renewal; LBP-12-8, 75 NRC 539 (2012)
Category 2 issues are reviewed on a site-specific basis because they have not been determined to be essentially similar for all plants; LBP-15-5, 81 NRC 249 (2015)
Category 2 issues focus on severe accident mitigation, to further reduce severe accident risk (probability or consequences); CLI-12-19, 76 NRC 377 (2012)
Category 2 issues require plant-specific review; LBP-12-8, 75 NRC 539 (2012)
commitment to implement an aging management plan consistent with the GALL Report is an acceptable method for compliance with 10 C.F.R. 54.21(c)(1)(iii); LBP-13-13, 78 NRC 246 (2013)
commitment to implement an aging management plan that NRC finds is consistent with the GALL Report constitutes one acceptable method for compliance, but does not insulate such an approach from challenge by an intervenor, and is not binding on a licensing board in an adjudication; LBP-11-2, 73 NRC 28 (2011); LBP-11-20, 74 NRC 65 (2011)
consultation with appropriate agencies is needed at the time of license renewal to determine whether threatened or endangered species are present and whether they would be adversely affected; LBP-12-10, 75 NRC 633 (2012)
contention asserting that a license renewal environmental report must include a discussion of need for power is inadmissible; LBP-11-13, 73 NRC 534 (2011)
contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 239 (2013)
contents of an application are set forth in 10 C.F.R. 54.21; CLI-15-21, 82 NRC 295 (2015)
contradiction between paragraphs (ii)(L) and (iv) of 10 C.F.R. 51.53(c)(3) is discussed; LBP-13-1, 77 NRC 57 (2013)
current licensing basis of an operating license shall continue during the license renewal period, but these conditions may be supplemented or amended as necessary to protect the environment during the term of the renewed license and will be derived from information contained in the supplement to the environmental report, as analyzed and evaluated in the NRC record of decision; LBP-11-17, 74 NRC 11 (2011)
depending on NRC Staff’s resolution of Fukushima-related rulemaking petitions, Staff could seek Commission permission to suspend one or more of the generic determinations in the license renewal environmental rules and include a new analysis in pending, plant-specific environmental impact statements; LBP-12-1, 75 NRC 1 (2012)
direct consultation obligation is imposed on NRC if NRC determines that approval of a requested license renewal may adversely affect any essential fish habitat; LBP-12-10, 75 NRC 633 (2012)
during the license renewal period, the regulations of 10 C.F.R. Part 50, Appendix B concerning ongoing inspections and audits apply; LBP-13-13, 78 NRC 246 (2013)
each application must contain an integrated plant assessment that is a detailed assessment, conducted at a
component and structure level, rather than at a more generalized system level; LBP-13-13, 78 NRC 246
(2013)
each reactor license renewal application must contain a list of structures and components subject to aging
management review; LBP-13-13, 78 NRC 246 (2013)
earest that a license renewal application may be submitted is 20 years before the expiration date of the
operating license in effect; CLI-13-7, 78 NRC 199 (2013)
effects of aging must be adequately managed so that intended functions will be maintained consistent with
the current licensing basis for the period of extended operation; LBP-15-6, 81 NRC 314 (2015)
endangered/threatened species is a Category 2 issue that requires site-specific analysis in the supplemental
environmental impact statement; LBP-12-10, 75 NRC 633 (2012)
environmental impact statement is required for license renewal of a power reactor; LBP-12-1, 75 NRC 1
(2012)
environmental impacts of license renewal are classified as either Category 1, which are generically
addressed by the NRC’s generic environmental impact statement for license renewal, or Category 2,
which are analyzed on a site-specific basis; LBP-11-17, 74 NRC 11 (2011)
environmental implications of new and significant information must be considered under NEPA before
NRC may grant renewed operating licenses; LBP-11-32, 74 NRC 654 (2011)
environmental justice is a Category 2 issue that must be considered in each license renewal review;
environmental report for license renewal must consider alternatives to mitigate severe accidents for all
plants that have not considered such alternatives; LBP-15-5, 81 NRC 249 (2015)
environmental report for this stage need not contain environmental analysis of Category 1 issues identified
environmental report must analyze environmental impacts of a license renewal on matters identified as
environmental reports for license renewal must address environmental impacts of the proposed action and
compare those impacts to the impacts of alternative actions, but need only consider those alternatives
that are reasonable; CLI-12-8, 75 NRC 393 (2012); LBP-12-15, 76 NRC 14 (2012)
environmental reports must contain any new and significant information regarding the environmental
impacts of license renewal of which the applicant is aware; LBP-13-1, 77 NRC 57 (2013)
environmental reports must discuss new SAMAs addressed in more recent reports for other nuclear power
plants of the same or similar boiling water reactor Mark II design; LBP-14-15, 80 NRC 151 (2014)
esential fish habitat assessment must describe the action, its potential effects on EFH, and proposed
mitigation activities, if any; LBP-12-10, 75 NRC 633 (2012)
existing license will not be deemed to have expired until the license renewal application has been finally
determined; CLI-15-6, 81 NRC 340 (2015)
existing regulatory programs can be expected to directly detect the effects of aging on active functions;
CLI-12-5, 75 NRC 301 (2012)
findings that NRC must make for issuance of a renewed license are set forth in 10 C.F.R. 54.29;
focus of license renewal regulations in 10 C.F.R. Part 54 is to ensure that licensee can manage the
effects of aging on certain long-lived, passive components that are important to safety; CLI-15-6, 81
NRC 340 (2015)
focus of license renewal safety review is described in 10 C.F.R. 54.4(a); CLI-12-5, 75 NRC 301 (2012)
for a license renewal to be issued, the Commission must determine that the applicable requirements of 10
C.F.R. Part 51, Subpart A have been satisfied; LBP-11-18, 74 NRC 29 (2011)
for active structures, systems, and components, NRC chose to exempt from license renewal, challenges to
a plant’s operational activities covered by its current licensing basis; LBP-13-13, 78 NRC 246 (2013)
for all plants, onsite dry or pool storage can safely accommodate spent fuel accumulated from a 20-year
license extension with small environmental effects; LBP-11-13, 73 NRC 534 (2011)
for an alternative energy source to be considered reasonable for an operating license renewal proceeding,
the alternative should be commercially viable and technically capable of producing an equal amount of

1159
baseload power now or in the near future, but no later than the expiration date of the current operating license; CLI-12-8, 75 NRC 393 (2012)

for an electrical generation alternative to qualify for in-depth review, the alternative must be able to provide baseload power during the license renewal term; LBP-12-15, 76 NRC 14 (2012)

for Category 2 environmental issues, applicants must include a site-specific environmental analysis in their license renewal applications; CLI-12-19, 76 NRC 377 (2012)

for license renewal safety review, it is not clear at this point whether any enhancements or changes considered by the Fukushima Task Force will bear on license renewal regulations, which are focused more narrowly on the proper management of aging; CLI-12-10, 75 NRC 479 (2012)

for purposes of the license renewal rule, NRC Staff has determined that the plant system portion of the offsite power system that is used to connect the plant to the offsite power source should be included within the scope of the station blackout rule; CL-12-5, 75 NRC 301 (2012)

forty-year operating licenses can be renewed for an additional 20 years; LBP-13-13, 78 NRC 246 (2013)

for managing effects of aging at its plant, then applicant should demonstrate to NRC Staff reviewers that its program includes the ten elements cited in the GALL Report and will likewise be effective; LBP-13-13, 78 NRC 246 (2013)

if NRC Staff has in hand new information that could render invalid the original site-specific analysis, then such information should be identified and evaluated by Staff for its significance, consistent with NEPA requirements; CLI-12-19, 76 NRC 377 (2012)

if NRC Staff has not already considered site-specific severe accident mitigation alternatives for a facility, they must be considered as part of applicant’s environmental report and ultimately as part of NRC Staff’s supplemental environmental impact statement; LBP-11-17, 74 NRC 11 (2011); LBP-11-18, 74 NRC 29 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-13-1, 77 NRC 57 (2013)

if renewed license is set aside on appeal, the previous operating license would be reinstated; LBP-12-16, 76 NRC 44 (2012)

if, as intervenors allege, applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring program embodied in its license renewal application was a fortiori inadequate, and intervenors had a regulatory obligation to challenge it in their original petition to intervene; LBP-15-1, 81 NRC 15 (2015)

illustrative list of structures and components that are subject to an aging management review is provided in 10 C.F.R. 54.21(a)(i); CLI-12-5, 75 NRC 301 (2012)

impact determinations in the Continued Storage generic environmental impact statement shall be deemed incorporated into the environmental impact statements associated with the applications; CLI-15-10, 81 NRC 535 (2015)

implication that any agency prerequisite with which applicant must comply to operate a plant during an extended term constitutes an “approval” under 10 C.F.R. 51.45(d) would entail an unreasonably strained definition of “approval”; LBP-12-15, 76 NRC 14 (2012)

in establishing its license renewal process, NRC did not believe it necessary or appropriate to throw open the full gamut of provisions in a plant’s current licensing basis to reanalysis because those are effectively addressed and maintained by ongoing agency oversight, review, and enforcement; LBP-13-13, 78 NRC 246 (2013)

integrated plant assessment must demonstrate that effects of aging for each structure and component will be managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 340 (2015); LBP-13-13, 78 NRC 246 (2013)

intervenors fail to specify what other alternatives to the license renewal application should be discussed in the draft supplemental environmental impact statement, much less show that any proposed alternative would satisfy the purpose of applicant’s proposed action; LBP-15-1, 81 NRC 15 (2015)

intervenors opposed renewal of the nuclear power plant license, and proposed new contentions for increased ultrasonic testing of sand bed epoxy coating integrity; LBP-15-1, 81 NRC 15 (2015)
issuance of a renewed operating license for a nuclear power reactor is a major federal action under NEPA; LBP-12-8, 75 NRC 539 (2012)

issues and concerns involved in an extended 20 years of operation are not identical to the issues reviewed when a reactor facility is first built and licensed; LBP-13-13, 78 NRC 246 (2013)

issues that applicant must address in its environmental report, as well as those that it need not address, are listed in 10 C.F.R. 51.53(c)(3); LBP-12-8, 75 NRC 539 (2012)

it is unnecessary to include in license renewal review all those issues already monitored, reviewed, and commonly resolved as needed by ongoing regulatory oversight; LBP-13-8, 78 NRC 1 (2013)

key functions of buried structures, systems, and components that are the focus of the license renewal safety review under Part 54 do not include the prevention of inadvertent radioactive leaks from buried structures; LBP-11-2, 73 NRC 28 (2011)

later revisions to license renewal application that bring the plant into compliance with the GALL-2 have generally been deemed acceptable; LBP-13-13, 78 NRC 246 (2013)

license renewal applicant is not required to perform a new severe accident mitigation alternatives analysis; LBP-14-15, 80 NRC 151 (2014)

license renewal applicant is required to list structures and components subject to an aging management review; LBP-13-8, 78 NRC 1 (2013)

license renewal applicant must file an environmental report that includes an alternatives analysis that considers and balances the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-11-13, 73 NRC 534 (2011)

license renewal applicants must provide a plant-specific analysis of issues designated as Category 2; CLI-11-11, 74 NRC 427 (2011)

license renewal applicants need not provide a site-specific analysis of the environmental impacts of spent fuel storage in their environmental report; CLI-11-11, 74 NRC 427 (2011)

license renewal applicants whose facilities qualify for the SAMA-analysis exception are exempt from addressing severe accident mitigation in their environmental reports, just as they would be exempt from addressing Category 1 issues; CLI-13-7, 78 NRC 199 (2013)

license renewal environmental report is not required to include discussion of need for power; LBP-11-21, 74 NRC 115 (2011)

license renewal regulations serve exactly their intended purpose by focusing the proceeding on future-oriented aging issues; CLI-15-21, 82 NRC 295 (2015)

license renewal review is not intended to duplicate NRC’s ongoing oversight of operating reactors; CLI-15-6, 81 NRC 340 (2015)

license renewal safety reviews are generally limited to aging-related issues because NRC recognizes that it has the ongoing responsibility to oversee the safety and security of operating nuclear reactors, and maintains an aggressive and ongoing program to oversee plant operation; LBP-13-13, 78 NRC 246 (2013)

licensee commitment to develop a program by the time the 20-year extension begins does not demonstrate that the effects of aging will be adequately managed; LBP-15-1, 81 NRC 15 (2015)

licensee is not required to list an enforcement order and its compliance with the order’s terms in the environmental report supporting its application; LBP-12-15, 76 NRC 14 (2012)

licensees are required to establish a program for qualifying certain defined electrical equipment; LBP-11-20, 74 NRC 65 (2011)

licensee’s integrated plant assessment must demonstrate that the effects of aging will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-13-8, 78 NRC 1 (2013)

limited scope of the intended functions of structures, systems, and components subject to aging management review is described in 10 C.F.R. 54.4(b); CLI-12-5, 75 NRC 301 (2012)

many safety questions that relate to plant aging become important during the extended renewal term since the design of some components may have been based upon a service lifetime of only 40 years; LBP-11-21, 74 NRC 115 (2011)

mere fact that the intended function of transformers is being monitored in accordance with the current licensing basis does not exempt them from needing to be included in an aging management review program for license renewal; LBP-13-8, 78 NRC 246 (2013)
NEPA imposes no legal duty on NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

NEPA mitigation alternatives analysis need not reflect the most conservative, or worst-case, analysis; CLI-12-10, 75 NRC 479 (2012)

NEPA requires consideration of reasonable alternatives; CLI-12-8, 75 NRC 393 (2012)

NEPA requires NRC to reevaluate any prior analysis if it is presented with any new and significant information that would cast doubt on a previous environmental analysis; LBP-12-8, 75 NRC 539 (2012)

NEPA review in license renewal proceedings is not limited to aging management-related issues; LBP-11-17, 74 NRC 11 (2011)

no finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency is necessary for issuance of a renewed nuclear power reactor operating license; LBP-13-13, 78 NRC 246 (2013)

none of the post-Fukushima orders or information requests can be characterized as approvals that must be obtained in connection with license renewal; LBP-12-15, 76 NRC 14 (2012)

nonpower reactors, including research and test reactors, differ as a class from nuclear power plants and are not covered by 10 C.F.R. Part 54; CLI-11-11, 74 NRC 427 (2011)

NRC does not mandate a specific approach to SAMA analyses, but instead, reviews each severe accident mitigation consideration provided by a license renewal applicant on its merits and determines whether it constitutes a reasonable consideration of SAMAs; CLI-13-7, 78 NRC 199 (2013)

NRC explicitly requires an emergency plan for initial reactor operating licenses but does not require them for license renewal; LBP-11-29, 74 NRC 612 (2011)

NRC has analyzed terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release expected from internally initiated events; LBP-11-2, 73 NRC 28 (2011)

NRC has resolved many environmental impacts for license renewal through a generic environmental impact statement and these issues need not be revisited in site-specific environmental impact statements; CLI-14-7, 80 NRC 1 (2014)

NRC is not required, as a precondition to issuing or renewing operating licenses for nuclear power plants, to make definitive findings concerning technical feasibility of a repository for the disposal of spent nuclear fuel; CLI-15-4, 81 NRC 221 (2015)

NRC reviews management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components and environmental impacts and alternatives to the proposed action in accordance; LBP-15-5, 81 NRC 249 (2015)

NRC Staff is not required to analyze need for power; LBP-13-13, 78 NRC 246 (2013)

NRC Staff must draw its own independent conclusion as to whether applicant’s programs are in fact consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)

NRC Staff must make a recommendation of the environmental acceptability of the license renewal action, and the Commission shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; CLI-12-8, 75 NRC 393 (2012)

NRC Staff must prepare a plant-specific supplement to the generic environmental impact statement that adopts applicable generic impact findings from the GEIS and analyzes site-specific impacts; LBP-12-8, 75 NRC 539 (2012)

NRC Staff prepares a supplement to its generic environmental impact statement; LBP-12-10, 75 NRC 633 (2012)

NRC will not issue licenses dependent upon the Waste Confidence Decision or the Temporary Storage Rule until the D.C. Circuit’s remand is appropriately addressed; LBP-13-13, 78 NRC 246 (2013)

NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013); LBP-13-13, 78 NRC 246 (2013)
NRC’s license renewal process concerns a particularized and limited inquiry into the potential impacts of an additional 20 years of nuclear power plant operation, not day-to-day operational issues; LBP-11-21, 74 NRC 115 (2011)
NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding or even in parallel with the ongoing license renewal review; CLI-11-5, 74 NRC 141 (2011); CLI-12-5, 75 NRC 301 (2012)
once NRC completes its environmental review, its record of decision must state whether NRC has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm from the alternative selected, and if not, to explain why those measures were not adopted, and summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-11-17, 74 NRC 11 (2011)
operating license renewal applicants must make a detailed assessment, conducted on passive, safety-related physical systems, structures, and components of the plant; LBP-11-21, 74 NRC 115 (2011)
operating license renewal applicants must reassess time-limited aging analyses made during the original license term and based upon the length of the original license term; LBP-11-21, 74 NRC 115 (2011)
Part 51 license renewal provisions cover environmental issues relating to onsite spent fuel storage generically and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-11-13, 73 NRC 534 (2011)
Part 51 process for environmental review associated with license renewal, focusing upon the potential impacts of an additional 20 years of plant operation, is described; CLI-12-5, 75 NRC 301 (2012)
Part 54 governs issuance of renewed operating licenses and renewed combined licenses for nuclear power plants licensed pursuant to sections 103 or 104b of the Atomic Energy Act and Title II of the Energy Reorganization Act; CLI-11-11, 74 NRC 427 (2011)
particular requirements for the environmental qualification of electric components important to safety for nuclear power plants are set forth in 10 C.F.R. 50.49; CLI-12-10, 75 NRC 479 (2012)
passive systems, structures, and components are subject to an aging management review only if they are long-lived, that is, not subject to replacement based on a qualified life or specified time period; LBP-13-13, 78 NRC 246 (2013)
past or current performance could inform the review of a license renewal application; CLI-11-11, 74 NRC 427 (2011)
plant systems, structures, and components within the scope of license renewal are all non-safety-related systems, structures, and components whose failure could prevent the capability to shut down the reactor and maintain it in a safe shutdown condition; LBP-15-6, 81 NRC 314 (2015)
plants for which a SAMA analysis was conducted for the first time under section 51.53(c)(3)(ii)(L) may face general criticism that the passage of time between original licensing and renewal has rendered their SAMA analysis out of date upon application for a subsequent renewal term; CLI-13-7, 78 NRC 199 (2013)
plants may continue to operate until the operating license renewal adjudication is completed; LBP-13-13, 78 NRC 246 (2013)
possibility that new SAMA candidates may become available cannot be the basis for a successful petition to waive 10 C.F.R. 51.53(c)(3)(ii)(L), because the Commission knew that SAMA technology would change, but was confident that processes, other than the SAMA analysis process, would adequately address any such developments; LBP-13-1, 77 NRC 57 (2013)
power reactor licensee may preserve its license by filing a renewal application at least 5 years before its license is set to expire, affording the Staff ample time to complete the required environmental and safety reviews; LBP-11-30, 74 NRC 627 (2011)
purpose of 10 C.F.R. 51.53(c)(3)(ii)(L) is to limit the analysis during relicensing to exclude consideration of SAMAs regarding plant operation that were previously considered; LBP-13-1, 77 NRC 57 (2013)
purpose of the exemption from 10 C.F.R. 51.53(c)(3)(ii)(L) is to reflect NRC’s view that one severe accident mitigation alternatives analysis, as a general matter, satisfies NRC obligation to consider measures to mitigate both the risk and the environmental impacts of severe accidents; LBP-14-15, 80 NRC 151 (2014)
reasonable assurance is not quantified as equivalent to a 95% (or any other percent) confidence level, but is based on sound technical judgment of the particulars of a case and on compliance with NRC regulations; LBP-13-13, 78 NRC 246 (2013)

“reasonable assurance” standard for aging management programs does not require a 95% confidence level of compliance; LBP-11-18, 74 NRC 29 (2011)

reassessment of time-limited aging analyses must show that the earlier analysis will remain valid for the extended operation period or modify and extend the analysis to apply to a longer term, such as 60 years, or otherwise demonstrate that the effects of aging will be adequately managed in the renewal term; LBP-13-13, 78 NRC 246 (2013)

reissuance of a reactor license is a major federal action requiring an environmental review; LBP-13-13, 78 NRC 246 (2013)

relay switches and snubbers are not subject to an aging management review; LBP-15-6, 81 NRC 314 (2015)

request that NRC conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as part of the environmental review for new reactor and license renewal decisions is premature; LBP-12-18, 76 NRC 127 (2012)

requirement for license renewal applicants to consider severe accident mitigation alternatives stems from 10 C.F.R. 51.53(c)(3) (ii)(L); CLI-12-10, 75 NRC 479 (2012)

safety review is limited to matters specified in 10 C.F.R. Part 54, which focus on the management of aging for certain systems, structures, and components, and the review of time-limited aging analyses; LBP-11-21, 74 NRC 115 (2011); LBP-15-5, 81 NRC 249 (2015); LBP-15-6, 81 NRC 314 (2015)

safety significance of a structure, system, or component is defined in terms of its safety-related functions, and within the scope of license renewal are included those SSCs whose failure could prevent satisfactory accomplishment of the safety-related function; CLI-15-6, 81 NRC 340 (2015)

scope of license renewal consists of all nonsafety-related structures, systems, and components whose failure could prevent satisfactory accomplishment of any safety functions including control of excessive dose exposures; LBP-13-13, 78 NRC 246 (2013)

scope of license renewal is defined in 10 C.F.R. 54.4; CLI-15-21, 82 NRC 295 (2015)

scope of license renewal, including buried piping, addresses all safety-related structures, systems, and components that are relied upon to remain functional to ensure the integrity of the reactor coolant pressure boundary, the capability to shut down and maintain the safe shutdown of the reactor, or the capability to prevent or mitigate the consequences of accidents that could result in potential offsite radiation exposures; LBP-13-13, 78 NRC 246 (2013)

severe accident mitigation alternative need not be implemented during a particular plant’s license renewal review if the Commission is concurrently resolving the safety improvement achieved by that SAMA through a generic process attached to the agency’s review of all plants’ current licensing bases; LBP-11-17, 74 NRC 11 (2011)

severe accident mitigation alternatives analysis for license renewal is a cost-benefit analysis, weighing a particular mitigation measure’s estimated degree of risk reduction against its estimated cost of implementation; CLI-12-8, 75 NRC 393 (2012)

severe accident mitigation alternatives analysis is a Category 2 issue and SAMAs must be considered for all plants that have not considered such alternatives; LBP-12-8, 75 NRC 539 (2012)

severe accident mitigation alternatives analysis is neither a worst-case nor a best-case impacts analysis, and the agency’s obligations under NEPA are tempered by a practical rule of reason; LBP-11-18, 74 NRC 29 (2011)

severe accident mitigation alternatives analysis is not part of the agency’s safety review for license renewal under the Atomic Energy Act, but is instead a mitigation alternatives analysis conducted pursuant to the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013)

severe accident mitigation alternatives analysis is required to discuss a recently discovered fault located near the plant; LBP-15-29, 82 NRC 246 (2015)

severe accident mitigation alternatives analysis must be considered as part of the environmental report and, ultimately, as part of NRC Staff’s supplemental environmental impact statement for a power reactor license renewal; LBP-15-5, 81 NRC 249 (2015)

severe accident mitigation alternatives review identifies and assesses possible plant changes such as improvements in hardware, training, or procedures that could cost-effectively mitigate the environmental impacts that would otherwise flow from a potential severe accident; LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)

site-specific consideration of severe accident mitigation alternatives is required at the time of license renewal unless a previous consideration of such alternatives regarding plant operation has been included in a final environmental impact statement, final environmental assessment, or a related supplement; CLI-11-5, 74 NRC 141 (2011)

Staff’s ability to satisfy its NEPA obligations will be undermined if applicant either fails to include seismic information in its SAMA analysis, or, in omitting the information, fails to explain its absence and justify that the overall costs of obtaining it are exorbitant; CLI-11-11, 74 NRC 427 (2011)

statements in the application promising to develop and implement an aging management plan that would be consistent with the NRC guidance document applicable at the time the application was submitted is insufficient; LBP-13-13, 78 NRC 246 (2013)

structures and components are subject to aging management review if they are not subject to routine replacement; CLI-15-6, 81 NRC 340 (2015)

structures and components are subject to aging management review if they perform an intended function without moving parts or without a change in configuration or properties; CLI-15-6, 81 NRC 340 (2015); LBP-11-2, 73 NRC 28 (2011)

structures and components associated only with active functions can be generically excluded from a license renewal aging management review; CLI-12-5, 75 NRC 301 (2012)

supplemental environmental impact statements for license renewal are not required to include discussion of need for power or the economic costs and economic benefits of the proposed action or of alternatives to the proposed action; LBP-13-13, 78 NRC 246 (2013)

there must be reasonable assurance that applicant will manage the effects of aging on certain structures and components during extended operation; LBP-11-2, 73 NRC 28 (2011)

time frame for SAMA analysis is inherent in NRC’s regulatory scheme, which provides for a 40-year license term, with the possibility of license renewal for an additional 20-year period; CLI-13-7, 78 NRC 199 (2013)

to evaluate an application, NRC reviews the management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011)

to grant a license renewal, NRC Staff must find that there is reasonable assurance that the effects of aging on relevant systems, structures, and components will be managed during the period of extended operation, that time-limited aging analyses have been identified for review, and that applicable environmental requirements have been met; LBP-15-6, 81 NRC 314 (2015)

to meet its environmental review burden in license renewal cases, NRC Staff developed the generic environmental impact statement, which contains findings that apply to all nuclear power plants and are codified in Appendix B of Subpart A of 10 C.F.R. Part 51; LBP-13-13, 78 NRC 246 (2013)

transformers perform their intended function through a change in state similar to switchgear, power supplies, battery chargers, and power inverters, which have been excluded from an aging management review; CLI-12-5, 75 NRC 301 (2012); CLI-15-6, 81 NRC 340 (2015)

variety of electrical and instrumentation and control components are excluded from an aging management review for license renewal; CLI-12-5, 75 NRC 301 (2012)

waste confidence undergirds certain agency licensing decisions, in particular new reactor licensing and reactor license renewal; CLI-12-16, 76 NRC 63 (2012); CLI-14-8, 80 NRC 71 (2014)

whether petitioners have adequately raised an issue as to whether transformers constitute active or passive components survived a motion for summary disposition; LBP-11-2, 73 NRC 28 (2011)

OPERATING LICENSE RENEWAL PROCEEDINGS

absent demonstration that petitioner’s alleged special circumstances are unique to the facility rather than common to a large class of facilities, the request for waiver of regulations excluding spent fuel pool
issues from license renewal proceedings is denied; LBP-11-35, 74 NRC 701 (2011)
adjudicatory hearings in individual proceedings will share the same scope of issues as NRC Staff review,
for NRC’s hearing process, like NRC Staff’s review, necessarily examines only the questions NRC
safety rules make pertinent; LBP-15-5, 81 NRC 249 (2015)
adjudicatory proceeding is terminated following Commission reversal of board’s decision admitting three
adjudicatory proceedings are not environmental impact statement editing sessions; CLI-12-6, 75 NRC 352
(2012)
admissibility of contention that common-mode failures and/or mutually exacerbating catastrophes are
entitled to severe accident mitigation alternatives analysis is decided; LBP-15-5, 81 NRC 249 (2015)
admissibility of contention that environmental report lacks site-specific safety and environmental findings
regarding storage and disposal of spent fuel is decided; LBP-15-5, 81 NRC 249 (2015)
admission of a management integrity contention relied on references to a serious incident involving
shutdown of the reactor, management responsible for the incident remaining in place, and a purported
climate of reprisals for bringing forward safety issues, and reference to at least one expert witness in
support of the contention; CLI-11-11, 74 NRC 427 (2011)
allegations of noncompliance with already-issued, existing, and open Commission orders are part of the
current licensing basis and therefore cannot be challenged in a license renewal proceeding; LBP-15-5,
81 NRC 249 (2015)
alternatives for reducing adverse environmental impacts, including impacts of severe accidents, are among
the limited issues within the scope of a license renewal proceeding; LBP-11-13, 73 NRC 534 (2011)
although a consideration of alternatives to mitigate severe accidents must be provided if not previously
performed, applicant must provide this analysis only for those issues identified as Category 2 issues in
Appendix B to Subpart A of Part 51; LBP-11-2, 73 NRC 28 (2011)
any person whose interests may be affected by the license renewal proceeding, and who wishes to
participate as a party, must file a petition for leave to intervene within 60 days of the notice of hearing
in accordance with 10 C.F.R. 2.309; LBP-12-8, 75 NRC 539 (2012)
yany rule or policy changes NRC may make as a result of its post-Fukushima review may be made
irrespective of whether a license renewal application is pending, or whether final action on an
application has been taken; CLI-12-6, 75 NRC 352 (2012)
allegations of noncompliance with already-issued, existing, and open Commission orders are part of the
current licensing basis and therefore cannot be challenged in a license renewal proceeding; LBP-15-5,
81 NRC 249 (2015)
allegations of noncompliance with already-issued, existing, and open Commission orders are part of the
current licensing basis and therefore cannot be challenged in a license renewal proceeding; LBP-15-5,
81 NRC 249 (2015)
apPLICANT is not required to identify safety-related incidents that have occurred during the current licensing
term; LBP-13-8, 78 NRC 1 (2013)
asertion by applicant that its aging management plan is consistent with the GALL Report does not
immunize it against a challenge to the AMP; CLI-12-5, 75 NRC 301 (2012)
asertions of a need to implement filtered vented containment are outside the scope of license renewal
proceedings; LBP-11-35, 74 NRC 701 (2011)
because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the
ability of buried structures to perform their intended functions as defined by 10 C.F.R. 54.4(a)(1)-(3),
the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 28 (2011)
because the probability of a spent fuel pool accident causing significant harm is remote, there is no need
for applicants to assess mitigation alternatives as part of license renewal; LBP-15-5, 81 NRC 249
(2015)
because the shield building functions as a radiation and biological shield, failure or collapse of the shield
building due to cracking propagation could lead to health and safety impacts and thus petitioner’s
contention concerns a subject matter that could impact the grant or denial of a pending license application;
bird collisions with cooling towers have not been found to be a problem at operating nuclear power
plants and are not expected to be a problem during the license renewal term; LBP-13-1, 77 NRC 57
(2013)
board erred in admitting a contention pertaining to a plant’s safety culture; CLI-11-11, 74 NRC 427
(2011)
board permitted any person who was not a party to the proceeding to submit written limited appearance
statements concerning the issues in the proceeding; LBP-13-13, 78 NRC 246 (2013)
boards are required to consider alternatives as they exist and are likely to exist; CLI-12-5, 75 NRC 301 (2012)
boards do not sit to “flyspeck” environmental documents or to add details or nuances, but the environmental report or environmental impact statement must come to grips with all important considerations; LBP-15-5, 81 NRC 249 (2015)
broad-based issues akin to safety culture such as operational history, quality assurance, quality control, management competence, and human factors are outside the scope of license renewal because they raise issues that are relevant to current plant operation; LBP-12-27, 76 NRC 583 (2012)
Category 1 impacts are those that NRC has determined are common across plants and are outside the scope of individual proceedings
Category 1 issues are environmental issues that NRC has resolved generically and therefore need not consider in specific license renewal proceedings; CLI-15-18, 82 NRC 135 (2015)
Category 1 issues are not subject to challenge in a relicensing proceeding, absent a waiver, because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-11-13, 73 NRC 534 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-13-13, 78 NRC 246 (2013); LBP-15-5, 81 NRC 249 (2015)
Category 2 issues must be reviewed on a site-specific basis because they have not been determined to be essentially similar for all plants and thus can be the subject of a contention; LBP-11-13, 73 NRC 534 (2011)
Category 2 issues are not subject to challenge in a relicensing proceeding, absent a waiver, because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-11-13, 73 NRC 534 (2011)
challenges to Category 1 findings based on new and significant information require a waiver of 10 C.F.R. Part 51, Subpart A, Appendix B, in order to be litigated in a license renewal adjudication; CLI-13-7, 78 NRC 199 (2013)
challenges to emergency planning fall outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
challenges to extensive damage mitigation guidelines are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to NRC’s assumptions about operators’ capability to mitigate an accident are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to NRC’s previous rejection of the petitioner’s concerns regarding environmental impacts of high-density pool storage of spent fuel are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to the generic environmental impact statement’s determinations amount to attacks on NRC regulations and are not within the scope of license renewal proceedings; LBP-13-8, 78 NRC 1 (2013)
claims of past and current mismanagement are outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
Commission denies a request for a protective stay of the proceeding; CLI-14-6, 79 NRC 445 (2014)
Commission has codified generic determinations for certain environmental issues, identified as Category 1 issues, for license renewal proceedings; LBP-11-13, 73 NRC 534 (2011)
Commission remands license renewal proceeding to the board for the limited purpose of considering a rule waiver petition; CLI-12-19, 76 NRC 377 (2012)
compliance with orders issued as part of NRC’s ongoing oversight program are enforcement issues that are not within the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
compliance with the current licensing basis is not within the scope of a license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011)
contention alleging that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 456 (2015)
contention alleging that license renewal application fails to consider plutonium fuel use, which would place it outside the current licensing basis, is inadmissible; LBP-13-8, 78 NRC 1 (2013)
contention alleging that licensee had a repeated pattern of violations which could undermine its ability to manage aging during the period of extended operations is not within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)
contention asserting that the NRC’s environmental review of the license renewal application has not met the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and Management Act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633 (2012)
contention asserting that the applicant’s integrated plant assessment for the license renewal application fails to identify and assess safety-related incidents at the plant in its required time-limited aging analysis is a safety contention, and thus is not admissible; LBP-13-8, 78 NRC 1 (2013)
contention asserting that applicant’s SAMA analysis improperly ignored radioactive waste disposal is outside the scope of the proceeding because it directly challenges the generic determinations in Table B-1 of Appendix B to Part 51; LBP-15-7, 81 NRC 199 (2013)
contention that challenges lack of severe accident mitigation alternatives analysis in applicant’s environmental report is inadmissible; CLI-13-7, 78 NRC 199 (2013)
contention that does not actually challenge any specific part of the integrated plant assessment or time-limited aging analyses fails to demonstrate the existence of a genuine dispute with applicant; LBP-15-6, 81 NRC 314 (2015)
contention that environmental report does not satisfy NEPA because it does not consider a range of measures to mitigate the risk of catastrophic fires in densely packed, closed-frame spent fuel storage pools is decided; LBP-15-5, 81 NRC 249 (2015)
contention that environmental report is inadequate insofar as it does not consider the risk of spent fuel pool fires is inadmissible; LBP-15-5, 81 NRC 249 (2015)
contention that ice condenser containments lack acceptable aging management plans to adequately maintain critical components of the containment for 20 years of additional operation is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that license renewal application fails to adequately address the risks of flooding from failure of upstream dams is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that license renewal application lacks supporting documentation providing analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that licensee’s history of managing whistleblower complaints regarding safety issues demonstrates that the plant will not be operated safely during the license renewal term is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that offers no explanation how its assertions are directly relevant to applicant’s ability to manage the effects of aging during the renewal term is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that operating license should not be renewed unless and until applicant establishes that the plant can withstand and be safely shut down following an earthquake is not within the scope of license renewal proceedings; LBP-15-6, 81 NRC 314 (2015)

contention that severe accident mitigation alternatives analysis fails to evaluate the impact that a severe accident at one unit would have on the operation of a proposed nearby unit is within the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

contention was inadmissible because petitioner offered nothing to link the outcome of the Fukushima events to either the nuclear power plant or the license renewal application and thus failed to show any dispute with the application; CLI-12-13, 75 NRC 681 (2012)

contentions alleging that applicants’ handling of past safety issues at the plants demonstrated that the applicants could not provide reasonable assurance that they would manage the effects of aging during the license renewal term are inadmissible; LBP-13-8, 78 NRC 1 (2013)

contentions are limited to aging-related issues, not issues already monitored and reviewed in the ongoing regulatory oversight processes; CLI-11-2, 73 NRC 333 (2011)

contentions concerning release of radiological, chemical, and herbicidal materials and storage of spent fuel are Category 1 issues and thus inadmissible; LBP-12-8, 75 NRC 539 (2012)

contentions could show a genuine dispute with respect to a technology that, although not commercially viable at the time of the application, is under development for large-scale use and is likely to be available during the period of extended operation; CLI-12-5, 75 NRC 301 (2012)

contentions on Category 1 issues amount to a challenge to the regulation barring challenges to generic environmental findings; CLI-12-19, 76 NRC 377 (2012)

contentions that challenge applicant’s compliance with the loss-of-large-areas requirements of 10 C.F.R. 50.54(h)(2) are not admissible because they are not within the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)

contentions that relate to current operations at a plant, as opposed to how it might operate during the period of extended operation, are inadmissible; LBP-13-8, 78 NRC 1 (2013)

contenting that current operating issues are, by their very nature, beyond the scope of a license renewal proceeding; CLI-11-2, 73 NRC 333 (2011); LBP-15-5, 81 NRC 249 (2015)

current safety issues are beyond the scope of the proceeding; LBP-12-27, 76 NRC 583 (2012)

determination that, for any license renewal of a nuclear power plant, the probability-weighted consequences of a severe accident are small cannot be challenged; LBP-11-2, 73 NRC 28 (2011)

discussion necessary to support a NEPA alternatives contention in a reactor license renewal proceeding is compared with that for a Part 52 combined license proceeding; LBP-12-15, 76 NRC 14 (2012)

during pendency of remand, intervenors are free to submit a motion to reopen the record pursuant to 10 C.F.R. 2.326 should they seek to address any genuinely new issues related to the license renewal application that previously could not have been raised; LBP-11-20, 74 NRC 65 (2011)

emergency planning is neither germane to age-related degradation nor unique to the period covered by a license renewal application; LBP-11-35, 74 NRC 701 (2011)

enforcement orders are outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

entertaining contentions in a license renewal proceeding that challenge the current licensing basis would be both unnecessary and wasteful given ongoing agency oversight, review, and enforcement; LBP-11-21, 74 NRC 115 (2011)
SUBJECT INDEX

environmental analysis of severe accidents is designated as a Category 2 site-specific issue for license renewal, and therefore the SAMA analysis normally is subject to challenge in a license renewal adjudicatory proceeding; CLI-13-7, 78 NRC 199 (2013)

exception in 10 C.F.R. 51.53(e)(3)(ii)(L) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in certain license renewal adjudications; CLI-13-7, 78 NRC 199 (2013)

for pending license renewal applications, where the period of extended operation will not begin for at least a year, there is no imminent threat to public health and safety that requires suspension of licensing proceedings or decisions; LBP-11-35, 74 NRC 701 (2011)

GEIS findings with respect to severe accident consequences are not subject to challenge in individual license renewal proceedings; CLI-15-6, 81 NRC 340 (2015)

generalized economic cost arguments, unsupported by asserted facts or expert opinion, are insufficient to show a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)

generic analysis remains appropriate for spent fuel pool accidents in license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)

genetic environmental analysis is incorporated into NRC regulations, and thus Category 1 generic findings may not be challenged in individual licensing proceedings unless accompanied by a petition for rule waiver; CLI-15-6, 81 NRC 340 (2015)

generally, geographic proximity to a facility (i.e., living or working within 50 miles) is presumptively sufficient to meet traditional standing requirements; LBP-12-8, 75 NRC 539 (2012)

groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue; LBP-12-8, 75 NRC 539 (2012)

if compliance with the current licensing basis cannot be fully achieved during the current licensing term and must be consummated during the period of extended operation, then a contention raising issues about such CLB compliance is within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

impacts to subsistence consumption must be evaluated as part of the site-specific environmental justice analysis; LBP-15-5, 81 NRC 249 (2015)

in the absence of any assertion that Subpart G procedures should be used to resolve any of the admitted contentions, the Subpart L hearing procedures will be used to adjudicate each admitted contention; LBP-11-2, 73 NRC 28 (2011)

in theory, Commission approval of a rule waiver could allow a contention on a Category 1 issue to proceed where special circumstances exist; CLI-15-6, 81 NRC 340 (2015)

interest into future, inchoate plans of licensee would generally invite petitioners in license renewal cases to raise safety issues involving a myriad of possible future license amendments; LBP-13-8, 78 NRC 1 (2013)

inspection reports could be seen as objective evidence that applicant may not adequately manage aging in the future; CLI-11-11, 74 NRC 427 (2011)

interested governmental entities who failed to raise admissible contentions were eligible to participate in the license renewal proceeding; LBP-13-13, 78 NRC 246 (2013)

intervenor must do more than point to issues with the shield building, but must also indicate what is wrong with applicant’s response and its amended inspection program and why intervenor believes the particular inspection program makes the license renewal application unacceptable; LBP-15-1, 81 NRC 15 (2015)

intervenors’ challenge to the aging management plan must consist of more than allegations that the AMP is deficient, but rather must point to specific ways the AMP is inadequate or wrong; LBP-12-27, 76 NRC 583 (2012)

intervenors’ requests for more testing, more methods of testing, and more information, without an explanation of why the current program is inadequate, do not create a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)

it is in the public interest for adjudications to proceed, except for contentions associated with waste confidence issues; CLI-12-16, 76 NRC 63 (2012)
it makes no sense to spend valuable resources litigating allegations of current deficiencies in a proceeding that is directed to future-oriented issues of aging; CLI-15-21, 82 NRC 295 (2015)

license renewal contention alleging higher cancer death rates in local counties than the state average is inadmissible because it is based on unsupported speculation; LBP-13-8, 78 NRC 1 (2013)

license renewal provisions cover environmental issues relating to onsite spent fuel storage generically, and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

license renewal review is a limited one, focused on aging management issues; CLI-11-5, 74 NRC 141 (2011)

license renewal safety review and any associated license renewal adjudicatory proceeding focus on the detrimental effects of aging posed by long-term reactor operation; CLI-12-5, 75 NRC 301 (2012)

license renewal should not include a new, broad-scoped inquiry into compliance that is separate from and parallel to ongoing compliance oversight activity; CLI-11-11, 74 NRC 427 (2011); LBP-13-8, 78 NRC 1 (2013)

licensee generally bears the ultimate burden of proof, but intervenors must give some basis for further inquiry; LBP-15-5, 81 NRC 249 (2015)

licensing actions that could increase reactor vessel embrittlement, such as license renewals, hold the potential for offsite consequences that are obvious; LBP-15-17, 81 NRC 753 (2015)

litigability of the adequacy of applicant’s efforts to address current operational issues is excluded from a license renewal proceeding; CLI-11-11, 74 NRC 427 (2011)

management integrity contentions are admissible in license renewal proceedings only if they rely on specific supporting information, including references to a serious incident involving shutdown where management responsible for the incident remained in place, a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert in support of the contention; LBP-13-8, 78 NRC 1 (2013)

matters relating to reasonable assurance of safety during the current license term are to be addressed under the current license and are outside the scope of a license renewal review; CLI-15-21, 82 NRC 295 (2015)

motion to admit a new contention arguing that applicant’s environmental report fails to satisfy NEPA because it does not address findings and recommendations raised by Task Force Report on the Fukushima Dai-ichi accident is denied as premature and insufficiently focused on the application; LBP-11-28, 74 NRC 604 (2011)

narrow and specific contention that alleges facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; CLI-11-11, 74 NRC 427 (2011)

NEPA imposes a procedural requirement on an agency’s decisionmaking process by mandating that an agency consider the environmental impacts of a proposed action and inform the public that it has taken those impacts into account in making its decision; LBP-11-17, 74 NRC 11 (2011)

NEPA review in license renewal proceedings is not limited to aging management-related issues; LBP-15-5, 81 NRC 249 (2015)

“new and significant information” requirement does not override, for purposes of litigating the issues in an adjudicatory proceeding, the exclusion of Category 1 issues in section 51.53(c)(3)(c) from site-specific review; CLI-12-19, 76 NRC 377 (2012)

no finding on emergency planning is necessary for issuance of a renewed nuclear power reactor operating license; CLI-15-6, 81 NRC 340 (2015)

nothing in NRC case law or regulations suggests that license renewal is an occasion for far-reaching speculation about unimplemented and uncertain plans; LBP-13-8, 78 NRC 1 (2013)

NRC adjudicatory hearings are not environmental impact statement editing sessions wherein the board sits to parse and fine-tune EISs; LBP-13-13, 78 NRC 246 (2013)

NRC shall require backfitting of a facility only when it determines that there is a substantial increase in the overall protection of the public health and safety or the common defense and security and that the costs of implementation are justified in view of this increased protection; LBP-11-17, 74 NRC 11 (2011)
NRC Staff has authority to require implementation of non-aging-management severe accident mitigation alternatives through its current licensing basis backfit review under Part 50 or through setting conditions of the license renewal; LBP-11-17, 74 NRC 11 (2011)
NRC Staff has the overall burden of complying with NEPA; LBP-13-13, 78 NRC 246 (2013)
NRC Staff’s independent finding of license renewal applicant’s consistency with GALL does not prevent the board from reviewing the substance of the applicant’s commitments and exploring deficiencies alleged by intervenors in its proceedings; LBP-13-13, 78 NRC 246 (2013)
NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding (perhaps even in parallel with the ongoing license renewal review); CLI-12-8, 75 NRC 393 (2012)
offsite land use is a Category 2 impact because land-use changes may be perceived by some community members as adverse and by others as beneficial, and so, NRC Staff is unable to assess generically the potential significance of site-specific offsite land use impacts; LBP-13-13, 78 NRC 246 (2013)
only role for a court is to ensure that the agency has taken a hard look at environmental consequences; LBP-11-17, 74 NRC 11 (2011)
operating license may be renewed if NRC finds, among other things, that actions have been identified and have been or will be taken to manage the effects of aging during the period of extended operation on the functionality of certain identified structures and components; CLI-11-11, 74 NRC 427 (2011)
petitioner has provided adequate support for its claim that there are numerous new severe accident mitigation alternatives candidates that should be evaluated for their significance; LBP-12-8, 75 NRC 539 (2012)
petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the nuclear power facility; LBP-11-21, 74 NRC 115 (2011)
petitioner must challenge the environmental report, which acts as a surrogate for the environmental impact statement during the early stages of a relicensing proceeding; LBP-12-8, 75 NRC 539 (2012)
petitioner’s assertion that severe accidents from spent fuel pools must be considered in applicant’s SAMA analysis is in direct conflict with NRC regulations; LBP-11-2, 73 NRC 28 (2011)
petitioner’s challenge to applicant’s use of Three Mile Island data constitutes a genuine dispute on a material issue and is within the scope of the proceeding because it challenges the adequacy of the environmental report; LBP-12-8, 75 NRC 539 (2012)
petitioner’s request to hold the proceeding in abeyance until the Commission resolves petitioner’s request to suspend the proceeding pending evaluation of the Fukushima accident is denied; LBP-11-35, 74 NRC 701 (2011)
petitioners can raise compliance issues only under 10 C.F.R. 2.206, which would allow them to petition NRC to take an enforcement action; LBP-15-5, 81 NRC 249 (2015)
petitioners have the burden of going forward, which requires them to provide factual allegations or expert testimony to show a potential deficiency in applicant’s aging management plan; LBP-15-5, 81 NRC 249 (2015)
petitioners must provide site-specific support to show that the severe accident mitigation alternatives analysis is unreasonable; LBP-15-5, 81 NRC 249 (2015)
petitioners question applicant’s failure to consider the qualitative benefits of installing engineered filters; LBP-15-5, 81 NRC 249 (2015)
petitioners’ assertions that the MACCS2 code was not subjected to quality assurance requirements is deficient because a SAMA analysis is not subject to such requirements; LBP-11-2, 73 NRC 28 (2011)
probability-weighted consequences of a severe accident (risk) are small in the context of a license renewal proceeding; LBP-11-13, 73 NRC 534 (2011)
proximity presumption applies in reactor operating license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
proximity presumption of standing has not been explicitly endorsed by the Commission, but has been cited favorably for renewals in the context of a combined license hearing; LBP-12-15, 76 NRC 14 (2012)
proximity presumption, respecting standing for an individual who resides within a 50-mile radius of a nuclear power plant, is recognized; LBP-12-10, 75 NRC 633 (2012)
proximity-based standing is allowed because license renewal allows operation of a reactor over an additional period of time during which the reactor could be subject to the same equipment failures and personnel errors as during operations over the original period of the license; LBP-12-8, 75 NRC 539 (2012)
referencing an aging management program described in the GALL Report does not insulate a program from an adequately supported challenge at a hearing; LBP-11-2, 73 NRC 28 (2011); LBP-13-13, 78 NRC 246 (2013)
relatively formal procedures in Subpart G of Part 2 govern where the credibility of an eyewitness may reasonably be expected to be at issue and/or issues of motive or intent of the party or eyewitness material to the resolution of the contested matter; LBP-11-2, 73 NRC 28 (2011)
relevant issues for an additional 20 years of reactor plant operation differ from those when a reactor plant is first built and licensed; LBP-11-21, 74 NRC 115 (2011)
representational standing associated with causation in power reactor license renewal proceedings is deemed fulfilled if a member of the organization resides or has significant contacts in an area within a 50-mile radius of the facility; LBP-12-15, 76 NRC 14 (2012)
safety culture issues are outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
safety culture, operational history, quality assurance, quality control, management competence, human factors, and emergency planning issues are beyond the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)
safety issue that does not involve aging management is outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
safety issues that are routinely addressed through the agency’s ongoing regulatory oversight are outside the scope of license renewal proceedings because considering them in that context would be unnecessary and wasteful; LBP-11-2, 73 NRC 28 (2011)
safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is inadmissible in license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
scope of the license renewal proceeding on safety-related issues, is limited to plant structures and components that will require an aging management review for the period of extended operation under the renewed license and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; CLI-15-21, 82 NRC 295 (2015)
subsection 52.80(d) mandates compliance with the agency’s loss-of-large-areas requirements in 10 C.F.R. 50.54(hh)(2), but does not apply to a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)
severe accident mitigation alternatives are listed as Category 2 issues, and NRC must treat them as such; LBP-12-8, 75 NRC 539 (2012)
severe accident mitigation alternatives contentions are admissible only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-11-2, 73 NRC 28 (2011)
severe accidents in spent fuel pools are Category 1 issues that do not need to be included in the severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 249 (2015)
site-specific environmental issues are Category 2 issues and thus admissible; LBP-12-8, 75 NRC 539 (2012)
standing based on the proximity presumption has been found if petitioner or a representative of a petitioner organization resides within approximately 50 miles of the facility in question; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
subsection (L) of 10 C.F.R. 51.53(c)(3)(ii) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in case-by-case license renewal adjudications; LBP-13-1, 77 NRC 57 (2013)
sufficiency of an aging management program that meets the GALL Report’s recommendations can be challenged if the contention admissibility requirements are otherwise met; CLI-12-10, 75 NRC 479 (2012)
sufficiency of the NRC’s hard look at the benefits of severe accident mitigation alternatives in comparison
to their costs is subject to litigation; LBP-11-17, 74 NRC 11 (2011)
suppositions/speculation regarding effectiveness of hydrogen control mechanisms are outside the scope of
license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
there is no legal requirement that applicant consider population projections to the end of the license term,
but petitioner could succeed in raising such a contention if it demonstrated that considering such data
would be material to the proceeding; LBP-12-8, 75 NRC 539 (2012)
to challenge an energy alternatives analysis, petitioner ordinarily must provide alleged facts or expert
opinion sufficient to raise a genuine dispute as to whether the best information available today suggests
that a commercially viable alternative technology (or combination of technologies) is available now, or
will become so in the near future, to supply baseload power; CLI-12-8, 75 NRC 393 (2012)
to demonstrate the admissibility of a NEPA contention that an applicant failed to consider a viable
alternative to its proposed action, petitioner must show that its contention presents a genuine dispute;
CLI-12-5, 75 NRC 301 (2012)
to the extent petitioner is challenging the adequacy of computer modeling of plume variability, petitioner
bears the burden of providing evidence specific to the license renewal applicant; LBP-15-5, 81 NRC
249 (2015)
to waive generic assessment in NRC regulations to permit adjudication of issues involving the
environmental impact of spent fuel pool accidents in a license renewal proceeding, the Commission
must conclude that the rule’s strict application would not serve the purpose for which it was adopted;
CLI-11-11, 74 NRC 427 (2011)
under the proximity presumption, an individual who resides within a 50-mile radius of a nuclear power
plant is not required to specifically plead injury, causation, and redressability to establish his or her
standing to intervene; LBP-12-10, 75 NRC 633 (2012)
unless petitioner sets forth a supported contention pointing to an apparent error or deficiency that may
have significantly skewed the environmental conclusions, there is no genuine material dispute for
hearing; LBP-15-5, 81 NRC 249 (2015)
untimely motion to reopen the proceeding and admit a new contention concerning licensee’s impacts on
the roseate tern, a federally listed endangered species, is denied; LBP-12-11, 75 NRC 731 (2012)
when an application is alleged to be deficient, petitioner must identify the deficiencies and provide
supporting reasons for its position that such information is required; LBP-15-1, 81 NRC 15 (2015)
OPERATING LICENSES
Atomic Energy Act does not, as a prerequisite to licensing, require a finding of reasonable assurance that
highly hazardous and long-lived radioactive materials can be disposed of safely; CLI-15-4, 81 NRC 221
(2015)
Commission has authority to determine, and prescribe by rule or regulation, what additional information
should be included in technical specifications to ensure public health and safety and the common
defense and security; LBP-13-7, 77 NRC 307 (2013)
Congress did not intend in enacting the Atomic Energy Act to require a demonstration that nuclear wastes
could be safely disposed of before licensing of nuclear plants was permitted; CLI-15-4, 81 NRC 221
(2015)
current reactor licensees comply with the requirements of section 50.54(h)(2) through conditions on their
operating licenses; LBP-11-21, 74 NRC 115 (2011)
every license to operate a nuclear power reactor must contain a list of technical specifications necessary
for adequate protection of public health and safety; LBP-12-25, 76 NRC 540 (2012)
holder of a license under Part 50, or a combined license under Part 52, shall follow and maintain the
effectiveness of an emergency plan that meets the requirements in Part 50, Appendix E; LBP-15-4, 81
NRC 156 (2015)
it is imperative that terms of a reactor operating license be clear and unambiguous and that licensee
scrupulously adhere to those terms, because it is unlawful for any person within the United States to
use any utilization facility except under and in accordance with a license issued by NRC; LBP-13-7, 77
NRC 307 (2013)
licensees may not, under penalty of law, deviate from the terms of their reactor operating licenses;
LBP-13-7, 77 NRC 307 (2013)
NEPA regulations require consideration of severe accident mitigation alternatives in its environmental impact statements and supplements thereto at the operating license stage; LBP-12-15, 76 NRC 14 (2012)

NRC is not required, as a precondition to issuing or renewing operating licenses for nuclear power plants, to make definitive findings concerning technical feasibility of a repository for the disposal of spent nuclear fuel; CLI-15-4, 81 NRC 221 (2015)

NRC’s long-continued regulatory practice of issuing operating licenses, with an implied finding of reasonable assurance that safe permanent disposal of spent nuclear fuel can be available when needed, is in accord with the intent of Congress underlying the Atomic Energy Act and Energy Reorganization Act; CLI-15-4, 81 NRC 221 (2015)

reactor operating licenses must include technical specifications that include specific characteristics of the facility and such other information as the Commission may, by rule or regulation, deem necessary in order to enable it to find that the utilization of special nuclear material will provide adequate protection to the health and safety of the public; LBP-13-7, 77 NRC 307 (2013)

section 50.54(hh)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)

unless the safety findings prescribed by the Atomic Energy Act and the regulations can be made, the reactor does not obtain a license, no matter how badly it is needed; CLI-15-4, 81 NRC 221 (2015)

OPERATIONS

docketing of certifications of shutdown and defueling means that licensee’s Part 50 license no longer authorizes operation of the reactor or emplacement or retention of fuel into the reactor vessel; DD-14-3, 79 NRC 500 (2014)

licensee may continue to operate reactor under an expired license if a license renewal application is timely submitted; CLJ-14-5, 79 NRC 254 (2014)

timing of source materials license renewal application enables licensee to operate under NRC’s timely renewal provision until the agency renews the license; LBP-15-2, 81 NRC 48 (2015)

See also Nuclear Power Plant Operations

OPINIONS

concurring opinions, by their nature, do not carry the force of law, except in very narrow circumstances; CLI-15-4, 81 NRC 221 (2015)

“dicta” is a court’s opinion that goes beyond the facts before court and therefore represents individual views of the author of the opinion and is not binding in subsequent cases as legal precedent; LBP-14-4, 79 NRC 319 (2014)

holding that “petitioner does not have standing is dispositive of this case and the board need not decide this issue” is dicta; LBP-14-4, 79 NRC 319 (2014)

upon completion of a license transfer hearing, the Commission will issue a written opinion including its decision on the license transfer application and the reasons for the decision; CLJ-14-5, 79 NRC 254 (2014)

OPPORTUNITY FOR HEARING

whether licensee or other person consents to an enforcement order, other persons adversely affected by an order issued under section 2.202 will be offered an opportunity for a hearing consistent with current practice and the authority of the Commission to define the scope of the proceeding on an enforcement order; LBP-14-4, 79 NRC 319 (2014)

OPPORTUNITY TO COMMENT

although NRC must respond to the significant views of other agencies, particularly if they are critical of NRC’s analysis, that duty applies at the final environmental impact statement stage after the draft EIS has been circulated to interested federal and state agencies for their review and comment; LBP-12-12, 75 NRC 742 (2012)

ORAL ARGUMENT

appellants seeking oral argument must show how oral argument will assist the Commission in reaching a decision; CLJ-11-8, 74 NRC 214 (2011)

argument is untimely when it is raised for the first time at oral argument; LBP-15-23, 82 NRC 55 (2015)

at its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review; CLJ-12-12, 75 NRC 603 (2012)
board determined that the oral portion of the proceeding should be closed to the public to allow for the free-ranging and thorough examination of witnesses and to ensure the effective safeguard and prevention from disclosure of restricted data; LBP-12-21, 76 NRC 218 (2012)
Commission generally declines to hold oral argument on appeals, absent a specific showing that oral argument will assist it in reaching a decision; CLI-12-12, 75 NRC 603 (2012)
court cannot defer to interpretive proposals offered by counsel at oral argument and affirm on the basis of that reading when the statute does not plainly compel the reading being proposed; CLI-11-12, 74 NRC 460 (2011)
in its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative; CLI-11-8, 74 NRC 214 (2011)
license transfer hearings are to be oral in nature unless the parties unanimously move for a hearing consisting of written comments; CL14-5, 79 NRC 254 (2014)
Service of a filing is not complete until accompanied by a certificate of service and a request for oral argument; LBP-11-21, 74 NRC 115 (2011)
where the Commission has a thorough written record containing adequate information on which to base a decision, there is no need for oral argument; CLI-11-8, 74 NRC 214 (2011)
written prefiled testimony and exhibits are typically submitted well in advance of the evidentiary hearing, and in most common types of hearings, licensing boards themselves, not the parties, orally examine the witnesses; LBP-12-21, 76 NRC 218 (2012)
ORDERS
initial scheduling orders set forth issues or matters in controversy to be determined in the proceeding; LBP-14-11, 80 NRC 125 (2014)
NRC’s ability to issue orders to unlicensed persons is limited; LBP-14-4, 79 NRC 319 (2014)
See also Confirmatory Order; Enforcement Orders; Executive Order 12898; Licensing Board Orders; Modification Order; Protective Orders
OVERPRESSURIZATION
NRC has addressed pressure suppression containment system vulnerability to early failure under severe accident conditions including overpressurization in NUREG-0474; DD-15-1, 81 NRC 193 (2015)
OVERSIGHT
See Regulatory Oversight Process
PAGE LIMITS
intervenors’ motion for an enlargement of the page limit for their petition for review is granted; CLI-14-10, 80 NRC 157 (2014)
PARTIAL INITIAL DECISIONS
basis for allowing immediate appellate review of PIDs rests on prior appeal board decisions permitting review of a licensing board ruling that disposes of a major segment of the case or terminates a party’s right to participate; CLI-11-14, 74 NRC 801 (2011)
Commission may, as a matter of discretion, grant review of a full or partial initial decision, giving due weight to the existence of a substantial question with respect to any of the considerations outlined in 10 C.F.R. 2.341(b)(4); CLI-15-2, 81 NRC 213 (2015)
decision constitutes a final decision of the Commission 40 days from the date of issuance or the first agency business day following that date if it is a Saturday, Sunday, or federal holiday unless a petition for review is filed in accordance with section 2.1212; LBP-12-5, 75 NRC 227 (2012)
decisions will be reviewed as a matter of discretion if petitions raise a substantial question in regard to any of the paragraphs of 10 C.F.R. 2.341(b)(4); CLI-12-1, 75 NRC 39 (2012)
parties may file a petition for review of licensing board full or partial initial decisions, both of which are considered to be final; CLI-11-14, 74 NRC 801 (2011)
petitions for review of PIDs and any answer shall conform to the requirements of 10 C.F.R. 2.341(b)(2)-(3); LBP-12-5, 75 NRC 227 (2012)
PIDs are one rendered following an evidentiary hearing on one or more contentions, but which does not dispose of the entire matter; CLI-11-6, 74 NRC 203 (2011); CLI-11-10, 74 NRC 251 (2011)
questions proposed by all parties will be publicly released by order of this board 30 days after issuance of its partial initial decision; LBP-14-3, 79 NRC 267 (2014)
where a board’s decision rests on a weighing of extensive fact-specific evidence presented by technical experts, the Commission generally will defer to the board’s factual findings, unless there appears to be a clearly erroneous factual finding or related oversight; CLI-12-1, 75 NRC 39 (2012)

PARTIES
although NRC Staff is not required to be a party to a license transfer adjudication, the Commission directs the Staff to become a party; CLI-14-5, 79 NRC 254 (2014)
any other party to the proceeding may file an answer supporting or opposing Commission review; CLI-15-6, 81 NRC 340 (2015)
NRC Staff is but one of the parties to a licensing proceeding, and the positions that it may take are in no way binding upon the licensing board; LBP-12-23, 76 NRC 445 (2012)
NRC Staff is not required to be a party to a license transfer adjudication; CLI-14-5, 79 NRC 254 (2014)
NRC Staff is required to notify the presiding officer and the parties whether it desires to participate as a party in a license transfer proceeding; CLI-14-5, 79 NRC 254 (2014)
NRC Staff will become a party to cases involving an application denial; CLI-14-5, 79 NRC 254 (2014)
ordinary burden on parties in pursuing litigation pending rulemaking does not justify disrupting ongoing license review; CLI-11-1, 73 NRC 1 (2011)
parties’ duty to report material significant developments in a matter under adjudication arises immediately upon discovery of that information; CLI-15-16, 81 NRC 810 (2015)
petitioners, not just parties, may request a rule waiver in NRC adjudicatory proceedings; CLI-12-19, 76 NRC 377 (2012)
rulemaking petitioner may request that NRC suspend all or any part of any licensing proceeding to which petitioner is a party pending disposition of the petition for rulemaking; CLI-12-6, 75 NRC 352 (2012)
rules governing access to SUNSI apply only to potential parties, whereas party access to SUNSI is governed by protective orders and nondisclosure agreements; LBP-11-9, 73 NRC 391 (2011)
there are places in NRC rules where “party” is used not as a term of art, but rather as a substitute for “participant”; CLI-12-19, 76 NRC 377 (2012)
to the extent that petitioner’s counsel is blameworthy, petitioner may be held accountable; LBP-13-2, 77 NRC 71 (2013)
See also Conduct of Parties

PASSIVE COMPONENTS
aging management review is required for components that function without moving parts and without a change in configuration or properties, and includes a non-exhaustive list of components that either do or do not fit this description; CLI-15-6, 81 NRC 340 (2015)
board examined how a transformer performs its intended function to determine whether it undergoes a change in configuration or properties; CLI-15-6, 81 NRC 340 (2015)
license renewal application must demonstrate that licensee will adequately manage effects of aging on passive, long-lived components so that their intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 340 (2015)
static components such as transistors and battery chargers are specifically excluded from aging management review; CLI-15-6, 81 NRC 340 (2015)

PERFORMANCE ASSESSMENT
Commission placed no historical-event restriction on reactors electing to comply with Appendix J through performance-based testing; LBP-15-26, 82 NRC 163 (2015)
tervenors litigated whether the performance-based licensing complies with the Atomic Energy Act and National Environmental Policy Act, and whether undue discretion was accorded to licensee; LBP-15-16, 81 NRC 618 (2015)
NRC addresses agreement-state performance concerns through its Integrated Materials Performance Evaluation Program process or through an independent agreement-state performance concern evaluation, depending on the performance concern raised; CLI-11-12, 74 NRC 460 (2011)

PERMITS
another permitting regime for discharges does not foreclose the department from developing compatible methods of regulating water intakes at cooling water intake structures; LBP-12-16, 76 NRC 44 (2012)
any NEPA-based challenge to the efficacy of, or the Staff’s reliance on, the state permitting process relative to the Staff’s environmental review must await the Staff’s initial environmental review document; LBP-13-6, 77 NRC 253 (2013)
applications for water use permits are evaluated by local governmental agencies; LBP-13-4, 77 NRC 107 (2013)
before being granted a Clean Water Act section 404 permit, applicant must demonstrate to the Corps of Engineers that it has taken all appropriate and practicable steps to avoid and minimize adverse impacts; LBP-15-23, 82 NRC 55 (2015)
blanket reliance by NRC Staff on Clean Water Act permits is not permitted; LBP-14-9, 80 NRC 15 (2014)
board denies as untimely a motion to reopen and admit a new contention alleging that the licensee lacks certain required environmental permits and approvals from state and federal agencies; LBP-12-16, 76 NRC 44 (2012)
Clean Water Act section 404 permit review can be conducted after issuance of a final environmental impact statement; LBP-15-23, 82 NRC 55 (2015)
combined license applicants must obtain permits from the U.S. Army Corps of Engineers in order to complete construction activities that may potentially affect wetlands; CLI-12-9, 75 NRC 421 (2012)
contention asserting that draft environmental impact statement must include the Corps of Engineers CWA 404 permit analysis in order to satisfy NEPA fails to raise a material issue; LBP-15-23, 82 NRC 55 (2015)
Corps of Engineers may not issue a 404 permit if there exists a practicable alternative that would have less adverse impact on the aquatic system, the permit would cause significant degradation of the water of the United States, or appropriate and practicable mitigation has not been undertaken; LBP-14-9, 80 NRC 15 (2014)
decision can be given to a state permit’s findings as to the acceptability of environmental impacts; LBP-15-11, 81 NRC 401 (2015)
EPA-approved state permitting authority for Class I injection wells is the regulatory entity from which applicant must seek and obtain the permit necessary to allow it to operate a deep injection well at the site; LBP-13-6, 77 NRC 253 (2013)
if a federal or state environmental agency issues a permit to the operator of a nuclear power plant that imposes numerical limits on the amount of pollution that the plant may emit, then NRC’s final environmental impact statement may reasonably assume that the company’s emissions will comply with those numerical limits; LBP-13-4, 77 NRC 107 (2013)
in determining whether a license or permit amendment will be issued to applicant, the Commission is to be guided by the considerations that govern issuance of initial licenses, construction permits, or early site permits to the extent applicable and appropriate; LBP-15-17, 81 NRC 753 (2015)
intervenors’ challenge concerning the draft environmental impact statement’s alleged failure to discuss the Great Lakes Compact’s process for regional review of its application for a consumptive water use permit is inadmissible; LBP-12-12, 75 NRC 742 (2012)
NEPA is not violated when an agency issues a supplemental environmental impact statement before the Corps of Engineers completes a Clean Water Act section 404 permit review; LBP-15-23, 82 NRC 55 (2015)
non-NRC permits are interdependent parts of applicant’s proposed action and thus are connected actions; LBP-15-16, 81 NRC 618 (2015)
NRC Staff’s draft environmental impact statement is required to list required federal permits and approvals and the current status of compliance with those requirements; LBP-12-12, 75 NRC 742 (2012)
NRC Staff’s environmental review was conducted in cooperation with the U.S. Army Corps of Engineers, with NRC acting as lead agency and ACE as cooperating agency under a memorandum of understanding because applicants also needed permits from ACE to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012)
proposed plant will impact at least 668 acres of wetlands and therefore its construction and operation will require a permit from U.S. Army Corps of Engineers; LBP-13-4, 77 NRC 107 (2013)
reliance on a state permit, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 401 (2015)
source permit is an operating permit that the Clean Air Act requires major stationary sources of air pollution to obtain; LBP-11-13, 73 NRC 534 (2011)

state water use permit is required for construction and operation of the nuclear units, associated facilities, and transmission lines and corridor; LBP-13-4, 77 NRC 107 (2013)

when a proposed project would cause discharge of dredged or fill material into wetlands, applicant must seek a permit from the Corps of Engineers; LBP-15-23, 82 NRC 55 (2015)

when an agency otherwise complies with NEPA’s requirement of a reasonably thorough mitigation analysis, there is no error in the agency’s reliance on the Clean Water Act section 404’s substantive requirements as mitigation measures even though the section 404 permit review is not yet complete; LBP-15-23, 82 NRC 55 (2015)

when reviewing an application for a 404 permit under the Clean Water Act, the Corps of Engineers evaluates whether issuance of the permit is in the public interest, weighing all relevant factors, including economic, environmental, and aesthetic concerns; LBP-14-9, 80 NRC 15 (2014)

whether non-NRC permits are required is the responsibility of bodies that issue such permits; LBP-12-16, 76 NRC 44 (2012)

See also Construction Permits; Early Site Permits; National Pollutant Discharge Elimination System Permit

PETITIONERS

only the petitioning party may file reply briefs; CLI-15-7, 81 NRC 481 (2015)

PHYSICAL SECURITY

applicant has demonstrated that its program of automated equipment, computer systems (and their verification), and the use of secured and tamper-safe item storage area boundaries, satisfactorily demonstrates the ability to verify the presence and integrity of all strategic special nuclear material items in storage; LBP-14-1, 79 NRC 39 (2014)

“controlled access area” includes a permanently established place that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; LBP-14-1, 79 NRC 39 (2014)

“material access area” is any location which contains special nuclear material, within a vault or a building, the roof, walls, and floor of which constitute a physical barrier; CLI-15-9, 81 NRC 512 (2015)

petition challenging an immediately effective enforcement order asking that licensee take certain physical security measures in addition to those already required by NRC regulations, to protect the spent fuel it planned to store at its power plant site, was rejected; LBP-12-14, 76 NRC 1 (2012)

relative to the issue of foreign ownership or control, NRC imposes restrictions on the physical security and control of information at licensed facilities to safeguard restricted data and national security information; LBP-11-11, 73 NRC 455 (2011)

“tamper-safing” refers to use of devices on containers or vaults in a manner and at a time that ensures a clear indication of any violation of the integrity of previously made measurements of special nuclear material within the container or vault; CLI-15-9, 81 NRC 512 (2015)

PIPING

because petitioner has not shown how a proposed plan would fail to ensure that buried pipes continue to fulfill their intended safety purposes, the contention is inadmissible; LBP-15-5, 81 NRC 249 (2015)

PIPING

because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the ability of buried structures to perform their intended functions as defined by 10 C.F.R. 54.4(a)(1)-(3), the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 28 (2011)

critical aspects of an aging management plan such as a commitment for buried pipes can be captured in the updated final safety analysis report supplement; LBP-13-13, 78 NRC 246 (2013)

key functions of buried structures, systems, and components that are the focus of the license renewal safety review under Part 54 do not include the prevention of inadvertent radioactive leaks from buried structures; LBP-11-2, 73 NRC 28 (2011)

liquid released from a leaky pipe where the pressure boundary is maintained would not be sufficient to exceed the dose limits specified in 10 C.F.R. Part 54; LBP-13-13, 78 NRC 246 (2013)
PLEADINGS

although a totally deficient pleading may not be justified on the basis that it was prepared without the assistance of counsel, pro se petitioners should not be held to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; LBP-15-13, 81 NRC 456 (2015)
any other party to the proceeding may file an answer supporting or opposing Commission review; CLI-15-6, 81 NRC 340 (2015)
boards are not expected to search the pleadings for information that would satisfy reopening requirements; CLI-12-3, 75 NRC 132 (2012)
boards must afford latitude to pro se petitioners in considering their pleadings; LBP-12-3, 75 NRC 164 (2012)
boards should not have to hunt for information that the agency’s procedural rules require be explicitly identified and fully explained; LBP-12-10, 75 NRC 633 (2012)
both the content of the draft environmental impact statement and the additional material submitted by the parties form part of the adjudicatory record; LBP-12-23, 76 NRC 445 (2012)
burden of setting forth a clear and coherent argument for standing is generally on petitioner, but pro se petitioner is not held to the same standards of clarity and precision to which a lawyer might reasonably be expected to adhere; CLI-15-25, 82 NRC 389 (2015)
Commission will not accept the filing of a vague, unpaticularized issue; CLI-11-2, 73 NRC 333 (2011)
filings not otherwise authorized by NRC rules are permitted only where necessity or fairness dictates; CLI-14-3, 79 NRC 31 (2014)
in NRC proceedings, pro se litigants are generally not held to the same high standards of pleading and practice as parties with counsel; LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011)
it is not up to boards to search through pleadings or other materials to uncover arguments and support never advanced by intervenors; LBP-11-34, 74 NRC 685 (2011)
judges are not like pigs, hunting for truffles buried in briefs; LBP-11-6, 73 NRC 149 (2011)
leniency is afforded to pro se petitioners, but parties to NRC proceedings are expected to fulfill the obligations imposed by NRC rules; CLI-15-25, 82 NRC 389 (2015)
petitions, answers, and replies are allowed unless otherwise specified by the Commission or the presiding officer, but no other written answers or replies will be entertained; LBP-11-2, 73 NRC 28 (2011)
pro se litigant’s pleadings are to be construed liberally and held to a less stringent standard than formal pleadings drafted by lawyers, but it is not the proper function of the court to assume the role of advocate for litigant; CLI-15-18, 82 NRC 135 (2015)
submitted documents must be signed; LBP-11-2, 73 NRC 28 (2011)
when a party requests action from the presiding officer in an NRC adjudicatory proceeding, the request must come in the form of a motion; CLI-15-13, 81 NRC 555 (2015)
wholesale incorporation by reference does not serve the purposes of a pleading; LBP-15-5, 81 NRC 249 (2015)
See also Amicus Pleadings; Briefs; Electronic Filing; Filings; Reply Briefs

PLUTONIUM

ability to detect the loss of plutonium in a timely manner, to allow for an effective response, is a crucial security requirement; LBP-11-9, 73 NRC 391 (2011)
contention alleging that license renewal application fails to consider plutonium fuel use, which would place it outside the current licensing basis, is inadmissible; LBP-13-8, 78 NRC 1 (2013)
contention that applicant’s revised material control and accounting plan fails to show how confirmation and verification of theft of plutonium will be carried out in the specified timelines is inadmissible; CLI-15-9, 81 NRC 512 (2015)

POLICY

Environmental Protection Agency is recognized as an expert in environmental protection, and its final policy determinations deserve consideration; LBP-15-15, 81 NRC 598 (2015)
party’s policy arguments that are advanced during the adjudicatory process before a licensing board cannot trump directives issued by the Commission; LBP-13-7, 77 NRC 307 (2013)
See also NRC Policy
SUBJECT INDEX

POLICY STATEMENTS

agencies cannot escape their responsibility to present evidence and reasoning supporting their substantive rules by announcing binding precedent in the form of a general statement of policy; LBP-13-13, 78 NRC 246 (2013)

Criterion 25 of NRC’s agreement state policy statement does not relate to substantive standards or the regulatory outcome of a pending license application, even where a license application has been pending at the NRC for an extended period; CLI-11-12, 74 NRC 460 (2011)

NRC policy statements are not a sufficient vehicle to preclude consideration of severe accident mitigation design alternatives, and NRC must take the requisite hard look at SAMDAs, giving them the careful consideration and disclosure required by the National Environmental Policy Act; CLI-12-19, 76 NRC 377 (2012)

public comment will be afforded in advance on any generic waste confidence document that NRC issues on remand, be it a fresh rule, a policy statement, an environmental assessment, or an environmental impact statement; CLI-12-16, 76 NRC 63 (2012)

purpose of Criterion 25 of NRC’s agreement state policy statement is to ensure that licensing records are transferred to and received by the new agreement state in an orderly manner that ensures that no pending licensing actions will be significantly delayed or that no records will be lost or misplaced as a result of the transition of authority; CLI-11-12, 74 NRC 460 (2011)

See also NRC Policy

POPULATION DENSITY

applicant’s estimate and NRC Staff’s approval of projected population estimate for severe accident mitigation alternatives analysis are reasonable and satisfy the requirements under NEPA and 10 C.F.R. 51.53(c)(3)(ii)(L); LBP-13-13, 78 NRC 246 (2013)

contention that applicant’s severe accident mitigation alternatives analysis is significantly flawed because of the use of inaccurate factual assumptions about population is admissible; LBP-15-5, 81 NRC 249 (2015)

there is no legal requirement that an applicant consider population projections to the end of the license term, but petitioner could succeed in raising such a contention if it demonstrated that considering such data would be material to the proceeding; LBP-12-8, 75 NRC 539 (2012)

See also NRC Policy

POWER

“baseload power” generates energy intended to continuously produce electricity at or near full capacity, with high availability; CLI-12-5, 75 NRC 301 (2012)

because a single wind turbine cannot provide continuous production of electricity at or near full capacity, it does not constitute a source of baseload power; CLI-12-5, 75 NRC 301 (2012)

See also Offsite Power

POWER UPRATE

extended power uprate proceedings necessarily trigger application of the 50-mile proximity presumption given that such license applications entail an obvious increase in the potential for offsite consequences; LBP-11-29, 74 NRC 612 (2011)

other than hypothesizing that there will be a failure of the nuclear reactor vessel because of increased stress brought by the proposed license amendment request, the contention does not provide sufficient information to show that a genuine dispute exists; LBP-11-29, 74 NRC 612 (2011)

radiological claims that represent a direct challenge to prior license amendments authorizing extended power uprates are outside the scope of a license amendment proceeding; LBP-15-13, 81 NRC 456 (2015)

section 51.53(c)(3)(iv) does not apply to license amendment applicants requesting a power uprate; LBP-11-29, 74 NRC 612 (2011)

See also NRC Policy

PRECEDENTIAL EFFECT

agencies act arbitrarily and capriciously when they ignore their own relevant precedent; CLI-13-7, 78 NRC 199 (2013)
although contention ultimately was resolved in NRC Staff’s favor, Commission takes review as a matter of discretion because the board’s ruling raises substantial questions of precedential importance; CLI-15-6, 81 NRC 340 (2015)

although the Atomic Safety and Licensing Appeal Panel is no longer in existence, the decisions of its appeals boards continue to be binding to the degree they concern a regulation or regulatory matter that has not been revised or otherwise materially altered; LBP-11-8, 73 NRC 349 (2011); LBP-11-34, 74 NRC 685 (2011)

concurring opinions, by their nature, do not carry the force of law, except in very narrow circumstances; CLI-15-4, 81 NRC 221 (2015)

“dicta” is a court’s opinion that goes beyond the facts before the court and therefore represents individual views of the author of the opinion and is not binding in subsequent cases as legal precedent; LBP-14-4, 79 NRC 319 (2014)

dicta ought not to control the judgment in a subsequent suit when the very point is presented for decision; LBP-14-4, 79 NRC 319 (2014)

in vacating decisions of the Licensing and Appeal Boards, the Commission observed that the decisions also should not be used for guidance; CLI-13-9, 78 NRC 551 (2013)

licensing boards may not disregard binding Commission case law; CLI-13-7, 78 NRC 199 (2013)

party may seek reconsideration of an earlier ruling whereby the party was not actually prejudiced, where the ruling could well have an impact upon the course of many licensing hearings; CLI-15-6, 81 NRC 340 (2015)

stare decisis is not implicated where the board decision is unreviewed and therefore not binding on future tribunals, but as a prudential matter, the Commission vacates such decisions when appellate review is cut short by mootness; CLI-13-9, 78 NRC 551 (2013)

unreviewed board rulings do not constitute precedent or binding law; CLI-12-13, 75 NRC 681 (2012); LBP-13-7, 77 NRC 307 (2013); CLI-13-9, 78 NRC 551 (2013); CLI-13-10, 78 NRC 563 (2013)

PRECONSTRUCTION ACTIVITIES

activities that are allowed under Part 50 are also allowed for materials licenses; LBP-11-26, 74 NRC 499 (2011)

although NRC may regard preconstruction activities as outside the scope of a combined license application, these activities are within the scope of the NEPA review because they are all connected actions; LBP-14-9, 80 NRC 15 (2014)

applicant’s monitoring program for establishing existing site characterization baseline values for certain site groundwater constituents prior to issuance of a source materials license for ISR facility construction and operation need not be conducted so as to also provide background information needed to set Appendix A, Criterion 5B groundwater protection standards; LBP-15-3, 81 NRC 65 (2015)

construction of a transmission line is defined as a preconstruction activity; LBP-12-12, 75 NRC 742 (2012)

even if the transmission corridor is a preconstruction activity and outside the NRC’s regulatory jurisdiction, the construction and maintenance of the transmission corridor likely qualifies as a connected action under governing NRC and Council on Environmental Quality regulations, and therefore must be analyzed in the FEIS; LBP-12-12, 75 NRC 742 (2012)
fugitive dust generation is discussed; LBP-11-26, 74 NRC 499 (2011)

NRC limits the scope of environmental analysis of preconstruction activities to activities falling within the scope of its regulatory authority; CLI-12-9, 75 NRC 421 (2012)

there is no NRC requirement that applicant submit a redress plan relative to preconstruction activities or, absent state or local requirements, take any remedial action regarding preconstruction activities if it decides not to complete the project or is denied agency authorization to construct and operate the facility; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)

uranium enrichment facility applicant seeks an exemption from regulations to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 455 (2011)

See also Limited Work Authorization

PREJUDICE

any consolidation of multiple parties’ presentations of evidence that would prejudice the rights of any party may not be ordered; LBP-11-4, 73 NRC 91 (2011)
SUBJECT INDEX

balancing test for nontimely filings does not encompass prejudice; LBP-11-13, 73 NRC 534 (2011)
burden of proving prejudicial error by a federal agency rests with the party challenging the agency’s
action, but this is not a particularly onerous requirement; LBP-14-2, 79 NRC 131 (2014)
dismissal of an appeal with prejudice, similar to termination of a proceeding with prejudice, generally
implies that the Commission has ruled on the merits of the appeal and such ruling is reserved for
unusual situations involving substantial prejudice to an opposing party or to the public interest in
general; CLI-13-10, 78 NRC 563 (2013)
dismissal with prejudice is a harsh sanction reserved for unusual situations because it is the equivalent of
a decision on the merits of the license amendment request; LBP-15-28, 82 NRC 233 (2015)
except upon a showing of substantial prejudice to the complaining party, it is always within the discretion
of a court or an administrative agency to relax or modify its procedural rules adopted for the orderly
transaction of business before it when in a given case the ends of justice require it; CLI-13-8, 78 NRC
219 (2013)
if the agency error did not affect the outcome, it did not prejudice the petitioner; LBP-14-2, 79 NRC 131
(2014)
in proving prejudicial error by a federal agency, it is sufficient that the agency’s error may have affected
the outcome; LBP-14-2, 79 NRC 131 (2014)
lack of prejudice, standing alone, does not excuse an untimely filing, but it is a factor the Commission
has considered in determining whether good cause exists; LBP-15-4, 81 NRC 156 (2015)
no prejudice to either the intervenors or the public occurred where intervenors would have been in
precisely the same position in any subsequent proceeding as if they had prevailed not only on their
instant appeal but also on the subsequent merits portion of the proceeding; CLI-13-10, 78 NRC 563
(2013)
opposing party’s litigation expenses do not provide a basis for departing from the usual rule that a
dismissal should be without prejudice; CLI-13-10, 78 NRC 563 (2013)
standard for dismissal with prejudice is not met because the prospect of future litigation is not unusual,
being inherent in any dismissal without prejudice; LBP-15-28, 82 NRC 233 (2015)
termination with prejudice bars relitigation of similar issues; LBP-15-21, 82 NRC 1 (2015)
there was no prejudice to intervenor where the board considered licensee’s supplement to the application,
which contained the updated aging management plan, because intervenor could have sought to amend
its contention to respond to the supplement; CLI-12-10, 75 NRC 479 (2012)
upon receipt of a motion to withdraw an application, the board may place terms and conditions on the
withdrawal, deny the application, or dismiss the application with prejudice; CLI-13-10, 78 NRC 563
(2013)
when the board has issued a Notice of Hearing, withdrawal of a license amendment request shall be on
such terms as the presiding officer may prescribe; LBP-15-28, 82 NRC 233 (2015)
PRESIDING OFFICER
ordinarily, the Commission itself presides over license transfer hearings, but NRC rules allow the
Commission to designate one or more Commissioners or any other person permitted by law to preside;
CLI-14-5, 79 NRC 254 (2014)
where the Commission does not preside over a license transfer proceeding, the Presiding Officer will
certify the completed hearing record to the Commission, which may then issue its decision on the
hearing or provide that additional testimony be presented; CLI-14-5, 79 NRC 254 (2014)
PRESIDING OFFICER, AUTHORITY
exceptionally grave issues may be considered in the discretion of the presiding officer even if untimely
presented; LBP-11-20, 74 NRC 65 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-1, 75 NRC 1
(2012)
if a party fails to file an answer or pleading within the time prescribed in 10 C.F.R. Part 2 or as
specified in the notice of hearing or pleading, to appear at a hearing or prehearing conference,
to comply with any prehearing order entered by the presiding officer, or to comply with any discovery
order entered by the presiding officer, the Commission or the presiding officer may make any orders in
regard to the failure that are just; CLI-14-2, 79 NRC 11 (2014)
NRC’s policy of encouraging settlements specifically recognizes that settlements are not inviolate, and the
presiding officer or Commission may order adjudication of the issues that the presiding officer or
SUBJECT INDEX

Commission finds is required in the public interest to dispose of the proceeding; LBP-14-4, 79 NRC 319 (2014)
presiding officer in the adjudication will determine the extent to which adoption by the NRC of DOE’s
repository EIS and its supplements is practicable, which in turn will satisfy NRC’s NEPA obligations;
CLI-13-8, 78 NRC 219 (2013)
presiding officer may certify questions or refer rulings to the Commission for decision; CLI-14-5, 79
NRC 254 (2014)
presiding officers have the duty to conduct a fair and impartial hearing according to law, to take
appropriate action to control the prehearing and hearing process, and to avoid delay and to maintain
order, and they have all the powers necessary to those ends; CLI-14-10, 80 NRC 157 (2014);
LBP-11-22, 74 NRC 259 (2011)
presiding officers may make a determination about the validity of a deliberative process privilege claim
without reviewing a document in camera if the affidavit outlining the reasons for nondisclosure is
sufficiently detailed; LBP-13-5, 77 NRC 233 (2013)
public interest inquiry for approval of settlement agreement is described; LBP-15-21, 82 NRC 1 (2015)
sanctions may be imposed on a party that fails to provide any document required to be disclosed, unless
the party demonstrates good cause for its failure to make the disclosure; LBP-14-2, 79 NRC 131 (2014)
sua sponte authority of presiding officer is compared under predecessor rule 10 C.F.R. 2.760a; LBP-14-9,
80 NRC 15 (2014)
withdrawal of an application after issuance of a notice of hearing shall be on such terms as the presiding
officer may prescribe; LBP-12-20, 76 NRC 215 (2012)
PRESIDING OFFICER, JURISDICTION
jurisdiction terminates when the time period for the Commission to direct certification expires, when the
Commission renders a final decision, and when the presiding officer withdraws from the case upon
disqualifying himself; CLI-12-17, 76 NRC 207 (2012)
three occasions that could trigger termination of the presiding officer’s jurisdiction are delineated in 10
C.F.R. 2.318(a); LBP-11-22, 74 NRC 259 (2011)
PRESSURIZED THERMAL SHOCK
alternate PTS rule changes how licensees derive projected reference temperatures for the components of
their reactor pressure vessels; LBP-15-17, 81 NRC 753 (2015)
alternate PTS rule is designed to enable all commercial pressurized water reactor licensees to assess the
state of their reactor pressure vessels relative to a new criterion without the need to make new material
property measurements, instead using only information that is currently available; LBP-15-17, 81 NRC 753 (2015)
alternate PTS rule provides measures for ongoing reporting; LBP-15-17, 81 NRC 753 (2015)
alternate PTS rule specifies mitigation processes for licensees if they project they will exceed (or they do
exceed) the rules’ screening criteria; LBP-15-17, 81 NRC 753 (2015)
applicant requests an operating license amendment to implement alternate fracture toughness requirements
for protection against PTS events; LBP-15-17, 81 NRC 753 (2015)
application to use alternate PTS rule must contain an assessment of flaws in the reactor pressure vessel;
LBP-15-17, 81 NRC 753 (2015)
application to use alternate PTS rule must contain the projected embrittlement reference temperatures
along various portions of the reactor pressure vessel, from the present to a future point, compared to
the alternate screening criteria; LBP-15-17, 81 NRC 753 (2015)
if NRC does not approve continued operation based on licensee’s safety analysis, licensee must request an
opportunity to modify the reactor pressure vessel or related reactor systems to reduce the potential for
failure of the reactor vessel due to PTS events; LBP-15-17, 81 NRC 753 (2015)
PTS rule and embrittlement screening program are discussed; LBP-15-17, 81 NRC 753 (2015); LBP-15-17, 81
NRC 753 (2015)
reactor vessel material surveillance programs provide material property data necessary to implement a
regulatory scheme to protect reactor pressure vessels from failure due to withstand a pressurized thermal
screening criterion is given for plates, forgings, and axial and circumferential weld materials; LBP-15-17,
81 NRC 753 (2015)
to take advantage of the alternate PTS rule, licensee must request approval from the Office of Nuclear Reactor Regulation, in accordance with the procedures for submitting a license amendment; LBP-15-17, 81 NRC 753 (2015)

when the reference temperature of a reactor pressure vessel is above the screening limit, the RPV is considered to have an unreasonably high risk of fracture from a PTS event; LBP-15-17, 81 NRC 753 (2015)

PRESSURIZED-WATER REACTOR
surveillance program to monitor pressurized water reactor pressure vessel is described; LBP-15-17, 81 NRC 753 (2015)

PRESUMPTION OF LEGITIMACY
adjudicative bodies are to accord government records and official conduct a presumption of legitimacy; LBP-12-14, 76 NRC 1 (2012)
record falls far short of rebutting the presumption that a petition for license modification, suspension, or revocation is a meaningful avenue for seeking administrative relief; LBP-12-14, 76 NRC 1 (2012)

PRESUMPTION OF REGULARITY
although public officials are afforded the presumption in the discharge of their duties, if facts before the board do not appear regular, then the presumption does not attach; LBP-14-2, 79 NRC 131 (2014)
boards cannot assume that applicants will not comply with its regulatory responsibilities, including its license conditions; LBP-15-3, 81 NRC 65 (2015)

Commission has long declined to assume that licensees will refuse to meet their obligations under their licenses or NRC regulations; CLI-14-11, 80 NRC 167 (2014); LBP-15-4, 81 NRC 156 (2015)
governmental officials, acting in their official capacities, are presumed to have properly discharged their duties and, to rebut this presumption, petitioner’s burden of proof involves presentation of clear evidence to the contrary; LBP-14-2, 79 NRC 131 (2014)

presumption attaches to the actions of government agencies; CLI-11-4, 74 NRC 1 (2011)
presumption does not help to sustain an action that on its face appears irregular, and if it appears irregular, it is irregular, and the burden shifts to the proponent to show the contrary; LBP-14-2, 79 NRC 131 (2014)

Staff’s deference to the expertise of other federal and state agencies to set and monitor the financial soundness of institutions issuing letters of credit is reasonable; CLI-11-4, 74 NRC 1 (2011)

PRIMA FACIE SHOWING
if a contention makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-15-5, 81 NRC 249 (2015)

if on the basis of the petition, affidavit, and any response provided for in 2.758(b), the presiding officer determines that a prima facie showing has been made, the presiding officer shall, before ruling thereon, certify the matter directly to the Commission; CLI-11-11, 74 NRC 427 (2011)
licensing board initially determines, based on the record, whether a prima facie showing has been made by the petitioner for its rule waiver request, and then the board must certify the matter directly to the Commission for a final determination; LBP-14-16, 80 NRC 183 (2014)

presiding officers must dismiss any petition for waiver that does not make a prima facie showing of special circumstances with respect to the subject matter of the particular proceeding; LBP-11-35, 74 NRC 701 (2011)

prima facie showing on a rule waiver request is not a final determination on the merits, but merely requires presentation of enough information to allow the board to infer (absent disproof) that special circumstances exist; LBP-14-16, 80 NRC 183 (2014)

prima facie showing within the meaning of 10 C.F.R. 2.758(d) is one that is legally sufficient to establish a fact or case unless disproved; LBP-14-16, 80 NRC 183 (2014)
role of the board when a rule waiver request is filed is limited to determining whether petitioner has made a prima facie showing that it has satisfied 10 C.F.R. 2.335(b), and if not, the board may not further consider the matter; LBP-13-1, 77 NRC 57 (2013)
special circumstances required to obtain a rule waiver have been described as a prima facie showing that application of a rule in a particular way would not serve the purposes for which the rule was adopted; LBP-15-5, 81 NRC 249 (2015)
SUBJECT INDEX

term is not defined in NRC regulations, but is interpreted to mean a substantial showing; LBP-14-16, 80 NRC 183 (2014)

PRIVILEGE LOG

adequacy of the privilege log with respect to the sufficiency of the information contained therein is particularly important with respect to Subpart L proceedings because without sufficient information as to what allegedly makes the document deliberative, the challenger is forced to shoot in the dark and face a substantive answer by the document withholder, without the right to reply; LBP-13-5, 77 NRC 233 (2013)
cursory statements are inadequate to permit a court to decide whether the privilege was properly claimed; LBP-13-5, 77 NRC 233 (2013)

NRC Staff is required to disclose or provide to the extent available a list of all otherwise-discoverable documents for which a claim of privilege or protected status is being made, together with sufficient information for assessing the claim of privilege or protected status of the documents; LBP-13-5, 77 NRC 233 (2013)

parties must list documents claimed to be privileged or protected on a privilege log; LBP-11-5, 73 NRC 131 (2011)

PRIVILEGED INFORMATION

claims and identification of privileged materials must occur within the time provided for disclosing withheld materials; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)
each party to a proceeding must disclose all documents relevant to the admitted contentions, except those documents for which a claim of privilege or protected status is made; LBP-11-5, 73 NRC 131 (2011)

PRO SE LITIGANTS

although a totally deficient pleading may not be justified on the basis that it was prepared without the assistance of counsel, pro se petitioners should not be held to those standards of clarity and precision to which a lawyer might reasonably be expected to adhere; LBP-15-13, 81 NRC 456 (2015)

boards must afford latitude to pro se petitioners in considering their pleadings; LBP-12-3, 75 NRC 164 (2012)

burden of setting forth a clear and coherent argument for standing is generally on petitioner, but pro se petitioner is not held to the same standards of clarity and precision to which a lawyer might reasonably be expected to adhere; CLI-15-25, 82 NRC 389 (2015)

Commission directive to treat pro se litigants more leniently than litigants with counsel allows a board to take into account complex procedural hurdles presented to intervenors and to structure its rulings accordingly; LBP-11-9, 73 NRC 391 (2011)
counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal authority that is adverse to the director's position, especially when the target of the government's enforcement action is not represented by counsel; LBP-14-11, 80 NRC 125 (2014)
even if intervenors are appearing pro se, adherence to board directives is expected; CLI-14-10, 80 NRC 157 (2014)

forcing a pro se intervenor to file monthly disclosures and closely follow a proceeding indefinitely solely to obtain a ruling on the merits of its claim would constitute significant unfairness and hardship; LBP-12-19, 76 NRC 184 (2012)
in NRC proceedings, pro se litigants are generally not held to the same high standards of pleading and practice as parties with counsel; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011)
leniency is afforded to pro se petitioners, but parties to NRC proceedings are expected to fulfill the obligations imposed by NRC rules; CLI-15-25, 82 NRC 389 (2015)

lenient treatment generally accorded to pro se litigants has limits; CLI-15-18, 82 NRC 135 (2015)

NRC is lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-11-13, 73 NRC 534 (2011)

petitioner was allowed to clarify standing declarations by submitting revised declarations with its reply; LBP-11-13, 73 NRC 534 (2011)

petitioners who are proceeding without counsel should be shown greater leeway on the question of whether they have demonstrated good cause for lateness than petitioners represented by counsel; LBP-11-13, 73 NRC 534 (2011)
pleadings are to be construed liberally and held to a less stringent standard than formal pleadings drafted by lawyers, but it is not the proper function of the court to assume the role of advocate for the litigant; CLI-15-18, 82 NRC 135 (2015)
pleadings submitted by pro se petitioners are afforded greater leniency than petitions drafted with the assistance of counsel; LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015)
representatives in licensing board proceedings, like all other representatives and/or lawyers, are required to be accurate and truthful and are subject to reprimand, censure, or suspension for failing in these duties; LBP-13-8, 78 NRC 1 (2013)
PROBABILITY RISK ASSESSMENT
accident sequence with a probability conservatively estimated at $2.0 \times 10^{-7}$ per reactor year is remote and speculative for the purposes of NEPA; LBP-11-38, 74 NRC 817 (2011)
agency conducting a NEPA analysis must examine both the probability of a given harm occurring and the consequences of that harm if it does occur; CLI-15-6, 81 NRC 340 (2015)
although a contention might have been more detailed or otherwise better supported, petitioners have done enough to raise a question about the adequacy of the probability figures used in applicant’s SAMA analysis, namely, whether they should have incorporated or otherwise acknowledged information from a Sandia study; LBP-12-18, 76 NRC 127 (2012)
analysis of potential volcanic hazard at proposed uranium enrichment facility site raises the question whether the probability of such an event is sufficiently low to be considered “highly unlikely”; LBP-11-11, 73 NRC 455 (2011)
applications for certified reactor designs include a probabilistic risk assessment for severe accidents; LBP-11-38, 74 NRC 817 (2011)
determination that, for any license renewal of a nuclear power plant, the probability-weighted consequences of a severe accident are small cannot be challenged; LBP-11-2, 73 NRC 28 (2011)
embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data in a process called the consistency check; LBP-15-17, 81 NRC 753 (2015)
highly site-specific seismic hazard analysis reflects consideration not only of the location and magnitude of historic earthquakes, but also the nature of the bedrock and the style of faulting in the surrounding region; LBP-11-11, 73 NRC 455 (2011)
only if the probability of a severe accident is so small as to be effectively zero could NRC Staff dispense with the consequences portion of the analysis; CLI-15-6, 81 NRC 340 (2015)
probability-weighted consequences of severe accidents (risk) are small in the context of a license renewal proceeding; LBP-11-13, 73 NRC 534 (2011)
probability-weighted environmental consequences of severe accidents are small; CLI-15-6, 81 NRC 340 (2015)
SAMA analysis is an analysis of a class of SAMA candidates using probabilistic risk assessment techniques to determine whether any of the SAMA candidates would be cost-beneficial; LBP-13-1, 77 NRC 57 (2013)
to evaluate the impact of a fault on current operations, a probabilistic risk assessment rather than a deterministic analysis is the accepted and standard practice in SAMA analyses; CLI-11-11, 74 NRC 427 (2011)
unlike plume modeling for an actual severe accident, the severe accident mitigation alternatives analysis is not focused on predicting the precise trajectory of a real-time plume but rather is a probabilistic analysis involving statistical averaging over many hundreds of randomly selected hourly weather sequences obtained from a year of hourly weather data; CLI-12-8, 75 NRC 393 (2012)
PROBABLE CAUSE
standard that must be met before NRC Staff can issue an immediately effective enforcement order is one of adequate evidence, which is akin to the test for probable cause; LBP-11-8, 73 NRC 349 (2011)
PROCEDURE COMPLIANCE
although NEPA’s requirements are procedural, federal agencies are held to a strict standard of compliance with the act’s requirements; LBP-12-18, 76 NRC 127 (2012)
although pro se litigants are expected to comply with procedural rules, they are generally extended some latitude; LBP-11-2, 73 NRC 28 (2011)
as an exercise of the Commission’s inherent supervisory authority over agency proceedings, it need not address procedural issues that would merit further consideration in adjudications; CLI-12-16, 76 NRC 63 (2012)
even if licensee chooses to satisfy a license condition by incorporating the condition into its inservice testing program, it still must comply with 10 C.F.R. 50.55a(f)(4) throughout the life of the plant; CLI-12-9, 75 NRC 421 (2012)

PROOF
See Burden of Proof; Standard of Proof

PROPERTY INTERESTS
Atomic Energy Act authorizes NRC to accord protection from radiological injury to both health and property interests, and thus a genuine property interest is sufficient to accord petitioner proximity-based standing; LBP-15-17, 81 NRC 753 (2015)
proximity presumption applies to persons who have a significant property interest in the area near a nuclear power plant; LBP-15-17, 81 NRC 753 (2015)

PROPERTY VALUES
preponderance of the evidence supports conclusion that NRC Staff’s reasoned, qualitative approach to weighing the costs and benefits of plant shutdown on property values and the local community is reasonable and satisfies regulatory requirements; LBP-13-13, 78 NRC 246 (2013)

PROPRIETARY INFORMATION
petitioners have an affirmative obligation to request confidential and proprietary information that has not been made publicly available in order to support a proposed contention; LBP-11-9, 73 NRC 391 (2011)

PROTECTIVE ACTION RECOMMENDATIONS
combined license application must include an emergency plan that contains, in the event of a reactor emergency resulting in a radiological release, a range of protective actions for the public located within about a 10-mile radius from the plant; LBP-11-15, 73 NRC 629 (2011)
contention that, in the event of a core-melt accident, applicant’s emergency plan should order an evacuation of persons within a 10-mile radius of the facility attacks NRC’s emergency planning regulation; LBP-11-15, 73 NRC 629 (2011)
emergency plans are to have a range of protective actions for persons within about a 10-mile radius, and guidelines for the choice of protective actions during an emergency, consistent with federal guidance, must be developed and in place; LBP-11-15, 73 NRC 629 (2011)
in developing the range of protective actions, consideration will be given to evacuation, sheltering, and, as a supplement to these, the prophylactic use of potassium iodide, as appropriate; LBP-11-15, 73 NRC 629 (2011)

PROTECTIVE ORDERS
although petitioner’s inadvertent publication of protected information was a serious offense that exposed movant to potential economic harm and undermined integrity of the adjudicative proceeding, the significance of petitioner’s misconduct is alleviated to some degree by the immediate corrective action taken by petitioner; LBP-13-2, 77 NRC 71 (2013)
board declines to issue a proposed protective order jointly submitted by all of the parties where it failed to require the privilege claimant to identify the legal basis for the claim that the document should be protected; LBP-11-5, 73 NRC 131 (2011)
board denies a motion seeking sanctions against petitioner for violating the governing protective order and nondisclosure agreement, but imposes a document review requirement upon petitioner in light of its misconduct and to enhance future compliance with the proceeding’s protective order; LBP-13-2, 77 NRC 71 (2013)
board issues a protective order and nondisclosure agreement that it considers to be clear and legally sound; LBP-11-5, 73 NRC 131 (2011)
confidential commercial information, release of which likely would lead to substantial competitive harm, is entitled to protection; CLI-15-24, 82 NRC 331 (2015)
"disclosing party" means the party required to make mandatory disclosure; LBP-11-5, 73 NRC 131 (2011)
disclosure to intervenors of the names of power plant employees who provided NRC with information during the course of its investigation would be inappropriate, even with a protective order in place; CLI-13-5, 77 NRC 223 (2013)
“document” means any medium (electronic, paper, or any other kind) that contains or stores any information, including text, data, audio, video, computer software, or computer modeling information; LBP-11-5, 73 NRC 131 (2011)

if the Commission determines on appeal that information withheld under a protective order should have been publicly disclosed, it will direct that such information and the transcript of the related in camera session be made publicly available; CLI-15-24, 82 NRC 331 (2015)

NRC has a strong policy in favor of openness and transparency; LBP-11-5, 73 NRC 131 (2011)

NRC Staff is exempted from the obligations of the protective order, even though Staff might hold many documents that are subject to the mandatory disclosure requirements; LBP-11-5, 73 NRC 131 (2011)

party moving for sanctions has the burden of establishing by a preponderance of the evidence that petitioner violated the protective order; LBP-13-2, 77 NRC 71 (2013)

protective order, and the good-faith representation and designation of documents as protected documents, serves in lieu of the requirement for marking and for an affidavit; LBP-11-5, 73 NRC 131 (2011)

“receiving party” means the party to whom the mandatory disclosure must be made; LBP-11-5, 73 NRC 131 (2011)

“representative” means the attorney or other authorized representative of a party who has entered a notice of appearance; LBP-11-5, 73 NRC 131 (2011)

rules governing access to SUNSI apply only to potential parties, whereas party access to SUNSI is governed by protective orders and nondisclosure agreements; LBP-11-9, 73 NRC 391 (2011)

SUNSI policy does not expand upon or create any new category of legally privileged or confidential information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 131 (2011)

when considering whether a disclosure of proprietary information was an isolated incident or part of a pattern of behavior, licensing boards may consider the circumstances underlying the disclosure, the corrective action taken, and petitioner’s representation that no disclosure will occur in the future; LBP-13-2, 77 NRC 71 (2013)

PROXIMITY PRESUMPTION

Atomic Energy Act authorizes NRC to accord protection from radiological injury to both health and property interests, and thus a genuine property interest is sufficient to accord petitioner proximity-based standing; LBP-15-17, 81 NRC 753 (2015)

Commission affirmed board ruling on standing and upheld the validity of the proximity presumption; CLI-15-13, 81 NRC 555 (2015)

distance of 3 miles in a license transfer proceeding between facility and organization’s offices does not qualify for organizational standing; LBP-13-6, 77 NRC 253 (2013)

extended power uprate proceedings necessarily trigger application of the 50-mile proximity presumption given that such license applications entail an obvious increase in the potential for offsite consequences; LBP-11-29, 74 NRC 612 (2011)

for reactor operating license renewal proceedings, standing is presumed for an individual who resides within a 50-mile radius of a nuclear power plant, is recognized; LBP-12-10, 75 NRC 633 (2012)

geographic proximity to a facility (i.e., living or working within 50 miles) is presumptively sufficient to meet traditional standing requirements in certain types of proceedings, including operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

Google Maps and Mapquest searches of distance from petitioner’s address may be used to establish proximity to a proposed facility; LBP-12-3, 75 NRC 164 (2012)

governmental body within close proximity of a proposed nuclear reactor has standing under the proximity presumption, effectively dispensing with the need to make an affirmative showing of injury, causation, and redressability; LBP-15-19, 81 NRC 815 (2015)

if proximity-based standing cannot be demonstrated, then standing must be established according to traditional principles of redressability, injury, and causation; LBP-12-3, 75 NRC 164 (2012)

in license amendment proceedings, petitioners may not claim standing simply upon a residence or visits near the plant, unless the proposed action quite obviously entails an increased potential for offsite consequences; LBP-11-29, 74 NRC 612 (2011)

in lieu of the injury and causation showings for standing, petitioner has been able to establish proximity-plus by showing that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; LBP-12-3, 75 NRC 164 (2012)
in materials licensing matters, there is no predefined distance marking the area of potential offsite consequences on which to establish standing and thus this must be judged on a case-by-case basis; LBP-12-24, 76 NRC 503 (2012)
in most licensing proceedings, petitioners are presumed to have standing if they live or have frequent contacts within 50 miles of the facility that is the subject of the proceeding; LBP-11-29, 74 NRC 612 (2011)

in reactor license renewal proceedings, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the nuclear power facility; LBP-11-21, 74 NRC 115 (2011)
in reactor proceedings, the Commission applies a proximity presumption, whereby an individual’s or organization’s location within 50 miles of a reactor is sufficient to demonstrate the requisite threat of injury; LBP-12-24, 76 NRC 503 (2012)

intervenors have standing based upon their proximity to the proposed facility; LBP-12-12, 75 NRC 742 (2012)

license amendments related to reactor pressure vessel embrittlement present an obvious potential for offsite public health and safety consequences; LBP-15-17, 81 NRC 753 (2015)

licensing actions that could increase reactor vessel embrittlement, such as license renewals, hold the potential for offsite consequences that are obvious; LBP-15-17, 81 NRC 753 (2015)

living within 50 miles of a nuclear power reactor is enough to confer standing on an individual or group in proceedings for construction permits, operating licenses, or significant amendments thereto; LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-20, 81 NRC 829 (2015)

mother was denied standing based on her son’s residence within 50 miles of a power plant, because she herself lived more than 50 miles away; LBP-15-17, 81 NRC 753 (2015)

no proximity presumption applies in an import/export licensing case because petitioners have not shown that the import or export involves a significant source of radioactivity producing an obvious potential for offsite consequences; CLI-11-3, 73 NRC 613 (2011)

NRC could consider adopting, at least for the initial construction/operation authorization of in situ recovery facilities, a standing regime by which persons living or having substantial contacts within a 50-mile radius of the facility are afforded standing; LBP-12-3, 75 NRC 164 (2012)

NRC’s 50-mile proximity presumption is an example of NRC’s great liberality in the arena of standing; LBP-14-4, 79 NRC 319 (2014)

organization members living within 50 miles of a reactor are presumed to have standing; LBP-15-5, 81 NRC 249 (2015)

petitioner could not rely on caretakers maintaining and farming the property in petitioner’s absence as grounds for proximity-based standing; LBP-15-17, 81 NRC 753 (2015)

petitioner in materials licensing actions is entitled to a presumption of standing if petitioner resides in the zone of reasonably foreseeable harm from the source of radioactivity and the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-12-24, 76 NRC 503 (2012)

petitioner is deemed to have standing in reactor licensing proceedings by showing that he or she, or an individual authorizing an organization to represent his or her interests, resides in, or frequents the area within, a 50-mile radius of the facility; LBP-11-2, 73 NRC 28 (2011); LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-13-8, 78 NRC 1 (2013)

petitioner who lives, has frequent contacts, or has significant property interest in within 50 miles of a nuclear power reactor has standing without the need to make an individualized showing of injury, causation, and redressability; LBP-15-17, 81 NRC 753 (2015)

petitioners had proximity-based standing even though they did not provide a reactor vessel failure scenario; LBP-15-17, 81 NRC 753 (2015)

petitioning member’s affidavit must be sufficiently specific to show frequent contact within 50 miles of the plant; LBP-15-17, 81 NRC 753 (2015)

presumption applies across the board to all proceedings regardless of type because the rationale underlying it is not based on the type of proceeding per se but on whether the proposed action involves
SUBJECT INDEX

a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-15-17, 81 NRC 753 (2015)

presumption applies in more limited license amendment proceedings only if the proposed amendment obviously entails an increased potential for offsite consequences; LBP-15-17, 81 NRC 753 (2015)

presumption applies in reactor operating license renewal proceedings; LBP-13-8, 78 NRC 1 (2013)

presumption applies to persons who have a significant property interest in the area near a nuclear power plant; LBP-15-17, 81 NRC 753 (2015)

presumption applies to persons who have frequent contacts in the area near a nuclear power plant; LBP-15-17, 81 NRC 753 (2015)

presumption applies when there are clear implications for the offsite environment, or major alterations to the facility with a clear potential for offsite consequences; LBP-15-17, 81 NRC 753 (2015)

presumption applies where petitioners’ contention concerns a license amendment to move the schedule for the withdrawal of reactor vessel material specimens from the technical specifications to the updated safety analysis report; LBP-15-17, 81 NRC 753 (2015)

presumption is limited to reactor licensing proceedings and to other cases where there is an obvious potential for offsite radiological consequences; LBP-14-4, 79 NRC 319 (2014)

presumption was applied in a license amendment proceeding where management’s lack of the required character and competence was alleged; LBP-15-17, 81 NRC 753 (2015)

proximity-based standing is allowed because license renewal allows operation of a reactor over an additional period of time during which the reactor could be subject to the same equipment failures and personnel errors as during operations over the original period of the license; LBP-12-8, 75 NRC 539 (2012)

radius for the proximity presumption has to be at least as large as the range where obvious offsite consequences can occur; LBP-15-17, 81 NRC 753 (2015)

rationale for proximity-based standing is that in construction permit and operating license cases, persons living within the roughly 50-mile radius of the facility face a realistic threat of harm if a release from the facility of radioactive material were to occur; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

representational standing associated with causation in power reactor license renewal proceedings is deemed fulfilled if a member of the organization resides or has significant contacts in an area within a 50-mile radius of the facility; LBP-12-15, 76 NRC 14 (2012)

standing based on frequent contacts is a determination to be made by a licensing board after weighing all the information provided; LBP-15-17, 81 NRC 753 (2015)

standing can be based on the finding that persons living within the roughly 50-mile radius of the facility face a realistic threat of harm if a release from the facility of radioactive material were to occur; LBP-14-4, 79 NRC 319 (2014)

standing criteria for federally recognized Indian tribes are less stringent, but only where the facility at issue is within the tribe’s boundaries; LBP-12-24, 76 NRC 503 (2012)

statement that petitioner lives, recreates, and conducts business within the vicinity of the plant is too vague to demonstrate a substantial or regular presence within 50 miles of the plant; LBP-15-17, 81 NRC 753 (2015)

to demonstrate frequent contacts within the 50-mile site radius under the proximity presumption, petitioner must show that her contacts are substantial and regular, and must describe them with specificity; LBP-15-17, 81 NRC 753 (2015)

under the presumption, an individual who resides within a 50-mile radius of a nuclear power plant is not required to specifically plead injury, causation, and redressability to establish his or her standing to intervene; LBP-12-10, 75 NRC 633 (2012)

when a governmental organization, including a federally recognized Native American tribe, is unable to establish standing because the facility or nuclear material in question does not fall within its jurisdictional boundaries, that entity nonetheless may be accorded standing if its boundaries come within a distance from the nuclear facility or material that otherwise would establish standing for an individual or nongovernmental organization, whether via a proximity presumption or otherwise; LBP-13-6, 77 NRC 253 (2013)

when a radiological health or safety impact is asserted to provide the basis for a petitioner’s injury in fact, in lieu of the usual injury and causation showings, petitioner can attempt to establish its standing
based on the proximity plus protocol by showing that the proposed licensing action involves a significant source of radiation, which has an obvious potential for offsite consequences; LBP-13-6, 77 NRC 253 (2013)

where a municipality seeks to participate in a reactor licensing proceeding that does not involve a facility within the municipality’s boundaries, it can, for purposes of establishing standing, rely on the 50-mile proximity presumption to the same extent as an individual or an organization; LBP-11-6, 73 NRC 149 (2011)

where petitioner has made no effort to establish that any proximity plus presumption should be applicable in determining standing relative to the challenged licensing action, boards must look to traditional standing precepts of injury and causation, as well as redressibility, to determine whether a sufficient factual and legal demonstration of standing has been made; LBP-13-6, 77 NRC 253 (2013)

whether petitioner could be affected by the licensing action must be determined on a case-by-case basis, taking into account the petitioner’s distance from the source, the nature of the licensed activity, and the significance of the radioactive source; LBP-13-6, 77 NRC 253 (2013)

**PSYCHOLOGICAL EFFECTS**

petitioner’s assertion that continued operation of an independent spent fuel storage installation causes fear and anxiety among its members is not a valid claim under NEPA; LBP-12-24, 76 NRC 503 (2012)

psychological fears or stigma effects are not cognizable NEPA claims; CLI-12-5, 75 NRC 301 (2012)

**PUBLIC COMMENTS**

agency officials must, except where appropriate to protect confidentiality concerns of affected parties, provide the public with information about an undertaking and its effects on historic properties and seek public comment and input; LBP-12-23, 76 NRC 445 (2012)

boards may entertain oral and written limited appearance statements from members of the public in connection with a mandatory uncontested proceeding; LBP-11-26, 74 NRC 499 (2011)

environmental impact statements cannot fulfill their role of providing a springboard for public comment if they fail to evaluate significant issues such as measures that the agency’s experts recommend to mitigate the consequences of a severe accident; LBP-12-18, 76 NRC 127 (2012)

final environmental impact statement will include responses to any comments on the draft EIS; LBP-13-13, 78 NRC 246 (2013)

if modification of the final environmental impact statement by NRC Staff testimony or the board’s decision is too substantial, recirculation of the FEIS would be required; LBP-13-13, 78 NRC 246 (2013)

licensing board’s hearing arguably allows for additional and a more rigorous public scrutiny of the final environmental impact statement than does the usual circulation for comment; LBP-14-9, 80 NRC 15 (2014)

members of the public had the opportunity to fully participate in the Continued Storage rulemaking proceeding; CLI-15-10, 81 NRC 535 (2015)

NEPA affords agencies considerable discretion to decide the extent to which public involvement is practicable; CLI-15-17, 82 NRC 33 (2015)

NEPA does not require circulation of a draft environmental assessment in all cases; CLI-15-17, 82 NRC 33 (2015)

NRC Staff is not obligated to fully adopt, or agree with, all comments to the draft supplemental environmental impact statement regarding the no-action alternative; LBP-13-13, 78 NRC 246 (2013)

NRC Staff may publish a draft finding of no significant impact for public comment, but it is not required to do in all cases; CLI-15-17, 82 NRC 33 (2015)

NRC will consider all comments on the draft supplemental EIS regardless of whether the comment is directed to impacts in Category 1 or 2; CLI-13-7, 78 NRC 199 (2013)

NRC’s NEPA regulations require a request for public comment on a draft environmental impact statement and a supplement to a DEIS distributed in accordance with 10 C.F.R. 51.74 and on any supplement to the FEIS prepared pursuant to 10 C.F.R. 51.92(a) or (b); LBP-14-9, 80 NRC 15 (2014)

petitioner may submit to NRC Staff any information that it believes to be new and significant by participating in NRC’s parallel NEPA process wherein an opportunity for public comment on the draft supplemental EIS is provided; CLI-13-7, 78 NRC 199 (2013)

petitioner’s rule waiver petition is referred to NRC Staff as additional comments on the draft supplemental EIS for the Staff’s consideration and response; CLI-13-7, 78 NRC 199 (2013)

1192
public comment period is required for draft and supplemental environmental impact statements; CLI-12-16, 76 NRC 63 (2012)

public comment periods are beneficial only to the extent the public has meaningful information on which to comment; LBP-12-17, 76 NRC 71 (2012)

public comment will be afforded in advance on any generic waste confidence document that NRC issues on remand, be it a fresh rule, a policy statement, an environmental assessment, or an environmental impact statement; CLI-12-16, 76 NRC 63 (2012)

to the extent that intervenors’ proposed contention is based on asserted deficiencies in NRC Staff’s process for soliciting public participation pursuant to the National Historic Preservation Act, the contention fails to demonstrate a genuine dispute on a material issue of fact or law; LBP-12-23, 76 NRC 445 (2012)

PUBLIC DOCUMENT ROOMS

transcript of Atomic Safety and Licensing Board hearings will be available for inspection in the agency’s public records system; LBP-11-5, 73 NRC 131 (2011)

PUBLIC HEARINGS

all hearings will be public; LBP-11-5, 73 NRC 131 (2011)

principle that justice cannot survive behind walls of silence has long been reflected in the Anglo-American distrust for secret trials; LBP-11-5, 73 NRC 131 (2011)

PUBLIC INTEREST

exemption from decommissioning funding requirements to allow applicant to act as a self-guarantor without satisfying the financial test for self-guarantors must be in the public interest or otherwise satisfy the requirements of 10 C.F.R. 40.14; LBP-12-6, 73 NRC 256 (2012)

it is in the public interest for adjudications to proceed, except for contentions associated with waste confidence issues; CLI-12-16, 76 NRC 63 (2012)

presiding officer’s approval of settlement is a matter that must give due consideration to the public interest; LBP-15-21, 82 NRC 1 (2015)

presiding officer’s public interest inquiry for approval of settlement agreement is described; LBP-15-21, 82 NRC 1 (2015)

principal goals of a final environmental impact statement are to force agencies to take a hard look at the environmental consequences of a proposed project, and, by making relevant analyses openly available, to permit the public a role in the agency’s decisionmaking process; LBP-14-9, 80 NRC 15 (2014)

public interest can well be served by revisions to an application that end up “getting it right” and by the Staff’s expected thorough analysis of such revisions; LBP-11-9, 73 NRC 391 (2011)

standard for settlement agreement review concerns whether the approval process deprives interested parties of meaningful participation; LBP-15-21, 82 NRC 1 (2015)

when reviewing an application for a 404 permit under the Clean Water Act, the Corps of Engineers evaluates whether issuance of the permit is in the public interest, weighing all relevant factors, including economic, environmental, and aesthetic concerns; LBP-14-9, 80 NRC 15 (2014)

where a licensed and operating plant has been found unsafe, where the Commission has ordered some remedial amendment, and where the licensee has accepted that amendment, there is no public interest in the proceeding; LBP-14-4, 79 NRC 319 (2014)

PUBLIC MEETINGS

agencies shall plan for involving the public in the National Historic Preservation Act § 106 process but may use the agency’s procedures for public involvement under NEPA if they provide adequate opportunities for public involvement; LBP-12-23, 76 NRC 445 (2012)

PUBLIC PARTICIPATION

NRC must make a diligent effort to involve the public in implementation of NEPA procedures; LBP-15-16, 81 NRC 618 (2015)

PUMPS

request for immediate action to prevent restart because a piece of primary coolant pump impeller was lodged between the reactor vessel and the flow skirt is denied; DD-15-3, 81 NRC 713 (2015)

request for licensee to replace the primary coolant pumps with others designed for their intended duty is denied; DD-15-3, 81 NRC 713 (2015)
SUBJECT INDEX

QUALIFICATIONS

adequacy of nuclear criticality safety manager qualifications for uranium enrichment facility is discussed and a license condition is imposed; LBP-11-11, 73 NRC 455 (2011)
based on his education and experience, intervenors’ witness was found qualified to testify but not specifically on issues related to nuclear engineering, such as events at the Fukushima Dai-ichi plant, core damage frequency calculations, and effectiveness of SAMDAs; LBP-11-38, 74 NRC 817 (2011)combined license applicant’s status as a current power reactor licensee generally provides the necessary support for NRC Staff’s finding that applicant is technically qualified for a new license; CLI-12-2, 75 NRC 63 (2012)
deliberative process privilege must be asserted by an individual who holds a sufficiently senior position such that he or she has control over the requested information and possesses a balanced perspective that enables him or her to discern the nature of the material at issue; LBP-13-5, 77 NRC 233 (2013)evidence in affidavits supporting a motion to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)expert witnesses must have the requisite education, training, skill, or experience in operation of a nuclear power plant or in probabilistic risk assessment to support a contention; LBP-11-35, 74 NRC 701 (2011)license transfer applicant must demonstrate that the proposed transferee is qualified to hold the license; CLI-15-26, 82 NRC 408 (2015)
person qualified to assert deliberative process privilege must be involved in the initial assertion of privilege; LBP-13-5, 77 NRC 233 (2013)qualified persons, such as head of a department or division, having both expertise and an overview-type perspective concerning the balance between the agency’s duty of disclosure versus its need to conduct frank internal debate must sign an affidavit asserting deliberative process privilege; LBP-13-5, 77 NRC 233 (2013)request that NRC shut down or prohibit restart of nuclear power plants until a criminal investigation of a licensee contractor is complete and everything has been verified safe is denied; DD-14-1, 79 NRC 7 (2014)

QUALIFIED PRIVILEGE

although deliberative process privilege is a qualified privilege and the agency claiming the privilege bears the initial burden of demonstrating that it is applicable, once this demonstration is made, the moving party can only defeat the privilege by a demonstration of an overriding need for the material; LBP-13-5, 77 NRC 233 (2013)deliberative process privilege is qualified, requiring the court to balance the interests of the parties for and against disclosures; LBP-13-5, 77 NRC 233 (2013)

QUALITATIVE ANALYSIS

although license requirements and other environmental quality standards are to be considered in assessing environmental impacts, they do not negate NRC Staff’s responsibility to consider all environmental effects; LBP-15-3, 81 NRC 65 (2015)important qualitative considerations or factors that cannot be quantified in the environmental impact statement will be discussed in qualitative terms; LBP-15-3, 81 NRC 65 (2015)petitioners question applicant’s failure to consider the qualitative benefits of installing engineered filters; LBP-15-5, 81 NRC 249 (2015)to the extent there are important NEPA qualitative considerations or factors that cannot be quantified, these considerations or factors will be discussed in qualitative terms; LBP-15-5, 81 NRC 249 (2015)

QUALITY ASSURANCE

combined license applicant’s final safety analysis report must describe the quality assurance program applied to the design and to be applied to the fabrication, construction, and testing, of the structures, systems, and components of the facility; LBP-14-7, 79 NRC 451 (2014)conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011)during the license renewal period, the regulations of 10 C.F.R. Part 50, Appendix B concerning ongoing inspections and audits apply; LBP-13-13, 78 NRC 246 (2013)
effect of a pattern of quality assurance violations is not necessarily to show that particular safety-related information is false, but to erode confidence that NRC can reasonably have in, and create substantial uncertainty about the quality of, the work that is tainted by the alleged QA violations; LBP-12-23, 76 NRC 445 (2012)
petitioners did not demonstrate that the issue of whether the MACCS2 was subject to quality assurance is material to the findings the NRC must make under NEPA to support the requested license extension; LBP-11-13, 73 NRC 534 (2011)
petitioners’ assertions that the MACCS2 code was not subjected to quality assurance requirements is deficient because a SAMA analysis is not subject to such requirements; LBP-11-2, 73 NRC 28 (2011)
petitioners’ concerns about tube leaks, unplanned power changes, and potential primary coolant contamination did not constitute any violations that were more than minor; DD-15-2, 81 NRC 205 (2015)
requirements under 10 C.F.R. Part 50, App. B apply to design of the safety-related functions of the structures, systems, and components that prevent or mitigate the consequences of postulated accidents; LBP-14-7, 79 NRC 451 (2014)
this issue is beyond the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)
use of the past tense when referring to “quality assurance applied to the design” in 10 C.F.R. Part 50, App. B shows that safety-related design activities must have been performed under an acceptable QA program even though those activities were performed prior to the date on which the combined license application (which includes the FSAR) was filed with NRC; LBP-14-7, 79 NRC 451 (2014)
QUALITY ASSURANCE PROGRAMS
applicant may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part thereof, but shall retain responsibility for the program; CLI-14-10, 80 NRC 157 (2014)
applicant must establish and implement its own QA program when it enters into a contract for the conduct of safety-related combined license application activities and to retain overall control of safety-related activities performed by the contractor; CLI-14-10, 80 NRC 157 (2014)
board rules in favor of applicant on contention challenging adequacy of quality assurance program developed and implemented by the applicant; LBP-14-7, 79 NRC 451 (2014)
comprehensive system of planned and periodic audits shall be carried out to verify compliance with all aspects of the quality assurance program and to determine effectiveness of the program; LBP-14-7, 79 NRC 451 (2014)
license applicant may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part thereof, but applicant retains responsibility for the program; LBP-12-23, 76 NRC 445 (2012)
licensee must implement managerial and administrative controls to ensure safe operation through implementation of the facility’s quality assurance program; DD-13-3, 78 NRC 571 (2013)
licensees must establish measures to ensure that conditions adverse to quality are promptly identified and corrected; LBP-12-23, 76 NRC 445 (2012)
NRC Staff may not issue a notice of violation for failure to satisfy Appendix B requirements during the preapplication period, but it may deny a combined license for failure to satisfy the standards and requirements of the Commission’s regulations; LBP-14-7, 79 NRC 451 (2014)
requirements relate to testing, calibration, or inspection to ensure that the necessary quality of systems and components is maintained, that facility operation will be within safety limits, and that the limiting conditions for operation will be met for certain structures, systems, and components; CLI-13-10, 78 NRC 563 (2013)
to demonstrate a significant safety issue, petitioners must establish either that uncorrected errors endanger safe plant operation, or that there has been a breakdown of the quality assurance program sufficient to raise legitimate doubt as to the plant’s capability of being operated safely; LBP-11-35, 74 NRC 701 (2011)
QUANTITATIVE DATA
agency’s failure to adequately validate a quantitative model on which it relies may lead the reviewing court to conclude that the agency’s decision is arbitrary, capricious, or contrary to law; LBP-15-20, 81 NRC 829 (2015)
applicant’s strategic special nuclear material item monitoring approach, as enhanced by an item verification procedure, provides reasonable assurance that the quantitative accuracy of the MMIS/PLC data is sufficient to enable the procedures employing those data to meet the regulatory requirements; LBP-14-1, 79 NRC 39 (2014)

quantitative accuracy of the MMIS/PLC computer system data must be considered in determining whether requirements of 10 C.F.R. 74.55(b)(1) are satisfied by applicant’s plans; LBP-14-1, 79 NRC 39 (2014)

relative to an individual ISR facility, when NRC Staff formulates its draft and final supplemental environmental impact statement conclusions regarding the environmental impacts of a proposed action or alternative actions, it uses as guidance a standard scheme to categorize or quantify the impacts; LBP-15-3, 81 NRC 65 (2015)

to the extent there are important NEPA qualitative considerations or factors that cannot be quantified, these considerations or factors will be discussed in qualitative terms; LBP-15-5, 81 NRC 249 (2015)

where environmental impacts are practically quantifiable, NRC has a duty to discuss them in those terms in the final supplemental environmental impact statement; LBP-15-3, 81 NRC 65 (2015)

RADIATION CONTROL PROGRAM

combined license applications must include kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-12-4, 75 NRC 213 (2012)

combined license applications must provide a level of information on plans to manage and store low-level radioactive waste onsite sufficient to enable the Commission to conclude that the application will comply with 10 C.F.R. Part 20; CLI-11-10, 74 NRC 251 (2011)

RADIATION EXPOSURE
See Radiological Exposure

RADIATION PROTECTION PROGRAM

combined license applications contain information pertaining to how applicant intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20 including, but not limited to, LLRW handling and storage; LBP-12-4, 75 NRC 213 (2012)

combined license applications include operational procedures to minimize contamination of the facility and environment, facilitate eventual decommissioning, and minimize generation of radioactive waste; CLI-12-2, 75 NRC 63 (2012)

RADIATION PROTECTION STANDARDS

ALARA principle as used in NRC regulations does not mean as low as achievable as a comparison between achievable doses, but rather as low as reasonably achievable below the dose limits; CLI-11-12, 74 NRC 460 (2011)

public doses for all Part 20 radiation protection programs must be as low as reasonably achievable and a basic radiation protection public dose standard of 100 mrem per year is required; CLI-11-12, 74 NRC 460 (2011)

radiation protection requirements with which licensees must comply, such as procedures and controls to reduce occupational doses and doses to members of the public to levels that are as low as reasonably achievable, are outlined in 10 C.F.R. 20.1101(b); LBP-12-4, 75 NRC 213 (2012)

RADIOACTIVE EFFLUENTS

because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the ability of buried structures to perform their intended functions as defined by 10 C.F.R. 54.4(a)(1)-(3), the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 28 (2011)

combined license application must identify the means for keeping levels of radioactive material in effluents to unrestricted areas as low as is reasonably achievable; LBP-11-6, 73 NRC 149 (2011)

combined license application must include kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-12-4, 75 NRC 213 (2012)

even with the additional conservatisms, concentrations at potential receptor locations resulting from bounding accidental effluent release scenarios remain within applicable regulatory limits; CLI-12-9, 75 NRC 421 (2012)

final safety analysis report must include information regarding the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting
radioactive effluents and radiation exposures within the limits set forth in Part 20; LBP-11-6, 73 NRC 149 (2011)

it is permissible for the final safety analysis report to give applicant several options for controlling and limiting radioactive effluents and radiation exposures, provided that each option is described with a level of information sufficient to enable the Commission to reach a final conclusion; LBP-11-31, 74 NRC 643 (2011)

key functions of buried structures, systems, and components that are the focus of the license renewal safety review under Part 54 do not include the prevention of inadvertent radioactive leaks from buried structures; LBP-11-2, 73 NRC 28 (2011)

minimum detectable concentrations for gaseous effluent and evaporator condensate must be 5% or less of the concentrations listed in Part 20, App. B, tbl. 2; LBP-11-26, 74 NRC 499 (2011)

Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 499 (2011)

uranium enrichment facility licensee must survey radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits for individual members of the public in section 20.1301; LBP-12-21, 76 NRC 218 (2012)

RADIOACTIVE EMISSIONS
keeping radionuclides below the EPA limit is necessary to maintain public safety at a decommissioning facility; LBP-15-24, 82 NRC 68 (2015)

RADIOACTIVE MATERIALS
applicant has described the kinds and quantities of radioactive materials expected to be produced in the operation to the extent its combined license application references a standardized design; LBP-11-6, 73 NRC 149 (2011)

final safety analysis report must include information regarding the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in Part 20; LBP-11-6, 73 NRC 149 (2011)

RADIOACTIVE PLUME
to the extent petitioner is challenging the adequacy of computer modeling of plume variability, petitioner bears the burden of providing evidence specific to the license renewal applicant; LBP-15-5, 81 NRC 249 (2015)

RADIOACTIVE RELEASES
buried structures, systems, and components must also control inadvertent radiological releases to ensure that dose exposures are below the regulatory limits; LBP-13-13, 78 NRC 246 (2013)

contentions concerning release of radiological, chemical, and herbicidal materials and storage of spent fuel are Category 1 issues and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

independent spent fuel storage installation licensees must limit releases of radioactive materials to as low as is reasonably achievable, and establish operational limits to prevent doses to the public that exceed the limits of 10 C.F.R. 72.104(a)-(c); LBP-12-24, 76 NRC 503 (2012)

license amendment to eliminate numerous detailed procedures for monitoring routine radioactive releases from the technical specifications and transfer them to a licensee-controlled document would allow licensee to make future changes to the radiation monitoring procedures without going through another license amendment; LBP-12-25, 76 NRC 540 (2012)

liquid released from a leaky pipe where the pressure boundary is maintained would not be sufficient to exceed the dose limits specified in 10 C.F.R. Part 54; LBP-13-13, 78 NRC 246 (2013)

loss of spent fuel confinement would produce a dose of 0.15 rem at the nearest site boundary, which is less than the 5-rem limit; LBP-12-24, 76 NRC 503 (2012)

NRC has analyzed terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release expected from internally initiated events; LBP-11-2, 73 NRC 28 (2011)

petitioners do not provide any alleged facts or expert support indicating that the river valley is within the geographic area for which applicant was required to model atmospheric dispersion; LBP-11-13, 73 NRC 534 (2011)
SUBJECT INDEX

Staff guidance documents outline acceptable methods for designing a radiological monitoring program and submitting required semiannual reports specifying principal radionuclide releases to unrestricted areas for the purpose of estimating maximum potential annual public doses from such releases; LBP-11-26, 74 NRC 499 (2011)

to the extent that intervenors challenge all radiological releases from nuclear power plants, the contention presents an impermissible challenge to the NRC’s regulations; LBP-12-12, 75 NRC 742 (2012)

uranium enrichment facility licensee must provide semiannual radiological release reports to NRC; LBP-12-21, 76 NRC 218 (2012)

RADIOACTIVE WASTE DISPOSAL

Commission sensibly has chosen to address high-level waste disposal generically rather than unnecessarily to revisit the same waste disposal questions, license by license, when reviewing individual applications; LBP-14-16, 80 NRC 183 (2014)

Congress did not intend in enacting the Atomic Energy Act to require a demonstration that nuclear wastes could safely be disposed of before licensing of nuclear plants was permitted; CLI-15-4, 81 NRC 221 (2015)

contention that applicant’s SAMA analysis improperly ignored radioactive waste disposal is outside the scope of the proceeding because it directly challenges the generic determinations in Table B-1 of Appendix B to Part 51; LBP-11-2, 73 NRC 28 (2011)

contention that draft environmental impact statement fails to include a reviewable plan for disposal of 11c(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 37 (2013)

decommissioning funding requirements encompass costs of low-level waste burial; CLI-15-8, 81 NRC 500 (2015)

environmental report for application for land disposal may incorporate by reference information contained in the application or in any previous application, statement, or report filed with the Commission provided that such references are clear and specific; LBP-12-24, 76 NRC 503 (2012)

final environmental impact statement as amplified by both board and Commission decisions, provides adequate consideration of environmental impacts of near-surface waste disposal; CLI-15-6, 81 NRC 340 (2015)

generic approach to high-level waste disposal has been endorsed by higher courts; LBP-14-16, 80 NRC 183 (2014)

licensee must provide for ready retrieval of spent fuel from storage for further processing or disposal; LBP-12-24, 76 NRC 503 (2012)

motion for summary disposition is granted because there is no genuine issue or dispute as to any material fact and applicant’s low-level radioactive waste plan satisfies the requirements of 10 C.F.R. 52.79(a); LBP-11-31, 74 NRC 643 (2011)

NRC is not required to conduct a rulemaking proceeding or to withhold action on pending or future applications for nuclear power reactor operating licenses until it makes a determination that high-level radioactive wastes can be permanently disposed of safely; CLI-15-4, 81 NRC 221 (2015)

NRC must include an evaluation of failure to secure permanent disposal, as well as an improved analysis of spent fuel pool leaks and spent fuel pool fires; CLI-14-8, 80 NRC 71 (2014)

NRC will not issue licenses dependent upon the Waste Confidence Decision or the Temporary Storage Rule until the District of Columbia Circuit’s remand is appropriately addressed; LBP-14-3, 79 NRC 267 (2014)

policies set forth by NEPA prevent NRC Staff from segmenting the disposal issues from the inquiry into whether applicant will be allowed to create 11c(2) byproduct material in the first instance; LBP-13-9, 78 NRC 37 (2013)

statutory findings required by AEA § 103 do not apply to disposal activities that might result from the operation of a licensed facility; CLI-15-4, 81 NRC 221 (2015)

waste disposal contentions are to be held in abeyance pending further order of the Commission; LBP-14-3, 79 NRC 267 (2014)

RADIOACTIVE WASTE MANAGEMENT

all uranium fuel cycle and waste management issues, including low-level waste storage and disposal, mixed waste storage and disposal, onsite spent fuel storage, and transportation, are Category 1 issues with a small impact; LBP-11-2, 73 NRC 28 (2011)
applicant’s FSAR must identify particular plans pertaining to design, operational organization, and procedures that demonstrate how it intends to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20 including, but not limited to, LLRW handling and storage; LBP-12-4, 75 NRC 213 (2012)
because petitioner fails to show that the possibility of site inundation is based on new and materially different information added to the environmental report as part of applicant’s revised low-level radioactive waste management plan or identify any new and materially different information on which its site-inundation argument is based, this argument is untimely; LBP-12-7, 75 NRC 503 (2012)
combined license applications include operational procedures to minimize contamination of the facility and environment, facilitate eventual decommissioning, and minimize generation of radioactive waste; CLI-12-2, 75 NRC 63 (2012)
if case-specific challenges to the waste confidence rule are appropriate for consideration, normal procedural rules will apply; CLI-12-16, 76 NRC 63 (2012)
postponing choice between several options for radioactive waste management, each of which is concretely stated and compliant with 10 C.F.R. 52.79(a), does not violate the regulation; LBP-11-31, 74 NRC 643 (2011)
the Atomic Energy Act does not, as a prerequisite to licensing, require a finding of reasonable assurance that highly hazardous and long-lived radioactive materials can be disposed of safely; CLI-15-4, 81 NRC 221 (2015)
challenges to a combined license applicant’s failure to provide information on long-term storage of Greater-Than-Class-C radioactive waste are outside the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)
combined license applications contain information pertaining to how applicant intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20 including, but not limited to, LLRW handling and storage; LBP-12-4, 75 NRC 213 (2012)
combined license applications must provide a level of information on plans to manage and store low-level radioactive waste onsite sufficient to enable the Commission to conclude that the application will comply with 10 C.F.R. Part 20; CLI-11-10, 74 NRC 251 (2011)
contention concerning temporary storage and ultimate disposal of nuclear waste was held in abeyance pending further order from the Commission; LBP-14-7, 79 NRC 451 (2014)
level of low-level radioactive waste storage information required by 10 C.F.R. 52.79(a)(3) is tied to the combined license applicant’s particular plans for compliance through design, operational organization, and procedures; LBP-12-4, 75 NRC 213 (2012)
the mere existence of a letter of intent to ship low-level radioactive waste to a disposal facility does not answer questions as to whether such a plan will ultimately result in a transfer of LLRW title and permanent offsite disposition of the LLRW and whether nontransfer of title will result in environmental impacts; LBP-11-6, 73 NRC 149 (2011)
SUBJECT INDEX

NRC failed to comply with the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule; CLI-14-8, 80 NRC 71 (2014) NRC will not issue licenses dependent upon the Waste Confidence Decision or the Temporary Storage Rule until the D.C. Circuit’s remand is appropriately addressed; LBP-13-13, 78 NRC 246 (2013) questions of safety impacts of onsite low-level waste storage are largely site- and design-specific, and appropriately decided in an individual licensing proceeding; LBP-12-4, 75 NRC 213 (2012) regarding waste confidence, NRC failed to comply with the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule; CLI-14-3, 79 NRC 31 (2014)

rule concerning storage and disposal of high-level waste is vacated and the issue remanded to the Commission to generate either a generic analysis that is forward looking and has enough breadth to the support the Commission’s conclusions or a site-specific environmental impact statement in all relevant proceedings; LBP-13-13, 78 NRC 246 (2013)
safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is inadmissible in license renewal proceedings; LBP-13-8, 78 NRC 1 (2013)

section 52.79(a)(3) specifies no quantity or time restrictions relative to onsite storage of LLRW; LBP-12-4, 75 NRC 213 (2012)

should the Commission determine at a future time that case-specific challenges to waste confidence are appropriate for consideration, normal procedural rules will apply; LBP-14-6, 79 NRC 404 (2014) there is a longstanding agency recognition of the availability of the mechanisms under 10 C.F.R. 50.59 or 50.90 for obtaining authorization to construct additional onsite LLRW storage facilities; LBP-12-4, 75 NRC 213 (2012)

waste confidence undergirds new reactor licensing and power reactor license renewal; CLI-14-8, 80 NRC 71 (2014)

whether offsite low-level radioactive waste storage and disposal facilities will ultimately be available is not material to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 213 (2012)

trivial to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 213 (2012)

See also Continued Storage Rule

RADIOACTIVE WASTE, HIGH-LEVEL

Atomic Energy Act does not, as a prerequisite to licensing, require a finding of reasonable assurance that highly hazardous and long-lived radioactive materials can be disposed of safely; CLI-15-4, 81 NRC 221 (2015)

challenges to a combined license applicant’s failure to provide information on long-term storage of Greater-Than-Class-C radioactive waste are outside the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)

Commission sensibly has chosen to address high-level waste disposal generically rather than unnecessarily to revisit the same waste disposal questions, license by license, when reviewing individual applications; LBP-14-16, 80 NRC 183 (2014)
generic approach to high-level waste disposal has been endorsed by higher courts; LBP-14-16, 80 NRC 183 (2014)

NRC is not required to conduct a rulemaking proceeding or to withhold action on pending or future applications for nuclear power reactor operating licenses until it makes a determination that high-level radioactive wastes can be permanently disposed of safely; CLI-15-4, 81 NRC 221 (2015)

NRC’s current rule concerning the storage and disposal of high-level waste was remanded to the Commission to generate either a generic analysis that is forward looking and has enough breadth to support the Commission’s conclusions or site-specific environmental impact statements in all relevant proceedings; LBP-12-21, 76 NRC 218 (2012)

relationship between the uranium enrichment facility’s product and production of high-level waste is too attenuated to show the requirement of a reasonably close causal relationship required by NEPA; LBP-12-21, 76 NRC 218 (2012)
rule concerning storage and disposal of high-level waste is vacated and the issue remanded to the
Commission to generate either a generic analysis that is forward looking and has enough breadth to
support the Commission’s conclusions or a site-specific environmental impact statement in all relevant
proceedings; LBP-13-13, 78 NRC 246 (2013)

RADIOACTIVE WASTE, LOW-LEVEL

absent a licensed LLRW disposal facility that will accept waste from the proposed facility, it is
reasonably foreseeable that low-level radioactive waste generated by normal operations will be stored at
the site for a longer term than is currently envisioned in applicant’s combined license application;
LBP-11-6, 73 NRC 149 (2011); LBP-12-4, 75 NRC 213 (2012)

applicant’s FSAR must identify particular plans pertaining to design, operational organization, and
procedures that demonstrate how it intends to comply with relevant substantive radiation protection
requirements in 10 C.F.R. Part 20 including, but not limited to, LLRW handling and storage; LBP-12-4,
75 NRC 213 (2012)

because petitioner fails to show that the possibility of site inundation is based on new and materially
different information added to the environmental report as part of applicant’s revised low-level
radioactive waste management plan or identify any new and materially different information on which
its site-inundation argument is based, its argument is not timely; LBP-12-7, 75 NRC 503 (2012)

categorical exclusion from the NEPA requirement to prepare an environmental assessment or
environmental impact statement for the issuance of import licenses involving low-level radioactive waste
is provided; CLI-11-3, 73 NRC 613 (2011)

combined license applications must provide a level of information on plans to manage and store LLRW
onsite sufficient to enable the Commission to conclude that the application will comply with 10 C.F.R.
Part 20; CLI-11-10, 74 NRC 251 (2011)

contentions challenging the ability of combined license applicants to handle onsite storage of Classes B
and C LLRW, as well as the attendant potential environmental impacts of such storage in the wake of
the closure of the Barnwell facility in South Carolina to states outside of the Atlantic Compact are
admissible; LBP-11-6, 73 NRC 149 (2011)

decommissioning funding requirements encompass costs of low-level waste burial; CLI-15-8, 81 NRC 500
(2015)

depleted uranium and the other waste generated by uranium enrichment facilities are not spent fuel,
transuranic waste, or 11c(2) byproduct material or specific kinds of wastes such as irradiated fuel and
the liquid and solid wastes resulting from the processing of irradiated fuel, and thus are classified as
low-level waste; LBP-12-21, 76 NRC 218 (2012)

discretionary hearing to discuss policy issues related to import of foreign low-level radioactive waste and
domestic incineration and transportation issues is not warranted because these issues are either
challenges to the Commission’s regulations or are outside the scope of the proceeding; CLI-11-3, 73
NRC 613 (2011)

key action that will allow incineration of imported low-level-radioactive waste material is the domestic
license authorizing such processing, not NRC’s grant of an import license; CLI-11-3, 73 NRC 613
(2011)

level of LLRW storage information required by 10 C.F.R. 52.79(a)(3) is tied to the combined license
applicant’s particular plans for compliance through design, operational organization, and procedures;
LBP-12-4, 75 NRC 213 (2012)

LLRW is defined as radioactive material that is not high-level radioactive waste, spent nuclear fuel, or
byproduct material and that NRC classifies as LLRW; LBP-12-4, 75 NRC 213 (2012); LBP-12-21, 76
NRC 218 (2012)

mere existence of a letter of intent to ship low-level radioactive waste to a disposal facility does not
answer questions as to whether such a plan will ultimately result in a transfer of LLRW title and
permanent off-site disposition of the LLRW and whether nontransfer of title will result in environmental
impacts; LBP-11-6, 73 NRC 149 (2011)

motion for summary disposition is granted because there is no genuine issue or dispute as to any material
fact and applicant’s low-level radioactive waste plan satisfies the requirements of 10 C.F.R. 52.79(a);
LBP-11-31, 74 NRC 645 (2011)

NRC divides LLRW into three classes, A, B, and C, based on the concentration and types of long-lived
and short-lived radionuclides; LBP-12-4, 75 NRC 213 (2012); LBP-12-7, 75 NRC 503 (2012)
questions of safety impacts of onsite low-level waste storage are largely site- and design-specific, and appropriately decided in an individual licensing proceeding; LBP-12-4, 75 NRC 213 (2012)

scope and specificity of information required under section 52.79(a)(3) is a fact-bound determination that is tied to applicant’s particular plans for compliance through, but not necessarily the details of, design, operational organization, and procedures associated with any contingent long-term LLRW facility; LBP-12-4, 75 NRC 213 (2012)

section 52.79(a)(3) specifies no quantity or time restrictions relative to onsite storage of LLRW; LBP-12-4, 75 NRC 213 (2012)

state reviewed the applications and the authorizations and found no technical reason to prohibit processing of imported waste; CLI-11-3, 73 NRC 613 (2011)

there is a longstanding agency recognition of the availability of the mechanisms under 10 C.F.R. 50.59 or 50.90 for obtaining authorization to construct additional onsite LLRW storage facilities; LBP-12-4, 75 NRC 213 (2012)

whether offsite LLRW storage and disposal facilities will ultimately be available is not material to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 213 (2012)

RADIOACTIVITY
determination expressly required by the text “further reductions in residual radioactivity . . . were not being made because the residual levels associated with restricted conditions are ALARA” in 10 C.F.R. 20.1403 is an inquiry that focuses on how far it is possible, on a cost-effective basis, to further reduce the “residual levels”; CLI-13-6, 78 NRC 155 (2013)

“further reductions” in 10 C.F.R. 20.1403(a) necessarily refers to further reductions from the level of residual radioactivity that a licensee proposes to leave in place under its proposed restricted-release decommissioning plan; CLI-13-6, 78 NRC 155 (2013)

licensees, in determining whether levels are ALARA, are to consider detriments, such as traffic accidents; CLI-13-6, 78 NRC 155 (2013)

one of the benefits of removing enough radioactivity to cross the 25-mrem threshold is that the value of the affected property is likely to increase, and it is in this sense that NRC guidelines contemplate, as part of the ALARA analysis, a comparison between restricted release and unrestricted release; CLI-13-6, 78 NRC 155 (2013)

“reductions in residual radioactivity” refers only to dose reductions to the public that can be accomplished solely through the steps associated with unrestricted-release decommissioning, i.e., removal of contaminated material or decontamination; CLI-13-6, 78 NRC 155 (2013)

“residual levels,” as used in the phrase “were not being made because the residual levels . . . are ALARA,” in 10 C.F.R. 20.1403(a) refers back to, and is shorthand for, the term “residual radioactivity” used earlier in the introductory language; CLI-13-6, 78 NRC 155 (2013)

“residual radioactivity” is defined as radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee’s control; CLI-13-6, 78 NRC 155 (2013)

RADIOGRAPHER
licensee is banned from engaging in NRC-licensed activities, including performing, supervising, or assisting in any industrial radiographic operations and must complete a formal radiation safety officer training course; LBP-15-21, 82 NRC 1 (2015)

“radiographer’s assistant,” is defined in 10 C.F.R. 34.3; LBP-15-21, 82 NRC 1 (2015)

RADIOGRAPHIC DEVICE STORAGE
choosing to store a radiographic exposure device at a facility that did not comply with NRC security requirements and was not an authorized storage location under the license is considered deliberate misconduct; LBP-14-11, 80 NRC 125 (2014)

RADIOGRAPHY
except for ownership of NRC-licensed materials outlined in the settlement agreement, licensee will refrain from engaging in conducting radiography or a radiographer’s duties, or assisting, directing, or supervising such activities in an NRC jurisdiction under an NRC license or an agreement state license; LBP-11-3, 73 NRC 81 (2011)

licensee is required to submit a license transfer application to NRC; CLI-14-5, 79 NRC 254 (2014)
SUBJECT INDEX

RADIOLOGICAL CONTAMINATION
areas of minor radioactive contamination are evaluated and remediated as needed during plant
decommissioning; DD-11-1, 73 NRC 7 (2011)  
dose limits from tritium in groundwater for individual members of the public were never approached;  
DD-11-1, 73 NRC 7 (2011)  
NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater  
remains well below the ALARA dose objectives; DD-11-1, 73 NRC 7 (2011)  
ojective of decommissioning is to reduce residual radioactivity in structures, soils, groundwater, and  
other media at the site so that the concentration of each radionuclide that could contribute to residual  
radioactivity is indistinguishable from the background radiation concentration for that nuclide; CLI-13-1,  
77 NRC 1 (2013)  
petition requesting that the NRC not allow restart after scheduled refueling outage until completion of all  
environmental remediation work and relevant reports on leaking tritium at the plant is denied; DD-11-1,  
73 NRC 7 (2011)  
petitioner fails to demonstrate that the issue of radiation dispersal due to site inundation is material to the  
findings the NRC must make to support approving a combined license application; LBP-12-7, 75 NRC  
503 (2012)  
“unrestricted use” means that, from a radiological standpoint, no hazards exist at the site, the license can  
be terminated, and the site can be considered an unrestricted area; CLI-13-1, 77 NRC 1 (2013)

RADIOLOGICAL EXPOSURE
ALARA is defined as every reasonable effort to maintain exposures to radiation as far below the dose  
limits in Part 20 as is practical consistent with the purpose for which the licensed activity is  
undertaken; CLI-11-12, 74 NRC 460 (2011)  
combined license applications must include kinds and quantities of radioactive materials expected to be  
produced in the operation and the means for controlling and limiting radioactive effluents and radiation  
exposures within the limits set forth in 10 C.F.R. Part 20; LBP-12-4, 75 NRC 213 (2012)  
dose limits for individual members of the public are 100 millirem in a year the As Low As Is  
Reasonably Achievable (ALARA) dose objectives specified in 10 C.F.R. 50, Appendix I; DD-11-3, 73  
NRC 375 (2011)  
dose limits from tritium in groundwater for individual members of the public were never approached;  
DD-11-1, 73 NRC 7 (2011)  
final safety analysis report must include information regarding the kinds and quantities of radioactive  
materials expected to be produced in the operation and the means for controlling and limiting  
radioactive effluents and radiation exposures within the limits set forth in Part 20; LBP-11-6, 73 NRC  
149 (2011)  
if institutional controls fail and engineered barriers have degraded over a period of time, the dose to a  
member of the public will not exceed 100 mrem per year, or 500 mrem per year under certain  
circumstances, and is as low as reasonably achievable; CLI-11-12, 74 NRC 460 (2011)  
it is permissible for the final safety analysis report to give applicant several options for controlling and  
limiting radioactive effluents and radiation exposures, provided that each option is described with a  
level of information sufficient to enable the Commission to reach a final conclusion; LBP-11-31, 74  
NRC 643 (2011)  
limit for individual members of the public from a licensed activity is a total effective dose equivalent of  
100 millirem per year; CLI-11-12, 74 NRC 460 (2011)  
mere potential exposure to minute doses of radiation within regulatory limits does not constitute a distinct  
and palpable injury on which standing can be founded; CLI-11-3, 73 NRC 613 (2011)  
NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater  
remains well below the ALARA dose objectives; DD-11-1, 73 NRC 7 (2011)  
small doses of radiation below dose limits, while safe and acceptable, may have some associated risk and  
should be reduced below limits when reasonable; CLI-11-12, 74 NRC 460 (2011)

RADIOLOGICAL MONITORING
applicant’s measurements and monitoring program is subject to scrutiny; LBP-11-26, 74 NRC 499 (2011)  
license amendment to eliminate numerous detailed procedures for monitoring routine radioactive releases  
from the technical specifications and transfer them to a licensee-controlled document would allow
SUBJECT INDEX

licensee to make future changes to the radiation monitoring procedures without going through another license amendment; LBP-12-25, 76 NRC 540 (2012)

Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 499 (2011)

petitioners’ reliance on loss of future opportunities to challenge by adjudicatory intervention licensee-initiated changes in the low-level effluent monitoring details fell short of an admissible contention; LBP-12-25, 76 NRC 540 (2012)

Staff guidance documents outline acceptable methods for designing a radiological monitoring program and submitting required semiannual reports specifying principal radionuclide releases to unrestricted areas for the purpose of estimating maximum potential annual public doses from such releases; LBP-11-26, 74 NRC 499 (2011)

Staff guidance documents set forth information that should be provided in the environmental report and the environmental impact statement regarding a radiological monitoring program and monitoring program acceptance criteria; LBP-11-26, 74 NRC 499 (2011) through the regulatory process, which includes plant inspections, notice and guidance to licensees, and enforcement actions, NRC takes a host of measures to improve the ability to timely detect and correct inadvertent leaks to assure compliance with public dose limits; LBP-11-2, 73 NRC 28 (2011)

uranium enrichment facility licensee must survey radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits in section 20.1301 for individual members of the public; LBP-12-21, 76 NRC 218 (2012)

uranium enrichment facility licensee’s radiological surveys must be as necessary and reasonable for compliance, and must include magnitude and extent of radiation levels, concentrations or quantities of radioactive material, and potential radiological hazards; LBP-12-21, 76 NRC 218 (2012)

RADON EMISSIONS

Environmental Protection Agency regulates radon; LBP-15-16, 81 NRC 618 (2015)

REACTOR CONTROL RODS

request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)

request for immediate action on flaws in the control rod drive mechanisms did not meet the criteria for review; DD-15-3, 81 NRC 713 (2015)

REACTOR COOLING SYSTEMS

wear of steam generator tubes is of critical importance to evaluations performed in the final safety analysis report, because the tubes are part of the reactor coolant pressure boundary, and assurance of their integrity is required; LBP-13-7, 77 NRC 307 (2013)

REACTOR DESIGN

all environmental issues concerning severe accident mitigation design alternatives associated with the information in NRC’s final environmental assessment for certified reactor design are deemed resolved for plants whose site parameters are within those specified in the technical support document; LBP-11-7, 73 NRC 254 (2011)

applicant has described the kinds and quantities of radioactive materials expected to be produced in the operation to the extent its combined license application references a standardized design; LBP-11-6, 73 NRC 149 (2011)

applicants may incorporate a certified reactor design in a combined license application; LBP-11-10, 73 NRC 424 (2011)

challenging features of the AP1000 standard design is a matter for a design certification rulemaking, not a combined license proceeding; CLI-11-8, 74 NRC 214 (2011)

combined license applicant may reference a docketed-but-not-yet-certified design in its application, but does so at its own risk; CLI-12-9, 75 NRC 421 (2012); LBP-11-10, 73 NRC 424 (2011)

combined license applicant will have to demonstrate that the site-specific parameters are bounded by the parameters developed for the certified design; LBP-11-10, 73 NRC 424 (2011)

each combined license applicant will have to determine whether it will adopt in toto the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-11-10, 73 NRC 424 (2011)
exemption from any part of a referenced design certification rule may be granted if NRC determines that
the exemption complies with any exemption provisions of the referenced design certification rule, or
with 10 C.F.R. 52.63 if there are no applicable exemption provisions in the referenced design
certification rule; LBP-11-10, 73 NRC 424 (2011)
exemption requests are subject to the same level of litigation as other issues that could be admissible in a
combined license proceeding; LBP-11-10, 73 NRC 424 (2011)
General Design Criteria require that the reactor exhibit a negative void coefficient in the power operating
range; LBP-12-12, 75 NRC 742 (2012)
grants of exemptions from referenced design certification rules are conditioned on the Commission’s
finding that the request complies with section 52.7 and that the special circumstances provided for
section 52.7 outweigh any decrease in safety that may result from the reduction in standardization
caused by the exemption; LBP-11-10, 73 NRC 424 (2011)
See also Design Certification
REACTOR OPERATION
upon docketing of certifications of permanent shutdown and fuel removal, licensee’s licenses no longer
authorize operation of the reactors or placement or retention of fuel into the reactor vessels and licensee
is prohibited from restarting or loading fuel; DD-15-7, 82 NRC 257 (2015)
REACTOR OPERATOR EXAMINATIONS
applicant must pass both the written examination and the operating test and meet the other requirements
applicant who passes both a written examination and operating test and meets the other requirements
specified in 10 C.F.R. Part 55 will be eligible to receive senior reactor operator license; LBP-13-5, 77
NRC 233 (2013)
because agency practice is one indicator of how the agency interprets regulations, a consistently held
NRC Staff view on an operator testing policy matter will not be disturbed; LBP-14-2, 79 NRC 131
(2014)
goal of senior reactor operator tests is to determine whether applicant’s level of knowledge and
understanding meet the minimum requirements to safely operate the facility for which the license is
sought; LBP-14-2, 79 NRC 131 (2014)
if an examiner is assigned to a reactor operator examination that might appear to present a conflict of
interest, the examiner shall inform his or her immediate supervisor of the potential conflict; LBP-14-2,
79 NRC 131 (2014)
licensing boards have limited their review of NRC Staff reactor operator licensing decisions to those
issues that were resolved against the license applicant in the Staff’s informal review; LBP-14-2, 79
NRC 131 (2014)
NRC regional office has the discretion to grant a waiver for retesting on a passed test for a senior reactor
operator applicant who has failed only one part of the test if it determines that sufficient justification is
presented; LBP-14-2, 79 NRC 131 (2014)
NRC regional office shall not assign an examiner who failed an applicant on an operating test to
administer any part of that applicant’s retake operating test; LBP-14-2, 79 NRC 131 (2014)
NRC Staff acted inconsistently with its own guidance and applied that guidance in an inconsistent manner
when it denied a senior reactor operator license; LBP-14-2, 79 NRC 131 (2014)
NRC Staff cannot defend its decision on a basis inconsistent with its own informal review; LBP-14-2, 79
NRC 131 (2014)
NRC Staff improperly discharges its duties with respect to the grading of an operating test if the grading
is inappropriate or unjustified or if the grading strays too far afield of the twin goals of equitable and
consistent examination administration, thus becoming arbitrary or an abuse of discretion; LBP-14-2, 79
NRC 131 (2014)
NRC Staff may not take a position or assert facts before the presiding officer contrary to a matter
decided by the appeal board (i.e., the Staff itself) on applicant’s informal appeal absent an explicit
confession of error; LBP-14-2, 79 NRC 131 (2014)
NRC Staff’s decision at the conclusion of its administrative reviews is the final Staff position and hence
the only Staff position open to applicant to challenge before the presiding officer; LBP-14-2, 79 NRC
131 (2014)
NUREG-1021 criteria that apply to the preparation of written reactor operator examinations and operating tests are binding upon NRC Staff; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 includes conflict of interest provisions that address the assignment of examiners to an examination team; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 is intended to ensure equitable and consistent administration of examinations for all applicants; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 provides that NRC’s regional offices shall obtain approval from the Office of Nuclear Reactor Regulation operator licensing program office before knowingly deviating from the intent of any of the NUREG-1021 standards; LBP-14-2, 79 NRC 131 (2014)

NUREG-1021 specifies NRC Staff policies, procedures, and practices for administering reactor operator initial and requalification written examinations and operating tests, listing goals and specific procedures for preparation, administration, and grading; LBP-14-2, 79 NRC 131 (2014)

pursuant to 10 C.F.R. 55.40, NRC Staff shall use the criteria in NUREG-1021 in effect 6 months before the examination date to prepare written reactor operator examinations required by sections 55.41 and 55.43 and the operating tests required by section 55.45; LBP-14-2, 79 NRC 131 (2014)

senior reactor operator license applicant who has passed either the written examination or operating test and failed the other may request in a new application on Form NRC-398 to be excused from reexamination on the portions of the examination or test that applicant has passed; LBP-13-3, 77 NRC 82 (2013); LBP-14-2, 79 NRC 131 (2014)

senior reactor operator license applicant who was denied a license after the first examination may elect to retake the tests; LBP-14-2, 79 NRC 131 (2014)

to obtain a senior reactor operator license, applicant must pass both a written test and an operating test and meet the other requirements specified in Part 55; LBP-14-2, 79 NRC 131 (2014)

under 10 C.F.R. 55.40, NRC Staff shall use NUREG-1021 to prepare and evaluate reactor operator licensing examinations; LBP-14-2, 79 NRC 131 (2014)

when informed of a potential conflict, the supervisor of a reactor operator test examiner must apply sound judgment to the facts of each case and, if any doubt exists, consult with regional management and/or the NRR operator licensing program office to resolve the issue; LBP-14-2, 79 NRC 131 (2014)

in the interest of expediting the further proceedings, hearing on senior operator license denial will be conducted under the provisions of Subpart L of the Commission’s Rules of Practice; LBP-13-3, 77 NRC 82 (2013)

proceedings for the grant, renewal, licensee-initiated amendment, or termination of licenses or permits subject to Part 55 may be conducted under the procedures of Subpart L; LBP-13-3, 77 NRC 82 (2013) section 2.309(f)(1) has no application to reactor operator license proceedings; LBP-13-3, 77 NRC 82 (2013)

applicant who passes both a written examination and operating test and meets the other requirements specified in 10 C.F.R. Part 55 will be eligible to receive senior reactor operator license; LBP-13-5, 77 NRC 233 (2013)

applicants are subject to the satisfaction of other licensing requirements not considered in this special proceeding, such as health, that NRC Staff must assess before issuing a license; LBP-14-2, 79 NRC 131 (2014)

in assessing whether applicant satisfies the burden of establishing that NRC Staff’s determination of applicant’s performance was inappropriate, unjustified, arbitrary, or an abuse of discretion, the board should consult NUREG-1021; LBP-14-2, 79 NRC 131 (2014)

See also Senior Reactor Operator License

REACTOR OPERATORS
any individual who manipulates the controls of any facility licensed under Parts 50, 52, or 54 of NRC’s regulations is required to have an operator’s license; LBP-14-2, 79 NRC 131 (2014)

See also Senior Reactor Operator

REACTOR PRESSURE VESSEL
alternate pressurized thermal shock rule is designed to enable all commercial PWR licensees to assess the state of their reactor pressure vessels relative to a new criterion without the need to make new material
property measurements, instead using only information that is currently available; LBP-15-17, 81 NRC 753 (2015)
alternate screening criteria consist of eighteen different reference temperature limits that depend on RPV wall thickness and the part of the RPV under consideration; LBP-15-17, 81 NRC 753 (2015)
application to use alternate pressurized thermal shock rule must contain an assessment of flaws in the RPV; LBP-15-17, 81 NRC 753 (2015)
ASTM Standard E 185 anticipates that during the course of a nuclear power plant’s life the surveillance capsule withdrawal schedule may need to be revised and allows and provides for such changes; LBP-15-20, 81 NRC 829 (2015)
board has ample authority to ensure that evidence offered concerning microcracking is limited to that specific material issue and does not stray into issues outside the scope of the license amendment proceeding; LBP-15-20, 81 NRC 829 (2015)
equivalent margins analysis must demonstrate that the calculated energy will provide margins of safety against fracture that are equivalent to those required by Appendix G of Section XI of the ASME Code; CLI-15-23, 82 NRC 321 (2015)
if NRC does not approve continued operation based on licensee’s safety analysis, licensee must request an opportunity to modify the RPV or related reactor systems to reduce the potential for failure of the reactor vessel due to pressurized thermal shock events; LBP-15-17, 81 NRC 753 (2015)
if part of an RPV is expected to fall below the 50 ft-lb standard, licensee must demonstrate that lower values of Charpy upper-shelf energy will provide margins of safety against fracture equivalent to those required by the ASME Boiler and Pressure Vessel Code; LBP-15-20, 81 NRC 829 (2015)
in calculating embrittlement reference temperatures, licensee must calculate neutron flux through the RPV using a methodology that has been benchmarked to experimental measurements and with quantified uncertainties and possible biases; LBP-15-17, 81 NRC 753 (2015)
licensee must establish the nil-ductility reference temperature for the RPV material in the annealed state, before the reactor was operational for various key points along the RPV; LBP-15-17, 81 NRC 753 (2015)
licensees have the option of demonstrating that values of Charpy upper-shelf energy below 50 ft-lb will provide margins of safety against fracture equivalent to those required by Appendix G of Section XI of the ASME BPV Code; LBP-15-20, 81 NRC 829 (2015)
licensees must attach a particular number of surveillance capsules to specified areas within the reactor vessel, typically near the inside vessel wall at the beltline; LBP-15-20, 81 NRC 829 (2015)
licensees seeking to use the updated methodology in 10 C.F.R. 50.61a must submit a license amendment request; CLI-15-22, 82 NRC 310 (2015)
licensing actions that could increase reactor vessel embrittlement, such as license renewals, hold the potential for offsite consequences that are obvious; LBP-15-17, 81 NRC 753 (2015)
long-term exposure to neutron radiation and elevated temperatures in a reactor vessel decrease the vessel materials’ fracture toughness, or resistance to fracture; LBP-15-20, 81 NRC 829 (2015)
material condition of a plant’s reactor vessel obviously bears on the health and safety of those members of the public who reside in the plant’s vicinity; LBP-15-20, 81 NRC 829 (2015)
material surveillance programs provide material property data necessary to implement a regulatory scheme to protect reactor pressure vessels from failure due to withstand a pressurized thermal shock event; CLI-15-22, 82 NRC 310 (2015)
materials in a reactor vessel must maintain a minimum level of 50 ft-lb of Charpy upper-shelf energy, which is a measurement of the amount of energy the material can absorb at high temperatures before it fractures and fails; LBP-15-20, 81 NRC 829 (2015)
minimum frequency with which surveillance capsules must be tested is set by ASTM Standard E 185 (1982 version), which is incorporated into Appendix H; LBP-15-20, 81 NRC 829 (2015)
neutron radiation embrittlement of reactor pressure vessel walls, decreasing their fracture toughness, is discussed; LBP-15-17, 81 NRC 753 (2015)

NRC must preapprove the schedule for removing material samples from the reactor vessel; LBP-15-17, 81 NRC 753 (2015)

petitioners are not barred from contending that additional testing is necessary to show margins of safety equivalent to those of the ASME BPV Code, Section XI, Appendix G because the petitioners allege noncompliance with 10 C.F.R. Part 50, Appendix G and not Appendix H; LBP-15-20, 81 NRC 829 (2015)

physical specimens must come from near the inside vessel wall in the beltline region so that the specimen irradiation history duplicates the neutron spectrum, temperature history, and maximum neutron fluence experienced by the reactor vessel inner surface; LBP-15-17, 81 NRC 753 (2015)

pressurized water reactor pressure vessel surveillance program relies on physical material samples, also known as specimens, capsules, or coupons; LBP-15-17, 81 NRC 753 (2015)

probabilistic embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data in a process called the consistency check; LBP-15-17, 81 NRC 753 (2015)

reference temperature values are compared to the alternate screening criteria to determine whether the reactor pressure vessel is safe to operate; LBP-15-17, 81 NRC 753 (2015)

request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)

requirements of 10 C.F.R. 50.61 are compared with new rule in section 50.61a to predict future reference temperatures across the reactor pressure vessel; CLI-15-22, 82 NRC 310 (2015)

surveillance data need not be obtained from the same reactor pressure vessel that is the subject of the license amendment; LBP-15-17, 81 NRC 753 (2015)

surveillance data used in the consistency check need not come from the same reactor pressure vessel that is the subject of the license amendment request; CLI-15-22, 82 NRC 310 (2015)

surveillance program to monitor pressurized water reactor pressure vessel is described; LBP-15-17, 81 NRC 753 (2015)

temperature data from other plants are included, and licensees must consider these data under certain circumstances; CLI-15-22, 82 NRC 310 (2015)

under normal plant conditions, materials at the beltline of the reactor pressure vessel must maintain Charpy upper-shelf energy of no less than 50 ft-lb (68 joules); CLI-15-23, 82 NRC 321 (2015)

updated embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data; CLI-15-22, 82 NRC 310 (2015)

when the reference temperature of an RPV is above the screening limit, the RPV is considered to have an unreasonably high risk of fracture from a pressurized thermal shock event; LBP-15-17, 81 NRC 753 (2015)

REACTOR TRIP

root-cause determination following Virginia earthquake is described; DD-12-1, 75 NRC 573 (2012)

REACTOR VESSEL

other than hypothesizing that there will be a failure of the nuclear reactor vessel because of increased stress brought by the proposed license amendment request, the contention does not provide sufficient information to show that a genuine dispute exists; LBP-11-29, 74 NRC 612 (2011)

REACTORS

nuclear reactor is an apparatus, other than an atomic weapon, designed or used to sustain nuclear fission in a self-supporting chain reaction; DD-13-3, 78 NRC 571 (2013)

production and utilization facilities include nuclear power reactors; LBP-11-25, 74 NRC 380 (2011)

See Boiling-Water Reactors; Economic Simplified Boiling Water Reactor

REASONABLE ASSURANCE

applicant has the burden of providing reasonable assurance that the current licensing basis will be maintained throughout the renewal period; LBP-15-5, 81 NRC 249 (2015)

applicant is required to show that safety features will fulfill their intended function, not that every structure will maintain its current licensing basis throughout the renewal period; LBP-15-5, 81 NRC 249 (2015)
applicant must make a showing that meets the preponderance-of-the-evidence threshold of compliance with
the applicable regulations; LBP-14-1, 79 NRC 39 (2014)
applicant’s strategic special nuclear material item monitoring approach, as enhanced by an item
verification procedure, provides reasonable assurance that the quantitative accuracy of the MMIS/PLC
data is sufficient to enable the procedures employing those data to meet the regulatory requirements;
LBP-14-1, 79 NRC 39 (2014)
Atomic Energy Act does not, as a prerequisite to licensing, require a finding of reasonable assurance that
highly hazardous and long-lived radioactive materials can be disposed of safely; CLI-15-4, 81 NRC 221
(2015)
basis of NRC Staff’s reasonable assurance finding on combined license applicant’s squib valve inspection
program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75
NRC 63 (2012)
court directed NRC to determine whether there is reasonable assurance that an offsite storage solution will
be available by the end of a reactor’s license term, and if not, whether there is reasonable assurance
that the fuel can be stored safely at the sites beyond those dates; CLI-15-4, 81 NRC 221 (2015)
given that legally binding monitoring and mitigation measures have been imposed via a certificate of
compliance issued by the appropriate state and local agencies, board has reasonable assurance that these
measures will be implemented and that these agencies will actively monitor and enforce appropriate
compliance with these environmental monitoring and mitigation measures; LBP-13-4, 77 NRC 107
(2013)
if NRC concludes that an aging management program is consistent with the GALL Report, then it accepts
applicant’s commitment to implement that AMP, finding the commitment itself to be an adequate
demonstration of reasonable assurance under section 54.29(a); CLI-12-5, 75 NRC 301 (2012);
CLI-12-10, 75 NRC 479 (2012)
in context of a license renewal application, reasonable assurance is based on sound technical judgment of
the particulars of a case and on compliance with NRC regulations; LBP-14-1, 79 NRC 39 (2014)
license renewal applicant’s use of an aging management program identified in NUREG-1801, Generic
Aging Lessons Learned Report, constitutes reasonable assurance that it will manage the targeted aging
effect during the renewal period; LBP-13-13, 78 NRC 246 (2013)
license transfer applicant must show reasonable assurance of sufficient funds to decommission the facility;
CLI-15-8, 81 NRC 500 (2015)
licensee must show with reasonable assurance that its proposed methodology for material control and
accounting will not be inimical to the common defense and security and will not constitute an
unreasonable risk to the health and safety of the public; CLI-15-9, 81 NRC 512 (2015)
NRC’s long-continued regulatory practice of issuing operating licenses with an implied finding of
reasonable assurance that safe permanent disposal of spent nuclear fuel can be available when needed is
in accord with the intent of Congress underlying the Atomic Energy Act and Energy Reorganization
Act; CLI-15-4, 81 NRC 221 (2015)
premier license issuance, NRC must find reasonable assurance that activities authorized by the amendment
can be conducted without endangering the health and safety of the public, and in compliance with
Commission regulations; LBP-15-17, 81 NRC 753 (2015); LBP-15-20, 81 NRC 829 (2015)
sound technical judgment of the particulars of a case and compliance with NRC regulations are the basis
for a finding of reasonable assurance, not quantification as equivalent to a 95% (or any other percent)
confidence level; LBP-13-13, 78 NRC 246 (2013)
standard for aging management programs does not require a 95% confidence level of compliance;
LBP-11-18, 74 NRC 29 (2011)
suspension of license renewal proceedings in light of the Fukushima accident is unnecessary because
current regulatory and oversight processes provide reasonable assurance that each plant continues to
comply with its current licensing basis, which can be adjusted by future Commission order or by
modification to the facility’s operating license outside the renewal proceeding; CLI-12-5, 75 NRC 301
(2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-8, 75 NRC 393 (2012)
there is a general overarching requirement that applicant’s strategic special nuclear material item
monitoring method be sufficiently accurate to provide reasonable assurance that the specific regulatory
requirement is satisfied; LBP-14-1, 79 NRC 39 (2014)
to authorize issuance of combined licenses, NRC must determine that applicable regulations have been met, there is reasonable assurance that the new reactors will be constructed and will operate in conformity with NRC regulations, and issuance of the licenses will not be inimical to the public health and safety; CLI-12-2, 75 NRC 63 (2012)

to grant a license renewal, NRC Staff must find that there is reasonable assurance that the effects of aging on relevant systems, structures, and components will be managed during the period of extended operation, that time-limited aging analyses have been identified for review, and that applicable environmental requirements have been met; LBP-13-13, 78 NRC 246 (2013)

to meet the reasonable assurance standard, applicant must make a showing that meets the preponderance-of-the-evidence threshold of compliance with the applicable regulations; LBP-13-13, 78 NRC 246 (2013)

to reach a finding of reasonable assurance that the public health and safety will be protected, the Commission imposed a license condition relating to testing program for squib valves; CLI-12-9, 75 NRC 421 (2012)

uranium enrichment facility applicant’s commitment to monitoring and the corrective action program provides reasonable assurance that public health and safety will be protected and applicant has a program in compliance with the regulations; LBP-12-21, 76 NRC 218 (2012)

REASONABILITY STANDARD
determination as to whether requests or petitions are filed in a timely manner shall be subject to a reasonableness standard and are not subject to the 30-day deadline applicable to motions by existing parties to add or amend contentions; LBP-15-6, 81 NRC 314 (2015)

for the purposes of the Equal Access to Justice Act, the government’s position should be considered substantially justified if a reasonable person could think it correct, that is, if it has a reasonable basis in law and fact; LBP-11-8, 73 NRC 349 (2011)

government must demonstrate the reasonableness not only of its litigation position, but also of the agency’s actions; LBP-11-8, 73 NRC 349 (2011)

justification “in substance or in the main” is equated with the “reasonable basis both in law and fact” standard that has been applied by a majority of federal appellate courts; LBP-11-8, 73 NRC 349 (2011)

legal standard governing the determination of substantial justification is separate and distinct from the legal standard used in assessing the merits phase of a proceeding; LBP-11-8, 73 NRC 349 (2011)

REBUTTABLE PRESUMPTION
in any NRC licensing proceeding, a FEMA finding will constitute a rebuttable presumption on questions of adequacy and implementation ability of state and local emergency plans; LBP-11-6, 73 NRC 149 (2011); LBP-15-4, 81 NRC 156 (2015)

RECONSIDERATION
as a general matter, agency guidance should not be reconsidered in an application-specific proceeding; CLI-13-4, 77 NRC 101 (2013)

Commission authority to reconsider or clarify a decision, if needed, is inherent in its authority to render the decision in the first instance; CLI-14-1, 79 NRC 1 (2014)

party may seek reconsideration of an earlier ruling whereby the party was not actually prejudiced, where the ruling could well have an impact upon the course of many licensing hearings; CLI-15-6, 81 NRC 340 (2015)

See also Motions for Reconsideration

RECORD
“closed record” refers to a record developed at an evidentiary hearing; LBP-11-22, 74 NRC 259 (2011)
in a proceeding to be conducted under Subpart L, the evidentiary record is opened upon the filing of the first initial written statements of position and written testimony with supporting affidavits on the admitted contentions; LBP-11-22, 74 NRC 259 (2011)

RECORD OF DECISION
adjudicatory record, board decision, and any Commission appellate decisions become, in effect, part of the final environmental impact statement; CLI-11-6, 74 NRC 203 (2011); CLI-12-1, 75 NRC 39 (2012); CLI-15-6, 81 NRC 340 (2015); LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012)

government’s record of decision must include a concise discussion of mitigation measures; LBP-15-16, 81 NRC 618 (2015)
as part of its environmental review, NRC Staff must prepare a Record of Decision to accompany any
Commission decision on any action for which a final EIS has been prepared; LBP-13-13, 78 NRC 246
(2013)
at the time of its decision, each agency shall prepare a concise public record of decision; LBP-15-16, 81
NRC 618 (2015)
board may incorporate material from another agency’s environmental impact statement, which was
submitted in the hearing record, as part of the record of decision; CLI-15-6, 81 NRC 340 (2015)
board’s ultimate NEPA judgments can be made on the basis of the entire adjudicatory record in addition
to NRC Staff’s final environmental impact statement; LBP-15-3, 81 NRC 65 (2015)
both the content of the draft environmental impact statement and the additional material submitted by the
parties form part of the adjudicatory record; LBP-12-23, 76 NRC 445 (2012)
current licensing basis of an operating license shall continue during the license renewal period, but these
conditions may be supplemented or amended as necessary to protect the environment during the term of
the renewed license and will be derived from information contained in the supplement to the
environmental report, as analyzed and evaluated in the ROD; LBP-11-17, 74 NRC 11 (2011)
environmental impact statement may be deemed modified by the hearing record because hearing
procedures allow for additional and a more rigorous public scrutiny of the FSEIS than does the usual
circulation for comment; CLI-15-6, 81 NRC 340 (2015)
fact-finding administrative body, such as a licensing board, with authority to develop an evidentiary
record, is distinguished from reviewing adjudicatory and judicial bodies, generally with a more limited
federal courts of appeal have approved of the process by which an environmental impact statement is
effectively amended through the adjudicatory process; LBP-14-9, 80 NRC 15 (2014)
final supplemental environmental impact statement is supplemented by the board’s decision as well as by
the hearing record; CLI-15-6, 81 NRC 340 (2015)
in an NRC adjudicatory proceeding, even if a board finds an environmental impact statement prepared by
NRC Staff inadequate in certain respects, the board’s findings, as well as the adjudicatory record,
become, in effect, part of the final EIS; LBP-15-16, 81 NRC 618 (2015)
initial decision of the presiding officer or final decision of the Commissioners acting as a collegial body
will constitute the record of decision; CLI-15-6, 81 NRC 340 (2015)
materials license suspension proceeding is not an adversary adjudication for purposes of the Equal Access
to Justice Act because the Atomic Energy Act of 1954, as amended, does not require such a hearing to
be on the record pursuant to Administrative Procedure Act § 554; LBP-11-8, 73 NRC 349 (2011)
NRC must state whether the Commission has taken all practicable measures within its jurisdiction to
avoid or minimize environmental harm from the alternative selected, and if not, to explain why those
measures were not adopted; LBP-12-18, 76 NRC 127 (2012)
NRC must summarize any license conditions and monitoring programs adopted in connection with
mitigation measures; LBP-12-18, 76 NRC 127 (2012)
NRC Staff typically prepares the record of decision but when a hearing is held, the board’s initial
decision constitutes the record of decision as to those issues that were litigated during the hearing;
LBP-13-13, 78 NRC 246 (2013)
NRC Staff’s final environmental impact statement, in conjunction with the adjudicatory record, becomes
the relevant record of decision for the environmental portion of the proceeding; LBP-12-17, 76 NRC 71
(2012)
objectives of the NRC adjudicatory procedures and policies include producing an informed adjudicatory
record that supports agency decisionmaking on public health and safety, the common defense and
once NRC completes its environmental review, its ROD must state whether NRC has taken all practicable
measures within its jurisdiction to avoid or minimize environmental harm from the alternative selected,
and if not, to explain why those measures were not adopted, and summarize any license conditions and
monitoring programs adopted in connection with mitigation measures; LBP-11-17, 74 NRC 11 (2011)
overall record for the licensing action includes a complete analysis of the cultural resources; LBP-15-16,
81 NRC 618 (2015)
record of decision is required to summarize any license conditions and monitoring programs adopted in
connection with mitigation measures; LBP-13-9, 78 NRC 37 (2013)
SUBJECT INDEX

record of licensing board evidentiary hearing on license transfer application must be certified to the Commission; CLI-15-26, 82 NRC 408 (2015)
relevant factors including economic and technical considerations among alternatives must be discussed; LBP-11-7, 73 NRC 254 (2011)
when NRC Staff prepares a final environmental impact statement, then, until a record of decision is issued, no action concerning the proposal may be taken by the Commission that would have an adverse environmental impact or limit the choice of reasonable alternatives; LBP-14-9, 80 NRC 15 (2014)

RECORDKEEPING
Department of Energy has independent records retention obligations regarding creation, management, and disposal of records; CLI-11-13, 74 NRC 635 (2011)
licensing boards lack authority to direct the Secretary’s administrative activities regarding the handling of documents; CLI-11-13, 74 NRC 635 (2011)
recordkeeping or administrative procedures are categorically excluded from environmental review; LBP-15-24, 82 NRC 68 (2015)

REDDRESSABILITY
both standing (redressability) and contention admissibility (scope) in the context of an NRC enforcement order are addressed; LBP-14-4, 79 NRC 319 (2014)
once parties demonstrate standing, they will then be free to assert any contention, which, if proven, will afford them the relief they seek; LBP-11-21, 74 NRC 115 (2011)
petitioner does not meet the redressability requirement for standing, because vacating the confirmatory orders would not ameliorate the injury of which petitioner complains; CLI-13-2, 77 NRC 39 (2013)
petitioner’s averment that proffered environmental contentions will better position NRC to fully review the possible impacts of the proposed project and, based on petitioners and their experts’ information, may address concerns and mitigate impacts to water, land, and other resources is sufficient to fulfill the redressability element of the standing requirement; CLI-12-12, 75 NRC 603 (2012); LBP-12-3, 75 NRC 164 (2012)

REDUNDANCY
means to ensure that a redundant train of safe-shutdown cables and equipment is free of fire damage in instances in which redundant trains are located in the same fire area outside of primary containment are described; DD-12-3, 76 NRC 416 (2012)

REFERRAL OF MOTION
Secretary of the Commission refers motions to reopen to the Atomic Safety and Licensing Board Panel pursuant to her authority; CLI-12-14, 75 NRC 692 (2012)

REFERRAL OF PROCEEDINGS
Commission refers a limited portion of the hearing request to the licensing board to determine whether petitioner has identified an NRC activity that requires an opportunity to request an adjudicatory hearing; CLI-15-14, 81 NRC 729 (2015)
referral to licensing board includes threshold issues such as standing, timeliness, and satisfaction of contention admissibility standards; CLI-15-14, 81 NRC 729 (2015)
scope of the referral is limited to whether NRC granted licensee greater authority than that provided by its existing licenses or otherwise altered the terms of its existing licenses thereby entitling petitioner to an opportunity to request a hearing; CLI-15-14, 81 NRC 729 (2015)

REFERRAL OF RULING
board denies petition for rule waiver but refers the decision to the Commission because the legal issue presented by the petition is novel and worthy of the Commission’s immediate attention; LBP-13-1, 77 NRC 57 (2013)
boards are authorized to refer a ruling to the Commission if the board determines that the decision or ruling involves a novel issue that merits Commission review at the earliest opportunity; CLI-11-11, 74 NRC 427 (2011); LBP-11-32, 74 NRC 654 (2011)
boards are encouraged to refer rulings that raise significant and novel legal or policy issues, the resolution of which would materially advance the orderly disposition of the proceeding; CLI-12-13, 75 NRC 681 (2012)
boards may make findings of fact and conclusions of law on any matter not put into controversy by the parties, but only to the extent that the presiding officer determines that a serious safety, environmental,
or common defense and security matter exists, and the Commission approves of an examination of and decision on the matter upon its referral by the presiding officer; LBP-14-9, 80 NRC 15 (2014)
licensing board refers ruling that applicant has no legal duty to supplement an originally compliant environmental report to incorporate new and significant information that arises after the ER was duly submitted; LBP-11-32, 74 NRC 654 (2011)
licensing boards are the appropriate finders of fact in most circumstances, and referral of a matter for a fact-specific dispute occurs in the ordinary course of business; CLI-13-9, 78 NRC 551 (2013)
piecemeal review of licensing board decisions is disfavored, but boards may refer rulings that, although interlocutory, raise significant and novel legal or policy issues or require Commission resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 199 (2013)
where petitioner has successfully made a prima facie showing for rule waiver, the board shall, before ruling on the petition, certify the matter directly to the Commission, and the Commission shall determine whether to grant or deny the waiver request; LBP-13-1, 77 NRC 57 (2013)

REFERRED RULINGS
Commission decision to decline review of a referred question does not constitute an endorsement of the board’s views on the question of an applicant’s duty to supplement its environmental report; CLI-12-13, 75 NRC 681 (2012)

prior to its revision, 10 C.F.R. 2.341(f)(1) required that the referred ruling raise a significant and novel legal or policy issue and necessitate resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 199 (2013)
referred rulings or certified questions must raise significant and novel legal or policy issues or issues whose early resolution would materially advance the orderly disposition of the proceeding; CLI-15-1, 81 NRC 1 (2015)

REFUELING OUTAGES
because irradiated fuel is continually present in the spent fuel pool once the reactor discharges the first batch of spent fuel, and conditions are most challenging during reactor shutdown for refueling, maintenance of equipment related to the safe storage of spent fuel is typically addressed as part of shutdown risk management; DD-13-3, 78 NRC 571 (2013)

REGULATIONS
absent a waiver, no rule or regulation of the Commission, or any provision thereof, concerning the licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; CLI-12-19, 76 NRC 377 (2012); CLI-15-1, 81 NRC 1 (2015); CLI-15-19, 82 NRC 151 (2015); LBP-11-2, 73 NRC 28 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-12-24, 76 NRC 503 (2012); LBP-13-9, 78 NRC 37 (2013); LBP-13-12, 78 NRC 239 (2013); LBP-15-4, 81 NRC 156 (2015); LBP-15-5, 81 NRC 249 (2015); LBP-15-6, 81 NRC 314 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-24, 82 NRC 68 (2015)
agencies must abide by their own regulations; LBP-14-4, 79 NRC 319 (2014); LBP-15-17, 81 NRC 753 (2015)
agencies shall use the criteria for scope in section 1508.25 to determine which proposals shall be the subject of a particular impact statement; LBP-14-6, 79 NRC 404 (2014)
alternate pressurized thermal shock rule provides measures for ongoing reporting; LBP-15-17, 81 NRC 753 (2015)
apparent gaps in 10 C.F.R. 50.54(h)(2) are outlined; LBP-11-21, 74 NRC 115 (2011)
applicant seeking an exemption should clearly describe any exemptions or authorizations of an unusual nature and adequately justify them for the NRC’s consideration; LBP-11-11, 73 NRC 455 (2011)
ASME Code for Operation and Maintenance of Nuclear Power Plants is incorporated by reference; CLI-12-9, 75 NRC 421 (2012)
Atomic Energy Act and National Environmental Policy Act and the regulations promulgated under each must be viewed in pari materia; LBP-14-9, 80 NRC 15 (2014)
authority empowering a licensing board to impose sanctions is found in 10 C.F.R. 2.314(c) and 2.319; LBP-13-2, 77 NRC 71 (2013)
basic regulatory framework that governs the licensing of an entity to construct and operate an enrichment facility is found in 10 C.F.R. Part 70, but Parts 19, 20, 21, 25, 30, 40, 51, 71, 73, 74, 95, 140, 170, 171, are also applicable; LBP-11-11, 73 NRC 455 (2011)
board is prohibited from imposing restrictions on the use of 10 C.F.R. 50.61a that go beyond the requirements in the regulation; CLI-15-22, 82 NRC 310 (2015)

boards are precluded from hearing rule challenges absent a showing of special circumstances; LBP-14-9, 80 NRC 15 (2014)

boards cannot prohibit what regulations allow except under specific conditions; LBP-15-17, 81 NRC 753 (2015)

challenges to NRC rules and regulations are generally prohibited with limited exceptions in view of expanding opportunities for participation in Commission rulemaking proceedings and increased emphasis on rulemaking proceedings as the appropriate forum for settling basic policy issues; CLI-13-7, 78 NRC 199 (2013)

COL application included a request for a departure from the wet-bulb noncoincident temperature, which is considered Tier 1 information and part of the certified design, and thus a regulatory exemption is required; CLI-12-9, 75 NRC 421 (2012)

collateral challenge to NRC emergency response data system rule is inadmissible; CLI-15-20, 82 NRC 211 (2015)

contention contesting adequacy of licensee’s equivalent margins analysis is not a challenge to 10 C.F.R. Part 50, Appendix H; LBP-15-20, 81 NRC 829 (2015)

contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; CLI-15-19, 82 NRC 151 (2015); LBP-13-6, 77 NRC 253 (2013); LBP-15-24, 82 NRC 68 (2015)

contention that regulatory provisions are themselves insufficient to protect the public health and safety constitutes an improper collateral attack upon NRC regulations; LBP-15-4, 81 NRC 156 (2015)

contentions calling for requirements in excess of those imposed by NRC regulations will be rejected as a collateral attack on the regulations; CLI-12-9, 75 NRC 301 (2012); LBP-15-4, 81 NRC 156 (2015)

contentions challenging existing NRC safety regulations are barred from consideration in adjudicatory proceedings; LBP-12-18, 76 NRC 127 (2012)

contentions on Category 1 issues amount to a challenge to the regulation barring challenges to generic environmental findings; CLI-12-19, 76 NRC 377 (2012)

contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking are inadmissible; LBP-13-6, 77 NRC 253 (2013)

Council on Environmental Quality and the Advisory Council on Historic Preservation regulations provide guidance on agency compliance with NEPA and are not binding on NRC when the agency has not expressly adopted them, but are entitled to considerable deference; LBP-15-16, 81 NRC 618 (2015)

Council on Environmental Quality Guidance does not change or substitute for any law, regulation, or other legally binding requirement and is not legally enforceable, and some courts have declined to defer to it; LBP-12-23, 76 NRC 445 (2012)

Council on Environmental Quality regulations receive substantial deference from federal courts; LBP-12-17, 76 NRC 71 (2012)

demonstration that application of a regulation is not necessary to achieve its underlying purpose is listed as a special circumstance warranting an exemption; CLI-12-9, 75 NRC 421 (2012)

dissatisfaction with regulatory requirements of 10 C.F.R. 50.75 are outside an enforcement petition; DD-11-4, 73 NRC 713 (2011)

environmental impacts of continued storage have been incorporated into the environmental impact statements at issue in the proceedings by operation of law; CLI-15-10, 81 NRC 535 (2015)

exception to the general rule that NRC regulations are not subject to challenge in adjudicatory proceedings is provided; CLI-11-11, 74 NRC 427 (2011)

exemption from a regulation will be granted if application of the regulation in the particular circumstances conflicts with other NRC rules or requirements, would not serve or is not necessary to achieve the underlying purpose of the rule, would result in undue hardship or other costs, would not be a benefit to public health and safety, would provide only temporary relief, or there is present any other material circumstance not considered when the regulation was adopted; LBP-11-10, 73 NRC 424 (2011)

exemption from a regulation will be granted when the request is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security; LBP-11-10, 73 NRC 424 (2011)
focus of the license renewal regulations in 10 C.F.R. Part 54 is to ensure that licensee can manage the effects of aging on certain long-lived, passive components that are important to safety; CLI-15-6, 81 NRC 340 (2015)

if actions are reasonably foreseeable future actions within the meaning of 40 C.F.R. 1508.7, the CEQ regulations require that they be included in a cumulative impact analysis; LBP-14-6, 79 NRC 404 (2014)

in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the Council on Environmental Quality; LBP-11-7, 73 NRC 254 (2011)

in issuing the suspension of final licensing decisions in proceedings, NRC recognized that it could not move forward without first addressing the D.C. Circuit’s remand because the vacatur left a regulatory gap in the Part 51 regulations that undergird licensing reviews in those matters; CLI-14-7, 80 NRC 1 (2014)

intervenors may not impose an additional requirement that is not present in a regulation; CLI-11-9, 74 NRC 233 (2011)

intervention petitioner may not attack generic NRC requirements or regulations or express generalized grievances about NRC policies; CLI-15-9, 81 NRC 512 (2015)

it is not the role of licensing boards to review and reconsider the wisdom of the Commission’s regulations; LBP-13-12, 78 NRC 239 (2013)

licensing board lacks authority to hold a hearing on the adequacy of a different agency’s regulations; LBP-15-5, 81 NRC 249 (2015)

licensing boards should not accept in individual license proceedings contentions that are, or are about to become, the subject of general rulemaking by the Commission; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

limited grounds for creation of exemptions are inherent in the administrative process, and agencies may use equitable discretion to afford case-by-case treatment, taking into account circumstances peculiar to individual parties in the application of a general rule or even in appropriate cases to grant dispensation from the rule’s operation; CLI-13-1, 77 NRC 1 (2013)

NEPA regulations do not apply to any environmental effects that NRC’s domestic licensing and related regulatory functions may have upon the environment of foreign nations; LBP-12-12, 75 NRC 742 (2012)

nonpower reactors, including research and test reactors, differ as a class from nuclear power plants and are not covered by 10 C.F.R. Part 54; CLI-11-11, 74 NRC 427 (2011)

NRC guidance cannot prescribe requirements; LBP-14-9, 80 NRC 15 (2014)

NRC has expressly adopted, and is therefore bound by, the Council on Environmental Quality definition of cumulative impacts; LBP-14-6, 79 NRC 404 (2014)

NRC has not expressly adopted Council on Environmental Quality regulations, but they are entitled to considerable deference; CLI-11-11, 74 NRC 427 (2011); LBP-15-3, 81 NRC 65 (2015)

NRC is bound by the unambiguous language of its own regulations; LBP-11-22, 74 NRC 259 (2011)

NRC is directed to use the Council on Environmental Quality regulations in defining the scope of its impact statements; LBP-14-6, 79 NRC 404 (2014)

NRC is not bound by guidance documents, which do not carry the force of regulations and do not impose legal requirements on licensees; CLI-12-5, 75 NRC 301 (2012)

NRC may grant exemptions from the regulatory requirements if it determines such an exemption is authorized by law and will not endanger life or property or the common defense and security and is otherwise in the public interest; LBP-11-11, 73 NRC 455 (2011)

NRC may, upon application of any interested person or upon its own initiative, grant such exemptions from the requirements of the regulations as it determines are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest; LBP-12-21, 76 NRC 218 (2012)

NRC regulations incorporate Council on Environmental Quality regulations that define the scope of an environmental impact statement to include cumulative impacts; LBP-12-3, 75 NRC 164 (2012)
SUBJECT INDEX

NRC regulations may not be challenged in an adjudicatory proceeding absent a request for a waiver under section 2.335(b); CLI-12-6, 75 NRC 352 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-12-12, 75 NRC 742 (2012)

NRC Staff granted an exemption from 10 C.F.R. 74.33(c)(5) subject to license conditions that require applicant to submit, for the Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 218 (2012)

NRC Staff is incorporating the 2012 edition of the ASME code by reference into 10 C.F.R. 50.55a; CLI-15-13, 81 NRC 555 (2015)

NRC’s original rule governing technical specifications, 10 C.F.R. 50.36, was promulgated in 1968 and lacked well-defined criteria as to what requirements need to be a technical specification and what provisions need not be in the license; LBP-12-25, 76 NRC 540 (2012)

numerous Council on Environmental Quality regulations require an agency to discuss possible mitigation measures, including 40 C.F.R. §§ 1508.25(b), 1502.14(f), 1502.16(h), and 1508.20; LBP-13-4, 77 NRC 107 (2013)

obvious purpose of the requirement that each agency use the best scientific and commercial data available is to ensure that a statute not be implemented haphazardly, on the basis of speculation or surmise; LBP-14-4, 79 NRC 319 (2014)

Part 51, not NEPA, is the source of the legal requirements applicable to the applicant’s environmental report; LBP-11-32, 74 NRC 654 (2011)

Part 54 governs issuance of renewed operating licenses and renewed combined licenses for nuclear power plants licensed pursuant to sections 103 or 104b of the Atomic Energy Act and Title II of the Energy Reorganization Act; CLI-11-11, 74 NRC 427 (2011)

Part 70 establishes the basic regulatory framework that governs the licensing of a uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)

parties with new and significant information that could undermine the rationale for a Commission regulation must seek a rulemaking instead of challenging the regulation in a particular proceeding unless the information uniquely applies to a given adjudication; LBP-11-35, 74 NRC 701 (2011)

Part 51 of 10 C.F.R. are applicable to licensing a uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)

petitioner’s demand for compliance with U.S. Army Corps of Engineers requirements is not within the scope of a combined license proceeding, because it is not the province of the NRC to enforce another agency’s regulations; LBP-11-6, 73 NRC 149 (2011)

petitioner’s suggestion that issuance of a license immediately upon completion of NRC Staff’s review where a hearing is pending is inappropriate is an attack on the regulation, which is not allowed in an individual adjudication absent of a waiver; CLI-15-17, 82 NRC 33 (2015)

petitioners may not raise in adjudicatory proceedings contentions attacking the agency’s rules and regulations or contentions that are the subject of ongoing rulemakings; LBP-11-29, 74 NRC 612 (2011); LBP-13-1, 77 NRC 57 (2013)

plants licensed to operate before January 1, 1979, must meet fire safety regulations; DD-12-3, 76 NRC 416 (2012)

proposed rule or proposed law may not support an admissible contention because its ultimate effect is at best speculative; LBP-15-15, 81 NRC 598 (2015)

proposed rules are not binding upon administrative agencies and are not ripe for review by NRC boards; LBP-15-15, 81 NRC 598 (2015)

publication of a regulation in the Federal Register constitutes notice to all persons residing in the United States; LBP-13-3, 77 NRC 82 (2013)

regulations can be challenged only under extremely limited circumstances; LBP-15-5, 81 NRC 249 (2015)

rule that excluded certain environmental impacts from NEPA consideration and deferred totally to environmental quality standards devised and administered by other agencies violated NEPA; LBP-15-23, 82 NRC 55 (2015)
subject index

scope of activities requiring permission from NRC in the form of limited work authorization was narrowed by eliminating the concept of commencement of construction formerly described in section 50.10(c) and the authorization formerly described in section 50.10(e)(1); LBP-14-9, 80 NRC 15 (2014)

section 51.102(c) replaced a previous version that expressly permitted licensing boards to modify the content of an environmental impact statement; CLI-15-6, 81 NRC 340 (2015)

sole remedy to challenge lawfulness of a regulation is to file a petition for rulemaking with the Commission; CLI-14-6, 79 NRC 445 (2014)

tentative conclusion articulated in a nonfinal, proposed rule does not command deference from the court nor is it binding on the agency; LBP-15-15, 81 NRC 598 (2015)

there is no enumeration of the required contents of a draft environmental impact statement regarding endangered or threatened species; LBP-12-12, 75 NRC 742 (2012)

to achieve strategic special nuclear material loss-related performance objectives, the material control and accounting system must provide the capabilities described in sections 74.55 and 74.57; LBP-14-1, 79 NRC 39 (2014)

to challenge a Category 1 issue such as public health, petitioner must request a waiver and show that unique circumstances warrant a site-specific determination; LBP-15-5, 81 NRC 249 (2015)

to obtain waiver of a rule, the allegation of special circumstances must be set forth with particularity and supported by an affidavit or other proof; LBP-15-5, 81 NRC 249 (2015)

to the extent a contention would require licensee to maintain the ERDS link or to create another ERDS-like system after its reactor is permanently shut down and defueled, it is an impermissible collateral attack on a regulation; LBP-15-4, 81 NRC 156 (2015)

waiver of rule or regulation may be obtained upon a showing that applying provision at issue would not serve the purposes for which the rule or regulation was adopted; LBP-15-3, 81 NRC 65 (2015)

when an NRC regulation permits use of a particular analysis, a contention asserting that a different analysis or technique should be used is inadmissible because it indirectly attacks the Commission’s regulations; LBP-15-17, 81 NRC 753 (2015)

where NRC intends to mandate that an originally compliant environmental document be supplemented, it does so explicitly; LBP-11-32, 74 NRC 654 (2011)

whether the safe shutdown earthquake exceedance in applicant’s exemption request does in fact comply with 10 C.F.R. Part 50, Appendix S and 10 C.F.R. 100.23 is a question currently before the NRC Staff and is thus material to the NRC’s licensing decision in this proceeding; LBP-11-10, 73 NRC 424 (2011)

See also Amendment of Regulations; Council on Environmental Quality Guidelines; Rules of Practice; State Regulatory Requirements; Waste Confidence Rule

regulations, interpretation

ALARA requirement in section 20.1101(b) applies to the dose criteria for license termination; CLI-11-12, 74 NRC 460 (2011)

although 10 C.F.R. Part 40 applies to ISL mining, some of the specific requirements in Part 40, such as many of those found in Appendix A, address hazards posed only by conventional uranium milling operations, and do not carry over to ISL mining; LBP-15-16, 81 NRC 618 (2015)

although disagreement over proper interpretation of NRC regulations may give rise to an admissible contention, petitioner’s proposed interpretation is in direct conflict with the plain meaning of the regulation and its Statement of Considerations; LBP-12-8, 75 NRC 539 (2012)

any alleged ambiguity in the exception provision of 10 C.F.R. Part 50, Appendix E, § VI is eliminated when the regulatory language is examined in light of the regulatory history and framework; LBP-15-4, 81 NRC 156 (2015)

any individual who manipulates the controls of any facility licensed under Parts 50, 52, or 54 of NRC’s regulations is required to have an operator’s license; LBP-14-2, 79 NRC 131 (2014)

application of 10 C.F.R. 40.38(a) and 70.40 is limited to USEC alone and has no relevance to any other enrichment facility applicant; LBP-11-11, 73 NRC 455 (2011)

application of the precept that different language is intended to mean different things may be suspended if the purpose or regulatory history behind the language shows that no difference was intended; LBP-13-3, 77 NRC 82 (2013)

1217
because 10 C.F.R. 51.23(b) prescribes a specific procedure for incorporating the environmental impacts of continued storage into a site-specific analysis, this procedure, rather than a procedure set forth in the general provisions of Part 51, governs NRC environmental review; CLI-15-10, 81 NRC 535 (2015)

because agency practice is one indicator of how the agency interprets regulations, a consistently held NRC Staff view on an operator testing policy matter will not be disturbed; LBP-14-2, 79 NRC 131 (2014)

because there is no list of site parameters specified in the technical support document, a prerequisite for resolving severe accident mitigation design alternatives issues by 10 C.F.R. Part 52, Appendix A, § VI.B.7 is lacking; LBP-11-7, 73 NRC 254 (2011)

board provides textual analysis and additional clarifying explanation of its interpretation of 10 C.F.R. 20.1403(a); CLI-13-6, 78 NRC 155 (2013)

boards are not empowered to reword the clear language of the Commission’s regulations; LBP-13-12, 78 NRC 239 (2013)

capability under 10 C.F.R. 74.51(a)(1) to verify presence is most clearly aimed at ongoing confirmation of the presence of strategic special nuclear material in assigned locations; LBP-14-1, 79 NRC 39 (2014)

capability under 10 C.F.R. 74.51(a)(4) to verify integrity is most clearly aimed at the prompt investigation of anomalies potentially indicative of strategic special nuclear material losses; LBP-14-1, 79 NRC 39 (2014)

challenges to section 50.54(bh)(2) are neither germane to age-related degradation nor unique to the license renewal period; LBP-11-21, 74 NRC 115 (2011)

comparison of the levels of protection afforded by the unrestricted and restricted decommissioning options is neither explicitly nor implicitly required; CLI-11-12, 74 NRC 460 (2011)

contention admissibility requirements do not apply to hearing demands submitted under section 2.103(b)(2) and petitioner lacked actual and constructive notice of the contention admissibility requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)

contradiction between paragraphs (ii)(L) and (iv) of 10 C.F.R. 51.53(c)(3) is discussed; LBP-13-1, 77 NRC 57 (2013)

contradictory provisions of subsections (a) and (b) of 10 C.F.R. 2.710 are discussed; LBP-11-23, 74 NRC 287 (2011)

courts give controlling weight to an agency’s interpretation of its own regulation unless it is plainly erroneous or inconsistent with the regulation; LBP-12-19, 76 NRC 184 (2012)

crux of the “genuine dispute” prong under 10 C.F.R. 2.309(f)(1)(vi) is the requirement for specificity, that a contention must have more than general allegations; LBP-15-1, 81 NRC 15 (2015)

“deemed incorporated” function of 10 C.F.R. 51.23(b) provides administrative efficiency by adding the environmental impacts of continued storage to site-specific environmental impact statements without additional work by the Staff; CLI-15-10, 81 NRC 535 (2015)

degree to which 10 C.F.R. 50.59 applies is controlled not by how a modification is labeled but by whether the substance of the change brings that revision within the confines of this section; LBP-12-25, 76 NRC 450 (2012)

“design bases” in 10 C.F.R. 50.59(c)(2)(vii) and (viii) means that information that identifies the specific functions to be performed by a structure, system, or component of a facility, and the specific values or ranges of values chosen for controlling parameters as reference bounds for a design; LBP-13-7, 77 NRC 307 (2013)

determination expressly required by the text “further reductions in residual radioactivity . . . were not being made because the residual levels associated with restricted conditions are ALARA” in 10 C.F.R. 20.1403 is an inquiry that focuses on how far it is possible, on a cost-effective basis, to further reduce the “residual levels”; CLI-13-6, 78 NRC 155 (2013)

determination regarding item integrity under 10 C.F.R. 74.55(b)(1) refers to the ability to determine that a container holding strategic special nuclear material items has not been breached and that the amount of SSNM within has not been altered; LBP-14-1, 79 NRC 39 (2014)

distinction is made between the “person to whom the Commission has issued an order” and “any other person adversely affected by the order” in 10 C.F.R. 2.202(a)(2); LBP-14-4, 79 NRC 319 (2014)

effects and impacts as used in 10 C.F.R. 51.14(b) are synonymous with terms in 40 C.F.R. 1508.8; LBP-13-4, 77 NRC 107 (2013)

1218
environmental qualification of electric equipment important to safety located in an environment that would at no time be significantly more severe than the environment that would occur during normal plant operation is not included within the scope of 10 C.F.R. 50.49(c); LBP-11-20, 74 NRC 65 (2011) except where the Commission determines that a discretionary hearing is warranted, section 2.206 provides the means to challenge licensee actions under 10 C.F.R. 50.59; CLI-12-20, 76 NRC 437 (2012)

"further reductions" in 10 C.F.R. 20.1403(a) necessarily refers to further reductions from the level of residual radioactivity that a licensee proposes to leave in place under its proposed restricted-release decommissioning plan; LBP-14-1, 79 NRC 39 (2014)

"good cause" in 10 C.F.R. 2.307(a) does not share the same definition that is used for good cause in section 2.309(c); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-15-1, 81 NRC 15 (2015)

if 10 C.F.R. Part 50, Appendix E, § VI were a one-time requirement that applied only to units existing in 1991, that would mean it was not intended to apply prospectively to newly built reactors; LBP-15-4, 81 NRC 156 (2015)

implication that any agency prerequisite with which applicant must comply to operate a plant during an extended term constitutes an "approval" under 10 C.F.R. 51.45(d) would entail an unreasonably strained definition of "approval"; LBP-12-15, 76 NRC 14 (2012)

importance of the phrase "any other person adversely affected" in 10 C.F.R. 2.202(a)(3) is underscored by the fact that it was intentionally added in 1991; LBP-14-4, 79 NRC 319 (2014)

in codifying the reopening requirements, the more neutral "exceptionally grave issue" language was chosen over the case law-based "sufficiently grave threat to public safety" phrasing; CLI-12-21, 76 NRC 491 (2012)

interpretation of regulations, like interpretation of a statute, begins with the language and structure of the provisions, and the entirety of each provision must be given effect; LBP-14-4, 79 NRC 319 (2014); LBP-14-7, 79 NRC 451 (2014)

interpreting statutes at issue and the regulations governing their implementation falls within the Commission’s province; LBP-15-5, 81 NRC 249 (2015)

licensees must satisfy the regulation’s detection requirements for tamper-safed strategic special nuclear material items in order to achieve the performance objectives set out in section 74.51(a); LBP-14-1, 79 NRC 39 (2014)

licensing boards should not interpret regulatory text in a way that would essentially negate the stated purpose of the regulation or impute to the Commission an intent to create a schizophrenic rule; LBP-14-7, 79 NRC 451 (2014)

meaning of "other person adversely affected by the order" in 10 C.F.R. 2.202(a)(3) is discussed; LBP-14-4, 79 NRC 319 (2014)

Millstone rule waiver decision, which aggregates cases interpreting the waiver standard, is an example of a uniform, permissible interpretation of NRC regulations; CLI-13-7, 78 NRC 199 (2013)

neither "baseline" nor "background" is explicitly defined in 10 C.F.R. Part 40, Appendix A; LBP-15-16, 81 NRC 618 (2015)

NEPA’s requirement to discuss alternatives to the proposed action does not extend to the construction of transmission line corridors, because it is not "construction" as defined in 10 C.F.R. 50.10; LBP-11-6, 73 NRC 149 (2011)

"new and significant information" requirement does not override, for purposes of litigating the issues in an adjudicatory proceeding, the exclusion of Category 1 issues in section 51.53(c)(3)(i) from site-specific review; CLI-12-19, 76 NRC 377 (2012)

no language is included in 10 C.F.R. 51.45(c) to the effect that a proposed action that is the subject of an agency environmental impact statement must include all connected actions as defined in 40 C.F.R. 1508.25; LBP-14-9, 80 NRC 15 (2014)
no requirement to quantify the potential for an adversary to take measures to conceal any abnormalities in MMIS and PLC mapping can reasonably be found in (or implied by) the language of 10 C.F.R. 74.55(b)(1); LBP-14-1, 79 NRC 39 (2014)
nothing in the definition of “construction” in 10 C.F.R. 40.4 precludes the installation of wells or the use of monitoring protocols as needed to provide those background data; LBP-15-3, 81 NRC 65 (2015)
NRC case law has given meaning to the “special circumstances” requirement for rule waiver; CLI-13-7, 78 NRC 199 (2013)
NRC often refers to the Statement of Considerations as an aid in interpreting the agency’s regulations; LBP-14-9, 80 NRC 15 (2014)
NRC regulations do not merely establish a standard that applicant is entitled to invoke for its benefit, but that may then be disregarded whenever applicant wants to argue its case on an individual, fact-specific basis; LBP-12-6, 75 NRC 256 (2012)
NRC’s broad definition of “construction” in the pre-2007 version of the regulation was originally added to Part 50 because of the interpretation that enactment of NEPA required NRC to expand its permitting/licensing authority; LBP-14-9, 80 NRC 15 (2014)
nuclear power facility has shut down permanently within the meaning of 10 C.F.R. Part 50, Appendix E, § VI.2 when it has permanently ceased reactor operations, and permanently removed fuel from the reactor vessel, as those terms are defined in 10 C.F.R. 50.2; LBP-15-4, 81 NRC 156 (2015)
one demanding a hearing on a challenge to an enforcement order need not comply with the requirements of 10 C.F.R. 2.309(f)(1); LBP-13-3, 77 NRC 82 (2013)
Part 40, Appendix A, Criteria 4(e) and 5G(2) refer to safety criteria that apply to applicants and licensees and are not relevant to the NEPA review; LBP-13-9, 78 NRC 37 (2013)
Part 55 of 10 C.F.R. establishes procedures and criteria for issuance of reactor operator licenses under the Atomic Energy Act or the Energy Reorganization Act; LBP-14-2, 79 NRC 131 (2014)
permissive “may” language of 40 C.F.R. 1508.25(a)(3) affords an agency more discretion in making a choice about whether a single EIS is the best way to assess similar actions; LBP-13-10, 78 NRC 117 (2013)
pertinent language in 10 C.F.R. 70.31(d) and 40.32(d) tracks the statutory language identically, i.e., “inimical to the common defense and security or the health and safety of the public”; LBP-11-11, 73 NRC 455 (2011)
petitioners’ argument that power reactor is being operated as a test reactor reflects a misreading of 10 C.F.R. 50.59; LBP-15-20, 81 NRC 829 (2015)
phrase “new” in 10 C.F.R. 51.53(c)(3)(iv) requires that the environmental report include environmental information that is new as compared to the original ER for the same facility and new as of the time of submission of the required ER, but does not impose a continuing duty to supplement an ER that was compliant when submitted; LBP-11-32, 74 NRC 654 (2011)
plain language of enacted text is the best indicator of intent; LBP-14-4, 79 NRC 319 (2014)
preamble of a rule, unlike the rule itself, does not have the force of law and may not be used to expand the reach of the regulations; LBP-14-9, 80 NRC 15 (2014)
prima facie showing within the meaning of 10 C.F.R. 2.758(d) is one that is legally sufficient to establish a fact or case unless disproved; LBP-14-16, 80 NRC 183 (2014)
prior to its revision, 10 C.F.R. 2.341(f)(1) required that a referred ruling raise a significant and novel legal or policy issue and necessitate resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 199 (2013)
“prompt” issuance is not defined as an immediate one in 10 C.F.R. 2.1202(a); LBP-15-2, 81 NRC 48 (2015)
purpose of 10 C.F.R. 51.53(c)(3)(ii)(L) is to limit the analysis during relicensing to exclude consideration of SAMAs regarding plant operation that were previously considered; LBP-13-1, 77 NRC 57 (2013)
purpose of the supplemental-SAMA-analysis exception in 10 C.F.R. 51.53(c)(3)(ii)(L) is to reflect NRC’s view that one SAMA analysis, as a general matter, satisfies NRC’s NEPA obligation to consider measures to mitigate both the risk and the environmental impacts of severe accidents; CLI-13-7, 78 NRC 199 (2013)
pursuant to 10 C.F.R. 55.40, NRC Staff shall use the criteria in NUREG-1021 in effect 6 months before the examination date to prepare written reactor operator examinations required by sections 55.41 and 55.43 and the operating tests required by section 55.45; LBP-14-2, 79 NRC 131 (2014)
rather than assuming that a rule’s purpose is simply to achieve its stated effect, one must look further by examining the underlying purpose of the requirement; CLI-13-7, 78 NRC 199 (2013)
regulation’s title can aid in construing regulatory text; LBP-15-4, 81 NRC 156 (2015)
regulatory history, like 10 C.F.R. Part 50, App. E, § VI itself, is focused entirely on implementation and maintenance of the ERDS operations with not one word about decommissioning the system; LBP-15-4, 81 NRC 156 (2015)
requirement in 10 C.F.R. 74.55(b) for 99% power of detection means that there must be a 99% probability that a missing item will be included within the sample chosen for inspection and would thus be detected; LBP-14-1, 79 NRC 39 (2014)
requirements in Part 40, such as many of the provisions in Appendix A, that, by their own terms, apply only to conventional uranium milling activities, cannot sensibly govern in situ leach mining; LBP-15-16, 81 NRC 618 (2015)
requirements of 10 C.F.R. 50.61 are compared with new rule in section 50.61a to predict future reference temperatures across the reactor pressure vessel; CLI-15-22, 82 NRC 310 (2015)
requirements of section XI of the ASME Boiler and Pressure Vessel Code on in-service inspections are incorporated by reference in 10 C.F.R. 50.55(a) and 50.55(d)(4); CLI-11-8, 74 NRC 214 (2011)
“residual levels,” as used in the phrase “were not being made because the residual levels . . . are ALARA,” in 10 C.F.R. 20.1403(a) refers back to, and is shorthand for, the term “residual radioactivity” used earlier in the introductory language; CLI-13-6, 78 NRC 155 (2013)
rules of interpretation applicable to statutes are equally germane in determining a regulation’s meaning; LBP-13-3, 77 NRC 82 (2013)
scope of an admitted contention depends in large part on the bases set forth in the brief explanation of the basis for the contention required by 10 C.F.R. 2.309(f)(1)(ii); LBP-12-23, 76 NRC 445 (2012)
scope of the ERDS exception is informed by the regulatory history, which states that ERDS is to be used by licensees of operating reactors; LBP-15-4, 81 NRC 156 (2015)
section 2.309(f)(1) has no application to reactor operator licensee proceedings; LBP-13-3, 77 NRC 82 (2013)
section 2.318(a) does not provide an exhaustive list of every situation where board jurisdiction lapses; CLI-12-14, 75 NRC 692 (2012); CLI-12-17, 76 NRC 207, 210 (2012)
section 2.338 is a new provision that consolidates and amplifies the previous rules pertaining to settlement; LBP-15-30, 82 NRC 339 (2015)
section 2.341(f)(2)(i) is compared to 10 C.F.R. 2.1213(d)(1); CLI-15-17, 82 NRC 33 (2015)
section 40.31(b) applies to uranium mills, but not to in situ recovery facilities; LBP-14-5, 79 NRC 377 (2014)
section 50.54(hh)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)
section 50.71(c) is only a reporting requirement; LBP-15-27, 82 NRC 184 (2015)
section 51.52(b) does not establish limits on power or on fuel enrichment, but instead requires applicant to perform an analysis if the conditions of section 51.52(a) are not met; LBP-12-12, 75 NRC 742 (2012)
section 51.53(3)(i)(I) does not convert the Category 2 (site-specific) issue of severe accident mitigation alternatives into a Category 1 issue; LBP-12-8, 75 NRC 539 (2012)
section 51.53(3)(iv) does not apply to license amendment applicants requesting a power uprate; LBP-11-29, 74 NRC 612 (2011)
section 51.61 applies to an application for an independent spent fuel storage installation; LBP-15-24, 82 NRC 68 (2015)
section 51.92(a)(2) does not apply to the question whether the environmental assessment adequately describes the current environment, but rather applies when considering whether to supplement an environmental analysis for the period between issuance of the final document and before the agency has taken the proposed action; CLI-15-25, 82 NRC 389 (2015)
section 52.80(d) mandates compliance with the agency’s loss-of-large-areas requirements in 10 C.F.R. 50.54(hh)(2), but does not apply to a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)
section 74.55 is not rendered superfluous by a reading that verifying the integrity of a storage area boundary will suffice to verify the integrity of the items contained therein; LBP-14-1, 79 NRC 39 (2014)
SUBJECT INDEX

section 74.55(b)(1) applies only to licensees that are authorized to possess 5 or more formula kilograms of strategic special nuclear material; LBP-14-1, 79 NRC 39 (2014)

“senior reactor operator” is any individual licensed under Part 55 to manipulate the controls of a facility and to direct the licensed activities of licensed operators; LBP-14-2, 79 NRC 131 (2014)

“special circumstances” language under 10 C.F.R. 2.335 is very similar to the definition of “special circumstances” under 10 C.F.R. 50.12(a)(2)(ii); LBP-12-6, 75 NRC 256 (2012)

specific inclusion of some conditions implies the exclusion of those not mentioned; CLI-12-14, 75 NRC 692 (2012)

specific regulations control over general regulations; CLI-15-10, 81 NRC 535 (2015)

statement of considerations cannot interpret what the regulation itself does not contain; LBP-14-9, 80 NRC 15 (2014)

statistical sampling is to be used to achieve verification of item presence and integrity but 10 C.F.R. 74.55(b) does not prescribe a particular method of sampling, only that statistical sampling must result in at least 99% power of detecting strategic special nuclear material losses that total 5 formula kg or more; LBP-14-1, 79 NRC 39 (2014)

subsection (L) of 10 C.F.R. 51.53(c)(i)(ii) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in case-by-case license renewal adjudications; LBP-13-1, 77 NRC 57 (2013)

term “petition” in section 2.335 refers to the waiver petition, not a petition to intervene; CLI-11-11, 74 NRC 427 (2011)

there are places in NRC rules where “party” is used not as a term of art, but rather as a substitute for “participant”; CLI-12-19, 76 NRC 377 (2012)

under 10 C.F.R. 55.40, NRC Staff shall use NUREG-1021 to prepare and evaluate reactor operator licensing examinations; LBP-14-2, 79 NRC 131 (2014)

under an enforcement order, NRC requires that workers report any observed “illegal, unusual, or aberrant” behavior by their co-workers, words not appearing in 10 C.F.R. 73.56(f); LBP-14-4, 79 NRC 319 (2014)

underlying purpose of 10 C.F.R. Part 50, Appendix B, § III.G is to ensure that the ability to achieve and maintain safe shutdown is preserved following a fire event; DD-12-3, 76 NRC 416 (2012)

“uniqueness” factor of the rule waiver test is interpreted; LBP-11-35, 74 NRC 701 (2011)

use of “and” in the list of requirements for rule waiver means that all four factors must be met; CLI-11-11, 74 NRC 427 (2011)

use of the past tense when referring to “quality assurance applied to the design” in 10 C.F.R. Part 50, Appendix B shows that safety-related design activities must have been performed under an acceptable QA program even though those activities were performed prior to the date on which the combined license application (which includes the FSAR) was filed with the NRC; LBP-14-7, 79 NRC 451 (2014)

usual rule of regulatory interpretation is that different language is intended to mean different things, and thus a demand for a hearing is not to be treated as a mere request for a hearing; LBP-13-3, 77 NRC 82 (2013)

where applicant has raised sufficient question as to the appropriate deadline, the board may conclude that it would be unfair to penalize applicant on account of what might be ambiguity in NRC’s own regulations; LBP-11-19, 74 NRC 61 (2011)

where the meaning of a regulation is clear and obvious, the regulatory language is conclusive, and the board may not disregard the letter of the regulation, but rather must enforce the regulation as written; LBP-14-7, 79 NRC 451 (2014)

whether economic concerns relating to job loss qualify as adverse effects within the meaning of 10 C.F.R. 2.202(a)(3) is discussed; LBP-14-4, 79 NRC 319 (2014)

words “further reductions in residual radioactivity necessary to comply with the provisions of § 20.1402”are analyzed; CLI-13-6, 78 NRC 155 (2013)

REGULATORY GUIDES

guidance documents, although not binding, describe an approach to compliance with NRC rules that is acceptable to the NRC, and thus can be informative for that reason; LBP-13-6, 77 NRC 253 (2013)

licensees may follow regulatory guides to determine equivalent safety margins, or may use any other methods, procedures, or selection of materials data and transients to demonstrate compliance with this regulation; LBP-15-20, 81 NRC 829 (2015)
licensing board takes official notice of NRC regulatory guide; LBP-15-3, 81 NRC 65 (2015)
NUREGs are merely guidance documents and thus not legally binding; LBP-13-6, 77 NRC 253 (2013)
petitioners may challenge a Staff guidance document such as a Regulatory Guide; LBP-15-20, 81 NRC 829 (2015)
such documents describe particular means of satisfying regulatory requirements in ways acceptable to
NRC Staff, but do not bind applicants, who remain free to choose different means; LBP-14-1, 79 NRC 39 (2014)
to perform an appropriate integrated safety analysis, NUREG-1520 standard review plan guidance for fuel
cycle facilities indicates that applicant should identify the process designs, accident sequences, and items
relied upon for safety that are associated with the facility; LBP-11-11, 73 NRC 455 (2011)
See also NRC Guidance Documents
REGULATORY OVERSIGHT PROCESS
actions taken by licensee under 10 C.F.R. 50.59 do not give rise to hearing rights under the AEA, but
rather are monitored by NRC Staff’s inspections and oversight, which may be challenged only by a
although NRC Staff reviews submissions under 10 C.F.R. 50.71(e) for compliance with such
administrative requirements as timeliness and content, it does not approve substantive changes, such as
to a seismic analysis, as part of the process; LBP-15-27, 82 NRC 184 (2015)
applicant’s commitment in the updated final safety analysis report cannot be changed without NRC Staff
oversight and, specifically, evaluation of the eight criteria listed in 10 C.F.R. 50.59; LBP-13-13, 78
NRC 246 (2013)
compliance with orders issued as part of NRC’s ongoing oversight program are enforcement issues that
are not within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
except for the detrimental effects of aging on the functionality of certain plant systems, structures, and
components in the period of extended operation, the regulatory process is adequate to ensure that the
licensing bases of all currently operating plants provide and maintain an acceptable level of safety;
LBP-15-6, 81 NRC 314 (2015)
federal financial regulatory agencies regularly examine banks within their jurisdiction, generally at 12- or
18-month intervals; CLI-11-4, 74 NRC 1 (2011)
if a hearing could be invoked each time NRC engaged in oversight over or inquiry into plant conditions,
NRC’s administrative process could be brought to a virtual standstill; CLI-14-11, 80 NRC 167 (2014);
license renewal review is not intended to duplicate NRC’s ongoing oversight of operating reactors;
CLI-15-6, 81 NRC 340 (2015)
merely pointing to the compliance program is in no way sufficient to support a scientific finding that
spent fuel pools will not cause a significant environmental impact during the extended storage period;
LBP-14-9, 80 NRC 15 (2014)
neither licensee activities nor NRC inspection of or inquiry about those activities provides the opportunity
for a hearing under the Atomic Energy Act because those activities only concern compliance with the
terms of an existing license; CLI-14-11, 80 NRC 167 (2014)
NRC has the ongoing responsibility to oversee the safety and security of operating nuclear reactors and
maintains an aggressive and ongoing program to oversee plant operation and to maintain compliance
with the current licensing basis; LBP-13-8, 78 NRC 1 (2013)
NRC monitors the status of decommissioning funds and, when necessary, requires additions to funds
through parent company guarantees, cash deposits, or other methods permitted by regulation; DD-15-8,
82 NRC 107 (2015)
NRC oversight activities gathering information about and evaluating plant performance, regardless of the
findings it makes, do not alter the conditions of a license and therefore cannot form the basis for the
right to request a hearing; CLI-14-11, 80 NRC 167 (2014)
NRC Staff inspections and confirmatory action letters are oversight activities normally conducted to
ensure that licensees comply with existing NRC requirements and license conditions and therefore do
not typically trigger the opportunity for a hearing under the AEA; CLI-15-5, 81 NRC 329 (2015)
NRC Staff will disposition violations as part of its ongoing reactor oversight process, and evidentiary
hearings before NRC at the request of third parties are not a part of this process; DD-12-3, 76 NRC 416 (2012)

1223
SUBJECT INDEX

NRC Staff’s ongoing enforcement of regulations and license conditions does not trigger hearing rights; LBP-15-24, 82 NRC 68 (2015)

NRC Staff’s reliance in an environmental impact statement on predicted future monitoring and regulatory compliance program to prevent environmental impacts is not permitted; LBP-14-9, 80 NRC 15 (2014)

NRC’s inspection process is separate from its licensing process; LBP-15-27, 82 NRC 184 (2015)

NRC’s ongoing regulatory process ensures that the current licensing basis of an operating plant remains acceptably safe; LBP-15-5, 81 NRC 249 (2015)

oversight activities at times involve enforcement actions, including orders and civil penalties, to which a hearing right or opportunity attaches; CLI-15-5, 81 NRC 329 (2015)

petitioners’ premise that a series of NRC Staff communications relating to plant oversight should be considered as an element of a single, overarching de facto license amendment was rejected; CLI-15-14, 81 NRC 729 (2015)

regulatory approach, of relying on licensees to submit complete and accurate information, and auditing that information as appropriate, is considered to be entirely consistent with sound regulatory practice; LBP-15-24, 82 NRC 68 (2015)

regulatory process continuously reassesses whether there is a need for additional oversight or regulations to protect public health and safety; LBP-15-4, 81 NRC 156 (2015)

REINSTATEMENT OF LICENSE

if renewed license is set aside on appeal, the previous operating license would be reinstated; LBP-12-16, 76 NRC 44 (2012)

NRC’s lifting of license suspension and authorizing restart under stipulated restrictions was not a license amendment because nothing in the record indicates that license amendments are necessary to permit the licensee to operate in accordance with the restrictions that have been imposed; LBP-13-7, 77 NRC 307 (2013)

RELAYS

contention that license renewal application has failed to establish that the effects of aging on switches and snubbers will be adequately managed for the period of extended operation is inadmissible; LBP-15-6, 81 NRC 314 (2015)

switches and snubbers do not rely on time-limited assumptions based on the plant’s operating term, but rather are subject to ongoing maintenance programs; LBP-15-6, 81 NRC 314 (2015)

RELEVANCE

new information from studies of the Fukushima event as to potential consequences of a severe accident at a U.S. nuclear power plant is irrelevant to any uncertainty that might exist regarding which agency has authority over cleanup after a severe accident; LBP-11-20, 74 NRC 65 (2011)

REMAND

agencies can reach exactly the same result on a remanded issue as long as they rely on the correct view of a law that they previously misinterpreted, or as long as they explain themselves better or develop better evidence for their position; CLI-11-12, 74 NRC 460 (2011)

board, on reconsideration and after remand from Commission, reopened the record with respect to a previously disposed contention, to consider the effect of licensee’s losing track of a fuel rod; CLI-12-14, 75 NRC 692 (2012)

Commission remands license renewal proceeding to the board for the limited purpose of considering a rule waiver petition; CLI-12-19, 76 NRC 377 (2012)

during pendency of remand, intervenors are free to submit a motion to reopen the record pursuant to 10 C.F.R. 2.326, should they seek to address any genuinely new issues related to the license renewal application that previously could not have been raised; LBP-11-20, 74 NRC 65 (2011)

in issuing the suspension of final licensing decisions in proceedings, NRC recognized that it could not move forward without first addressing the D.C. Circuit’s remand because the vacatur left a regulatory gap in the Part 51 regulations that undergird licensing reviews in those matters; CLI-14-7, 80 NRC 1 (2014)

intervenor’s failure to address the reopening standards in 10 C.F.R. 2.326 creates a yawning deficiency in its submissions because the evidentiary record has been closed and the board’s jurisdiction in the proceeding does not extend beyond the narrow scope of the remand; LBP-11-20, 74 NRC 65 (2011)
proceeding will remain open during the pendency of a remand; LBP-11-23, 74 NRC 287 (2011)
remand holds the proceeding open, but only for the limited purpose of litigating the remanded contention;
CLI-12-3, 75 NRC 132 (2012)
where the proceeding remains open during the pendency of a remand, but the record remains closed, any
contentions raising genuinely new issues would have to be accompanied by a motion to reopen;
CLI-12-3, 75 NRC 132 (2012)
RENEWABLE ENERGY SOURCES
although there are many possible combinations of wind and solar power, storage, and natural gas, it is
not necessary to examine every possible combination; LBP-11-4, 73 NRC 91 (2011)
because a single wind turbine cannot provide continuous production of electricity at or near full capacity,
it does not constitute a source of baseload power; CLI-12-5, 75 NRC 301 (2012)
contention seeking full impacts analysis of the power supply alternative of wind, either alone or in
combination with solar and storage, is inadmissible because it fails to adequately demonstrate the
capacity to produce baseload power; LBP-12-15, 76 NRC 14 (2012)
demonstration that an alternative energy technology, although not commercially viable at the time of the
application, is under development for large-scale use and is likely to be available during the period of
extended operation has not been made; LBP-12-15, 76 NRC 14 (2012)
failure to provide a direct critique of the analysis in the environmental report discussing the potential for
offshore power and interconnected wind farms is a failure to identify a genuine dispute with applicant;
failure to reference specific sources showing that wind or other renewables are viable sources of baseload
power within the service area, renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)
for an electrical generation alternative to qualify for in-depth review, the alternative must be able to
provide baseload power during the license renewal term; LBP-12-15, 76 NRC 14 (2012)
it is not enough to demonstrate a theoretical possibility that wind farms spread across a wide area could
provide consistent power, but rather petitioners must show concretely that wind could be a reliable,
commercially viable source of baseload power during the license renewal period; LBP-15-5, 81 NRC
249 (2015)
Maryland’s renewable energy portfolio standard is discussed in the context of the consideration of
alternatives under NEPA; LBP-12-17, 76 NRC 71 (2012)
See also Solar Power; Wind Power
REOPENING A RECORD
after a record has closed, finality attaches to the hearing process, and after that point, only timely,
significant issues will be considered; CLI-12-6, 75 NRC 352 (2012)
agencies are permitted to impose requirements or thresholds for parties seeking to reopen a closed record;
as a matter of law and logic, if applicant’s enhanced monitoring program is inadequate, then applicant’s
unenhanced monitoring program was a fortiori inadequate, and intervener had a regulatory obligation to
challenge it in its original petition to intervene; LBP-11-20, 74 NRC 65 (2011)
because the previous licensing board terminated the adjudicatory proceeding that was convened to
consider challenges to the operating license renewal application, challengers must satisfy the stringent
requirements for reopening; LBP-12-10, 75 NRC 633 (2012)
board, on reconsideration and after remand from Commission, reopened the record with respect to a
previously disposed contention, to consider the effect of licensee’s losing track of a fuel rod;
CLI-12-14, 75 NRC 692 (2012)
boards will reopen the record only when new evidence raises an exceptionally grave issue calling into
question the safety of the licensed activity; LBP-12-16, 76 NRC 44 (2012)
burden of satisfying the reopening requirements is a heavy one, and proponents of a reopening motion
bear the burden of meeting all of the requirements; LBP-11-20, 74 NRC 65 (2011)
combined license cannot be issued until the foreign ownership issue is properly corrected and then
applicants may motion to reopen the record; LBP-12-19, 76 NRC 184 (2012)
contention that indicates neither positive nor negative impact from proposed severe accident mitigation
alternative implementation does not paint the required seriously different picture of the environmental
landscape to reopen the record; LBP-11-35, 74 NRC 701 (2011)
enhancement to a program does not constitute new information sufficient to support a new contention; LBP-11-20, 74 NRC 65 (2011)
environmental issue is “significant” for the purposes of reopening a record if it will paint a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; LBP-12-10, 75 NRC 633 (2012)
extinction for situations where parties seek to add previously unlitigated material would effectively render the reopening regulation meaningless; CLI-12-10, 75 NRC 479 (2012)
“exceptionally grave” issues warranting reopening are limited to those affecting public safety; CLI-12-21, 76 NRC 491 (2012)
failure to challenge the existing severe accident mitigation alternatives analysis would be insufficient to establish a material dispute for the purposes of satisfying the general contention admissibility standards, let alone the reopening standards; CLI-12-6, 75 NRC 352 (2012)
for new contentions to be admitted after the record has closed, petitioner must satisfy the Commission’s demanding regulatory requirements for reopening the record; LBP-11-23, 74 NRC 287 (2011)
given the need for finality in adjudications, reopening the record is an extraordinary action imposing a deliberately heavy burden on intervenor; LBP-15-14, 81 NRC 591 (2015)
heavy barrier to reopening applies whenever an adjudication has been closed and not merely after a case has been terminated following a full evidentiary hearing on the merits; LBP-15-14, 81 NRC 591 (2015)
if a petition is rejected or dismissed at the docketing stage (before the evidentiary record has ever been opened), then subsequent petitions, in addition to meeting all of the other requirements, must also show that the evidentiary record should be reopened; LBP-14-4, 79 NRC 319 (2014)
in unusual circumstances, where fairness dictates, the Commission has been willing to soften or waive its reopening requirements; CLI-12-14, 75 NRC 692 (2012)
intervention’s failure to address the reopening standards in 10 C.F.R. 2.326 creates a yawning deficiency in its submissions because the evidentiary record has been closed and the board’s jurisdiction in the proceeding does not extend beyond the narrow scope of the remand; LBP-11-20, 74 NRC 65 (2011)
intervenor’s speculation that further review of certain issues might change some conclusions in the final safety evaluation report does not justify restarting the hearing process; LBP-11-20, 74 NRC 65 (2011); LBP-11-35, 74 NRC 701 (2011)
nonligants seeking to reopen a closed record necessarily face a heavy burden; CLI-12-6, 75 NRC 352 (2012)
motions to reopen the record are governed by 10 C.F.R. 2.326; CLI-12-3, 75 NRC 132 (2012)
movant properly bears the burden of meeting the reopening standards and applicant retains the burden of proof on the question whether the license should be issued; CLI-15-19, 82 NRC 151 (2015)
new contentions filed after the record has closed must satisfy the timeliness requirement of either 10 C.F.R. 2.309(f)(2) or 2.309(c), and the admissibility requirements of section 2.309(f)(1); LBP-11-22, 74 NRC 259 (2011)
newly constituted board applied the reopening standard to new contentions filed after the prior proceeding was terminated for want of pending or admitted contentions; LBP-11-22, 74 NRC 259 (2011)
NRC practice of closing the hearing record after resolution of the last live contention, and of holding new contentions to the higher reopening standard, has been upheld by higher courts; CLI-12-14, 75 NRC 692 (2012)
NRC regulations place an intentionally heavy burden on parties seeking to reopen the record; CLI-15-19, 82 NRC 151 (2015)
petitioner who files a new contention after the board has already closed the evidentiary record is obliged to address the reopening standards; CLI-12-6, 75 NRC 352 (2012)
petitioner who satisfies the reopening standard must also show that its proposed new contention meets the standard for new or amended contentions in section 2.309(c) and the underlying admissibility standards of section 2.309(f)(1); LBP-14-8, 79 NRC 519 (2014)
petitioners have not raised an issue material to findings that NRC must make to support final decisions and they are unable to satisfy contention admissibility standards or meet the criteria to reopen a closed record; CLI-15-4, 81 NRC 221 (2015)

proponents of motions to reopen the record bear a heavy burden because it is an extraordinary action; LBP-11-22, 74 NRC 259 (2011)

purpose of the reopening rule is to make sure that petitioners have an opportunity to raise serious issues after the close of the record; CLI-12-14, 75 NRC 692 (2012)

reopening standard imposes a deliberately heavy burden on parties seeking to supplement the evidentiary record at the 11th hour, after the record has closed; LBP-12-10, 75 NRC 633 (2012)

reopening standard is intended to impose a deliberately heavy burden on parties seeking to supplement the evidentiary record at the 11th hour, after the record has closed; CLI-12-10, 75 NRC 479 (2012)

reopening with respect to a specific issue would not have the effect of reopening the proceeding for adjudication on unrelated matters once a record is closed; CLI-12-17, 76 NRC 207 (2012)

serious accident mitigation alternatives analysis is a cost-benefit analysis, not a direct safety analysis, and thus does not raise any exceptionally grave issue; LBP-11-23, 74 NRC 287 (2011)

should requirements for reopening the record be satisfied, the requirements for untimely contentions must also be satisfied, as well as the contention admissibility criteria of section 2.309(f)(1); LBP-11-35, 74 NRC 701 (2011)

showing merely that changes to the severe accident mitigation alternatives analysis results are possible or likely or probable is not enough to reopen a record; LBP-11-35, 74 NRC 701 (2011)

showing necessary to demonstrate that a materially different result in the outcome of the severe accident mitigation alternatives analysis would be or would have been likely had the newly proffered evidence been considered initially is discussed; LBP-11-35, 74 NRC 701 (2011)

standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-11-2, 73 NRC 333 (2011); LBP-11-22, 74 NRC 259 (2011)

standards expressly contemplate contentions that raise issues not previously litigated; CLI-12-6, 75 NRC 352 (2012)

standards for reopening apply not only when a party is seeking to introduce new evidence on a previously admitted contention after the evidentiary record is closed, but also when a party is seeking to introduce a new contention after the record is closed; LBP-11-23, 74 NRC 287 (2011)

standards require movant to show that the motion is timely, addresses a significant safety or environmental issue, and demonstrates that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-12-10, 75 NRC 479 (2012)

there would be little hope of completing administrative proceedings if each newly arising allegation required an agency to reopen its hearings; CLI-11-2, 73 NRC 333 (2011); LBP-15-14, 81 NRC 591 (2015)

untimely issues may be considered in the discretion of the presiding officer if the issue is exceptionally grave; CLI-12-10, 75 NRC 479 (2012)

where initial decisions have been issued, the record should not be reopened to take evidence on some accident-related issue unless the party seeking reopening shows that there is significant new evidence, not included in the record, that materially affects the decision; CLI-11-5, 74 NRC 141 (2011)

where the evidentiary record had been closed, the demanding requirements for reopening must be satisfied; LBP-12-1, 75 NRC 1 (2012)

See also Motions to Reopen

allowing new claims in a reply not only would defeat the contention-filing deadline, but would unfairly deprive other participants of an opportunity to rebut the new claims; LBP-15-26, 82 NRC 163 (2015)

although rules do not provide for filing of reply briefs, as a matter of discretion the Commission reviews a reply brief; CLI-15-7, 81 NRC 481 (2015)

because applicant has not shown that it could not have addressed issues in its appeal, nor has presented genuinely new information in its reply, neither necessity nor fairness dictates that its reply should be permitted; CLI-14-3, 79 NRC 31 (2014)
because it relates to Staff’s position on the reviewability of the Board’s decision, Staff’s statement regarding its inclination not to revise the final supplemental environmental impact statement is presented for the first time in Staff’s answer; CLI-11-14, 74 NRC 801 (2011)
board considered a letter written after the original petition was filed and submitted with petitioner’s reply; LBP-15-5, 81 NRC 249 (2015)
board refused to consider new bases that were included in an answer to summary disposition motion and were outside the scope of the original contention; LBP-11-4, 73 NRC 91 (2011)
b Briefs are limited to the scope of the arguments set forth in the original motion or petition; LBP-11-34, 74 NRC 685 (2011)
b Briefs cannot be used to present entirely new facts or arguments in an attempt to reinvigorate thinly supported contentions; LBP-11-34, 74 NRC 685 (2011)
b Briefs may not contain new information that was not raised in either the petition or answers, but may provide arguments that respond to the petition or answers, whether they are offered in rebuttal or in support; CLI-11-14, 74 NRC 801 (2011)
b Briefs must focus narrowly on the legal or factual arguments first presented in the original motion or petition or raised in the answers to it; LBP-11-34, 74 NRC 685 (2011)
failure to read NRC regulations carefully does not constitute good cause for late-filed motions; LBP-11-34, 74 NRC 685 (2011)
if a contention as originally pleaded did not satisfy 10 C.F.R. 2.309(f)(1), a reply cannot remediate the deficiency by introducing, for the first time, references to a genuine dispute with the license application at issue; LBP-11-34, 74 NRC 685 (2011)
intervenor is entitled to cure deficiencies with regard to standing when it files its reply; LBP-14-4, 79 NRC 319 (2014)
issues raised in an intervention petition or answer are within the appropriate scope of a reply brief; LBP-15-5, 81 NRC 249 (2015)
motion to reply is denied because no compelling circumstances are presented; CLI-12-6, 75 NRC 352 (2012)
motion to reply is denied because petitioner should have anticipated the arguments in NRC Staff’s and applicant’s answers, which were logical responses to petitioner’s suspension motion; CLI-12-6, 75 NRC 352 (2012)
new arguments in support of petitioner’s contentions cannot be raised for the first time in reply briefs; CLI-15-20, 82 NRC 211 (2015); CLI-15-22, 82 NRC 310 (2015); LBP-11-6, 73 NRC 149 (2011); LBP-13-12, 78 NRC 239 (2013); LBP-15-4, 81 NRC 156 (2015); LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015)
NRC proceedings would prove unmanageable and unfair to other parties if intervenor could freely change admitted contentions at will as litigation progresses; CLI-12-1, 75 NRC 39 (2012)
only the petitioning party may file reply briefs; CLI-15-7, 81 NRC 481 (2015); LBP-15-13, 81 NRC 456 (2015)
parties do not have an automatic right to respond to reply briefs; LBP-11-34, 74 NRC 685 (2011)
parties may not raise new arguments that are outside the scope of their contentions, but may legitimately amplify arguments presented in support of the contention in order to fairly respond to arguments raised by the opposing party; LBP-12-23, 76 NRC 445 (2012)
petitioner cannot expand the scope of the arguments set forth in the original hearing request; LBP-14-4, 79 NRC 319 (2014)
petitioner cannot introduce new issues or expand the scope of arguments advanced in the original petition, but rather must focus on actual or logical arguments presented in the original petition or raised in answers to it; CLI-15-18, 82 NRC 135 (2015); LBP-15-26, 82 NRC 163 (2015)
petitioner has some latitude to supplement or cure a standing showing in its reply pleading, but any additional arguments should be supported by either the declaration that accompanied the original hearing request or a supplemental affidavit; LBP-12-3, 75 NRC 164 (2012)
petitioner is generally afforded 7 days to file its reply; LBP-12-3, 75 NRC 164 (2012)
petitioner may correct or supplement its showing on standing; LBP-11-21, 74 NRC 115 (2011)
petitioner may not include new information that was not raised in either the petition or answers, but arguments that respond to the petition or answers, whether they are offered in rebuttal or in support, are not precluded; LBP-12-8, 75 NRC 539 (2012)
petitioner may not remediate deficient contentions by introducing, in the reply, documents that were available to it during the time frame for initially filing contentions; LBP-12-7, 75 NRC 503 (2012)
petitioner may not use its reply to introduce new arguments to reinvigorate thinly supported contentions; CLI-12-5, 75 NRC 301 (2012)
petitioner may use its reply as an opportunity to cure potential defects in standing; LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015)
petitioner was allowed to clarify standing declarations by submitting revised declarations with its reply; LBP-11-13, 73 NRC 534 (2011)
petitioner may not use its reply to introduce new arguments to reinvigorate thinly supported contentions; CLI-12-5, 75 NRC 301 (2012)
petitioner may use its reply as an opportunity to cure potential defects in standing; LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015)
petitioner was allowed to clarify standing declarations by submitting revised declarations with its reply; LBP-11-13, 73 NRC 534 (2011)
petitioner, having failed in its revised petition to challenge applicant’s reliance on the generic environmental impact statement, cannot raise that challenge for the first time in its reply; LBP-11-6, 73 NRC 149 (2011)
petitioner’s reply must be narrowly focused on the legal or logical arguments presented in the applicant’s or NRC Staff’s answer; LBP-11-6, 73 NRC 149 (2011)
petitioners have a right to reply to petitions for review subject to 10 C.F.R. 2.341; CLI-12-6, 75 NRC 352 (2012)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
reply affidavit that did not accompany the motion to reopen will not be considered in determining whether petitioners have satisfied 10 C.F.R. 2.326(b); LBP-12-10, 75 NRC 633 (2012)
reply must be filed within 7 days after the filing of answers to an intervention petition; LBP-11-21, 74 NRC 801 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
right to reply is intended to provide an opportunity to legitimately amplify arguments made in the intervention petition in response to applicant and NRC Staff answers; LBP-14-4, 79 NRC 319 (2014)
replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 534 (2011)
alternate pressurized thermal shock rule provides measures for ongoing reporting; LBP-15-17, 81 NRC 753 (2015)
annual report on recalculations of decommissioning cost estimates and projected available decommissioning funding must be submitted by a licensee for a plant that has closed before the end of its licensed life; DD-11-4, 73 NRC 713 (2011)
applicants shall notify NRC of information identified by the applicant as having, for the regulated activity, a significant implication for public health and safety or common defense and security; LBP-11-32, 74 NRC 654 (2011)
contention alleges errors by NRC Staff in implementation of 10 C.F.R. 73.56(f)(1)-(3) that fall within the scope of issues protected or regulated by those provisions; LBP-14-4, 79 NRC 319 (2014)
contention that a confirmatory order should not be sustained because, without sufficient justification, in the record, it imposes obligations on the off-duty employees of licensee not otherwise required by the NRC to observe and report the offsite conduct of fellow employees in an inadmissible; LBP-14-4, 79 NRC 319 (2014)
contract that licensee is relying on for decommissioning funding must be reported to NRC; DD-11-7, 74 NRC 787 (2011)
evidence that relief valve failure and inoperability may have existed for a period of time greater than allowed by technical specifications is a reportable event; DD-11-6, 74 NRC 420 (2011)
exemptions from decommissioning fund expenditure notification requirements are categorically excluded from environmental review as administrative changes that do not increase the risk of public radiation exposure; LBP-15-28, 82 NRC 233 (2015)
if license amendment request is approved, licensee will no longer have to provide 30-day notice to the Commission once it begins decommissioning and starts making withdrawals from the decommissioning fund; LBP-15-28, 82 NRC 233 (2015)
individuals who are subject to an access authorization program shall at a minimum, report any concerns arising from behavioral observation and are individually liable if they fail to do so; LBP-14-4, 79 NRC 319 (2014)
instead of providing notice before each decommissioning expense, licensee must submit a decommissioning cost estimate and timeline, called a Post Shutdown Decommissioning Activities Report, and annual reports on expenditures; LBP-15-24, 82 NRC 68 (2015)
license amendment request seeks to replace 30-day notice requirement and other plant-specific license conditions with the decommissioning fund requirements; LBP-15-28, 82 NRC 233 (2015)
licensee assessed the structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS-HD dry cask storage systems for an earthquake and reviewed the event for reportability; DD-12-1, 75 NRC 573 (2012)
licensee determined that dry storage cask displacement and damage to the NUHOMS HD 32PT4 caused by an earthquake exceeding the design basis were not reportable; DD-12-2, 76 NRC 391 (2012)
licensee is not required to list an enforcement order and its compliance with the order’s terms in the environmental report supporting its operating license renewal application; LBP-12-15, 76 NRC 14 (2012)
licensee is obliged to give local union notice and an opportunity to bargain over the effects of its decision to implement changes in the terms and conditions of the employees’ employment regarding behavioral observations of security concerns; CLI-15-16, 81 NRC 810 (2015)
licensee must notify NRC as soon as practical and in all cases within 1 hour of the occurrence, of any deviation from a plant’s technical specification; DD-11-6, 74 NRC 420 (2011)
licensee must periodically submit an updated FSAR to NRC to report information and analyses submitted to NRC by licensee or prepared by licensee pursuant to NRC requirement since the previous update; LBP-15-27, 82 NRC 184 (2015)
licensee must submit a post-shutdown decommissioning-activities report before or within 2 years following permanent cessation of operations; DD-15-8, 82 NRC 107 (2015)
licensee seeks regulatory exemptions to allow it to use decommissioning funds to manage spent fuel and eliminate the 30-day notice requirement that would otherwise apply to spent fuel management; LBP-15-28, 82 NRC 233 (2015)

licensees must annually adjust the amount of decommissioning funding assurance; DD-15-8, 82 NRC 107 (2015)

NRC can issue an order suspending an individual from working anywhere in the nuclear industry who fails to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

NRC can order an individual to pay civil penalties of up to $100,000 for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

NRC can take criminal enforcement action against an individual for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

NRC’s enforcement order does not state that any reportable illegal, unusual, or aberrant behavior must have a nexus to public health and safety or the common defense and security in order to be reportable; LBP-14-4, 79 NRC 319 (2014)

Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 499 (2011)

parties’ duty to report material significant developments in a matter under adjudication arises immediately upon discovery of that information; CLI-15-16, 81 NRC 810 (2015)

power reactor licensees must report decommissioning funding assurance information to NRC at least once every 2 years; DD-11-7, 74 NRC 787 (2011)

power reactor licensees must report to the NRC at least once every 2 years on the status of their decommissioning funding for each reactor or part of a reactor that they own; DD-11-4, 73 NRC 713 (2011)

relief valve failure and inoperability found during the refueling outage, which potentially affected the ability of the SRVs to satisfy design actuation requirements, meets the requirements for a licensee event report; DD-11-6, 74 NRC 420 (2011)

reporting and recordkeeping rules for decommissioning trusts are government by 10 C.F.R. 50.75(h)(1)-(4); LBP-15-28, 82 NRC 233 (2015)

reporting of observed behavior is the core concept of the behavioral observation program; LBP-14-4, 79 NRC 319 (2014)

reports to the agency regarding unapproved changes made to the material control and accounting program must be filed within no more than 6 months after the changes; LBP-11-11, 73 NRC 455 (2011)

section 50.71(e) is only a reporting requirement; LBP-15-27, 82 NRC 184 (2015)

Staff guidance documents outline acceptable methods for designing a radiological monitoring program and submitting required semiannual reports specifying principal radionuclide releases to unrestricted areas for the purpose of estimating maximum potential annual public doses from such releases; LBP-11-26, 74 NRC 499 (2011)

C. 1231

to consider any or all of NRC Staff documents as “approvals” by reason of the fact that they request information that will be used to assess compliance with agency requirements would impose an unintended reporting encumbrance; LBP-12-15, 76 NRC 14 (2012)

under an enforcement order, NRC requires that workers report any observed “illegal, unusual, or aberrant” behavior by their co-workers, words not appearing in 10 C.F.R. 73.56(f); LBP-14-4, 79 NRC 319 (2014)

uranium enrichment facility licensee must provide semiannual radiological release reports to NRC; LBP-12-21, 76 NRC 218 (2012)

uranium enrichment facility licensee must submit an annual update of the integrated safety analysis summary; LBP-12-21, 76 NRC 218 (2012)

uranium enrichment facility licensee must submit biannual reports to the NRC specifying the quantity of each of the principal radionuclides released to unrestricted areas in liquid and gaseous effluents during the previous 6 months of operation, and such other information as the Commission may require to estimate maximum potential annual radiation doses to the public resulting from effluent releases; LBP-12-21, 76 NRC 218 (2012)

uranium enrichment facility licensee’s radiological surveys must be as necessary and reasonable for compliance, and must include magnitude and extent of radiation levels, concentrations or quantities of radioactive material, and potential radiological hazards; LBP-12-21, 76 NRC 218 (2012)
SUBJECT INDEX

REPRESENTATION

although an allegation that a purported representative is acting without his or her organization’s authorization, i.e., is acting ultra vires, is distinct from a challenge to the organization’s standing, petitioner may cure such a defect in representation as well; LBP-11-13, 73 NRC 534 (2011) authority of an officer or attorney to sign a petition is distinguished from an authorization addressed to the organization’s standing to intervene; LBP-11-13, 73 NRC 534 (2011) duly authorized member or officer may represent his or her partnership, corporation, or unincorporated association even if he or she is not an attorney at law, but the representative’s notice of appearance must state the basis of his or her authority to act on behalf of the party; LBP-11-13, 73 NRC 534 (2011) individual may not intervene in his or her own right while simultaneously being represented by another petitioner in the same proceeding; LBP-11-13, 73 NRC 534 (2011) organization’s standing can be demonstrated through the interests of its members, but if a member acts or speaks on behalf of the organization, that member must also demonstrate authorization by that organization to represent it; LBP-11-13, 73 NRC 534 (2011)

REQUEST FOR ACTION

2.206 process provides a forum for individuals to advance their concerns and to obtain full or partial relief, or written reasons why the requested relief is not warranted, and the Commission may then review the NRC Staff’s findings on its own motion; CLI-12-20, 76 NRC 437 (2012) actions taken by licensee under 10 C.F.R. 50.59 do not give rise to hearing rights under the AEA, but rather are monitored by NRC Staff’s inspections and oversight, which may be challenged only by a petition for enforcement; LBP-15-27, 82 NRC 184 (2015) any member of the public may seek enforcement action associated with matters affecting plant operation, including the vitality of component maintenance programs; CLI-15-6, 81 NRC 340 (2015) any person may file a request to institute a proceeding to modify, suspend, or revoke a license, or for any other action as may be proper; CLI-12-20, 76 NRC 437 (2012); LBP-11-13, 73 NRC 534 (2011) appropriate means of challenging licensee actions undertaken in accordance with 10 C.F.R. 50.59 is through a petition under 10 C.F.R. 2.206; CLI-14-11, 80 NRC 167 (2014) challenges to licensee actions taken under 10 C.F.R. 50.59 may only be taken by means of a petition for enforcement action under 10 C.F.R. 2.206; CLI-15-5, 81 NRC 329 (2015) Commission denies hearing request, but refers the matters raised to the Executive Director of Operations for consideration as a request for enforcement action; CLI-15-5, 81 NRC 329 (2015) concerns about current design and operation of a nuclear power plant are more properly addressed through a petition for enforcement action; LBP-15-13, 81 NRC 456 (2015) concerns about facility’s emergency plans may be raised at any time pursuant to 10 C.F.R. 2.206; CLI-15-6, 81 NRC 340 (2015) concerns about safety, licensee’s compliance with regulatory requirements, and adequacy of NRC oversight are appropriately addressed as requests for enforcement action; CLI-15-8, 81 NRC 500 (2015); CLI-15-14, 81 NRC 729 (2015) contention claiming that modifications to repair or replace inadequate structural beams and columns is more appropriately presented as a request for enforcement action; CLI-15-5, 81 NRC 329 (2015) director of NRC office with responsibility for the subject matter shall either institute the requested proceeding or advise the person who made the request in writing that no proceeding will be instituted, in whole or in part, with respect to the request and the reason for the decision; DD-15-7, 82 NRC 257 (2015) except where the Commission determines that a discretionary hearing is warranted, section 2.206 provides the means to challenge licensee actions under 10 C.F.R. 50.59; CLI-12-20, 76 NRC 437 (2012) for contentions that fall within the facility’s current licensing basis, petitioner may seek action on its concerns by either filing a petition for rulemaking under 10 C.F.R. 2.802 or submitting an enforcement petition under 10 C.F.R. 2.206; LBP-11-21, 74 NRC 115 (2011) Fukushima-related petitions for suspension of proceeding and rescission of regulations that make generic conclusions about environmental impacts of severe reactor and spent fuel pool accidents and that
SUBJECT INDEX

- Preclude consideration of those issues in individual licensing proceedings are denied; LBP-11-39, 74 NRC 862 (2011)
- Hearing request on safety concerns over steam generator replacement is referred to the Executive Director for Operations for disposition; CLI-14-11, 80 NRC 167 (2014)
- Hearing requests were dismissed as untimely and referred to the Executive Director for Operations for consideration under section 2.206; CLI-12-20, 76 NRC 437 (2012)
- If a license were amended, the public’s only means to participate in future schedule changes would be through a request for action under 10 C.F.R. 2.206; LBP-15-17, 81 NRC 753 (2015)
- If a stakeholder is of the view that immediate action is needed to remedy an ailing safety culture at any facility, then that matter should be brought immediately to the attention of the agency via section 2.206; LBP-13-8, 78 NRC 1 (2013)
- If evidence subsequently indicates that the design basis of an operating nuclear power plant will not withstand a maximum flooding event, members of the public may file a request to institute a proceeding to modify, suspend, or revoke a license; LBP-11-15, 73 NRC 629 (2011)
- If intervener is of the view that its members face imminent harm from ongoing site operations, then it may, at any time, file a petition for enforcement action; CLI-12-4, 75 NRC 154 (2012)
- If petitioner believes that licensee’s analysis is incomplete, inaccurate, or otherwise does not satisfy the section 50.54(q)(3) two-part test, petitioner can challenge the analysis through the enforcement process; CLI-15-20, 82 NRC 211 (2015)
- If petitioner has a credible basis to question the adequacy of licensee’s compliance with 10 C.F.R. 50.54(q)(3), it may petition for enforcement action; LBP-15-4, 81 NRC 156 (2015)
- If petitioner is concerned about the sufficiency of the ongoing oversight of a nuclear power plant and its current evacuation plan, it has the option of requesting a modification, suspension, or revocation of its operating license; LBP-11-29, 74 NRC 612 (2011)
- Licensing boards are not the appropriate vehicles for reviewing 2.206 petitions; CLI-12-20, 76 NRC 437 (2012)
- Meaningfulness of section 2.206 petitions is discussed; LBP-12-24, 76 NRC 503 (2012)
- Motions and petitions related to the Fukushima events are denied as premature; CLI-12-7, 75 NRC 379 (2012)
- Once a proceeding has closed, the mechanism to raise a new issue no longer would be a contention accompanied by a motion to reopen, but rather a request for action under 10 C.F.R. 2.206 or a petition for rulemaking under 10 C.F.R. 2.802; CLI-12-3, 75 NRC 132 (2012)
- Petition requesting that NRC not allow restart after scheduled refueling outage until completion of all environmental remediation work and relevant reports on leaking tritium at the plant is denied; DD-11-1, 73 NRC 7 (2011)
- Petition under 10 C.F.R. 2.206 will be reviewed only where petitioner specifies the bases for taking the requested action; DD-15-6, 81 NRC 884 (2015)
- Petitioner may file a request to institute a proceeding to modify, suspend, or revoke a license, or for any other action that may be proper, if it believes that applicant’s seismic design and licensing bases are now invalid and that safe operation of the plant can no longer be ensured; CLI-15-21, 82 NRC 295 (2015)
- Petitioner may file at any time a request for action if it wishes to challenge ongoing operations; CLI-15-25, 82 NRC 389 (2015)
- Petitioner’s request that the NRC take escalated enforcement action against licensee concerning flooding protection is being addressed by the NRC’s request for information; DD-15-5, 81 NRC 877 (2015)
- Petitioners request that NRC issue a demand for information to compel boiling-water reactor licensees with Mark I and Mark II containment designs to describe how their individual facilities comply with 10 C.F.R. Part 50, Appendix A, GDC 44 and 10 C.F.R. 50.49; DD-15-11, 82 NRC 361 (2015)
petitioners who have been denied a hearing for raising an issue outside the scope of a proceeding could still raise the issue through a petition for enforcement under 10 C.F.R. 2.206; LBP-12-14, 76 NRC 1 (2012)

petitioners’ request for cold shutdown because of radiological contamination of groundwater from tritium is denied; DD-11-3, 73 NRC 375 (2011)

record before the board falls far short of rebutting the presumption that a petition for license modification, suspension, or revocation is a meaningful avenue for seeking administrative relief; CLI-12-20, 76 NRC 437 (2012); LBP-12-14, 76 NRC 1 (2012)

referrals may be made when a petition does not satisfy the legal requirements for a hearing or intervention and it is determined that referral to the section 2.206 process is appropriate; CLI-12-20, 76 NRC 437 (2012)

request for enforcement action based on support beam deficiencies, flood protection inadequacy, flood risks from upstream dams, and primary reactor containment electrical penetration seals containing Teflon is denied because petitioner’s requests have been addressed through other actions; DD-15-4, 81 NRC 869 (2015)

request for enforcement action to address concerns about operability of the submerged and/or wetted non-environmentally qualified inaccessible cables is denied; DD-13-2, 78 NRC 185 (2013)

request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise technical specifications for spent fuel pool instrumentation is denied; DD-13-3, 78 NRC 571 (2013)

request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)

request for immediate action on flaws in the control rod drive mechanisms did not meet the criteria for review; DD-15-3, 81 NRC 713 (2015)

request for immediate action on leakage from the safety injection refueling water tank did not meet the criteria for review; DD-15-3, 81 NRC 713 (2015)

request for immediate action to prevent restart because a piece of primary coolant pump impeller was lodged between the reactor vessel and the flow skirt is denied; DD-15-3, 81 NRC 713 (2015)

request for licensee to replace the primary coolant pumps with others designed for their intended duty is denied; DD-15-3, 81 NRC 713 (2015)

request relating to containment structural damage is mooted by licensee’s decision to shut down and defuel the facility

request that licensees should be required to maintain Emergency Response Data System capability throughout an accident will be addressed by an advance notice of proposed rulemaking; DD-14-2, 79 NRC 489 (2014)

request that NRC immediately shut down plants until all turbine building high-energy line break concerns are identified and those important to safety are corrected is granted in part; DD-14-5, 80 NRC 205 (2014)

request that NRC modify the administrative controls section of the standard technical specifications for each operating reactor design to reference the approved EOP technical guidelines for that plant design is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensee to submit a license amendment application for the design and installation of replacement steam generators and for additional enforcement action is moot; DD-15-7, 82 NRC 257 (2015)

request that NRC order licensees to add guidance to emergency plans that documents how to perform a multiunit dose assessment (including releases from spent fuel pools) using licensee’s site-specific dose assessment software and approach until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to complete the Emergency Response Data System modernization initiative by June 2012 to ensure multiunit site monitoring capability is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to comply with twelve specific recommendations in the Near-Term Task Force Report is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to conduct periodic training and exercises for multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to determine and implement required staff to fill all necessary positions for responding to a multiunit event until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to ensure that emergency planning equipment and facilities are sufficient for dealing with multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to have an installed, seismically qualified means to spray water into the spent fuel pools, including an easily accessible connection to supply the water (e.g., using a portable pump or pumper truck) at grade outside the building is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to include a reliable hardened vent in boiling-water reactor Mark I and Mark II containments is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to modify the technical guidelines to include emergency operations procedures, severe accident mitigation guidelines, and extensive damage mitigation guidelines in an integrated manner, specify clear command and control strategies for their implementation, and stipulate appropriate qualification and training for those who make decisions during emergencies is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide means to power communications equipment needed to communicate onsite and offsite during a prolonged station blackout until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide reasonable protection for equipment from the effects of design-basis external events and to add equipment as needed to address multiunit events while other requirements are being revised and implemented is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide safety-related AC electrical power for the spent fuel pool makeup system is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to reevaluate seismic and flooding hazards at their sites against current NRC requirements and guidance, and if necessary, update the design basis and structures, systems, and components important to safety to protect against the updated hazards is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to revise their technical specifications to address requirements to have one train of onsite emergency electrical power operable for spent fuel pool makeup and spent fuel pool instrumentation when there is irradiated fuel in the spent fuel pool, regardless of the operational mode of the reactor is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
request that NRC order the immediate shutdown of all nuclear power reactors that are known to be located on or near an earthquake fault line is denied; DD-15-6, 81 NRC 884 (2015)
request that NRC order the immediate suspension of the operating licenses of all General Electric boiling-water reactors that use the Mark I primary containment system citing the Fukushima Dai-ichi accident in Japan as its rationale basis is resolved; DD-15-1, 81 NRC 193 (2015)
request that NRC revoke license for falsification of information is addressed; DD-14-4, 79 NRC 506 (2014)
request that NRC shut down or prohibit restart of nuclear power plants until a criminal investigation of a licensee contractor is complete and everything has been verified safe is denied; DD-14-1, 79 NRC 7 (2014)
request that NRC suspend operations at one plant, investigate whether licensee possesses sufficient funds to cease operations and decommission another, and investigate licensee’s current financial qualifications.

1235
to determine whether it remains qualified to continue operating another plant is denied; DD-15-8, 82 NRC 107 (2015)
request that NRC suspend the operating licenses until completion of a set of activities related to the effects of an earthquake that exceeded the plant’s operating basis earthquake is granted in part and denied in part; DD-12-2, 76 NRC 391 (2012); DD-15-9, 82 NRC 274 (2015)
request that NRC take enforcement action to correct alleged noncompliance with fire protection regulations is granted; DD-12-3, 76 NRC 416 (2012)
request that NRC take enforcement action until the Licensee completes an independent root-cause assessment for the rise in ultimate heat sink temperature is denied; DD-15-10, 82 NRC 201 (2015)
section 2.206 process provides stakeholders a forum to advance their concerns and to obtain full or partial relief, or written reasons why the requested relief is not warranted; CLI-13-2, 77 NRC 39 (2013); CLI-14-11, 80 NRC 39 (2014)
to the extent petitioner believes there are existing management competence questions that merit immediate action, then its remedy is to direct the Staff’s attention to those matters by filing a request for action under 10 C.F.R. 2.206; CLI-11-11, 74 NRC 427 (2011)
to the extent petitioner seeks to have applicant implement safety measures in addition to those ordered, its recourse is to petition for rulemaking or to petition for license modification, suspension, or revocation; LBP-12-14, 76 NRC 1 (2012)
REQUEST FOR ADDITIONAL INFORMATION
although an admissible contention requires no more than some minimal factual and legal foundation in support, the Commission expects that in almost all instances a petitioner must go beyond merely quoting a request for additional information to justify admission; LBP-15-1, 81 NRC 15 (2015)
as part of the NRC post-Fukushima lessons-learned activities, NRC is requiring all licensees to reevaluate seismic hazards at their sites, and to this end, issued a request for information; DD-15-1, 81 NRC 193 (2015)
asking questions and seeking additional information is an essential part of NRC’s licensing process, and such questioning does not automatically give rise to an admissible contention; LBP-12-27, 76 NRC 583 (2012)
Commission decision does not foreclose NRC Staff’s ability to request additional information on any part of the license transfer application; CLI-15-26, 82 NRC 408 (2015)
if applicant was required to update its environmental report every time NRC issued an RAI, there would need to be dozens, if not hundreds, of such updates; LBP-12-13, 75 NRC 784 (2012)
information request from NRC Staff is not an approval that needs to be listed in applicant’s environmental report under 10 C.F.R. 51.45(d); LBP-15-27, 82 NRC 184 (2015)
issuance of an RAI does not alone establish deficiencies in an application or that NRC Staff will go on to find any of applicant’s clarifications, justifications, or other responses to be unsatisfactory; CLI-15-8, 81 NRC 500 (2015)
mere general references to NRC Staff’s RAIs do not provide the requisite reasonable specificity to support admission of a contention; CLI-12-5, 75 NRC 301 (2012)
one of the post-Fukushima orders or information requests can be characterized as approvals that must be obtained in connection with renewal of an operating license; LBP-12-15, 76 NRC 14 (2012)
NRC may at any time before expiration of a license, require further written statements from licensee to determine whether a license should be modified; LBP-13-7, 77 NRC 307 (2013)
NRC Staff is empowered to issue requests for additional information relevant to an applicant’s environmental report; LBP-11-32, 74 NRC 654 (2011); LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011)
NRC Staff’s responsibilities, parallel to the adjudicatory process, include seeking additional information from applicant after docketing of a pending license application; LBP-12-9, 75 NRC 615 (2012)
petitioner may not rely on a document generated by a state agency if that document contains nothing more than a request for information; LBP-11-6, 73 NRC 149 (2011)
petitioners must do more than rest on the mere existence of RAIs as a basis for their contention; CLI-15-8, 81 NRC 500 (2015)
RAIs are a routine means for NRC Staff to ask for clarification or additional corroborating information from an applicant; CLI-15-8, 81 NRC 500 (2015)
to consider any or all of NRC Staff documents as “approvals” by reason of the fact that they request information that will be used to assess compliance with agency requirements would impose an unintended reporting encumbrance; LBP-12-15, 76 NRC 14 (2012)
to the extent that applicant proposes modifications to the facility in response to a request for information, NEPA also requires the consideration of the effectiveness and relative costs of a range of alternatives for satisfying the NRC’s concerns; LBP-12-15, 76 NRC 14 (2012)

RESEARCH REACTORS
admission of a management integrity contention relied on references to a serious incident involving shutdown of the reactor, management responsible for the incident remaining in place, and a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert witness in support of the contention; CLI-11-11, 74 NRC 427 (2011)
licensee is required to submit a license transfer application to NRC; CLI-14-5, 79 NRC 254 (2014)
licensee may continue to operate reactor under an expired license if a license renewal application is timely submitted; CLI-14-5, 79 NRC 254 (2014)
nonpower reactors, including research and test reactors, differ as a class from nuclear power plants and are not covered by 10 C.F.R. Part 54; CLI-11-11, 74 NRC 427 (2011)

RESOURCE CONSERVATION & RECOVERY ACT
admissibility of contention that environmental assessment fails to adequately describe and analyze the impacts of maintaining post-operational wellfields as long-term hazardous waste facilities is decided; LBP-15-15, 81 NRC 598 (2015)
proper sampling plan for establishing baseline values is described; LBP-15-3, 81 NRC 65 (2015)

RESPONSE TIME
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to resolve the nature and cause of any MC&A alarm within approved time periods in each of the four storage areas at issue; LBP-14-1, 79 NRC 39 (2014)
contention that applicant’s revised material control and accounting plan is inadequate to satisfy the alarm resolution requirements is inadmissible; CLI-15-9, 81 NRC 512 (2015)
See also Time Limits

RESPONSES TO PETITIONS
petitions, answers, and replies are allowed unless otherwise specified by the Commission or the presiding officer, but no other written answers or replies will be entertained; LBP-11-2, 73 NRC 28 (2011)

RESTART
before restart, licensee is required to demonstrate to NRC that no functional damage from seismic events has occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 573 (2012)
NRC approvals of plant restart and lifting suspensions did not trigger AEA § 189a hearing rights; CLI-15-14, 81 NRC 729 (2015)
NRC authorization to restart a plant following NRC Staff’s review of forty-seven ordered modifications is not a license amendment; LBP-15-27, 82 NRC 184 (2015)
NRC’s lifting of license suspension and authorizing restart under stipulated restrictions was not a license amendment because nothing in the record indicates that license amendments are necessary to permit the licensee to operate in accordance with the restrictions that have been imposed; LBP-13-7, 77 NRC 307 (2013)
petition requesting that the NRC not allow restart after scheduled refueling outage until completion of all environmental remediation work and relevant reports on leaking tritium at the plant is denied; DD-11-1, 73 NRC 7 (2011)
request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)
request that, following an earthquake that exceeded the operating basis, NRC suspend the operating licenses until completion of a set of activities described in the petition, is addressed; DD-15-9, 82 NRC 274 (2015)
to demonstrate that no functional damage occurred as a result of the earthquake, licensee performed inspections, tests, and analyses to address the requirements of 10 C.F.R. Part 100, Appendix A; DD-15-9, 82 NRC 274 (2015)
SUBJECT INDEX

upon docketing of certifications of permanent shutdown and fuel removal, licensee’s licenses no longer authorize operation of the reactors or placement or retention of fuel into the reactor vessels and licensee is prohibited from restarting or loading fuel; DD-15-7, 82 NRC 257 (2015)

RESTRICTED DATA

board determined that the oral portion of the proceeding should be closed to the public to allow for the free-ranging and thorough examination of witnesses and to ensure the effective safeguard and prevention from disclosure of restricted data; LBP-12-21, 76 NRC 218 (2012)

relative to the issue of foreign ownership or control, NRC imposes restrictions on the physical security and control of information at licensed facilities to safeguard restricted data and national security information; LBP-11-11, 73 NRC 455 (2011)

RESTRICTED RELEASE

agreement state license termination regulations are not less protective than or incompatible with NRC’s in making the terms of restricted release considerably more difficult than those for unrestricted release; ALARA analysis required under section 20.1403(a) calls for a licensee seeking to use restricted release to analyze whether it would be cost-beneficial to remove enough radioactive contamination from the site that doses to the public are no higher than 25 mrem per year without reliance on restricted-release controls; CLI-13-6, 78 NRC 155 (2013)

ALARA principle has been incorporated into the restricted-use portion of the license termination rule to screen out sites that should be removing contamination to achieve unrestricted use; CLI-11-12, 74 NRC 460 (2011)

ALARA principle, either as a general regulatory principle or as used in NRC’s license termination rule, does not incorporate or call for any comparative analysis of doses from restricted and unrestricted release; CLI-11-12, 74 NRC 460 (2011)

benefit-cost analysis is used to determine initial eligibility for restricted release; CLI-11-12, 74 NRC 460 (2011)

board provides textual analysis and additional clarifying explanation of its interpretation of 10 C.F.R. 20.1403(a); CLI-13-6, 78 NRC 155 (2013)

despite having passed the initial eligibility test for restricted release, if licensee cannot satisfy dose criteria, its site will not be considered acceptable for license termination under restricted conditions; CLI-13-6, 78 NRC 155 (2013)

doses yielded by the restricted-release and unrestricted-release decommissioning options are not susceptible to being compared meaningfully because of the significantly different risks and uncertainties associated with each option; CLI-13-6, 78 NRC 155 (2013)

eligibility test in section 20.1403(a) postulates a cost-benefit inquiry that is modeled on a traditional ALARA cost-benefit analysis, but that serves a different regulatory purpose; CLI-13-6, 78 NRC 155 (2013)

for license termination under restricted conditions, licensee must provide legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 mrem (0.25 mSv) per year; CLI-13-6, 78 NRC 155 (2013)

“Further reductions” in 10 C.F.R. 20.1403(a) necessarily refers to further reductions from the level of residual radioactivity that a licensee proposes to leave in place under its proposed restricted-release decommissioning plan; CLI-13-6, 78 NRC 155 (2013)

if licensee demonstrates, through either of the two cost-benefit approaches, that removing radioactive contamination to the unrestricted-use level would not be cost-beneficial, then licensee then must show that, with the addition of engineered barriers and institutional controls, the average annual dose to the public will not exceed 25 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

licensee must show that, if institutional controls fail, enough residual radioactivity has been removed from the site so that the average annual dose to the public will not exceed 100 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

nothing in NRC license termination regulations, including the ALARA principle incorporated into section 20.1403(a), calls for a comparison of doses of the restricted-release and unrestricted-release decommissioning options; CLI-13-6, 78 NRC 155 (2013)
NRC regulations neither explicitly nor implicitly require a comparison of the levels of protection afforded by the unrestricted and restricted decommissioning options; CLI-11-12, 74 NRC 460 (2011)

one of the benefits of removing enough radioactivity to cross the 25-mrem threshold is that the value of the affected property is likely to increase, and it is in this sense that NRC guidelines contemplate, as part of the ALARA analysis, a comparison between restricted release and unrestricted release; CLI-13-6, 78 NRC 155 (2013)
sites will be considered acceptable for license termination under restricted conditions if licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of section 20.1402 would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA; CLI-13-6, 78 NRC 155 (2013)

terminating a license for restricted use relies on legally enforceable institutional controls to achieve the 25-mrem dose limit; CLI-11-12, 74 NRC 460 (2011)

threshold eligibility for restricted release requires that licensees demonstrate that remediation to the level of adequate protection for license termination cannot be achieved cost-beneficially through unrestricted release before allowing them to pursue restricted-release decommissioning; CLI-13-6, 78 NRC 155 (2013)

unrestricted release and restricted release are both available as independent regulatory options that would provide adequate protection to the public health and safety if the applicable dose and other criteria are met; CLI-11-12, 74 NRC 460 (2011)

REVERSAL OF RULING

Commission reviews board’s legal rulings de novo and will reverse a board’s legal rulings if they are contrary to established law; CLI-15-6, 81 NRC 340 (2015)

deficiency in a final environmental impact statement is not automatic ground for reversal of an order granting a permit although the issue has been opened for full consideration in an agency hearing; CLI-15-6, 81 NRC 340 (2015)

if motions for stay of effectiveness demonstrate neither irreparable injury nor that reversal of the licensing board is a virtual certainty, then the remaining factors need not be considered; CLI-12-11, 75 NRC 523 (2012)

without a showing of irreparable injury, petitioners seeking a stay of effectiveness must demonstrate that reversal of the licensing board is a virtual certainty; CLI-12-11, 75 NRC 523 (2012)

REVIEW

See Appellate Review; Environmental Review; Financial Qualifications Review; NRC Staff Review; Safety Review; Standard of Review; Standard Review Plans

REVIEW, DISCRETIONARY

although contention ultimately was resolved in NRC Staff’s favor, Commission takes review as a matter of discretion because the board’s ruling raises substantial questions of precedential importance; CLI-15-6, 81 NRC 340 (2015)

although NRC rules do not provide for the filing of amicus curiae briefs on motions filed pursuant to 10 C.F.R. 2.323, as a matter of discretion the Commission has reviewed both an amicus brief and the opposition to it; CLI-14-11, 80 NRC 167 (2014)

apart from discretionary review by the Commission, NRC Staff’s no significant hazards consideration determination under section 50.92(c) may not be contested; LBP-15-26, 82 NRC 163 (2015)

appellate review of interlocutory licensing board orders is disfavored and will be undertaken as a discretionary matter only in extraordinary circumstances; CLI-11-10, 74 NRC 251 (2011)

applicant satisfied the regulatory standards for discretionary review by identifying a substantial question as to whether the board decision reaches at least one necessary legal conclusion without governing precedent or addresses at least one substantial and important question of law, policy, or discretion; CLI-13-1, 77 NRC 1 (2013)

Commission exercised its inherent supervisory authority over agency adjudications to review motion and petition addressing the spent fuel storage issue; LBP-15-1, 81 NRC 15 (2015); LBP-15-9, 81 NRC 396 (2015)

Commission exercises its discretion to review a board decision that raises a potentially recurring procedural issue of some importance; CLI-12-14, 75 NRC 692 (2012)

Commission may at its discretion grant a party’s request for interlocutory review of a board decision; CLI-12-18, 76 NRC 371 (2012)
SUBJECT INDEX

Commission on its own motion may review a decision that modifies, suspends, or revokes a license; CLI-15-14, 81 NRC 729 (2015)
Commission will grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to one or more of the considerations of 10 C.F.R. 2.341(b)(4); CLI-11-9, 74 NRC 233 (2011); CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-12-21, 76 NRC 491 (2012); CLI-14-10, 80 NRC 157 (2014); CLI-15-1, 81 NRC 1 (2015); CLI-15-9, 81 NRC 512 (2015); CLI-15-19, 82 NRC 151 (2015)
grant of discretionary review must show that a board’s ruling was a departure from, or contrary to, established law; CLI-15-7, 81 NRC 481 (2015)
grant of discretionary review requires a showing that the board’s findings are not even plausible in light of the record viewed in its entirety; CLI-13-1, 77 NRC 1 (2013)
interlocutory review is discretionary and will be granted only upon a showing that the issue for which review is sought threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-13-3, 77 NRC 51 (2013)
partial initial decisions by presiding officers will be reviewed as a matter of discretion if petitions raise a substantial question in regard to any of the paragraphs of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-12-1, 75 NRC 39 (2012)
review is granted only where the party demonstrates that the issue for which it seeks review threatens it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through an appeal following the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-14, 74 NRC 801 (2011); CLI-15-24, 82 NRC 331 (2015)
standard for discretionary review is described; CLI-15-7, 81 NRC 481 (2015)

REVIEW, INTERLOCUTORY
Commission has declined to take interlocutory review with respect to case management decisions; CLI-15-24, 82 NRC 331 (2015)
disfavor of piecemeal appeals leads the Commission to grant interlocutory review only upon a showing of extraordinary circumstances; CLI-11-14, 74 NRC 801 (2011)
expansion of issues for litigation from the board’s denial of a motion for summary disposition had neither a pervasive and unusual effect on the litigation nor a serious and irreparable impact on movant; CLI-15-24, 82 NRC 331 (2015)
expense is not irreparable harm; CLI-15-24, 82 NRC 331 (2015)
grant of interlocutory review requires a showing that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-14, 74 NRC 801 (2011); CLI-15-24, 82 NRC 331 (2015)
grant of summary disposition where other contentions are pending is not a final decision, and is appealable only upon a showing that the standards for interlocutory review have been met; CLI-11-14, 74 NRC 801 (2011)
increased litigation burden did not have a pervasive effect on the basic structure of the proceeding; CLI-15-24, 82 NRC 331 (2015)
interlocutory review is generally disfavored and requests for such review are granted only under extraordinary circumstances; CLI-15-24, 82 NRC 331 (2015)
interlocutory review of a board decision that denied reconsideration of a contention admissibility determination was declined; CLI-15-24, 82 NRC 331 (2015)
parties should not seek interlocutory review by invoking the grounds under which the Commission might exercise its supervisory authority; CLI-11-14, 74 NRC 801 (2011)
procedural rulings involving discovery rarely meet the standard for interlocutory review; CLI-15-24, 82 NRC 331 (2015)

REVIEW, SUA SPONTE
2.206 process provides a forum for individuals to advance their concerns and to obtain full or partial relief, or written reasons why the requested relief is not warranted, and the Commission may then review the NRC Staff’s findings on its own motion; CLI-12-20, 76 NRC 437 (2012)
adequacy of NRC Staff’s review of transmission-corridor impacts might be appropriate for the board’s
collection suo sponte; CLI-15-1, 81 NRC 1 (2015)
although Commission approval is required before a board exercises its suo sponte authority, that authority
still exists; LBP-14-9, 80 NRC 15 (2014)
amicus curiae briefs may be filed when the Commission has taken up a matter pursuant to section 2.341
or suo sponte; CLI-14-11, 80 NRC 167 (2014); CLI-15-23, 82 NRC 321 (2015); CLI-15-24, 82 NRC
331 (2015)
authority of presiding officer is compared under predecessor rule 10 C.F.R. 2.760a; LBP-14-9, 80 NRC
15 (2014)
authority shall be used only in extraordinary circumstances; CLI-15-1, 81 NRC 1 (2015)
because the final environmental impact statement had been issued and the board had ruled that a
contention remained procedurally defective, it was an appropriate point for board consideration of
whether the contention merited suo sponte review; LBP-14-9, 80 NRC 15 (2014)
board must request that the Commission approve the board’s determination that suo sponte review is
warranted; LBP-14-9, 80 NRC 15 (2014)
boards may make findings of fact and conclusions of law on any matter not put into controversy by the
parties, but only to the extent that the presiding officer determines that a serious safety, environmental,
or common defense and security matter exists, and the Commission approves of an examination of and
decision on the matter upon its referral by the presiding officer; LBP-14-9, 80 NRC 15 (2014)
boards must request Commission approval to undertake suo sponte review; CLI-15-1, 81 NRC 1 (2015)
Commission disfavors requests to invoke its inherent supervisory authority over adjudications; CLI-11-13,
74 NRC 635 (2011)
Commission ordered a licensing board not to exercise suo sponte authority because the Commission had
already initiated an ongoing investigation to deal with the issues raised; LBP-14-9, 80 NRC 15 (2014)
licensing boards must judiciously exercise suo sponte authority when faced with a serious, and unraised,
issue; LBP-14-9, 80 NRC 15 (2014)
licensing boards should only use suo sponte review in extraordinary circumstances; LBP-14-9, 80 NRC 15
(2014)
no board has attempted to invoke suo sponte review in the past 20 years; LBP-14-9, 80 NRC 15 (2014)
persons who are not parties may file an amicus curiae brief if a matter is taken up by the Commission
under 10 C.F.R. 2.341 or suo sponte; CLI-15-1, 81 NRC 1 (2015)
untimely filed contention is appropriate for suo sponte board review; LBP-14-9, 80 NRC 15 (2014)
with Commission’s express approval, a licensing board may make findings on a serious safety,
environmental, or common defense and security matter not put into controversy by the parties;
REVOCATION OF LICENSES
except for ownership of NRC-licensed materials outlined in the settlement agreement, licensee will refrain
from engaging in conducting radiography or a radiographer’s duties, or assisting, directing, or
supervising such activities in an NRC jurisdiction under an NRC license or an agreement state license;
LBP-11-3, 73 NRC 81 (2011)
if a board determines after full adjudication that the license amendment should not have been granted, it
may be revoked or conditioned; LBP-15-16, 81 NRC 618 (2015)
issued licenses can be revoked, conditioned, modified, or affirmed based on the evidence reviewed at the
request that NRC revoke license for falsification of information is addressed; DD-14-4, 79 NRC 506
(2014)
request under 10 C.F.R. 50.54(i) is to enable the Commission to determine whether or not the license
should be modified, suspended, or revoked; CLI-15-14, 81 NRC 729 (2015)
RIPENESS
courts decline to review tentative agency positions because doing so severely compromises the interests
that the ripeness doctrine protects; LBP-15-15, 81 NRC 598 (2015)
nonfinal rulemaking action can be ripe for review; LBP-15-15, 81 NRC 598 (2015)
in determining whether an issue is ripe for judicial decision, a court must evaluate fitness of the issues
for judicial decision and hardship to the parties of withholding court consideration; LBP-12-19, 76 NRC
184 (2012)
this doctrine is designed to prevent Article III courts from premature judicial review of abstract controversies and to protect the agencies from judicial interference until an administrative decision has been formalized and its effects felt in a concrete way by the challenging parties; LBP-12-19, 76 NRC 184 (2012)
this doctrine is drawn both from Article III limitations on judicial power and from prudential reasons for refusing to exercise jurisdiction; LBP-12-19, 76 NRC 184 (2012)

RISK ASSESSMENT
applicant is required to evaluate and reduce the risk of events that could have significant impacts on workers or the public; LBP-12-21, 76 NRC 218 (2012)
high-consequence events are required to be highly unlikely and intermediate-consequence events to be unlikely; LBP-12-21, 76 NRC 218 (2012)
request for information instructed all licensees to reevaluate seismic hazards at their sites using updated seismic hazard information, present-day guidance and methodologies, and a risk evaluation; DD-15-6, 81 NRC 884 (2015)
risk from groundwater releases at ocean sites would be a small fraction of that from atmospheric releases; CLI-12-15, 75 NRC 704 (2012)
See also Probabilistic Risk Assessment

RISK MANAGEMENT
because irradiated fuel is continually present in the spent fuel pool once the reactor discharges the first batch of spent fuel, and conditions are most challenging during reactor shutdown for refueling, maintenance of equipment related to the safe storage of spent fuel is typically addressed as part of shutdown risk management; DD-13-3, 78 NRC 571 (2013)
guidance for implementation of requirements during shutdown operations is provided in 10 C.F.R. 50.65(a)(4); DD-13-3, 78 NRC 571 (2013)

RISK-INFORMED PERFORMANCE-BASED PROGRAMS
uranium enrichment facility applicants must ensure that each item relied on for safety will be available and reliable to perform its function when needed; LBP-11-11, 73 NRC 455 (2011)

RISKS
as a logical proposition, risk equals the likelihood of an occurrence times the severity of the consequences; LBP-11-2, 73 NRC 28 (2011)
continued operation and licensing activities post-Fukushima do not pose an imminent risk to public health and safety; LBP-12-18, 76 NRC 127 (2012)
‘imminent risk’ reflects NRC’s determination that, post-Fukushima, continued operation of U.S. nuclear plants and continued licensing activities pose no imminent risk to public health and safety; CLI-15-19, 82 NRC 151 (2015)
NEPA is not intended to encompass every possible impact, and does not encompass potential losses due to individuals’ perception of a risk; LBP-12-24, 76 NRC 503 (2012); CLI-12-15, 75 NRC 704 (2012)
NRC has found, through its individual plant examination and individual plant examination for external events processes and other risk studies, that the severe accident risks are small for all U.S. licensed nuclear power plants; LBP-12-26, 76 NRC 559 (2012)
small doses of radiation below dose limits, while safe and acceptable, may have some associated risk and should be reduced below limits when reasonable; CLI-11-12, 74 NRC 460 (2011)
when the reference temperature of a reactor pressure vessel is above the screening limit, the RPV is considered to have an unreasonably high risk of fracture from a pressurized thermal shock event; LBP-15-17, 81 NRC 753 (2015)

RULE OF REASON
agencies need only address reasonably foreseeable impacts, not those that are remote and speculative or inconsequentially small; LBP-11-33, 74 NRC 675 (2011); LBP-11-38, 74 NRC 817 (2011); LBP-11-39, 74 NRC 862 (2011); LBP-12-17, 76 NRC 71 (2012)
agency decisions regarding the need to supplement an environmental impact statement based on new and significant information are subject to the rule of reason; LBP-11-26, 74 NRC 499 (2011)
although a severe accident mitigation alternatives analysis considers safety issues, it is actually an environmental review that must be judged under NEPA’s rule of reason and not under the safety requirements of the Atomic Energy Act; LBP-15-29, 82 NRC 246 (2015)
applicant's alternatives analysis need not discuss every conceivable alternative to the proposed action, but rather only feasible, non-speculative, and reasonable alternatives; LBP-11-13, 73 NRC 534 (2011) because NEPA is premised on a rule of reason, NRC need only consider reasonable alternatives to a proposed action; LBP-11-26, 74 NRC 499 (2011)

concept of alternatives under NEPA must be bounded by some notion of feasibility; CLJ-12-15, 75 NRC 704 (2012)

consistent with NEPA’s rule of reason, applicant and NRC Staff acted on the basis of best available information and analysis in completing the SAMA evaluation; LBP-13-13, 78 NRC 246 (2013) duty to prepare an environmental impact statement and to identify and consider every significant environmental impact is tempered by the rule of reason; LBP-13-4, 77 NRC 107 (2013)

environmental reports for license renewal must address environmental impacts of the proposed action and compare those impacts to the impacts of alternative actions, but need only consider those alternatives that are reasonable; LBP-12-15, 76 NRC 14 (2012)

extent of the no-action discussion is governed by a rule of reason, and discussion in the environmental documents need not be exhaustive or inordinately detailed; LBP-12-8, 75 NRC 539 (2012)
given the legal responsibility imposed upon a public utility to provide at all times adequate, reliable service, and the severe consequences that may attend upon a failure to discharge that responsibility, the most that can be required is that the forecast be a reasonable one in light of what is ascertainable at the time made; LBP-11-7, 73 NRC 254 (2011)

hard look under NEPA is subject to a rule of reason, and consideration of environmental impacts need not address all theoretical possibilities, but only those that have some reasonable possibility of occurring; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

if an alternative is commercially feasible and capable of bringing about the ends of the proposed project, then Staff may not dismiss it merely because it is inconsistent with the preferences of interested parties, or for other reasons inconsistent with NEPA’s rule of reason; LBP-12-17, 76 NRC 71 (2012)

legal adequacy of a final environmental impact statement is assessed under the rule of reason; LBP-13-4, 77 NRC 107 (2013)

NEPA does not exclude consideration of demand-side management as part of an alternatives analysis when applicant is a state-regulated utility; LBP-11-6, 73 NRC 149 (2011)

NEPA does not require a worst-case analysis; LBP-11-38, 74 NRC 817 (2011)

NEPA excludes consideration of remote and speculative impacts or worst-case scenarios; LBP-13-4, 77 NRC 107 (2013)

NEPA only requires that the environmental impact statement address those environmental impacts that are reasonably foreseeable; LBP-13-4, 77 NRC 107 (2013)

NEPA requirements are subject to a rule of reason, and an environmental impact statement need not address remote and highly speculative consequences; LBP-14-9, 80 NRC 15 (2014)

NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-11-38, 74 NRC 817 (2011); LBP-13-4, 77 NRC 107 (2013); LBP-13-13, 78 NRC 246 (2013); LBP-15-3, 81 NRC 65 (2015)

NEPA’s hard-look requirement is tempered by a rule of reason that requires agencies to address only impacts that are reasonably foreseeable, not those that are remote and speculative; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012); LBP-14-7, 79 NRC 451 (2014)

NEPA’s rule of reason is a judicial device to ensure that common sense and reason are not lost in the rubric of regulation and thus requires only reasonable forecasting; LBP-13-13, 78 NRC 246 (2013)

NRC’s environmental analysis need only consider environmental impacts that are reasonably foreseeable, and need not consider remote and speculative scenarios; LBP-13-13, 78 NRC 246 (2013) project goals determine the alternatives that are considered reasonable; LBP-12-17, 76 NRC 71 (2012) regardless of whether NRC itself conducts the need-for-power assessment or relies on another agency’s forecasts and studies, that assessment need only be reasonable; LBP-11-7, 73 NRC 254 (2011)

rule of reason is inherent in the National Environmental Policy Act and its implementing regulations; LBP-12-5, 75 NRC 227 (2012)

severe accident mitigation alternatives analysis is mandated by NEPA considerations and thus subject to a rule of reason; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
severe accident mitigation alternatives analysis is neither a worst-case nor a best-case impacts analysis, and the agency’s obligations under NEPA are tempered by a practical rule of reason; LBP-11-18, 74 NRC 29 (2013)
there is no NEPA requirement to use the best scientific methodology; LBP-11-38, 74 NRC 817 (2011); LBP-15-3, 81 NRC 65 (2015)
there will always be more data that could be gathered, but agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-13-13, 78 NRC 246 (2013)
to make an impact statement something more than an exercise in frivolous boilerplate, the concept of alternatives must be bounded by some notion of feasibility; LBP-13-4, 77 NRC 107 (2013)
with regard to reasonably foreseeable impacts, NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-15-3, 81 NRC 65 (2015)
within the rule of reason, an environmental impact statement must address both the direct and indirect effects or impacts; LBP-13-4, 77 NRC 107 (2013)

RULEMAKING
administrative agencies are allowed to address issues of general applicability through rulemaking instead of individual adjudications, and the choice made between proceeding by general rule or by individual, ad hoc, litigation is one that lies primarily within the informed discretion of the administrative agency; LBP-14-16, 80 NRC 183 (2014)
Administrative Procedure Act requires no more than a description of the subjects and issues involved in a notice of proposed rulemaking; LBP-15-15, 81 NRC 598 (2015)
admission of contentions that NRC may ultimately deal with generically through notice-and-comment rulemaking is precluded; LBP-11-32, 74 NRC 654 (2011)
advance notice of proposed rulemaking is a formal invitation to participate in shaping the proposed rule; LBP-15-15, 81 NRC 598 (2015)
ad advance notice of proposed rulemaking was withdrawn due to changes in market demand; LBP-15-15, 81 NRC 598 (2015)
agency can cease a rulemaking all together after a notice of proposed rulemaking has been issued; LBP-15-15, 81 NRC 598 (2015)
agency has discretion to choose between rulemaking and adjudication; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
agency is generally not required to issue a new notice of proposed rulemaking if it changes its position, as long as the final rule is a logical outgrowth of the proposed rule; LBP-15-15, 81 NRC 598 (2015)
agency need not submit a full draft of a rule in a notice of proposed rulemaking; LBP-15-15, 81 NRC 598 (2015)
any changes in NRC rules post-9/11 that might bear on license renewal reviews could be addressed via late-filed contentions; CLI-11-5, 74 NRC 141 (2011)
any interested person may petition the Commission to issue, amend, or rescind any regulation; CLI-12-19, 76 NRC 377 (2012); CLI-13-7, 78 NRC 199 (2013); CLI-13-10, 78 NRC 563 (2013)
any rule or policy changes NRC may make as a result of its post-Fukushima review may be made irrespective of whether a license renewal application is pending, or whether final action on an application has been taken; CLI-12-6, 75 NRC 352 (2012)
because generic impact determinations on impacts of continued storage have been the subject of extensive public participation in the rulemaking process, they are excluded from litigation in individual proceedings; LBP-14-15, 80 NRC 151 (2014)
because the Commission will have an opportunity to take a fresh look at concerns petitioners have expressed once the particulars of their rulemaking petition have been scrutinized by public comment and agency review, holding up proceedings is not necessary to ensure that the public will realize the full benefit of our ongoing regulatory review; CLI-11-1, 73 NRC 1 (2011)

1244
on rulemaking proceedings as the appropriate forum for settling basic policy issues; CLI-13-7, 78 NRC 199 (2013)
challenges to rules are appropriately lodged through a request for rulemaking; CLI-13-1, 77 NRC 1 (2013)
choice between rulemaking and adjudication (i.e., issuing orders or other license revisions) is within the
agency’s discretion; LBP-11-11, 73 NRC 455 (2011); CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
Commission may consider the rulemaking request of a nonparty as an exercise of its inherent supervisory
powers over proceedings; CLI-11-5, 74 NRC 141 (2011)
concerns about licensee’s response to a prolonged station blackout are being addressed in a rulemaking;
DD-12-2, 76 NRC 391 (2012)
concerns that apply generically to all spent fuel pools at all reactors are more appropriately addressed via
rulemaking or other appropriate generic activity; CLI-12-6, 75 NRC 352 (2012)
consideration in adjudicatory proceedings of issues presently to be taken up by the Commission in
rulemaking would be a wasteful duplication of effort; LBP-14-1, 79 NRC 39 (2014)
contentions that are the subject of general rulemaking by the Commission may not be litigated in
individual license proceedings; CLI-14-8, 80 NRC 71 (2014); LBP-14-15, 80 NRC 151 (2014); LBP-14-16, 80 NRC 183 (2014); LBP-15-4, 81 NRC 156 (2015); LBP-15-17, 81 NRC 753 (2015)
courts have relied on language accompanying proposed rulemakings to determine agency intent;
for contentions that fall within the facility’s current licensing basis, petitioner may seek action on its
concerns by either filing a petition for rulemaking under 10 C.F.R. 2.802 or submitting an enforcement
petition under 10 C.F.R. 2.206; LBP-11-21, 74 NRC 115 (2011)
for suspension of licensing proceedings, petitioners must show that continuation of proceedings, pending
consideration of a rulemaking petition, would jeopardize the public health and safety, prove an obstacle
to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or
policy changes that might emerge from NRC’s continued evaluation of the impacts of the Fukushima
accident; LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011)
generically applicable concerns are not appropriate for resolution in an adjudicatory proceeding, a
rulemaking petition being the appropriate mechanism for raising those concerns; CLI-12-6, 75 NRC 352 (2012)
given that NRC will have the opportunity to further consider the concerns that rulemaking petitioners
have expressed, and as it further considers actions related to the Fukushima events, it declines to
suspend any proceeding pending resolution of the rulemaking petition; LBP-15-4, 81 NRC 156 (2015)
if intervenor wishes to effect a substantive change to Part 50, Appendix E, § VI.2, it may petition for
if NRC determines that changes to its current environmental assessment rules are warranted, it can revisit
whether an individual licensing review or adjudication should be held in abeyance pending the outcome
of a relevant rulemaking; CLI-14-7, 80 NRC 1 (2014)
if petitioner wishes to challenge an NRC regulation, its recourse is to petition for a rule change;
LBP-11-15, 73 NRC 620 (2011)
if petitioner wishes to pursue its concerns about the safety of relocating certain surveillance frequencies
generically, it may, at any time, file a petition for rulemaking to amend the regulation; CLI-13-10, 78 NRC 563 (2013)
if petitioner’s challenge to an agency rule or regulation relates to an issue of broader significance, then
filing a petition for rulemaking is the better approach; CLI-13-7, 78 NRC 199 (2013)
it makes more sense for NRC to study whether, as a technical matter, the agency should modify its
requirements relating to spent fuel storage for all plants than to litigate the issue in particular
adjudications; CLI-12-6, 75 NRC 352 (2012)
legislative history of the Administrative Procedure Act emphasized the notice requirement for proposed
rulemaking in order to fairly apprise the public of the agency’s potential action; LBP-15-15, 81 NRC 598 (2015)
licensing boards (as opposed to the Commission) are not empowered to grant a request to suspend a
licensing proceeding pending disposition of a rulemaking petition; LBP-11-33, 74 NRC 675 (2011)
licensing boards should not accept in individual license proceedings contentions which are or are about to become the subject of general rulemaking by the Commission; CLI-12-16, 76 NRC 63 (2012); LBP-12-24, 76 NRC 503 (2012); CLI-15-9, 81 NRC 512 (2015); CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

licensing proceedings are not the appropriate venue for generic issues, especially those that are about to become the subject of rulemaking; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

many agency statements, including statements sometimes called “rules,” do not have force and effect, and advance notice and public participation are required for rules that carry the force of law; LBP-15-15, 81 NRC 598 (2015)

members of the public had the opportunity to fully participate in the Continued Storage rulemaking proceeding; CLI-15-10, 81 NRC 535 (2015)

nonfinal rulemaking action can be ripe for review; LBP-15-15, 81 NRC 598 (2015)

NRC has discretion to resolve issues generically by rulemaking; CLI-11-11, 74 NRC 427 (2011)

advance notice and public participation are required for rules that carry the force of law; LBP-15-15, 81 NRC 598 (2015)

NRC has discretion to transact its business broadly, through rulemaking, or case-by-case, through adjudication; CLI-13-7, 78 NRC 199 (2013)

NRC is not required to conduct a rulemaking proceeding or to withhold action on pending or future applications for nuclear power reactor operating licenses until it makes a determination that high-level radioactive wastes can be permanently disposed of safely; CLI-15-4, 81 NRC 221 (2015)

NRC regulations provide procedural mechanisms under 10 C.F.R. 2.206 and 2.802 by which petitioner may pursue its concerns about current deficiencies; LBP-15-6, 81 NRC 314 (2015)

NRC, by necessary implication, considered Indian tribe’s trust responsibility concerns during its rulemaking; LBP-14-16, 80 NRC 183 (2014)

NRC’s longstanding practice of considering environmental issues through general rulemaking in appropriate circumstances has been endorsed by higher courts; CLI-15-6, 81 NRC 340 (2015); LBP-12-18, 76 NRC 127 (2012)

once a proceeding has closed, the mechanism to raise a new issue no longer would be a contention accompanied by a motion to reopen, but rather a request for action under 10 C.F.R. 2.206 or a petition for rulemaking under 10 C.F.R. 2.802; CLI-12-3, 75 NRC 132 (2012)

ordinary burden to parties in pursuing litigation pending rulemaking does not justify disrupting ongoing license review; CLI-11-1, 73 NRC 1 (2011)

parties with new and significant information that could undermine the rationale for a Commission regulation must seek a rulemaking instead of challenging the regulation in a particular proceeding unless the information uniquely applies to a given adjudication; LBP-11-35, 74 NRC 701 (2011)

petitioner may file a petition for rulemaking to expand the scope of NRC license renewal regulations if it believes that applicant’s seismic design and licensing basis are now invalid and that safe operation of the plant can no longer be ensured; CLI-15-21, 82 NRC 295 (2015)

petitioner may request that the Commission suspend all or any part of any licensing proceeding to which petitioner is a party, pending disposition of the petition for rulemaking; CLI-11-5, 74 NRC 141 (2011)

petitioners assert that NRC Staff’s review of the expedited-transfer issue generated new and significant information regarding the environmental impacts of spent fuel storage; CLI-14-7, 80 NRC 1 (2014)

petitioners have not shown compelling circumstances requiring NRC to suspend final licensing decisions pending completion of rulemaking; CLI-14-7, 80 NRC 1 (2014)

petitioners request that NRC amend 10 C.F.R. 54.17(c) to permit a reactor licensee to file a license renewal application no sooner than 10 years before the expiration of the current license; CLI-11-1, 73 NRC 1 (2011)

post-Fukushima spent fuel pool concerns are being addressed through rulemaking on mitigation of beyond-design-basis events; DD-15-1, 81 NRC 193 (2015)

preamble to notice of proposed rulemaking addresses agency’s duty to identify and make available technical studies and data that it has employed in reaching the decisions to propose particular rules; LBP-15-15, 81 NRC 598 (2015)

precedence requires a licensing board to let EPA’s rulemaking run its course, allowing intelligent resolution of any remaining claims instead of piecemeal and repetitive litigation; LBP-15-15, 81 NRC 598 (2015)
purpose of notice of proposed rulemaking is not to set binding law or policy, but instead to provide interested members of the public an opportunity to comment in a meaningful way on the agency’s proposal; LBP-15-15, 81 NRC 598 (2015)

regarding waste confidence, NRC failed to comply with the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule; CLI-14-3, 79 NRC 31 (2014)

request that licensees should be required to maintain Emergency Response Data System capability throughout an accident will be addressed by an advance notice of proposed rulemaking; DD-14-2, 79 NRC 489 (2014)

request that NRC modify the administrative controls section of the standard technical specifications for each operating reactor design to reference the approved EOP technical guidelines for that plant design is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to modify the technical guidelines to include emergency operations procedures, severe accident mitigation guidelines, and extensive damage mitigation guidelines in an integrated manner, specify clear command and control strategies for their implementation, and stipulate appropriate qualification and training for those who make decisions during emergencies is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to revise their technical specifications to address requirements to have one train of onsite emergency electrical power operable for spent fuel pool makeup and spent fuel pool instrumentation when there is irradiated fuel in the spent fuel pool, regardless of the operational mode of the reactor is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

requirement for a notice of proposed rulemaking is to sufficiently and fairly apprise interested parties of the issues involved, rather than to specify every precise proposal that the agency may ultimately adopt; LBP-15-15, 81 NRC 598 (2015)

rulemaking petitioner may request a suspension of a licensing proceeding in which petitioner is a participant, pending disposition of the rulemaking petition; CLI-14-6, 79 NRC 445 (2014); CLI-14-7, 80 NRC 1 (2014)

section 2.802(d) suspension request is inapplicable where no petition for rulemaking has been filed before the Commission; CLI-14-6, 79 NRC 445 (2014)

sole remedy to challenge lawfulness of a regulation is to file a petition for rulemaking with the Commission; CLI-14-6, 79 NRC 445 (2014)

sole remedy to challenge the wisdom or lawfulness of 10 C.F.R. 51.53(c)(2) is to file a petition for rulemaking with the Commission; LBP-13-12, 78 NRC 239 (2013)

spent fuel storage pool matters will be addressed, if studies of implications from Fukushima warrant, through more generic regulatory reform; LBP-11-35, 74 NRC 701 (2011)

suspension provision provides an opportunity for a participant to ensure that a successful rulemaking petition is applied in an ongoing adjudication; CLI-14-7, 80 NRC 1 (2014)

suspension request that would have halted final licensing decisions pending action on a petition for rulemaking regarding NRC Staff’s review of the potential expedited transfer of spent fuel from pools to dry casks was denied; CLI-15-13, 81 NRC 555 (2015)

to the extent petitioner seeks to have applicant implement safety measures in addition to those ordered, its recourse is to petition for rulemaking or to petition for license modification, suspension, or revocation; LBP-12-14, 76 NRC 1 (2012)

to the extent that petitioner challenges the generic environmental impact statement, its remedy is a petition for rulemaking or a petition for a waiver of the rules based on circumstances; CLI-11-11, 74 NRC 427 (2011)

when engaging in rulemaking, the Commission is carving out issues from adjudication for generic resolution; CLI-13-7, 78 NRC 199 (2013)

where the basis behind the determination not to proceed with a rulemaking was a final agency ruling allowing for judicial review, the earlier advance notice of proposed rulemaking itself was not held to have any binding effect on the public; LBP-15-15, 81 NRC 598 (2015)

See also Denial of Rulemaking

RULES

Administrative Procedure Act broadly defines “rule” to include nearly every statement an agency may make; LBP-15-15, 81 NRC 598 (2015)
SUBJECT INDEX

contention quotes text from a notice of proposed rulemaking, but it never ties the statements from the NOPR to any specific section of the environmental assessment, and thus fails to raise a genuine dispute with the EA; LBP-15-15, 81 NRC 598 (2015)
examples of the kinds of facts that must be weighed when determining whether to grant an exemption are given; CLI-13-1, 77 NRC 1 (2013)
intervenors were correct to file contentions on a newly adopted rule because, unlike a proposed rule, it now has indisputable legal effect; LBP-15-15, 81 NRC 598 (2015)
request for exemption from a rule, by itself, does not give rise to an opportunity for hearing; CLI-13-1, 77 NRC 1 (2013)
rule exemption decisions should take into account the equities of each situation; CLI-13-1, 77 NRC 1 (2013)
where the reviewing court vacates a rule without reinstating the old rule, failure to reinstate the old rule creates a temporary regulatory vacuum; CLI-14-8, 80 NRC 71 (2014)
See also Continued Storage Rule; Regulations; Temporary Storage Rule; Waiver of Rule; Waste Confidence Rule

RULES OF PRACTICE

absence of a prohibition is not sufficient justification to admit a contention; CLI-15-23, 82 NRC 321 (2015)
absent a waiver or exception from the presiding officer, no NRC rule or regulation, or provision thereof, concerning licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; LBP-11-21, 74 NRC 115 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-15-26, 82 NRC 163 (2015)
absent a waiver, contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; CLI-12-19, 76 NRC 377 (2012); LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
absent a waiver, contentions that raise a direct or indirect challenge to a Commission regulation are inadmissible; CLI-15-3, 81 NRC 65 (2015); LBP-15-4, 81 NRC 156 (2015); LBP-15-5, 81 NRC 249 (2015)
absent error of law or abuse of discretion, the Commission defers to licensing board rulings on contention admissibility; CLI-11-9, 74 NRC 233 (2011); CLI-12-19, 76 NRC 377 (2012)
absent good cause, there must be a compelling showing on the remaining late-filing factors; CLI-12-10, 75 NRC 479 (2012)
adequacy of NRC Staff’s review of transmission-corridor impacts might be appropriate for the board’s consideration sua sponte; CLI-15-1, 81 NRC 1 (2015)
adherence to deadlines and procedures in NRC rules is required so that other litigants are not taken by surprise and are accorded an appropriate opportunity to respond to new arguments or new information; CLI-15-18, 82 NRC 135 (2015)
adjudication is not the proper forum for challenging applicable statutory requirements or the basic structure of the agency’s regulatory process; LBP-13-6, 77 NRC 253 (2013)
admissible action is issuing a demand for information is described; DD-15-11, 82 NRC 361 (2015)
admissible contention is required for grant of a hearing request; LBP-15-17, 81 NRC 753 (2015)
admissible contention must satisfy all six criteria of 10 C.F.R. 2.309(4)(1); CLI-15-21, 82 NRC 295 (2015); LBP-11-2, 73 NRC 28 (2011); LBP-11-9, 73 NRC 391 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-32, 74 NRC 654 (2011); LBP-11-39, 74 NRC 862 (2011); LBP-12-8, 75 NRC 539 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-12-23, 76 NRC 445 (2012); LBP-12-24, 76 NRC 503 (2012); LBP-13-8, 78 NRC 1 (2013); LBP-14-6, 79 NRC 404 (2014); LBP-15-5, 81 NRC 249 (2015); LBP-15-6, 81 NRC 314 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-18, 81 NRC 793 (2015); LBP-15-20, 81 NRC 829 (2015); LBP-15-24, 82 NRC 68 (2015)
admissible contentions must satisfy the six basic requirements of specificity, brief explanation, scope, materiality, concise statement of alleged facts or expert opinion, and genuine dispute; LBP-12-25, 76 NRC 540 (2012)
admission of late-filed contentions is allowed only upon a showing that information upon which the new contention is based was not previously available and is materially different than information previously available and the new contention has been submitted in a timely fashion based on the availability of the subsequent information; CLI-11-2, 73 NRC 333 (2011)
adoption of building code rules by a state presents new and materially different information not previously available, upon which Intervenors may rest their proposed contention; LBP-11-7, 73 NRC 254 (2011)

affidavits accompanying motions to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; LBP-15-14, 81 NRC 591 (2015)

affidavits setting forth factual and/or technical bases for the reopening criteria must address each criterion separately and provide a specific explanation of why it has been met; CLI-12-10, 75 NRC 479 (2012); LBP-11-20, 74 NRC 65 (2011)

after the section 2.309(b) deadline has passed for submitting an initial hearing petition with one or more accompanying contentions, petitioner/intervenor who wishes to amend an already submitted or admitted contention or gain admission of a new contention must file a motion for leave to file such a new or amended contention; LBP-13-10, 78 NRC 117 (2013)

all contentions must proffer an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-12-27, 76 NRC 583 (2012)

all contentions, regardless of when they are filed, must also satisfy the admissibility requirements; LBP-12-1, 75 NRC 1 (2012)

all disclosures under section 2.336(c) must be accompanied by a certification (in the form of a sworn affidavit) that all relevant materials required by this section have been disclosed, and that the disclosures are accurate and complete as of the date of the certification; LBP-14-2, 79 NRC 131 (2014)

all four factors must be met for a rule waiver request to be granted; LBP-12-26, 76 NRC 559 (2012)

all material facts set forth by summary disposition movant will be considered to be admitted unless controverted by the opposing party; LBP-11-4, 73 NRC 91 (2011); LBP-12-26, 76 NRC 559 (2012)

all parties are obliged to follow the procedures in 10 C.F.R. Part 2 and board scheduling orders; CLI-14-10, 80 NRC 157 (2014)

all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-12-3, 75 NRC 164 (2012)

all properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-12-3, 75 NRC 164 (2012)

although 10 C.F.R. 2.337(f), by its terms, applies to evidence at hearings, the bounds that this rule places on official notice is also appropriate for the contention admissibility stage of a proceeding; LBP-11-7, 73 NRC 254 (2011)

although a board may view petitioner’s supporting information in a light favorable to petitioner, petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; LBP-11-16, 73 NRC 645 (2011)

although an intervention petition itself was timely filed, the board must balance the eight factors to determine whether petitioner’s late-filed exhibits are admissible; LBP-11-13, 73 NRC 534 (2011)

although intervenors may use discovery to develop a case once contentions are admitted, contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact(s) demonstrating a genuine material dispute with the applicant; CLI-12-5, 75 NRC 301 (2012)

although it is risky for a nonmoving party to fail to proffer evidence in response to the summary judgment movant’s showing, such a failure does not automatically mandate granting of the motion; LBP-11-4, 73 NRC 91 (2011)

although NRC regulations mandate that a petition contain the name, address, and telephone number of petitioner, the Commission’s hearing notice advises prospective petitioners not to include personal privacy information, such as home addresses or home phone numbers, in their filings; LBP-11-21, 74 NRC 115 (2011)

although NRC rules do not provide for the filing of amicus curiae briefs on motions filed pursuant to 10 C.F.R. 2.323, as a matter of discretion the Commission has reviewed both an amicus brief and the opposition to it; CLI-14-11, 80 NRC 167 (2014)
although NRC Staff is not required to be a party to a license transfer adjudication, the Commission directs the Staff to become a party; CLI-14-5, 79 NRC 254 (2014)
although petitioner proffered a contention within 30 days of events that prompted it, this does not automatically render a newly proffered contention timely; LBP-11-15, 73 NRC 629 (2011)
although pro se litigants are expected to comply with procedural rules, they are generally extended some latitude; LBP-11-2, 73 NRC 28 (2011)
although rules do not provide for filing of reply briefs, as a matter of discretion the Commission reviews a reply brief; CLI-15-7, 81 NRC 481 (2015)
although the better practice would be to file a notice of appearance, pursuant to section 2.304(d), the signature of a person signing a pleading is a representation that the document has been subscribed in the capacity specified with full authority; LBP-13-12, 78 NRC 239 (2013)
although the entire record is considered on appeal, including pleadings that appellants ask to be adopted by reference, the Commission’s decision responds to the arguments made explicitly in the appellate brief; CLI-11-8, 74 NRC 214 (2011)
amended contentions filed after the initial filing period has expired may be admitted only with leave of the licensing board if they satisfy the three criteria of 10 C.F.R. 2.309(f)(2)(i)-(iii); LBP-12-9, 75 NRC 615 (2012)
amended contentions must satisfy general contention admissibility criteria and either the timeliness standards of section 2.309(x)(2) or the balancing test in section 2.309(c) for nontimely contentions; LBP-12-9, 75 NRC 615 (2012)
amended regulations apply to obligations and disputes that arise after the effective date of the regulation; LBP-15-1, 81 NRC 15 (2015)
amendment of 10 C.F.R. 2.309 in 2012 was to simplify the rules, not fundamentally change the rationale boards use to admit new/amended contentions; LBP-15-11, 81 NRC 401 (2015)
amendment of contentions and submission of new contentions are allowed when good cause is shown; CLI-12-1, 75 NRC 39 (2012)
amicus curiae briefs may be filed when the Commission has taken up a matter pursuant to section 2.341 or sua sponte; CLI-14-11, 80 NRC 167 (2014); CLI-15-4, 81 NRC 221 (2015); CLI-15-5, 81 NRC 329 (2015); CLI-15-10, 81 NRC 535 (2015); CLI-15-23, 82 NRC 321 (2015)
any contention filed within 30 days of the date when new and material information on which it is based first became available is regarded as timely; LBP-12-9, 75 NRC 615 (2012)
any contention that falls outside the specified scope of the proceeding must be rejected; LBP-12-27, 76 NRC 583 (2012)
any contention, regardless of when it is filed, must meet the requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-11-20, 74 NRC 65 (2011)
any doubt as to the existence of a genuine issue of material fact is resolved against the summary disposition movant; LBP-11-4, 73 NRC 91 (2011)
any person may file a request to institute a proceeding to modify, suspend, or revoke a license; LBP-11-6, 73 NRC 149 (2011)
any person or organization seeking to intervene as a party in an NRC adjudicatory proceeding addressing a proposed licensing action must establish standing and proffer at least one admissible contention; LBP-11-13, 73 NRC 534 (2011)
appeal as of right from a board’s ruling on an intervention petition is permitted only upon denial of a petition to intervene and/or request for hearing, on the question as to whether it should have been granted or upon the granting of a petition to intervene and/or request for hearing, on the question as to whether it should have been wholly denied; CLI-14-3, 79 NRC 31 (2014)
appeal as of right is allowed on the question whether a request for hearing should have been wholly denied; CLI-12-19, 76 NRC 377 (2012); CLI-15-18, 82 NRC 135 (2015); CLI-15-25, 82 NRC 389 (2015)
appeal as of right on the question of whether an initial intervention petition should have been wholly denied or, alternatively, was granted improperly are governed by 10 C.F.R. 2.311; CLI-12-7, 75 NRC 379 (2012); CLI-12-12, 75 NRC 603 (2012)
appeal as of right will be granted on the question whether a request for hearing or petition to intervene should have been granted; CLI-15-21, 82 NRC 295 (2015)
appeal of an order selecting a hearing procedure is permitted on the question as to whether the selection of the particular hearing procedures was in clear contravention of the criteria set forth in section 2.310; CLI-14-3, 79 NRC 31 (2014)
appeals from an order ruling on the admission of new or amended contentions is not permitted; LBP-14-5, 79 NRC 377 (2014)
appeals of board rulings on hearing requests, petitions to intervene, and access to certain nonpublic information are governed by 10 C.F.R. 2.311(a); CLI-12-6, 75 NRC 352 (2012)
appeals of contention admissibility rulings are available only upon denial of a petition to intervene and/or request for hearing on the question of whether it should have been granted or upon the grant of a petition to intervene and/or request for hearing on the question of whether it should have been wholly denied; CLI-13-3, 77 NRC 51 (2013)
appealants must clearly identify the errors in the decision below and ensure that their brief contains sufficient information and cogent argument to alert the other parties and the Commission to the precise nature of and support for their claims; CLI-11-8, 74 NRC 214 (2011)
appellate review of interlocutory licensing board orders is disfavored, and will be undertaken as a discretionary matter only in extraordinary circumstances; CLI-11-10, 74 NRC 251 (2011)
appellate review of the majority of presiding officer decisions is governed by 10 C.F.R. 2.341(a)(1); CLI-12-6, 75 NRC 352 (2012)
apponent may file an interlocutory appeal of board orders admitting contentions, but only if the appeal challenges the admissibility of all admitted contentions; CLI-12-12, 75 NRC 603 (2012)
apponent satisfied the regulatory standards for discretionary review by identifying a substantial question as to whether the board decision reaches at least one necessary legal conclusion without governing precedent or addresses at least one substantial and important question of law, policy, or discretion; CLI-13-1, 77 NRC 1 (2013)
apponent’s change of legal position, its claims that such change no longer entails a need for an exemption from the regulations, and its identification of new means/systems to satisfy the regulations are all types of materially different new information that can enable a contention to satisfy the timely new or amended contention requirements of 10 C.F.R. 2.309(f)(2)(i)-(ii); LBP-11-9, 73 NRC 391 (2011)
appropriate mechanism to challenge individual contention admissibility determinations following a ruling on an initial petition is a request for interlocutory review; CLI-12-12, 75 NRC 603 (2012)
argument that applying heightened late-filing standards to contentions triggered by the NRC Staff’s review documents violates a petitioner’s AEA hearing rights has been considered and rejected; CLI-12-14, 75 NRC 692 (2012)
as a consequence of the Commission ruling that the board should have terminated the proceeding once it resolved all contentions, all of the board’s earlier interlocutory orders become ripe for appellate review; CLI-12-14, 75 NRC 692 (2012)
at issue is not whether evidence unmistakably favors one side or the other, but whether there is sufficient evidence favoring the summary disposition opponent for a reasonable trier of fact to find in favor of that party; LBP-11-4, 73 NRC 91 (2011)
at the admission stage, petitioners should provide a minimal showing that material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate; LBP-11-13, 73 NRC 534 (2011)
at the contention admissibility stage, a board evaluates whether a petitioner has provided sufficient support to justify admitting the contention for further litigation; CLI-11-8, 74 NRC 214 (2011)
at the contention admissibility stage, petitioners need not marshal their evidence as though preparing for an evidentiary hearing; LBP-11-21, 74 NRC 115 (2011)
at the contention admissibility stage, the burden is on intervenors to demonstrate a deficiency in the application; CLI-11-9, 74 NRC 233 (2011)
at the contention pleading stage, parties must come forward with sufficiently detailed grievances to allow a board to conclude that genuine disputes exist justifying a commitment of adjudicatory resources; LBP-11-21, 74 NRC 115 (2011)
at the summary disposition stage, the judge’s function is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; LBP-11-14, 73 NRC 591 (2011)
attaching material or documents as a basis for a contention, without setting forth an explanation of that information’s significance, is inadequate to support admission; LBP-12-15, 76 NRC 14 (2012);
LBP-13-6, 77 NRC 253 (2013)
availability of new information may provide good cause for nontimely filing, but the test for good cause is not simply when the intervenor became aware of the material sought to be introduced but when the information became available and when the intervenor reasonably should have become aware of the information; LBP-11-7, 73 NRC 254 (2011)

bald allegations do not suffice to support contention admissibility; LBP-13-8, 78 NRC 1 (2013)

bare assertions and speculation are insufficient to support the heavy burden placed on the proponent of a motion to reopen to demonstrate that the motion should be granted; CL1-11-8, 74 NRC 214 (2011)

bare assertions and speculation do not supply the requisite support for a motion to reopen; CL1-11-2, 73 NRC 333 (2011)

bald assertions are insufficient to support a contention; CL1-11-11, 74 NRC 427 (2011)

bare assertions in a contention run afoul of NRC’s intention to focus the hearing process and provide notice to the other parties; LBP-11-21, 74 NRC 115 (2011)

basis for allowing immediate appellate review of partial initial decisions rests on prior appeal board decisions permitting review of a licensing board ruling that disposes of a major segment of the case or terminates a party’s right to participate; CL1-11-14, 74 NRC 801 (2011)
because a pro se first-time filer experienced problems with the NRC E-Filing system, the board concludes that petitioners’ efforts demonstrate the requisite good cause for acceptance of the nontimely exhibits for consideration with the timely filed petition; LBP-11-13, 73 NRC 534 (2011)
because applicant did not comply with the consultation requirement of 10 C.F.R. 2.323(b), the board does not consider information supplied with applicant’s letter in connection with the board’s analysis of petitioner’s contention; LBP-11-2, 73 NRC 28 (2011)
because parties to a Subpart L proceeding may not seek discovery from the other parties to the proceeding, all such parties must make periodic mandatory disclosures; LBP-14-2, 79 NRC 131 (2014)
because petitioner’s claim of likelihood of success on the merits is conclusory, with no attempt to show how they would be likely to prevail, the motion to reopen falls far short of meeting the requirements until the end of the case; CL1-11-2, 79 NRC 11 (2014)
because the initial burden rests on the summary disposition movant, a licensing board must examine the record in the light most favorable to the nonmoving party and all justifiable inferences must be drawn in favor of the nonmoving party; LBP-11-4, 73 NRC 91 (2011); LBP-11-14, 73 NRC 591 (2011)
because the motion to reopen and contention are based on information that is neither new nor materially different from information that was previously available, the motion and contention are untimely;
LBP-12-11, 75 NRC 731 (2012)

“belief” that is not supported by alleged facts or expert opinion renders a contention inadmissible; LBP-15-26, 82 NRC 163 (2015)

board authority under section 2.338(i) is to approve or reject a settlement agreement, and so it cannot amend the agreement without consent of the parties; LBP-15-21, 82 NRC 1 (2015)

board conducted an initial scheduling conference to discuss development of an initial scheduling order that would help achieve just resolution of a dispute as efficiently and expeditiously as possible; LBP-14-11, 80 NRC 125 (2014)

board denies petition for rule waiver but refers the decision to the Commission because the legal issue presented by the petition is novel and worthy of the Commission’s immediate attention; LBP-13-1, 77 NRC 57 (2013)

board has discretion to consider an untimely motion to reopen if the motion presents an exceptionally grave issue; LBP-15-14, 81 NRC 591 (2015)

board may grant a timely filed petition to intervene if it concludes that petitioner has established standing and proffered at least one admissible contention; LBP-15-26, 82 NRC 163 (2015)

board must request that the Commission approve the board’s determination that sua sponte review is warranted; LBP-14-9, 80 NRC 15 (2014)
board order is appealable when it disposes of a major segment of the case or terminates a party’s right to participate; CLI-11-10, 74 NRC 251 (2011)

board permitted any person who was not a party to the proceeding to submit written limited appearance statements concerning the issues in the proceeding; LBP-13-13, 78 NRC 246 (2013)

board properly rejected state’s contention that raised concerns similar to those in its rulemaking petition as an impermissible challenge to NRC regulations; CLI-12-6, 75 NRC 352 (2012)

board refused to consider new bases that were included in an answer to summary disposition motion and were outside the scope of the original contention; LBP-11-4, 73 NRC 91 (2011)

board suspended mandatory disclosure obligations until further notice; CLI-12-14, 75 NRC 692 (2012)

boards admit contentions, not their supporting bases; LBP-11-2, 73 NRC 28 (2011)

boards are precluded from hearing rule challenges absent a showing of special circumstances; LBP-14-9, 80 NRC 15 (2014)

boards are to construe intervention petitions in favor of petitioners in determining whether petitioner has demonstrated standing; LBP-11-2, 73 NRC 28 (2011)

boards cannot grant summary disposition unless movant discharges its burden of demonstrating that it is entitled to a decision as a matter of law; LBP-12-4, 75 NRC 213 (2012)

boards cannot reconstruct intervenor’s pleadings to find that they might be interpreted to satisfy the requirements for reopening a record where the intervenor itself has explicitly argued it need not; LBP-11-20, 74 NRC 65 (2011)

boards do not adjudicate disputed facts at the contention admission stage; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-21, 74 NRC 115 (2011)

boards have an independent obligation to determine whether petitioners meet the threshold criterion for intervention even if their standing is uncontested; LBP-12-24, 76 NRC 503 (2012)

boards in individual licensing proceedings are expected to assess contentions against applicable procedural standards; CLI-12-7, 75 NRC 379 (2012)

boards look to judicial concepts of standing and determine whether petitioner is threatened with a concrete injury and the injury is fairly traceable to the licensing action and capable of being redressed by a favorable decision; LBP-12-24, 76 NRC 503 (2012)

boards may afford an interested state, local governmental body, and federally recognized Indian tribe that has not been admitted as a party under section 2.309 a reasonable opportunity to participate in a hearing; LBP-15-24, 82 NRC 68 (2015)

boards may appropriately view petitioner’s supporting information in a light favorable to petitioner, but failure to provide such information requires that the contention be rejected; LBP-12-3, 75 NRC 164 (2012); LBP-15-12, 76 NRC 14 (2012); LBP-13-6, 77 NRC 253 (2013)

boards may make findings of fact and conclusions of law on any matter not put into controversy by the parties, but only to the extent that the presiding officer determines that a serious safety, environmental, or common defense and security matter exists, and the Commission approves of an examination of and decision on the matter upon its referral by the presiding officer; LBP-14-9, 80 NRC 15 (2014)

boards may take official notice of any fact of which a court of the United States may take judicial notice or of any technical or scientific fact within the knowledge of the Commission as an expert body; LBP-11-20, 74 NRC 65 (2011)

boards must balance the eight factors to determine whether petitioner’s late-filed petition will be considered and good cause for the failure to file on time is the most important; LBP-11-2, 73 NRC 28 (2011)

boards must request Commission approval to undertake sua sponte review; CLI-15-1, 81 NRC 1 (2015)

boards must view the record in the light most favorable to the summary disposition opponent; LBP-12-19, 76 NRC 184 (2012)

boards should refer rulings that raise novel or legal policy issues that would benefit from Commission review; CLI-11-11, 74 NRC 427 (2011)

boards will not hunt for information that the agency’s procedural rules require be explicitly identified and fully explained; CLI-11-8, 74 NRC 214 (2011)

brief explanation of the basis for a contention is required; LBP-11-13, 73 NRC 534 (2011)

brief explanation of the rationale underlying the contention is sufficient to satisfy 10 C.F.R. 2.309(d)(1)(ii); LBP-15-24, 82 NRC 68 (2015)
briefs on appeal are limited to 30 pages, absent Commission order directing otherwise; CLI-11-8, 74 NRC 214 (2011)
briefs on appeal must conform to the requirements stated in 10 C.F.R. 2.341(c)(2); CLI-11-8, 74 NRC 214 (2011)
burden is on intervenors to demonstrate that a balancing of the factors of 10 C.F.R. 2.309(c)(i)-(viii) weighs in favor of granting a late-filed petition; LBP-12-27, 76 NRC 583 (2012)
burden of satisfying the requirement for reopening a record is a heavy one; CLI-11-2, 73 NRC 333 (2011)
burden of setting forth a clear and coherent argument is on petitioner, and it should not be necessary to speculate about what a pleading is supposed to mean; CLI-11-2, 73 NRC 333 (2011)
by filing proposed new or amended contention within the time specified in the initial scheduling order, petitioner satisfies timeliness requirements but would still have to satisfy the other requirements of section 2.309(b)(2) or section 2.309(c), as well as the contention admissibility requirements of 10 C.F.R. 2.309(c)(1); LBP-11-22, 74 NRC 259 (2011)
case law test for rule waiver establishes an appreciably higher burden for would-be waiver seekers than does 10 C.F.R. 2.335(b); LBP-14-16, 80 NRC 183 (2014)
caution should be exercised in granting summary disposition, which may be denied if there is reason to believe that the better course would be to proceed to a full hearing; LBP-11-7, 73 NRC 254 (2011)
challenges to an agency rule or regulation in an adjudicatory proceeding without a waiver of that rule or regulation are prohibited; CLI-15-21, 82 NRC 295 (2015)
challenges to an enhanced version of an application alone are insufficient to vitiate intervenors’ obligation to file any challenges to the original version of that application at the outset of the proceeding; LBP-11-9, 73 NRC 391 (2011)
challenges to board rulings on late-filed contentions normally fall under NRC rules for interlocutory review; CLI-12-7, 75 NRC 379 (2012)
challenges to rules are appropriately lodged through a request for rulemaking; CLI-13-1, 77 NRC 1 (2013)
Commission affirmed the board’s standing ruling, but declined to accept review of challenges to the board’s admission of two contentions because petitioner had failed to perfect its appeal by challenging the validity of the board’s admissibility rulings regarding other contentions; LBP-15-3, 81 NRC 65 (2015)
Commission did not intend to relieve third-party individuals who are not the subject of an enforcement order, but who nonetheless seek a hearing on the order, from satisfying the requirements for a petition for intervention in section 2.309; LBP-14-4, 79 NRC 319 (2014)
Commission discourages piecemeal appeals; CLI-12-12, 75 NRC 603 (2012)
Commission does not consider hearing requests after the deadline in section 2.309(b) has passed absent a determination that petitioner has demonstrated good cause by showing the criteria of this section have been met; CLI-14-11, 80 NRC 167 (2014)
Commission justifiably expects that all applicable provisions of the Rules of Practice will be observed in adjudicatory submissions, but it also expects the Staff to turn square corners with those with whom it deals, including applicants for SRO licenses; LBP-13-3, 77 NRC 82 (2013)
Commission may grant a petition for review at its discretion, giving due weight to whether there exists a substantial question regarding the considerations in 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-11-9, 74 NRC 233 (2011); CLI-12-7, 75 NRC 379 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-12-15, 75 NRC 213 (2015); CLI-15-19, 82 NRC 151 (2015)
Commission toughened its contention admissibility rule in 1989 to ensure that only intervenors with genuine and particularized concerns participate in NRC hearings; LBP-11-6, 73 NRC 149 (2011)
Commission will not accept the filing of a vague, unpaticularized issue; CLI-11-2, 73 NRC 333 (2011)
complex, fact-intensive issues are rarely appropriate for summary disposition, much less for resolution on the initial pleadings; LBP-11-2, 73 NRC 28 (2011)
conclusory allegations about potential radiological harm are insufficient to establish standing; CLI-11-3, 73 NRC 613 (2011)
conclusory statement that appellants proved their position is not sufficient to show clear error or abuse of discretion on the part of the board; CLI-11-8, 74 NRC 214 (2011)
1254
confidential commercial information, release of which likely would lead to substantial competitive harm, is entitled to protection; CLI-15-24, 82 NRC 331 (2015)

Congress called upon the Commission to make fundamental changes in its public hearing process to ensure that hearings adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; LBP-11-6, 73 NRC 149 (2011)

consolidating proceedings is the exception rather than the rule; CLI-14-5, 79 NRC 254 (2014)

contemporaneous judicial concepts of standing are applied in NRC proceedings; LBP-12-8, 75 NRC 539 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-13-8, 78 NRC 1 (2013)

contemporaneous judicial concepts of standing require a petitioner to allege an injury in fact that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-11-6, 73 NRC 149 (2011)

content of settlement agreements is set forth in 10 C.F.R. 2.338(b); LBP-15-21, 82 NRC 1 (2015)

contention admissibility requirements are strict by design to help ensure that the NRC hearing process will be appropriately focused upon disputes that can be resolved in the adjudication; LBP-11-29, 74 NRC 612 (2011)

contention admissibility requirements do not apply to hearing demands submitted under section 2.103(b)(2) and petitioner lacked actual and constructive notice of the contention admissibility requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)

contention admissibility requirements seek to ensure that NRC hearings serve to adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; CLI-15-8, 81 NRC 500 (2015)

contention admissibility rule serves to ensure that admitted contentions focus on real disputes that can be resolved in an adjudication, establish a sufficient factual and legal foundation to warrant further inquiry, and put other parties on notice of the disputed issues so they will know precisely those claims they must support or oppose; LBP-11-6, 73 NRC 149 (2011)

contention admissibility rule should not serve as a fortress to deny intervention; LBP-11-6, 73 NRC 149 (2011)

contention admissibility rules are strict by design and exist to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-14-4, 79 NRC 319 (2014); LBP-14-5, 79 NRC 377 (2014); LBP-15-15, 81 NRC 598 (2015); LBP-15-20, 81 NRC 829 (2015)

contention admissibility rules do not permit the filing of a vague, unparticularized contention, unsupported by affidavit, expert, or documentary support; LBP-14-5, 79 NRC 377 (2014)

contention admissibility rules require that a proposed contention be supported by alleged fact or expert opinion; CLI-12-7, 75 NRC 379 (2012)

contention admissibility standards are deliberately strict, and any contention that does not satisfy NRC requirements will be rejected; CLI-11-8, 74 NRC 214 (2011)

contention admissibility test in section 2.309(f)(1) was crafted by the Commission to raise the threshold bar for an admissible contention; LBP-11-6, 73 NRC 149 (2011)

contention alleging deficiencies or errors in an application also must indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-12-27, 76 NRC 583 (2012)

contention challenging a Commission rule is beyond the scope of the proceeding; LBP-14-16, 80 NRC 183 (2014)

contention claims must be set forth with particularity; CLI-12-1, 75 NRC 39 (2012)

contention fails to satisfy the good cause requirements of 10 C.F.R. 2.309(c)(i) because its foundational argument does not rest upon new and materially different information and could and should have been filed at the outset of the proceeding; LBP-11-35, 74 NRC 701 (2011)

contention is inadmissible for failing to raise a material issue; LBP-15-26, 82 NRC 163 (2015)

contention is inadmissible for failure to show that a genuine dispute exists with applicant on a material issue of law or fact; LBP-11-33, 74 NRC 675 (2011)

contention must be rejected if it attacks applicable statutory requirements or regulations, challenges the basic structure of the regulatory process, merely expresses petitioner’s view of policy, seeks to raise an issue improper for adjudication in the proceeding or not applicable to the facility in question, or raises an issue that is not concrete or is otherwise not litigable; LBP-11-6, 73 NRC 149 (2011)
contention must provide sufficient information to show a genuine dispute with applicant on a material issue of law or fact; CLI-15-20, 82 NRC 211 (2015); LBP-12-13, 75 NRC 784 (2012)

contention or amendment or supplement to a contention is considered timely if filed 60 days of the date when the material information on which it is based first becomes available to the moving party through service, publication, or any other means; LBP-12-27, 76 NRC 583 (2012)

contention relating to a matter not previously in controversy among the parties must satisfy the requirements of section 2.309(c) and (f); LBP-14-8, 79 NRC 519 (2014)

contention that fails to raise a material issue is inadmissible; LBP-12-25, 76 NRC 540 (2012)

contention that requires the tribe to formulate contentions before a final EIS is released and failing to follow scoping process violates NEPA is inadmissible; LBP-15-9, 78 NRC 500 (2015)

contention that seeks to impose a requirement beyond those imposed by a Commission regulation is inadmissible; LBP-15-26, 82 NRC 227 (2015)

contention that simply states petitioner’s views about what regulatory policy should be does not present a litigable issue; LBP-13-6, 77 NRC 253 (2013)

contention that was originally admitted as a challenge to the environmental report may be treated as a challenge to the similar section of the draft environmental impact statement; LBP-11-1, 73 NRC 19 (2011)

contentions based on bare assertions and speculation will not be admitted; LBP-13-8, 78 NRC 1 (2013)

contentions that the application fails to contain information on a relevant matter as required by law and provides the supporting reasons for petitioner’s belief; LBP-15-5, 81 NRC 249 (2015)

contention that final environmental assessment fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-13-6, 77 NRC 37 (2013)

contention that was originally admitted as a challenge to the environmental report may be treated as a challenge to the similar section of the draft environmental impact statement; LBP-11-1, 73 NRC 19 (2011)

contention that provides no reference to any specific portion of the license amendment request that petitioners dispute is inadmissible; LBP-13-11, 78 NRC 177 (2013)

contention that challenges the legal sufficiency of the final environmental impact statement for a combined license is within the scope of the proceeding; LBP-12-18, 76 NRC 127 (2012)

contention that failing to follow scoping process violates NEPA is inadmissible; LBP-12-15, 76 NRC 14 (2012); LBP-12-18, 76 NRC 127 (2012)

contention that seeks to impose a requirement beyond those imposed by a Commission regulation is inadmissible; LBP-15-26, 82 NRC 163 (2015)

contention that simply states petitioner’s views about what regulatory policy should be does not present a litigable issue; LBP-13-6, 77 NRC 253 (2013)

contention that was originally admitted as a challenge to the environmental report may be treated as a challenge to the similar section of the draft environmental impact statement; LBP-11-1, 73 NRC 19 (2011)

contentions based on bare assertions and speculation will not be admitted; LBP-13-8, 78 NRC 1 (2013)

contentions based on new information in a document that was not previously available and that is materially different from a document that was previously available are not untimely simply for not being included in an intervenor’s initial hearing request filed at the outset of a proceeding; LBP-11-9, 73 NRC 391 (2011)

contentions calling for requirements in excess of those imposed by regulations will be rejected as a collateral attack on regulations; CLI-12-5, 75 NRC 301 (2012)

contentions filed after the deadline for initial intervention petitions also must satisfy the standards for late-filed contentions; CLI-12-15, 75 NRC 704 (2012)

contentions filed after the initial petition are not subject to appeal pursuant to 10 C.F.R. 2.311; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012)
contentions for adjudicatory hearings must raise a genuine dispute with the applicant/licensee on a material issue of law or fact; CLI-12-10, 75 NRC 479 (2012)

contentions must be based on a genuine material dispute, not the possibility that petitioners, if they perform their own additional analyses, may ultimately disagree with the application; LBP-14-6, 79 NRC 404 (2014)

contentions must be based on documents or other information available at the time the petition is to be filed, such as the application, supporting safety analysis report, environmental report or other supporting document filed by an applicant or licensee, or otherwise available to a petitioner; LBP-11-29, 74 NRC 612 (2011)

contentions must be raised at the earliest possible opportunity; CLI-15-1, 81 NRC 1 (2015)

contentions must be raised with sufficient detail to put the parties on notice of the issues to be litigated; CLI-11-11, 74 NRC 427 (2011)

contentions must be set forth with particularity and must meet all six contention admissibility factors; CLI-15-18, 82 NRC 135 (2015); LBP-15-26, 82 NRC 163 (2015)

contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and directive referring the proceeding to the licensing board; LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-14-6, 79 NRC 404 (2014)

contentions must demonstrate that the issue raised is material to the findings NRC must make for the licensing action at issue; CLI-12-15, 75 NRC 704 (2012)

contentions must focus on the license application, including the safety analysis report/technical report and the environmental report, challenging either specific portions or alleged omissions so as to establish a genuine dispute on a material issue of law or fact; LBP-12-15, 76 NRC 14 (2012); LBP-13-6, 77 NRC 253 (2013)

contentions must provide a concise statement of the alleged facts or expert opinions that support petitioner’s position on the issue and on which petitioner intends to rely at hearing, together with references to the specific sources and documents on which petitioner intends to rely to support its position fact; CLI-15-8, 81 NRC 500 (2015); LBP-12-24, 76 NRC 503 (2012); LBP-14-6, 79 NRC 404 (2014)

contentions must raise a genuine dispute with the license application and must have underlying factual or legal support; CLI-12-15, 75 NRC 704 (2012); CLI-14-6, 79 NRC 445 (2014)

contentions must satisfy the twin precepts of timeliness and admissibility; LBP-13-10, 78 NRC 117 (2013)

contentions need not be proven at the admissibility stage; LBP-13-8, 78 NRC 1 (2013)

contentions need to have some reasonably specific factual or legal basis; CLI-15-8, 81 NRC 500 (2015)

contention’s proponent, not the licensing board, is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement its admission; CLI-12-5, 75 NRC 301 (2012)

contentions proposed after the filing deadline, which would have been allowable under the previous 10 C.F.R. 2.309(f)(2) requirements, will also be allowable under the current section 2.309(c)(1) requirements; LBP-15-11, 81 NRC 401 (2015)

contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact or facts demonstrating a genuine material dispute with the applicant; LBP-12-8, 75 NRC 539 (2012)

contentions should refer to portions of the application that petitioner disputes along with supporting reasons for each dispute, if petitioner believes that an application fails altogether to contain information required by law, petitioner must identify each failure and provide supporting reasons for petitioner’s belief; CLI-15-8, 81 NRC 500 (2015)

contentions submitted after the deadline for initial intervention petitions must satisfy the standards for late-filed contentions; CLI-12-10, 75 NRC 479 (2012)

contentions submitted after the initial filing period for receipt of petitions to intervene must be based on information not previously available and materially different than information previously available and must be submitted in a timely fashion based on availability of the new information; LBP-12-27, 76 NRC 583 (2012)
contentions that address an important security issue regarding Part 74’s strict requirements for the proposed facility, which applicant previously admitted it failed to satisfy, are admissible; LBP-11-9, 73 NRC 391 (2011)

contentions that amount to an attack on applicable statutory requirements or represent a challenge to the basic structure of the Commission’s regulatory process must be rejected; LBP-11-29, 74 NRC 391 (2011)

contentions that are not accompanied by sufficient factual support to raise a genuine dispute are inadmissible; LBP-13-12, 78 NRC 239 (2013)

contentions that challenge an NRC regulation are inadmissible; LBP-13-12, 78 NRC 239 (2013)

contentions that challenge applicant’s compliance with the loss-of-large-areas requirements of 10 C.F.R. 50.54(hh)(2) are not admissible because they are not within the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)

contentions that fail to directly controvert the application or that mistakenly assert that the application does not address a relevant issue will be dismissed; LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013)

contentions that fail to satisfy timeliness standards in section 2.309(f)(2) may still be admitted pursuant to a balancing test governing nontimely filings that weighs the factors set forth in 10 C.F.R. 2.309(c); LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012)

contentions that neither explain how the application is inadequate nor identify which sections of the application are inadequate are inadmissible; LBP-11-21, 74 NRC 115 (2011)

contentions will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-14-6, 79 NRC 404 (2014)

contradictory provisions of subsections (a) and (b) of 10 C.F.R. 2.710 are discussed; LBP-11-23, 74 NRC 287 (2011)

criteria that nontimely contentions must address are governed by 10 C.F.R. 2.309(c); LBP-11-9, 73 NRC 391 (2011)

crux of the “genuine dispute” prong under 10 C.F.R. 2.309(f)(1)(vi) is the requirement for specificity, that a contention must have more than general allegations; LBP-15-1, 81 NRC 15 (2015)

current adjudicatory procedures and policies provide latitude to the Commission, its licensing boards, and presiding officers to instill discipline in the hearing process and ensure a prompt yet fair resolution of contested issues in adjudicatory proceedings; CLI-14-10, 80 NRC 157 (2014)

degree to which new/amended contentions will be considered timely submitted is generally defined by the presiding officer as a specific period following the triggering event that makes the previously unavailable/materially different information available so as to be the basis for the new/amended contention; LBP-13-10, 78 NRC 117 (2013)

deliberative process privilege applied under 10 C.F.R. 2.390(a)(5) to interagency or intra-agency memorandums or letters is similar to Exemption 5 under the Freedom of Information Act; LBP-13-5, 77 NRC 233 (2013)

demands for a hearing by the subject of an enforcement order are automatic without regard to satisfaction of section 2.309(d) and section 2.309(f)(1); LBP-14-4, 79 NRC 319 (2014)

determination as to whether requests or petitions are filed in a timely manner shall be subject to a reasonableness standard and are not subject to the 30-day deadline applicable to motions by existing parties to add or amend contentions; LBP-15-6, 81 NRC 314 (2015)

director of NRC office with responsibility for the subject matter shall either institute the requested 2.206 proceeding or advise the person who made the request in writing that no proceeding will be instituted, in whole or in part, with respect to the request and the reason for the decision; DD-15-7, 82 NRC 257 (2015)

“disclosing party” means the party required to make mandatory disclosure pursuant to 10 C.F.R. 2.236; LBP-11-5, 73 NRC 131 (2011)

disclosure updates in Subpart L proceedings shall include any documents subject to disclosure that were not included in any previous disclosure update; LBP-14-2, 79 NRC 131 (2014)

discretionary grant of a petition for review gives due weight to the existence of a substantial question with respect to one or more of the considerations under 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-12-6, 75 NRC 352 (2012)
discretionary intervention may be considered only when at least one requestor/petitioner has established standing and at least one contention has been admitted so that a hearing will be held; LBP-14-4, 79 NRC 319 (2014)
disfavor of piecemeal appeals leads the Commission to grant interlocutory review only upon a showing of extraordinary circumstances; CLI-11-14, 74 NRC 801 (2011)
documents merely summarizing earlier documents or compiling preexisting, publicly available information into a single source do not render “new” the summarized or compiled information; CLI-11-2, 73 NRC 333 (2011)
during summary disposition, it is not appropriate for boards to untangle the expert affidavits and decide which experts are more correct; LBP-11-7, 73 NRC 254 (2011)
each of the criteria for a motion to reopen must be separately addressed in an affidavit, with a specific explanation of why it has been met; CLI-11-8, 74 NRC 214 (2011); CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012); LBP-11-35, 74 NRC 701 (2011)
each organization member seeking representation must qualify for standing in his or her own right, the interests that the representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the requested relief must require an individual member to participate in the organization’s legal action; LBP-11-29, 74 NRC 612 (2011)
each party to a proceeding must disclose all documents relevant to the admitted contentions, except those documents for which a claim of privilege or protected status is made; LBP-11-5, 73 NRC 131 (2011)
eight-factor balancing test is applied to determine whether nontimely contentions should be admitted; LBP-12-27, 76 NRC 583 (2012)
eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)
entity seeking representation standing must show that it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)
essential to establishing standing are findings of injury, causation, and redressability; CLI-11-3, 73 NRC 613 (2011)
evaluation of a contention at the contention admissibility stage should not be confused with evaluation at the merits stage; CLI-11-8, 74 NRC 214 (2011)
even if intervenors are appearing pro se, adherence to board directives is expected; CLI-14-10, 80 NRC 157 (2014)
even if there are no objections to petitioners’ representational standing, boards have an independent obligation to determine whether they have adequately demonstrated standing; LBP-11-2, 73 NRC 28 (2011); LBP-11-16, 73 NRC 645 (2011)
even when a proposed new contention is not found timely, it may be admitted if it meets a balancing of the eight nontimely filing factors; LBP-11-39, 74 NRC 862 (2011)
evidence contained in affidavits accompanying motions to reopen must meet admissibility standards; CLI-12-6, 75 NRC 352 (2012); LBP-15-14, 81 NRC 591 (2015)
evidentiary objections made for the first time after briefing has been completed unfairly deprive the petitioners of the opportunity to file the response expressly provided in the NRC’s procedural rules; LBP-15-20, 81 NRC 829 (2015)
exception for situations where parties seek to add previously unlitigated material would effectively render the reopening regulation meaningless; CLI-12-10, 75 NRC 479 (2012)
exceptionally grave issues may be considered in the discretion of the presiding officer even if untimely presented; CLI-12-21, 76 NRC 491 (2012); LBP-12-1, 75 NRC 1 (2012)
extert’s affidavit supporting a motion to reopen must supply the factual and legal foundation for assertions that the reopening criteria are satisfied; LBP-11-20, 74 NRC 65 (2011)
factors that timely new or amended contentions must satisfy are governed by are 10 C.F.R. 2.309(f)(2); LBP-11-9, 73 NRC 391 (2011)
factual basis requirement for contention admission is intended to preclude contentions from being admitted where an intervenor has no facts to support its position and instead contemplates using discovery or cross-examination as a fishing expedition that might produce relevant supporting facts; LBP-14-6, 79 NRC 404 (2014)
factual support required at the contention admission stage is only a minimal showing that material facts are in dispute; LBP-11-2, 73 NRC 28 (2011); LBP-11-14, 73 NRC 591 (2011)
factual support required for an admissible contention need not be of the quality necessary to withstand a summary disposition motion, but need only demonstrate that material facts are in dispute; LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
failure of petitioner to cite even a single specific deficiency in the application precludes satisfaction of the specificity requirement of 10 C.F.R. 2.309(f)(1)(vi); LBP-11-29, 74 NRC 612 (2011)
failure to comply with any of the admissibility criteria in section 2.309(f)(1) warrants rejection of a contention; LBP-11-7, 73 NRC 254 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-12-3, 75 NRC 164 (2012); LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-12-24, 76 NRC 503 (2012); LBP-12-25, 76 NRC 540 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-14-6, 79 NRC 404 (2014); LBP-14-8, 79 NRC 519 (2014); LBP-15-1, 81 NRC 15 (2015); LBP-15-4, 81 NRC 156 (2015); LBP-15-16, 81 NRC 618 (2015); LBP-15-19, 81 NRC 815 (2015)
failure to comply with NRC’s e-filing requirements without good cause or without obtaining an exemption from the requirements under 10 C.F.R. 2.302(g) can result in rejection of a pleading; LBP-15-4, 81 NRC 156 (2015)
failure to comply with pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests; LBP-11-7, 73 NRC 254 (2011)
failure to demonstrate good cause for a late-filed contention requires a compelling showing on the remaining factors; CLI-12-15, 75 NRC 704 (2012)
failure to provide sufficient factual or expert support for claims in a contention in contravention of section 2.309(f)(1)(vi) also may have failed to show a genuine dispute with the application as required under section 2.309(f)(1)(vi); LBP-12-15, 76 NRC 14 (2012)
fair and reasonable settlement of issues proposed for litigation is encouraged; LBP-15-21, 82 NRC 1 (2015)
filings not otherwise authorized by NRC rules are allowed only where necessity or fairness dictates; CLI-11-14, 74 NRC 801 (2011); CLI-14-3, 79 NRC 31 (2014)
for a contention to be admissible, petitioner must, among other things, provide a concise statement of the alleged facts or expert opinions that support its position on the issue and on which the petitioner intends to rely at hearing; together with references to the specific sources and documents that support its position; CLI-12-5, 75 NRC 301 (2012)
for a motion to reopen to be granted and a new contention admitted after termination of a proceeding, the motion must meet all of the requirements of 10 C.F.R. 2.326 for reopening a record, and the new contention must have been submitted in a timely fashion and demonstrate admissibility as required at 10 C.F.R. 2.309; LBP-12-11, 75 NRC 731 (2012)
for a newly proffered contention to be timely, it must be based on information that was not previously available; LBP-11-15, 73 NRC 629 (2011)
for a request for hearing and petition to intervene to be granted, petitioner must establish that it has standing and propose at least one admissible contention; LBP-11-21, 74 NRC 115 (2011)
for a rule waiver request to be granted, all four factors must be met; LBP-11-35, 74 NRC 701 (2011)
for a timely filed contention to be admissible, it must satisfy six pleading requirements; LBP-11-6, 73 NRC 149 (2011)
for an individual or organization to be deemed a “person whose interest may be affected by the proceeding,” so as to have standing as of right such that party status can be granted in an agency adjudicatory proceeding, the intervention petition must comply with 10 C.F.R. 2.309(d)(1)(i)-(iv); LBP-12-15, 76 NRC 14 (2012)
for any contention to be admissible, regardless of when it is filed, it must satisfy each of the six criteria of 10 C.F.R. 2.309(f)(1); LBP-12-10, 75 NRC 633 (2012)
for new contentions to be admitted after the record has closed, petitioner must satisfy the Commission’s demanding regulatory requirements for reopening the record; LBP-11-23, 74 NRC 287 (2011)
for proceedings for which a Federal Register notice of agency action is published, the hearing request must be filed not later than the time specified in the notice of proposed action; CLI-14-11, 80 NRC 167 (2014)
for proceedings in which a Federal Register notice is not published, the hearing request shall be filed by the later of 60 days after publication of notice on the NRC website or 60 days after the requestor receives actual notice of a pending application, but not more than 60 days after agency action on the application; CLI-14-11, 80 NRC 167 (2014)
for reactor operating license renewal proceedings, a proximity presumption, respecting standing for an individual who resides within a 50-mile radius of a nuclear power plant, is recognized; LBP-12-10, 75 NRC 633 (2012)
for representational standing, neither the claim asserted nor the relief requested requires the participation of individual members in the lawsuit; LBP-11-13, 73 NRC 534 (2011)
form of settlement agreements is set forth in 10 C.F.R. 2.338(g); LBP-15-21, 82 NRC 1 (2015)
four factors must be addressed when the Commission or presiding officer is asked to stay the effectiveness of a presiding officer’s decision or action during the pendency of an appeal; CLI-15-17, 82 NRC 33 (2015)
four-factor test for showing of special circumstances demonstrating that application of a rule would not serve the purpose for which it was adopted is outlined; CLI-12-6, 75 NRC 352 (2012); CLI-12-19, 76 NRC 377 (2012)
general environmental and policy interests are insufficient for organizational standing; LBP-12-3, 75 NRC 164 (2012)
general requirements for admissibility for all contentions are set forth in 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-12-27, 76 NRC 583 (2012)
generic environmental analysis is incorporated into NRC regulations, and thus Category 1 generic findings may not be challenged in individual licensing proceedings unless accompanied by a petition for rule waiver; CLI-15-6, 81 NRC 340 (2015)
geographic proximity to a facility (i.e., living or working within 50 miles) is presumptively sufficient to meet traditional standing requirements in certain types of proceedings, including operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)
good cause exists when information on which the filing is based was not previously available and is materially different from information previously available and the filing has been submitted in a timely fashion based on the availability of the subsequent information; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-15-1, 81 NRC 15 (2015); LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)
"good cause" for late filing is defined as a showing that petitioner could not have met the filing deadline and filed as soon as possible thereafter; LBP-11-7, 73 NRC 254 (2011)
good cause for the failure to file on time is afforded the most weight in the balancing of the eight late-filing factors of 10 C.F.R. 2.309(c)(i)-(viii); CLI-12-10, 75 NRC 479 (2012); LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011); LBP-11-7, 73 NRC 254 (2011); LBP-11-9, 73 NRC 391 (2011); LBP-11-10, 73 NRC 424 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-15, 73 NRC 629 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-32, 74 NRC 654 (2011); LBP-12-7, 75 NRC 503 (2012); LBP-12-27, 76 NRC 583 (2012)
good cause in section 2.307(a) does not share the same definition that is used for good cause in section 2.309(c); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
good cause is the most important of the late-filing factors under section 2.309(c)(1), and absent good cause, a compelling showing must be made with regard to the other seven factors; LBP-12-10, 75 NRC 633 (2012); LBP-12-12, 75 NRC 742 (2012)
Google Maps and Mapquest searches of distance from petitioner’s address may be used to establish proximity to a proposed facility; LBP-12-3, 75 NRC 164 (2012)
governmental body’s interest in protecting the individuals and territory that fall under that body’s authority establishes an organizational interest for standing purposes; LBP-11-6, 73 NRC 149 (2011)
governmental entity is permitted to participate in the proceeding as an interested local governmental body and will thus have the opportunity to support intervenors’ already-admitted contention; LBP-15-19, 81 NRC 815 (2015)
grant of interlocutory review requires a showing that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-15-24, 82 NRC 331 (2015)
grant of summary disposition where other contentions are pending is not a final decision, and is appealable only upon a showing that the standards for interlocutory review have been met; CLI-11-14, 74 NRC 801 (2011)
health issues or an unexpected weather event are reasons that might constitute good cause for purposes of requesting an extension under section 2.307; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
hearing demand under section 2.103(b)(2) has only to meet the prescribed filing deadline and specify the reasons why the demander deemed the denial of the sought operator’s license to have been unjustified; LBP-13-3, 77 NRC 82 (2013)
hearing is granted where petitioner has proffered at least one admissible contention and established standing; LBP-15-5, 81 NRC 249 (2015)
hearing petitioners have an ironclad obligation to examine the publicly available documentary material pertaining to the facility in question with sufficient care to uncover any information that could serve as the foundation for a specific contention; LBP-11-9, 73 NRC 391 (2011)
hearing request must set forth with particularity the contentions petitioner seeks to litigate; CLI-15-20, 82 NRC 211 (2015)
hearing request on safety concerns over steam generator replacement is referred to the Executive Director for Operations for disposition; CLI-14-11, 80 NRC 167 (2014)
hearing request or petition to intervene must set forth with particularity the contentions sought to be raised by satisfying the six criteria; CLI-12-5, 75 NRC 301 (2012); LBP-11-21, 74 NRC 115 (2011)
if a contention is based upon new information, it must meet the standards of 10 C.F.R. 2.309(f)(2); LBP-11-35, 74 NRC 701 (2011)
if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to 10 C.F.R. 2.309(c) which specifically applies to nontimely filings; LBP-12-18, 76 NRC 127 (2012)
if a new or amended contention is deemed untimely under section 2.309(f)(2)(iii), it will be evaluated under 10 C.F.R. 2.309(c)(1), which requires a balancing of eight factors to determine whether it is admissible; LBP-12-12, 75 NRC 742 (2012); LBP-12-23, 76 NRC 445 (2012)
if a party fails to file an answer or pleading within the time prescribed in 10 C.F.R. Part 2 or as specified in the notice of hearing or pleading, to appear at a hearing or prehearing conference, to comply with any prehearing order entered by the presiding officer, or to comply with any discovery order entered by the presiding officer, the Commission or the presiding officer may make any orders in regard to the failure that are just; CLI-14-2, 79 NRC 11 (2014)
if a party submits a proposed contention after the initial filing deadline announced in the applicable Federal Register notice for submitting a hearing petition, it will not be entertained absent a determination by the presiding officer that a participant has demonstrated good cause; LBP-13-9, 78 NRC 37 (2013); LBP-15-11, 81 NRC 401 (2015)
if a proposed new contention that is filed after the initial filing period set forth in the hearing notice is not timely under 10 C.F.R. 2.309(f)(2)(iii), then proponent must address the eight criteria of section 2.309(c)(1) and show that a balance of these factors weighs in favor of admitting that contention; LBP-11-9, 73 NRC 391 (2011); LBP-11-10, 73 NRC 424 (2011); LBP-11-32, 74 NRC 654 (2011)
if a summary disposition proponent fails to make the requisite showing, the board must deny the motion even if the opposing party chooses not to respond or its response is inadequate; LBP-11-4, 73 NRC 91 (2011)
if any portion of a filing is untimely tendered, it must be accompanied by a motion to file out of time; LBP-11-13, 73 NRC 534 (2011)
if applicants believe that their actions render a contention moot, then they should promptly file a motion for summary disposition; LBP-12-19, 76 NRC 184 (2012)

if at least one petitioner demonstrates standing and proffers an admissible contention so that its petition to intervene is granted, section 2.315(c) allows a local governmental body that has not been admitted as a party to participate in a hearing as an interested nonparty; LBP-11-6, 73 NRC 149 (2011)

if evidence in favor of the summary disposition opponent is merely colorable or not significantly probative, summary disposition may be granted; LBP-11-4, 73 NRC 91 (2011)

if good cause is not shown, a board may still permit the late filing, but petitioner or intervenor must make a strong showing on the other factors of 10 C.F.R. 2.309(c); LBP-11-7, 73 NRC 254 (2011); LBP-11-9, 73 NRC 391 (2011); LBP-11-32, 74 NRC 654 (2011)

if intervenor cannot meet the requirements for filing a contention under the new section 2.309(c)(1), he or she can still take advantage of an extension request if unanticipated events, such as a weather event or unexpected health issues, prevented the participant from filing for a reasonable period of time after the deadline; LBP-15-1, 81 NRC 15 (2015)

if intervenors file a new or amended contention, with supporting materials, within 60 days after pertinent information first becomes available, then the contention will be deemed timely filed and intervenors will be absolved of their obligation to satisfy the late-filing requirements of 10 C.F.R. 2.309(c) or the requirements for reopening the record; LBP-11-22, 74 NRC 259 (2011)

if intervenors raise issues that are not within the scope of an admitted contention and have not sought to amend the contention to include those issues, the board will not consider the issues; LBP-12-23, 76 NRC 445 (2012)

if leave to file a motion for reconsideration is granted, the motion must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have reasonably been anticipated, which renders the decision invalid; CLI-12-17, 76 NRC 207 (2012)

if movant makes a proper showing for summary disposition, and if the opposing party does not show that a genuine issue of material fact exists, the board may summarily dispose of all arguments on the basis of the pleadings; LBP-11-4, 73 NRC 91 (2011)

if no answer to a summary disposition motion is filed, the decision sought, if appropriate, must be rendered; LBP-12-26, 76 NRC 559 (2012)

if no genuine dispute remains, then the board may dispose of all arguments based on the pleadings; LBP-11-7, 73 NRC 254 (2011)

if opponent of summary disposition declines to oppose the moving party’s prima facie showing of undisputed material facts, NRC regulations provide that those facts will be considered admitted; LBP-12-2-4, 75 NRC 213 (2012)

if petitioner believes that an application fails altogether to contain information required by law, petitioner must identify each failure and provide supporting reasons for petitioner’s belief; CLI-15-20, 82 NRC 211 (2015); LBP-11-6, 73 NRC 149 (2011)

if petitioner fails to show standing pursuant to section 2.309(d), a board may grant discretionary standing when at least one requestor/petitioner has established standing and at least one admissible contention has been admitted so that a hearing will be held; LBP-11-29, 74 NRC 612 (2011)

if petitioner neglects to provide the requisite support for its contentions, it is not within the board’s power to make assumptions or draw inferences that favor petitioner, nor may the board supply information that is lacking; LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013)

if reasonable minds could differ as to the import of the evidence, summary disposition is not appropriate; LBP-11-14, 73 NRC 591 (2011); LBP-11-20, 74 NRC 65 (2011)

if reopening standards are inapplicable, or if reopening criteria have been satisfied, a new contention must also meet the standards for contention admissibility; LBP-11-35, 74 NRC 701 (2011)

if summary disposition movant discusses a matter in its statement of undisputed facts, the board may view with skepticism any later argument by that movant that a response regarding that issue is outside the scope of the contention, particularly given the onus that is placed upon an opposing party to respond to such a statement; LBP-11-4, 73 NRC 91 (2011)

if summary disposition movant fails to make the requisite showing to satisfy that initial burden, then the board must deny the motion even if the opposing party chooses not to respond or its response is inadequate; LBP-11-14, 73 NRC 591 (2011); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)
if summary disposition movant meets its burden, opponent must set forth specific facts showing that there is a genuine issue and may not rely on mere allegations or denials; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

if the question is a close one, boards must, in considering summary disposition opponent’s submission, carefully ascertain whether any factual disputes asserted are genuine and relate to issues that would affect the outcome of the proceeding under relevant substantive law; LBP-11-4, 73 NRC 91 (2011)

if the reason a motion to admit a new or amended contention was filed after the deadline does not relate to the substance of the filing itself, the standard in 10 C.F.R. 2.307 applies in determining whether the motion can be considered timely; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

if the summary disposition movant meets its burden, then and only then is the nonmoving party required to proffer evidence that contradicts the moving party’s showing and that proves the existence of a genuine issue of material fact; LBP-11-4, 73 NRC 91 (2011)

if the summary disposition proponent does not meet its burden, the nonmoving party is, without making any showing, entitled to a denial of the motion; LBP-11-4, 73 NRC 91 (2011)

if, considering only the moving party’s support for its motion, the board determines that it has met its burden, the board then looks to whether an opponent of the motion has overcome the movant’s case by showing a genuine dispute on a material issue of fact; LBP-11-4, 73 NRC 91 (2011)

if, within 60 days after pertinent information supporting a new contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding construction of a mixed oxide facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements or the requirements for reopening the record; LBP-11-9, 73 NRC 391 (2011)

importance of finality in adjudicatory proceedings is reflected in 10 C.F.R. 2.326; CLI-15-19, 82 NRC 151 (2015)

in 1989, NRC revised its rules to prevent the admission of poorly defined or supported contentions or those based on little more than speculation; CLI-12-8, 75 NRC 393 (2012)

in a proceeding governed by Subpart L, the board is to apply the standards of Subpart G when ruling on motions for summary disposition; LBP-11-17, 74 NRC 11 (2011)

in addition to satisfying the timeliness standards in 10 C.F.R. 2.309(f)(2) or the balancing test in 10 C.F.R. 2.309(c), a newly proffered contention must satisfy the admissibility criteria of 10 C.F.R. 2.309(f)(1); LBP-12-7, 75 NRC 503 (2012); LBP-15-19, 81 NRC 815 (2015); LBP-15-23, 82 NRC 55 (2015)

in addressing the good cause factor for late filing, petitioner must explain not only why it failed to file within the time required, but also why it did not file as soon thereafter as possible; LBP-11-7, 73 NRC 254 (2011)

in affidavits supporting motions to reopen, each of the criteria must be separately addressed, with a specific explanation of why it has been met; LBP-12-10, 75 NRC 633 (2012); LBP-11-23, 74 NRC 287 (2011)

in an ongoing proceeding in which a hearing petition has been granted and there are contentions pending for merits resolution, intervenors must satisfy two sets of requirements to gain the admission of a new contention; LBP-11-37, 74 NRC 774 (2011)

in analyzing the admissibility of a proffered contention, a licensing board need not turn a blind eye to those portions of a petitioner’s exhibits that might militate against admissibility; LBP-11-6, 73 NRC 149 (2011)

in applying the summary disposition standard, it is appropriate for the board to look not only to NRC regulatory and case law, but also to federal court case law on summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-11-4, 73 NRC 91 (2011)

in assessing whether petitioner has demonstrated standing, boards are to construe the petition in favor of the petitioner; LBP-13-6, 77 NRC 253 (2013)

in cases involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility is considered to be sufficient to establish standing; LBP-11-16, 73 NRC 645 (2011)

in codifying the reopening requirements, the more neutral “exceptionally grave issue” language was chosen over the case law-based “sufficiently grave threat to public safety” phrasing; CLI-12-21, 76 NRC 491 (2012)
in deciding motions seeking a stay of agency action pending judicial review, the Commission looks to the same four-part test that governs stays of licensing board decisions pending Commission review; CLI-12-11, 75 NRC 523 (2012)
in determining whether an individual member of an organization qualifies for standing in his or her own right, NRC generally applies traditional judicial standing concepts; LBP-11-13, 73 NRC 534 (2011)
in determining whether petitioner has demonstrated standing, the Commission applies contemporaneous judicial concepts of standing; LBP-11-6, 73 NRC 149 (2011)
in determining whether to grant or deny an application for a stay, a board must balance four separate interests; LBP-15-2, 81 NRC 48 (2015)
in establishing the evidentiary standard of “relevant, material, and reliable evidence” being admissible in a hearing, 10 C.F.R. 2.337 thereby establishes the right of all parties to present such admissible evidence; LBP-11-4, 73 NRC 91 (2011)
in its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review or brief on review, or upon its own initiative; CLI-11-8, 74 NRC 214 (2011)
in materials licensing matters, there is no predefined distance marking the area of potential offsite consequences on which to establish standing and thus this must be judged on a case-by-case basis; LBP-12-24, 76 NRC 503 (2012)
in reactor license renewal proceedings, petitioner is presumed to have standing to intervene without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the nuclear power facility; LBP-11-21, 74 NRC 115 (2011)
in reactor licensing proceedings, petitioner is deemed to have standing pursuant to the Commission’s proximity presumption rule by showing that he or she resides in, or frequents the area within, a 50-mile radius of the facility; LBP-11-6, 73 NRC 149 (2011); LBP-12-24, 76 NRC 503 (2012)
in Subpart L proceedings, licensing boards must apply the summary disposition standard for Subpart G proceedings; LBP-11-14, 73 NRC 591 (2011); LBP-11-4, 73 NRC 91 (2011)
in the absence of clear error or abuse of discretion, the Commission defers to boards’ rulings on threshold issues; CLI-11-8, 74 NRC 214 (2011)
in the context of a new contention filed after the initial petition, petitioner has an iron-clad obligation to examine the publicly available documentary material with sufficient care to enable it to uncover any information that could serve as the foundation for a specific contention; CLI-11-2, 73 NRC 333 (2011)
in the interest of expediting the further proceedings, hearing on senior operator license denial will be conducted under the provisions of Subpart L of the Commission’s Rules of Practice; LBP-13-3, 77 NRC 82 (2013)
in unusual circumstances, where fairness dictates, the Commission has been willing to soften or waive its reopening requirements; CLI-12-14, 75 NRC 692 (2012)
in weighing the timeliness factors for motions to reopen, greatest weight is accorded to good cause for failure to file on time; CLI-11-8, 74 NRC 214 (2011)
individual member who qualifies an organization for standing must have suffered or might suffer a concrete and particularized injury that is fairly traceable to the challenged action and the injury is likely redressable by a favorable decision; LBP-14-4, 79 NRC 319 (2014)
individuals or groups may seek discretionary intervention if the requirements necessary to be afforded standing as of right cannot be established; LBP-13-6, 77 NRC 253 (2013)
intent of 10 C.F.R. 2.309(f)(1) is to focus litigation on concrete issues and result in a clearer and more focused record for decision and to ensure that the Commission expends resources to support the hearing process only for issues that are appropriate for, and susceptible to, resolution in an NRC hearing; LBP-11-16, 73 NRC 645 (2011)
interested governmental entity may introduce evidence, interrogate witnesses where cross-examination by the parties is permitted, advise the Commission without being required to take a position with respect to the issue, file proposed findings, and petition for review by the Commission; LBP-11-6, 73 NRC 149 (2011)
interests a municipality seeks to represent on behalf of its residents are germane to its own purposes in the context or standing; LBP-11-6, 73 NRC 149 (2011)
interests that an organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the requested relief must require an individual member to participate in the organization’s legal action; LBP-11-6, 73 NRC 149 (2011)
interlocutory review is discretionary and will be granted only upon a showing that the issue for which review is sought threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-13-3, 77 NRC 51 (2013)

interlocutory review of a board’s dismissal of a new contention is granted only upon a showing of extraordinary circumstances; CLI-12-13, 75 NRC 681 (2012)

interlocutory review of board rulings is permitted when petitioner demonstrates either that the ruling threatens the petitioner with immediate and irreparable harm or the ruling has a pervasive and unusual effect on the structure of the proceeding; CLI-11-6, 74 NRC 203 (2011); CLI-12-12, 75 NRC 603 (2012)

interlocutory review of decisions and actions of a presiding officer may be available under 10 C.F.R. 2.341(f)(2); LBP-14-5, 79 NRC 377 (2014)

intervenor is not free to change the focus of its admitted contention, at will, as the litigation progresses; LBP-11-38, 74 NRC 817 (2011)

intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or other sources of new and materially different information, provided that it does so promptly after the new information becomes available and that it successfully fulfills the general contention admissibility requirements; LBP-11-22, 74 NRC 259 (2011)

intervenor normally is not allowed to challenge a board’s rejection of contentions where the board has granted a hearing on any contention; CLI-12-12, 75 NRC 603 (2012)

intervenor’s failure to address the reopening standards in 10 C.F.R. 2.326 creates a yawning deficiency in its submissions because the evidentiary record has been closed and the board’s jurisdiction in the proceeding does not extend beyond the narrow scope of the remand; LBP-11-20, 74 NRC 65 (2011)

intervenors have demonstrated their ability to contribute to the development of a sound record where they have put forward in support of those contentions the views of a witness whose expertise has been recognized in other NRC proceedings; LBP-11-9, 73 NRC 391 (2011)

intervenors in adjudicatory proceedings are prohibited from challenging regulations unless they first obtain a waiver by showing special circumstances; LBP-14-15, 80 NRC 151 (2014)

intervenors may not impose an additional requirement that is not present in a regulation; CLI-11-9, 74 NRC 233 (2011)

intervenors may seek a stay of NRC Staff’s immediately effective license issuance; LBP-15-3, 81 NRC 65 (2015)

intervenors must assert a sufficiently specific challenge that demonstrates that further inquiry is warranted; CLI-11-9, 74 NRC 233 (2011)

intervenors must provide a concise statement of the facts or expert opinions that support their position and upon which they intend to rely at the hearing; LBP-12-18, 76 NRC 127 (2012)

intervenors’ request for extension of time is granted because it is unopposed and intervenors have shown good cause for the modest extension; CLI-14-10, 80 NRC 157 (2014)

intervenors seeking a new hearing on a new contention after the board has closed the evidentiary record must move to reopen the evidentiary record and meet a deliberately higher threshold standard than that for an ordinary late-filed contention; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)

intervenors’ speculation that further review of certain issues might change some conclusions in the final safety evaluation report does not justify restarting the hearing process; LBP-11-23, 74 NRC 287 (2011)

intervention as a matter of discretion is permitted only where at least one petitioner has established standing and at least one admissible contention has been admitted, and petitioner is required to address six factors in its initial petition; CLI-15-14, 81 NRC 729 (2015)

intervention petition is denied for failure to proffer an admissible contention; LBP-11-21, 74 NRC 115 (2011)

intervention petition must be filed within the time specified in any notice of proposed action; LBP-15-13, 81 NRC 456 (2015)

intervention petition must contain the name, address, and phone number of the requestor or petitioner; LBP-15-20, 81 NRC 829 (2015)

intervention petition must satisfy the six pleading requirements of 10 C.F.R. 2.309(f)(1); LBP-15-13, 81 NRC 456 (2015)
intervention petition must state the nature of petitioner’s statutory right to be made a party to the proceeding, nature and extent of petitioner’s property, financial, or other interest in the proceeding, and possible effect of any decision or order that may be issued on petitioner’s interest; LBP-15-13, 81 NRC 456 (2015)

intervention petitioner bears the burden of providing facts sufficient to establish its standing; LBP-11-21, 74 NRC 115 (2011)

intervention petitioner can justify filing a petition after the initial deadline has expired by showing that the contention is based on new information and that the petition was filed promptly after the new information became available; LBP-12-25, 76 NRC 540 (2012)

intervention petitioner may not attack generic NRC requirements or regulations or express generalized grievances about NRC policies; CLI-15-9, 81 NRC 512 (2015)

intervention petitioner must demonstrate that it has suffered a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statute and that the injury can fairly be traced to the challenged action and is likely to be redressed by a favorable decision; LBP-12-8, 75 NRC 539 (2012)

intervention petitioner must either file its petition by the date specified in the Federal Register notice or show good cause for filing after the deadline; LBP-12-25, 76 NRC 540 (2012)

intervention petitioner must establish standing and propose at least one admissible contention that meets the criteria of 10 C.F.R. 2.309(b)(1)(i)-(vi); CLI-15-21, 82 NRC 295 (2015); CLI-15-23, 82 NRC 321 (2015); LBP-12-25, 76 NRC 540 (2012); LBP-13-8, 78 NRC 1 (2013)

intervention petitioner need not discuss each and every portion of the application that bears any relation to the issue being contested, but only provide a brief explanation of the argument and a concise statement of the relevant facts; CLI-14-2, 79 NRC 11 (2014)

intervention petitioner’s burden is met if petitioner provides plausible factual allegations that satisfy each element of standing; LBP-13-6, 77 NRC 253 (2013)

intervention petitioners must establish standing by demonstrating the nature of their right under the Atomic Energy Act to be made a party to the proceeding, nature and extent of their interest in the proceeding, and possible effect of any decision in the proceeding on their interest; LBP-12-24, 76 NRC 503 (2012)

intervention petitions must be timely, demonstrate standing, and proffer at least one admissible contention; CLI-15-5, 81 NRC 329 (2015); LBP-15-6, 81 NRC 314 (2015); LBP-15-13, 81 NRC 456 (2015)

intervention petitions must include a statement of petitioner’s name, address, and telephone contact information, nature of petitioner’s right under the AEA to be made a party, nature of petitioner’s interest in the proceeding, whether property, financial or otherwise, and possible effect of any decision or order that might be issued in the proceeding on the petitioner’s interest; LBP-12-3, 75 NRC 164 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-13-6, 77 NRC 253 (2013)

irreparable injury is the most important of the stay criteria; CLI-15-8, 81 NRC 500 (2015)

issue raised in a contention must fall within the scope of the proceeding and be material to the findings that the NRC must make; CLI-15-8, 81 NRC 500 (2015)

it is intervention petitioner’s responsibility to put others on notice as to the issues it seeks to litigate; CLI-11-11, 74 NRC 427 (2011)

it is well within NRC’s discretion to impose specific requirements that clarify or go beyond those already established by regulations; LBP-14-4, 79 NRC 319 (2014)

judicial concepts of standing are generally followed in NRC proceedings; LBP-11-2, 73 NRC 28 (2011); LBP-11-21, 74 NRC 115 (2011)

judicial concepts of standing require that petitioner establish that it has suffered a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statute and that the injury can fairly be traced to the challenged action and is likely to be redressed by a favorable decision; LBP-11-21, 74 NRC 115 (2011)

late-filed contention is inadmissible both for lack of a good cause showing and for failure to address the other factors of 10 C.F.R. 2.309(c)(1); LBP-11-6, 73 NRC 149 (2011)
late-filed contention shall not be considered by a licensing board unless the petitioner demonstrates that a multifactor balancing test weighs in favor of consideration; LBP-11-6, 73 NRC 149 (2011)
late-filed contentions must show that the information upon which the new contention is based was not previously available and is materially different than information previously available; CLI-12-10, 75 NRC 479 (2012)
late-filing factor given the most weight is whether there is good cause for the failure to file on time; CLI-12-15, 75 NRC 704 (2012)
lateness is a sufficient ground on which to deny a motion for reconsideration; CLI-12-17, 76 NRC 207 (2012)
level of support required to sustain a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-6, 75 NRC 352 (2012)
license denial letter that contained apparent boilerplate that was incomplete and perforce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the AEA; LBP-13-3, 77 NRC 82 (2013)
licensee or other person to whom the Commission has issued an immediately effective order may move the presiding officer to set aside the immediate effectiveness of the order; LBP-14-4, 79 NRC 319 (2014)
licensing board order granting a request for hearing on the question whether the request should have been wholly denied is appealable; CLI-15-23, 82 NRC 321 (2015)
licensing board, construing the petition in favor of petitioners, based its standing finding on potential harm from traffic-generated dust and light pollution; CLI-12-12, 75 NRC 603 (2012)
licensing boards are bound to admit for litigation contentions that are material and supported by reasonably specific factual and legal allegations; LBP-11-6, 73 NRC 149 (2011)
licensing boards are obliged to independently assess petitioners’ standing; LBP-15-5, 81 NRC 249 (2015)
licensing boards are to apply the same standards for granting or denying summary disposition as would be applied in proceedings conducted under Subpart G, which are set forth in section 2.710; LBP-11-7, 73 NRC 254 (2011); LBP-12-19, 76 NRC 184 (2012)
licensing boards have broad powers to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-15-30, 82 NRC 339 (2015)
licensing boards in Subpart L proceedings must apply the summary disposition standard for Subpart G proceedings found in 10 C.F.R. 2.710; LBP-12-23, 76 NRC 445 (2012)
licensing boards must examine the record in the light most favorable to the opponent of summary disposition and draw all justifiable inferences in favor of that party; LBP-12-23, 76 NRC 445 (2012)
like issues related to standing and contention admissibility, the question whether a pleading satisfies the requirements of section 2.326 and therefore justifies reopening a closed proceeding is a threshold issue; CLI-11-8, 74 NRC 214 (2011)
limited appearance statements do not constitute evidence but may assist the board and/or parties in disposition and draw all justifiable inferences in favor of that party; LBP-15-13, 78 NRC 246 (2013)
limited exception to NRC’s general prohibition against challenges to its rules or regulations in adjudicatory proceedings is provided in 10 C.F.R. 2.335(b); CLI-13-7, 78 NRC 199 (2013)
limited interlocutory appeal right attaches only when the board has fully ruled on the initial intervention petition, that is, when it has admitted or rejected all proposed contentions; CLI-14-3, 79 NRC 31 (2014)
litigants may not challenge a rule in NRC adjudicatory proceedings absent a showing of special circumstances; CLI-15-1, 81 NRC 1 (2015)
litigants seeking to reopen a record must comply fully with section 2.326(b); LBP-12-10, 75 NRC 633 (2012)
litigation opportunities available to an entity participating as a local governmental body pursuant to 10 C.F.R. 2.315(c) are discussed; LBP-15-19, 81 NRC 815 (2015)
local governmental body that is not admitted as a party shall, upon request, be permitted to participate in a hearing as an interested nonparty; LBP-11-6, 73 NRC 149 (2011)
matter difference must exist between information on which a contention is based and information that was previously available, e.g., a difference between the environmental report and the draft EIS or the draft EIS and the final EIS; CLI-15-1, 81 NRC 1 (2015)
“materially different result” requirement of section 2.326(a)(3) is analyzed using the Commission’s test of whether it has been shown that a motion for summary disposition could be defeated; LBP-12-1, 75 NRC 1 (2012)

materiality requirement for contention admission often dictates that allegations of deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the public health and safety or the environment; LBP-12-15, 76 NRC 14 (2012)

mere interest in a problem is not sufficient by itself to render the organization adversely affected or aggrieved within the meaning of the Administrative Procedure Act; CLI-11-3, 73 NRC 613 (2011)

mere mention of the future filing of an affidavit does not satisfy the requirement of section 2.326(b); LBP-14-8, 79 NRC 519 (2014)

mere notice pleading is insufficient for contention admission; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 354 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-12-8, 75 NRC 539 (2012)

merits determination cannot be resolved at the contention admissibility stage of the proceeding; LBP-11-6, 73 NRC 149 (2011)

motion to file new or amended contentions must address the motion to reopen standards after an intervention petition has been denied; LBP-11-20, 74 NRC 65 (2011)

motion to reopen that relates to a contention not previously in controversy among the parties must also satisfy the requirements for nontimely contentions in section 2.309(c); CLI-11-8, 74 NRC 214 (2011); LBP-11-23, 74 NRC 287 (2011)

motion to reopen will not be granted unless movant satisfies all three criteria listed in 10 C.F.R. 2.326(a) and the motion is accompanied by an affidavit that satisfies section 2.326(b); CLI-15-19, 82 NRC 151 (2015)

motion to reply is denied because no compelling circumstances are presented; CLI-12-6, 75 NRC 352 (2012)

motion to strike may be granted where a pleading or other submission contains information that is irrelevant; LBP-14-6, 79 NRC 404 (2014)

motions for reconsideration must be filed within 10 days of the action for which reconsideration is requested; CLI-14-10, 80 NRC 157 (2014); LBP-11-15, 73 NRC 629 (2011)

motions for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid; CLI-14-1, 79 NRC 1 (2014); LBP-11-15, 73 NRC 629 (2011)
motions for reconsideration should not include new arguments or evidence unless it relates to a board concern that applicant could not reasonably have anticipated; LBP-14-7, 79 NRC 451 (2014)
motions for summary disposition must contend that there are facts on which there is no genuine issue to be heard; LBP-14-5, 79 NRC 377 (2014)
motions for summary disposition shall be granted if the filings in the proceeding, depositions, answers to interrogatories, and admissions on file, together with the statements of the parties and the affidavits, if any, show that there is no genuine dispute as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-12-4, 75 NRC 213 (2012)
motions must be rejected if they do not include a certification by the attorney or representative of the moving party that movant has made a sincere effort to contact other parties in the proceeding and resolve the issue(s) raised in the motion, and that movant’s efforts to resolve the issue(s) have been unsuccessful; LBP-12-27, 76 NRC 583 (2012)
motions seeking admission of new or amended contentions must be filed within 30 days of the date the information that forms the basis for the contention becomes available; CLI-11-8, 74 NRC 214 (2011); CLI-12-3, 75 NRC 132 (2012); CLI-12-14, 75 NRC 692 (2012); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-10, 75 NRC 633 (2012); LBP-15-14, 81 NRC 591 (2015)
motions to reopen must be supported by affidavit, be timely, address a significant safety or environmental issue, and demonstrate that a materially different result would have been likely if the evidence had been available; CLI-12-6, 75 NRC 352 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-12-21, 76 NRC 491 (2012); LBP-11-35, 74 NRC 701 (2011); LBP-12-1, 75 NRC 1 (2012); LBP-14-8, 79 NRC 519 (2014); LBP-15-14, 81 NRC 591 (2015)
motions to reopen on issues not previously litigated must satisfy the balancing test of 10 C.F.R. 2.309(c) in addition to the reopening standards; CLI-12-3, 75 NRC 132 (2012); LBP-12-1, 75 NRC 1 (2012); LBP-12-10, 75 NRC 633 (2012); LBP-12-16, 76 NRC 44 (2012)
motions to reopen could be rejected solely on the basis of the appellants’ failure to address the reopening standards in the supporting affidavit; LBP-12-10, 75 NRC 633 (2012)
movant has no right to reply except as permitted by the presiding officer and only in compelling circumstances; LBP-15-28, 82 NRC 233 (2015)
movant has the burden to present information in a manner that complies with section 2.326(b); LBP-12-10, 75 NRC 633 (2012)
movant may obtain summary disposition if the filings in the proceeding, together with the statements of the parties and the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)
municipality is deemed to have standing in a reactor licensing proceeding that involves a facility located within its boundaries; LBP-11-6, 73 NRC 149 (2011)
neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow admission of a proffered contention; LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013)
SUBJECT INDEX

new and amended contentions submitted after an intervenor’s initial hearing request are evaluated under 10 C.F.R. 2.309(f)(2) for timeliness and, if found timely, their general admissibility is analyzed pursuant to section 2.309(f)(1); LBP-11-10, 73 NRC 424 (2011)

new contention filed after the record has closed must also satisfy general contention admissibility requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-12-16, 76 NRC 44 (2012)

new contention is inadmissible because it neither points to nor references any specific portion of the application that is disputed; LBP-11-35, 74 NRC 701 (2011)

new contentions are deemed timely if filed within 30 days of the date when the new and material information on which they are based first became available; LBP-11-39, 74 NRC 862 (2011); LBP-12-1, 75 NRC 1 (2012)

new contentions filed after the record has closed must satisfy the timeliness requirement of either 10 C.F.R. 2.309(f)(2) or 2.309(c), and the admissibility requirements of section 2.309(f)(1); LBP-11-22, 74 NRC 259 (2011); LBP-11-34, 74 NRC 685 (2011); LBP-11-39, 74 NRC 862 (2011)

new contentions must be based upon information that was not previously available, is materially different from information previously available, and is timely filed; LBP-14-5, 79 NRC 377 (2014); LBP-14-6, 79 NRC 404 (2014); LBP-14-8, 79 NRC 519 (2014)

new or amended contention is considered timely if it is filed within 60 days of the date when the material information first became available to the moving party through service, publication, or any other means; LBP-11-9, 73 NRC 391 (2011); LBP-15-1, 81 NRC 15 (2015)

new or amended contentions must satisfy the substantive contention admissibility standards set forth in 10 C.F.R. 2.309(f)(1); LBP-13-10, 78 NRC 117 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-14-8, 79 NRC 519 (2014)

new or amended contentions based on material information that has subsequently become available must meet the general contention admissibility requirements of 10 C.F.R. 2.309(f)(1) as well as the three requirements in section 2.309(c)(1); LBP-14-6, 79 NRC 404 (2014)

new or amended contentions filed after the initial filing period has expired may be admitted as timely only with leave of the licensing board if they meet the timeliness standards of 10 C.F.R. 2.309(f)(2); LBP-12-7, 75 NRC 503 (2012); LBP-12-12, 75 NRC 742 (2012)

new or amended contentions must demonstrate good cause for post-initial-hearing petition deadline filing, based on three factors; LBP-13-10, 78 NRC 117 (2013)

new or amended contentions must satisfy the substantive contention admissibility standards and failure to meet any of them renders a contention inadmissible; LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)

new or amended contentions not related to the question of foreign ownership that an interested person may wish to file during the pendency of the combined license application are subject to usual rules of practice, including rules governing reopening the record of a closed proceeding; CLI-13-4, 77 NRC 101 (2013)

newly proffered contention that does not satisfy the timeliness requirements of section 2.309(f)(2) may still be considered for admission if it satisfies section 2.309(f)(1); LBP-11-15, 73 NRC 629 (2011)

no defense to an insufficient showing by summary disposition proponent is required; LBP-11-14, 73 NRC 591 (2011); LBP-12-4, 75 NRC 213 (2012); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

no further demonstration of standing is required from a state that seeks to participate as a party in a proceeding pertaining to a utilization facility located within its boundaries; LBP-15-26, 82 NRC 163 (2015)

no proximity presumption applies in an import/export licensing case because petitioners have not shown that the import or export involves a significant source of radioactivity producing an obvious potential for offsite consequences; CLI-11-3, 73 NRC 613 (2011)

no rule or regulation of the Commission, or any provision thereof, concerning the licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; CLI-11-8, 74 NRC 214 (2011); CLI-15-20, 82 NRC 211 (2015); LBP-12-24, 76 NRC 503 (2012); LBP-15-5, 81 NRC 249 (2015)

nonlicensee with a purely economic interest has an automatic right to demand a hearing under section 2.202(a)(3) without showing standing or proffering an admissible contention; LBP-14-4, 79 NRC 319 (2014)
nontimely contentions might be admissible if petitioner can show that the contention is based on new information and was filed promptly after the new information became available; LBP-12-27, 76 NRC 583 (2012)
nontimely proposed contention may be admissible if, on balance, it satisfies eight criteria; LBP-11-7, 73 NRC 254 (2011)
not only must a late-filing intervenor act promptly after learning of new information, but the information itself must be new information, not information already in the public domain; LBP-11-7, 73 NRC 254 (2011)
notification of renewal of source materials license triggers the 5-day filing deadline to apply for a stay of the license; LBP-15-2, 81 NRC 48 (2015)
NRC adjudicatory rules are designed to promote fair and efficient resolution of disputes; CLI-14-7, 80 NRC 1 (2014)
NRC deliberately raised contention admissibility standards to relieve the hearing delays that poorly defined or supported contentions had caused in the past; CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)
NRC follows contemporaneous judicial concepts of standing, which call for showing of a concrete and particularized injury that is fairly traceable to the challenged action and is likely to be redressed by a favorable decision, where the injury is to an interest arguably within the zone of interests protected by the governing statute; LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-29, 74 NRC 612 (2011)
NRC generally considers approximately 30-60 days as the limit for timely filings based on new information; CLI-11-2, 73 NRC 333 (2011)
NRC generally disfavors the filing of new contentions at the eleventh hour of an adjudication, a policy that is grounded in the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; CLI-11-2, 73 NRC 333 (2011)
NRC has endorsed a four-pronged test for grant of a rule waiver; LBP-11-35, 74 NRC 701 (2011)
NRC imposes a deliberately heavy burden on petitioners seeking to reopen a record, even with respect to an existing contention; CLI-11-2, 73 NRC 333 (2011)
NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-11-6, 73 NRC 149 (2011)
NRC possesses the authority to change its procedures on a case-by-case basis; CLI-13-8, 78 NRC 219 (2013)
NRC presumes that an individual has standing to intervene without the need to address traditional standing concepts upon a showing that he or she lives within, or otherwise has frequent contacts with, a geographic zone of potential harm; LBP-11-2, 73 NRC 28 (2011)
NRC proceedings would be incapable of attaining finality if contentions that could have been raised at the outset could be added later at will, regardless of the stage of the proceeding; CLI-12-10, 75 NRC 479 (2012)
NRC provides for an automatic right to appeal a board decision on the question whether a petition to intervene should have been wholly denied; CLI-14-2, 79 NRC 11 (2014)
NRC recognizes an exception to the timeliness requirement in rare instances in which petitioner raises an exceptionally grave issue; CLI-11-2, 73 NRC 333 (2011)
NRC regulations do not allow use of reply briefs to provide, for the first time, the necessary threshold support for contentions; LBP-11-6, 73 NRC 149 (2011)
NRC regulations may not be challenged in an adjudicatory proceeding absent a request for a waiver under section 2.335(b); LBP-12-8, 75 NRC 539 (2012); LBP-12-12, 75 NRC 742 (2012)
NRC revised its rules in 1989 to prevent admission of contentions based on little more than speculation; CLI-12-5, 75 NRC 301 (2012)
NRC rules are designed to avoid resource-intensive hearings where petitioners have not provided sufficient support for their technical claims, and do not demonstrate a potential to meaningfully participate in a hearing; CLI-12-15, 75 NRC 704 (2012)
NRC rules are designed to avoid unfocused inquiry in contested proceedings; CLI-15-1, 81 NRC 1 (2015)
NRC rules contain ample provisions through which litigants may seek admission of new or amended contentions; CLI-12-13, 75 NRC 681 (2012)
NRC rules provide the board with substantial authority to regulate hearing procedures; CLI-14-10, 80 NRC 157 (2014)
NRC rules provide for an automatic right to appeal a licensing board decision deciding standing and contention admissibility, on the question whether a petition to intervene and request for hearing should have been granted, or denied in its entirety; CLI-12-8, 75 NRC 393 (2012)
NRC Staff counsel may file written interrogatories that the target of an enforcement order must answer; LBP-14-11, 80 NRC 125 (2014)
NRC Staff counsel may require the target of an enforcement order to provide the Director with a copy of any designated relevant document that is within his possession, custody, or control; LBP-14-11, 80 NRC 125 (2014)
NRC Staff counsel may take the deposition of the target of an enforcement order or any other person; LBP-14-11, 80 NRC 125 (2014)
NRC Staff is required to notify the presiding officer and the parties whether it desires to participate as a party in a license transfer proceeding; CLI-14-5, 79 NRC 254 (2014)
NRC Staff will become a party to cases involving an application denial; CLI-14-5, 79 NRC 254 (2014)
NRC standards for ruling on summary disposition motions are analogous to the standards for granting summary judgment motions under Rule 56 of the Federal Rules of Civil Procedure; LBP-11-7, 73 NRC 254 (2011)
NRC’s contention admissibility rules are intentionally strict; CLI-15-20, 82 NRC 211 (2015)
NRC’s demanding regulatory requirements for reopening the record regarding contentions submitted after the record has closed must be satisfied; LBP-11-20, 74 NRC 65 (2011)
NRC’s strict contention rule is designed to avoid resource-intensive hearings where petitioners have not provided sufficient support for their technical claims, and do not demonstrate a potential to meaningfully participate and inform a hearing; LBP-12-27, 76 NRC 583 (2012)
officer, member, or attorney representing an organization in a proceeding must file a written notice of appearance stating, among other things, his or her basis for representing the organization; LBP-11-13, 73 NRC 534 (2011)
once parties demonstrate standing, they will then be free to assert any contention, which, if proven, will afford them the relief they seek; LBP-11-21, 74 NRC 115 (2011)
once the deadline for filing petitions to intervene has passed, a party may file new or amended contentions if it is able to demonstrate good cause by meeting the three requirements specified in this section; LBP-15-1, 81 NRC 15 (2015)
one demanding a hearing on a challenge to an enforcement order need not comply with the requirements of 10 C.F.R. 2.309(k)(1); LBP-13-3, 77 NRC 82 (2013); LBP-14-4, 79 NRC 319 (2014)
one fundamental purpose of the prehearing conference and the scheduling order is expediting the disposition of the proceeding; LBP-12-19, 76 NRC 184 (2012)
only 10 C.F.R. 2.203 refers to a notice of hearing as part of the settlement procedure; LBP-15-30, 82 NRC 339 (2015)
only alleged facts, not evidence or expert opinion, are required to support contention admissibility; LBP-13-8, 78 NRC 1 (2013)
only disputes over facts that might affect the outcome of a proceeding would preclude summary disposition; LBP-11-4, 73 NRC 91 (2011)
only relevant, material, and reliable evidence that is not unduly repetitious will be admitted; LBP-12-21, 76 NRC 213 (2012)
only the petitioning party may file reply briefs; CLI-15-7, 81 NRC 481 (2015)
opponent of a summary disposition motion cannot rest on the allegations or denials of a pleading, but instead must go beyond the pleadings and by its own affidavits, or the depositions, answers to interrogatories, and admissions on file, designate specific facts showing that there is a genuine issue for trial; LBP-12-4, 75 NRC 213 (2012)
opponent of a summary disposition motion may not raise distinctly new asserted deficiencies; LBP-11-4, 73 NRC 91 (2011)
organization asserting standing in its own right must establish a discrete institutional injury to the organization’s interests, which must be based on something more than a general environmental or policy interest in the subject matter of the proceeding; LBP-12-3, 75 NRC 164 (2012)
organization may base its standing on immediate or threatened injury to its organizational interests; CLI-11-3, 73 NRC 613 (2011)
organization may establish organizational standing; LBP-11-6, 73 NRC 149 (2011)
organization may represent the interests of members using representational standing if it can show that the interests it seeks to protect are germane to its own purpose, identify by name and address at least one member who qualifies for standing in his or her own right, show that it is authorized by that member to request a hearing on his or her behalf and show that neither the claim asserted nor the relief requested requires an individual member’s participation in the organization’s legal action; LBP-11-2, 73 NRC 28 (2011)
organization seeking standing as a party must show either a discrete injury to its own institutional interests or authorization to represent an individual who would have standing in his or her own right; LBP-12-24, 76 NRC 503 (2012)
organization seeking to intervene in its own right must allege that the challenged action will cause a cognizable injury to its interests or to the interests of its members; LBP-11-21, 74 NRC 115 (2011); LBP-12-8, 75 NRC 539 (2012); LBP-12-10, 75 NRC 633 (2012); LBP-13-8, 78 NRC 1 (2013)
organization that seeks to establish representational standing, must show that at least one of its members would be affected by the proceeding and identify that member by name and address, show that the member would have standing to intervene in his or her own right, and that the identified member has authorized the organization to request a hearing on their behalf; CLI-11-3, 73 NRC 613 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
organization's standing can be demonstrated through the interests of its members, but if a member acts or speaks on behalf of the organization, that member must also demonstrate authorization by that organization to represent it; LBP-11-13, 73 NRC 534 (2011)
organizations may claim standing on their own behalf; LBP-11-29, 74 NRC 612 (2011)
page limit for appellate briefs excludes tables of contents and citations, appropriate exhibits, and statutory or regulatory extracts; CLI-11-8, 74 NRC 214 (2011)
partial initial decision constitutes a final decision of the Commission 40 days from the date of issuance or the first agency business day following that date if it is a Saturday, Sunday, or federal holiday unless a petition for review is filed in accordance with section 2.1212; LBP-12-5, 75 NRC 227 (2012)
participant may request the waiver of a current rule or regulation in a specific proceeding under special circumstances as an exception to the prohibition against challenging NRC rules or regulations in adjudicatory proceedings; CLI-14-7, 80 NRC 1 (2014)
parties are expected to adhere to page-limit requirements, or timely seek leave for an enlargement of the page limit; CLI-11-14, 74 NRC 801 (2011)
parties bring settlement requests pursuant to 10 C.F.R. 2.338(i); LBP-15-30, 82 NRC 339 (2015)
parties do not have an automatic right to respond to reply briefs; LBP-11-34, 74 NRC 685 (2011)
parties may choose whether to submit a petition for review, an answer in support of the petition, or neither; CLI-11-14, 74 NRC 801 (2011)
parties may file a petition for review of licensing board full or partial initial decisions, both of which are considered to be final; CLI-11-14, 74 NRC 801 (2011)
parties may not raise new arguments that are outside the scope of their contentions, but may legitimately amplify arguments presented in support of the contention in order to fairly respond to arguments raised by the opposing party; LBP-12-23, 76 NRC 445 (2012)
parties must list documents claimed to be privileged or protected on a privilege log; LBP-11-5, 73 NRC 131 (2011)
parties pursuing settlement may seek to have a settlement judge appointed; LBP-14-11, 80 NRC 125 (2014)
parties seeking a rule waiver must attach an affidavit that, among other things, states with particularity the special circumstances claimed to justify the waiver or exception requested; CLI-12-6, 75 NRC 352 (2012)
parties seeking interlocutory review must show that the issue to be reviewed threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-14, 74 NRC 801 (2011)
parties to a Subpart L proceeding must update their disclosures every month after initial disclosures on a due date selected by the presiding officer in the order admitting contentions; LBP-14-2, 79 NRC 131 (2014)

parties to an adjudication may petition for a waiver of a rule or regulation upon a showing that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which it was adopted; CLI-12-6, 75 NRC 352 (2012)

party may move to reopen the case to allow it to litigate a new version of a previously rejected contention, even if the licensing board has closed the evidentiary record and the Commission had issued its final decision authorizing the Staff to issue the license for the proposed facility; LBP-11-22, 74 NRC 259 (2011)

party’s policy arguments that are advanced during the adjudicatory process before a licensing board cannot trump directives issued by the Commission; LIP-13-7, 77 NRC 307 (2013)

persistent difficulties with the NRC electronic filing system despite petitioners’ good-faith efforts is good cause for late filing; LBP-11-2, 73 NRC 28 (2011)

person adversely affected by an enforcement order has a legal right to demand a hearing; LBP-14-4, 79 NRC 319 (2014)

persons not currently a party may file timely petitions to intervene provided that they satisfy the good-cause criteria; LBP-15-6, 81 NRC 314 (2015)

persons who are not parties may file an amicus curiae brief if a matter is taken up by the Commission under 10 C.F.R. 2.341 or sua sponte; CLI-15-1, 81 NRC 1 (2015)

pertinent zone in operating license renewal proceedings and other power reactor license matters is the area within a 50-mile radius of the site; LBP-11-2, 73 NRC 28 (2011)

petition for review falls short of satisfying 10 C.F.R. 2.341(b)(4) if it does not specify the subsections upon which it relies but merely sets forth a series of general grievances fundamentally going to the correctness of the board’s decision; CLI-11-2, 73 NRC 333 (2011)

petition for review will be granted at Commission’s discretion upon a showing that petitioner has raised a substantial question as to any of the factors of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-11-2, 73 NRC 333 (2011); CLI-12-21, 76 NRC 491 (2012); CLI-14-10, 80 NRC 157 (2014); CLI-15-1, 81 NRC 1 (2015); CLI-15-9, 81 NRC 512 (2015)

petition pursuant to 10 C.F.R. 2.714, which was abolished in 2004, is treated as though filed under section 2.309; LBP-13-12, 78 NRC 239 (2013)

petition that attempts to proffer a nontimely contention without addressing the balancing factors in section 2.309(c) may be summarily rejected; LBP-12-7, 75 NRC 503 (2012)

petitioner asserting organizational standing must establish a discrete institutional injury to the organization’s interests, which must be based on something more than a general environmental or policy interest in the subject matter of the proceeding; LBP-13-6, 77 NRC 253 (2013)

petitioner bears the burden to provide facts sufficient to establish standing; LBP-13-6, 77 NRC 253 (2013)

petitioner can justify missing a contention filing deadline by showing that the delay was caused by factors such as a weather event or unexpected health issues; LBP-12-27, 76 NRC 583 (2012)

petitioner cannot rest its contentions on bare assertions and speculation; LBP-11-21, 74 NRC 115 (2011)

petitioner does not have to prove its contentions at the admission stage; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011)

petitioner failed to satisfy NRC standards for reopening because its motion was untimely and it failed to demonstrate that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-11-2, 73 NRC 333 (2011)

petitioner in materials licensing actions is entitled to a presumption of standing if petitioner resides in the zone of reasonably foreseeable harm from the source of radioactivity and the proposed action involves a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-12-24, 76 NRC 503 (2012)

petitioner is generally afforded 7 days to file its reply; LBP-12-3, 75 NRC 164 (2012)

petitioner is required to make reference to specific sources and documents on which it intends to rely; LBP-12-8, 75 NRC 539 (2012)

1275
petitioner is required to present the factual allegations and/or expert opinion necessary to support its contention; LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012)
petitioner is required to provide a concise statement of the alleged facts or expert opinions that support its position; LBP-12-3, 75 NRC 164 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-13-6, 77 NRC 253 (2013)
petitioner lacked good cause for a hearing request filed 7 days after the filing deadline when the argument relied on a misimpression of due dates; LBP-11-9, 73 NRC 391 (2011)
petitioner may address the selection of hearing procedures, taking into account the provisions of 10 C.F.R. 2.310; LBP-11-6, 73 NRC 149 (2011)
petitioner may correct or supplement its showing on standing; LBP-11-21, 74 NRC 115 (2011)
petitioner may file at any time a request for action if it wishes to challenge ongoing operations; CLI-15-25, 82 NRC 389 (2015)
petitioner may raise a SAMA-related contention in a license renewal adjudication if it satisfies the general contention admissibility criteria in section 2.309(f)(1); CLI-13-7, 78 NRC 199 (2013)
petitioner must also show that its contention is material to the findings NRC must make to support issuance of the license amendments; CLI-15-25, 82 NRC 389 (2015)
petitioner must demonstrate good cause for proffering a new contention after the initial deadline for the filing of contentions; LBP-15-23, 82 NRC 55 (2015)
petitioner must demonstrate that a contention asserts an issue of law or fact that is material to the findings the NRC must make to support the action that is involved in the proceeding; CLI-15-20, 82 NRC 211 (2015); CLI-15-25, 82 NRC 389 (2015); LBP-12-3, 75 NRC 164 (2012); LBP-12-13, 75 NRC 784 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-15-20, 81 NRC 829 (2015)
petitioner must demonstrate that a contention of omission is within the scope of the proceeding; LBP-15-5, 81 NRC 249 (2015)
petitioner must explain the basis for each proffered contention by stating alleged facts or expert opinions that support petitioner’s position and on which petitioner intends to rely in litigating the contention at hearing; CLI-15-8, 81 NRC 500 (2015); LBP-15-5, 81 NRC 249 (2015)
petitioner must provide a brief explanation of the basis for its contention; CLI-15-25, 82 NRC 389 (2015)
petitioner must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact, including references to specific portions of the application that petitioner disputes and the supporting reasons for each dispute; CLI-14-2, 79 NRC 11 (2014); LBP-12-3, 78 NRC 1 (2013)
petitioner must refer to specific portions of the application that it disputes, along with the supporting reasons for each dispute; CLI-15-20, 82 NRC 211 (2015)
petitioner must show that a genuine dispute exists on a material issue of law or fact relating to the application; LBP-15-19, 81 NRC 815 (2015); LBP-15-23, 82 NRC 55 (2015)
petitioner must state the alleged facts or expert opinions that support its position and on which it intends to rely at hearing; CLI-15-20, 82 NRC 211 (2015)
petitioner must state the issue of law or fact to be raised or controverted and a brief explanation of the basis for each contention; CLI-15-20, 82 NRC 211 (2015)
petitioner must state the nature of right under either the Atomic Energy Act or the National Environmental Policy Act to be made a party, nature and extent of property, financial, or other interest, and possible effect of any decision or order that may be issued in the proceeding on his/her interest; LBP-15-19, 81 NRC 815 (2015)
petitioner need not prove its contentions at the admissibility stage; LBP-12-8, 75 NRC 539 (2012)
petitioner or intervenor may file timely new or amended contentions, with leave of the board, if the three requirements are met; LBP-11-9, 73 NRC 391 (2011)
petitioner residing within 50 miles of a nuclear power plant is presumed to have standing; LBP-13-8, 78 NRC 1 (2013)
petitioner who believes a regulation should not be applied in a particular proceeding may seek a waiver of that regulation; LBP-13-1, 77 NRC 37 (2013)
petitioner who satisfies the reopening standard must also show that its proposed new contention meets the standard for new or amended contentions in section 2.309(c) and the underlying admissibility standards of section 2.309(f)(1); LBP-14-8, 79 NRC 519 (2014)
petitioner who seeks both to reopen the record and to submit a late contention must successfully satisfy two elevated standards; CLI-11-2, 73 NRC 333 (2011)

petitioner who seeks to demonstrate standing to intervene on behalf of its members must show that an individual member can fulfill all necessary standing elements and has authorized petitioner to represent his or her interests; LBP-12-15, 76 NRC 14 (2012)

petitioner’s appellate argument must pass regulatory muster under the rigorous standards of 10 C.F.R. 2.326(a)(3); CLI-11-2, 73 NRC 333 (2011)

petitioner’s burden on a contention of omission is to identify the omission and the supporting reasons for petitioners’ belief that the application fails to contain information on a relevant matter as required by law; LBP-15-5, 81 NRC 249 (2015)

petitioner’s reply must be narrowly focused on the legal or logical arguments presented in the applicant’s or NRC Staff’s answer; LBP-11-6, 73 NRC 149 (2011)

petitioners are not required to demonstrate that their complaint is unique to the facility in question or that their complaint reflects a significant safety issue; LBP-13-1, 77 NRC 57 (2013)

petitioners cannot challenge an NRC regulation without first obtaining a waiver; LBP-15-20, 81 NRC 829 (2015)

petitioners do not need to cite a specific portion of the application to support a contention of omission; LBP-15-5, 81 NRC 249 (2015)

petitioners have not raised an issue material to findings that NRC must make to support final decisions and they are unable to satisfy contention admissibility standards or meet the criteria to reopen a closed record; CLI-15-4, 81 NRC 221 (2015)

petitioners may not raise in adjudicatory proceedings contentions attacking the agency’s rules and regulations or contentions that are the subject of ongoing rulemakings; LBP-11-29, 74 NRC 612 (2011)

petitioners may seek waiver of a regulation by demonstrating both special circumstances and that the regulation would not serve the purposes for which it was adopted; LBP-12-24, 76 NRC 503 (2012)

petitioners must provide a statement of the alleged facts or expert opinions upon which they rely; LBP-15-5, 81 NRC 249 (2015)

petitioners must state their name, address, and telephone number, the nature of their right to be made a party, the nature and extent of their property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on their interest; LBP-11-6, 73 NRC 149 (2011)

petitioners who are proceeding pro se should be shown greater leeway on the question of whether they have demonstrated good cause for lateness than petitioners represented by counsel; LBP-11-13, 73 NRC 534 (2011)

petitioners who choose to raise contentions that could have been raised earlier risk the possibility that there will not be a material difference between the application and NRC Staff’s review documents, thus rendering any newly proposed contention on previously available information impermissibly late; CLI-15-1, 81 NRC 1 (2015)

petitioners who have not shown good cause for their late filing must demonstrate that the balance of the remaining factors weighs in their favor; CLI-12-21, 76 NRC 491 (2012)

petitioners’ claims of potential injury are also so speculative, and separate from the import and export license, that they do not amount to cognizable harm for purposes of standing; CLI-11-3, 73 NRC 613 (2011)

petitioners’ generalized institutional interest in public forums and in preventing processing of foreign waste is insufficient to confer standing; CLI-11-3, 73 NRC 613 (2011)

petitioning parties may reply separately to each answer, especially considering that the answers may present different views or arguments; CLI-11-14, 74 NRC 801 (2011)

petitions for interlocutory review must show that the issue to be reviewed threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-12-13, 75 NRC 681 (2012)

petitions for reconsideration may not be filed except upon leave of the adjudicatory body that rendered the decision and that procedural deficiency is reason enough to deny the request; CLI-12-17, 76 NRC 207 (2012)
petitions for review are allowed after a full or partial initial decision, both of which are considered final decisions; CLI-11-10, 74 NRC 251 (2011)

petitions for review must be filed within 15 days; CLI-12-17, 76 NRC 207 (2012)

petitions for review will be granted at the Commission’s discretion, giving due weight to the existence of a substantial question with respect to one or more of the considerations of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-12-3, 75 NRC 132 (2012)

petitions for review of partial initial decision and any answer shall conform to the requirements of 10 C.F.R. 2.341(b)(4)(i)-(v); LBP-12-5, 75 NRC 227 (2012)

petitions, answers, and replies are allowed unless otherwise specified by the Commission or the presiding officer, but no other written answers or replies will be entertained; LBP-11-2, 73 NRC 28 (2011)

pleading requirements calling for a recitation of facts or expert opinion supporting the issue raised are inapplicable to a contention of omission beyond identifying the regulatively required missing information; LBP-15-5, 81 NRC 249 (2015); LBP-15-11, 81 NRC 401 (2015)

post-hearing petition contention (new or amended contention) also must satisfy the substantive contention admissibility standards; LBP-13-9, 78 NRC 37 (2013)

prejudice is not a factor in the balancing test for nontimely filings; LBP-11-13, 73 NRC 534 (2011)

presiding officer approval for settlements in contested proceedings with admitted contentions is evidenced from provisions of section 2.338 other than paragraph (g); LBP-15-30, 82 NRC 339 (2015)

presiding officer has discretion to consider an exceptionally grave issue even if untimely presented; LBP-11-20, 74 NRC 65 (2011)

presiding officer may certify questions or refer rulings to the Commission for decision; CLI-14-5, 79 NRC 254 (2014)

presiding officer may impose sanctions on a party that fails to provide any document required to be disclosed, unless the party demonstrates good cause for its failure to make the disclosure; LBP-14-2, 79 NRC 131 (2014)

presiding officer’s jurisdiction terminates when the time period for the Commission to direct certification expires, when the Commission renders a final decision, and when the presiding officer withdraws from the case upon disqualifying himself; CLI-12-17, 76 NRC 207 (2012)

prior to its revision, 10 C.F.R. 2.341(f)(1) required that a referred ruling raise a significant and novel legal or policy issue and necessitate resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 199 (2013)

proper showing of standing includes the name, address, and telephone number of petitioner, nature of petitioner’s right under a relevant statute to be made a party, nature and extent of the petitioner’s property, financial, or other interest in the proceeding, and possible effect of any decision or order that might be issued on petitioner’s interest; LBP-11-21, 74 NRC 115 (2011)

properly formulated contentions must focus on the license application in question, challenging either specific portions of, or alleged omissions from, the application (including the safety analysis report/technical report and the ER) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-12-27, 76 NRC 583 (2012)

proponent of a contention is responsible for formulating the contention and providing the necessary support to satisfy the admissibility requirements; CLI-15-23, 82 NRC 321 (2015)
proponent of a contention must provide sufficient information to show that a genuine dispute exists with applicant/licensee on a material issue of law or fact; CLI-12-3, 75 NRC 132 (2012)
proponent of a motion to reopen must show that the motion is timely, addresses a significant safety or environmental issue, and a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-12-3, 75 NRC 132 (2012)
proponent of a new contention must demonstrate that a materially different result would have been likely had the newly proffered evidence been considered initially; CLI-11-2, 73 NRC 333 (2011)
proponents of new or amended contentions are required to demonstrate good cause for their filing, which includes showing that information on which the contention is based is materially different from information previously available; CLI-15-1, 81 NRC 1 (2015)
potential new contention will be considered timely if it is filed within 30 days of the date when the new and material information on which the proposed contention is based first becomes available; LBP-11-7, 73 NRC 254 (2011); LBP-12-23, 76 NRC 445 (2012)
proposed new or amended contentions shall be deemed timely if filed within 60 days of the date when the document containing the new and material information first becomes available; LBP-12-12, 75 NRC 742 (2012)
proximity presumption applies if petitioner has frequent contacts with the geographic zone of potential harm
proximity presumption applies in reactor operating license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
purpose of 10 C.F.R. 2.309(f)(1) is to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-13-8, 78 NRC 1 (2013); LBP-15-5, 81 NRC 249 (2015)
purpose of contention pleading requirements is to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-12-25, 76 NRC 540 (2012)
purpose of the reopening rule is to make sure that petitioners have an opportunity to raise serious issues after the close of the record; CLI-12-14, 75 NRC 692 (2012)
reach of a contention necessarily hinges upon its terms coupled with its stated bases; CLI-12-5, 75 NRC 301 (2012)
“receiving party” means the party to whom the mandatory disclosure must be made pursuant to 10 C.F.R. 2.336; LBP-11-5, 73 NRC 131 (2011)
recipient of a subpoena issued by the NRC’s Office of Investigations may move to quash the subpoena pursuant to 10 C.F.R. 2.702(f); CLI-13-5, 77 NRC 223 (2013)
reconsideration motion fails to identify a significant factual or legal matter that the board overlooked or provide compelling circumstances that render the board’s decision invalid; LBP-14-7, 79 NRC 451 (2014)
reconsideration motions must be filed within 10 days of the action for which reconsideration is requested; CLI-12-17, 76 NRC 207 (2012)
referred rulings or certified questions must raise significant and novel legal or policy issues or issues whose early resolution would materially advance the orderly disposition of the proceeding; CLI-15-1, 81 NRC 1 (2015)
regardless of when filed, all proposed contentions must comply with the general contention admissibility criteria; LBP-11-7, 73 NRC 254 (2011)
regulations are not subject to collateral attack in NRC hearings; LBP-13-9, 78 NRC 37 (2013)
relevant legal standards when evaluating a third-party petition for hearing on a confirmatory order are in section 2.309(d) and (f); LBP-14-4, 79 NRC 319 (2014)
reopening standard is intended to impose a deliberately heavy burden on parties seeking to supplement the evidentiary record at the 11th hour, after the record has closed; CLI-12-10, 75 NRC 479 (2012)
reopening standards expressly contemplate contentions that raise issues not previously litigated; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
reopening the record is an extraordinary action and proponents bear a heavy burden; LBP-11-22, 74 NRC 259 (2011)
reopening will only be allowed where proponent presents material, probative evidence that either could not have been discovered before or could have been discovered but is so grave that, in the judgment of the presiding officer, it must be considered anyway; CLI-12-10, 75 NRC 479 (2012)

reply affidavit that did not accompany the motion to reopen will not be considered in determining whether petitioners have satisfied 10 C.F.R. 2.326(b); LBP-12-10, 75 NRC 633 (2012)

reply briefs may not be used to introduce new arguments to reinvigorate thinly supported contentions; CLI-12-5, 75 NRC 301 (2012)

reply briefs may not contain new information that was not raised in either the petition or answers, but may provide arguments that respond to the petition or answers, whether they are offered in rebuttal or in support; CLI-11-14, 74 NRC 801 (2011); LBP-12-8, 75 NRC 539 (2012)

reply must be filed within 7 days after the filing of answers to an intervention petition; LBP-11-21, 74 NRC 115 (2011)

representational standing associated with causation in power reactor license renewal proceedings is deemed fulfilled if a member of the organization resides or has significant contacts in an area within a 50-mile radius of the facility; LBP-12-15, 76 NRC 14 (2012)

representational standing claims must have supporting declarations from members identifying themselves, outlining their interests, and authorizing petitioners to represent them; LBP-12-3, 75 NRC 164 (2012)

representational standing granted in a different proceeding on the basis of the individual standing showing of a member cannot be the supporting basis for the organization’s representational standing in another proceeding where that member does not provide the basis for standing; LBP-13-6, 77 NRC 253 (2013)

representational standing must be based on individual standing of at least one member; LBP-13-6, 77 NRC 253 (2013)

representative of a governmental entity that wishes to participate as a nonparty in the proceeding must identify those contentions on which it will participate in advance of any hearing held; LBP-15-11, 81 NRC 401 (2015)

request for hearing and/or petition for leave to intervene will be granted if the board determines that requestor/petitioner has standing and has proposed at least one admissible contention; LBP-12-8, 75 NRC 539 (2012)

request for hearing must state name and identity of requestor, nature of requestor’s right to be a party, and nature and extent of the requestor’s/petitioner’s property, financial, or other interests in the proceeding; LBP-14-4, 79 NRC 319 (2014)

request for hearing or petition for leave to intervene must explain proposed contentions with particularity; CLI-11-8, 74 NRC 214 (2011)

request for hearing regarding a newly proffered contention cannot be admitted unless it satisfies the stringent standards for reopening the record; LBP-11-20, 74 NRC 65 (2011)

request to admit a new or amended contention requires petitioner to show that the information upon which it is based was not previously available and is materially different from information previously available; CLI-14-2, 79 NRC 11 (2014)

requests for hearing and petitions for leave to intervene must set forth with particularity the contentions sought to be raised and must satisfy all six requirements of 10 C.F.R. 2.309(f)(1); CLI-12-8, 75 NRC 393 (2012)

requests for stays of licensing board decisions are considered under 10 C.F.R. 2.342; CLI-12-11, 75 NRC 523 (2012)

requirement for brief explanation of the basis for a contention merely means an explanation of the rationale or theory of the contention; LBP-15-20, 81 NRC 829 (2015)

requirement that a contention refer to specific portions of the application ensures that the board will be able to determine whether the contention is within the scope of the proceeding and that applicant knows which portions of the application it must defend; LBP-15-20, 81 NRC 829 (2015)

requirement that a contention refer to specific portions of the application is satisfied when a commonsense reading of the petition makes abundantly clear which sections of the application petitioners are challenging, even though petitioners do not specifically cite particular sections; LBP-15-20, 81 NRC 829 (2015)
requirements for an admissible contention are provided in 10 C.F.R. 2.309(f)(i)-(vi); CLI-15-8, 81 NRC 500 (2015); LBP-12-3, 75 NRC 164 (2012)
requirements for demonstrating good cause are the same as the requirements for filing late contentions previously available under section 2.309(f)(2)(i)-(iii); LBP-15-1, 81 NRC 15 (2015)
requiring petitioners to proffer additional and conclusive support for the effect of their proposed contention would improperly require boards to adjudicate the merits of contentions before admitting them; LBP-11-7, 73 NRC 254 (2011); LBP-11-21, 74 NRC 115 (2011)
review is granted where petitions for review raise substantial questions of law and procedure; CLI-15-6, 81 NRC 340 (2015)
review of a board’s certified question that raises a significant and novel issue whose early resolution will materially advance the orderly disposition of the proceeding is granted; CLI-11-4, 74 NRC 1 (2011)
revised rules no longer require leave from the presiding officer to amend a contention or file a new contention; LBP-12-27, 76 NRC 583 (2012)
routine contention admissibility determinations generally are not appropriate for interlocutory review; CLI-12-12, 75 NRC 603 (2012)
rule waiver petitions are reviewed under section 2.335 as well as case law; CLI-13-7, 78 NRC 199 (2013)
rule waiver petitions must include an affidavit that states with particularity the special circumstances that justify waiver of the rule; CLI-13-7, 78 NRC 199 (2013); LBP-13-12, 78 NRC 239 (2013)
rule waiver requests must demonstrate that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which it was adopted; CLI-15-21, 82 NRC 295 (2015)
rule waivers may be granted only when all four factors in 10 C.F.R. 2.335(b) are met; LBP-14-15, 80 NRC 151 (2014)
rulemaking petitioner who is also a participant in a licensing proceeding may request suspension of that proceeding pending the outcome of the rulemaking petition; CLI-14-7, 80 NRC 1 (2014)
rules on contention admissibility are strict by design; LBP-11-21, 74 NRC 115 (2011); LBP-11-22, 74 NRC 259 (2011); LBP-12-25, 76 NRC 540 (2012); LBP-13-8, 78 NRC 1 (2013); LBP-15-5, 81 NRC 249 (2015)
scope of a contention is limited to the issues of law and fact pleaded with particularity and any factual and legal material in support thereof; LBP-11-38, 74 NRC 817 (2011)
scope of the proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-15-20, 81 NRC 829 (2015)
section 2.304 provides a process for stakeholders to advance concerns and obtain full or partial relief, or written reasons why the requested relief is not warranted; LBP-15-4, 81 NRC 156 (2015)
section 2.309(c)(1)(iii) does not stipulate what is considered timely, and the board looks to Commission precedent; LBP-15-4, 81 NRC 401 (2015)
section 2.309(c)(vii) weighs heavily against admission of a contention because the addition of a hearing on its subject matter will unduly broaden the issues and materially delay the proceeding; LBP-11-35, 74 NRC 701 (2011)
section 2.309(f)(1) has no application to reactor operator licensee proceedings; LBP-13-3, 77 NRC 82 (2013)
section 2.311 does not provide for the filing of replies; CLI-14-3, 79 NRC 31 (2014)
section 2.311(a) is applicable to an appeal of a board decision rejecting an intervention petition and a hearing request; CLI-14-6, 79 NRC 445 (2014)
section 2.311(d)(1) provides for appeals as of right on the question of whether a request for hearing should have been wholly denied; CLI-11-11, 74 NRC 427 (2011)
section 2.318(a) does not provide an exhaustive list of every situation where board jurisdiction lapses; CLI-12-14, 75 NRC 692 (2012); CLI-12-17, 76 NRC 207, 210 (2012)
section 2.326(a)(3) expressly refers to a motion to reopen a closed record to consider additional evidence and newly proffered evidence; LBP-11-22, 74 NRC 259 (2011)
section 2.338 is a new provision that consolidates and amplifies the previous rules pertaining to settlement; LBP-15-30, 82 NRC 339 (2015)
section 2.341 applies to appeals of rulings on new contentions filed after initial intervention petitions; CLI-12-7, 75 NRC 379 (2012)
section 2.341(f)(2)(i) is compared to 10 C.F.R. 2.1213(d)(1); CLI-15-17, 82 NRC 33 (2015)
section 2.342 does not apply to requests for stays of Commission decisions pending judicial review; CLI-12-11, 75 NRC 523 (2012)
section 2.342(e) standards are applied to motion to stay issuance of a license; CLI-14-6, 79 NRC 445 (2014)
section 2.802(d) suspension request is inapplicable where no petition for rulemaking has been filed before the Commission; CLI-14-6, 79 NRC 445 (2014)
service of a filing is not complete until accompanied by a certificate of service and a request for oral argument; LBP-11-21, 74 NRC 115 (2011)
settlement agreement approval process in 10 C.F.R. 2.338(i) is discussed; LBP-15-21, 82 NRC 1 (2015)
settlement agreements are contingent upon approval by a licensing board; LBP-15-21, 82 NRC 1 (2015)
settlements must be in the form of a proposed settlement agreement, a consent order, and a motion for its entry that includes the reasons why it should be accepted; LBP-15-30, 82 NRC 339 (2015)
settlements approved by a presiding officer are subject to Commission review; LBP-15-21, 82 NRC 1 (2015)
should a suspended adjudication resume, the Commission will consider appeals in due course, consistent with relevant Subpart J rules; CLI-13-8, 78 NRC 219 (2013)
should requirements for reopening the record be satisfied, the requirements for untimely contentions must also be satisfied, as well as the contention admissibility criteria of section 2.309(o)(1); LBP-11-35, 74 NRC 701 (2011)
should the Commission determine at a future time that case-specific waste confidence challenges are appropriate for consideration, normal procedural rules will apply; LBP-13-1, 77 NRC 57 (2013); LBP-14-6, 79 NRC 404 (2014)
showing of special circumstances demonstrating that application of the rule would not serve the purpose for which it was adopted is required for rule waiver; CLI-12-19, 76 NRC 377 (2012); LBP-11-35, 74 NRC 701 (2011); LBP-13-1, 77 NRC 57 (2013)
simply attaching material or documents as a basis for a contention, without setting forth an explanation of that information’s significance, is inadequate to support the admission of the contention; LBP-12-27, 76 NRC 583 (2012)
sole provision of NRC’s procedural rules explicitly authorizing stay applications is available only to parties to adjudicatory proceedings seeking stays of decisions or actions of a presiding officer pending the filing and resolution of a petition for review; CLI-11-5, 74 NRC 141 (2011)
special circumstances are required for a rule waiver; LBP-14-16, 80 NRC 183 (2014)
standard for admission of new or amended contentions involves a balancing of eight factors; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)
standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-11-2, 73 NRC 333 (2011); CLI-12-10, 75 NRC 479 (2012); CLI-11-8, 74 NRC 214 (2011); LBP-11-20, 74 NRC 65 (2011); LBP-11-22, 74 NRC 259 (2011)
standard for deciding motions for summary disposition in Subpart L proceedings is found in section 2.710; LBP-11-31, 74 NRC 643 (2011)
standard for determining whether a party has met the “materially different result” requirements of 10 C.F.R. 2.326(a)(3) is whether the party can defeat a motion for summary disposition; LBP-11-23, 74 NRC 287 (2011)
standard for discretionary review is described; CLI-15-7, 81 NRC 481 (2015)
standard for review of contention admissibility determinations is the same, whether an appeal lies under section 2.311 or 2.341, and the Commission will disturb a licensing board’s contention admissibility ruling only if there has been an error of law or an abuse of discretion; CLI-12-7, 75 NRC 379 (2012)
standard for when an issue is “significant” in the context of reopening a closed record is the same as the standard for when supplementation of an environmental impact statement is required, i.e., the new and significant information must paint a seriously different picture of the environmental landscape; LBP-11-23, 74 NRC 287 (2011)
standards for admission of new contentions are reviewed; LBP-11-25, 74 NRC 380 (2011)
standards for reopening apply not only when a party is seeking to introduce new evidence on a previously admitted contention after the evidentiary record is closed, but also when a party is seeking to introduce a new contention after the record is closed; LBP-11-23, 74 NRC 287 (2011)
standards for reopening the case record require movant to show that the motion is timely, addresses a significant safety or environmental issue, and demonstrates that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-12-10, 75 NRC 479 (2012)
standards governing contention admissibility are strict by design; LBP-12-7, 75 NRC 503 (2012)
standing based on the proximity presumption has been found if petitioner or a representative of a petitioner organization resides within approximately 50 miles of the facility in question; LBP-11-13, 73 NRC 534 (2011)
standing criteria for federally recognized Indian tribes are less stringent, but only where the facility at issue is within the tribe’s boundaries; LBP-12-24, 76 NRC 503 (2012)
standing requires petitioner to show a concrete and particularized harm, stemming from the challenged action, and redressable by a favorable decision; CLI-13-2, 77 NRC 39 (2013)
state government may file an amicus brief within the time allowed to the party whose position the brief will support
state has standing because facility is located within the boundaries of the state and no further demonstration of standing is required; LBP-15-24, 82 NRC 68 (2015)
state intervenor provided good cause for its late e-filing submission because the State submitted its petition to NRC by e-mail before the deadline lapsed and the delay was purely a matter of obtaining digital credentials for the system, not an attempt to gain extra time to prepare a pleading or otherwise to float NRC’s procedural requirements; LBP-15-4, 81 NRC 156 (2015)
stay movant has the burden of persuasion on the four factors of 10 C.F.R. 2.1213(d); LBP-15-2, 81 NRC 48 (2015)
stay pursuant to 10 C.F.R. 2.342 is available only where a presiding officer or licensing board has issued a decision or taken action in a proceeding to which the movant is a party; CLI-14-4, 79 NRC 249 (2014)
strict rules of evidence do not apply to written submissions; LBP-12-21, 76 NRC 218 (2012)
sua sponte authority of presiding officer is compared under predecessor rule 10 C.F.R. 2.760a; LBP-14-9, 80 NRC 15 (2014)
sua sponte review authority shall be used only in extraordinary circumstances; CLI-15-1, 81 NRC 1 (2015)
subject matter of contentions must impact the grant or denial of a pending license application; LBP-12-15, 76 NRC 14 (2012)
Subpart L hearing procedures provide that motions for summary disposition must be in writing and must include a written explanation of the basis of the motion and affidavits to support statements of fact; LBP-12-4, 75 NRC 213 (2012)
Subpart L provides for motions for summary disposition, and such motions are governed by the same standards as those in Subpart G proceedings; LBP-12-2, 75 NRC 159 (2012); LBP-12-4, 75 NRC 213 (2012)
summary disposition is not a tool for trying to convince a licensing board to decide, on written submissions, genuine issues of material fact that warrant resolution at a hearing; LBP-11-14, 73 NRC 591 (2011)
summary disposition is particularly inappropriate when a licensing board is presented with conflicting expert testimony, for at that stage of a proceeding it is not the role of licensing boards to untangle the expert affidavits and decide which experts are more correct; LBP-11-14, 73 NRC 591 (2011)
summary disposition may be entered with respect to all or any part of the matters involved in the proceeding if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-12-2, 75 NRC 159 (2012)
summary disposition movant bears the burden of demonstrating that there is no genuine issue as to any material fact and that it is entitled to a decision in its favor; LBP-11-4, 73 NRC 91 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-11-17, 74 NRC 11 (2011); LBP-12-4, 75 NRC 213 (2012); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)
summary disposition opponent may not rest upon mere allegations or denials, but must state specific facts showing that there is a genuine issue of fact for hearing; LBP-11-4, 73 NRC 91 (2011)
summary disposition opponent need not demonstrate that it would prevail on the issues at hand, but it must at least show that there is a genuine dispute of material fact to be tried; LBP-12-19, 76 NRC 184 (2012)

summary disposition should be granted if filings in the proceeding, depositions, answers to interrogatories, and admissions on file, together with statements of parties and affidavits show that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-11-4, 73 NRC 91 (2011); LBP-12-26, 76 NRC 559 (2012)

summary disposition, like summary judgment, is an extreme remedy that should be granted with caution especially before the parties have been afforded an opportunity to marshal their evidence; LBP-11-7, 73 NRC 254 (2011)

summary judgment should be awarded only when the truth is quite clear; LBP-11-4, 73 NRC 91 (2011); LBP-11-14, 73 NRC 591 (2011)

support required for a contention necessarily will depend on the issue sought to be litigated; CLI-11-11, 74 NRC 427 (2011)

support required for a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-3, 75 NRC 132 (2012)

suspension provision provides an opportunity for a participant to ensure that a successful rulemaking petition is applied in an ongoing adjudication; CLI-14-7, 80 NRC 1 (2014)

tardy filing of a contention may be excusable only where the facts upon which the amended or new contention is based were previously unavailable; CLI-11-2, 73 NRC 333 (2011)

target of an enforcement order may require NRC Staff to attend a prehearing meeting where he can require that Staff member to answer questions orally under oath; LBP-14-11, 80 NRC 134 (2014); LBP-14-11, 80 NRC 125 (2014)

target of an enforcement order may serve interrogatories on NRC Staff, must show that answers to the interrogatories are necessary to a proper decision in the proceeding, and may ask the board to direct NRC Staff to answer those interrogatories; LBP-14-11, 80 NRC 125 (2014)

target of an enforcement order must be provided a copy of all NRC Staff documents that are relevant to disputed issues alleged with particularity in the pleadings; LBP-14-11, 80 NRC 125 (2014)

term “petition” in section 2.335 refers to the waiver petition, not a petition to intervene; CLI-11-11, 74 NRC 427 (2011)

terminating an adjudication has significant implications for the rights of intervenors under Atomic Energy Act § 189a; LBP-11-22, 74 NRC 289 (2011)

test for the “materially different result” requirement of section 2.326(a)(3) is whether it has been shown that a motion for summary disposition could be defeated; LBP-11-20, 74 NRC 65 (2011)

that a summary disposition opponent declines to oppose the motion does not mean that movant is entitled to a favorable judgment; LBP-12-4, 75 NRC 213 (2012)

those providing affidavits must be competent individuals or appropriately qualified experts; CLI-11-8, 74 NRC 214 (2011)

time for submitting a new/amended contention based on information that would be newly available, materially different, and otherwise timely submitted given the information’s availability can be extended if the extension request is based on good cause; LBP-13-10, 78 NRC 117 (2013)

timeliness of an initial hearing petition in different situations is defined as being filed between 20 and 60 days after certain specified events; LBP-15-11, 81 NRC 401 (2015)

timely new contentions may be filed with leave of the presiding officer if information on which they are based was not previously available and is materially different than information previously available and they have been submitted in a timely fashion based on the availability of the subsequent information; LBP-11-25, 74 NRC 380 (2011); LBP-11-32, 74 NRC 654 (2011)

timing of license issuance is informed by instruction for NRC Staff to promptly issue its approval or denial of the application consistent with its findings, and despite the pendency of a hearing; LBP-15-2, 81 NRC 48 (2015)

to be accepted for hearing, contentions must meet strict admission standards; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)
to be admissible, contentions must include specific grievances beyond mere notice pleading; LBP-11-29, 74 NRC 612 (2011)

to be admissible, each contention must satisfy six pleading requirements; LBP-11-29, 74 NRC 612 (2011)

to be admissible, late-filed contentions must not only meet standards of section 2.309(f)(1), but must also satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 37 (2013)

to be considered under the motions rule, replies must satisfy the compelling circumstances standard; CLI-14-3, 79 NRC 31 (2014)

to demonstrate representational standing, an organization must show that at least one of its members would be affected by the agency’s approval of the requested license, identify such members, and establish (preferably through an affidavit) that such members have authorized it to act as their representative and to request a hearing on their behalf; LBP-11-29, 74 NRC 612 (2011)

to demonstrate standing, petitioner must describe the nature of petitioner’s right to be made a party, nature and extent of petitioner’s property, financial, or other interest, and possible effect of any subsequent decision or order on petitioner’s interest; LBP-13-8, 78 NRC 1 (2013)

to demonstrate standing, petitioner must show that it has suffered a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statute, that the injury can fairly be traced to the challenged action, and that the injury is likely to be redressed by a favorable decision; LBP-13-8, 78 NRC 1 (2013)

to derive standing from a member, an organization must demonstrate that the individual member has standing to participate and has authorized the organization to represent his or her interests; LBP-12-8, 75 NRC 539 (2012); LBP-13-8, 78 NRC 1 (2013)

to determine whether petitioner has demonstrated that application of a regulation would not serve the purposes for which it was adopted, a board must first determine the purpose of rule or regulation for which waiver is sought; LBP-13-1, 77 NRC 57 (2013)

to establish organizational standing, petitioner must show that its interests will be harmed by the licensing action, while an organization seeking representational standing must demonstrate that the interests of at least one of its members will be harmed; LBP-12-10, 75 NRC 633 (2012)

to establish representational standing, organizations must show that at least one of its members may be harmed by the licensing action and would have standing to sue in his or her own right, identify that member by name and address, show that the organization is authorized to request a hearing on behalf of that member, and show that the interests that the representative organization seeks to protect are germane to its own interests; LBP-12-10, 75 NRC 633 (2012)

to gain the admission of a new or amended contention, a party must meet the requirements of 10 C.F.R. 2.309(c) and (f); LBP-15-16, 81 NRC 618 (2015)

to have a new contention admitted after the contested proceeding has terminated, petitioner must meet three criteria; CLI-12-14, 75 NRC 692 (2012)

to intervene as a party in an adjudicatory proceeding concerning a proposed license action, petitioner must establish standing and proffer at least one admissible contention; LBP-13-11, 78 NRC 177 (2013); LBP-13-12, 78 NRC 239 (2013); LBP-15-13, 81 NRC 456 (2015); LBP-15-19, 81 NRC 815 (2015)

to intervene as a party, a union must establish standing and proffer at least one admissible contention; LBP-14-4, 79 NRC 319 (2014)

to justify granting a motion to reopen, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition; CLI-11-8, 74 NRC 214 (2011)

to make additional claims in a contention, intervenor must provide a sufficient explanation of its concern and a concise statement of the alleged facts supporting its position; LBP-14-5, 79 NRC 377 (2014)

to obtain a hearing, petitioner must show that its request is timely, that it has standing to obtain a hearing, and that it has proposed at least one admissible contention; CLI-14-11, 80 NRC 167 (2014)

to proffer an admissible contention, intervenors must demonstrate a genuine dispute suitable for evidentiary hearing; LBP-11-28, 74 NRC 604 (2011)

to remove an admitted contention from the proceeding, a party must file, and a board must grant, a motion for summary disposition; LBP-14-5, 79 NRC 377 (2014)

to reopen a closed proceeding, intervenors must file a motion demonstrating, among other things, that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; LBP-12-19, 76 NRC 184 (2012)
to show a genuine dispute with applicant on a material issue of law or fact, a contention must include references to specific portions of the application that the petitioner disputes and the supporting reasons for each dispute; CLI-11-9, 74 NRC 233 (2011)
to show standing, a hearing request must state petitioner’s name, address, and telephone number, nature of its right under the applicable statutes to be made a party, nature and extent of property, financial, or other interest in the proceeding, and possible effect of any decision or order that may be issued on its interest; LBP-11-29, 74 NRC 612 (2011)
to the extent that contentions raise matters other than onsite spent fuel storage, the board should assess their admissibility under generally applicable rules of practice; CLI-14-8, 80 NRC 71 (2014)
to trigger a full adjudicatory hearing, petitioners must be able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-12-27, 76 NRC 583 (2012)
 trigger point for the timely submission of new or amended contentions is when new information becomes available, and intervenor has the obligation to raise new contentions based on such information; CLI-12-13, 75 NRC 681 (2012)
two issues in one contention are best evaluated as separate contentions; LBP-15-5, 81 NRC 249 (2015)
under 10 C.F.R. 2.311, appeal of a ruling on contentions is allowed only if the order wholly denies an intervention petition or a party other than the petitioner alleges that a petition for leave to intervene or a request for hearing should have been wholly denied; CLI-12-7, 75 NRC 379 (2012)
under current rules, intervenors may use discovery to develop a case once contentions are admitted, but contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact or facts demonstrating a genuine material dispute with the applicant; CLI-12-8, 75 NRC 393 (2012)
under the proximity presumption, an individual who resides within a 50-mile radius of a nuclear power plant is not required to specifically plead injury, causation, and redressability to establish his or her standing to intervene; LBP-12-10, 75 NRC 633 (2012)
unless the presiding officer otherwise orders, applicant or proponent of an order has the burden of proof; LBP-14-2, 79 NRC 131 (2014); LBP-15-2, 81 NRC 48 (2015)
untimeliness constitutes sufficient grounds on its own for denying a motion to reopen and thus the board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 44 (2012)
untimely filed contention is appropriate for sua sponte board review; LBP-14-9, 80 NRC 15 (2014)
untimely issues may be considered in the discretion of the presiding officer if the issue is exceptionally grave; CLI-12-10, 75 NRC 479 (2012)
using reply briefs to provide, for the first time, the necessary threshold support for contentions would effectively bypass and eviscerate NRC rules governing timely filing, contention amendment, and submission of late-filed contentions; LBP-12-7, 75 NRC 503 (2012)
vague accusation does not rise to the level of an admissible genuine dispute of material fact or law; LBP-11-10, 73 NRC 424 (2011)
waiver of rule or regulation may be obtained upon a showing that applying provision at issue would not serve the purposes for which the rule or regulation was adopted; LBP-15-3, 81 NRC 65 (2015)
waiver petition would permit consideration of an issue in an adjudicatory proceeding that would otherwise impermissibly challenge an NRC rule or regulation; CLI-14-7, 80 NRC 1 (2014)
waivers of NRC regulations may be granted in extraordinary situations where special circumstances can be demonstrated; LBP-13-12, 78 NRC 239 (2013)
when a contention is considered to be timely filed is not specified in 10 C.F.R. 2.309(c)(1)(iii); LBP-15-15, 81 NRC 598 (2015)
when a motion to reopen is untimely, the section 2.326(a)(1) “exceptionally grave” test supplants the section 2.326(a)(2) “significant safety or environmental issue” test; CLI-14-8, 74 NRC 214 (2011)
when a petition for review is filed with the Commission at the same time as a motion for reconsideration is filed with the board, the Commission will delay considering the petition for review until after the board has ruled; CLI-12-5, 75 NRC 301 (2012)
when determining whether a new contention is timely for purpose of reopening a record, the Commission looks to whether the information on which it is based was previously available or whether it is

1286
materially different from what was previously available, and whether it has been submitted in a timely
fashion based on the information’s availability; CLI-12-21, 76 NRC 491 (2012)
when petitioner seeks leave to intervene after the initial deadline for the filing of contentions, it must
demonstrate good cause for its belated filing; LBP-15-19, 81 NRC 815 (2015)
when ruling on summary disposition motions, the Commission applies standards analogous to those used
by federal courts when ruling on motions for summary judgment under Rule 56 of the Federal Rules of
Civil Procedure; LBP-12-23, 76 NRC 445 (2012)
when seeking to intervene in a representational capacity, an organization must identify at least one
member who is affected by the licensing action and who qualifies for standing in his or her own right,
and show that the member has authorized the organization to intervene on his or her behalf;
LBP-11-21, 74 NRC 115 (2011)
where a motion to reopen relates to a contention not previously in controversy, the motion must
demonstrate that the balance of the non timely filing factors of 10 C.F.R. 2.309(c) favors granting the
motion to reopen; LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011)
where a nonmoving party declines to oppose a motion for summary disposition, the board shall accept as
admitted the moving party’s prima facie showing of material facts; LBP-12-4, 75 NRC 213 (2012)
where admission of a late-filed contention would cause a material delay in the proceeding weighed
against admission of the contention; CLI-12-15, 75 NRC 704 (2012)
where an admitted contention is pending before the board, appeals do not lie under section 2.311, but
rather under section 2.341(l)(2), which governs petitions for interlocutory review, including board
rulings on new contentions; CLI-13-3, 77 NRC 51 (2013)
where an issue arises over the scope of an admitted contention, NRC opinions have long referred back to
the bases set forth in support of the contention; LBP-12-23, 76 NRC 445 (2012)
where initial decisions have been issued, the record should not be reopened to take evidence on some
accident-related issue unless the party seeking reopening shows that there is significant new evidence,
not included in the record, that materially affects the decision; CLI-11-5, 74 NRC 141 (2011)
where petitioner fails to establish good cause for late filing, its demonstration on the other factors must
be particularly strong; LBP-12-7, 75 NRC 503 (2012)
where the evidentiary record had been closed, the demanding requirements for reopening must be
satisfied; LBP-12-1, 75 NRC 1 (2012)
where the time for filing contentions had expired in a given case, no new TMI-related contentions would
be accepted absent a showing of good cause and a balancing of the late-filing factors; CLI-11-5, 74
NRC 141 (2011)
withdrawal of an application after issuance of a notice of hearing shall be on such terms as the presiding
officer may prescribe; LBP-12-20, 76 NRC 215 (2012)
within 15 days from an order granting a hearing, each party must indicate what kind of hearing it
prefers; CLI-14-5, 79 NRC 254 (2014)
within 45 days of the initial scheduling order, target of the enforcement order must provide certain
information and documents to the NRC enforcement director; LBP-14-11, 80 NRC 125 (2014)
within certain constraints, target of an enforcement order may pursue discovery against the NRC Staff;
LBP-14-11, 80 NRC 125 (2014)
RULES OF PROCEDURE
except upon a showing of substantial prejudice to the complaining party, it is always within the discretion
of a court or an administrative agency to relax or modify its procedural rules adopted for the orderly
transaction of business before it when in a given case the ends of justice require it; CLI-13-8, 78 NRC
219 (2013)
federal courts leave to an agency’s discretion the manner in which the agency determines whether
information is new or significant to warrant supplementation of an environmental impact statement,
including the application of its procedural rules; CLI-12-6, 75 NRC 352 (2012)
if case-specific challenges to the waste confidence rule are appropriate for consideration, normal
procedural rules will apply; CLI-12-16, 76 NRC 63 (2012)
licensing boards applied existing procedural rules to new contentions and motions to reopen filed in
response to the Three Mile Island accident and the September 11, 2001, terrorist attacks; CLI-12-13, 75
NRC 681 (2012)
NRC’s action in adopting new procedural rules meets the rational basis test; LBP-11-4, 73 NRC 91 (2011)

procedural rule governing appeals in a 10 C.F.R. Part 2, Subpart J proceeding provides for review only in the limited circumstances prescribed in the rule; CLI-11-13, 74 NRC 635 (2011)

procedural rules in Subpart L govern most adjudicatory proceedings; CLI-14-5, 79 NRC 254 (2014)

procedural rules in Subpart M govern adjudications on transfer applications; CLI-14-5, 79 NRC 254 (2014)

proceedings on enforcement matters must be conducted under the procedures of Subpart G unless all parties agree otherwise; LBP-14-11, 80 NRC 125 (2014)

raising new issues related to the Fukushima events does not warrant new procedures or a separate timetable; CLI-12-6, 75 NRC 352 (2012); CLI-12-13, 75 NRC 681 (2012)

“rational basis review” was applied to intervenor’s challenge to the NRC’s 2004 changes to its procedural rules, citing cases involving challenges to laws regulating aspects of prisoners’ right to access to the courts; LBP-11-4, 73 NRC 91 (2011)

separate hearings have been shown to be appropriate for cases governed by different procedural rules; CLI-14-5, 79 NRC 254 (2014)

should the agency’s administration of its new procedural rules contradict its present representations that cross-examination will be allowed under the rules when required for a full and true disclosure of the facts or otherwise flout this principle, the rules may be subject to future challenges; LBP-11-4, 73 NRC 91 (2011)

Subpart G procedures are mandated for certain proceedings and parties are permitted to propound interrogatories, take depositions, and cross-examine witnesses without leave of the board; LBP-11-13, 73 NRC 534 (2011)

Subpart L procedures provide for a more informal proceeding in which discovery is generally prohibited except for specified mandatory disclosures under 10 C.F.R. 2.336 and the mandatory production of the hearing file under 10 C.F.R. 2.1203(a); LBP-11-3, 73 NRC 534 (2011)

Subpart M logically applies to all license transfer hearing requests, regardless of who files them, because the types of issues litigated (e.g., financial assurance, technical qualifications, foreign ownership, and staffing levels) are likely to be similar regardless of whether they are initiated by intervention petitions or by challenges to a Staff action; CLI-14-5, 79 NRC 254 (2014)

See also Federal Rules of Civil Procedure; Hearing Procedures

SABOTAGE
licensors must establish and maintain systems to protect against acts of radiological sabotage and to prevent the theft or diversion of special nuclear material; CLI-11-4, 74 NRC 1 (2011)

NEPA imposes no legal duty on NRC to consider intentional malevolent acts in conjunction with commercial power reactor license renewal applications; LBP-11-2, 73 NRC 28 (2011); LBP-11-3, 73 NRC 534 (2011)

SAFE SHUTDOWN EARTHQUAKE
geologic and seismic siting factors considered for design must include a determination of the SSE ground motion for the site and the potential for surface tectonic and nontectonic deformations; LBP-11-16, 73 NRC 645 (2011)

whether the SSE exceedance in applicant’s exemption request does in fact comply with 10 C.F.R. Part 50, Appendix S and 10 C.F.R. 100.23 is a question currently before the NRC Staff and is thus material to the NRC’s licensing decision in the proceeding; LBP-11-10, 73 NRC 424 (2011)

SAFE SHUTDOWN SYSTEMS
ability of a facility to shut down safely following a potential earthquake is a current operating issue, and is not unique to whether licenses should be renewed; LBP-15-6, 81 NRC 314 (2015)

contention that operating license should not be renewed unless and until applicant establishes that the plant can withstand and be safely shut down following an earthquake is not within the scope of a license renewal proceeding; LBP-15-6, 81 NRC 314 (2015)

licensee cited for violations for use of unapproved operator manual actions to mitigate safe shutdown equipment malfunctions caused by a fire-induced single spurious actuation in lieu of protecting the equipment; DD-12-3, 76 NRC 416 (2012)
means to ensure that a redundant train of safe-shutdown cables and equipment is free of fire damage in
instances in which redundant trains are located in the same fire area outside of primary containment are
described; DD-12-3, 76 NRC 416 (2012)
under its certified design, the Economic Simplified Boiling Water Reactor could maintain circulation long
enough to permit safe shutdown of the reactor even if it were to lose offsite power and all of its
backup generators failed to operate; LBP-15-5, 81 NRC 249 (2015)
underlying purpose of 10 C.F.R. Part 50, Appendix R, § III.G is to ensure that the ability to achieve and
maintain safe shutdown is preserved following a fire event; DD-12-3, 76 NRC 416 (2012)

SAFEGUARDS INFORMATION

board determination of expert’s need to know with regard to a document withheld as safeguards
information was reversed; LBP-11-9, 73 NRC 391 (2011)
boards may exclude the public from adjudicatory hearings or actions that involve restricted data, defense
information, safeguards information protected from disclosure under the authority of AEA § 147, or
information protected from disclosure under the authority of section 148; LBP-11-5, 73 NRC 131
(2011)
NRC Staff and its counsel, like the board and its staff, are federal government employees and are thus
subject to stringent sanctions for the unauthorized disclosure of the protected information or protected
documents; LBP-11-5, 73 NRC 131 (2011)
petitioner was denied access to a safeguards-protected design-related document on the basis of his lacking
a need to know; LBP-11-9, 73 NRC 391 (2011)

SAFETY

Congress expressly recognized and impliedly approved NRC’s regulatory scheme and practice under which
the safety of interim storage of high-level wastes at commercial nuclear power reactor sites has been
determined separately from the safety of government-owned permanent storage facilities that have not yet
been established; CLI-15-4, 81 NRC 221 (2015)
“exceptionally grave” issues warranting reopening of a record are limited to those affecting public safety;
CLI-12-21, 76 NRC 491 (2012)
NRC’s long-continued regulatory practice of issuing operating licenses with an implied finding of
reasonable assurance that safe permanent disposal of spent nuclear fuel can be available when needed is
in accord with the intent of Congress underlying the Atomic Energy Act and Energy Reorganization
Act; CLI-15-4, 81 NRC 221 (2015)
NRC’s safety regulations cover a 50-mile planning area; LBP-14-4, 79 NRC 319 (2014)
spent nuclear fuel can be stored safely at licensed nuclear facilities until such time as a long-term
geologic storage facility is constructed; LBP-12-24, 76 NRC 503 (2012)
stringent safety requirements apply to the construction and operation of reactor spent fuel pools and
independent spent fuel storage installations; CLI-15-4, 81 NRC 221 (2015)
See also Health and Safety

SAFETY ANALYSIS

equivalent margins analysis must demonstrate that the calculated energy will provide margins of safety
against fracture that are equivalent to those required by Appendix G of Section XI of the ASME Code;
if NRC does not approve continued operation based on licensee’s safety analysis, licensee must request an
opportunity to modify the reactor pressure vessel or related reactor systems to reduce the potential for
failure of the reactor vessel due to pressurized thermal shock events; LBP-15-17, 81 NRC 753 (2015)
if reference values projected at specific areas of the reactor pressure vessel for the end of life of the
plant surpass the current screening criteria, licensee must submit a safety analysis and obtain NRC
approval to continue to operate; LBP-15-17, 81 NRC 753 (2015)
independent assessment of the safety aspects of the combined license application is required; CLI-15-13,
81 NRC 555 (2015)
license amendments are not contingent upon any additional safety determination regarding spent fuel
storage under the Atomic Energy Act; CLI-15-4, 81 NRC 221 (2015)
licensees have the option of demonstrating that values of Charpy upper-shelf energy below 50 ft-lb will
provide margins of safety against fracture equivalent to those required by Appendix G of Section XI of
the ASME BPV Code; LBP-15-20, 81 NRC 829 (2015)
NRC cannot look to the sufficiency of safety standards enacted under the Atomic Energy Act to avoid its NEPA obligations; LBP-12-18, 76 NRC 127 (2012)

NRC’s independent technical evaluation of information submitted by licensee to demonstrate that no functional damage occurred as a result of an earthquake is described; DD-15-9, 82 NRC 274 (2015)

petitioners’ contention challenges the sufficiency of the equivalent margins analysis to provide reasonable assurance of reactor safety and is therefore within the scope of the proceeding; LBP-15-20, 81 NRC 829 (2015)

petitioners’ request for a safety analysis relative to Fukushima-related concerns was granted to the extent that the requested analyses had already been undertaken; CLI-12-9, 75 NRC 421 (2012)

severe accident mitigation alternatives analyses are conducted for the purposes of the NRC’s environmental review under NEPA and are not safety analyses; CLI-15-18, 82 NRC 135 (2015)

when an NRC regulation permits use of a particular analysis, a contention asserting that a different analysis or technique should be used is inadmissible because it indirectly attacks NRC’s regulations; LBP-15-20, 81 NRC 829 (2015)

See also Final Safety Analysis Report; Final Safety Evaluation Report; Integrated Safety Analysis SAFETY ANALYSIS REPORT

construction permit applications must include the principal design criteria for a proposed facility and describe the design bases and their relationship to the principal design criteria in the preliminary safety analysis report; DD-13-3, 78 NRC 571 (2013)

operating license applicant must present the design bases of the facility and safety analyses of the facility as a whole in the final SAR; DD-15-11, 82 NRC 361 (2015)

technical specifications derived from the analyses and evaluations included in the safety analysis report are required; DD-13-3, 78 NRC 571 (2013)

See also Final Safety Analysis Report

SAFETY CULTURE

board erred in admitting a contention pertaining to a plant’s safety culture; CLI-11-11, 74 NRC 427 (2011)

broad-based issues akin to safety culture such as operational history, quality assurance, quality control, management competence, and human factors are outside the scope of license renewal because they raise issues that are relevant to current plant operation; LBP-12-27, 76 NRC 583 (2012)

contention challenging applicant’s safety culture and claiming to rely on NRC Staff’s Safety Evaluation Report was inadmissible because the SER did not discuss safety culture as a general matter and could not serve as a reasonably apparent foundation for a safety culture contention; LBP-15-11, 81 NRC 401 (2015)

contention charging that licensee’s poor safety culture could undermine its ability to manage aging during the period of extended operations is not within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

contention that licensee’s history of managing whistleblower complaints regarding safety issues demonstrates that the plant will not be operated safely during the license renewal term is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contentions alleging that applicants’ handling of past safety issues at the plants demonstrated that the applicants could not provide reasonable assurance that they would manage the effects of aging during the license renewal term are inadmissible; LBP-13-8, 78 NRC 1 (2013)

if a stakeholder is of the view that immediate action is needed to remedy an ailing safety culture at any facility, then that matter should be brought immediately to the attention of the agency via section 2.206; LBP-13-8, 78 NRC 1 (2013)

this issue is beyond the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011); LBP-15-5, 81 NRC 249 (2015)

SAFETY EVALUATION REPORT

applicant’s environmental report is not the vehicle for the NRC Staff’s safety review; LBP-11-6, 73 NRC 149 (2011)

contention challenging applicant’s safety culture and claiming to rely on NRC Staff’s SER was inadmissible because the SER did not discuss safety culture as a general matter and could not serve as a reasonably apparent foundation for a safety culture contention; LBP-15-11, 81 NRC 401 (2015)
SUBJECT INDEX

discovery cannot be completed nor can the evidentiary hearing be held until the SER and all necessary environmental impact statements are completed; CLI-13-8, 78 NRC 219 (2013)

filing of new contentions based on the SER and Staff NEPA documents is expressly contemplated by the Model Milestones; LBP-11-22, 74 NRC 259 (2011)
good cause for a late-filed contention based on information in the SER did not add a last piece of information, but merely compiled and organized preexisting information; CLI-11-8, 74 NRC 214 (2011)

hearings on safety issues may commence before publication of NRC Staff’s safety evaluation if commencing the hearings at that time would expedite the proceeding; LBP-13-13, 78 NRC 246 (2013)

intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or other sources of new and materially different information, provided that it does so promptly after the new information becomes available and that it successfully fulfills the general contention admissibility requirements; LBP-11-22, 74 NRC 259 (2011)

intervention petitioners may not challenge the adequacy of the SER, but may file contentions challenging the combined license application based on new information in the SER; LBP-11-22, 74 NRC 259 (2011)

licensing hearing does not embrace anything new revealed in the SER or the NEPA documents; CLI-12-14, 75 NRC 692 (2012)

Model Milestones permit intervenors’ proposed late-filed contentions on the SER and necessary NEPA documents to be filed within 30 days of the issuance of those documents; LBP-11-22, 74 NRC 259 (2011)

NRC Staff ensures that applicant’s design basis for the new units will protect public health and safety by verifying that the design basis will withstand maximum flooding events; LBP-11-6, 73 NRC 149 (2011)

NRC Staff, incident to its preparation of the SER, is obliged to ensure that applicant’s design basis for the new units will protect public health and safety; LBP-11-6, 73 NRC 149 (2011)

until the SER and Staff NEPA documents have been issued, a licensing board is generally prohibited from holding the hearing on the license application; LBP-11-22, 74 NRC 259 (2011)

See Final Safety Evaluation Report

SAFETY ISSUES

adjudicatory hearings in individual license renewal proceedings will share the same scope of issues as

NRC Staff review, for NRC’s hearing process, like NRC Staff’s review, necessarily examines only the questions NRC safety rules make pertinent; LBP-15-5, 81 NRC 249 (2015)

almost every item originally contained in technical specifications has some conceivable connection to safety, but this general premise is insufficient, by itself, as a ground for intervention; LBP-12-25, 76 NRC 540 (2012)

although a SAMA analysis considers safety issues, it is actually an environmental review that must be judged under NEPA’s rule of reason and not under the safety requirements of the Atomic Energy Act; LBP-15-29, 82 NRC 246 (2015)

although intervenors disagree with applicant’s opportunistic inspection strategy for managing rebar corrosion, they merely assert, and do not plausibly explain, how applicant’s approach will lead to a material safety impact; LBP-15-1, 81 NRC 15 (2015)

although safety issues are reviewed under the adequacy and sufficiency standard, licensing boards conducting mandatory hearings must independently consider the final balance among the conflicting costs and benefits when reviewing National Environmental Policy Act issues; LBP-12-21, 76 NRC 218 (2012)

applicant has the burden of establishing that it is entitled to the applied-for license by a preponderance of the evidence; LBP-12-5, 75 NRC 227 (2012); LBP-14-3, 79 NRC 267 (2014)

applicant has the burden of proof on safety issues in a licensing proceeding; LBP-13-13, 78 NRC 246 (2013); LBP-14-1, 79 NRC 39 (2014)

applicant is required to show that safety features will fulfill their intended function, not that every structure will maintain its current licensing basis throughout the renewal period; LBP-15-5, 81 NRC 249 (2015)

based on NRC Staff’s and applicant’s written responses to board questions, and on the resumes, CVs, and SPQs admitted as part of the evidentiary record to respond to the questions, the board considers safety issues resolved for the proceeding; LBP-11-11, 73 NRC 455 (2011)
because primary responsibility to address and comply with AEA safety-related requirements resides with a license applicant, that application, not the Staff’s application review, is the focus of any safety-related contentions and thus the migration tenet does not apply; LBP-13-10, 78 NRC 117 (2013)
commission chose to review intervenors’ motion along with similar motions in other proceedings and associated petitions to suspend reactor licensing pending issuance of waste confidence safety findings; CLI-15-6, 81 NRC 340 (2015)
concern that involves safety will not support standing in an enforcement proceeding if petitioner seeks merely a better settlement, i.e., one that promises greater improvements to safety than the settlement that was actually negotiated; LBP-14-4, 79 NRC 319 (2014)
concerns about current or ongoing safety deficiencies can be raised as a petition for enforcement action; CLI-15-8, 81 NRC 500 (2015)
contention about a matter not covered by a specific rule need only allege that it poses a significant safety problem; CLI-15-23, 82 NRC 321 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-20, 81 NRC 829 (2015)
contention asserting that applicant’s Integrated Plant Assessment for the license renewal application fails to identify and assess safety-related incidents at the plant in its required time-limited aging analysis is a safety contention, is not admissible; LBP-13-8, 78 NRC 1 (2013)
contention that NRC or licensee has abused or exceeded its lawful discretion with respect to nuclear safety programs is not admissible because it fails to provide sufficient information to show that a genuine dispute exists on a material issue of law or fact; LBP-14-4, 79 NRC 319 (2014)
contentions challenging aging management of non-environmentally qualified inaccessible medium-voltage cables and wiring are decided; LBP-13-13, 78 NRC 246 (2013)
contentions challenging existing NRC safety regulations are barred from consideration in adjudicatory proceedings; LBP-12-18, 76 NRC 127 (2012)
court directed NRC to determine whether there is reasonable assurance that an offsite storage solution will be available by the end of a reactor’s license term, and if not, whether there is reasonable assurance that the fuel can be stored safely at the sites beyond those dates; CLI-15-4, 81 NRC 221 (2015)
current safety issues are beyond the scope of a license renewal proceeding; LBP-12-27, 76 NRC 583 (2012)
directing NRC Staff to investigate a safety issue that the board could not reach through the adjudicatory process may put the Commission in a position, after receiving views of applicant if it desired, to assure itself about the significance, or lack thereof, of the shield building cracking issues raised by intervenors, and to direct such followup proceedings, if any, as it might deem appropriate; LBP-15-1, 81 NRC 15 (2015)
hearing request on safety concerns over steam generator replacement is referred to the Executive Director for Operations for disposition; CLI-14-11, 80 NRC 167 (2014)
hearings on safety issues may commence before publication of NRC Staff’s safety evaluation if commencing the hearings at that time would expedite the proceeding; LBP-13-13, 78 NRC 246 (2013)
if there were any doubt over the intent of Congress not to require a safety finding on spent fuel disposal, it was laid to rest by enactment of the Energy Reorganization Act of 1974; CLI-15-4, 81 NRC 221 (2015)
impact of a proposed action on public safety is an issue that must be considered under the National Environmental Policy Act as well as the Atomic Energy Act; LBP-12-18, 76 NRC 127 (2012)
inquiry into future, inchoate plans of licensee would generally invite petitioners in license renewal cases to raise safety issues involving a myriad of possible future license amendments; LBP-13-8, 78 NRC 1 (2013)
issue that does not involve aging management is outside the scope of the license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
issues that are routinely addressed through the agency’s ongoing regulatory oversight are outside the scope of license renewal proceedings because considering them in that context would be unnecessary and wasteful; LBP-11-2, 73 NRC 28 (2011)
isues that the Commission must consider in the mandatory portion of a combined license proceeding are outlined; CLI-15-13, 81 NRC 555 (2015)
license renewal applicant is not required to identify safety-related incidents that have occurred during the current licensing term; LBP-13-8, 78 NRC 1 (2013)
licensing boards can refer potentially significant safety issues that cannot be addressed through the adjudicatory process to NRC Staff for review; LBP-15-1, 81 NRC 15 (2015)
matters relating to reasonable assurance of safety during the current license term are to be addressed under the current license and are outside the scope of a license renewal review; CLI-15-21, 82 NRC 295 (2015)
new contentions on the safety and environmental implications of the NRC Task Force Report on the Fukushima Dai-ichi accident are premature and must be denied on that basis without regard to any other considerations; LBP-11-27, 74 NRC 591 (2011)
no one can challenge an enforcement order as long as the order, in any way, improves the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014)
NRC Staff review of combined license application relative to regulatory actions that the NRC has taken in response to lessons learned from the Fukushima Dai-ichi accident is discussed; CLI-15-13, 81 NRC 555 (2015)
NRC Staff’s safety analysis and environmental analysis occur separately, and intervenors are expected to raise safety challenges in response to the safety reports and environmental challenges in response to the environmental statements; LBP-15-11, 81 NRC 401 (2015)
pending tax litigation would not have a significant implication for public health and safety and, to the extent the claim is viable, it would be better handled through a petition for enforcement action; LBP-15-15, 81 NRC 598 (2015)
protection of regulatory treatment of non-safety systems equipment from external hazards at the site is discussed; CLI-15-13, 81 NRC 555 (2015)
questions of safety impacts of onsite low-level waste storage are largely site- and design-specific, and appropriately decided in an individual licensing proceeding; LBP-12-4, 75 NRC 213 (2012)
request that NRC immediately shut down plants until all turbine building high-energy line break concerns are identified and those important to safety were corrected is granted in part; DD-14-5, 80 NRC 205 (2014)
requesting authorization from the Commission for the board, on its own motion, to examine and decide the serious safety or common defense and security matters underlying contentions is allowed to be used for matters that were initially raised by a party, where that party later withdrew; LBP-11-9, 73 NRC 391 (2011)
rule waiver should not be granted unless the petition relates to a significant safety problem; LBP-14-16, 80 NRC 183 (2014)
safety contention challenging aging management of electrical transformers is decided; LBP-13-13, 78 NRC 246 (2013)
safety matters generally need to be raised, relative to an admitted safety contention, in the context of the merits disposition of the already admitted safety contention or, in the case of a new issue, as a wholly new safety contention; LBP-13-10, 78 NRC 117 (2013)
safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is inadmissible in license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
scope of the license renewal proceeding on safety-related issues is limited to plant structures and components that will require an aging management review for the period of extended operation under the renewed license and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; CLI-15-21, 82 NRC 295 (2015)
severe accident mitigation alternatives analysis is conducted pursuant to the National Environmental Policy Act, and thus is an environmental issue, not a safety issue; LBP-15-1, 81 NRC 15 (2015)
soil-structure interaction analysis is discussed; CLI-15-13, 81 NRC 555 (2015)
standing to challenge a confirmatory order exists only when a petitioner credibly alleges that a settlement somehow actually reduces safety; LBP-14-4, 79 NRC 319 (2014)
system must be provided to transfer heat from structures, systems, and components important to safety to an ultimate heat sink under normal operating and accident conditions, and must be able to perform this safety function with either onsite or offsite power, assuming a single component failure; DD-15-11, 82 NRC 361 (2015)
there is no imminent safety reason to halt new reactor licensing, because there is sufficient time to implement new Fukushima-related requirements before operation; CLI-12-2, 75 NRC 63 (2012)
SUBJECT INDEX

to assess whether a contention is within the scope of, and material to, the proceeding, boards need to
know the legal basis (safety or environmental) of the contention; LBP-13-8, 78 NRC 1 (2013)
to demonstrate a significant safety issue, petitioners must establish either that uncorrected errors endanger
safe plant operation, or that there has been a breakdown of the quality assurance program sufficient to
raise legitimate doubt as to the plant’s capability of being operated safely; LBP-11-35, 74 NRC 701
(2011)
unless safety findings prescribed by the Atomic Energy Act and the regulations can be made, the reactor
does not obtain a license, no matter how badly it is needed; CLI-15-4, 81 NRC 221 (2015)
when NRC imposes new regulatory requirements that are important safety enhancements but not deemed
necessary to ensure adequate protection of public health and safety, NRC often does not require existing
licensees to implement them based on considerations such as whether they are cost-beneficial; CLI-12-2,
75 NRC 63 (2012)
See also Generic Safety Issues; Health and Safety; Unresolved Safety Issues
SAFETY-RELATED
all credible accident sequences must be identified in the integrated safety analysis summary as well as
items relied on for safety and necessary safety controls; LBP-12-21, 76 NRC 218 (2012)
all structures and components that are important to safety must be maintained to manage the effects of
aging, but most systems, structures, and components are adequately maintained under existing programs
as required by the Maintenance Rule; CLI-15-6, 81 NRC 340 (2015)
applicant must establish and implement its own quality assurance program when it enters into a contract
for the conduct of safety-related combined license application activities and to retain overall control of
safety-related activities performed by the contractor; CLI-14-10, 80 NRC 157 (2014)
because changes to technical specifications require a license amendment, technical specifications should be
limited to those plant conditions most important to safety; LBP-13-7, 77 NRC 307 (2013)
brurred pipelines, channels, and tanks that fall under aging management provide safety-related functions by
maintaining adequate flow and pressure; LBP-11-2, 73 NRC 28 (2011)
electric equipment that must be environmentally qualified is described; LBP-11-20, 74 NRC 65 (2011)
focus of the license renewal regulations in 10 C.F.R. Part 54 is to ensure that licensees can manage the
effects of aging on certain long-lived, passive components that are important to safety; CLI-15-6, 81
NRC 340 (2015)
inspection to determine effects of wet or underwater conditions on underground safety-related electrical
cables is discussed; DD-15-1, 81 NRC 193 (2015)
plants must employ an ultimate heat sink to transfer heat from structures, systems, and components that
are important to safety; LBP-15-13, 81 NRC 456 (2015)
safety significance of a structure, system, or component is defined in terms of its safety-related functions,
and within the scope of license renewal are included those SSCs whose failure could prevent
satisfactory accomplishment of the safety-related function; CLI-15-6, 81 NRC 340 (2015)
scope of license renewal, including buried piping, addresses all safety-related structures, systems, and
components that are relied upon to remain functional to ensure the integrity of the reactor coolant
pressure boundary, the capability to shut down and maintain the safe shutdown of the reactor, or the
capability to prevent or mitigate the consequences of accidents which could result in potential offsite
radiation exposures; LBP-13-13, 78 NRC 246 (2013)
structures and components that are subject to aging management review include those that perform certain
safety-related functions without moving parts or without a change in configuration or properties;
LBP-11-2, 73 NRC 28 (2011)
structures, systems, and components important to safety shall be designed to withstand the effects of
natural phenomena such as floods without loss of capability to perform their safety functions;
LBP-13-8, 78 NRC 1 (2013)
systems, structures, and components relied upon to remain functional during and following design-basis
events to ensure specific functions are safety-related; LBP-11-20, 74 NRC 65 (2011)
uranium enrichment facility applications must identify radiological and chemical hazards, facility hazards
that could affect safety of licensed materials, potential accident sequences and their consequences and
likelihood of occurrence, and each item relied on for safety; LBP-12-21, 76 NRC 218 (2012)
SAFETY RELIEF VALVES

Evidence that relief valve failure and inoperability may have existed for a period of time greater than allowed by technical specifications is a reportable event; DD-11-6, 74 NRC 420 (2011)

Failure and inoperability found during refueling outage, which potentially affected the ability of the SRVs to satisfy design actuation requirements, meets the requirements for a licensee event report; DD-11-6, 74 NRC 420 (2011)

Request for cold shutdown because of inoperability of main steam safety relief valves is denied but petitioner’s concerns about the SRVs have been resolved; DD-11-6, 74 NRC 420 (2011)

SAFETY REVIEW

Active components are not subject to an aging management review because existing regulatory programs, including required maintenance programs, can be expected to directly detect the effects of aging on active functions; LBP-11-2, 73 NRC 28 (2011)

Aging management review is required for components that function without moving parts and without a change in configuration or properties, and includes a non-exhaustive list of components that either do or do not fit this description; CLI-15-6, 81 NRC 340 (2015)

Aging-based safety review set out in Part 54 is analytically separate from Part 51’s environmental inquiry and does not in any sense restrict NEPA; LBP-11-17, 74 NRC 11 (2011)

Although sufficiency of the application and NRC Staff’s environmental review of that application are proper targets of contentions, sufficiency of NRC Staff’s safety review of the application is not; LBP-11-28, 74 NRC 612 (2011)

Applicant for a renewed license must first identify all structures, systems, and components that serve a function relating directly or indirectly to safety, as defined by this regulation; CLI-15-6, 81 NRC 340 (2015)

Before a final decision approving or disapproving a construction authorization application may be reached, not only must the Staff complete its safety and environmental reviews but a formal hearing must be conducted, and the Commission’s own review of both contested and uncontested issues must take place; CLI-13-8, 78 NRC 219 (2013)

Commission examines whether NRC Staff’s safety review of the combined license application under 10 C.F.R. 52.97(a)(1)(i)-(v) has been adequate to support its findings; CLI-12-9, 75 NRC 421 (2012)

Conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011)

Contention fails because it contests NRC Staff’s safety review rather than the license renewal application; LBP-15-15, 81 NRC 598 (2015)

Existing regulatory programs can be expected to directly detect the effects of aging on active functions; CLI-12-5, 75 NRC 301 (2012)

Focus of license renewal safety review is described in 10 C.F.R. 54.4(a); CLI-12-5, 75 NRC 301 (2012) for active structures, systems, and components, NRC chose to exempt from license renewal, challenges to a plant’s operational activities covered by its current licensing basis; LBP-13-13, 78 NRC 246 (2013) for license renewal safety review, it is not clear whether any enhancements or changes considered by the Fukushima Task Force will bear on license renewal regulations, which are focused more narrowly on the proper management of aging; CLI-12-10, 75 NRC 479 (2012)

For mandatory uncontested proceeding on a uranium enrichment facility license, a licensing board is to conduct a simple sufficiency review rather than a de novo review on both safety and environmental issues; LBP-11-26, 74 NRC 499 (2011)

Goal of NRC’s license renewal safety review is to ensure that licensee can successfully manage the detrimental effects of aging; CLI-15-6, 81 NRC 340 (2015)

Illustrative list of structures and components that are subject to an aging management review is provided in 10 C.F.R. 54.21(a)(1)(ii); CLI-12-5, 75 NRC 301 (2012)

In context of license renewal, NRC’s Atomic Energy Act review under Part 54 does not compromise or limit the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013); LBP-13-13, 78 NRC 246 (2013)

In establishing its license renewal process, NRC did not believe it necessary or appropriate to throw open the full gamut of provisions in a plant’s current licensing basis to reanalysis because those are...
effectively addressed and maintained by ongoing agency oversight, review, and enforcement; LBP-13-13, 78 NRC 246 (2013)
in response to the Fukushima accident in Japan, NRC is conducting a comprehensive safety review of the requirements and guidance associated with accident mitigation measures; CLI-12-1, 75 NRC 39 (2012)
key functions of buried structures, systems, and components that are the focus of the license renewal safety review under Part 54 do not include the prevention of inadvertent radioactive leaks from buried structures; LBP-11-2, 73 NRC 28 (2011)
license renewal applicants must conduct aging management reviews of any structure, system, or component that performs one of these intended functions if the SSC is passive (performs its intended function without moving parts or without a change in configuration or properties); CLI-12-5, 75 NRC 301 (2012)
license renewal safety review and any associated license renewal adjudicatory proceeding focus on the detrimental effects of aging posed by long-term reactor operation; CLI-12-5, 75 NRC 301 (2012)
license renewal safety review is limited to the matters specified in 10 C.F.R. Part 54, which focus on the management of aging for certain systems, structures, and components, and the review of time-limited aging analyses; LBP-11-21, 74 NRC 115 (2011); LBP-15-5, 81 NRC 249 (2015); LBP-15-6, 81 NRC 314 (2015)
license renewal safety reviews are generally limited to aging-related issues because NRC recognizes that it has the ongoing responsibility to oversee the safety and security of operating nuclear reactors, and maintains an aggressive and ongoing program to oversee plant operation; LBP-13-13, 78 NRC 246 (2013)
limited scope of the intended functions of structures, systems, and components subject to aging management review is described in 10 C.F.R. 54.4(b); CLI-12-5, 75 NRC 301 (2012)
many safety questions that relate to plant aging become important during the extended renewal term since the design of some components may have been based upon a service lifetime of only 40 years; LBP-11-21, 74 NRC 115 (2011)
NRC’s AEA safety review under Part 54 does not compromise or limit NEPA; LBP-15-5, 81 NRC 249 (2015)
operating license renewal applicants must make a detailed assessment, conducted on passive, safety-related physical systems, structures, and components of the plant; LBP-11-21, 74 NRC 115 (2011)
presiding officer must take into consideration NRC Staff’s projected schedule for completion of its safety and environmental evaluations to ensure that the hearing schedule does not adversely impact Staff’s ability to complete its reviews in a timely manner; LBP-13-13, 78 NRC 246 (2013)
proximity of nuclear power plant site to the Canadian border is considered in the contexts of environmental and safety reviews; CLI-15-13, 81 NRC 555 (2015)
regardless of whether a hearing request is granted, NRC Staff performs a full safety review of every license amendment request and no request is approved until all necessary public health and safety findings have been made; CLI-15-22, 82 NRC 310 (2015)
severe accident mitigation alternatives analysis is not part of the agency’s safety review for license renewal under the Atomic Energy Act, but is instead a mitigation alternatives analysis conducted pursuant to the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013)
structures and components associated only with active functions can be generically excluded from a license renewal aging management review; CLI-12-5, 75 NRC 301 (2012)
to evaluate an operating license renewal application, the NRC reviews the management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011)
transformers perform their intended function through a change in state similar to switchgear, power supplies, battery chargers, and power inverters, which have been excluded from an aging management review; CLI-12-5, 75 NRC 301 (2012)
variety of electrical and instrumentation and control components are excluded from an aging management review for license renewal; CLI-12-5, 75 NRC 301 (2012)
SALTWATER INTRUSION
contention alleging that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 456 (2015)

SANCTIONS
authority empowering a licensing board to impose sanctions is found in 10 C.F.R. 2.314(c) and 2.319; LBP-13-2, 77 NRC 71 (2013)
board denies a motion seeking sanctions against petitioner for violating the governing protective order and nondisclosure agreement, but imposes a document review requirement upon petitioner in light of its misconduct and to enhance future compliance with the proceeding’s protective order; LBP-13-2, 77 NRC 71 (2013)
boards may take disciplinary action against a party that fails to comply with any prehearing order, as long as the action is just; CL1-14-10, 80 NRC 157 (2014)
boards should attempt to tailor sanctions to mitigate the harm caused by the failure of a party to fulfill its obligations and bring about improved future compliance; LBP-13-2, 77 NRC 71 (2013)
Commission has imposed or upheld disciplinary measures against parties and their representatives when they failed to comply with board directives and procedural rules; CL1-14-10, 80 NRC 157 (2014)
dismissal with prejudice is a harsh sanction reserved for unusual situations because it is the equivalent of a decision on the merits of the license amendment request; LBP-15-28, 82 NRC 233 (2015)
every participant in NRC adjudicative proceedings has the duty to fulfill the obligations imposed by and in accordance with applicable law, and when participant fails to meet its obligations, a licensing board should consider the imposition of sanctions against the offending party; LBP-13-2, 77 NRC 71 (2013)
harm factor of sanction test has two components, requiring boards to consider the potential harm to the other parties and the potential harm to the orderly conduct of the proceeding; LBP-13-2, 77 NRC 71 (2013)
if a party fails to file an answer or pleading within the time prescribed in 10 C.F.R. Part 2 or as specified in the notice of hearing or pleading, to appear at a hearing or prehearing conference, to comply with any prehearing order entered by the presiding officer, or to comply with any discovery order entered by the presiding officer, the Commission or the presiding officer may make any orders in regard to the failure that are just; CL1-14-2, 79 NRC 11 (2014)
important health and safety issue referred to a licensing board by the Commission satisfies the importance factor of the multifactor sanction test; LBP-13-2, 77 NRC 71 (2013)
in any enforcement action, especially one that has been settled to NRC’s satisfaction without creating a formal record, NRC’s choice of sanctions is quintessentially a matter of the Commission’s sound discretion; LBP-14-4, 79 NRC 319 (2014)
in selecting a sanction, boards should consider the relative importance of the unmet obligation, its potential for harm to other parties or the orderly conduct of the proceeding, whether its occurrence is an isolated incident or a part of a pattern of behavior, the importance of the safety or environmental concerns raised by the party, and all of the circumstances; LBP-13-2, 77 NRC 71 (2013)
licensing boards have all the powers necessary to perform their duties, including powers to regulate the conduct of the participants and to issue orders necessary to carry out their duties and responsibilities; LBP-13-2, 77 NRC 71 (2013)
licensing boards may impose on contumacious parties or their representatives reprimands, censures, or suspensions from proceedings; LBP-13-2, 77 NRC 71 (2013)
NRC Staff and its counsel, like the Board and its staff, are federal government employees and are thus subject to stringent sanctions for the unauthorized disclosure of the protected information or protected documents; LBP-11-5, 73 NRC 131 (2011)
parties, including NRC Staff, may be sanctioned for noncompliance with the disclosure regulations; LBP-14-2, 79 NRC 131 (2014)
party moving for sanctions has the burden of establishing by a preponderance of the evidence that petitioner violated the protective order; LBP-13-2, 77 NRC 71 (2013)
party who neglects to fully participate in a proceeding is subject to sanctions including dismissal of its contention; CL1-14-2, 79 NRC 11 (2014)
period allotted for the filing of challenges to enforcement orders that impose some sanction is 20 days; LBP-13-3, 77 NRC 82 (2013)
pressing officer may impose sanctions on a party that fails to provide any document required to be disclosed, unless the party demonstrates good cause for its failure to make the disclosure; LBP-14-2, 79 NRC 131 (2014)
pro se representative in licensing board proceedings, like all other representatives and/or lawyers, are required to be accurate and truthful and are subject to reprimand, censure, or suspension for failing in these duties; LBP-13-8, 78 NRC 1 (2013)
request that board impose additional discovery activities as a requirement of withdrawal of license amendment request is too broad because it goes beyond the scope of the admitted contentions and discovery is peculiarly related to particular proceedings and particular contentions; LBP-15-28, 82 NRC 233 (2015)
when considering whether a disclosure of proprietary information was an isolated incident or part of a pattern of behavior, licensing boards may consider the circumstances underlying the disclosure, the corrective action taken, and petitioner’s representation that no disclosure will occur in the future; LBP-13-2, 77 NRC 71 (2013)

SCHEDULE, BRIEFING

all parties are obliged to follow the procedures in 10 C.F.R. Part 2 and board scheduling orders; CLI-14-10, 80 NRC 157 (2014)
board conducted an initial scheduling conference to discuss development of an initial scheduling order that would help achieve just resolution of a dispute as efficiently and expeditiously as possible; LBP-14-11, 80 NRC 125 (2014)
boards must use the applicable Model Milestones in 10 C.F.R. Part 2, Appendix B as a starting point for the schedule, but the board shall make appropriate modifications based upon the circumstances of each case; LBP-11-22, 74 NRC 259 (2011)
failure of counsel to review the scheduling order does not constitute good cause for failure to meet a filing deadline; LBP-12-12, 75 NRC 742 (2012)
schedule for Subpart L proceedings, including the closing of the record, is described; CLI-12-3, 75 NRC 132 (2012)
shortly after a hearing request has been granted, the board must set a schedule to govern the proceeding; LBP-11-22, 74 NRC 259 (2011)
unless a deadline has been specified in the scheduling order for the proceeding, the determination of timeliness is subject to a reasonableness standard that depends on the facts and circumstances in the case; LBP-12-27, 76 NRC 583 (2012)

SCHEDULING

ASTM Standard E 185 anticipates that during the course of a nuclear power plant’s life the surveillance capsule withdrawal schedule may need to be revised and allows and provides for such changes; LBP-15-20, 81 NRC 829 (2015)
boards are to consider NRC Staff’s projected schedule for completion of its safety and environmental evaluations in developing the hearing schedule; LBP-12-3, 75 NRC 164 (2012)
boards should develop schedules that will provide a fair and expeditious procedure for resolving new or amended contentions that might be proposed during the course of the proceeding, not just those already admitted; LBP-11-22, 74 NRC 259 (2011)
if a board issues a scheduling order before the effective date of the final rule that incorporates 10 C.F.R. 2.336(d), which currently requires parties to update their disclosures every 14 days, that obligation would change to every month on a day specified by the board, unless the parties agree otherwise, once the effective date of the rule is reached; LBP-15-1, 81 NRC 15 (2015)
initial scheduling orders set forth issues or matters in controversy to be determined in the proceeding; LBP-14-11, 80 NRC 125 (2014)
licensing board may modify or waive the provisions of its scheduling orders as it deems appropriate in the interest of sound case management; LBP-15-29, 82 NRC 246 (2015)
NRC must preapprove the schedule for removing material samples from the reactor vessel; LBP-15-17, 81 NRC 753 (2015)

once the nature of a license transfer hearing is settled, Subpart M and NRC Model Milestones set a default schedule for the remainder of the proceeding; CLI-14-5, 79 NRC 254 (2014)
one fundamental purpose of the prehearing conference and the scheduling order is expediting the disposition of the proceeding; LBP-12-19, 76 NRC 184 (2012)

presiding officer must take into consideration NRC Staff’s projected schedule for completion of its safety and environmental evaluations to ensure that the hearing schedule does not adversely impact Staff’s ability to complete its reviews in a timely manner; LBP-13-13, 78 NRC 246 (2013)

purpose of scheduling orders is to ensure proper case management, with the objective of expediting disposition of the proceeding, establishing early and continuing control so that the proceeding will not be protracted because of lack of management, and discouraging wasteful prehearing activities; LBP-15-29, 82 NRC 246 (2015)

raising new issues related to the Fukushima events does not warrant new procedures or a separate timetable; CLI-12-6, 75 NRC 352 (2012)

settlement is encouraged, but the fact that a possible settlement is being negotiated does not change any of the deadlines set forth in an initial scheduling order; LBP-14-11, 80 NRC 125 (2014)

subject to exceptions, the presiding officer must adhere to the schedule set forth in 10 C.F.R. Part 2, Appendix D; CLI-13-8, 78 NRC 219 (2013)

unless a schedule is so onerous or unfair that it deprives a party of procedural due process, scheduling is a matter of licensing board discretion; LBP-15-29, 82 NRC 246 (2015)

when establishing a schedule, boards are to consider NRC’s interest in providing a fair and expeditious resolution of the issues sought to be admitted for adjudication in the proceeding, along with other factors; LBP-11-22, 74 NRC 259 (2011)

SEA LEVEL RISE
although the combined license application is not expressly required to consider sea level rise, the board decides that the issue is within the scope of a COL proceeding; LBP-11-6, 73 NRC 149 (2011)

SEALED SOURCES
any special nuclear material that is physically encased in a capsule, rod, element, etc. that prevents the leakage, escape, and removal of the SNM without penetrations of the casing is a sealed source; LBP-14-1, 79 NRC 39 (2014)

SECURITY
ability to detect the loss of plutonium in a timely manner, to allow for an effective response, is a crucial security requirement; LBP-11-9, 73 NRC 391 (2011)

choosing to store a radiographic exposure device at a facility that did not comply with NRC security requirements and was not an authorized storage location under the license is considered deliberate misconduct; LBP-14-11, 80 NRC 125 (2014)

contentions that address an important security issue regarding Part 74’s strict requirements for the proposed facility, which applicant previously admitted it failed to satisfy, are admissible; LBP-11-9, 73 NRC 391 (2011)

‘controlled access area’ is any temporarily or permanently established area that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; CLI-15-9, 81 NRC 512 (2015)

petitioners’ argument opposing an order that imposed additional security measures at a spent fuel storage facility, because it created a false sense of security was rejected because petitioners did not explain how they would be better off without the measures in the order; CLI-13-2, 77 NRC 39 (2013)

whether a foreign entity has the ability to restrict or inhibit compliance with security or other regulations of the Atomic Energy Commission is of greatest significance to a foreign ownership, control, or domination review; CLI-15-7, 81 NRC 481 (2015)

SECURITY CLEARANCES
Pentapartite Agreement between the United States and four European governments to prevent new restricted data from being disseminated to European nationals will be a prerequisite to the NRC Staff issuing a facility clearance; LBP-11-11, 73 NRC 455 (2011)

an enrichment facility security clearance requires a determination that granting the clearance would not be inconsistent with the national interest, including a finding that the facility is not under foreign
ownership, control, or influence to such a degree that a determination could not be made; LBP-11-11, 73 NRC 455 (2011)

Staff imposed a license condition on a uranium enrichment facility to ensure that clearances are obtained before classified matter is processed, stored, reproduced, transmitted, handled, or accessed; LBP-11-11, 73 NRC 455 (2011)

SECURITY PLANS

cyber security plans must be submitted for NRC approval; CLI-12-2, 75 NRC 63 (2012)
cyber security plans must take into account site-specific conditions; CLI-12-2, 75 NRC 63 (2012)
licensees are permitted to develop their own individual access authorization programs, provided they satisfy 10 C.F.R. 73.56; LBP-14-4, 79 NRC 319 (2014)
NRC Staff granted an exemption from 10 C.F.R. 74.33(c)(5) subject to license conditions that require applicant to submit, for NRC Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 218 (2012)
written policies, implementing procedures, site-specific analysis, and other supporting technical information developed to implement cyber security plans are subject to periodic inspection by NRC Staff; CLI-12-2, 75 NRC 63 (2012)
See also Physical Security

SECURITY PROGRAM

application for a uranium enrichment facility is required to contain a description of the security program to protect against unauthorized disclosure of classified matter in accord with Part 95; LBP-11-11, 73 NRC 455 (2011)
licensee is obliged to give local union notice and an opportunity to bargain over the effects of its decision to implement changes in the terms and conditions of the employees’ employment regarding behavioral observations of security concerns; CLI-15-16, 81 NRC 810 (2015)
licensees must establish and maintain systems to protect against acts of radiological sabotage and to prevent the theft or diversion of special nuclear material; CLI-11-4, 74 NRC 1 (2011)
NRC’s program addresses not only current operations, but also extends into the license renewal term; CLI-11-11, 74 NRC 427 (2011)
protecting against the threat of air attacks is not within licensees’ responsibilities because a private security force cannot reasonably be expected to defend against such attacks and adequate protection is ensured through the actions of other federal agencies with defense capabilities and air-safety expertise; CLI-11-4, 74 NRC 1 (2011)

SEGMENTATION

as to whether the connected action aspect of 40 C.F.R. 1508.25(a)(1) supports an improper-segmentation contention’s admissibility, petitioners have not providing sufficient supporting information to show that a genuine dispute exists on the material issue; LBP-13-10, 78 NRC 117 (2013)
contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-13-10, 78 NRC 117 (2013)
cumulative effects and improper segmentation issues raise separate but similar questions; LBP-14-6, 79 NRC 404 (2014)
failure to include all connected actions within the scope of the proposed action is generally referred to as segmentation; LBP-14-6, 79 NRC 404 (2014)
failuer to include all connected actions within the scope of the proposed action is generally referred to as segmentation; LBP-14-9, 80 NRC 15 (2014)
federal agencies may plan a number of related actions but may decide to prepare impact statements on each action individually rather than prepare an impact statement on the entire group, creating a segmentation or piecemealing problem; LBP-14-6, 79 NRC 404 (2014)
piecemealing or segmentation occurs when an action is divided into component parts, each involving action with less significant environmental effects; LBP-14-6, 79 NRC 404 (2014)
policies set forth by NEPA prevent NRC Staff from segmenting the disposal issues from the inquiry into whether applicant will be allowed to create 11e(2) byproduct material in the first instance; LBP-13-9, 78 NRC 37 (2013)
segmentation is to be avoided in order to ensure that interrelated projects, the overall effect of which is environmentally significant, not be fractionalized into smaller, less significant actions; LBP-14-6, 79 NRC 404 (2014)

separate actions are connected if, among other things, they cannot or will not proceed unless other actions are taken previously or simultaneously, or they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-12-12, 75 NRC 742 (2012)

to ensure that interrelated projects, the overall effect of which is environmentally significant, not be fractionalized into smaller, less significant actions, segmentation in the environmental impact statement is to be avoided; LBP-14-9, 80 NRC 15 (2014)

when an action is divided into component parts, each involving action with less significant environmental effects, segmentation or piecemealing occurs; LBP-12-12, 75 NRC 742 (2012); LBP-14-9, 80 NRC 15 (2014)

SEISMIC ANALYSIS

although NRC Staff reviews submissions under 10 C.F.R. 50.71(e) for compliance with such administrative requirements as timeliness and content, it does not approve substantive changes, such as changes to a seismic analysis, as part of the process; LBP-15-27, 82 NRC 184 (2015)

any amendment to an existing license as a result of NRC review of licensee seismic hazard reevaluations that leads to changes in the current licensing basis would be subject to a hearing opportunity; CLI-15-21, 82 NRC 295 (2015)

as part of the NRC post-Fukushima lessons-learned activities, NRC is requiring all licensees to reevaluate seismic hazards at their sites, and to this end, issued a request for information; DD-15-1, 81 NRC 193 (2015)

contention that final safety analysis report is deficient because it does not include information provided in applicant’s seismic evaluation process report is rejected; LBP-15-14, 81 NRC 591 (2015)

design bases for earthquakes are to be determined through evaluation of the geologic and seismic history of the site and surrounding region; DD-12-1, 75 NRC 573 (2012)

geologic and seismic siting factors considered for design must include a determination of the safe shutdown earthquake ground motion for the site and the potential for surface tectonic and non-tectonic deformations; LBP-11-16, 73 NRC 645 (2011)

highly site-specific seismic hazard analysis reflects consideration not only of the location and magnitude of historic earthquakes, but also the nature of the bedrock and the style of faulting in the surrounding region; LBP-11-1, 73 NRC 455 (2011)

modernization plans for seismic instrumentation following failure of an annunciation panel in the main control room are discussed; DD-12-2, 76 NRC 391 (2012)

NRC’s post-Fukushima lessons learned and information-gathering process authorizes NRC to collect information from licensees to determine whether licenses should be modified, suspended, or revoked; LBP-15-27, 82 NRC 184 (2015)

request for information instructed all licensees to reevaluate seismic hazards at their sites using updated seismic hazard information, present-day guidance and methodologies, and a risk evaluation; DD-15-6, 81 NRC 884 (2015)

request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 489 (2014)

seismic hazard reevaluations of all nuclear power reactors are not de facto license amendments; LBP-15-27, 82 NRC 184 (2015)

Staff’s ability to satisfy its NEPA obligations will be undermined if applicant either fails to include seismic information in its SAMA analysis, or, in omitting the information, fails to explain its absence and justify that the overall costs of obtaining it are exorbitant; CLI-11-11, 74 NRC 427 (2011)

to evaluate the impact of a fault on current operations, a probabilistic risk assessment rather than a deterministic analysis is the accepted and standard practice in SAMA analyses; CLI-11-11, 74 NRC 427 (2011)
SUBJECT INDEX

where seismic suitability of a site was evaluated at the early site permit stage, further litigation of the
geologic fault issue is foreclosed at the combined license stage; LBP-14-8, 79 NRC 519 (2014)
See also Earthquakes

SEISMIC DESIGN

NRC issued an order on station blackout mitigation strategies requiring mitigation strategies to protect
against, among many other hazards, postulated seismic events; DD-15-1, 81 NRC 193 (2015)
petitioner may file a petition for rulemaking to expand the scope of NRC license renewal regulations if it
believes that applicant’s seismic design and licensing basis are now invalid and that safe operation of
the plant can no longer be ensured; CLI-15-21, 82 NRC 295 (2015)
petitioner may file a request to institute a proceeding to modify, suspend, or revoke a license, or for any
other action that may be proper, if it believes that applicant’s seismic design and licensing basis are
now invalid and that safe operation of the plant can no longer be ensured; CLI-15-21, 82 NRC 295
(2015)

SEISMIC ISSUES

seismology is an evolving science; LBP-15-27, 82 NRC 184 (2015)

SENIOR REACTOR OPERATOR

any individual licensed under Part 55 to manipulate the controls of a facility and to direct the licensed
activities of licensed operators is designated as an SRO; LBP-14-2, 79 NRC 131 (2014)
SRO is any individual licensed under 10 C.F.R. Part 55 to manipulate the controls of a facility and to
direct the licensed activities of licensed operators; LBP-13-3, 77 NRC 82 (2013)

SENIOR REACTOR OPERATOR LICENSE

any individual who manipulates the controls of any facility licensed under Parts 50, 52, or 54 of NRC’s
regulations is required to have an operator’s license; LBP-14-2, 79 NRC 131 (2014)
any license is limited to the facility for which it is issued; LBP-13-3, 77 NRC 82 (2013)
apPLICANT denied an SRO license has the right to demand a hearing, rather than being required to
negotiate the contention admissibility requirements and a possible appeal in the event a hearing is
granted; LBP-13-3, 77 NRC 82 (2013)
apPLICANT must pass both the written examination and the operating test and meet the other requirements
apPLICANT who does not accept a proposed license denial may, within 20 days of the date of the denial
letter, demand a hearing; LBP-14-2, 79 NRC 131 (2014)
apPLICANT who has passed either the written examination or operating test and failed the other may request
in a new application on Form NRC-398 to be excused from reexamination on the portions of the
examination or test that the applicant has passed; LBP-13-3, 77 NRC 82 (2013)
apPLICANT who passes both a written examination and operating test and meets the other requirements
specified in 10 C.F.R. Part 55 will be eligible to receive senior reactor operator license; LBP-13-5, 77
NRC 233 (2013)
apPLICANT who was denied a license after the first examination may elect to retake the tests; LBP-14-2, 79
NRC 131 (2014)
because an applicant denied an operator’s license (or a byproduct, source, special materials, or facility
license) would be entitled to demand a hearing, rather than merely request a hearing, no more than 20
days would be required to prepare a document that would satisfy the conditions precedent to obtaining
the hearing; LBP-13-3, 77 NRC 82 (2013)
contention admissibility requirements do not apply to hearing demands submitted under section 2.103(b)(2)
and petitioner lacked actual and constructive notice of the contention admissibility requirements that
NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)
demAND for hearing on denial of application for a senior reactor operator license is granted; LBP-13-3, 77
NRC 82 (2013)
hearing demand under section 2.103(b)(2) has only to meet the prescribed filing deadline and specify the
reasons why the demander deemed the denial of the sought operator’s license to have been unjustified;
LBP-13-3, 77 NRC 82 (2013)
licenses are subject to the satisfaction of other licensing requirements not considered in this proceeding,
such as health, that the NRC Staff must assess before issuing a license; LBP-14-2, 79 NRC 131 (2014)
licenses shall be effective as of the date issued and shall be subject to the usual terms and conditions;
LBP-14-2, 79 NRC 131 (2014)
NRC regional office has the discretion to grant a waiver for retesting on a passed test for a senior reactor operator applicant who has failed only one part of the test if it determines that sufficient justification is presented; LBP-14-2, 79 NRC 131 (2014)

NRC Staff acted inconsistently with its own guidance and applied that guidance in an inconsistent manner when it denied an SRO license; LBP-14-2, 79 NRC 131 (2014)

Part 55 of 10 C.F.R. establishes procedures and criteria for issuance of reactor operator licenses under the Atomic Energy Act or the Energy Reorganization Act; LBP-14-2, 79 NRC 131 (2014)

to obtain a license, applicant must pass both a written test and an operating test and meet the other requirements specified in Part 55; LBP-14-2, 79 NRC 131 (2014)

SENSITIVE UNCLASSIFIED NONSAFEGUARDS INFORMATION

boards have closed their hearings even when they were concerned with less sensitive (i.e., nonpublic but unclassified) types of information; LBP-12-21, 76 NRC 218 (2012)

lack of clarity in the terms and application of the agency’s newly established SUNSI policy contributed to intervenors’ misapprehension that they were required to demonstrate a need for the information in order to request SUNSI documents; LBP-11-9, 73 NRC 391 (2011)

NRC Staff was admonished for having imposed a stricter-than-necessary standard of “need” for access to SUNSI; LBP-11-9, 73 NRC 391 (2011)

rules governing access to SUNSI apply only to potential parties, whereas party access to SUNSI is governed by protective orders and nondisclosure agreements; LBP-11-9, 73 NRC 391 (2011)

SUNSI policy does not expand upon or create any new category of legally privileged or confidential information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 131 (2011)

SERVICE OF DOCUMENTS

service of a filing is not complete until accompanied by a certificate of service and a request for oral argument; LBP-11-21, 74 NRC 115 (2011)

SETTLEMENT AGREEMENTS

agreements are contingent upon approval by a licensing board; LBP-15-21, 82 NRC 1 (2015)

approval process in 10 C.F.R. 2.338(i) is discussed; LBP-15-21, 82 NRC 1 (2015)

board authority under section 2.338(i) is to approve or reject a settlement agreement, and so it cannot amend the agreement without consent of the parties; LBP-15-21, 82 NRC 1 (2015)

board finds that it is not necessary for a notice of hearing to be issued before the board can approve a settlement; LBP-15-30, 82 NRC 339 (2015)

boards are empowered to approve settlements proposed by the parties; LBP-15-30, 82 NRC 339 (2015)

content requirements are set forth in 10 C.F.R. 2.338(h); LBP-15-21, 82 NRC 1 (2015)

form requirements are set forth in 10 C.F.R. 2.338(g); LBP-15-21, 82 NRC 1 (2015)

if licensee or other person to whom an order is issued consents to its issuance, or the order confirms actions agreed to by the licensee or such other person, that consent or agreement constitutes a waiver by the licensee or such other person of a right to a hearing and any associated rights; LBP-14-4, 79 NRC 319 (2014)

if parties settle their dispute after a hearing, the board should dismiss the adjudication; LBP-11-22, 74 NRC 259 (2011)

in any enforcement action, especially one that has been settled to NRC’s satisfaction without creating a formal record, NRC’s choice of sanctions is quintessentially a matter of the Commission’s sound discretion; LBP-14-4, 79 NRC 319 (2014)

licensee is banned from engaging in NRC-licensed activities, including performing, supervising, or assisting in any industrial radiographic operations and must complete a formal radiation safety officer training course; LBP-15-21, 82 NRC 1 (2015)

licensing boards are to approve settlements when they are fair and reasonable and comport with the public interest; LBP-15-30, 82 NRC 339 (2015)

nonparty petitioners may not challenge a confirmatory order embodying a settlement if the order improves the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014)
NRC Staff’s position in an enforcement proceeding is not itself dispositive of whether an enforcement agreement should be approved, but regulatory instruction to accord that position due weight is dispositive proof of the importance of Staff’s views; LBP-15-21, 82 NRC 1 (2015)

NRC’s policy of encouraging settlements specifically recognizes that settlements are not inviolate, and the presiding officer or Commission may order adjudication of the issues that the presiding officer or Commission finds is required in the public interest to dispose of the proceeding; LBP-14-4, 79 NRC 319 (2014)

only 10 C.F.R. 2.203 refers to a notice of hearing as part of the settlement procedure; LBP-15-30, 82 NRC 339 (2015)

parties agreed that additional analysis in the Final Supplemental Environmental Impact Statement would be sufficient to address the only contention remaining in this proceeding; LBP-15-22, 82 NRC 49 (2015)

parties bring settlement requests pursuant to 10 C.F.R. 2.338(g); LBP-15-30, 82 NRC 339 (2015)

parties who choose to resolve litigation through settlement may not dispose of the claims of a third party and may not impose duties or obligations on a third party without that party’s agreement; LBP-14-4, 79 NRC 319 (2014)

presiding officer’s approval for settlements in contested proceedings with admitted contentions is evidenced from provisions of section 2.338 other than paragraph (g); LBP-15-30, 82 NRC 339 (2015)

presiding officer’s approval of settlement is a matter that must give due consideration to the public interest; LBP-15-21, 82 NRC 1 (2015)

public interest does not require additional adjudication of an enforcement matter and, given that all matters required to be adjudicated as part of this proceeding have been resolved, the proceeding is dismissed; LBP-11-3, 73 NRC 81 (2011)

public interest standard for settlement agreement review concerns whether the approval process deprives interested parties of meaningful participation; LBP-15-21, 82 NRC 1 (2015)

section 2.338 is a new provision that consolidates and amplifies the previous rules pertaining to settlement; LBP-15-30, 82 NRC 339 (2015)

settlements approved by a presiding officer are subject to Commission review; LBP-15-21, 82 NRC 1 (2015)

upon review of a settlement agreement, the board is satisfied that its terms reflect a fair and reasonable settlement in keeping with the objectives of the NRC’s enforcement policy, and satisfy the requirements of 10 C.F.R. 2.338(g) and (h); LBP-11-3, 73 NRC 81 (2011)

where a licensed and operating plant has been found unsafe, where the Commission has ordered some remedial amendment, and where the licensee has accepted that amendment, there is no public interest in the proceeding; LBP-14-4, 79 NRC 319 (2014)

SETTLEMENT JUDGES

parties pursuing settlement may seek to have a settlement judge appointed; LBP-14-11, 80 NRC 125 (2014)

SETTLEMENT NEGOTIATIONS

boards lack authority to order NRC Staff to bring licensee employees into settlement negotiations; LBP-14-4, 79 NRC 319 (2014)

settlement is encouraged, but the fact that a possible settlement is being negotiated does not change any of the deadlines set forth in the initial scheduling order; LBP-14-11, 80 NRC 125 (2014)

when a filing deadline is approaching, notwithstanding that an attorney is engaged in good-faith settlement discussions, prudence should compel the attorney to take all actions that are necessary to ensure the deadline will be met in the event that settlement discussions are unsuccessful; LBP-15-4, 81 NRC 156 (2015)

SETTLEMENTS

Commission, like other adjudicatory bodies, looks with favor upon settlements; LBP-14-4, 79 NRC 319 (2014)

fair and reasonable settlement of issues proposed for litigation is encouraged; LBP-15-21, 82 NRC 1 (2015); LBP-15-30, 82 NRC 339 (2015)
settlement must be in the form of a proposed settlement agreement, a consent order, and a motion for its entry that includes the reasons why it should be accepted; LBP-15-30, 82 NRC 339 (2015)
settlements may become illusory if licensees consent to confirmatory orders and are nonetheless subjected to formal proceedings, possibly leading to different or more severe enforcement actions; LBP-14-4, 79 NRC 319 (2014)
too freely allowing third parties to contest enforcement settlements at hearings would undercut the NRC’s policy favoring enforcement settlements; LBP-14-4, 79 NRC 319 (2014)
SEVERE ACCIDENT MITIGATION ALTERNATIVES
assertion that other SAMAs might become cost-effective if implemented, without indication of any particular positive or negative environmental impact from any such implementation, fails to present an exceptionally grave issue; LBP-12-1, 75 NRC 1 (2012)
Category 2 issues focus on severe accident mitigation, to further reduce severe accident risk (probability or consequences); CLI-12-19, 76 NRC 377 (2012)
COL applications must include a description and plans for implementation of the guidance and strategies required by section 50.54(h)(2) for severe accident mitigation; CLI-11-9, 74 NRC 233 (2011)
contention that indicates neither positive nor negative impact from proposed severe accident mitigation alternative implementation does not paint the required seriously different picture of the environmental landscape to reopen the record; LBP-11-35, 74 NRC 701 (2011)
design or procedural modifications that could mitigate the consequences of a severe accident are known as severe accident mitigation alternatives; LBP-11-38, 74 NRC 817 (2011)
if cost of implementing a particular SAMA is greater than its estimated benefit, the SAMA is not considered cost-beneficial to implement; LBP-11-33, 74 NRC 675 (2011)
in a combined license proceeding, NRC may require implementation of mitigation measures it deems necessary and appropriate by imposing conditions in the license; LBP-12-18, 76 NRC 127 (2012)
individual licensing proceedings are not the appropriate forum for evaluating SAMAs; LBP-13-1, 77 NRC 57 (2013)
it is applicant’s responsibility to include information in the environmental report that NRC Staff needs to prepare the draft environmental impact statement, including information on alternatives available for reducing or avoiding adverse environmental effects; LBP-12-12, 75 NRC 742 (2012)
license renewal applicant is compelled to implement safety-related SAMAs that deal with aging management; LBP-11-17, 74 NRC 11 (2011)
materiality of a SAMA contention is based on whether it purports to show that an additional SAMA should have been identified as potentially cost-beneficial; CLI-11-11, 74 NRC 427 (2011)
NEPA is a procedural statute and although it requires a hard look at mitigation measures, it does not, in and of itself, provide the statutory basis for their implementation; CLI-11-14, 74 NRC 801 (2011)
NRC shall require backfitting of a facility only when it determines that there is a substantial increase in the overall protection of the public health and safety or the common defense and security and that the costs of implementation are justified in view of this increased protection; LBP-11-17, 74 NRC 11 (2011)
NRC Staff has authority to require implementation of non-aging-management SAMAs through its current licensing basis backfit review under Part 50 or through setting conditions of the license renewal; LBP-11-17, 74 NRC 11 (2011)
petitioner may raise a SAMA-related contention in a license renewal adjudication if it satisfies the general contention admissibility criteria in section 2.309(f)(1); CLI-13-7, 78 NRC 199 (2013)
petitioner must approximate the relative cost and benefit of a challenged SAMA or provide at least some ballpark consequence and implementation costs should the SAMA be performed; CLI-11-11, 74 NRC 427 (2011)

possibility that new SAMA candidates may become available cannot be the basis for a successful petition to waive 10 C.F.R. 51.53(c)(3)(ii)(L), because the Commission knew that SAMA technology would change, but was confident that processes, other than the SAMA analysis process, would adequately address any such developments; LBP-13-1, 77 NRC 57 (2013)

record of decision is required to summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-13-9, 78 NRC 37 (2013)

SAMA need not be implemented during a particular plant’s license renewal review if the Commission is concurrently resolving the safety improvement achieved by that SAMA through a generic process attached to the agency’s review of all plants’ current licensing bases; LBP-11-17, 74 NRC 11 (2011)

SAMAs are category 2 items under 10 C.F.R. Part 51, Subpart A, App. B, and NRC must treat them as such; CLI-12-19, 76 NRC 377 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-12-15, 76 NRC 14 (2012)

SAMAs are safety enhancements such as a new hardware item or procedure intended to reduce the risk of severe accidents; LBP-11-33, 74 NRC 675 (2011)

SAMAs are somewhat broader than severe accident mitigation design alternatives, which focus on design changes and do not consider procedural modifications; LBP-11-38, 74 NRC 817 (2011)

SAMAs fall within Category 2 and must therefore be addressed on a site-specific basis; LBP-15-5, 81 NRC 249 (2015)

section 51.53(c)(3)(ii)(L) does not convert the Category 2 (site-specific) issue of SAMAs into a Category 1 issue; LBP-12-8, 75 NRC 539 (2012)

subsection (L) of 10 C.F.R. 51.53(c)(3)(ii) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in case-by-case license renewal adjudications; LBP-13-1, 77 NRC 57 (2013)

unsupported speculation that fresh analysis might lead NRC to require additional mitigation measures simply does not raise a significant safety issue or an exceptionally grave issue; LBP-11-23, 74 NRC 287 (2011)

SEVERE ACCIDENT MITIGATION ALTERNATIVES ANALYSIS

absent a valid regulation limiting NRC’s NEPA obligations, the consideration of alternative severe accident mitigation measures may not be excluded from the agency’s NEPA reviews; LBP-12-18, 76 NRC 127 (2012)

accounting for the meteorological patterns, atmospheric transport modeling, and data issues raised by intervenor cannot credibly alter which severe accident mitigation alternatives are potentially cost-beneficial to implement; LBP-11-18, 74 NRC 29 (2011)

admissibility of contention that common-mode failures and/or mutually exacerbating catastrophes are entitled SAMA analysis is decided; LBP-15-5, 81 NRC 249 (2015)

admissibility of contention that SAMA analysis fails to evaluate the impact that a severe accident at one unit would have on the operation of a proposed nearby unit is decided; LBP-15-5, 81 NRC 249 (2015)

admission of a contention that might require further explanation of SAMA cost-benefit analysis did not have a pervasive and unusual effect on the litigation; CLI-11-6, 74 NRC 203 (2011)

alternatives to mitigate severe accidents must be considered for all plants that have not considered such alternatives; LBP-11-2, 73 NRC 28 (2011)

although a contention might have been more detailed or otherwise better supported, petitioners have done enough to raise a question about the adequacy of the probability figures used in applicant’s SAMA analysis, namely, whether they should have incorporated or otherwise acknowledged information from a Sandia study; LBP-12-18, 76 NRC 127 (2012)

although a SAMA analysis considers safety issues, it is actually an environmental review that must be judged under NEPA’s rule of reason and not under the safety requirements of the Atomic Energy Act; LBP-15-29, 82 NRC 246 (2015)

although a SAMA analysis must be provided if not previously performed, applicant must provide this analysis only for those issues identified as Category 2 issues in Appendix B to Subpart A of Part 51; LBP-11-2, 73 NRC 28 (2011)
although NEPA does not mention mitigation, by administrative practice and regulation, mitigation plays an important role in the discharge by federal agencies of their procedural duty under NEPA to prepare an EIS; LBP-12-18, 76 NRC 127 (2012)

although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants, NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review; LBP-12-26, 76 NRC 559 (2012)

although petitioners are not required to run their own computer models at the contention admissibility stage, a contention challenging a SAMA analysis nonetheless must be tethered to the computer modeling and mathematical aspects of the analysis; CLI-12-15, 75 NRC 704 (2012)

although potential SAMLAs must be considered for license renewal, no site-specific severe accident impacts analysis needs to be done; CLI-12-15, 75 NRC 704 (2012)

although there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-11-7, 73 NRC 254 (2011)

among the limited issues within the scope of a license renewal proceeding are alternatives for reducing adverse environmental impacts listed as Category 2 issues in Appendix B to Subpart A of 10 C.F.R. Part 51; LBP-11-2, 73 NRC 28 (2011)

an environmental report must contain a full discussion of mitigation plans; LBP-11-6, 73 NRC 149 (2011)

analysis is conducted pursuant to the National Environmental Policy Act, and thus is an environmental issue, not a safety one; LBP-15-1, 81 NRC 15 (2015)

analysis is not based on either best-case or worst-case accident scenarios, but on mean accident consequence values, averaged over the many hypothetical severe accident scenarios; LBP-13-13, 78 NRC 246 (2013)

analysis issues can present difficult judgment calls at the contention admission stage; LBP-15-5, 81 NRC 249 (2015)

analysis must be considered as part of the environmental report and, ultimately, as part of NRC Staff’s supplemental environmental impact statement for a power reactor license renewal; LBP-15-5, 81 NRC 249 (2015)

analysis must necessarily be site specific because the potential consequences of a severe accident will largely be the product of the location of the plant; LBP-13-13, 78 NRC 246 (2013)

applicant is exempt from including in its environmental report a site-specific SAMA analysis because NRC Staff previously considered severe accident mitigation design alternatives in its final environmental impact statement; CLI-13-7, 78 NRC 199 (2013)

applicant is to provide in its environmental report an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-12-8, 75 NRC 539 (2012)

applicant need only ensure that the environmental consequences of the project have been fairly evaluated; LBP-11-2, 73 NRC 28 (2011)

applicant’s environmental report must contain a sufficient analysis of potential environmental consequences and alternatives to enable the NRC Staff to prepare an environmental impact statement that fulfills the agency’s obligations under NEPA; LBP-11-14, 73 NRC 591 (2011)

applicant’s estimate and NRC Staff’s approval of projected population estimate for severe accident mitigation alternatives analysis are reasonable and satisfy the requirements under NEPA and 10 C.F.R. §51.53(c)(3)(ii)(L); LBP-13-13, 78 NRC 246 (2013)

applicant’s use of the MAAP code to generate fission product source terms for use in its severe accident mitigation alternatives analysis is reasonable under NEPA; LBP-12-26, 76 NRC 559 (2012)

arguments that more conservative SAMA analysis needs to be performed, using 95th percentile computations, and not using a discount factor to evaluate the time effects of cleanup costs are policy matters that are solely within Commission jurisdiction and represent inadmissible challenges to binding Commission rulings; LBP-11-20, 74 NRC 65 (2011)

as issues of mitigation, SAMLAs need only be discussed in sufficient detail to ensure that environmental consequences of the proposed project have been fairly evaluated; LBP-13-13, 78 NRC 246 (2013)

because NRC has established a requirement to provide information to be used by NRC staff in fulfillment of its obligation under the National Environmental Policy Act, suitability of applicant’s SAMA analysis must be judged by the requirements of NEPA; LBP-11-18, 74 NRC 29 (2011)
because the analysis is largely quantitative, resting on inputs used in computer modeling, it will always be possible to propose that the analysis use one or more other inputs; LBP-13-13, 78 NRC 246 (2013)
because the probability of a spent fuel pool accident causing significant harm is remote, there is no need for applicants to assess spent fuel pool accident mitigation alternatives as part of license renewal; LBP-15-5, 81 NRC 249 (2015)
bird collisions with cooling towers have not been found to be a problem at operating nuclear power plants and are not expected to be a problem during the license renewal term; LBP-13-1, 77 NRC 57 (2013)
board assessment of a severe accident mitigation alternatives analysis does not consider whether more or different analysis can be done; LBP-13-13, 78 NRC 246 (2013)
boards should not have to guess what aspects of the SAMA analysis the petitioner is challenging; LBP-12-1, 75 NRC 1 (2012)
CEQ regulations require that agencies discuss possible mitigation measures in defining the scope of the EIS, in discussing alternatives to the proposed action and consequences of that action, and in explaining its ultimate decision; LBP-12-18, 76 NRC 127 (2012)
challenge to the inputs and methodology in the SAMA analysis is impermissibly late; CLI-12-10, 75 NRC 479 (2012)
challenges to extensive damage mitigation guidelines are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to NRC’s assumptions about operators’ capability to mitigate an accident are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to NRC’s excessive secrecy regarding accident mitigation measures are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
citation of studies indicating that source terms from the Modular Accident Analysis Progression (MAAP) code are lower than results from Source Term Code Package or NUREG-1150 satisfies the requirements of 10 C.F.R. 2.309(f)(1)(v); LBP-11-2, 73 NRC 28 (2011)
claim that SAMA analysis is deficient for failing to address potential spent fuel pool accidents falls beyond the scope of NRC SAMA analysis and impermissibly challenges NRC regulations; LBP-11-13, 73 NRC 534 (2011)
Commission requests briefing from NRC Staff on the circumstances, if any, NRC Staff would judge a potentially cost-beneficial mitigation alternative to warrant further NRC consideration outside of the license renewal review, either via a backfit analysis or as part of another process; CLI-15-3, 81 NRC 217 (2015)
Commission requests briefing from NRC Staff on the level of uncertainty that NRC Staff considers acceptable for the implementation cost portion of the cost-benefit analysis, and why; CLI-15-3, 81 NRC 217 (2015)
Commission requests briefing from NRC Staff on whether it has a process in place to follow up with licensee to determine which potentially cost-beneficial mitigation alternatives ultimately were found by licensee to be cost-beneficial, if any, and which alternatives, if any, licensee implemented; CLI-15-3, 81 NRC 217 (2015)
conclusory statements do not amount to a challenge to a SAMA analysis; CLI-15-18, 82 NRC 135 (2015)
consistent with NEPA’s rule of reason, applicant and NRC Staff acted on the basis of best available information and analysis in completing the SAMA evaluation; LBP-13-13, 78 NRC 246 (2013)
contention is within the scope of license renewal proceeding because NRC regulations require that the environmental report include a SAMA analysis; LBP-15-5, 81 NRC 249 (2015)
contention proposing alternative inputs or methodologies for SAMA analysis must present some factual or expert basis for why the proposed changes in the analysis are warranted; LBP-12-26, 76 NRC 559 (2012)
contention questioning accuracy of the SAMA results given the geographic location and variable meteorological conditions at the site and the large population base surrounding the plant is admissible; LBP-11-2, 73 NRC 28 (2011)
contention regarding mitigation alternatives is effectively a collateral attack on regulation that exempts applicants from having to reanalyze SAMAs during the renewal process; LBP-14-15, 80 NRC 151 (2014)
contention that applicant’s SAMA analysis improperly ignored radioactive waste disposal is outside the scope of the proceeding because it directly challenges the generic determinations in Table B-1 of Appendix B to Part 51; LBP-11-2, 73 NRC 28 (2011)
contention that applicant’s SAMA analysis is significantly flawed because of the use of inaccurate factual assumptions about population is admissible; LBP-15-5, 81 NRC 249 (2015)
contention that challenges lack of SAMA analysis in applicant’s environmental report is inadmissible; CLI-13-7, 78 NRC 199 (2013)
contention that SAMA analysis does not satisfy NEPA because it does not consider a range of mitigation measures to mitigate the risk of catastrophic fires in densely packed, closed-frame spent fuel storage pools is decided; LBP-15-5, 81 NRC 249 (2015)
contention that environmental report fails to accurately and thoroughly conduct SAMA analysis to design vulnerability of GE Mark I boiling water reactor pressure suppression containment system and environmental consequences of a to-be-anticipated severe accident post-Fukushima Daiichi fails to present a genuine material dispute; LBP-15-5, 81 NRC 249 (2015)
contention that other costs were ignored is not admissible because petitioners presented no facts or expert opinion that show it to be plausible that including them might affect the outcome of the SAMA analysis; LBP-11-2, 73 NRC 28 (2011)
contention that population used for analysis might underestimate the exposed population in a severe accident and, in turn, underestimate the benefit achieved in implementing a SAMA analysis is admissible; LBP-15-5, 81 NRC 249 (2015)
contention that SAMA analysis does not accurately reflect decontamination and cleanup costs is decided; LBP-13-13, 78 NRC 246 (2013)
contention that the draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 37 (2013)
contentions challenging a SAMA analysis must identify a deficiency that plausibly could alter the overall result of the analysis in a material way; LBP-13-13, 78 NRC 246 (2013)
contentions proposing alternative inputs or methodologies for the SAMA analysis must present some factual or expert basis for why the proposed changes in the analysis are warranted; CLI-12-8, 75 NRC 393 (2012)
contradiction between paragraphs (ii)(L) and (iv) of 10 C.F.R. 51.53(c)(3) is discussed; LBP-13-1, 77 NRC 57 (2013)
cost-effective candidate SAMAs are identified by comparing the annualized cost of the mitigation measure with the benefit as determined by the averted cost of severe accidents (consequences), as weighted by the probability of the accidents’ occurrence; LBP-11-13, 73 NRC 534 (2011)
degree to which specific additional mitigation measures may reduce the risk of various accident scenarios is analyzed on a site-specific basis; LBP-13-13, 78 NRC 246 (2013)
discussion of steps that can be taken to mitigate adverse environmental consequences plays an important role in the environmental analysis under NEPA; LBP-12-18, 76 NRC 127 (2012)
draft environmental impact statements must include a preliminary analysis that considers and weighs alternatives available for reducing or avoiding adverse environmental effects; LBP-12-18, 76 NRC 127 (2012)
draft environmental impact statements need not contain more information on mitigation measures than a description of the mitigation measures on which NRC relies and explanation of the limiting effect of the mitigation measures on environmental impacts; LBP-13-9, 78 NRC 37 (2013)
environmental analysis of severe accidents is designated as a Category 2 site-specific issue for license renewal, and therefore the SAMA analysis normally is subject to challenge in a license renewal adjudicatory proceeding; CLI-13-7, 78 NRC 199 (2013)
environmental impact statement is required to discuss a recently discovered fault located near the plant; LBP-15-29, 82 NRC 246 (2015)
environmental impact statements cannot fulfill their role of providing a springboard for public comment if they fail to evaluate significant issues such as measures that the agency’s experts recommend to mitigate the consequences of a severe accident; LBP-12-18, 76 NRC 127 (2012)
environmental impact statements must include a reasonably complete discussion of possible mitigation measures; LBP-12-18, 76 NRC 127 (2012)
environmental report for license renewal must consider SAMAs for all plants that have not considered such alternatives; LBP-15-5, 81 NRC 249 (2015)

environmental reports must discuss new SAMAs addressed in more recent reports for other nuclear power plants of the same or similar boiling water reactor Mark II design; LBP-14-15, 80 NRC 151 (2014)

evaluation is governed by the rule of reason and alternatives must be bounded by some notion of feasibility; LBP-13-13, 78 NRC 246 (2013)

exception in 10 C.F.R. 51.53(c)(3)(ii)(L) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in certain license renewal adjudications; CLI-13-7, 78 NRC 199 (2013)

failure to challenge the existing SAMA analysis would be insufficient to establish a material dispute for the purposes of satisfying the general contention admissibility standards, let alone the reopening standards; CLI-12-6, 75 NRC 352 (2012)

for an admissible contention, petitioners do not have to prove outright that a SAMA analysis is deficient; CLI-11-11, 74 NRC 427 (2011)

license renewal applicant is not required to perform a new SAMA analysis; LBP-14-15, 80 NRC 151 (2014)

for license renewal, a SAMA analysis is a cost-benefit analysis, weighing a particular mitigation measure’s estimated degree of risk reduction against its estimated cost of implementation; CLI-12-8, 75 NRC 393 (2012)

Gaussian plume model’s incorporation in the MACCS2 code and the wide, customary use of the code are not a sufficient ground to exclude the code’s integral dispersion model from all challenge if adequate support is provided for a contention; LBP-11-2, 73 NRC 28 (2011)

generalized reference to the potential human and economic costs from an accident falls short of the support necessary for a SAMA contention; CLI-15-18, 82 NRC 135 (2015)

given the quantitative nature of analysis, which rests largely on selected inputs, it may always be possible to conceive of alternative and more conservative inputs, whose use in the analysis could result in greater estimated accident consequences; LBP-13-13, 78 NRC 246 (2013)

goal of a SAMA analysis is to identify potential changes to a nuclear power plant or its operations that might reduce the risk or likelihood or impact, or both, of a severe reactor accident for which the benefit of implementing the changes outweighs the cost of the implementation; LBP-11-18, 74 NRC 29 (2011)

if NRC Staff has not already considered site-specific SAMAs for a facility, they must be considered as part of applicant’s environmental report and ultimately as part of NRC Staff’s supplemental environmental impact statement in a power reactor license renewal proceeding; LBP-11-17, 74 NRC 11 (2011); LBP-11-18, 74 NRC 29 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-13-1, 77 NRC 57 (2013)

implicit in NEPA’s demand that an agency prepare a detailed environmental impact statement is an understanding that the EIS will discuss the extent to which adverse effects can be avoided; LBP-12-18, 76 NRC 127 (2012)

inadequacy in the SAMA analysis is material if license renewal applicant failed to consider complete information without justifying why particular information was omitted; LBP-15-5, 81 NRC 249 (2015)

it is not possible simply to plug in and run a different atmospheric dispersion model in the MACCS2 code; LBP-11-2, 73 NRC 28 (2011)

it must be genuinely plausible that revising the SAMA analysis would change the outcome so that one or more of the SAMA candidates that applicant evaluated and rejected would become cost-beneficial; LBP-15-5, 81 NRC 249 (2015)

license renewal applicant must file an environmental report that includes an alternatives analysis that considers and balances the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-11-13, 73 NRC 534 (2011)
license renewal applicants are not required to base their analysis on consequence values at the 95th percentile consequence level; LBP-11-2, 73 NRC 28 (2011)

license renewal applicant’s environmental report must contain a consideration of alternatives for reducing adverse impacts for all Category 2 license renewal issues in Appendix B; LBP-11-21, 74 NRC 115 (2011)

license renewal applicants must provide a SAMA analysis if NRC Staff has not yet previously considered SAMAs for the applicant’s plant in an environmental impact statement or related supplement, or in an environmental assessment; CLI-12-5, 75 NRC 501 (2012); LBP-12-8, 75 NRC 539 (2012); CLI-12-19, 76 NRC 377 (2012); CLI-15-18, 82 NRC 135 (2015)

license renewal applicants whose facilities qualify for the SAMA-analysis exception are exempt from addressing severe accident mitigation in their environmental reports, just as they would be exempt from addressing Category 1 issues; CLI-13-7, 78 NRC 199 (2013)

licensing boards must admit an adequately supported contention alleging that the agency’s NEPA analysis of severe accident mitigation alternatives is deficient; LBP-12-18, 76 NRC 127 (2012)

mitigation measures assessed in the SAMA analysis under the National Environmental Policy Act are supplemental to those already required under NRC safety regulations for reasonable assurance of safe operation and likewise to those NRC may order or require under ongoing regulatory oversight over reactor safety, pursuant to the Atomic Energy Act; CLI-12-15, 75 NRC 704 (2012)

mitigation must be discussed in sufficient detail in an environmental impact statement to ensure that environmental consequences have been fairly evaluated; LBP-12-18, 76 NRC 127 (2012)

National Environmental Policy Act requires NRC to consider SAMAs; LBP-13-1, 77 NRC 57 (2013)

NEPA allows agencies to select their own methodology as long as that methodology is reasonable; LBP-11-2, 73 NRC 28 (2011); LBP-11-7, 73 NRC 254 (2011)

NEPA does not require a fully developed plan that will mitigate all environmental harm before an agency can act, but only requires that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fully evaluated; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-11-18, 74 NRC 29 (2011); LBP-11-23, 74 NRC 287 (2011)

NEPA does not require agencies to resolve all uncertainties, including uncertainties associated with the NUREG-1150 values used in the SAMA analysis; LBP-13-13, 78 NRC 246 (2013)

NEPA imposes no substantive requirement that mitigation measures actually be taken; LBP-11-14, 73 NRC 591 (2011)

NEPA neither requires nor authorizes NRC to order implementation of mitigation measures analyzed in an environmental analysis; CLI-12-10, 75 NRC 479 (2012)

NEPA regulations require consideration of SAMAs in environmental impact statements and supplements thereto at the operating license stage; LBP-12-15, 76 NRC 14 (2012)

NEPA requires a hard look at severe accident mitigation measures; LBP-12-26, 76 NRC 559 (2012) NEPA requires that agencies provide a reasonably complete discussion of possible severe accident mitigation measures; LBP-12-18, 76 NRC 127 (2012)

NEPA requires that NRC take a hard look at alternatives, including SAMAs, and to provide a rational basis for rejecting alternatives that are cost-effective; LBP-12-8, 75 NRC 539 (2012)

NEPA SAMA analysis need not reflect the most conservative, or worst-case, analysis; CLI-12-10, 75 NRC 479 (2012); LBP-12-26, 76 NRC 559 (2012)

new information from studies of the Fukushima event as to potential consequences of a severe accident at a U.S. nuclear power plant is irrelevant to any uncertainty that might exist regarding which agency has authority over cleanup after a severe accident; LBP-11-20, 74 NRC 65 (2011)

NRC does not mandate a specific approach to SAMA analyses, but instead, reviews each severe accident mitigation consideration provided by a license renewal applicant on its merits and determines whether it constitutes a reasonable consideration of SAMAs; CLI-13-7, 78 NRC 199 (2013)

NRC generally reviews SAMAs using a cost-benefit analysis, and SAMAs that are not cost-beneficial need not be implemented by licensee; LBP-12-18, 76 NRC 127 (2012)

NRC is required to consider SAMAs in issuing a new operating license; LBP-11-7, 73 NRC 254 (2011) NRC policy statement is not a sufficient vehicle to preclude consideration of severe accident mitigation design alternatives, and NRC must take the requisite hard look at them, giving them the careful consideration and disclosure required by the National Environmental Policy Act; CLI-12-19, 76 NRC 377 (2012)
SUBJECT INDEX

NRC Staff’s approval of the NUREG-1150 TIMDEC and CDNFRM input values is reasonable and appropriate and satisfies the requirements under NEPA; LBP-13-13, 78 NRC 246 (2013)

NRC Staff’s obligations under Part 51 and NEPA are not limited to only those SAMAs that address aging management; LBP-11-17, 74 NRC 11 (2011)

NRC was ordered to analyze features or actions that could prevent a serious accident or mitigate its consequences; LBP-14-15, 80 NRC 151 (2014)

NRC’s obligation to evaluate new recommendations for enhanced accident mitigation does not depend upon whether intervenors have identified unique characteristics of the site or the proposed new reactor; LBP-12-18, 76 NRC 127 (2012)

one important component of an environmental impact statement is the discussion of possible actions that might mitigate adverse environmental consequences; LBP-11-7, 73 NRC 254 (2011)

only if the probability of a severe accident is so small as to be effectively zero could NRC Staff dispense with the consequences portion of the analysis; CLI-15-6, 81 NRC 340 (2015)

parties are directed to provide further briefing on questions relating to severe accident decontamination time values and costs used in the SAMA analysis; CLI-15-2, 81 NRC 213 (2015)

petitioner does not demonstrate, with the level of support required under section 2.326(b), that a materially different result would have been likely had the possibility of recriticality over a period longer than 24 hours, or even 4 days, been considered in the SAMA analysis initially; CLI-12-3, 75 NRC 132 (2012)

petitioner fails to specifically explain why a materially different result would have been likely had information currently available from the Fukushima accident been considered ab initio in the severe accident mitigation alternatives analysis or why that information presents a significant safety or environmental issue; LBP-11-35, 74 NRC 701 (2011)

petitioner has provided adequate support for its claim that there are numerous new SAMA candidates that should be evaluated for their significance; LBP-12-8, 75 NRC 539 (2012)

petitioner may question the practice for SAMA analysis to utilize mean consequence values, which results in an averaging of potential consequences; LBP-11-13, 73 NRC 534 (2011)

petitioner need not rerun applicant’s own cost-benefit calculations, but must do more than merely suggest that additional factors be evaluated or that different analytical techniques be used; LBP-15-5, 81 NRC 249 (2015)

petitioner’s assertion that severe accidents from spent fuel pools must be considered in applicant’s SAMA analysis is in direct conflict with NRC regulations; LBP-11-2, 73 NRC 28 (2011)

petitioner’s assertions that the MACCS2 code was not subjected to quality assurance requirements is deficient because a SAMA analysis is not subject to such requirements; LBP-11-2, 73 NRC 28 (2011)

petitioner’s failure to address applicant’s supplemental economic analyses, demonstrate specific knowledge of the analysis, and not indicate, even broadly that the SAMA economic cost-benefit conclusions are not sufficiently conservative renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)

petitioners have not established that use of another source term would identify additional cost-beneficial severe accident mitigation alternatives; LBP-11-13, 73 NRC 534 (2011)

petitioners must provide a nexus between its concerns and any deficiencies in applicant’s SAMA analysis, which would be necessary to establish a genuine dispute for an admissible contention; CLI-15-18, 82 NRC 135 (2015)

petitioners must provide site-specific support to show that the SAMA analysis is unreasonable; LBP-15-5, 81 NRC 249 (2015)

plants for which a SAMA analysis was conducted for the first time under section 51.53(c)(3)(ii)(L) may face general criticism that the passage of time between original licensing and renewal has rendered their SAMA analysis out of date upon application for a subsequent renewal term; CLI-13-7, 78 NRC 199 (2015)

portion of a contention asserting that applicant failed to consider the results of a particular study in its SAMA analysis is admissible; CLI-11-11, 74 NRC 427 (2011)

possible changes, such as improvements in hardware, training, or procedures, that could cost-effectively mitigate the environmental impacts that would otherwise flow from a potential severe accident are identified and addressed; LBP-11-13, 73 NRC 534 (2011); LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)

1312
probabilities of accident scenarios are taken into account, ultimately assessing whether and to what extent
the probability-weighted consequences of the analyzed severe accident sequences would decrease if a
specific mitigation alternative were implemented; LBP-13-13, 78 NRC 246 (2013)

proper question is not whether there are plausible alternative choices for use in the SAMA analysis, but
whether the analysis that was done is reasonable under NEPA; CLI-13-7, 78 NRC 199 (2013);
purpose of 10 C.F.R. 51.53(c)(iii)(L) is to limit the analysis during relicensing to exclude consideration
of SAMAs regarding plant operation that were previously considered; LBP-13-1, 77 NRC 57 (2013)
purpose of SAMA analyses is to identify safety enhancements that would be cost-beneficial to adopt;
purpose of the exemption from 10 C.F.R. 51.53(c)(iii)(L) is to reflect NRC’s view that one SAMA
analysis, as a general matter, satisfies NRC obligation to consider measures to mitigate both the risk
and the environmental impacts of severe accidents; LBP-14-15, 80 NRC 151 (2014)
purpose of the supplemental-SAMA-analysis exception in 10 C.F.R. 51.53(c)(iii)(L) is to reflect NRC’s
view that one SAMA analysis, as a general matter, satisfies NRC’s NEPA obligation to consider
measures to mitigate both the risk and the environmental impacts of severe accidents; CLI-13-7, 78
NRC 199 (2013)

question of material impacts hinges upon whether a severe accident mitigation alternative may be
cost-beneficial to implement; LBP-13-13, 78 NRC 246 (2013)

record of decision for the license must state whether NRC has taken all practicable measures within its
jurisdiction to avoid or minimize environmental harm from the alternative selected, and if not, to
explain why those measures were not adopted; LBP-12-18, 76 NRC 127 (2012)

record of decision must also summarize any license conditions and monitoring programs adopted in
connection with mitigation measures; LBP-12-18, 76 NRC 127 (2012)

relevant issue is whether any additional SAMA should have been identified as potentially cost beneficial,
not whether further analysis may refine the details in the SAMA NEPA analysis; LBP-15-29, 82 NRC
246 (2015)

required level of demonstration by petitioners of cost-effectiveness of other SAMAs is case and issue
specific; LBP-11-35, 74 NRC 701 (2011)

requirement for license renewal applicants to consider SAMAs stems from 10 C.F.R. 51.53(c)(iii)(L);
CLI-12-10, 75 NRC 479 (2012)

SAMA analyses are conducted for the purposes of the NRC’s environmental review under NEPA and are
not safety analyses; CLI-15-18, 82 NRC 135 (2015)

SAMA analysis for relicensing must be performed by licensee and included in the license renewal
application; LBP-12-26, 76 NRC 559 (2012)

SAMA analysis fulfills the requirement to provide a consideration of alternatives to mitigate severe
accidents and therefore is governed by NEPA’s rule of reason; LBP-11-2, 73 NRC 28 (2011);
LBP-11-13, 73 NRC 534 (2011)

SAMA analysis is a cost-benefit analysis, not a direct safety analysis, and thus does not raise any
exceptionally grave issue; LBP-11-23, 74 NRC 287 (2011)

SAMA analysis is a quantitative cost-benefit analysis, assessing whether the cost of implementing a
specific enhancement outweighs its benefit; CLI-15-18, 82 NRC 135 (2015); LBP-13-13, 78 NRC 246
(2013)

SAMA analysis is an analysis of a class of SAMA candidates using probabilistic risk assessment
techniques to determine whether any of the SAMA candidates would be cost-beneficial; LBP-13-1, 77
NRC 57 (2013)

SAMA analysis is neither a worst-case nor a best-case impacts analysis; LBP-11-7, 73 NRC 254 (2011)

SAMA analysis is neither a worst-case nor a best-case impacts analysis, and the agency’s obligations
under NEPA are tempered by a practical rule of reason; LBP-11-18, 74 NRC 29 (2011)

SAMA analysis is not part of the agency’s safety review for license renewal under the Atomic Energy
Act, but is instead a mitigation alternatives analysis conducted pursuant to the National Environmental
Policy Act; LBP-13-8, 78 NRC 1 (2013)

SAMA contentions are admissible only if it looks genuinely plausible that inclusion of an additional
factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA
candidates evaluated; LBP-11-2, 73 NRC 28 (2011); LBP-11-7, 73 NRC 254 (2011); LBP-11-13, 73 NRC 534 (2011)

SAMAs must be considered for all plants that have not considered such alternatives because they are a Category 2 issue; LBP-12-8, 75 NRC 539 (2012)

sea-breeze effect and the hot-spot effect must cause the expected average offsite damages to increase by at least a factor of 2 for the next most costly SAMA to be cost-effective; LBP-11-18, 74 NRC 29 (2011)

severe accidents in the spent fuel pools are Category 1 issues that do not need to be included in the SAMA analysis; LBP-15-5, 81 NRC 249 (2015)

showing merely that changes to the SAMA analysis results are possible or likely or probable is not enough to reopen a record; LBP-11-35, 74 NRC 701 (2011)

showing necessary to demonstrate that a materially different result in the outcome of the SAMA analysis would be or would have been likely had the newly proffered evidence been considered initially is discussed; LBP-11-35, 74 NRC 701 (2011)

simply because alternative inputs could be used does not demonstrate that the original inputs were unreasonable; LBP-13-13, 78 NRC 246 (2013)

site-specific consideration of SAMAs is required at the time of license renewal unless a previous consideration of such alternatives regarding plant operation has been included in a final environmental impact statement, final environmental assessment, or a related supplement; CLI-11-5, 74 NRC 141 (2011)

speculation that NRC would consider other SAMAs than have been previously considered does not demonstrate that the issue raised is material to NRC’s decision; LBP-12-1, 75 NRC 1 (2012)

Staff’s ability to satisfy its NEPA obligations will be undermined if applicant either fails to include seismic information in its SAMA analysis, or, in omitting the information, fails to explain its absence and justify that the overall costs of obtaining it are exorbitant; CLI-11-11, 74 NRC 427 (2011)

sufficiency of the NRC’s hard look at the benefits of SAMAs in comparison to their costs is subject to litigation in a license renewal proceeding; LBP-11-17, 74 NRC 11 (2011)

this probability-weighted analysis is carried out for the limited purpose of identifying mitigation alternatives that meet a defined benefit-cost criterion; CLI-12-15, 75 NRC 704 (2012)

time frame for SAMA analysis is inherent in NRC’s regulatory scheme, which provides for a 40-year license term, with the possibility of license renewal for an additional 20-year period; CLI-13-7, 78 NRC 199 (2013)

to demonstrate that a revised SAMA analysis would produce a materially different result, intervenor should indicate how much the mean consequences of the severe accident scenarios could reasonably be expected to change as well as cost of implementing other SAMAs it believes might become cost-effective; LBP-12-1, 75 NRC 1 (2012)

to evaluate the impact of a fault on current operations, a probabilistic risk assessment rather than a deterministic analysis is the accepted and standard practice in SAMA analyses; CLI-11-11, 74 NRC 427 (2011)

to litigate a SAMA-related contention in adjudicatory proceedings where the SAMA-analysis exception applies, petitioner must obtain a waiver by satisfying the requirements in this section as well as the contention admissibility criteria in section 2.309(a)(1); CLI-13-7, 78 NRC 199 (2013)

to litigate SAMA-related issues requires demonstration of potentially significant deficiency in the SAMA analysis that credibly could render the SAMA analysis unreasonable under NEPA standards; CLI-13-7, 78 NRC 199 (2013); LBP-13-13, 78 NRC 246 (2013)

to satisfy its obligations under NEPA the final supplemental environmental impact statement need only explain any known shortcomings in available methodology, disclose incomplete or unavailable information and significant uncertainties, and make a reasoned evaluation of whether and to what extent these or other considerations credibly could alter the SAMA analysis conclusions; LBP-13-13, 78 NRC 246 (2013)

ultimate issue on SAMA analysis is whether any additional SAMA should have been identified as potentially cost-beneficial, not whether further analysis may refine the details in the SAMA NEPA analysis; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

1314
SUBJECT INDEX

licensing decision and is not appropriate for litigation in NRC proceedings; LBP-12-26, 76 NRC 559 (2012)

unless it looks genuinely plausible that inclusion of an additional factor or use of other assumptions and models may change the cost-benefit conclusions for the severe accident mitigation alternative candidates evaluated, no purpose would be served to further refine the SAMA analysis; CLI-12-5, 75 NRC 301 (2012); LBP-15-5, 81 NRC 249 (2015)

unless petitioner sets forth a supported contention pointing to an apparent error or deficiency that may have significantly skewed the environmental conclusions, there is no genuine material dispute with the application; CLI-12-8, 75 NRC 393 (2012)

unlike plume modeling for an actual severe accident, the SAMA analysis is not focused on predicting the precise trajectory of a real-time plume but rather is a probabilistic analysis involving statistical averaging over many hundreds of randomly selected hourly weather sequences obtained from a year of hourly weather data; CLI-12-8, 75 NRC 393 (2012)

use of mean consequences in SAMA analysis is consistent with NRC policy and precedent, whereas the 95th percentile approach is akin to a worst-case scenario analysis, which is not required by NRC; LBP-11-18, 74 NRC 29 (2011)

whether a proposed alternative method for estimating a macroscopic frequency of occurrence of a severe offsite radiological release should have been used in the SAMA analysis could have been raised when the original license renewal application was submitted and thus is not timely; LBP-11-35, 74 NRC 701 (2011)

whether a SAMA is worthy of more detailed analysis in an environmental report or supplemental environmental impact statement hinges on whether it may be cost-beneficial to implement; CLI-12-3, 75 NRC 132 (2012); LBP-11-2, 73 NRC 28 (2011)

See also Consideration of Alternatives

SEVERE ACCIDENT MITIGATION DESIGN ALTERNATIVES ANALYSIS

adequacy of a SAMDA analysis is judged not by whether plainly better assumptions or methodologies could have been used or the analysis refined further but whether it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMDA analysis; LBP-11-38, 74 NRC 817 (2011)

all environmental issues concerning SAMDAs associated with the information in NRC’s final environmental assessment for certified reactor design are deemed resolved for plants whose site parameters are within those specified in the technical support document; LBP-11-7, 73 NRC 254 (2011)

appellate review of board decision rejecting a challenge to the SAMA analysis is denied; CLI-12-1, 75 NRC 39 (2012)

careful consideration of SAMDAs is required under NEPA, and NRC’s failure to consider them is a violation of NEPA; LBP-12-8, 75 NRC 539 (2012)

issues surrounding SAMDAs that have been resolved by regulation may not be challenged in a combined license adjudication; CLI-11-6, 74 NRC 203 (2011)

NRC-Staff’s creation of a list of site parameters for use in the combined license proceeding cannot cure the absence of a list of site parameters in the technical support document, rendering it impossible to resolve SAMDA issues by rule; LBP-11-7, 73 NRC 254 (2011)

NRC-endorsed guidance on SAMA analysis methodology specifies use of the mean annual offsite dose and economic impact; CLI-12-1, 75 NRC 39 (2012)

SAMA analysis is a probability-weighted assessment of the benefits and costs of mitigation alternatives that can be used to reduce the risks of potential severe accidents at nuclear power plants; CLI-12-1, 75 NRC 39 (2012)

SAMA analysis is neither a worst-case nor a best-case impacts analysis; CLI-12-1, 75 NRC 39 (2012)

SAMDAs examine whether implementing a SAMDA would decrease the probability-weighted consequences of severe accidents; LBP-11-38, 74 NRC 817 (2011)

scaling SAMDA implementation costs (inflation rate, regional cost-of-living adjustment, risk reduction factor) and implementation benefits (discount rate, power pricing data, power market effects, consumer impacts, power price spikes, loss of grid) is discussed; LBP-11-38, 74 NRC 817 (2011)

severe accident mitigation alternatives are somewhat broader than SAMDAs, which focus on design changes and do not consider procedural modifications; LBP-11-38, 74 NRC 817 (2011)
there is no purpose for further refining a SAMDA analysis, unless it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-11-7, 73 NRC 254 (2011)
to require worst-case analyses can easily lead to limitless NEPA analyses because it is always possible to introduce yet another additional variable to a hypothetical scenario to conjure up a worse worst case; CLI-12-1, 75 NRC 39 (2012)

SHELTERING
in developing the recommended range of protective actions in an emergency plan, sheltering must be considered; LBP-11-6, 73 NRC 149 (2011)
lack of detail for emergency sheltering option is not significant because size of sheltering population is very small; LBP-15-18, 81 NRC 793 (2015)

SHIELD BUILDING
because the building functions as a radiation and biological shield, failure or collapse of the shield building due to cracking propagation could lead to health and safety impacts and thus petitioner’s contention concerns a subject matter that could impact the grant or denial of a pending license application; LBP-15-1, 81 NRC 15 (2015)
directing NRC Staff to investigate a safety issue that the board could not reach through the adjudicatory process may put the Commission in a position, after receiving views of applicant if it desired, to assure itself about the significance, or lack thereof, of the shield building cracking issues raised by intervenors, and to direct such followup proceedings, if any, as it might deem appropriate; LBP-15-1, 81 NRC 15 (2015)
intervenor must do more than point to issues with the shield building, but must also indicate what is wrong with applicant’s response and its amended inspection program and why intervenor believes the particular inspection program makes the license renewal application unacceptable; LBP-15-1, 81 NRC 15 (2015)
intervenors must point to the specific ways in which the shield building monitoring aging management plan is wrong or inadequate to raise a genuine dispute with applicant’s license renewal application; LBP-12-27, 76 NRC 383 (2012)
intervenors’ allegations do not plausibly indicate that the shield building would lose its functionality under the proposed aging management plan; LBP-15-1, 81 NRC 15 (2015)

SHUTDOWN
all nuclear power facilities that are shut down permanently or indefinitely are exempted from participating in the ERDS program; LBP-15-4, 81 NRC 156 (2015)
all Part 50 licensees must meet emergency planning requirements, regardless of whether the facility is operating or has been permanently shut down and defueled; LBP-15-18, 81 NRC 793 (2015)
assurance of adequate cooling water supply for emergency and long-term shutdown decay heat removal shall be considered in the design of the nuclear power plant; LBP-11-16, 73 NRC 645 (2011)
because the plant is now permanently shut down and will not restart, no live controversy remains between the litigants; CLI-13-9, 78 NRC 551 (2013)
docketing of certifications of shutdown and defueling means that licensee’s Part 50 license no longer authorizes operation of the reactor or emplacement or retention of fuel into the reactor vessel; DD-14-3, 79 NRC 500 (2014)
“exigent circumstances” determination seems compelled by the fact that violation of the technical specifications limit for the plant, whatever the cause of the temperature increase, requires a dual-unit shutdown; LBP-15-13, 81 NRC 456 (2015)
following an earthquake exceeding the design basis, the plant must remain shut down until licensee demonstrates to NRC that no functional damage occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-2, 76 NRC 391 (2012)
guidance for implementation of risk management requirements during shutdown operations is provided in 10 C.F.R. 50.65(a)(4); DD-13-3, 78 NRC 571 (2013)
licensee is required to shut down a nuclear power plant when the vibratory ground motion exceeds that of the operating basis earthquake; DD-12-2, 76 NRC 391 (2012)
licensee must provide certifications to NRC Staff that it has permanently ceased power operations and that all fuel has been permanently removed from the reactor vessel; DD-14-3, 79 NRC 500 (2014); DD-15-1, 81 NRC 193 (2015); DD-15-7, 82 NRC 257 (2015)
licensee of a permanently shutdown reactor is never required to activate the ERDS link, and thus it follows that such a licensee need not maintain the ERDS link; LBP-15-4, 81 NRC 156 (2015)
meaning of “shut down permanently” is discussed; CLI-15-20, 82 NRC 211 (2015); LBP-15-4, 81 NRC 156 (2015)
petitioner’s request for action relating to containment structural damage is mooted by licensee’s decision to shut down and defuel the facility; DD-14-3, 79 NRC 500 (2014)
petitioners’ request for cold shutdown because of radiological contamination of groundwater from tritium is denied; DD-11-3, 73 NRC 375 (2011)
preponderance of the evidence supports conclusion that NRC Staff’s reasoned, qualitative approach to weighing the costs and benefits of plant shutdown on property values and the local community is reasonable and satisfies regulatory requirements; LBP-13-13, 78 NRC 246 (2013)
proposed staffing changes meet emergency plan standards and provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency commensurate with credible accidents in the permanently shutdown and defueled condition; CLI-15-20, 82 NRC 231 (2015)
reactors must be shut down and remain shut down until licensee demonstrates to NRC that an earthquake exceeding its operating basis caused no functional damage to features necessary for continued operation without undue risk; DD-15-9, 82 NRC 274 (2015)
reactors subject to the section 2.202 confirmatory orders would not have to shut down if the orders were not sustained; CLI-13-2, 77 NRC 39 (2013)
request for cold shutdown because of inoperability of main steam safety relief valves is denied but petitioner’s concern about the SRVs have been resolved; DD-11-6, 74 NRC 420 (2011)
request that NRC immediately shut down plants until all turbine building high-energy line break concerns are identified and those important to safety are corrected is granted in part; DD-14-5, 80 NRC 205 (2014)
request that NRC order the immediate shutdown of all nuclear power reactors that are known to be located on or near an earthquake fault line is denied; DD-15-6, 81 NRC 884 (2015)
upon docketing of certifications for permanent cessation of operations and permanent removal of fuel from the reactor vessel, license will no longer authorize operation of the reactor or emplacement or retention of fuel in the reactor vessel; CLI-15-20, 82 NRC 231 (2015)
when an earthquake results in ground accelerations greater than those assumed in the design of the nuclear power plant, the plant is required to be shut down and to remain shut down until licensee demonstrates to NRC that no functional damage occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 573 (2012)
where the Commission finds that an emergency situation exists, in that failure to act in a timely way would result in derating or shutdown of a nuclear power plant, it may issue a license amendment involving no significant hazards consideration without prior notice and opportunity for a hearing or for public comment; LBP-15-13, 81 NRC 456 (2015)
See also Safe Shutdown Systems
SIGNATURE
persons without digital ID certificates may sign electronically by typing “Executed in Accord with 10 C.F.R. 2.304(d)” or its equivalent on the signature line and including the date of signature and the signatory’s name, capacity, address, phone number, and e-mail address; LBP-11-2, 73 NRC 28 (2011)
submitted documents must be signed; LBP-11-2, 73 NRC 28 (2011)
SINGLE-FAILURE CRITERION
system must be provided to transfer heat from structures, systems, and components important to safety to an ultimate heat sink under normal operating and accident conditions, and must be able to perform this safety function with either onsite or offsite power, assuming a single component failure; DD-15-11, 82 NRC 361 (2015)
SITE CHARACTERIZATION
adequacy of the final environmental impact statement regarding site geology and hydrology is discussed; LBP-13-4, 77 NRC 107 (2013)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 401 (2015)
applicant for a uranium ISR license is required to provide data from a groundwater monitoring program that are sufficient to establish a prelicensing site characterization baseline for assessing the potential effects of facility operations on local groundwater quality; LBP-15-3, 81 NRC 65 (2015)
applicant must provide complete baseline data on a milling site and its environs; LBP-15-16, 81 NRC 618 (2015)
applicant’s monitoring program for establishing existing site characterization baseline values for certain site groundwater constituents prior to issuance of a source materials license for ISR facility construction and operation need not, to comply with NEPA and NRC’s Part 51 implementing regulations, be conducted so as to also provide background information needed to set Appendix A, Criterion 5B groundwater protection standards; LBP-15-3, 81 NRC 65 (2015)
applicants referencing a certified design must provide sufficient information for NRC Staff to determine whether the site’s characteristics fall within the design’s parameters; CLI-15-13, 81 NRC 555 (2015)
contention alleging that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is decided; LBP-15-16, 81 NRC 618 (2015)
design bases for earthquakes are to be determined through evaluation of the geologic and seismic history of the site and surrounding region; DD-12-1, 75 NRC 573 (2012)
factors used for a site geological and seismological evaluation are stated in 10 C.F.R. 100.23(d); LBP-11-10, 73 NRC 424 (2011)
geological, seismological, and engineering characteristics of a site and its environs must be investigated in sufficient scope and detail; LBP-11-10, 73 NRC 424 (2011)
if applicant did not pursue an early site permit, all relevant site characteristics, including site geology, hydrology, seismology, and man-made hazards, as well as potential environmental impacts of the project, were studied as part of NRC Staff’s combined license review and are within the scope of the Commission decision; CLI-15-13, 81 NRC 555 (2015)
investigation of geological, seismological, and engineering characteristics of a site is required; LBP-14-8, 79 NRC 519 (2014)
nothing in 10 C.F.R. Part 40, Appendix A, Criterion 5B precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to characterize properly the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 65 (2015)
NRC Staff’s creation of a list of site parameters for use in the combined license proceeding cannot cure the absence of a list of site parameters in the technical support document, rendering it impossible to resolve SAMDA issues by rule; LBP-11-7, 73 NRC 254 (2011)
site-specific data to confirm proper baseline quality values, and confirm whether existing rock units provide adequate confinement cannot be collected until an in situ leach well field has been installed; LBP-15-3, 81 NRC 65 (2015)
site-specific interaction analysis is discussed; CLI-15-13, 81 NRC 555 (2015)
waiting until after licensing, but before mining operations begin, to establish definitively the groundwater quality baselines and upper control limits is consistent with industry practice and NRC methodology, given the sequential development of in situ leach well fields; LBP-15-3, 81 NRC 65 (2015)
SITE REMEDIATION
areas of minor radioactive contamination are evaluated and remediated as needed during plant decommissioning; DD-11-1, 73 NRC 7 (2011)
certain “construction” activities are allowed at a reactor site pursuant to a limited work authorization as long as a site redress plan is submitted; LBP-11-11, 73 NRC 455 (2011)
contention alleging that final supplemental environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-14-5, 79 NRC 377 (2014)
licensee is required to ensure that the site can be safely maintained and decommissioned, even in the face of unexpected costs; LBP-15-24, 82 NRC 68 (2015)
petition requesting that NRC not allow restart after scheduled refueling outage until completion of all environmental remediation work and relevant reports on leaking tritium at the plant is denied; DD-11-1, 73 NRC 7 (2011)

1318
there is no agency requirement that applicant submit a redress plan relative to preconstruction activities or, absent state or local requirements, take any remediation action regarding preconstruction activities if it decides not to complete the project or is denied agency authorization to construct and operate the facility; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)

SITE RESTORATION
admissibility of contention that environmental assessment fails to adequately describe and analyze aquifer restoration goals in light of new standards for determining alternative control limits is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that environmental documents and associated monitoring values and restoration goals rely on baseline data calculations that are inadequate and unacceptable is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that environmental documents lack an adequate description of adequate financial assurances sufficient to pay the costs of restoration and long-term monitoring of up to 30 years is decided; LBP-15-15, 81 NRC 598 (2015)
admissibility of contention that final environmental assessment failed to conduct the required hard look at impacts of the proposed mine associated with restoration standards and difficulty and cost in achieving them and the use of the alternative standards permitted under the proposed rules is decided; LBP-15-15, 81 NRC 598 (2015)
bounding analysis provided in the final supplemental environmental impact statement, as supplemented in the record, provides sufficient information about a reasonable range of hazardous constituent concentration values associated with potential post-operational alternate concentration limits so as to provide an appropriate NEPA assessment of the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits; LBP-15-3, 81 NRC 65 (2015)
contention that FSEIS fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 65 (2015)
EPA drinking water maximum contaminant levels continue to be an accepted groundwater restoration standard; LBP-15-3, 81 NRC 65 (2015)
no in situ recovery facility has ever requested that all OZ aquifer groundwater hazardous constituents be restored to CAB concentrations or Criterion 5B(5)(b) MCLs, as those are currently defined; LBP-15-3, 81 NRC 65 (2015)
“primary groundwater restoration” is to return the constituent to background levels; LBP-15-3, 81 NRC 65 (2015)
requirements for groundwater restoration standards for ISR mining operations are set forth in 10 C.F.R. Part 40, Appendix A, Criterion 5B(5); LBP-15-3, 81 NRC 65 (2015)
restoration to an alternate concentration limit is permitted only when restoration to a primary or the secondary Table 5C standard is not practically achievable; LBP-15-3, 81 NRC 65 (2015)
“secondary groundwater restoration” is restoration of constituent levels to the drinking water limits enumerated in Appendix A, Table 5C; LBP-15-3, 81 NRC 65 (2015)
SITE SAFETY ANALYSIS REPORT
applicant need not submit information regarding control room habitability and ventilation system design in the SSAR portion of an early site permit application; LBP-11-16, 73 NRC 645 (2011)
applicant’s SSAR must provide sufficient data to enable the requisite determination of the potential for surface deformation as a result of growth faults at the site; LBP-11-16, 73 NRC 645 (2011)
even though a cooling pond is not a safety-related structure, knowledge of faulting under the pool and the impact this faulting might have on the pool’s operation are required; LBP-11-16, 73 NRC 645 (2011)
SITE SELECTION
for siting alternatives, an agency’s duty under NEPA is to study all alternatives that appear reasonable and appropriate for study at the time of drafting the environmental impact statement; CLI-12-5, 75 NRC 301 (2012)
seismic avoidance areas are discussed; LBP-11-26, 74 NRC 499 (2011)
winter weather- and earthquake-related criteria are discussed; LBP-11-26, 74 NRC 499 (2011)
SITE SUITABILITY
investigation of geological, seismological, and engineering characteristics of a site is required; LBP-14-8, 79 NRC 519 (2014)
NRC Staff’s steps in the geographic and demographic review in the final safety evaluation report to determine whether the COL applicant has proposed an acceptable site, including acceptable site boundaries, with appropriate consideration of nearby populations and natural and manmade features, are described; CLI-12-9, 75 NRC 421 (2012)

where seismic suitability of a site was evaluated at the early site permit stage, further litigation of the geologic fault issue is foreclosed at the combined license stage; LBP-14-8, 79 NRC 519 (2014)

SITING
by 1974, NRC had adopted an aggressive approach to its environmental responsibilities in the context of transmission line siting; LBP-14-9, 80 NRC 15 (2014)

SOCIOECONOMIC IMPACTS
contention that alleges an omission, not an inadequacy, of an environmental report’s analysis of socioeconomic impacts raises an issue that is not material to any finding NRC must make in an early site permit proceeding; LBP-11-16, 73 NRC 645 (2011)

SOLAR POWER
because a solely wind- or solar-powered facility could not satisfy the project’s purpose, there was no need to compare the impact of such facilities to the impact of the proposed nuclear plant; LBP-11-7, 73 NRC 254 (2011)

contention seeking full impacts analysis of the power supply alternative of wind, either alone or in combination with solar and storage, is inadmissible because it fails to adequately demonstrate the capacity to produce baseload power; LBP-12-15, 76 NRC 14 (2012)

extent to which operation and maintenance costs of a solar facility may present a comparative benefit is immaterial since the four-part combination of alternative energy sources is not environmentally preferable to two new nuclear units; LBP-11-4, 73 NRC 91 (2011)

technologies available for utility-scale plants are discussed; LBP-12-17, 76 NRC 71 (2012)

SOURCE MATERIAL
“item” means any discrete quantity or container of special nuclear material or source material, not undergoing processing, having a unique identity and also having an assigned element and isotope quantity; LBP-14-1, 79 NRC 39 (2014)

uranium being extracted through the ISL process is defined as “source material”; LBP-15-16, 81 NRC 618 (2015)

SOURCE MATERIALS LICENSES
applicant for a license to possess and use source and AEA §11e(2) byproduct material for the purpose of in situ uranium recovery must submit an environmental report with its application; LBP-15-3, 81 NRC 65 (2015)

application may incorporate information contained in previous applications, statements or reports filed with the Commission, provided that the reference is clear and specific; LBP-12-24, 76 NRC 503 (2012)

bond-issuing licensees may provide a self-guarantee of funds for decommissioning costs based on a financial test set forth in Appendix C of Part 30; CLI-13-1, 77 NRC 1 (2013)

decommissioning funding plans must include a periodically adjusted cost estimate, specify the method for assuring that sufficient funds will be available when needed, and certify that the amount assured for decommissioning meets or exceeds estimated decommissioning costs; CLI-13-1, 77 NRC 1 (2013)

exemption from the decommissioning financial assurance requirements is considered to be an extraordinary equitable remedy to be used only sparingly; CLI-13-1, 77 NRC 1 (2013)

grounds for license denial exist if, prior to issuance of a license to possess and use source and byproduct materials for uranium milling, there is commencement of construction by an applicant; LBP-12-3, 75 NRC 164 (2012)

intangible assets may be used to meet specified criteria in the financial tests for self-guarantees; CLI-13-1, 77 NRC 1 (2013)

issuing a license to possess and use source material to a uranium milling facility is identified as a major federal action; LBP-15-16, 81 NRC 618 (2015)

licensees can seek an exemption from the decommissioning financial assurance requirements; CLI-13-1, 77 NRC 1 (2013)

licensees must submit a decommissioning funding plan far in advance of submitting the actual plans for decommissioning; CLI-13-1, 77 NRC 1 (2013)
licensees must submit a decommissioning plan when it decides to cease NRC-licensed activities at its facility; CLI-13-1, 77 NRC 1 (2013)
nongovernment licensees must demonstrate financial assurance for decommissioning by prepayment, use of a surety method, insurance, or other guarantee method, or use of an external sinking fund; CLI-13-1, 77 NRC 1 (2013)
notification of renewal of source materials license triggers the 5-day filing deadline to apply for a stay of the license; LBP-15-2, 81 NRC 48 (2015)
NRC Staff must prepare an environmental impact statement in connection with a license to possess and use source and AEA §11e(2) byproduct material for the purpose of in situ uranium recovery; LBP-15-3, 81 NRC 65 (2015)
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)
timing of renewal application enables licensee to operate under NRC’s timely renewal provision until the agency renews the license; LBP-15-2, 81 NRC 48 (2015)
to qualify for the alternative method of self-funding for decommissioning, licensee must have, among other things, a bond rating of “A” or better, as issued by Standard and Poor’s or Moody’s; CLI-13-1, 77 NRC 1 (2013)
when licensee has made timely and sufficient application for a license renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency; LBP-15-2, 81 NRC 48 (2015); LBP-15-11, 81 NRC 401 (2015)
with limited exceptions, licensees must demonstrate that they can pay for the decommissioning of their regulated facilities; CLI-13-1, 77 NRC 1 (2013)

SOURCE TERM
applicant’s use of the MAAP code to generate fission product source terms for use in its severe accident mitigation alternatives analysis is reasonable under NEPA; LBP-12-26, 76 NRC 559 (2012)
petitioners have not established that use of another source term would identify additional cost-beneficial severe accident mitigation alternatives; LBP-11-13, 73 NRC 534 (2011)

SOVEREIGN IMMUNITY DOCTRINE
because Equal Access to Justice Act operates as a waiver of sovereign immunity it must be narrowly construed to avoid creating a waiver of sovereign immunity that Congress did not intend; LBP-11-8, 73 NRC 349 (2011)
one time Congress has waived sovereign immunity over certain subject matter, a court should be careful not to assume the authority to narrow the waiver that Congress intended; LBP-11-8, 73 NRC 349 (2011)
Equal Access to Justice Act renders the United States liable for attorney’s fees for which it would nototherwise be liable, and thus amounts to a partial waiver of sovereign immunity and any such waiver must be strictly construed in favor of the United States; LBP-11-8, 73 NRC 349 (2011)

SPECIAL CIRCUMSTANCES
any interested person may challenge the use of a categorical exclusion by presenting special circumstances; LBP-15-26, 82 NRC 163 (2015)
circumstances must be unusual if not unique, and the Commission must not have previously considered such circumstances, either explicitly or by necessary implication, when it promulgated the relevant regulation in the first place; LBP-12-6, 75 NRC 256 (2012)
Commission approval of a rule waiver could allow a contention on a Category 1 issue to proceed where special circumstances exist; CLI-15-6, 81 NRC 340 (2015)
definition in 10 C.F.R. 2.335 employs language very similar to the definition under 10 C.F.R. 50.12(a)(2)(i); LBP-12-6, 75 NRC 256 (2012)
exemption may be appropriate where there is present any circumstance that was not considered by NRC when it promulgated the pertinent regulation in the first place; LBP-12-6, 75 NRC 256 (2012)
exemption should be granted if special circumstances exist, such as when compliance is not necessary to satisfy the purpose of the regulations from which an exemption is sought; LBP-12-6, 75 NRC 256 (2012)
NRC case law has given meaning to the “special circumstances” requirement for rule waiver; CLI-13-7, 78 NRC 199 (2013)
party may petition the Commission for permission to challenge a rule, but that party must make a showing of special circumstances; LBP-15-5, 81 NRC 249 (2015)
rule exemption requests that do not involve special circumstances must be denied as a matter of law; CLI-13-1, 77 NRC 1 (2013)

rule waiver requests must demonstrate that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which it was adopted; CLI-15-21, 82 NRC 295 (2015); LBP-13-1, 77 NRC 57 (2013)

special circumstances required to obtain a rule waiver have been described as a prima facie showing that application of a rule in a particular way would not serve the purposes for which the rule was adopted; LBP-15-5, 81 NRC 249 (2015)

to obtain waiver of a rule, the allegation of special circumstances must be set forth with particularity and supported by an affidavit or other proof; LBP-15-5, 81 NRC 249 (2015)

where special circumstances make a generic rule inapplicable to a particular proceeding, participant may petition for a rule waiver or exception; CLI-15-6, 81 NRC 340 (2015)

SPECIAL NUCLEAR MATERIALS

accuracy is an integral component of the portion of the regulatory requirement that addresses item presence verification; CLI-15-9, 81 NRC 512 (2015)

basis for NRC authority to regulate the use of special nuclear material in facilities like nuclear power reactors is established; CLI-15-4, 81 NRC 221 (2015)

certifications of financial assurance, which are used by applicants seeking to possess smaller quantities of material, are governed by 10 C.F.R. 70.25(b)(2); CLI-11-4, 74 NRC 1 (2011)

depending on the quantity of material, Part 70 license applicants must submit either a decommissioning funding plan or a certification of financial assurance; CLI-11-4, 74 NRC 1 (2011)

“item” means any discrete quantity or container of SNM or source material, not undergoing processing, having a unique identity and also having an assigned element and isotope quantity; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

“material access area” is any location which contains special nuclear material, within a vault or a building, the roof, walls, and floor of which constitute a physical barrier; CLI-15-9, 81 NRC 512 (2015)

materials license amendment applications must contain a full description of applicant’s program for control and accounting of special nuclear material to show how it will comply with the 10 C.F.R. Part 74 requirements; LBP-11-9, 73 NRC 391 (2011)

meaning of “verify” in the context of item presence verification is discussed; CLI-15-9, 81 NRC 512 (2015)

possession limits associated with a certification of financial assurance are set forth in 10 C.F.R. 70.25(d); CLI-11-4, 74 NRC 1 (2011)

“sealed source” means any SNM that is physically encased in a capsule, rod, element, etc. that prevents the leakage, escape, and removal of the SNM without penetrations of the casing; LBP-14-1, 79 NRC 39 (2014)

“tamper-safing” refers to use of devices on containers or vaults in a manner and at a time that ensures a clear indication of any violation of the integrity of previously made measurements of special nuclear material within the container or vault; CLI-15-9, 81 NRC 512 (2015)

technical specifications must include information on the amount, kind, and source of special nuclear material, the place of use, and the particular characteristics of the facility; LBP-12-25, 76 NRC 540 (2012)

See also Strategic Special Nuclear Material

SPECIAL NUCLEAR MATERIALS LICENSES

applications may incorporate by reference information contained in previous applications, statements, or reports filed with the Commission if the references are clear and specific; LBP-12-24, 76 NRC 503 (2012)

SPECIAL PROCEEDINGS

when a matter is not strictly adjudicatory in nature or otherwise does not fit cleanly within the procedures described in NRC rules of practice, the Commission undertakes a decision as an exercise of its inherent supervisory authority over agency proceedings; CLI-13-8, 78 NRC 219 (2013)
SUBJECT INDEX

SPENT FUEL COOLING SYSTEM
Commission imposed a license condition requiring licensees to develop and implement strategies to maintain or restore core cooling, containment and spent fuel pool cooling capabilities following a beyond-design-basis external event, including a simultaneous loss of all AC power and loss of normal access to the normal heat sink; CLI-12-9, 75 NRC 421 (2012)

extensive damage mitigation guidelines are intended to guide onsite emergency actions and they include guidance and strategies intended to maintain or restore core cooling and containment and spent fuel pool cooling capabilities under the circumstances associated with the loss of large areas of the plant due to fire or explosion; LBP-12-18, 76 NRC 127 (2012)

fuel storage system must be designed to prevent significant reduction in coolant inventory under accident conditions and with a residual heat removal capability having reliability and testability that reflects the importance to safety of decay heat and other residual heat removal; DD-15-11, 82 NRC 361 (2015)

licensees must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities to address loss of large areas from fires or explosions that arise from a beyond-design-basis event; CLI-12-2, 75 NRC 63 (2012)

NRC imposed requirements to provide makeup water independent of offsite power and the normal emergency alternating current power sources to maintain or restore spent fuel pool cooling capability in the event of an accident; DD-15-1, 81 NRC 193 (2015)

licensee must develop and implement strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities following a beyond-design-basis external event; CLI-12-2, 75 NRC 63 (2012)

revision of 10 C.F.R. 50.63 to expand the coping capability to include cooling the spent fuel, preventing a loss-of-coolant accident, and preventing containment failure would be a significant benefit; LBP-12-18, 76 NRC 127 (2012)

SPENT FUEL MANAGEMENT
admissibility of contention that environmental report lacks site-specific safety and environmental findings regarding storage and disposal of spent fuel is decided; LBP-15-5, 81 NRC 249 (2015)

because irradiated fuel is continually present in the spent fuel pool once the reactor discharges the first batch of spent fuel, and conditions are most challenging during reactor shutdown for refueling, maintenance of equipment related to the safe storage of spent fuel is typically addressed as part of shutdown risk management; DD-13-3, 78 NRC 571 (2013)

contention that does not dispute any specific portion of applicant’s fuel handling accident analysis is inadmissible for lack of a genuine dispute; LBP-15-18, 81 NRC 793 (2015)

establishing safety limits for stored irradiated fuel is not appropriate, but measures to prevent a significant loss of coolant inventory under accident conditions that could challenge the cooling of the stored fuel are documented in the updated final safety analysis report; DD-13-3, 78 NRC 571 (2013)

license amendment request seeks to replace 30-day notice requirement and other plant-specific license conditions with the decommissioning fund requirements; LBP-15-28, 82 NRC 233 (2015)

licensee must provide certifications when a nuclear power station has permanently ceased power operations and all fuel has been permanently removed from the reactor vessel and placed in the spent fuel pool; DD-15-1, 81 NRC 193 (2015)

licensee seeks regulatory exemptions to allow it to use decommissioning funds to manage spent fuel and eliminate the 30-day notice requirement that would otherwise apply to spent fuel management; LBP-15-28, 82 NRC 233 (2015)

licensees must submit for NRC approval their plans to manage spent fuel after the permanent cessation of reactor operation; CLI-15-4, 81 NRC 221 (2015)

regulation governing the storage and disposal of spent nuclear fuel was vacated; LBP-14-15, 80 NRC 151 (2014)

spent fuel management is not a decommissioning activity; LBP-15-24, 82 NRC 68 (2015)

structural integrity of GE Mark I boiling water reactor spent fuel pools and spent fuel management in dry storage casks are discussed; DD-15-1, 81 NRC 193 (2015)

without an exemption from the NRC, licensee is prohibited from using decommissioning funds for spent fuel management because it is not an allowable decommissioning expense; LBP-15-28, 82 NRC 233 (2015)

SPENT FUEL POOL EXPANSION
petitioners challenged NRC’s approval of operating license amendments to allow for the use of higher-density spent-fuel-storage racks in the reactors’ spent fuel pools; CLI-15-4, 81 NRC 221 (2015)
SPENT FUEL POOLS
absent demonstration that petitioner’s alleged special circumstances are unique to the facility rather than
common to a large class of facilities, the request for waiver of regulations excluding spent fuel pool
issues from license renewal proceedings is denied; LBP-12-1, 75 NRC 1 (2011)
any evaluation of the Fukushima events will include consideration of lessons learned that may apply to
spent fuel pools; LBP-12-1, 75 NRC 1 (2011)
applicability of 10 C.F.R. Part 50, Appendix A, GDC 44 to boiling water reactor spent fuel pools is
discussed; DD-15-11, 82 NRC 361 (2015)
because the probability of a spent fuel pool accident causing significant harm is remote, there is no need
for applicants to assess spent fuel pool accident mitigation alternatives as part of license renewal;
Commission administratively exempted from the backfit rule, an order to the combined license holder to
address spent fuel pool instrumentation requirements not specified in the certified design as enhanced
protective measures that represent a substantial increase in the protection of public health and safety;
CLI-12-9, 75 NRC 421 (2012)
concerns that apply generically to all spent fuel pools at all reactors are more appropriately addressed via
rulemaking or other appropriate generic activity; CLI-12-6, 75 NRC 352 (2012)
contention concerning need under NEPA to include a discussion of the environmental impacts of spent
fuel pool leakage, SFP fires, and the lack of a spent fuel repository is held in abeyance; LBP-12-26, 76
NRC 559 (2012)
contention that applicant must include a discussion of environmental impacts of spent fuel pool leakage,
fires, and lack of a spent fuel repository is dismissed; LBP-14-12, 80 NRC 138 (2014)
contention that environmental report does not satisfy NEPA because it does not consider a range of
measures to mitigate risk of catastrophic fires in densely packed, closed-frame spent fuel storage pools
is decided; LBP-15-5, 81 NRC 249 (2015)
contention that environmental report is inadequate insofar as it does not consider the risk of spent fuel
pool fires is inadmissible; LBP-15-5, 81 NRC 249 (2015)
establishing safety limits for stored irradiated fuel is not appropriate, but measures to prevent a significant
loss of coolant inventory under accident conditions that could challenge the cooling of the stored fuel
are documented in the updated final safety analysis report; DD-13-3, 78 NRC 571 (2013)
Fukushima-related petitions for suspension of proceeding and rescission of regulations that make generic
conclusions about environmental impacts of severe reactor and spent fuel pool accidents and that
preclude consideration of those issues in individual licensing proceedings are denied; LBP-11-39, 74
NRC 862 (2011)
generic analysis remains appropriate for spent fuel pool accidents in license renewal proceedings;
LBP-11-35, 74 NRC 701 (2011)
generic environmental impact statement for spent fuel pools is not limited to discussing only normal
operations, but also discusses potential accidents and other nonroutine events, and thus need not be
included in the severe accident mitigation alternatives analysis for license renewal; LBP-15-5, 81 NRC
249 (2015)
in its Waste Confidence Decision, NRC failed to consider environmental impacts of a repository never
becoming available, its analysis of spent fuel pool leaks was not forward-looking, and it had not
sufficiently considered the consequences of spent fuel pool fires; CLI-15-4, 81 NRC 221 (2015)
merely pointing to the compliance program is in no way sufficient to support a scientific finding that
spent fuel pools will not cause a significant environmental impact during the extended storage period;
LBP-14-9, 80 NRC 15 (2014)
NRC argument that leaks from spent fuel pools will not occur because the NRC is on duty was rejected;
LBP-13-4, 77 NRC 107 (2013)
NRC must include an evaluation of failure to secure permanent disposal, as well as an improved analysis
of spent fuel pool leaks and spent fuel pool fires; CLI-14-8, 80 NRC 71 (2014)
Part 51 treats all spent fuel pool accidents, whatever their cause, as generic, Category 1 events not
suitable for case-by-case adjudication; LBP-11-2, 73 NRC 28 (2011)
petitioner’s assertion that severe accidents from spent fuel pools must be considered in applicant’s SAMA
analysis is in direct conflict with NRC regulations; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC
534 (2011)
SUBJECT INDEX

post-9/11 motion to reopen satisfied rules for reopening the record and for late-filed contentions, but contention involving a license amendment request for reconfiguring a spent fuel pool was inadmissible; CLI-11-5, 74 NRC 141 (2011)
post-Fukushima spent fuel pool concerns are being addressed through rulemaking on mitigation of beyond-design-basis events; DD-15-1, 81 NRC 193 (2015)
request for additional instrumentation for all Mark I spent fuel storage pools has been addressed through an order modifying licenses with regard to reliable spent fuel pool instrumentation; DD-15-1, 81 NRC 193 (2015)
request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise technical specifications for spent fuel pool instrumentation is denied; DD-13-3, 78 NRC 571 (2013)
request that NRC order licensees to have an installed, seismically qualified means to spray water into the spent fuel pools, including an easily accessible connection to supply the water (e.g., using a portable pump or pumper truck) at grade outside the building is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide safety-related AC electrical power for the spent fuel pool makeup system is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to revise their technical specifications to address requirements to have one train of onsite emergency electrical power operable for spent fuel pool makeup and spent fuel pool instrumentation when there is irradiated fuel in the spent fuel pool, regardless of the operational mode of the reactor is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
request that technical specification for secondary containment isolation instrumentation be changed to require the reactor building exhaust radiation-high function to be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)
request that the applicability for technical specification be revised to include spent fuel storage pool water level and AC and DC sources and distribution systems for shutdown whenever irradiated fuel is stored in the spent fuel pool instead of only when irradiated fuel assemblies are being moved in the SFP or secondary containment is denied; DD-13-3, 78 NRC 571 (2013)
severe accidents in the spent fuel pools are Category 1 issues that do not need to be included in the severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 249 (2015)
stringent safety requirements apply to the construction and operation of reactor spent fuel pools and independent spent fuel storage installations; CLI-15-4, 81 NRC 221 (2015)
structural integrity of GE Mark I boiling water reactor spent fuel pools and spent fuel management in dry storage casks are discussed; DD-15-1, 81 NRC 193 (2015)
suspension request that would have halted final licensing decisions pending action on a petition for rulemaking regarding NRC Staff’s review of the potential expedited transfer of spent fuel from pools to dry casks was denied; CLI-15-13, 81 NRC 555 (2015)
to waive the generic assessment in NRC regulations to permit adjudication of issues involving the environmental impact of spent fuel pool accidents in a license renewal proceeding, the Commission must conclude that the rule’s strict application would not serve the purpose for which it was adopted; CLI-11-11, 74 NRC 427 (2011)
SPENT FUEL STORAGE
agency did not need to assess site-specific impacts of continuing to store the spent fuel in either an onsite or offsite storage facility in new reactor licensing environmental impact statements or environmental assessments beyond the expiration dates of reactor licenses; LBP-14-16, 80 NRC 183 (2014)
assumptions used in analysis of impacts of continued storage of spent fuel are sufficiently conservative to bound the impacts such that variances that may occur between sites are unlikely to result in environmental impact determinations greater than those presented in the continued storage generic environmental impact statement; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
because generic impact determinations on impacts of continued storage have been the subject of extensive public participation in the rulemaking process, they are excluded from litigation in individual proceedings; LBP-14-15, 80 NRC 151 (2014)
because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petition and motions itself; CLI-14-9, 80 NRC 147 (2014)

boards are directed to reject waste storage contentions pending before them; LBP-14-16, 80 NRC 183 (2014)

challenges to NRC’s previous rejection of petitioner’s concerns regarding environmental impacts of high-density pool storage of spent fuel are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)

Commission adopted a generic environmental impact statement to identify and analyze the environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-12, 81 NRC 452 (2015)

Commission approval of the Continued Storage Rule and generic environmental impact statement mandates that contentions discussing the long-term storage of spent nuclear fuel not be heard by individual licensing boards; LBP-14-16, 80 NRC 183 (2014)

Commission denied petition to supplement and declined to admit “placeholder” contention; CLI-15-13, 81 NRC 555 (2015)

Commission directed all licensing boards to reject pending waste confidence contentions that had been held in abeyance, because the generic impact determinations have been the subject of extensive public participation in the rulemaking process, and therefore are excluded from litigation in individual proceedings; LBP-15-1, 81 NRC 15 (2015); LBP-15-5, 81 NRC 249 (2015)

Commission directed that all spent fuel storage contentions be held in abeyance; CLI-15-6, 81 NRC 340 (2015); LBP-15-1, 81 NRC 15 (2015)

Commission exercised its inherent supervisory authority over agency adjudications to review motion and petition addressing the spent fuel storage issue; LBP-15-1, 81 NRC 15 (2015)

Commission exercised its supervisory authority and dismissed proposed waste confidence safety contention and denied suspension petitions; CLI-15-13, 81 NRC 555 (2015)

Commission instituted a rulemaking to revise the agency’s generic determination on the environmental impacts of continued storage of spent nuclear fuel; LBP-14-12, 80 NRC 138 (2014)

Commission lifted suspension on final licensing decisions, declined to accept contentions concerning continued storage of spent nuclear fuel, and directed boards to reject pending contentions on this issue; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015); LBP-14-14, 80 NRC 144 (2014)

Congress expressly recognized and impliedly approved NRC’s regulatory scheme and practice under which the safety of interim storage of high-level wastes at commercial nuclear power reactor sites has been determined separately from the safety of government-owned permanent storage facilities that have not yet been established; CLI-15-4, 81 NRC 221 (2015)

contention concerning release of radiological, chemical, and herbicidal materials and storage of spent fuel are Category 1 issues and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

contention that supplementation of the environmental impact statement is necessary to allow members of the public to lodge placeholder contentions challenging Commission reliance, in individual licensing proceedings, on the continued storage GEIS and Continued Storage Rule is inadmissible; CLI-15-10, 81 NRC 535 (2015)

continued Storage Rule and supporting generic environmental impact statement to assess the environmental impacts of spent fuel storage after the end of a reactor’s license term were approved; CLI-15-10, 81 NRC 535 (2015)

Continued Storage Rule makes generic safety findings concerning feasibility and capacity of spent fuel disposal; LBP-15-9, 81 NRC 396 (2015)

court directed NRC to determine whether there is reasonable assurance that an offsite storage solution will be available by the end of a reactor’s license term, and if not, whether there is reasonable assurance that the fuel can be stored safely at the sites beyond those dates; CLI-15-4, 81 NRC 221 (2015)
court recognized the long-term nature of the concerns associated with spent fuel storage and disposal when it declined to vacate the license amendments that were the subject of the case, noting that doing so would effectively shut down the plants; CLI-15-4, 81 NRC 221 (2015)
“deemed incorporated” function of 10 C.F.R. 51.23(b) provides administrative efficiency by adding the environmental impacts of continued storage to site-specific environmental impact statements without additional work by the Staff; CLI-15-10, 81 NRC 535 (2015)
denial of license transfer applications typically is on grounds of operating costs and inability to pay the annual cost for spent fuel storage; CLI-14-5, 79 NRC 254 (2014)
discussion of any environmental impact of spent fuel storage during the period following the term of the reactor operating license in any environmental analysis prepared in connection with power reactor and dry cask licenses is excluded; CLI-14-8, 80 NRC 71 (2014)
environmental impacts of at-reactor and away-from-reactor storage of spent fuel are considered for 60 years after the end of a reactor’s licensed life for operation, an additional 100 years of storage, and the indefinite storage of spent nuclear fuel and incorporated into site-specific environmental impact statements; CLI-15-10, 81 NRC 535 (2015)
environmental impacts of continued storage have been incorporated into the environmental impact statements at issue in the proceedings by operation of law; CLI-15-10, 81 NRC 535 (2015)
following adoption of a revised Continued Storage Rule, boards were ordered to reject continued storage contentions pending before them, except contentions unresolved by the Continued Storage Rule; CLI-15-6, 81 NRC 340 (2015)
for all plants, onsite dry or pool storage can safely accommodate spent fuel accumulated from a 20-year license extension with small environmental effects; LBP-11-13, 73 NRC 534 (2011)
general license may be granted to all Part 50 and Part 52 reactor licensees to store spent fuel in an independent spent fuel storage installation; CLI-15-4, 81 NRC 221 (2015)
general scope of NRC’s authority is established in Atomic Energy Act § 161, but it does not discuss spent fuel disposal; CLI-15-4, 81 NRC 221 (2015)
generic analyses of the environmental impacts of continued storage and disposal in the context of NRC reactor licensing proceedings are acceptable; CLI-15-4, 81 NRC 221 (2015)
generic findings are reflected regarding impacts of spent fuel storage after cessation of licensed operation of a nuclear power plant; CLI-14-8, 80 NRC 71 (2014)
hearing on exemption-related matters is necessary insofar as resolution of the exemption request directly affects the licensability of a proposed fuel storage site and the exemption raises material questions directly connected to an agency licensing action; LBP-15-18, 81 NRC 793 (2015)
if NRC Staff safety review reveals any new and significant information relating to the environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 404 (2014)
if there were any doubt over the intent of Congress not to require a safety finding on spent fuel disposal, it was laid to rest by enactment of the Energy Reorganization Act of 1974; CLI-15-4, 81 NRC 221 (2015)
impact determinations in the Continued Storage generic environmental impact statement shall be deemed incorporated into the environmental impact statements associated with combined license and license renewal applications; CLI-15-10, 81 NRC 535 (2015)
impacts of continued storage will not vary significantly across sites and can be analyzed generically; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015); LBP-14-16, 80 NRC 183 (2014)
light of the dim prospects for moving forward with a geologic repository in the contemporary political environment, NRC must consider the environmental effects of storing waste in spent fuel pools or casks for extended periods; LBP-12-24, 76 NRC 503 (2012)
in light of the vacatur of the Waste Confidence Decision and Temporary Storage Rule, environmental reports must consider the reasonably foreseeable impacts of permanent storage of spent fuel, and contentions concerning the failure of the ER to do so must be held in abeyance; LBP-12-24, 76 NRC 503 (2012)
in view of its adoption of a revised rule codifying NRC’s generic determinations regarding the pertinent environmental impacts associated with continued storage of spent nuclear fuel, the Commission directs boards to reject pending contentions on this issue; LBP-14-13, 80 NRC 142 (2014)
SUBJECT INDEX

information is specified in Atomic Energy Act § 182 that must be provided by applicant for a license and it has no reference to spent fuel disposal; CLI-15-4, 81 NRC 221 (2015)
it makes more sense for NRC to study whether, as a technical matter, the agency should modify its requirements relating to spent fuel storage for all plants than to litigate the issue in particular adjudications; CLI-12-6, 75 NRC 352 (2012)
license amendments are not contingent upon any additional safety determination regarding spent fuel storage under the Atomic Energy Act; CLI-15-4, 81 NRC 221 (2015)
license applicants were permitted to omit any discussion of any environmental impact of spent fuel storage in independent spent fuel storage installations for the period following the term of the initial ISFSI license in any environmental report, environmental impact statement, environmental assessment, or other analysis; LBP-12-24, 76 NRC 503 (2012)
license renewal applicants need not provide a site-specific analysis of the environmental impacts of spent fuel storage in their environmental report; CLI-11-11, 74 NRC 427 (2011)
license renewal provisions cover environmental issues relating to onsite spent fuel storage generically, and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
licensee determined that dry storage cask displacement and damage to the NUHOMS HD 32PTH caused by an earthquake exceeding the design basis were not reportable; DD-12-2, 76 NRC 391 (2012)
licensee must protect spent fuel cladding from degradation during storage or confine the fuel in such a way that degradation does not cause operational problems when removed from storage; LBP-12-24, 76 NRC 503 (2012)
licensee must provide for ready retrieval of spent fuel from storage for further processing or disposal; LBP-12-24, 76 NRC 503 (2012)
licensee’s assessment of the structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS HD dry cask storage systems following an earthquake exceeding the plant’s design basis is described; DD-12-2, 76 NRC 391 (2012)
new contention concerning continued storage of spent nuclear fuel is ordered held in abeyance pending further Commission order; LBP-14-14, 80 NRC 144 (2014)
NRC is not required, as a precondition to issuing or renewing operating licenses for nuclear power plants, to make definitive findings concerning technical feasibility of a repository for the disposal of spent nuclear fuel; CLI-15-4, 81 NRC 221 (2015)
NRC Staff must account for the environmental impacts of continued storage before finalizing individual licensing decisions, and, when appropriate circumstances exist, the question of whether to prepare a supplemental final environmental impact statement is to be part of that analysis; CLI-15-10, 81 NRC 535 (2015)
NRC’s long-continued regulatory practice of issuing operating licenses with an implied finding of reasonable assurance that safe permanent disposal of spent nuclear fuel can be available when needed is in accord with the intent of Congress underlying the Atomic Energy Act and Energy Reorganization Act; CLI-15-4, 81 NRC 221 (2015)
Part 51’s license renewal provisions cover environmental issues relating to onsite spent fuel storage generically and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-11-13, 73 NRC 534 (2011)
petitioners’ argument opposing an order that imposed additional security measures at a spent fuel storage facility, because it created a false sense of security was rejected because petitioners did not explain how they would be better off without the measures in the order; CLI-13-2, 77 NRC 39 (2013)
potential consequences of insufficient offsite storage for spent fuel is one of the unforeseen conditions that 10 C.F.R. 50.82(a)(8)(i)(B) was promulgated to address; LBP-15-24, 82 NRC 68 (2015)
rulemaking petitioners assert that NRC Staff’s review of the expedited-transfer issue generated new and significant information regarding the environmental impacts of spent fuel storage; CLI-14-7, 80 NRC 1 (2014)

section 51.61 applies to an application for an independent spent fuel storage installation; LBP-15-24, 82 NRC 68 (2015)

spent fuel can be stored safely and without significant environmental impacts for at least 60 years beyond the licensed life for operation and there is reasonable assurance that sufficient mined geologic repository capacity will be available when necessary; CLI-14-8, 80 NRC 71 (2014)

spent fuel storage pool matters will be addressed, if studies of implications from Fukushima warrant, through more generic regulatory reform; LBP-11-35, 74 NRC 701 (2011)

spent nuclear fuel can be stored safely at licensed nuclear facilities until such time as a long-term geologic storage facility is constructed; LBP-12-24, 76 NRC 503 (2012)

systems must be designed to ensure adequate safety under normal and postulated accident conditions; CLI-15-4, 81 NRC 221 (2015)

Temporary Storage Rule was vacated; LBP-15-1, 81 NRC 15 (2015)

to the extent NRC takes action with respect to waste confidence on a case-by-case basis, litigants can challenge such site-specific agency actions in the adjudicatory process; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

when considering continued storage in licensing reviews with previously completed final environmental impact statements, NRC Staff is expected to use a consistent and transparent process to ensure that all stakeholders are aware of how the environmental impacts of continued storage are considered in each licensing action affected by this regulation; CLI-15-10, 81 NRC 535 (2015)

See also Continued Storage Rule; Dry Cask Storage

SPENT FUEL STORAGE CASKS
certification for transportation poses such a minimal environmental impact that it merits a categorical exclusion from NEPA; LBP-14-6, 79 NRC 404 (2014)

licensee assessed structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS-HD dry cask storage systems following an earthquake and reviewed the event for reportability; DD-12-1, 75 NRC 573 (2012)

loss of spent fuel confinement would produce a dose of 0.15 rem at the nearest site boundary, which is less than the 5-rem limit; LBP-12-24, 76 NRC 503 (2012)

STAFF REQUIREMENTS MEMORANDUM
external entities are not entitled to seek revisions to a Commission direction to NRC Staff contained in a Staff Requirements Memorandum; CLI-15-19, 82 NRC 211 (2015)

Fukushima-related contention based on an SRM are inadmissible because the SRM does not define or impose any new requirements arising from the Fukushima accident and thus fails to establish a genuine dispute on a material issue of law or fact; LBP-11-37, 74 NRC 774 (2011)

STAFFING
proposed staffing changes meet emergency plan standards and provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency commensurate with credible accidents in the permanently shutdown and defueled condition; CLI-15-20, 82 NRC 211 (2015)

STANDARD OF PROOF
applicant in a licensing proceeding bears the burden of proof by a preponderance of the evidence on safety issues that it is entitled to the applied-for license; LBP-12-17, 76 NRC 71 (2012)

applicant in a licensing proceeding must meet its burden of proof by a preponderance of the evidence; LBP-11-38, 74 NRC 817 (2011)

if intervenors provide sufficient evidence to support the claims made, applicant has the burden of demonstrating by a preponderance of the evidence that it has met the relevant NRC regulations and that the board should therefore reject each contention on the merits; LBP-14-1, 79 NRC 39 (2014)

in proving prejudicial error by a federal agency, it is sufficient that the agency’s error may have affected the outcome; LBP-14-2, 79 NRC 131 (2014)

NRC administrative proceedings have applied a “preponderance of the evidence” standard in reaching the ultimate conclusions after hearing in resolving a proceeding; LBP-14-2, 79 NRC 131 (2014)
SUBJECT INDEX

NRC has never adopted a “clear and convincing” standard as the evidentiary yardstick in its enforcement proceedings, nor is it required to do so under the Atomic Energy Act or the Administrative Procedure Act; LBP-14-2, 79 NRC 131 (2014)
on safety issues, applicant has the burden of establishing that it is entitled to the applied-for license by a preponderance of the evidence; LBP-14-3, 79 NRC 267 (2014)
on safety issues, license applicants have the burden of establishing entitlement to the applied-for license by a preponderance of the evidence; LBP-12-5, 75 NRC 227 (2012)
one it made a determination of plausible injury from the proposed project, the board was not required to weigh the evidence to determine whether the harm to petitioners was beyond doubt; CLI-12-12, 75 NRC 603 (2012)
party moving for sanctions has the burden of establishing by a preponderance of the evidence that petitioner violated the protective order; LBP-13-2, 77 NRC 71 (2013)
preponderance-of-the-evidence standard is the one generally applied in proceedings under the Administrative Procedure Act; LBP-14-2, 79 NRC 131 (2014)
preponderance-of-the-evidence standard requires the trier of fact to believe that the existence of a fact is more probable than its nonexistence; LBP-14-3, 79 NRC 267 (2014)
relative to factual matters, to carry burden of proof, NRC Staff and/or applicant must establish that its position is supported by a preponderance of the evidence; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)
to meet the reasonable assurance standard, applicant must make a showing that meets the preponderance-of-the-evidence threshold of compliance with the applicable regulations; LBP-13-13, 78 NRC 246 (2013); LBP-14-1, 79 NRC 39 (2014)

STANDARD OF REVIEW

absent error of law or abuse of discretion, the Commission defers to licensing board rulings on contention admissibility; CLI-11-8, 74 NRC 214 (2011); CLI-11-9, 74 NRC 233 (2011); CLI-11-11, 74 NRC 427 (2011); CLI-12-3, 75 NRC 132 (2012); CLI-12-5, 75 NRC 301 (2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-8, 75 NRC 393 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-12, 75 NRC 603 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-12-19, 76 NRC 377 (2012); CLI-14-2, 79 NRC 11 (2014); CLI-15-20, 82 NRC 211 (2015); CLI-15-22, 82 NRC 310 (2015); CLI-15-23, 82 NRC 321 (2015); CLI-15-25, 82 NRC 389 (2015)
abuse of discretion standard of review is applicable to discretionary Staff actions not subject to a hearing opportunity; CLI-13-1, 77 NRC 1 (2013)
although safety issues are reviewed under the adequacy and sufficiency standard, licensing boards conducting mandatory hearings must independently consider the final balance among the conflicting costs and benefits when reviewing NEPA issues; LBP-12-21, 76 NRC 218 (2012)
although the Commission has authority to undertake a de novo factual review, where a board’s decision rests on a weighing of extensive fact-specific evidence presented by technical experts, the Commission generally will defer to the board’s factual findings, unless there appears to be a clearly erroneous factual finding or related oversight; CLI-13-1, 77 NRC 1 (2013)
although the entire record is considered on appeal, including pleadings that appellants ask to be adopted by reference, the Commission’s decision responds to the arguments made explicitly in the appellate brief; CLI-11-8, 74 NRC 214 (2011)
appeal as of right is allowed on the question whether a request for hearing should have been wholly denied; CLI-15-18, 82 NRC 135 (2015); CLI-15-21, 82 NRC 295 (2015)
applied satisfied the regulatory standards for discretionary review by identifying a substantial question as to whether the board decision reaches at least one necessary legal conclusion without governing precedent or addresses at least one substantial and important question of law, policy, or discretion; CLI-13-1, 77 NRC 1 (2013)
the board is the appropriate arbiter of fact-specific questions of contention admissibility, and the Commission will not second-guess the board’s evaluation of factual support for the contention, absent an error of law or abuse of discretion, even if support for the contention is weak; CLI-15-25, 82 NRC 389 (2015)
board rulings on standing are given substantial deference on appeal; CLI-14-2, 79 NRC 11 (2014)
board’s role in mandatory hearings is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but the NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the
boards are to make independent environmental judgments with respect to certain NEPA findings, though even then they need not rethunk or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-26, 74 NRC 499 (2011)

boards conducting mandatory hearings should not second-guess the underlying technical or factual findings by the NRC Staff; LBP-12-21, 76 NRC 218 (2012)

Commission addresses the sufficiency of NRC Staff’s review of a combined license application rather than making a de novo review; CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012); CLI-15-13, 81 NRC 555 (2015)

Commission gives substantial deference to licensing board findings of fact, and it will not overturn a board’s factual findings unless they are not even plausible in light of the record viewed in its entirety; CLI-14-10, 80 NRC 157 (2014)

Commission may grant a petition for review of a board decision at its discretion, giving due weight to whether there is a substantial question regarding the considerations in 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-12-15, 75 NRC 704 (2012)

Commission may grant interlocutory review if the issue for which the party seeks review threatens the party adversely affected by it with immediate and serious irreparable impact which could not be alleviated through an appeal at the end of the case; CLI-15-17, 82 NRC 33 (2015)

Commission must determine whether NRC Staff review of a combined license application has been adequate to support the findings listed in 10 C.F.R. 52.97 and 51.107(a) for each of the licenses to be issued and in 10 C.F.R. 50.10 and 51.107(d) with respect to the limited work authorizations; CLI-12-2, 75 NRC 63 (2012)

Commission will consider taking discretionary interlocutory review where the requesting party shows that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-12-18, 76 NRC 371 (2012)

Commission will grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to one or more of the considerations of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-12-9, 74 NRC 233 (2011); CLI-15-19, 82 NRC 151 (2015)

de novo standard is applicable to review of an NRC Staff decision on a license transfer application; CLI-15-26, 82 NRC 408 (2015)

deference to a board’s factual determinations is particularly high when they are based in significant part on its assessment of expert testimony and credibility of the witnesses offering that testimony; CLI-13-1, 77 NRC 1 (2013)

deference to board rulings on contention admissibility is appropriate even where the Commission may consider that the support for the contention is weak, or where the claim’s materiality presents a close question; CLI-14-2, 79 NRC 11 (2014)

deferential clear error standard is applied in analyzing a board’s findings of fact; CLI-13-1, 77 NRC 1 (2013)

discretionary interlocutory review is granted only where the party demonstrates that the issue for which it seeks review threatens it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through an appeal following the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-12-18, 76 NRC 371 (2012)

disfavor of piecemeal appeals leads the Commission to grant interlocutory review only upon a showing of extraordinary circumstances; CLI-11-14, 74 NRC 801 (2011)

expansion of issues for litigation that results from a board action does not have a pervasive and unusual effect on the litigation; CLI-11-10, 74 NRC 251 (2011)
federal agency would be acting arbitrarily and capriciously if it did not look at relevant data and sufficiently explain a rational nexus between the facts found in its review and the choice it makes as a result of that review; LBP-11-17, 74 NRC 11 (2011)

for a hearing petitioner to take an appeal pursuant to section 2.311(c), petitioner must claim that, after considering all pending contentions, the board has erroneously denied a hearing; CLI-14-3, 79 NRC 31 (2014)

for mandatory proceedings on uranium enrichment facility licensing, boards are to conduct a simple sufficiency review rather than a de novo review on both AEA and NEPA issues; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)

for threshold issues such as contention admissibility, the Commission gives substantial deference to a board’s determinations; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)

giving appropriate deference to NRC Staff technical expertise, boards are to probe the logic and evidence supporting NRC Staff findings and decide whether those findings are sufficient to support license issuance; LBP-12-21, 76 NRC 218 (2012)

grant of discretionary review must show that a board’s ruling was a departure from, or contrary to, established law; CLI-15-7, 81 NRC 481 (2015)

grant of discretionary review requires a showing that the board’s findings are not even plausible in light of the record viewed in its entirety; CLI-13-1, 77 NRC 1 (2013)

important questions of law and material fact merit Commission review; CLI-15-6, 81 NRC 340 (2015)
in a mandatory hearing, a licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
in an uncontested operating license proceeding, the Commission would informally review the Staff recommendations, and the license would issue only after Commission action; CLI-11-5, 74 NRC 141 (2011)
in mandatory proceedings for uranium enrichment facility licensing, boards are to make independent environmental judgments with respect to certain NEPA findings; LBP-11-11, 73 NRC 455 (2011)
in mandatory proceedings on uranium enrichment facility licensing, boards should inquire whether the NRC Staff performed an adequate review and made findings with reasonable support in logic and fact; LBP-11-11, 73 NRC 455 (2011)

interlocutory review is allowed where the ruling threatens petitioner with immediate and serious irremovable harm, or has a pervasive and unusual effect on the basic structure of the proceeding; CLI-12-12, 75 NRC 603 (2012)

interlocutory review is generally disfavored and requests for such review are granted only under extraordinary circumstances; CLI-15-24, 82 NRC 331 (2015)

license renewal review is not intended to duplicate NRC’s ongoing oversight of operating reactors; CLI-15-6, 81 NRC 340 (2015)

licensing boards conducting mandatory hearings on uncontested issues should conduct a simple sufficiency review of uncontested issues, not a de novo review; LBP-12-21, 76 NRC 218 (2012)

licensing boards have limited their review of NRC Staff reactor operator licensing decisions to those issues that were resolved against the license applicant in the Staff’s informal review; LBP-14-2, 79 NRC 131 (2014)

licensing board’s inquiry should not be whether there are plainly better methodologies or whether the severe accident mitigation alternatives analysis can be refined further, but rather whether the SAMA analysis resulted in erroneous conclusions on which SAMAs and SAMDAs are found cost-beneficial to implement; LBP-11-7, 73 NRC 254 (2011)

licensing boards must be vested with considerable latitude in determining the course of the proceedings that they are called upon to conduct, and the Commission will enter that arena only to the extent necessary to ensure that no party has been denied a fair opportunity to advance its cause; LBP-15-29, 82 NRC 246 (2015)

mere presence of evidence supporting both sides does not call for Commission review, where it appears that the board considered all the evidence and arguments before it; CLI-15-7, 81 NRC 481 (2015)
NRC Staff may accord substantial weight to the stated purpose of the project, i.e., to provide additional baseload electrical generation capacity for use in the owner’s current markets and/or for potential sale on the wholesale market; LBP-11-7, 73 NRC 254 (2011)

NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-26, 74 NRC 499 (2011)

NUREG-1021 provides that NRC’s regional offices shall obtain approval from the Office of Nuclear Reactor Regulation operator licensing program office before knowingly deviating from the intent of any of the NUREG-1021 standards; LBP-14-2, 79 NRC 131 (2014)

on appeal intervenors must show that the board’s resolution of the contested issue in favor of applicant is clearly erroneous; CLI-14-10, 80 NRC 157 (2014)

parties seeking interlocutory review must show that the issue to be reviewed threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-14, 74 NRC 801 (2011)

petition for review must raise a substantial question with respect to whether a necessary legal conclusion is without governing precedent or is contrary to established law; CLI-15-7, 81 NRC 481 (2015)

petition for review will be granted at Commission discretion upon a showing that petitioner has raised a substantial question as to any of the five factors of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-15-9, 81 NRC 512 (2015)

petition is considered under interlocutory review standard because neither NRC Staff’s issuance of the license nor the board’s denial of a stay of the effectiveness of that license constitutes final agency action; DD-15-6, 81 NRC 884 (2015)

petitions to review interlocutory board orders typically are denied summarily, without engaging in extensive merits discussion; CLI-13-3, 77 NRC 51 (2013)

question before the Commission is not whether it would have made different factual findings than those of the board but whether the board’s findings of fact are so lacking in record support as to be clearly erroneous; CLI-13-1, 77 NRC 1 (2013)

“rational basis review” was applied to intervenor’s challenge to the NRC’s 2004 changes to its procedural rules, citing cases involving challenges to laws regulating aspects of prisoners’ right to access to the courts; LBP-11-4, 73 NRC 91 (2011)

review is granted where petitions for review raise substantial questions of law and procedure; CLI-15-6, 81 NRC 340 (2015)

review of a board’s certified question that raises a significant and novel issue whose early resolution will materially advance the orderly disposition of the proceeding is granted; CLI-11-4, 74 NRC 1 (2011)

review of contention admissibility determinations is the same, whether an appeal lies under section 2.311 or 2.341, and the Commission will disturb a licensing board’s contention admissibility ruling only if there has been an error of law or an abuse of discretion; CLI-12-7, 75 NRC 379 (2012)

standard for discretionary review is described; CLI-15-7, 81 NRC 481 (2015)

standard for showing clear error is difficult to meet, requiring that intervenors demonstrate that the board’s determination is not even plausible in light of the record as a whole; CLI-15-7, 81 NRC 481 (2015); CLI-15-9, 81 NRC 512 (2015)

standard of review of a board’s determination on standing is deferential and the Commission will uphold the decision absent a clear misapplication of facts or law; CLI-15-25, 82 NRC 389 (2015)

where a board’s decision rests on a weighing of extensive fact-specific evidence presented by technical experts, the Commission generally will defer to the board’s factual findings, unless there appears to be a clearly erroneous factual finding or related oversight; CLI-12-1, 75 NRC 39 (2012)

where issues in a case have been sharply contested, the Commission will explain its view of the case in some detail; CLI-13-1, 77 NRC 1 (2013)

STANDARD REVIEW PLANS

although an SRP lacks the legal force of regulations, it is to be given special weight as a guidance document that has been approved by the Commission but is nonbinding guidance; LBP-14-3, 79 NRC 267 (2014)
for power reactors, NRC developed a Commission-approved standard review plan to assist in evaluating applications for reactor licenses or applications for the transfer of such licenses; LBP-11-11, 73 NRC 455 (2011)

GALL Report and the SRP are guidance documents, and therefore not binding, but they do carry special weight; CLI-12-5, 75 NRC 301 (2012)
guidance documents do not have the force of law, but the SRP for the Review of a License Application for a Fuel Cycle Facility has benefited from extensive consideration within the agency, with which the Commission has never expressed disagreement; LBP-12-21, 76 NRC 218 (2012)
if after conducting a threshold review, NRC Staff concludes that the applicant may be considered to be foreign owned, controlled, or dominated, or that additional action would be necessary to negate the foreign ownership, control, or domination, applicant shall be promptly advised and requested to submit a negation action plan; LBP-11-11, 73 NRC 455 (2011)

SRP does not in itself impose requirements on an applicant but provides guidance to NRC Staff in reviewing an application; CLI-14-2, 79 NRC 11 (2014)
SRPs do not have the force and effect of law; CLI-15-6, 81 NRC 340 (2015)
to perform an appropriate integrated safety analysis, NUREG-1520 standard review plan guidance for fuel cycle facilities indicates that applicant should identify the process designs, accident sequences, and items relied upon for safety that are associated with the facility; LBP-11-11, 73 NRC 455 (2011)
where no Staff guidance was available for the particular type of facility undergoing license review, the board reasonably selected a standard for a facility most like the facility under review; CLI-15-6, 81 NRC 340 (2015)

STANDING TO INTERVENE

absent an obvious potential for harm, to obtain standing, it is petitioner’s burden to show how harm will or may occur; LBP-14-4, 79 NRC 319 (2014)
aesthetic harms may amount to an injury in fact sufficient for standing; CLI-12-12, 75 NRC 603 (2012)
although it might be fatal for standing purposes if an Indian tribe were seeking to have intervenors represent their interests in the proceeding, intervenors’ lack of authority to represent them is not a bar to intervenors raising the tribe’s contention; LBP-12-12, 75 NRC 742 (2012)
although NRC regulations mandate that a petition contain the name, address, and telephone number of petitioner, the Commission’s hearing notice advises prospective petitioners not to include personal privacy information, such as home addresses or home phone numbers, in their filings; LBP-11-21, 74 NRC 115 (2011)

although petitioner bears the burden of establishing standing, licensing boards should evaluate petitioner’s standing construing the petition in favor of petitioner; LBP-15-13, 81 NRC 456 (2015)
argument that, in addition to the tribe, individual tribal representative has standing to sue under NHPA section 106 consultation provisions is rejected; LBP-13-6, 77 NRC 253 (2013)
as de facto targets of an enforcement order, licensee employees have automatic standing if they are adversely affected by an enforcement order; LBP-14-4, 79 NRC 319 (2014)
as distance increases from in situ uranium recovery facility, petitioner with an upgradient water source must expect to provide the board with some analysis as to how any contamination will affect any wells alleged to be impacted by the facility; LBP-12-3, 75 NRC 164 (2012)

Atomic Energy Act authorizes NRC to accord protection from radiological injury to both health and property interests, and thus a genuine property interest is sufficient to accord petitioner proximity-based standing; LBP-15-17, 81 NRC 753 (2015)
before any hearing is granted on an order issued pursuant to 10 C.F.R. 2.202, a threshold question, intertwined with both standing and contention admissibility issues, is whether the hearing requests are within the scope of the proceeding; CLI-13-2, 77 NRC 39 (2013)
board is obliged to independently assess petitioners’ standing, even if it is unchallenged; LBP-15-17, 81 NRC 753 (2015)
board may grant a timely filed petition to intervene if it concludes that petitioner has established standing and proffered at least one admissible contention; LBP-15-26, 82 NRC 163 (2015)
board need not address the issue of standing where petitioner has failed to demonstrate the existence of a licensing action subject to AEA hearing rights; LBP-15-27, 82 NRC 184 (2015)
boards are to construe intervention petitions in favor of petitioners in determine whether petitioner has demonstrated standing; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
boards have an independent obligation to determine whether petitioners meet the threshold criteria for intervention even if their standing is uncontested; LBP-12-24, 76 NRC 503 (2012)
boards look to judicial concepts of standing and determine whether petitioner is threatened with a concrete injury and the injury is fairly traceable to the licensing action and capable of being redressed by a favorable decision; LBP-12-15, 76 NRC 14 (2012); LBP-12-24, 76 NRC 503 (2012)
boards should determine whether plaintiff’s grievance arguably falls within the zone of interests protected or regulated by the statutory provision invoked in the suit; LBP-14-4, 79 NRC 319 (2014)
both standing (redressability) and contention admissibility (scope) in the context of an NRC enforcement order are addressed; LBP-14-4, 79 NRC 319 (2014)
burden of setting forth a clear and coherent argument for standing is generally on petitioner, but pro se petitioner is not held to the same standards of clarity and precision to which a lawyer might reasonably be expected to adhere; CLI-15-25, 82 NRC 389 (2015)
by reason of their own standing in a proceeding, intervenors may assert any violation of law that would lead to a redress of their injuries, including their interests in seeing that the NEPA process is properly carried out or in preventing or delaying issuance of the requested combined license; LBP-12-12, 75 NRC 742 (2012)
case or controversy limitation does not apply to NRC because it is not an Article III court; LBP-14-4, 79 NRC 319 (2014)
claims based on economic impacts are only cognizable in NRC proceedings with regard to NEPA-based concerns; LBP-12-3, 75 NRC 164 (2012)
Commission affirmed board ruling on standing and upheld the validity of the proximity presumption; CLI-15-13, 81 NRC 555 (2015)
Commission affirmed board standing ruling, but declined to accept review of challenges to board’s admission of two contentions because petitioner had failed to perfect its appeal by challenging the validity of the board’s admissibility rulings regarding other contentions; LBP-15-3, 81 NRC 65 (2015)
Commission permits petitioners to cure deficiencies with regard to standing in their replies; LBP-15-5, 81 NRC 249 (2015)
concern that involves safety will not support standing in an enforcement proceeding if petitioner seeks merely a better settlement, i.e., one that promises greater improvements to safety than the settlement that was actually negotiated; LBP-14-4, 79 NRC 319 (2014)
conclusory allegations about potential radiological harm are insufficient to establish standing; CLI-11-3, 73 NRC 613 (2011)
contemporaneous judicial concepts of standing are applied in NRC proceedings; CLI-11-3, 73 NRC 613 (2011); CLI-15-25, 82 NRC 389 (2015); LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-11-29, 74 NRC 612 (2011); LBP-12-3, 75 NRC 164 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-13-8, 78 NRC 1 (2013); LBP-14-4, 79 NRC 319 (2014); LBP-15-17, 81 NRC 753 (2015); LBP-15-19, 81 NRC 815 (2015)
contemporaneous judicial concepts of standing require petitioner to allege an injury in fact that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-11-29, 74 NRC 612 (2011); LBP-14-4, 79 NRC 319 (2014); LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015)
courts should not inquire whether there has been a congressional intent to benefit the would-be plaintiff; LBP-14-4, 79 NRC 319 (2014)
discretionary intervention is permitted only where at least one petitioner has established standing and at least one admissible contention has been admitted; CLI-14-11, 80 NRC 167 (2014)
economic injuries suffered by ratepayers are not particularized or distinct to the extent required to support standing, but are instead generalized and shared by a large class; LBP-14-4, 79 NRC 319 (2014)
economic interest generally is not sufficient to afford standing in NRC licensing proceedings regarding health and safety; LBP-14-4, 79 NRC 319 (2014)
even if undisputed, the jurisdictional nature of standing in NRC proceedings requires independent examination by the presiding officer; LBP-11-16, 73 NRC 645 (2011)

for a request for hearing and petition to intervene to be granted, petitioner must establish that it has standing and propose at least one admissible contention; LBP-11-21, 74 NRC 115 (2011)

for an enforcement order, the threshold question, related to both standing and admissibility of contentions, is whether the hearing request is within the scope of the proceeding as outlined in the order; LBP-14-4, 79 NRC 319 (2014)

for an individual or organization to be deemed a “person whose interest may be affected by the proceeding,” so as to have standing as of right such that party status can be granted in an agency adjudicatory proceeding, the intervention petition must comply with 10 C.F.R. 2.309(d)(1)(i)-(iv); LBP-12-15, 76 NRC 14 (2012)

for constitutional standing, plaintiff must allege personal injury fairly traceable to the defendant’s allegedly unlawful conduct and likely to be redressed by the requested relief; LBP-14-4, 79 NRC 319 (2014)

for petitioners claiming to be using water from the same aquifer as for the uranium ore source, regardless of distance from the facility in question, licensing boards have found that a plausible pathway connecting the proposed mining operation to their water source has been shown so as to establish petitioners’ standing; LBP-12-3, 75 NRC 164 (2012)

generic, unsubstantiated claims regarding health, safety, and property devaluation impacts are insufficient to establish standing; LBP-12-3, 75 NRC 164 (2012)

google maps and mapquest searches of distance from petitioner’s address may be used to establish proximity to a proposed facility; LBP-12-3, 75 NRC 164 (2012)

for proximate and potential health-impact of facility traffic-associated dust, if properly pleaded, could provide a basis for standing; LBP-12-3, 75 NRC 164 (2012)

if petitioner fails to show standing pursuant to section 2.309(d), a board may grant discretionary standing when at least one requestor/petitioner has established standing and at least one admissible contention has been admitted so that a hearing will be held; LBP-11-29, 74 NRC 612 (2011)

if petitioner’s factual claims in support of its standing are contested, untenable, conjectural, or conclusory, a board need not uncritically accept such assertions, but may weigh those informational claims and exercise its judgment about whether standing has been satisfied; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)

if proximity-based standing cannot be demonstrated, then standing must be established according to traditional principles of redressability, injury, and causation; LBP-12-3, 75 NRC 164 (2012)

in assessing whether petitioner has demonstrated its standing, licensing boards are to construe petitions in favor of petitioners; CLI-14-2, 79 NRC 11 (2014); CLI-15-25, 82 NRC 389 (2015); LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)
in cases involving the possible construction or operation of a nuclear power reactor, proximity to the proposed facility is considered sufficient to establish standing; LBP-11-16, 73 NRC 645 (2011)
in license amendment proceedings, petitioners may not claim standing simply upon a residence or visits near the plant, unless the proposed action quite obviously entails an increased potential for offsite consequences; LBP-11-29, 74 NRC 612 (2011)
in lieu of the injury and causation showings for standing, petitioner has been able to establish proximity-plus by showing that the proposed licensing action involves a significant source of radiation that has an obvious potential for offsite consequences; LBP-12-3, 75 NRC 164 (2012)
in materials licensing matters, there is no predefined distance marking the area of potential offsite consequences on which to establish standing and thus this must be judged on a case-by-case basis; LBP-12-24, 76 NRC 503 (2012)
in reactor license renewal proceedings, petitioner is presumed to have standing without the need to specifically plead injury, causation, and redressability if petitioner lives within 50 miles of the nuclear power facility; LBP-11-21, 74 NRC 115 (2011); LBP-11-29, 74 NRC 612 (2011)
in reactor licensing proceedings, petitioner is deemed to have standing pursuant to the Commission’s proximity presumption rule by showing that he or she resides in, or frequents the area within, a 50-mile radius of the facility; LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011)
in reactor proceedings, the Commission applies a proximity presumption, whereby an individual’s or organization’s location within 50 miles of a reactor is sufficient to demonstrate the requisite threat of injury; LBP-12-24, 76 NRC 503 (2012)
in situations involving obvious potential for offsite consequences, Commission has routinely granted standing to petitioners who live within a certain distance of the facility at issue under the proximity presumption, effectively dispensing with the need to make an affirmative showing of injury, causation, and redressability; LBP-15-13, 81 NRC 456 (2015)
injury-in-fact can result when the risk of encountering environmental harms prevents a plaintiff from taking an action; LBP-14-4, 79 NRC 319 (2014)
individual tribal member who does not reside on a tribal reservation where a facility is proposed to be located must show injury in fact relative to that member’s activities on the reservation even when the reservation is asserted to be on aboriginal tribal lands; LBP-13-6, 77 NRC 253 (2013)
individual tribal member’s assertion of an interest based on cultural resource concerns must show that there is a concrete or particularized injury to herself as an individual; LBP-13-6, 77 NRC 253 (2013)
interests that representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the required relief must require an individual member to participate in the organization’s legal action; LBP-15-5, 81 NRC 249 (2015)
intervenor is entitled to cure deficiencies with regard to standing when it files its reply; LBP-14-4, 79 NRC 319 (2014)
intervenors have standing based upon their proximity to the proposed facility; LBP-12-12, 75 NRC 742 (2012)
intervention petitioner must demonstrate that it has suffered a distinct and palpable harm that constitutes injury-in-fact within the zone of interests arguably protected by the governing statute and that the injury can fairly be traced to the challenged action and is likely to be redressed by a favorable decision; LBP-12-8, 75 NRC 539 (2012); LBP-13-8, 78 NRC 1 (2013)
intervention petitioner’s burden is met if petitioner provides plausible factual allegations that satisfy each element of standing; LBP-13-6, 77 NRC 253 (2013)
intervention petitions must include a statement of petitioner’s name, address, and telephone contact information, nature of petitioner’s right under the AEA to be made a party, nature of petitioner’s interest in the proceeding, whether property, financial or otherwise, and possible effect of any decision or order that might be issued in the proceeding on the petitioner’s interest; LBP-12-15, 76 NRC 14 (2012)
license amendments related to reactor pressure vessel embrittlement present an obvious potential for offsite public health and safety consequences; LBP-15-17, 81 NRC 753 (2015)
licensing actions that could increase reactor vessel embrittlement, such as license renewals, hold the potential for offsite consequences that are obvious; LBP-15-17, 81 NRC 753 (2015)
licensing board, construing the petition in favor of petitioners, based its standing finding on potential harm from traffic-generated dust and light pollution; CLI-12-12, 75 NRC 603 (2012)
licensing boards are obliged to independently assess petitioners’ standing; LBP-15-5, 81 NRC 249 (2015)
light pollution is a matter of concern as a proposed nuclear materials facility undergoes agency licensing review; LBP-12-3, 75 NRC 164 (2012)
living within 50 miles of a nuclear power reactor is enough to confer standing on an individual or group in proceedings for construction permits, operating licenses, or significant amendments thereto; LBP-15-17, 81 NRC 753 (2015); LBP-15-20, 81 NRC 829 (2015)
mere potential exposure to minute doses of radiation within regulatory limits does not constitute a distinct and palpable injury on which standing can be founded; CLI-11-3, 73 NRC 613 (2011)
more subjective appraisal of declining property values might be permissible in the context of a licensing action associated with an applicant or facility shown to have engaged in a continuous and pervasive course of illegal conduct; LBP-12-3, 75 NRC 164 (2012)
mother was denied standing based on her son’s residence within 50 miles of a power plant, because she herself lived more than 50 miles away; LBP-15-17, 81 NRC 753 (2015)
municipality is deemed to have standing in a reactor licensing proceeding that involves a facility located within its boundaries; LBP-11-6, 73 NRC 149 (2011)
Native American tribe’s statutorily recognized interest in tribal cultural resources that may still be extant on its recognized aboriginal lands provides a cognizable interest for the purpose of establishing its standing; LBP-13-6, 77 NRC 253 (2013)
no further demonstration of standing is required from a state that seeks to participate as a party in a proceeding pertaining to a utilization facility located within its boundaries; LBP-15-24, 82 NRC 68 (2015); LBP-15-26, 82 NRC 163 (2015)
no proximity presumption applies in an import/export licensing case because petitioners have not shown that the import or export involves a significant source of radioactivity producing an obvious potential for offsite consequences; CLI-11-3, 73 NRC 613 (2011)
nonradiological impacts can be a basis for standing; LBP-13-6, 77 NRC 253 (2013)
nonspeculative showing that increased traffic accidents could be another impact of increased road usage might establish standing; LBP-12-3, 75 NRC 164 (2012)
NRC could consider adopting, at least for the initial construction/operation authorization of in situ recovery facilities, a standing regime by which persons living or having substantial contacts within a 50-mile radius of the facility are afforded standing; LBP-12-3, 75 NRC 164 (2012)
NRC has latitude to define who is an “affected person” within the meaning of Atomic Energy Act § 189a, 42 U.S.C. § 2239(a); LBP-12-3, 75 NRC 164 (2012)
NRC is lenient in permitting pro se petitioners the opportunity to cure procedural defects in petitions to intervene regarding standing; LBP-11-13, 73 NRC 534 (2011)
NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-11-6, 73 NRC 149 (2011)
NRC sometimes imposes standing requirements more stringent than those imposed in federal court; LBP-14-4, 79 NRC 319 (2014)
NRC’s 50-mile proximity presumption is an example of NRC’s great liberality in the arena of standing; LBP-14-4, 79 NRC 319 (2014)

1338
petitioner bears the burden of providing facts sufficient to establish its standing; LBP-11-21, 74 NRC 115 (2011); LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)

petitioner could not rely on caretakers maintaining and farming the property in petitioner’s absence as grounds for proximity-based standing; LBP-15-17, 81 NRC 753 (2015)

petitioner does not meet the redressability requirement for standing, because vacating the confirmatory orders would not ameliorate the injury of which Pilgrim Watch complains; CLI-13-2, 77 NRC 39 (2013)

petitioner has some latitude to supplement or cure a standing showing in its reply pleading, but any additional arguments should be supported by either the declaration that accompanied the original hearing request or a supplemental affidavit; LBP-12-3, 75 NRC 164 (2012)

petitioner has standing when seeking to intervene to ensure that an enforcement order will be upheld; CLI-13-2, 77 NRC 39 (2013)

petitioner in materials licensing actions is entitled to a presumption of standing if petitioner resides in the zone of reasonably foreseeable harm from the source of radioactivity and the proposed action involves a significant source of radioactivity producing an obvious potential of offsite consequences; LBP-12-24, 76 NRC 503 (2012)

petitioner may act to vindicate its own rights, but it has no standing to assert the rights of others; CLI-12-6, 75 NRC 352 (2012)

petitioner may correct or supplement its showing on standing; LBP-11-21, 74 NRC 115 (2011)

petitioner may use its reply as an opportunity to cure potential defects in standing; LBP-15-13, 81 NRC 456 (2015)

petitioner must allege a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; CLI-11-3, 73 NRC 613 (2011); CLI-13-2, 77 NRC 39 (2013)

petitioner must demonstrate that the asserted injury is plausibly linked to the challenged action; CLI-15-25, 82 NRC 389 (2015)

petitioner need only show that a cognizable injury is associated with a proposed licensing action and that granting the relief sought will address that injury; LBP-13-6, 77 NRC 253 (2013)

petitioner residing within 50 miles of a nuclear power plant is presumed to have standing; LBP-13-8, 78 NRC 1 (2013)

petitioner seeking a hearing must demonstrate standing and proffer at least one admissible contention; LBP-11-29, 74 NRC 612 (2011)

petitioner was allowed to clarify standing declarations by submitting revised declarations with its reply; LBP-11-13, 73 NRC 534 (2011)

petitioner who lives, has frequent contacts, or has significant property interest in within 50 miles of a nuclear power reactor has standing without the need to make an individualized showing of injury, causation, and redressability; LBP-15-17, 81 NRC 753 (2015)

petitioner whose property is upgradient but nonetheless located in close proximity to a proposed in situ recovery facility may be able to establish its plausible pathway with a less particularized showing; LBP-12-3, 75 NRC 164 (2012)

petitioner’s averment that proffered environmental contentions will better position NRC to fully review the possible impacts of the proposed project and, based on petitioners and their experts’ information, may address concerns and mitigate impacts to water, land, and other resources is sufficient to fulfill the redressability element of the standing requirement; CLI-12-12, 75 NRC 603 (2012); LBP-12-3, 75 NRC 164 (2012)

petitioners cannot gain standing from the interests of third parties except in very limited circumstances; LBP-15-17, 81 NRC 753 (2015)

petitioners considerably upgradient of a mining area must provide scientific or technical support for how contaminated material from an in situ recovery site might plausibly enter their drinking water to fulfill the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)

petitioners had proximity-based standing even though they did not provide a reactor vessel failure scenario; LBP-15-17, 81 NRC 753 (2015)

petitioners must establish standing by demonstrating the nature of their right under the Atomic Energy Act to be made a party to the proceeding, nature and extent of their interest in the proceeding, and possible effect of any decision in the proceeding on their interest; LBP-12-24, 76 NRC 503 (2012)
petitioners must state their name, address, and telephone number, the nature of their right to be made a
delay, the nature and extent of their property, financial, or other interest in the proceeding, and the
possible effect of any decision or order that may be issued in the proceeding on their interest;
LBP-11-6, 73 NRC 149 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011);
LBP-13-8, 78 NRC 1 (2013)
potential harm necessary to demonstrate standing in NRC proceedings need not relate to physical or
bodily injury; CLI-12-12, 75 NRC 603 (2012)
proximity presumption allows petitioner living within 50 miles of the reactor to establish standing without
the need to make an individualized showing of injury, causation, and redressability; LBP-15-5, 81 NRC
249 (2015)
proximity presumption applied where petitioners’ contention concerned a license amendment to move the
schedule for the withdrawal of reactor vessel material specimens from the technical specifications to the
updated safety analysis report; LBP-15-17, 81 NRC 753 (2015)
proximity presumption applies across the board to all proceedings regardless of type because the rationale
underlying it is not based on the type of proceeding per se but on whether the proposed action involves
a significant source of radioactivity producing an obvious potential for offsite consequences; LBP-15-17,
81 NRC 753 (2015)
proximity presumption applies if petitioner has frequent contacts with the geographic zone of potential
harm; LBP-11-13, 73 NRC 534 (2011); LBP-15-17, 81 NRC 753 (2015)
proximity presumption applies in more limited license amendment proceedings only if the proposed
amendment obviously entails an increased potential for offsite consequences; LBP-15-17, 81 NRC 753
(2015)
proximity presumption applies in reactor operating license renewal proceedings; LBP-13-8, 78 NRC 1
(2013)
proximity presumption applies to persons who have a significant property interest in the area near a
nuclear power plant; LBP-15-17, 81 NRC 753 (2015)
proximity presumption applies when an individual or organization, or an individual authorizing an
organization to represent his or her interests seeks to establish its representational standing, resides
within 50 miles of the proposed facility, or has frequent contacts with the area affected by the proposed
facility; LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
proximity presumption applies when there are clear implications for the offsite environment, or major
alterations to the facility with a clear potential for offsite consequences; LBP-15-17, 81 NRC 753
(2015)
proximity presumption is limited to reactor licensing proceedings and to other cases where there is an
obvious potential for offsite radiological consequences; LBP-14-4, 79 NRC 319 (2014)
proximity presumption of standing in a license renewal proceeding has not been explicitly endorsed by
the Commission, but has been cited favorably for renewals in the context of a combined license
hearing; LBP-12-15, 76 NRC 14 (2012)
proximity presumption to establish standing is based on the finding that persons living within the roughly
50-mile radius of the facility face a realistic threat of harm if a release from the facility of radioactive
material were to occur; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-14-4, 79
NRC 319 (2014)
proximity presumption was applied in a license amendment proceeding where management’s lack of the
required character and competence was alleged; LBP-15-17, 81 NRC 753 (2015)
proximity-based standing based on frequent contacts is a determination to be made by a licensing board
after weighing all the information provided; LBP-15-17, 81 NRC 753 (2015)
proximity-based standing is allowed because license renewal allows operation of a reactor over an
additional period of time during which the reactor could be subject to the same equipment failures and
personnel errors as during operations over the original period of the license; LBP-12-8, 75 NRC 539
(2012)
radius for the proximity presumption has to be at least as large as the range where obvious offsite
consequences can occur; LBP-15-17, 81 NRC 753 (2015)
remedy that makes even a small contribution to resolving a larger, more complex injury can still support
a standing claim; LBP-15-13, 81 NRC 456 (2015)
request for hearing and/or petition for leave to intervene will be granted if the board determines that requestor/petitioner has standing and has proposed at least one admissible contention; LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-12-8, 75 NRC 539 (2012)

requirement to demonstrate standing is derived from instruction to NRC to provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-15-5, 81 NRC 249 (2015)

risk of future harm as an injury must be both actual and imminent; LBP-14-4, 79 NRC 319 (2014)

standard of review of a board’s determination on standing is deferential and the Commission will uphold the decision absent a clear misapplication of facts or law; CLI-15-25, 82 NRC 389 (2015)

standing can be based on diminishment of recreational enjoyment of wildlife area due to, among other factors, an increase in dust due to traffic on adjacent highway; CLI-12-12, 75 NRC 603 (2012)

standing criteria for federally recognized Indian tribes are less stringent, but only where the facility at issue is within the tribe’s boundaries; LBP-12-24, 76 NRC 503 (2012)

standing has been granted to a utilities commission based on injuries that would increase costs to regulated utilities; LBP-14-4, 79 NRC 319 (2014)

standing in each agency proceeding depends on the factual circumstances associated with that case; LBP-13-6, 77 NRC 253 (2013)

standing is refused only when congressional intent specifically precludes the party or issue from obtaining judicial review; LBP-14-4, 79 NRC 319 (2014)

standing to challenge a confirmatory order exists only when a petitioner credibly alleges that a settlement somehow actually reduces safety; LBP-14-4, 79 NRC 319 (2014)

standing was found for petitioner fishing a river 60 miles downstream from a proposed in situ recovery facility expansion alleged to allow drainage into the river from operations; LBP-12-3, 75 NRC 164 (2012)

state government has standing because the facility is located within the boundaries of the state and, accordingly, no further demonstration of standing is required; LBP-15-4, 81 NRC 156 (2015); LBP-15-18, 81 NRC 793 (2015); LBP-15-19, 81 NRC 815 (2015)

statement that petitioner lives, recreates, and conducts business within the vicinity of the plant is too vague to demonstrate a substantial or regular presence within 50 miles of the plant; LBP-15-17, 81 NRC 753 (2015)

surface water contamination has played a significant role in standing determinations in in situ recovery cases; LBP-12-3, 75 NRC 164 (2012)

taxpayer interest is too generalized and attenuated to support Article III standing; LBP-14-4, 79 NRC 319 (2014)

taxpayer interest is too generalized and attenuated to support Article III standing; LBP-14-4, 79 NRC 319 (2014)

there is no contention-based requirement mandating that to have standing, besides showing that a cognizable injury is associated with a proposed licensing action and that granting the relief sought will address that injury, petitioner also must establish a link between that injury and the issues it wishes to litigate in challenging an application; LBP-12-3, 75 NRC 164 (2012)

to be adversely affected or aggrieved within the meaning of a statute, plaintiff must establish that the injury complained of falls within the zone of interests sought to be protected by the statutory provision whose violation forms the legal basis for the complaint; LBP-14-4, 79 NRC 319 (2014)

to demonstrate frequent contacts within the 50-mile site radius under the proximity presumption, petitioner must show that her contacts are substantial and regular, and must describe them with specificity; LBP-15-17, 81 NRC 753 (2015)

to evaluate a petitioner’s standing, boards construe the petition in favor of petitioner; LBP-14-4, 79 NRC 319 (2014)

to meet its burden to establish standing, petitioner must provide plausible factual allegations that satisfy each element of standing; LBP-12-3, 75 NRC 164 (2012)

tribal member who regularly visits tribal migratory route on national monument land to pursue cultural undertakings has standing under NHPA to raise concerns; LBP-13-6, 77 NRC 253 (2013)

under the proximity presumption, an individual who resides within a 50-mile radius of a nuclear power plant is not required to specifically plead injury, causation, and redressability to establish his or her standing to intervene; LBP-12-10, 75 NRC 633 (2012)

when a governmental organization, including a federally recognized Native American tribe, is unable to establish standing because the facility or nuclear material in question does not fall within its
jurisdictional boundaries, that entity nonetheless may be accorded standing if its boundaries come within a distance from the nuclear facility or material that otherwise would establish standing for an individual or nongovernmental organization, whether via a proximity presumption or otherwise; LBP-13-6, 77 NRC 253 (2013)

when a radiological health or safety impact is asserted to provide the basis for a petitioner’s injury in fact, in lieu of the usual injury and causation showings, petitioner can attempt to establish its standing based on the proximity plus protocol by showing that the proposed licensing action involves a significant source of radiation, which has an obvious potential for offsite consequences; LBP-13-6, 77 NRC 253 (2013)

when petitioners considerably upgradient of the mining area fail to explain how contaminated material from the in situ recovery site might plausibly enter their drinking water, they fail to fulfill the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)

where a municipality seeks to participate in a reactor licensing proceeding that does not involve a facility within the municipality’s boundaries, it can, for purposes of establishing standing, rely on the 50-mile proximity presumption to the same extent as an individual or an organization; LBP-11-6, 73 NRC 149 (2011)

where petitioner has made no effort to establish that any proximity plus presumption should be applicable in determining standing relative to the challenged licensing action, boards must look to traditional standing precepts of injury and causation, as well as redressibility, to determine whether a sufficient factual and legal demonstration of standing has been made; LBP-13-6, 77 NRC 253 (2013)

where plaintiff is not itself the subject of the contested regulatory action, the zone-of-interests test for standing denies a right of review if plaintiff’s interests are so marginally related to or inconsistent with the purposes implicit in the statute that it cannot be assumed that Congress intended to permit the suit; LBP-14-4, 79 NRC 319 (2014)

whether petitioner could be affected by a materials licensing action must be determined on a case-by-case basis; LBP-12-3, 75 NRC 164 (2012)

whether petitioner could be affected by the licensing action must be determined on a case-by-case basis, taking into account the petitioner’s distance from the source, the nature of the licensed activity, and the significance of the radioactive source; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)

whether plaintiff’s interest is arguably protected by the statute within the meaning of the zone-of-interests test is to be determined not by reference to the overall purpose of the Act in question, but by reference to the particular provision of law upon which plaintiff relies; LBP-14-4, 79 NRC 319 (2014)

whether the zone-of-interests test has been satisfied does not depend on how concrete or speculative the threat of injury may be; LBP-14-4, 79 NRC 319 (2014)

zone-of-interests test is not meant to be especially demanding, there being no indication of congressional purpose to benefit the would-be plaintiff; LBP-14-4, 79 NRC 319 (2014)

STANDING TO INTERVENE, ORGANIZATIONAL

analysis of standing of other petitioning organizations was unnecessary when public interest organization had clear representational standing; LBP-13-6, 77 NRC 253 (2013)

argument that, in addition to the tribe, individual tribal representative has standing to sue under NHPA section 106 consultation provisions is rejected; LBP-13-6, 77 NRC 253 (2013)

as a sovereign body, Native American tribes maintain a strong interest in its members’ welfare such that its organizational purpose is germane to the interests it seeks to represent in proceeding; LBP-13-6, 77 NRC 253 (2013)

association has standing to bring suit on behalf of its members when its members would otherwise have standing to sue in their own right, the interests at stake are germane to the organization’s purpose, and neither the claim asserted nor the relief requested requires the participation of individual members in the lawsuit; LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011)

board based tribe’s standing on the presence onsite of cultural resources that could be harmed as a result of mining activities; CLI-14-2, 79 NRC 11 (2014)

general environmental and policy interests are insufficient for organizational standing; LBP-12-3, 75 NRC 164 (2012)

governmental body’s interest in protecting the individuals and territory that fall under that body’s authority establishes an organizational interest for standing purposes; LBP-11-6, 73 NRC 149 (2011)
in a license transfer proceeding, 3-mile distance between facility and organization’s offices does not qualify for organizational standing; LBP-13-6, 77 NRC 253 (2013)

in a reactor decommissioning proceeding, a public interest group lacked organizational standing when its business address did not lie within 50 miles of the facility; LBP-13-6, 77 NRC 253 (2013)

Indian tribe has an organizational interest in protecting cultural artifacts connected with it; CLI-14-2, 79 NRC 11 (2014)

interest in protecting the natural resources of the Black Hills of South Dakota with a focus on groundwater contamination from uranium mining is insufficient to establish organizational standing; LBP-13-6, 77 NRC 253 (2013)

interest that is cognizable for the purpose of establishing standing is one that is more than a mere interest in a problem, no matter how longstanding the interest and no matter how qualified the organization is in evaluating the problem; LBP-13-6, 77 NRC 253 (2013)

licensing board rejected union’s claim to standing, but the appeal board under the rules then in effect permitted discretionary intervention; LBP-14-4, 79 NRC 519 (2014)

members living within 50 miles of a reactor are presumed to have standing under the Commission’s 50-mile proximity presumption; LBP-15-5, 81 NRC 249 (2015)

mere interest in a problem is not sufficient by itself to render the organization adversely affected or aggrieved within the meaning of the Administrative Procedure Act; CLI-11-3, 73 NRC 613 (2011)

organization may base its standing on immediate or threatened injury to its organizational interests; LBP-11-3, 73 NRC 613 (2011)

organization may derive standing from a member if the organization demonstrates that the individual member has standing to participate and has authorized the organization to represent his or her interests; CLI-11-3, 73 NRC 613 (2011)

organization may establish organizational standing; LBP-11-6, 73 NRC 149 (2011)

organization must show either a discrete injury to its own institutional interests or authorization to represent an individual who would have standing in his or her own right; LBP-12-24, 76 NRC 503 (2012)

organization seeking to intervene in its own right must allege that the challenged action will cause a cognizable injury to its interests or to the interests of its members; LBP-11-21, 74 NRC 115 (2011)

organization that seeks representational standing must show that at least one of its members would be affected by the proceeding, identify that member by name and address, show that members would have standing to intervene in their own right, and that identified members have authorized the organization to request a hearing on their behalf; LBP-11-13, 73 NRC 534 (2011); LBP-15-5, 81 NRC 249 (2015)

organizations may base standing on either immediate or threatened injury to its organizational interests, or to the interests of identified members; LBP-12-8, 75 NRC 539 (2012); LBP-12-10, 75 NRC 633 (2012); LBP-13-8, 78 NRC 1 (2013)

organizations may claim standing on their own behalf; LBP-11-29, 74 NRC 612 (2011)

organization’s standing can be demonstrated through the interests of its members, but if a member acts or speaks on behalf of the organization, that member must also demonstrate authorization by that organization to represent it; LBP-11-13, 73 NRC 534 (2011)

petitioner asserting organizational standing must establish a discrete institutional injury to the organization’s interests, which must be based on something more than a general environmental or policy interest in the subject matter of the proceeding; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)

petitioner must show a discrete injury to the organization itself; LBP-15-5, 81 NRC 249 (2015); LBP-15-17, 81 NRC 753 (2015)

petitioner must show that its interests will be harmed by the licensing action, while an organization seeking representational standing must demonstrate that the interests of at least one of its members will be harmed; LBP-12-10, 75 NRC 633 (2012)

petitioners’ claims of potential injury are also so speculative, and separate from the import and export license, that they do not amount to cognizable harm for purposes of standing; CLI-11-3, 73 NRC 613 (2011)

petitioners’ generalized institutional interest in public forums and in preventing processing of foreign waste is insufficient to confer standing; CLI-11-3, 73 NRC 613 (2011)
standing in an agency adjudicatory proceeding could arise based on an asserted injury to a tangible asset, such as a building or land owned or regularly utilized by an organization, that is located near a proposed licensing activity; LBP-13-6, 77 NRC 253 (2013)
standing in an agency adjudicatory proceeding could be based on an organizational interest that has well-recognized institutional underpinnings; LBP-13-6, 77 NRC 253 (2013)
standing is footed in the capacity of an organization to show a discrete injury to its organizational interests; LBP-13-6, 77 NRC 253 (2013)
when an organization seeks to intervene on behalf of its members, it may establish standing by showing that one or more of its members would individually meet the above articulated standing requirements, the member has authorized the organization to represent its interest, and the interest represented is germane to the organization’s purpose; LBP-15-13, 81 NRC 456 (2015)

STANDING TO INTERVENE, REPRESENTATIONAL

although an allegation that a purported representative is acting without his or her organization’s authorization, i.e., is acting ultra vires, is distinct from a challenge to the organization’s standing, petitioner may cure such a defect in representation as well; LBP-11-13, 73 NRC 534 (2011)

analysis of standing of other petitioning organizations was unnecessary when public interest organization had clear representational standing; LBP-13-6, 77 NRC 253 (2013)

association has standing to bring suit on behalf of its members when its members would otherwise have standing to sue in their own right, the interests at stake are germane to the organization’s purpose, and neither the claim asserted nor the relief requested requires the participation of individual members in the lawsuit; LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011)

authority of an officer or attorney to sign a petition is distinguished from an authorization addressed to the organization’s standing to intervene; LBP-11-13, 73 NRC 534 (2011)

boards cannot logically infer that identified members of one organization are also members of another organization for purpose of representational standing determinations; LBP-13-8, 78 NRC 1 (2013)
each organization member seeking representation must qualify for standing in his or her own right, the interests that the representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the requested relief must require an individual member to participate in the organization’s legal action; LBP-11-29, 74 NRC 612 (2011)

entity seeking representational standing must show it has an individual member who can fulfill all the necessary standing elements and who has authorized the organization to represent his or her interests; LBP-12-3, 75 NRC 164 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-12-10, 75 NRC 633 (2012); LBP-13-6, 77 NRC 253 (2013)
even if there are no objections to petitioners’ representational standing, boards have an independent obligation to determine whether they have adequately demonstrated standing; LBP-11-2, 73 NRC 28 (2011)

failure of organization member to provide an exact address in her affidavit is not a limiting concern; LBP-15-17, 81 NRC 753 (2015)
in determining whether an individual member of an organization qualifies for standing in his or her own right, NRC generally applies traditional judicial standing concepts; LBP-11-13, 73 NRC 534 (2011)
individual may not intervene in his or her own right while simultaneously being represented by another petitioner in the same proceeding; LBP-11-13, 73 NRC 534 (2011)

individual member who qualifies an organization for standing must have suffered or might suffer a concrete and particularized injury that is fairly traceable to the challenged action and the injury is likely redressable by a favorable decision; LBP-14-4, 79 NRC 319 (2014)

interests a municipality seeks to represent on behalf of its residents are germane to its own purposes in the context of standing; LBP-11-6, 73 NRC 149 (2011)

interests that a representative organization seeks to protect must be germane to its own purpose, and neither the asserted claim nor the relief sought must require an individual member to participate in the organization’s legal action; LBP-15-5, 81 NRC 249 (2015); LBP-15-17, 81 NRC 753 (2015)

neither the claim asserted nor the relief requested requires the participation of individual members in the lawsuit; LBP-11-13, 73 NRC 534 (2011)

organization members living within 50 miles of a reactor are presumed to have standing under the Commission’s 50-mile proximity presumption; LBP-15-5, 81 NRC 249 (2015)
organization must show that at least one of its members might be affected by the proceeding, identify that member by name and address, and show that the member has authorized the organization to represent him or her and to request a hearing on his or her behalf; LBP-11-6, 73 NRC 149 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
organization seeking representational standing on behalf of its members may meet the injury-in-fact requirement by demonstrating that at least one of its members, who has authorized the organization to represent his or her interest, will be injured by the possible outcome of the proceeding; LBP-11-21, 74 NRC 115 (2011); LBP-11-29, 74 NRC 612 (2011); LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015)
organizations may base standing on either immediate or threatened injury to its organizational interests, or to the interests of identified members; LBP-12-8, 75 NRC 539 (2012); LBP-12-10, 75 NRC 633 (2012); LBP-13-8, 78 NRC 1 (2013)
organizations must show that at least one of its members may be harmed by the licensing action and would have standing to sue in his or her own right, identify that member by name and address, show that the organization is authorized to request a hearing on behalf of that member, and show that the interests that the representative organization seeks to protect are germane to its own interests; LBP-12-10, 75 NRC 633 (2012)
petitioner must show that an individual member can fulfill all necessary standing elements and has authorized petitioner to represent his or her interests; LBP-12-15, 76 NRC 14 (2012); LBP-12-24, 76 NRC 503 (2012); LBP-13-8, 78 NRC 1 (2013)
petitioner’s claims must have supporting declarations from members identifying themselves, outlining their interests, and authorizing petitioners to represent them; LBP-12-3, 75 NRC 164 (2012)
petitioning member’s affidavit must be sufficiently specific to show frequent contact within 50 miles of the plant; LBP-15-17, 81 NRC 753 (2015)
representational standing associated with causation in power reactor license renewal proceedings is deemed fulfilled if a member of the organization resides or has significant contacts in an area within a 50-mile radius of the facility; LBP-12-15, 76 NRC 14 (2012)
standing granted in a different proceeding on the basis of the individual showing of a member’s standing cannot be the supporting basis for the organization’s representational standing in another proceeding where that member does not provide the basis for standing; LBP-13-6, 77 NRC 253 (2013)
standing must be based on individual standing of at least one member; LBP-13-6, 77 NRC 253 (2013)
union must show that the interests it seeks to protect are germane to its own purposes, identify by name and address at least one member who qualifies for standing in his or her own right, show that it is authorized by that member to request a hearing on his or her behalf, and show that neither the claim asserted nor the relief requested requires that member’s participation in the proceeding in an individual capacity; LBP-14-3, 79 NRC 319 (2014)
union’s organizational standing argument was rejected in an indirect license transfer proceeding initiated before the Commission because it was merely the Local’s representational standing argument dressed up in different clothes; LBP-14-3, 79 NRC 319 (2014)
STATE GOVERNMENT
deferral can be given to a state permit’s findings as to the acceptability of environmental impacts; LBP-15-11, 81 NRC 401 (2015)
during a nuclear emergency in the United States, the individual licensee and the appropriate state and local government officials have direct responsibilities for the coordinated response to the event; LBP-11-15, 73 NRC 629 (2011)
fact that a competent and responsible state authority has approved the environmental acceptability of a site or a project after extensive and thorough environmentally sensitive hearings is properly entitled to substantial weight in the conduct of NRC’s own NEPA analysis; LBP-15-11, 81 NRC 401 (2015)
government entity may file an amicus brief within the time allowed to the party whose position the brief will support; CLI-15-2, 81 NRC 213 (2015)
intervenors may question whether the draft environmental impact statement includes a sufficient justification for its reliance upon future actions of a state agency; LBP-12-23, 76 NRC 445 (2012)
NEPA encourages state participation when appropriate and authorized, but coordination between a federal agency and a state requires active involvement between the two in order for the federal agency to meet its independent review burden; LBP-15-11, 81 NRC 401 (2015)
no further demonstration of standing is required from a state that seeks to participate as a party in a proceeding pertaining to a utilization facility located within its boundaries; LBP-15-24, 82 NRC 68 (2015); LBP-15-26, 82 NRC 163 (2015)
radiological emergency response plan was developed by the state and approved by the Federal Emergency Management Agency to ensure that the State is prepared to handle the offsite effects of a radiological emergency; LBP-15-4, 81 NRC 156 (2015)
reliance on a state permit, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 401 (2015)
state government has standing because the facility is located within its boundaries and, accordingly, no further demonstration of standing is required; LBP-15-4, 81 NRC 156 (2015); LBP-15-18, 81 NRC 793 (2015)
when licensee requests an amendment, it must notify the state in which its facility is located of its request by providing that state with a copy of its application; LBP-15-28, 82 NRC 233 (2015)
See also Agreement State Programs

STATE REGULATORY REQUIREMENTS
adoption of building code rules by a state presents new and materially different information not previously available, upon which intervenors may rest their proposed contention; LBP-11-7, 73 NRC 254 (2011)
alleged violations of state law are outside the scope of, and not material to, an adjudicatory proceeding; LBP-15-24, 82 NRC 68 (2015)
any NEPA-based challenge to the efficacy of, or the Staff’s reliance on, the state permitting process relative to the Staff’s environmental review must await the Staff’s initial environmental review document; LBP-13-6, 77 NRC 253 (2013)
comments and questions generated by a state agency that is examining a state application to determine compliance with state legal and technical standards do not, in and of themselves, demonstrate a material deficiency in applicant’s combined license application; LBP-11-6, 73 NRC 149 (2011)
EPA also has granted authority to some states to implement, maintain, and enforce their own EPA-compliant air quality programs through State Ambient Air Quality Standards; LBP-11-26, 74 NRC 499 (2011)
EPA-approved state permitting authority for Class I injection wells is the regulatory entity from which applicant must seek and obtain the permit necessary to allow it to operate a deep injection well at the site; LBP-13-6, 77 NRC 253 (2013)
Great Lakes Compact Agreement binds and imposes certain obligations on its member states, not on other governmental agencies or on utility companies; LBP-12-12, 75 NRC 742 (2012)
it is unlawful for any person to harvest, possess, or sell river herring in the Commonwealth of Massachusetts or in waters under its jurisdiction; LBP-12-16, 76 NRC 44 (2012)
matters within the purview of the state public service board are outside the jurisdiction of the licensing board, which is limited to considering only the license amendment request and NRC regulations; LBP-15-24, 82 NRC 68 (2015)
NRC adjudication is not the appropriate forum for a challenge to a decision by a state regulatory agency; LBP-12-23, 76 NRC 445 (2012)
NRC Staff’s reference to, and reliance in its draft environmental impact statement on, state issuance of a site certification order and associated certificate of compliance on groundwater use does not dispense with NRC’s duty under NEPA to conduct an independent hard look at environmental impacts related to active dewatering during operations at a nuclear plant; LBP-11-1, 73 NRC 19 (2011)
pronouncement of state regulations falls within the broad reach of any fact of which a court of the United States may take judicial notice or of any technical or scientific fact within the knowledge of the Commission as an expert body; LBP-11-7, 73 NRC 254 (2011)
state agency’s 6-month review period of an applicant’s consistency certification begins on the date the state agency receives the consistency certification; LBP-11-16, 73 NRC 645 (2011)
state water use permit is required for construction and operation of the nuclear units, associated facilities, and transmission lines and corridor; LBP-13-4, 77 NRC 107 (2013)
state’s regulations are not inherently unfair because they may be designed to effectuate a state-desired regulatory outcome; CLI-11-12, 74 NRC 460 (2011)
where implementation of a building code could not make a difference in the outcome of the proceeding, it cannot be material; LBP-11-7, 73 NRC 254 (2011)
where state and local governmental bodies that have jurisdiction over the area in which adverse effects need to be addressed and since they have the authority to mitigate them, it would be incongruous to conclude that a federal agency has no power to act until the local agencies have reached a final conclusion on what mitigation measures they consider necessary; LBP-13-4, 77 NRC 107 (2013)

STATEMENT OF CONSIDERATIONS
NRC often refers to the Statement of Considerations as an aid in interpreting the agency’s regulations; LBP-14-9, 80 NRC 15 (2014)
SOC cannot interpret what the regulation itself does not contain; LBP-14-9, 80 NRC 15 (2014)

STATEMENT OF CONSIDERATIONS
commission imposed a license condition requiring licensees to develop and implement strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities following a beyond-design-basis external event, including a simultaneous loss of all AC power and loss of normal access to the normal heat sink; CLI-12-9, 75 NRC 421 (2012)
concerns about licensee’s response to a prolonged station blackout are being addressed in a rulemaking; DD-12-2, 76 NRC 391 (2012)
each nuclear power plant must be able to cool the reactor core and maintain containment integrity in the event of a station blackout of a specified duration; LBP-12-18, 76 NRC 127 (2012)
fire detection systems shall be automatic and capable of operating with or without offsite power; DD-12-3, 76 NRC 416 (2012)
for purposes of the license renewal rule, NRC Staff has determined that the plant system portion of the offsite power system that is used to connect the plant to the offsite power source should be included within the scope of the station blackout rule; CLI-12-5, 75 NRC 301 (2012)
licensees must develop strategies to mitigate a simultaneous loss of all a.c. power and loss of normal access to the ultimate heat sink; DD-15-5, 81 NRC 877 (2015)
NRC guidance documents outline the process licensees use to define and deploy strategies to enhance their ability to cope with beyond-design-basis external events, including station blackout; DD-15-5, 81 NRC 877 (2015)
NRC issued an order on station blackout mitigation strategies requiring mitigation strategies to protect against, among many other hazards, postulated seismic events; DD-15-1, 81 NRC 193 (2015)
petitioner proffers no new information on station blackout or mitigation measures, and the events therefore cannot form the basis for an assertion of timeliness of a motion to reopen; LBP-11-35, 74 NRC 701 (2011)
request that NRC order licensees to conduct periodic training and exercises for multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to ensure that emergency planning equipment and facilities are sufficient for dealing with multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide means to power communications equipment needed to communicate onsite and offsite during a prolonged station blackout until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
istation blackout is a beyond-design-basis event and therefore regulations requiring emergency operating procedures do not apply, and so operators would follow a set of procedures required by 10 C.F.R. 50.63(c)(ii) & (iii); LBP-12-18, 76 NRC 127 (2012)
under its certified design, the Economic Simplified Boiling Water Reactor could maintain circulation long enough to permit safe shutdown of the reactor even if it were to lose offsite power and all of its backup generators failed to operate; LBP-15-5, 81 NRC 249 (2015)

STATUTES
contentions challenging applicable statutory requirements or Commission regulations are not admissible in agency adjudications; LBP-15-5, 81 NRC 249 (2015)
contentions that amount to an attack on applicable statutory requirements or represent a challenge to the basic structure of the Commission’s regulatory process must be rejected; LBP-11-29, 74 NRC 612 (2011)

relevant zone of interests in NRC proceedings are articulated in the Atomic Energy Act and the National Environmental Policy Act; LBP-11-29, 74 NRC 612 (2011)

STATUTORY CONSTRUCTION

agencies can reach exactly the same result on a remanded issue as long as they rely on the correct view of a law that they previously misinterpreted, or as long as they explain themselves better or develop better evidence for their position; CLI-11-12, 74 NRC 460 (2011)

agency’s interpretation of what is properly within its jurisdictional scope is entitled to great deference, and will not be overthrown if reasonably related to the language and purposes of the statute; LBP-14-9, 80 NRC 15 (2014)

agency’s narrowed construction of its statutory authority, as distinct from an express prohibition by Congress, may not be used to limit the agency’s obligations under NEPA; LBP-14-9, 80 NRC 15 (2014)

although pertinent language of the AEA is written in present tense, a board’s inquiry does not end with evaluating foreign ownership, control, or domination concerns posed only by the current corporate structure and financing; LBP-14-3, 79 NRC 267 (2014)

application of the precept that different language is intended to mean different things may be suspended if the purpose or regulatory history behind the language shows that no difference was intended; LBP-13-3, 77 NRC 82 (2013)

applying the rule that the mention of one thing implies the exclusion of another, the fact that the regulation sets forth three specific circumstances in which a board’s jurisdiction ends implies that jurisdiction does not end in other circumstances not listed; LBP-11-22, 74 NRC 259 (2011)

Atomic Energy Act § 189a has been interpreted to require that the hearing must encompass all material factors bearing on the licensing decision raised by the requester; LBP-11-22, 74 NRC 259 (2011)

Atomic Energy Act § 274d is construed as providing specific conditions under which NRC shall exercise the general legal authority granted to it under AEA § 274b; CLI-11-12, 74 NRC 460 (2011)

connection of the three prohibitions on foreign ownership with the conjunction “or” rather than “and” shows that a license may not be granted if any of the three prohibitions is violated; LBP-12-19, 76 NRC 184 (2012)

court cannot defer to interpretive proposals offered by counsel at oral argument and affirm on the basis of that reading when the statute does not plainly compel the reading being proposed; CLI-11-12, 74 NRC 460 (2011)

court is hesitant to adopt an interpretation of a congressional enactment that renders superfluous another portion of that same law; LBP-12-19, 76 NRC 184 (2012)

courts must give effect, if possible, to every clause and word of a statute to avoid any construction that implies that the legislature was ignorant of the meaning of the language it employed; LBP-12-19, 76 NRC 184 (2012)

doctrine of *expressio unis est exclusio alterius* instructs that where a law expressly describes a particular situation to which it shall apply, what was omitted or excluded was intended to be omitted or excluded; LBP-13-9, 78 NRC 37 (2013)

equivalent words have equivalent meaning when repeated in the same statute; LBP-13-3, 77 NRC 82 (2013)

in ruling that NRC had appropriately interpreted the Atomic Energy Act to include regulatory authority over attendant transmission lines, the court did not decide whether NEPA is an independent source of substantive jurisdiction; LBP-14-9, 80 NRC 15 (2014)

“incur” within the context of Equal Access to Justice Act means that an individual who is a prevailing party meeting the financial qualification of the EAJA is ineligible to receive an EAJA award when that individual was not responsible for the costs of the attorney’s fees; LBP-11-8, 73 NRC 349 (2011)

intent of Congress in the Atomic Energy Act is to prohibit relationships where an alien has the power to direct the actions of the licensee; LBP-14-3, 79 NRC 267 (2014)

interpretation of regulations, like interpretation of a statute, begins with the language and structure of the provisions, and the entirety of each provision must be given effect; LBP-14-4, 79 NRC 319 (2014); LBP-14-7, 79 NRC 451 (2014)
interpretation of statutes at issue and the regulations governing their implementation falls within the
Commission’s province; LBP-15-5, 81 NRC 249 (2015)
it is fair to read the AEC and NRC history as a de facto acquiescence in and ratification of the
Commission’s licensing procedure by Congress; CLI-15-4, 81 NRC 221 (2015)
it remains open to Congress to consider whether a ruling comports with actual legislative intent and, if
appropriate, to enact clarifying legislation that, consistent with legislative history, mandates
Administrative Procedure Act § 554 hearings in Atomic Energy Act enforcement proceedings; LBP-11-8,
73 NRC 349 (2011)
it would be impermissible to construe the prohibition of foreign ownership so as to make it redundant or
otherwise deprive it of operative effect; LBP-12-19, 76 NRC 184 (2012)
language of NEPA indicates that Congress did not intend that it be precluded by the Atomic Energy Act;
LBP-12-18, 76 NRC 127 (2012)
legislative history and case law require compliance with NEPA unless compliance is impossible, or
another statute specifically prohibits compliance with NEPA; LBP-12-18, 76 NRC 127 (2012)
mandatory language used in Atomic Energy Act § 274 is construed as requiring NRC to enter into an
agreement for state regulation of the particular categories of nuclear materials that a state certifies it
both desires to regulate and has established a program for, provided NRC finds the state’s program to
be adequate and compatible; CLI-11-12, 74 NRC 460 (2011)
NEPA’s legislative history reflects Congress’s concern that agencies might attempt to avoid any
compliance with NEPA by narrowly construing other statutory directives to create a conflict with
NEPA; LBP-14-9, 80 NRC 15 (2014)
no agency shall utilize an excessively narrow construction of its existing statutory authorizations to avoid
compliance with NEPA; LBP-14-9, 80 NRC 15 (2014)
no provision of a statute should be construed to be entirely redundant; LBP-12-19, 76 NRC 184 (2012)
NRC’s broad definition of “construction” in the pre-2007 version of the regulation was originally added
to Part 50 because of the interpretation that enactment of NEPA required NRC to expand its
permitting/licensing authority; LBP-14-9, 80 NRC 15 (2014)
NRC’s decision to include transmission lines that serve a nuclear power plant within the definition of
“utilization facility” in NEPA, 42 U.S.C. § 2014(cc), was upheld; LBP-14-9, 80 NRC 15 (2014)
only in rare cases does legislative history overcome the strong presumption that the legislative purpose is
expressed by the ordinary meaning of the statutory language; LBP-11-8, 73 NRC 349 (2011)
“owned, controlled, or dominated” refers to relationships in which the will of one party is subjugated to
the will of another; CLI-15-7, 81 NRC 481 (2015); LBP-14-3, 79 NRC 267 (2014)
plain language of enacted text is the best indicator of intent; LBP-14-4, 79 NRC 319 (2014)
rules of interpretation applicable to statutes are equally germane in determining a regulation’s meaning;
LBP-13-3, 77 NRC 82 (2013)
section 7 applies only where threatened and endangered species or critical habitats are present and
impacts on a species are expected as a result of the proposed project; LBP-13-9, 78 NRC 37 (2013)
“shall” is a term of legal significance in that it is mandatory or imperative, not merely precautionary;
CLI-11-12, 74 NRC 460 (2011)
specific inclusion of some conditions implies the exclusion of those not mentioned; CLI-12-14, 75 NRC
692 (2012)
statutes must, if possible, be construed so that every word has operative effect; LBP-12-19, 76 NRC 184
(2012)
usual rule of regulatory interpretation is that different language is intended to mean different things, and
thus a demand for a hearing is not to be treated as a mere request for a hearing; LBP-13-3, 77 NRC
82 (2013)
STAY
absent a showing of irreparable injury, stay standards can only be met if movant can demonstrate a
virtual certainty of success on the merits; CLI-15-17, 82 NRC 33 (2015)
brevy stay of the close of a licensing proceeding was ordered to allow a state the opportunity to request
status as an interested governmental entity; CLI-12-6, 75 NRC 352 (2012)
Commission denies a request for a protective stay of the license renewal proceeding; CLI-14-6, 79 NRC
445 (2014)
Commission may consider requests to suspend or hold proceedings in abeyance pursuant to its inherent supervisory authority over agency proceedings; CLI-11-5, 74 NRC 141 (2011)

Commission rarely grants an indefinite or very lengthy stay on the mere possibility of change; CLI-14-6, 79 NRC 445 (2014)

even if movant fails to show irreparable injury, a board may still grant a stay if movant has made an overwhelming showing or a demonstration of virtual certainty that it will prevail on the merits; LBP-15-2, 81 NRC 48 (2015)

in addressing the stay criteria in a Subpart L proceeding, litigant must come forth with more than general or conclusory assertions in order to demonstrate its entitlement to relief; LBP-15-2, 81 NRC 48 (2015)

in determining whether to grant or deny an application for a stay, a board must balance four separate interests; LBP-15-2, 81 NRC 48 (2015)

irreparable injury is the most important of the factors for grant or denial of a stay; LBP-15-2, 81 NRC 48 (2015)

merely raising the specter of a nuclear accident does not demonstrate irreparable harm; CLI-14-4, 79 NRC 249 (2014)

movant has the burden of persuasion on the four factors of 10 C.F.R. 2.1213(d); LBP-15-2, 81 NRC 48 (2015)

movant must specifically and reasonably demonstrate an injury, not merely allege generalized harm; LBP-15-2, 81 NRC 48 (2015)

request for a protective stay to hold the proceeding in abeyance indefinitely pending potential future events is inconsistent with NRC’s longstanding interest in sound case management and regulatory finality and would be unfair to the other parties; CLI-14-6, 79 NRC 445 (2014)

rulemaking petitioner who is not a party to a licensing proceeding has no right under NRC rules to request a stay of that proceeding; CLI-12-6, 75 NRC 352 (2012)

section 2.342(e) standards are applied to motion to stay issuance of a license; CLI-14-6, 79 NRC 445 (2014)

sole provision of NRC’s procedural rules explicitly authorizing stay applications is available only to parties to adjudicatory proceedings seeking stays of decisions or actions of a presiding officer pending the filing and resolution of a petition for review; CLI-11-5, 74 NRC 141 (2011)

stay is an extraordinary remedy and is rarely granted in NRC practice; CLI-15-17, 82 NRC 33 (2015)

to qualify as an irreparable injury, the potential harm cited by stay movant first must be related to the underlying claim that is the focus of the adjudication; LBP-15-2, 81 NRC 48 (2015)

under 10 C.F.R. 2.342, stay is available only where a presiding officer or licensing board has issued a decision or taken action in a proceeding to which movant is a party; CLI-14-4, 79 NRC 249 (2014)

upon a strong showing of irreparable injury, movant need not always establish a high probability of success on the merits; LBP-15-2, 81 NRC 48 (2015)

when considering stays or other forms of temporary injunctive relief, the Commission has applied the stay factors outlined in 10 C.F.R. 2.342(e), which restate commonplace principles of equity; CLI-14-6, 79 NRC 445 (2014)

where movant cannot show either irreparable injury or a likelihood of prevailing on the merits, a board need not consider the remaining factors; LBP-15-2, 81 NRC 48 (2015)

See also Injunctive Relief

STAY OF EFFECTIVENESS

although NRC has no specific rule governing stays of agency action pending judicial review, federal law requires parties seeking such stays in court to come to the agency first; CLI-12-11, 75 NRC 523 (2012)

automatic stay provisions were removed in 2007; CLI-11-5, 74 NRC 141 (2011)

four factors must be addressed when the Commission or presiding officer is asked to stay the effectiveness of a presiding officer’s decision or action during the pendency of an appeal; CLI-15-17, 82 NRC 33 (2015)

if motions for stay of effectiveness demonstrate neither irreparable injury nor that reversal of the licensing board is a virtual certainty, then the remaining factors need not be considered; CLI-12-11, 75 NRC 523 (2012)

if NRC Staff grants a renewed license before a hearing takes place, intervenor may seek a stay of Staff’s action; CLI-12-4, 75 NRC 154 (2012)
in deciding motions seeking a stay of agency action pending judicial review, the Commission looks to the same four-part test that governs stays of licensing board decisions pending Commission review; CLI-12-11, 75 NRC 523 (2012) intervenors may seek a stay of NRC Staff’s immediately effective license issuance; LBP-15-3, 81 NRC 65 (2015) irreparable injury is the most important of the stay criteria; CLI-12-11, 75 NRC 523 (2012) licensee or other person to whom the Commission has issued an immediately effective order may move the presiding officer to set aside the immediate effectiveness of the order; LBP-14-4, 79 NRC 319 (2014) notification of renewal of source materials license triggers the 5-day filing deadline to apply for a stay of the license; LBP-15-2, 81 NRC 48 (2015) parties seeking a stay must show that they face imminent, irreparable harm that is both certain and great; CLI-12-11, 75 NRC 523 (2012) requests for stays of licensing board decisions are considered under 10 C.F.R. 2.342; CLI-12-11, 75 NRC 523 (2012) requests to stay effectiveness of future licensing action pending judicial appeal are more appropriately styled motions to reconsider and motions to hold in abeyance; CLI-12-11, 75 NRC 523 (2012) section 2.342 does not apply to requests for stays of Commission decisions pending judicial review; CLI-12-11, 75 NRC 523 (2012) stay of an NRC license is an extraordinary remedy, and a rare occurrence in NRC practice; LBP-15-2, 81 NRC 48 (2015) to qualify as irreparable harm justifying a stay, the asserted harm must be related to the underlying claim; CLI-12-11, 75 NRC 523 (2012) without a showing of irreparable injury, petitioners seeking a stay of effectiveness must demonstrate that reversal of the licensing board is a virtual certainty; CLI-12-11, 75 NRC 523 (2012) STEAM GENERATOR TUBE DEGRADATION petitioners’ concerns about tube leaks, unplanned power changes, and potential primary coolant contamination did not constitute any violations that were more than minor; DD-15-2, 81 NRC 205 (2015) wear of steam generator tubes is of critical importance to evaluations performed in the final safety analysis report, because the tubes are part of the reactor coolant pressure boundary, and assurance of their integrity is required; LBP-13-7, 77 NRC 307 (2013) STEAM GENERATORS any operation that might result in in-plane vibrations due to fluid elastic instability is inconsistent with the analyses or descriptions in the UFSAR is the type of test or experiment that triggers the obligation to seek a license amendment; LBP-13-7, 77 NRC 307 (2013) changes with respect to components (i.e., steam generators) are permitted without a license amendment under prescribed conditions that assure that the replacement components are sufficiently similar to the original so that safety requirements are maintained or improved; LBP-13-7, 77 NRC 307 (2013) contention that challenges the entire steam generator replacement project, rather than any aspect of the proposed changes to four technical specifications identified in the license amendment request is outside the scope of this proceeding; LBP-13-11, 78 NRC 177 (2013) contention that is primarily based on the fact that steam generator replacements in other reactors have experienced problems is not adequately supported; LBP-13-11, 78 NRC 177 (2013) contention that steam generator replacement project be deemed an experiment and that an adjudicatory public hearing be convened for independent analysis of the project before it is implemented is inadmissible; LBP-13-11, 78 NRC 177 (2013) failure to verify adequacy of thermal-hydraulic and flow-induced vibration design of the replacement steam generators was determined to be of very low safety significance, because the tubes did not leak and continued to meet the required structural integrity criterion; DD-15-7, 82 NRC 257 (2015) hearing request on safety concerns over steam generator replacement is referred to the Executive Director for Operations for disposition; CLI-14-11, 80 NRC 167 (2014) request that NRC order licensee to submit a license amendment application for the design and installation of replacement steam generators and for additional enforcement action is moot; DD-15-7, 82 NRC 257 (2015)
revisions to technical specifications that are necessary to allow licensee to operate safely with the
replacement steam generators after they have been installed require a license amendment; LBP-13-11,
78 NRC 177 (2013)

STIPULATIONS
appeal board’s ruling that the environmental impact statement was deemed modified by the parties’
stipulations at hearing did not violate the letter or spirit of NEPA; CLI-15-6, 81 NRC 340 (2015)
Commission directs litigants to provide either a joint stipulation that local union’s appeal should be
dismissed or briefing on the question whether the appeal should be dismissed as moot and the
proceeding terminated; CLI-15-16, 81 NRC 810 (2015)

STORAGE CANISTERS
determination regarding item integrity under 10 C.F.R. 74.55(b)(1) refers to the ability to determine that a
container holding strategic special nuclear material items has not been breached and that the amount of
SSNM within has not been altered; LBP-14-1, 79 NRC 39 (2014)

STRATEGIC SPECIAL NUCLEAR MATERIAL
adequacy finding on applicant’s material control and accounting program requires the board to make a
case-by-case determination, guided by the Atomic Energy Act’s mandate that no license to possess
special nuclear material may be issued if issuance would be inimical to the common defense and
security or would constitute an unreasonable risk to the health and safety of the public; LBP-14-1, 79
NRC 39 (2014)
any statistical sampling plan for verifying the presence and integrity of SSNM items must have at least
99 percent power of detecting item losses that total 5 formula kg or more, plantwide, within 30
calendar days for Category IA items and 60 calendar days for Category IB items contained in a vault
or in a permanently controlled access area isolated from the rest of the material access area; CLI-15-9,
81 NRC 512 (2015)
applicant has demonstrated that its program of automated equipment, computer systems (and their
verification), and the use of secured and tamper-safed item storage area boundaries, satisfactorily
demonstrates the ability to verify the presence and integrity of all SSNM items in storage; LBP-14-1,
79 NRC 39 (2014)
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to
rapidly assess the validity of alleged thefts; LBP-14-1, 79 NRC 39 (2014)
applicant’s program for control and accounting of SSNM must show how compliance with the
requirements of section 74.51 will be accomplished; LBP-14-1, 79 NRC 39 (2014)
applicant’s proposal to seal and design strategic SSNM item storage locations to be tamper-safed or
equivalent to tamper-safing such that confirmation that the physical boundary of these locations has not
been breached ensures the integrity of these items; LBP-14-1, 79 NRC 39 (2014)
applicant’s SSNM item monitoring approach, as enhanced by an item verification procedure, provides
reasonable assurance that the quantitative accuracy of the MMIS/PLC data is sufficient to enable the
procedures employing those data to meet the regulatory requirements; LBP-14-1, 79 NRC 39 (2014)
applicant’s verification of the integrity of the SSNM vault boundaries on a daily basis exceeds the
regulatory requirement to verify the integrity of the items every 30 or 60 days; LBP-14-1, 79 NRC 39
(2014)
applicants applying to possess 5 or more formula kilograms of SSNM must maintain alarm resolution
capabilities designed to achieve the performance objectives of section 74.51(a); LBP-14-1, 79 NRC 39
(2014)
by verifying integrity of storage area boundaries, applicant can verify the integrity of all SSNM items in
storage within the required 30- and 60-day time frames; LBP-14-1, 79 NRC 39 (2014)
capability to resolve alarms within approved time periods is most clearly aimed at the prompt
investigation of anomalies potentially indicative of SSNM losses; LBP-14-1, 79 NRC 39 (2014)
capability under 10 C.F.R. 74.51(a)(4) to verify integrity is most clearly aimed at the prompt investigation
of anomalies potentially indicative of SSNM losses; LBP-14-1, 79 NRC 39 (2014)
“Category IA” material means any SSNM directly usable in the manufacture of a nuclear explosive device; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

“Category IB” material refers to all SSNM other than Category IA material; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

Contention that applicant’s revised material control and accounting plan is deficient because its item monitoring program does not have the capability to verify, on a statistical sampling basis, the presence and integrity of SSNM losses that total 5 formula kilograms of plutonium or more, plantwide, within the time frames specified by the regulation is inadmissible; CLI-15-9, 81 NRC 512 (2015)

“controlled access area” is any temporarily or permanently established area that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; CLI-15-9, 81 NRC 512 (2015)

determination regarding item integrity under 10 C.F.R. 74.55(b)(1) refers to the ability to determine that a container holding SSNM items has not been breached and that the amount of SSNM within has not been altered; LBP-14-1, 79 NRC 39 (2014)

“formula kilogram” means SSNM in any combination in a quantity of 1000 grams computed by the formula, grams = (grams contained U-235) + 2.5 (grams U-233 + grams plutonium); CLI-15-9, 81 NRC 512 (2015)

licensee must be able to rapidly assess the validity of alleged thefts; CLI-15-9, 81 NRC 512 (2015)

licensees are not required to conduct assessments of alleged thefts without the use of their records systems, or by first verifying the integrity and accuracy of those records systems; LBP-14-1, 79 NRC 39 (2014)

licensees must satisfy 10 C.F.R. 74.55(b)’s detection requirements for tamper-safed SSNM items in order to achieve the performance objectives set out in section 74.51(a); LBP-14-1, 79 NRC 39 (2014)

licensees must verify on a statistical sampling basis, the presence and integrity of SSNM items; CLI-15-9, 81 NRC 512 (2015)

no requirement to quantify the potential for an adversary to take measures to conceal any abnormalities in MMIS and PLC mapping can reasonably be found in (or implied by) the language of 10 C.F.R. 74.55(b)(1); LBP-14-1, 79 NRC 39 (2014)

NRC may issue a license to possess and use 5 or more formula kilograms of SSNM only if applicant can establish, implement, and maintain a Commission-approved material control and accounting system that will achieve general performance objectives; LBP-14-1, 79 NRC 39 (2014)

“power of detection” means the probability that the critical value of a statistical test will be exceeded when there is an actual loss of a specific quantity of SSNM; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

rapid determination of SSNM theft assessment should be completed within an 8- or 72-hour timeline; LBP-14-1, 79 NRC 39 (2014)

requirement in 10 C.F.R. 74.55(b) for 99% power of detection means that there must be a 99% probability that a missing item will be included within the sample chosen for inspection and would thus be detected; LBP-14-1, 79 NRC 39 (2014)

section 74.55(b)(1) applies only to licensees that are authorized to possess 5 or more formula kilograms of SSNM; LBP-14-1, 79 NRC 39 (2014)

statistical sampling is to be used to achieve verification of item presence and integrity but 10 C.F.R. 74.55(b) does not prescribe a particular method of sampling, only that statistical sampling must result in at least 99% power of detecting losses that total 5 formula kg or more; LBP-14-1, 79 NRC 39 (2014)

“tamper-safing” means the use of devices on containers or vaults in a manner and at a time that ensures a clear indication of any violation of the integrity of previously made measurements of SSNM within the container or vault; LBP-14-1, 79 NRC 39 (2014)

there is a general overarching requirement that applicant’s SSNM item monitoring method be sufficiently accurate to provide reasonable assurance that the specific regulatory requirement is satisfied; LBP-14-1, 79 NRC 39 (2014)

to achieve SSNM loss-related performance objectives, the material control and accounting system must provide the capabilities described in sections 74.55 and 74.57; LBP-14-1, 79 NRC 39 (2014)

“unit process” means an identifiable segment or segments of processing activities for which the amounts of input and output SSNM are based on measurements; CLI-15-9, 81 NRC 512 (2015)
“vault” is a windowless enclosure with walls, floor, roof and door(s) designed and constructed to delay penetration from forced entry; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

whether applicant’s item monitoring program has the capability to verify, on a statistical sampling basis, the presence and integrity of SSNM items is decided; LBP-14-1, 79 NRC 39 (2014)

STRIKING TESTIMONY
boards may on motion or on their own initiative strike any portion of a written presentation that is unreliable; LBP-11-14, 73 NRC 591 (2011)

STRUCTURAL ANALYSIS
because the shield building functions as a radiation and biological shield, failure or collapse of the shield building due to cracking propagation could lead to health and safety impacts and thus petitioner’s contention concerns a subject matter that could impact the grant or denial of a pending license application; LBP-15-1, 81 NRC 15 (2015)

structural limits on the block wall between the engineered safety feature switchgear rooms is discussed; DD-14-5, 80 NRC 205 (2014)

STRUCTURAL INTEGRITY
contention claiming that modifications to repair or replace inadequate structural beams and columns is more appropriately presented as a request for enforcement action; CLI-15-5, 81 NRC 329 (2015)

failure to verify adequacy of thermal-hydraulic and flow-induced vibration design of the replacement steam generators was determined to be of very low safety significance, because the tubes did not leak and continued to meet the required structural integrity criterion; DD-15-7, 82 NRC 257 (2015)

periodic visual inspections of the accessible interior and exterior surfaces of the containment system are required to identify structural deterioration that may affect containment integrity; LBP-15-26, 82 NRC 163 (2015)

request for enforcement action based on support beam deficiencies, flood protection inadequacy, flood risks from upstream dams, and primary reactor containment electrical penetration seals containing Teflon is denied because petitioner’s requests have been addressed through other actions; DD-15-4, 81 NRC 869 (2015)

SUA SPONTE ISSUES
although Commission approval is required before a board exercises its sua sponte authority, that authority still exists; LBP-14-9, 80 NRC 15 (2014)

amicus curiae briefs may be filed when the Commission has taken up a matter pursuant to section 2.341 or sua sponte; CLI-13-9, 78 NRC 551 (2013)

boards are not to proceed with sua sponte issues absent the Commission’s approval; LBP-11-9, 73 NRC 391 (2011)

boards’ authority to seek to trigger review in extraordinary circumstances remains and has been put to good use; LBP-11-9, 73 NRC 391 (2011)

boards have limited authority to consider matters in addition to those properly put into controversy by the parties; LBP-11-9, 73 NRC 391 (2011)

boards may consider any matter, but only to the extent that the board determines that a serious safety, environmental, or common defense and security matter exists, and the Commission approves of an examination of and decision on the matter upon its referral by the board; LBP-11-9, 73 NRC 391 (2011)

licensing boards may not raise issues sua sponte when the sole intervenor has withdrawn from the proceeding; LBP-11-22, 74 NRC 259 (2011)

referring serious safety, environmental, or common defense and security matter to the Staff for resolution is not an adequate solution; LBP-11-9, 73 NRC 391 (2011)

requesting authorization from the Commission for the board, on its own motion, to examine and decide the serious safety or common defense and security matters underlying contentions is allowed to be used for matters that were initially raised by a party, where that party later withdrew; LBP-11-9, 73 NRC 391 (2011)

SUBPART G PROCEDURES
enforcement proceedings are typically conducted pursuant to the procedures in Subpart G; LBP-13-3, 77 NRC 82 (2013)

in a proceeding governed by Subpart L, the board is to apply the standards of Subpart G when ruling on motions for summary disposition; LBP-11-17, 74 NRC 11 (2011); LBP-12-2, 75 NRC 159 (2012)
licensing boards are to apply the same standards for granting or denying summary disposition that are set forth in section 2.710; LBP-11-4, 73 NRC 91 (2011); LBP-11-7, 73 NRC 254 (2011)

petitioner must demonstrate by reference to the contention and its bases and the specific procedures in Subpart G that resolving the contention will require resolution of material issues of fact that may be best determined through use of the identified procedures; LBP-11-2, 73 NRC 28 (2011)

presiding officer must determine by order that a contested matter necessitates resolution of a material issue of fact relating to a past activity where the credibility of an eyewitness and/or issues of motive or intent of the party or eyewitness material to the resolution of the contested matter may reasonably be expected to be at issue; LBP-11-6, 73 NRC 149 (2011)

proceedings on enforcement matters must be conducted under the procedures of Subpart G unless all parties agree otherwise; LBP-14-11, 80 NRC 125 (2014)

relatively formal procedures in Subpart G of Part 2 govern where the credibility of an eyewitness may reasonably be expected to be at issue and/or issues of motive or intent of the party or eyewitness material to the resolution of the contested matter; LBP-11-2, 73 NRC 28 (2011); LBP-11-16, 73 NRC 645 (2011)

SUBPART G PROCEEDINGS

scope of discovery under Subpart G covers any matter that is relevant to the subject matter involved in the proceeding, whether it relates to the claim or defense of any other party; LBP-14-11, 80 NRC 125 (2014)

scope of mandatory disclosures that parties must make under Subpart G is defined by the disputed issues alleged with particularity in the pleadings; LBP-14-11, 80 NRC 125 (2014)

SUBPART J PROCEEDINGS

should a suspended adjudication resume, the Commission will consider appeals in due course, consistent with relevant Subpart J rules; CLI-13-8, 78 NRC 219 (2013)

SUBPART L PROCEDURES

Commission has authority to rule that a license transfer case be adjudicated under Subpart L; CLI-14-5, 79 NRC 254 (2014)

in the absence of any assertion that Subpart G procedures should be used to resolve any of the admitted contentions, the Subpart L hearing procedures will be used to adjudicate each admitted contention; LBP-11-2, 73 NRC 28 (2011)

in the interest of expediting the further proceedings, hearing on senior operator license denial will be conducted under the provisions of Subpart L of the Commission’s Rules of Practice; LBP-13-3, 77 NRC 82 (2013)

informal hearing procedures will ordinarily be used in proceedings for the grant, renewal, licensee-initiated amendment, or termination of licenses or permits; LBP-11-6, 73 NRC 149 (2011); LBP-11-16, 73 NRC 645 (2011)

motions for summary disposition must be in writing and must include a written explanation of the basis of the motion and affidavits to support statements of fact; LBP-12-4, 75 NRC 213 (2012)

proceedings for the grant, renewal, licensee-initiated amendment, or termination of licenses or permits subject to Part 55 may be conducted under the procedures of Subpart L; LBP-13-3, 77 NRC 82 (2013)

taking of evidence for the record in a Subpart L hearing is described; CLI-12-3, 75 NRC 132 (2012)

SUBPART L PROCEEDINGS

all disclosures under section 2.336(c) must be accompanied by a certification (in the form of a sworn affidavit) that all relevant materials required by this section have been disclosed, and that the disclosures are accurate and complete as of the date of the certification; LBP-14-2, 79 NRC 131 (2014)

because parties may not seek discovery from the other parties to the proceeding, all such parties must make periodic mandatory disclosures; LBP-14-2, 79 NRC 131 (2014)

board is to apply the standards of Subpart G when ruling on motions for summary disposition; LBP-11-17, 74 NRC 11 (2011); LBP-11-31, 74 NRC 643 (2011); LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

complexity and number of issues in a proceeding do not per se lead ineluctably to the conclusion that cross-examination is necessary to ensure a fair and adequate hearing; CLI-12-18, 76 NRC 371 (2012)

disclosure updates shall include any documents subject to disclosure that were not included in any previous disclosure update; LBP-14-2, 79 NRC 131 (2014)
SUBJECT INDEX

evidentiary record is opened upon the filing of the first initial written statements of position and written testimony with supporting affidavits on the admitted contentions; LBP-11-22, 74 NRC 259 (2011)
in addressing the stay criteria in a Subpart L proceeding, litigant must come forth with more than general or conclusory assertions in order to demonstrate its entitlement to relief; LBP-18-2, 81 NRC 48 (2015)
NRC Staff is under a special obligation to create, maintain, and update a hearing file; LBP-14-2, 79 NRC 131 (2014)
NRC Staff must disclose or provide documents that support Staff’s review of the application or proposed action, together with a list of all otherwise-discoverable documents for which a claim of protected or privileged status is being made; LBP-13-5, 77 NRC 233 (2013)
parties must update their disclosures every month after initial disclosures on a due date selected by the presiding officer in the order admitting contentions; LBP-14-2, 79 NRC 131 (2014)
procedural rules in Subpart L govern most adjudicatory proceedings; CLI-14-5, 79 NRC 254 (2014)
standard for deciding motions for summary disposition closely parallels the standard used by the federal courts in deciding motions for summary judgment; LBP-11-31, 74 NRC 643 (2011)
summary disposition motions in Subpart L proceedings are to be evaluated pursuant to the same standards for summary disposition set forth in Part 2, Subpart G; LBP-12-2, 75 NRC 159 (2012); LBP-12-4, 75 NRC 213 (2012)
where parties have provided prefiled direct testimony in Subpart L cases and submitted a list of confidential proposed questions for the board to ask the witnesses, the need for cross-examination by parties should be a rare circumstance, except where questions of witness credibility, motive, or intent are at issue; CLI-12-18, 76 NRC 371 (2012)
SUBPART M PROCEDURES
any discretionary diversion from the usual Subpart M procedural track will be rare, requiring extraordinary and unusual circumstances, and all requests to date to provide a non-Subpart M hearing in a license transfer case have been denied; CLI-14-5, 79 NRC 254 (2014)
license transfer hearings are to be oral in nature unless the parties unanimously move for a hearing consisting of written comments; CLI-14-5, 79 NRC 254 (2014)
SUBPART M PROCEEDINGS
scope of Subpart M proceedings covers all adjudicatory proceedings on an application for transfer of control of an NRC license, without distinction as to how the proceeding commences; CLI-14-5, 79 NRC 254 (2014)
Subpart M logically applies to all license transfer hearing requests, regardless of who files them, because the types of issues litigated (e.g., financial assurance, technical qualifications, foreign ownership, and staffing levels) are likely to be similar regardless of whether they are initiated by intervention petitions or by challenges to a Staff action; CLI-14-5, 79 NRC 254 (2014)
SUBPOENA PROCEEDINGS
schedule for Subpart L proceedings, including the closing of the record, is described; CLI-12-3, 75 NRC 132 (2012)
SUBPOENAS
administrative subpoena duces tecum is judicially enforceable where the inquiry is within the authority of the agency, the demand for production is neither too indefinite nor unreasonably broad nor burdensome, and the information sought is reasonably relevant to the authorized inquiry; CLI-13-5, 77 NRC 223 (2013)
agencies are required to use alternative means for obtaining information to avoid unnecessary infringement of First Amendment associational rights; CLI-13-5, 77 NRC 223 (2013)
Congress has vested NRC with authority to issue subpoenas in conjunction with investigations that the NRC deems necessary to protect public health or to minimize danger to life or property in matters involving nuclear materials; CLI-13-5, 77 NRC 223 (2013)
licensee’s motion to quash a subpoena duces tecum because production of the requested file would compromise its employee concerns program by potentially subjecting information contained in the file to public disclosure as an official agency record under FOIA is denied; CLI-13-5, 77 NRC 223 (2013)
NRC is authorized to issue any necessary subpoenas; CLI-13-5, 77 NRC 223 (2013)
NRC subpoena was upheld notwithstanding assertion of First Amendment freedom of association rights, where the subpoena was narrowly tailored to documents supporting specific allegations; CLI-13-5, 77 NRC 223 (2013)
SUBJECT INDEX

NRC subpoenas have been quashed or limited when the subpoena was not closely drawn or NRC did not consider alternative means for obtaining the requested information to avoid unnecessary infringement of First Amendment associational rights; CLI-13-5, 77 NRC 223 (2013)

recipient of a subpoena issued by the NRC’s Office of Investigations may move to quash the subpoena pursuant to 10 C.F.R. 2.702(f); CLI-13-5, 77 NRC 223 (2013)

under appropriate circumstances First Amendment rights give way to the compelling government interest in nuclear safety; CLI-13-5, 77 NRC 223 (2013)

under certain circumstances, a licensee or vendor might be required to disclose confidential ECP information (including the identity of a concerned individual) at the behest of a government agency (including the NRC), or in response to a subpoena; CLI-13-5, 77 NRC 223 (2013)

SUBSTANTIAL JUSTIFICATION STANDARD

although a court’s merits reasoning may be quite relevant to the resolution of the substantial justification question, the inquiry into the reasonableness of the government’s position may not be collapsed into an antecedent evaluation of the merits; LBP-11-8, 73 NRC 349 (2011)

board’s determination of whether the government’s position was substantially justified is made on the basis of the written record and oral argument; LBP-11-8, 73 NRC 349 (2011)

Congress did not want the “substantially justified” standard to be read to raise a presumption that the government position was not substantially justified simply because it lost the case; LBP-11-8, 73 NRC 349 (2011)

fact that one other court agreed or disagreed with the government does not establish whether its position was substantially justified; LBP-11-8, 73 NRC 349 (2011)

for the purposes of the Equal Access to Justice Act, the government’s position should be considered substantially justified if a reasonable person could think it correct, that is, if it has a reasonable basis in law and fact; LBP-11-8, 73 NRC 349 (2011)

government must demonstrate the reasonableness not only of its litigation position, but also of the agency’s actions; LBP-11-8, 73 NRC 349 (2011)

in determining whether the government’s position was substantially justified, courts must look to the totality of the circumstances; LBP-11-8, 73 NRC 349 (2011)

in determining whether the government’s position was substantially justified, the board does not make separate determinations regarding each stage but arrives at one conclusion that simultaneously encompasses and accommodates the entire civil action; LBP-11-8, 73 NRC 349 (2011)

justification “in substance or in the main” is equated with the “reasonable basis both in law and fact” standard that has been applied by a majority of federal appellate courts; LBP-11-8, 73 NRC 349 (2011)

prevailing party is not entitled to an award for attorneys’ fees and expenses if the position of the Commission over which the applicant has prevailed was substantially justified; LBP-11-8, 73 NRC 349 (2011)

reasonableness, the legal standard governing the determination of substantial justification, is separate and distinct from the legal standard used in assessing the merits phase of a proceeding; LBP-11-8, 73 NRC 349 (2011)

under the Equal Access to Justice Act, the government bears the burden of establishing that its position was substantially justified; LBP-11-8, 73 NRC 349 (2011)

SUMMARY DISPOSITION

all facts are to be construed in the light most favorable to the nonmoving party; LBP-11-31, 74 NRC 643 (2011)

all material facts set forth in the statement required to be served by movant will be considered to be admitted unless controverted by the statement required to be served by the opposing party; LBP-11-4, 73 NRC 91 (2011); LBP-12-26, 76 NRC 559 (2012)

although it is risky for a nonmoving party to fail to proffer evidence in response to the summary judgment movant’s showing, such a failure does not automatically mandate granting of the motion; LBP-11-4, 73 NRC 91 (2011)

any doubt as to the existence of a genuine issue of material fact is resolved against the movant; LBP-11-4, 73 NRC 91 (2011)

at issue is not whether evidence unmistakably favors one side or the other, but whether there is sufficient evidence favoring the summary disposition opponent for a reasonable trier of fact to find in favor of that party; LBP-11-4, 73 NRC 91 (2011)
because the initial burden rests on summary disposition movant, a licensing board must examine the record in the light most favorable to the nonmoving party and all justifiable inferences must be drawn in favor of that party; LBP-11-14, 73 NRC 591 (2011)
boards apply a two-part test in determining whether to grant summary disposition; LBP-12-26, 76 NRC 559 (2012)
boards cannot grant summary disposition unless movant discharges its burden of demonstrating that it is entitled to a decision as a matter of law; LBP-12-4, 75 NRC 213 (2012)
boards’ denial of a summary disposition motion did not constitute a de facto partial initial decision or a final decision on the merits ripe for Commission review; CLI-11-6, 74 NRC 203 (2011)
board’s denial of summary disposition, which may be denied if there is reason to believe that the better course would be to proceed to a full hearing; LBP-11-7, 73 NRC 254 (2011)
boards must view the record in the light most favorable to the summary disposition opponent; LBP-12-19, 76 NRC 184 (2012)
caution should be exercised in granting summary disposition, which may be denied if there is reason to believe that the better course would be to proceed to a full hearing; LBP-11-4, 73 NRC 91 (2011)
complex, fact-intensive issues are rarely appropriate for summary disposition, much less for resolution on the initial pleadings; LBP-11-2, 73 NRC 28 (2011)
correct inquiry with regard to the first criterion for summary disposition is whether there are material factual issues that properly can be resolved only by a finder of fact because they may reasonably be resolved in favor of either party; LBP-11-31, 74 NRC 643 (2011)
courts may treat motions to dismiss for failure to state a claim upon which relief can be granted and motions for judgment on the pleadings as motions for summary judgment under Rule 56 if matters outside the pleadings are presented to and not excluded by the court; LBP-12-2, 75 NRC 159 (2012)
denial of summary disposition does not constitute a full or partial initial decision warranting immediate Commission review; CLI-11-10, 74 NRC 251 (2011)
denial of summary disposition neither threatens NRC Staff with immediate and serious irreparable impact that could not be alleviated through a petition for review of the presiding officer’s final decision nor affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-10, 74 NRC 251 (2011)
even where no factual dispute exists, summary disposition may only be granted if movant is entitled to judgment as a matter of law; LBP-12-26, 76 NRC 559 (2012)
expansion of issues for litigation from the board’s denial of a motion for summary disposition had neither a pervasive and unusual effect on the litigation nor a serious and irreparable impact on movant; CLI-15-24, 82 NRC 331 (2015)
grant of summary disposition on a particular contention is an interlocutory ruling appealable at the end of the case; CLI-11-16, 74 NRC 203 (2011)
grant of summary disposition where other contentions are pending is not a final decision, and is appealable only upon a showing that the standards for interlocutory review have been met; CLI-11-14, 74 NRC 801 (2011)
if a board grants summary disposition of a foreign ownership contention, it could terminate the proceeding or move ahead with a pending environmental contention; LBP-12-19, 76 NRC 184 (2012)
if a motion for summary disposition is granted, then the party that filed the original contention of omission must file a new or amended contention if it wishes to challenge the adequacy or sufficiency of NRC Staff’s treatment of the relevant issue; LBP-14-5, 79 NRC 377 (2014)
if a party believes an admitted contention is mooted by the inclusion of additional information, that party may file a motion for summary disposition; LBP-14-5, 79 NRC 377 (2014)
if applicants believe that their actions render a contention moot, then they should promptly file a motion for summary disposition; LBP-12-19, 76 NRC 184 (2012)
if evidence in favor of the summary disposition opponent is merely colorable or not significantly probative, summary disposition may be granted; LBP-11-4, 73 NRC 91 (2011)
if movant discusses a matter in its statement of undisputed facts, the board may view with skepticism any later argument by that movant that a response regarding that issue is outside the scope of the contention, particularly given the onus that is placed on an opposing party to respond to such a statement; LBP-11-4, 73 NRC 91 (2011)
if movant fails to make the requisite showing to satisfy that initial burden, then the board must deny the motion even if the opposing party chooses not to respond or its response is inadequate; LBP-11-4, 73 NRC 91 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

if movant makes a proper showing, and if the opposing party does not show that a genuine issue of material fact exists, the board may summarily dispose of all arguments on the basis of the pleadings; LBP-11-4, 73 NRC 91 (2011)

if movant meets its burden, the nonmoving party must counter each adequately supported material fact with its own statement of material facts in dispute and supporting documentation and cannot rely on mere allegations or denials, or the facts in controversy will be deemed admitted; LBP-11-14, 73 NRC 591 (2011); LBP-12-19, 76 NRC 184 (2012)

if movant meets its burden, then and only then is the nonmoving party required to proffer evidence that contradicts the moving party’s showing and that proves the existence of a genuine issue of material fact; LBP-11-4, 73 NRC 91 (2011)

if no answer to a summary disposition motion is filed, the decision sought, if appropriate, must be rendered; LBP-12-26, 76 NRC 559 (2012)

if no genuine dispute remains, then the board may dispose of all arguments based on the pleadings; LBP-11-7, 73 NRC 254 (2011)

if opponent of summary disposition declines to oppose the moving party’s prima facie showing of undisputed material facts, NRC regulations provide that those facts will be considered admitted; LBP-12-4, 75 NRC 213 (2012)

if proponent meets its burden, opponent must counter each adequately supported material fact with its own statement of material facts in dispute and supporting documentation and cannot rely on mere allegations or denials, or the facts in controversy will be deemed admitted; LBP-12-23, 76 NRC 445 (2012)

if proponent meets its burden, opponent must set forth specific facts showing that there is a genuine issue, and may not rely on mere allegations or denials, but no defense to an insufficient showing is required; LBP-11-7, 73 NRC 254 (2011)

if reasonable minds could differ as to the import of the evidence, summary disposition is not appropriate; LBP-11-14, 73 NRC 591 (2011); LBP-11-20, 74 NRC 65 (2011); LBP-12-23, 76 NRC 445 (2012)

if the question is a close one, boards must, in considering summary disposition opponent’s submission, carefully ascertain whether any factual disputes asserted are genuine and relate to issues that would affect the outcome of the proceeding under relevant substantive law; LBP-11-4, 73 NRC 91 (2011)

in a proceeding governed by Subpart L, the board is to apply the standards of Subpart G found in 10 C.F.R. 2.710 when ruling on motions for summary disposition; LBP-11-4, 73 NRC 91 (2011); LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-11-17, 74 NRC 11 (2011); LBP-12-4, 75 NRC 213 (2012); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

in applying the summary disposition standard, it is appropriate for the board to look not only to NRC regulatory and case law, but also to federal court case law on summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-11-4, 73 NRC 91 (2011)

in assessing whether movant has met his or her burden, a court must view all inferences to be drawn from underlying facts in the light most favorable to the party opposing the motion; LBP-11-4, 73 NRC 91 (2011)

in establishing the evidentiary standard of “relevant, material, and reliable evidence” being admissible in a hearing, 10 C.F.R. 2.337 thereby establishes the right of all parties to present such admissible evidence; LBP-11-4, 73 NRC 91 (2011)

in upholding summary disposition in a proceeding to enforce a suspension order, the Commission ruled that the hearsay nature of a witness’s statement did not preclude the licensing board from considering it, at least in the absence of evidence questioning its reliability; LBP-11-14, 73 NRC 591 (2011)

it is not appropriate for boards to untangle the expert affidavits and decide which experts are more correct; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011)

judge’s function is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; LBP-11-14, 73 NRC 591 (2011)
judgment should be granted only where the truth is clear; LBP-12-23, 76 NRC 445 (2012)
licensing boards must examine the record in the light most favorable to the opponent of summary
disposition and draw all justifiable inferences in favor of that party; LBP-12-23, 76 NRC 445 (2012)
licensing boards or presiding officers should not conduct a trial on affidavits; LBP-12-23, 76 NRC 445
(2012)
like summary judgment, summary disposition is an extreme remedy that should be granted with caution
especially before the parties have been afforded an opportunity to marshal their evidence; LBP-11-7, 73
NRC 254 (2011)
“materially different result” requirement of section 2.326(a)(3) is analyzed using the Commission’s test of
whether it has been shown that a motion for summary disposition could be defeated; LBP-12-1, 75
NRC 1 (2012)
motion is granted because there is no genuine issue or dispute as to any material fact and applicant’s
low-level radioactive waste plan satisfies the requirements of 10 C.F.R. 32.79(a); LBP-11-31, 74 NRC
643 (2011)
motions must contend that there are facts on which there is no genuine issue to be heard; LBP-14-5, 79
NRC 377 (2014)
motions shall be granted if the filings in the proceeding, depositions, answers to interrogatories, and
admissions on file, together with the statements of the parties and the affidavits, if any, show that there
is no genuine dispute as to any material fact and that the moving party is entitled to a decision as a
matter of law; LBP-11-4, 73 NRC 91 (2011); LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591
(2011); LBP-11-17, 74 NRC 11 (2011); LBP-12-4, 75 NRC 213 (2012)
motions will be granted if there is no genuine issue as to any material fact and the moving party is
entitled to a decision as a matter of law; LBP-11-31, 74 NRC 643 (2011)
movant bears the initial burden of showing the absence of a genuine issue as to any material fact and
that it is entitled to judgment as a matter of law; LBP-11-4, 73 NRC 91 (2011); LBP-11-14, 73 NRC
591 (2011); LBP-12-4, 75 NRC 213 (2012); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445
(2012)
movant is entitled to summary disposition if filings in the proceeding together with statements of the
parties and the affidavits, if any, show that there is no genuine issue as to any material fact and that
movant is entitled to a decision as a matter of law; LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76
NRC 445 (2012)
movant should prevail only where the truth is clear; LBP-11-4, 73 NRC 91 (2011); LBP-11-14, 73 NRC
591 (2011)
no defense to an insufficient showing by summary disposition proponent is required; LBP-11-14, 73 NRC
591 (2011); LBP-12-4, 75 NRC 213 (2012); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445
(2012)
NRC applies the same standards to motions for summary disposition that federal courts apply to motions
for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-11-7, 73 NRC 254
(2011); LBP-11-14, 73 NRC 591 (2011); LBP-12-2, 75 NRC 159 (2012); LBP-12-4, 75 NRC 213
(2012); LBP-12-19, 76 NRC 184 (2012)
only disputes over facts that might affect the outcome of a proceeding would preclude summary
disposition; LBP-11-4, 73 NRC 91 (2011)
OPponent cannot rest on the allegations or denials of a pleading, but instead must go beyond the
pleadings and by its own affidavits, or the depositions, answers to interrogatories, and admissions on
file, designate specific facts showing that there is a genuine issue for trial; LBP-12-4, 75 NRC 213
(2012)
opponent has 20 days from proponent’s filing of its motion to oppose that motion; LBP-12-7, 75 NRC
503 (2012)
opponent may not rest upon mere allegations or denials, but must state specific facts showing that there
is a genuine issue of fact for hearing; LBP-11-4, 73 NRC 91 (2011)
opponent need not demonstrate that it would prevail on the issues at hand, but it must at least show that
there is a genuine dispute of material fact to be tried; LBP-12-19, 76 NRC 184 (2012)
opponent of a summary disposition motion may not raise distinctly new asserted deficiencies; LBP-11-4,
73 NRC 91 (2011)
proper method for raising an issue addressed in a motion to strike is to seek leave to file a reply in support of the summary disposition motion; LBP-11-14, 73 NRC 591 (2011)
proponent bears the burden of establishing that no facts remain in dispute, even if the motion is unopposed; LBP-12-26, 76 NRC 559 (2012)
purely legal disputes can be appropriately resolved by summary disposition; LBP-12-26, 76 NRC 559 (2012)
record must show movant’s right to summary judgment with such clarity as to leave no room for controversy, and must demonstrate that his opponent would not be entitled to prevail under any discernible circumstances; LBP-11-4, 73 NRC 91 (2011)
regardless of the level of the dispute, at the summary disposition stage, it is not proper for a board to choose which expert has the better of the argument; LBP-12-23, 76 NRC 445 (2012)
standard for a motion to reopen is measured using the Commission’s test of whether it has been shown that a motion for summary disposition could be defeated; CLI-11-8, 74 NRC 214 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011)
standard for deciding motions for summary disposition in Subpart L proceedings closely parallels the standard used by the federal courts in deciding motions for summary judgment; LBP-11-31, 74 NRC 643 (2011)
standard for deciding motions for summary disposition in Subpart L proceedings is found in section 2.710; LBP-11-31, 74 NRC 643 (2011)
Subpart L hearing procedures provide that motions for summary disposition must be in writing and must include a written explanation of the basis of the motion and affidavits to support statements of fact; LBP-12-4, 75 NRC 213 (2012)
Subpart L provides for motions for summary disposition, and such motions are governed by the same standards as those in Subpart G proceedings; LBP-12-2, 75 NRC 159 (2012)
summary disposition may be entered with respect to all or any part of the matters involved in the proceeding if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-12-2, 75 NRC 159 (2012); LBP-12-26, 76 NRC 559 (2012)
test for the “materially different result” requirement of section 2.326(a)(3) is whether it has been shown that a motion for summary disposition could be defeated; LBP-11-20, 74 NRC 65 (2011)
that opponent declines to oppose the motion does not mean that movant is entitled to a favorable judgment; LBP-12-4, 75 NRC 213 (2012)
to avoid summary disposition, intervenors must present contrary evidence so significantly probative that it creates a material factual issue; LBP-12-19, 76 NRC 184 (2012)
to justify reopening the record, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition; CLI-11-2, 73 NRC 333 (2011)
to remove an admitted contention from the proceeding, a party must file, and a board must grant, a motion for summary disposition; LBP-14-5, 79 NRC 377 (2014)
when considering a motion for summary disposition, the function of the board is not to weigh the evidence and determine the truth of the matter but to determine whether there is a genuine issue for hearing; LBP-12-23, 76 NRC 445 (2012)
when presented with conflicting expert opinions, licensing boards should be mindful that summary disposition is rarely proper; LBP-11-7, 73 NRC 254 (2011); LBP-12-23, 76 NRC 445 (2012)
when ruling on summary disposition motions, the Commission applies standards analogous to those used by federal courts when ruling on motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-12-23, 76 NRC 445 (2012)
when the issue on which summary judgment is sought is one on which the nonmoving party bears the burden of proof, the burden on the moving party may be discharged by showing that there is an absence of evidence to support the nonmoving party’s case; LBP-11-4, 73 NRC 91 (2011)
when there no longer exists any genuine dispute over a material fact and the moving party is entitled to judgment as a matter of law, summary disposition of a contention is appropriate; LBP-11-17, 74 NRC 11 (2011)
where a nonmoving party declines to oppose a motion for summary disposition, the board shall accept as admitted the moving party’s prima facie showing of material facts; LBP-12-4, 75 NRC 213 (2012)
where alleged omission from initial renewal application is cured in updated SAMA analysis, summary disposition is appropriate; LBP-15-29, 82 NRC 246 (2015)

whether offsite low-level radioactive waste storage and disposal facilities will ultimately be available is not material to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 213 (2012)

whether petitioners have adequately raised an issue as to whether transformers constitute active or passive components survived a motion for summary disposition; LBP-11-2, 73 NRC 28 (2011)

SUMMARY JUDGMENT

courts may treat motions to dismiss for failure to state a claim upon which relief can be granted and motions for judgment on the pleadings as motions for summary judgment under Rule 56 if matters outside the pleadings are presented to and not excluded by the court; LBP-12-2, 75 NRC 159 (2012)

movant bears the initial burden of demonstrating that no genuine issue as to any material fact exists and that it is entitled to judgment as a matter of law; LBP-12-23, 76 NRC 445 (2012)

movant has the burden to show that he is entitled to judgment under established principles, and if he does not discharge that burden, then he is not entitled to judgment; LBP-12-4, 75 NRC 213 (2012)

NRC standards for ruling on summary disposition motions are analogous to the standards for granting summary judgment motions under Rule 56 of the Federal Rules of Civil Procedure; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-11-31, 74 NRC 643 (2011); LBP-12-2, 75 NRC 159 (2012); LBP-12-4, 75 NRC 213 (2012); LBP-12-19, 76 NRC 184 (2012); LBP-12-23, 76 NRC 445 (2012)

summary disposition, like summary judgment, is an extreme remedy that should be granted with caution especially before the parties have been afforded an opportunity to marshal their evidence; LBP-11-7, 73 NRC 254 (2011)

summary judgment, which is appropriate upon proper showings of the lack of a genuine, triable issue of material fact, is an integral part of the Federal Rules as a whole, which are designed to secure the just, speedy, and inexpensive determination of every action; LBP-11-4, 73 NRC 91 (2011)

SUPPLEMENTAL ENVIRONMENTAL IMPACT STATEMENT

government agencies have discretion on the manner in which they determine whether information is new or significant to warrant supplementation of an environmental impact statement, including the application of its procedural rules; CLI-12-3, 75 NRC 132 (2012)

agencies need not supplement an EIS every time new information comes to light after the EIS is finalized because it would render agency decisionmaking intractable; CLI-12-7, 75 NRC 579 (2012); LBP-12-18, 76 NRC 127 (2012)

agencies shall prepare supplements to either draft or final EISs if there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-15-13, 81 NRC 456 (2015)

agency decisions regarding the need to supplement an EIS based on new and significant information are subject to the rule of reason; LBP-11-26, 74 NRC 499 (2011)

alleged defects in applicant’s environmental report may be mooted by the content of NRC’s EIS or SEIS; LBP-11-28, 74 NRC 604 (2011)

although a draft SEIS may rely in part on applicant’s environmental report, NRC Staff must independently evaluate and be responsible for the reliability of all information used in the DSEIS; LBP-15-3, 81 NRC 65 (2015)

although NRC has issued a generic environmental impact statement for in situ uranium recovery facilities that assesses potential ISR facility construction/operation/decommissioning impacts, for the initial licensing of each individual ISR facility, NRC Staff will first prepare a draft SEIS; LBP-15-3, 81 NRC 65 (2015)

although NRC rules provide a mechanism for supplementing an original NEPA analysis, the rules do not guarantee a hearing nor is a hearing necessary to satisfy NRC’s NEPA obligations; CLI-13-7, 78 NRC 199 (2013)

before taking a proposed action, Staff must issue an SEIS if there are substantial changes in the proposed action that are relevant to environmental concerns or there are new and significant circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-39, 74 NRC 862 (2011)
board’s findings and the adjudicatory record are, in effect, part of the final SEIS; LBP-15-16, 81 NRC 618 (2015)
bounding analysis provided in the final SEIS, as supplemented in the record, provides sufficient
information about a reasonable range of hazardous constituent concentration values associated with
potential post-operational alternate concentration limits to provide an appropriate NEPA assessment of
the environmental impacts that will occur if applicant cannot restore groundwater to primary or
contention questioning whether future anticipated use of MOX fuel is sufficiently definite to constitute a
proposal under the law, with a connection, cumulative impact, interdependence, or similar relationship to
matters at issue in a license renewal proceeding to warrant being addressed in the supplemental
environmental impact statement is admissible; LBP-14-6, 79 NRC 404 (2014)
contention that final SEIS fails to analyze environmental impacts that will occur if applicant cannot
restore groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 65 (2015)
contention that final SEIS fails to comply with NRC regulations and NEPA because it lacks an adequate
description of the present baseline (i.e., original or premining) groundwater quality and fails to
demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper
sampling methodologies is decided; LBP-15-3, 81 NRC 65 (2015)
contention that supplementation of the EIS is necessary to allow members of the public to lodge
placeholder contentions challenging Commission reliance, in individual licensing proceedings, on the
continued storage GEIS and Continued Storage Rule is inadmissible; CLI-15-10, 81 NRC 535 (2015)
decision of the board or Commission becomes the record of decision, which may also incorporate the
final SEIS; CLI-15-6, 81 NRC 340 (2015)
distribution requirements for a final EIS and SEIS are imposed by 10 C.F.R. 51.93; LBP-15-3, 81 NRC
65 (2015)
DOE may be required to supplement its final EIS when there is new information relevant to
environmental concerns and bearing on the proposed action or its impacts; CLI-13-8, 78 NRC 219
(2013)
duty to supplement the final environmental impact statement is mandatory, is not avoidable through
findings of compliance with the agency’s safety regulations, and is waivable only where the
consequences are remote and highly improbable; CLI-12-11, 75 NRC 523 (2012)
EIS must be supplemented when there is new and significant information that will paint a seriously
different picture of the environmental landscape; LBP-11-35, 74 NRC 701 (2011)
endangered/threatened species is a Category 2 issue that requires site-specific analysis in the supplemental
environmental impact statement; LBP-12-10, 75 NRC 633 (2012)
environmental assessment cannot import previous environmental analyses without considering subsequent
developments at the site and to hold otherwise would render meaningless NEPA’s requirement to
supplement an EIS or environmental assessment; CLI-15-25, 82 NRC 389 (2015)
federal courts leave to an agency’s discretion the manner in which the agency determines whether
information is new or significant to warrant supplementation of an environmental impact statement,
including the application of its procedural rules; CLI-12-6, 75 NRC 352 (2012)
final EIS and SEIS must be considered in the agency’s decisionmaking; LBP-15-3, 81 NRC 65 (2015)
final EIS is supplemented by the board’s decision as well as by the hearing record; CLI-15-6, 81 NRC
340 (2015)
final EIS may be supplemented if, before a proposed action is taken, new and significant information
comes to light that bears on the proposed action or its impacts; CLI-12-6, 75 NRC 352 (2012)
final EIS must be supplemented to provide complete, accurate, and up-to-date sources of information for
members of the public and state and local governments; CLI-15-10, 81 NRC 535 (2015)
final SEIS is a snapshot in time of expected environmental consequences; CLI-15-6, 81 NRC 340 (2015)
final SEIS must demonstrate that NRC Staff has received sufficient information to take a hard look at
severe accident mitigation alternatives; LBP-11-17, 74 NRC 11 (2011)
final SEIS must include an analysis of cultural impacts; LBP-15-16, 81 NRC 618 (2015)
for each license renewal application, NRC Staff must prepare a plant-specific supplement to the generic
environmental impact statement that adopts applicable generic impact findings from the GEIS and
analyzes site-specific impacts; LBP-12-8, 75 NRC 539 (2012); LBP-12-10, 75 NRC 633 (2012)
for license renewal, NRC Staff is not required to include discussion of need for power or the economic
costs and economic benefits of the proposed action or of alternatives to the proposed action;
LBP-13-13, 78 NRC 246 (2013)
for new information to be sufficiently significant to merit the preparation of a SFEIS, the information
must paint a seriously different picture of the environmental landscape; CLI-12-11, 75 NRC 523 (2012)
Fukushima-related environmental impacts are not so significant as to satisfy the Commission’s criterion
for supplementing an environmental impact statement; LBP-12-18, 76 NRC 127 (2012)
if after preparation of the EIS, the agency is presented with new information or changed circumstances
and there remains major federal action to occur, and if the new information is sufficient to show that the
remaining action will affect the quality of the human environment in a significant manner or to a
significant extent not already considered, an SEIS must be prepared; LBP-12-18, 76 NRC 127 (2012)
if NRC Staff has not already considered site-specific severe accident mitigation alternatives for a facility,
they must be considered as part of applicant’s environmental report and ultimately as part of NRC
Staff’s SEIS in a power reactor license renewal proceeding; LBP-11-17, 74 NRC 11 (2011)
if recommendations of the NRC’s Near-Term Task Force review of the Fukushima Dai-ichi accident
constitute relevant new and significant information, then the draft SEIS must address them; LBP-11-28,
74 NRC 604 (2011)
if there remains major federal action to occur, and if the new information is sufficient to show that the
remaining action will affect the quality of the human environment in a significant manner or to a
significant extent not already considered, a supplemental EIS must be prepared; CLI-13-7, 78 NRC 199
(2013)
in mandatory hearings, Commission discussion regarding alternative site review supplements the
environmental impact statement; LBP-11-26, 74 NRC 499 (2011)
intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or
other sources of new and materially different information, provided that it does so promptly after the
new information becomes available and that it successfully fulfills the general contention admissibility
requirements; LBP-11-22, 74 NRC 259 (2011)
intervenors fail to establish the validity of their various challenges to the adequacy of the final SEIS
description of the baseline water quality at the ISR site; LBP-15-3, 81 NRC 65 (2015)
intervenors fail to specify what other alternatives to the license renewal application should be discussed in
the draft SEIS, much less show that any proposed alternative would satisfy the purpose of applicant’s
proposed action; LBP-15-1, 81 NRC 15 (2015)
it is not clear that NRC Staff relied on the generic environmental impact statement when preparing the
draft SEIS because it was not incorporated by reference or mentioned in any other manner; LBP-15-11,
81 NRC 401 (2015)
license renewal applicant need not include analyses of the environmental impacts of Category 1 issues in
its environmental report because NRC Staff incorporates the GEIS analysis of Category 1 issues as part
of the overall cost-benefit balance in the supplemental environmental impact statement for license
renewal; CLI-12-19, 76 NRC 377 (2012)
license renewal applicants must submit an environmental report to aid the Staff in its preparation of a
supplemental environmental impact statement; CLI-12-13, 75 NRC 681 (2012)
migration tenet applies when the information in the final SEIS is sufficiently similar to the information in
the draft SEIS; LBP-14-5, 79 NRC 377 (2014)
NEPA imposes a continuing obligation on federal agencies to supplement an existing environmental
impact statement if the proposed action has not been taken, in response to significant new
circumstances or information relevant to environmental concerns and bearing on the proposed action or
its impacts; CLI-12-7, 75 NRC 379 (2012)
NEPA imposes a nondiscretionary duty on the NRC to amend an environmental impact statement if new
and significant information comes to light; LBP-12-18, 76 NRC 127 (2012)
NEPA is not violated when an agency issues an SEIS before the Corps of Engineers completes a Clean
NEPA regulations require consideration of severe mitigation alternatives in its EISs and supplements
thereto at the operating license stage; LBP-12-15, 76 NRC 14 (2012)
new contentions must paint a seriously different picture of the environmental landscape that would require
supplementation of an environmental impact statement; LBP-12-10, 75 NRC 633 (2012)
new information on the need to supplement an issued final EIS must point to impacts that affect the quality of the human environment in a significant manner or to a significant extent not already considered; LBP-15-16, 81 NRC 618 (2015)

new information requiring NRC Staff to prepare supplemental environmental review documents, must present a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; LBP-11-27, 74 NRC 591 (2011); LBP-11-28, 74 NRC 604 (2011)

new information that may be assessed for its relevance to an ongoing licensing matter may be derived in a wide variety of ways and is assessed for significance regardless of whether it has been acted upon in some way by the Commission or by NRC Staff; CLI-12-7, 75 NRC 379 (2012)

NRC is not required to wait until inchoate information matures into something that later might affect its environmental review; CLI-12-6, 75 NRC 352 (2012)

NRC need not supplement an EIS with information in an area of research that is still developing; CLI-12-6, 75 NRC 352 (2012)

NRC rules enable it to supplement an EIS if, before a proposed action is taken, new and significant information comes to light that bears on the proposed action or its impacts; CLI-12-7, 75 NRC 379 (2012)

NRC rules provide a process to prepare supplemental draft or final environmental impact statements when the agency identifies new and significant information; CLI-13-7, 78 NRC 199 (2013); CLI-14-7, 80 NRC 1 (2014)

NRC Staff has the option of preparing a supplement to a draft or final EIS when, in its opinion, preparation of a supplement will further the purposes of NEPA; CLI-11-5, 74 NRC 141 (2011)

NRC Staff must account for the environmental impacts of continued storage before finalizing individual licensing decisions, and, when appropriate circumstances exist, the question of whether to prepare a supplemental FEIS is to be part of that analysis; CLI-15-10, 81 NRC 535 (2015)

NRC Staff must include in the final SEIS an analysis of significant problems and objections raised by any affected Indian tribes, and by other interested persons; LBP-15-16, 81 NRC 618 (2015)

NRC Staff must include new and significant information in the supplemental DEIS; LBP-11-34, 74 NRC 685 (2011)

NRC Staff need not recirculate a supplemental NEPA document every time new information becomes available; LBP-13-9, 78 NRC 37 (2013)

NRC Staff uses applicant’s environmental report as a starting point for its own environmental review of a license renewal application, the results of which are published as a supplement to the generic EIS; CLI-15-6, 81 NRC 340 (2015)

NRC Staff will incorporate any new SAMA-related information that it finds to be significant in the final supplemental EIS; CLI-13-7, 78 NRC 199 (2013)

NRC will consider all comments on the draft supplemental EIS regardless of whether the comment is directed to impacts in Category 1 or 2; CLI-13-7, 78 NRC 199 (2013)

NRC’s NEPA regulations require a request for public comment on a draft environmental impact statement and a supplement to a DEIS distributed in accordance with 10 C.F.R. 51.74 and on any supplement to the FEIS prepared pursuant to 10 C.F.R. 51.92(a) or (b); LBP-14-9, 80 NRC 15 (2014)

only where new information presents a seriously different picture of the environmental impact of the proposed project from what was previously envisioned is supplementation of an environmental impact statement required; CLI-11-5, 74 NRC 141 (2011); LBP-11-28, 74 NRC 604 (2011); LBP-11-32, 74 NRC 654 (2011); LBP-11-39, 74 NRC 862 (2011)

parties agreed that additional analysis in the final SEIS would be sufficient to address the only contention remaining in the proceeding; LBP-15-22, 82 NRC 49 (2015)

petitioner may submit to NRC Staff any information that it believes to be new and significant by participating in NRC’s parallel NEPA process wherein an opportunity for public comment on the draft supplemental EIS is provided; CLI-13-7, 78 NRC 199 (2013)

petitioner’s rule waiver petition is referred to NRC Staff as additional comments on the draft supplemental EIS for the Staff’s consideration and response; CLI-13-7, 78 NRC 199 (2013)
petitioners may amend their contentions or file new contentions if the supplemental DEIS differs significantly from the data or conclusions in applicant’s documents; LBP-11-34, 74 NRC 685 (2011)

community comment period is required for draft and supplemental EIS; CLI-12-16, 76 NRC 63 (2012)

purpose of the final SEIS is to inform the decisionmaking agency and the public of a broad range of environmental impacts that will result, with a fair degree of likelihood, from a proposed project, rather than to speculate about worst-case scenarios and how to prevent them; CLI-15-6, 81 NRC 340 (2015)

relative to an individual ISR facility, when NRC Staff formulates its draft and final SEIS conclusions regarding the environmental impacts of a proposed action or alternative actions, it uses as guidance a standard scheme to categorize or quantify the impacts; LBP-15-3, 81 NRC 65 (2015)

requirement to supplement environmental analysis every time any new information, such as recommended but not yet adopted regulatory reform, comes to light would render agency decisionmaking intractable, always awaiting updated information only to find the new information outdated by the time a decision is made; LBP-11-28, 74 NRC 604 (2011)

severe accident mitigation alternatives analysis must be considered as part of the environmental report and, ultimately, as part of NRC Staff’s SEIS for a power reactor license renewal; LBP-15-5, 81 NRC 249 (2015)

standard for preparing a supplemental environmental assessment is the same as for preparing a SEIS; LBP-15-13, 81 NRC 456 (2015)

subject of postdecision SEIS is not expressly addressed in NEPA; LBP-12-18, 76 NRC 127 (2012)

supplementation of the FEIS is not necessary every time new information comes to light after the environmental impact statement is finalized; CLI-15-10, 81 NRC 535 (2015)

supplementation of the FEIS is required when a final action has not been taken and there are new and significant circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; CLI-15-10, 81 NRC 535 (2015)

supplementing an EIS is not necessary unless new information presents a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; LBP-12-18, 76 NRC 127 (2012)

time for challenging the environmental report passes when NRC Staff releases its draft supplemental environmental impact statement, but contentions challenging the ER can be filed with the initial petition prior to the time Staff’s environmental review documents are completed; LBP-12-11, 75 NRC 731 (2012)

to assist NRC in preparation of a SEIS, license renewal applicants are required to prepare an environmental report; CLI-13-7, 78 NRC 199 (2013)

to constitute a basis for supplementing an EIS, the new information must present a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; CLI-13-7, 75 NRC 379 (2012); CLI-15-10, 81 NRC 535 (2015)

to satisfy the hard-look requirement, NRC must provide detailed analysis of new information and a reasonable explanation of the agency’s decision concerning supplementation, not merely a conclusory assertion that the agency has reviewed the new information and concluded that no supplement is required; LBP-12-18, 76 NRC 127 (2012)

when a supplement to a FEIS is required and what it must contain are outlined; LBP-15-3, 81 NRC 65 (2015)

when a supplement to an environmental impact statement is prepared, NRC Staff need not conduct a scoping process; LBP-13-9, 78 NRC 37 (2013)

when an environmental impact statement is prepared at the early site permit stage, NRC Staff must prepare a supplemental EIS for the combined license focusing on issues related to the impacts of construction and operation for which new and significant information has been identified; CLI-12-2, 75 NRC 63 (2012)

where an SEIS is being prepared, intervenor may submit proposed new contentions based on new information, including new information in the SER and Staff NEPA documents; LBP-11-22, 74 NRC 259 (2011)
where environmental impacts are practically quantifiable, NRC has a duty to discuss them in those terms in the final SEIS; LBP-15-3, 81 NRC 65 (2015)
where NRC intends to mandate that an originally compliant environmental document be supplemented, it does so explicitly; LBP-11-32, 74 NRC 654 (2011)
whether a severe accident mitigation alternative is worthy of more detailed analysis in an environmental report or supplemental environmental impact statement hinges on whether it may be cost-beneficial to implement; CLI-12-3, 75 NRC 132 (2012)
with respect to the need to supplement an issued FEIS, the party offering the new contention has the burden of presenting information sufficient to show that there is a genuine issue regarding whether the NRC Staff should supplement its document; LBP-15-16, 81 NRC 618 (2015)

SURVEILLANCE
after the rulemaking is completed, licensees for new reactors will be required to comply with the ASME code preservice and in-service surveillance provisions for squib valves; CLI-15-13, 81 NRC 555 (2015)
licensee must perform a consistency check of its embrittlement model against available surveillance data; LBP-15-17, 81 NRC 753 (2015)
surveillance data are continuously integrated into future embrittlement projections; LBP-15-17, 81 NRC 753 (2015)

SURVEILLANCE PROGRAMS
although the Commission found NRC Staff’s review of combined license applications rigorous, it imposed a condition requiring implementation of a squib-valve surveillance program prior to fuel load; CLI-15-13, 81 NRC 555 (2015)
data used in the consistency check need not come from the same reactor pressure vessel that is the subject of the license amendment request; CLI-15-22, 82 NRC 310 (2015)
if licensee sought to make a change to a surveillance frequency that did not conform to the NEI 04-10 standard, then it would then need to request a license amendment; CLI-13-10, 78 NRC 563 (2013)
information that license amendment request must contain to use updated embrittlement model is described; CLI-15-22, 82 NRC 310 (2015)
integrated surveillance program among similar reactors is allowed if the reactors have sufficiently similar design and operating features to permit accurate comparisons of the predicted amount of radiation damage; LBP-15-17, 81 NRC 753 (2015)
licensee is not required to collect additional surveillance data from the subject plant, but rather licensee must use any data that demonstrate the embrittlement trends for the materials, including surveillance programs at other plants with or without a surveillance program integrated under Part 50, Appendix H; CLI-15-22, 82 NRC 310 (2015)
licensees seeking to use the updated methodology in 10 C.F.R. 50.61a must submit a license amendment request; CLI-15-22, 82 NRC 310 (2015)
licensing board imposes a license condition directing implementation of a surveillance program for explosively actuated valves prior to fuel load; CLI-12-2, 75 NRC 63 (2012)
reactor pressure vessel temperature data from other plants are included, and licensees must consider these data under certain circumstances; CLI-15-22, 82 NRC 310 (2015)
reactor vessel material surveillance programs provide material property data necessary to implement a regulatory scheme to protect reactor pressure vessels from failure due to withstand a pressurized thermal shock event; CLI-15-22, 82 NRC 310 (2015)
requirements relate to testing, calibration, or inspection to ensure that the necessary quality of systems and components is maintained, that facility operation will be within safety limits, and that the limiting conditions for operation will be met for certain structures, systems, and components; CLI-13-10, 78 NRC 563 (2013)
results from plant-specific surveillance program must be integrated into the fracture toughness estimate if the plant-specific surveillance data have been deemed credible; LBP-15-17, 81 NRC 753 (2015)
soundness of relocating certain surveillance frequencies from operating license technical specifications to licensee-controlled documents is better resolved in the context of a concrete dispute, where all of the parties have a stake in the outcome of the litigation; CLI-13-10, 78 NRC 563 (2013)
updated embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data; CLI-15-22, 82 NRC 310 (2015)
SURVEILLANCE TESTING

any changes to the material specimen withdrawal schedule that conform to the ASTM standard referenced in Appendix H will not alter the plant’s license; LBP-15-20, 81 NRC 829 (2015)
ASTM Standard E 185 anticipates that during the course of a nuclear power plant’s life the surveillance capsule withdrawal schedule may need to be revised and allows and provides for such changes; LBP-15-20, 81 NRC 829 (2015)
challenges based on 10 C.F.R. 50.61a and the question of whether applicant demonstrated substantial advantage under 10 C.F.R. Part 50, Appendix H as a reason to not test capsules are beyond the scope of a license amendment proceeding, which concerns compliance with Appendix G of 10 C.F.R. Part 50; LBP-15-20, 81 NRC 829 (2015)
consistency check compares mean and slope of the embrittlement model curve against surveillance data and checks to confirm that outliers fall within acceptable residual values provided in the regulation; LBP-15-17, 81 NRC 753 (2015)
consistency check is required if three or more surveillance data points measured at three or more different neutron fluences exist for a specific material; LBP-15-17, 81 NRC 753 (2015)
consistency check seeks to compare, for a specific material type, the model’s projected embrittlement with the actual embrittlement values at the same fluence provided by material samples; LBP-15-17, 81 NRC 753 (2015)
data must consist of material samples that are the same composition, or heat, as the materials being evaluated by the model; LBP-15-17, 81 NRC 753 (2015)
differing amounts of copper, nickel, phosphorus, and manganese between material samples for the consistency check are accounted for; LBP-15-17, 81 NRC 753 (2015)
if fewer than three surveillance data points exist for a specific material, then the embrittlement model must be used without performing the consistency check; LBP-15-17, 81 NRC 753 (2015)
if the embrittlement model deviates from the physical samples over the limits specified in 10 C.F.R. 50.61a(f)(6)(vi), licensee must submit additional evaluations and seek approval for the deviations from the Director of the Office of Nuclear Reactor Regulation; LBP-15-17, 81 NRC 753 (2015)
if three or more surveillance data points measured at three or more different neutron fluences exist for a specific material, licensee shall determine if the surveillance data show a significantly different trend than the embrittlement model predicts; LBP-15-17, 81 NRC 753 (2015)
in calculating embrittlement reference temperatures, licensee must calculate neutron flux through the reactor pressure vessel using a methodology that has been benchmarked to experimental measurements and with quantified uncertainties and possible biases; LBP-15-17, 81 NRC 753 (2015)
licensees have some discretion in considering other plant-specific information that may be helpful in aligning their embrittlement models with the surveillance data; LBP-15-17, 81 NRC 753 (2015)
licensees must attach a particular number of surveillance capsules to specified areas within the reactor vessel, typically near the inside vessel wall at the beltline; LBP-15-20, 81 NRC 829 (2015)
imimum frequency with which surveillance capsules must be tested is set by ASTM Standard E 185 (1982 version), which is incorporated into Appendix H; LBP-15-20, 81 NRC 829 (2015)
NRC must preapprove the schedule for removing material samples from the reactor vessel; LBP-15-17, 81 NRC 753 (2015)
NRC must preapprove the schedule for removing material samples from the reactor vessel; LBP-15-17, 81 NRC 753 (2015)
physical specimens must come from near the inside vessel wall in the beltline region so that the specimen irradiation history duplicates the neutron spectrum, temperature history, and maximum neutron fluence experienced by the reactor vessel inner surface; LBP-15-17, 81 NRC 753 (2015)
plant-specific surveillance data must be integrated into the transition fracture toughness reference temperature estimate; LBP-15-17, 81 NRC 753 (2015)
pressurized thermal shock rule and embrittlement screening program are discussed; LBP-15-17, 81 NRC (2015); LBP-15-17, 81 NRC 753 (2015)
pressurized water reactor pressure vessel surveillance program relies on physical material samples, also known as specimens, capsules, or coupons; LBP-15-17, 81 NRC 753 (2015)
purpose of the consistency check is to determine if the surveillance data show a significantly different trend than the embrittlement model predicts; LBP-15-17, 81 NRC 753 (2015)
surveillance data include any data that demonstrate embrittlement trends for the beltline materials; LBP-15-17, 81 NRC 753 (2015)
surveillance data must be used in the consistency check when it is a heat-specific match for one or more of the materials for which the reference temperature is being calculated and three or more different neutron fluences exist for a specific material; LBP-15-17, 81 NRC 753 (2015)
surveillance data need not be obtained from the same reactor pressure vessel that is the subject of the license amendment; LBP-15-17, 81 NRC 753 (2015)
three or more samples are required to conduct a consistency check; LBP-15-17, 81 NRC 753 (2015)
SURVEYS
Class III archeological survey involves a professionally conducted, pedestrian survey of an entire target area to identify properties that may be eligible for inclusion on the National Register of Historic Places; LBP-15-16, 81 NRC 618 (2015)
SUSPENSION
NRC approvals of plant restart and lifting suspensions did not trigger AEA § 189a hearing rights; CLI-15-14, 81 NRC 729 (2015)
SUSPENSION OF LICENSE
decision lifting license suspension and authorizing restart under stipulated conditions is not a license amendment; LBP-15-27, 82 NRC 184 (2015)
in cases involving license suspension or revocation, where the Atomic Energy Commission’s staff is cast in an accusatory role, the precautions prescribed by the Administrative Procedure Act should be carefully observed; LBP-11-8, 73 NRC 349 (2011)
licensee is banned from engaging in NRC-licensed activities, including performing, supervising, or assisting in any industrial radiographic operations and must complete a formal radiation safety officer training course; LBP-15-21, 82 NRC 1 (2015)
motors license suspension proceeding is not an adversary adjudication for purposes of the Equal Access to Justice Act because the Atomic Energy Act does not require such a hearing to be on the record pursuant to Administrative Procedure Act § 554; LBP-11-8, 73 NRC 349 (2011)
NRC can issue an order suspending an individual from working anywhere in the nuclear industry who fails to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)
request that NRC order the immediate suspension of the operating licenses of all General Electric boiling-water reactors that use the Mark I primary containment system citing the Fukushima Dai-ichi accident in Japan as its rationale basis is resolved; DD-15-1, 81 NRC 193 (2015)
request that NRC suspend the operating licenses until completion of a set of activities related to the effects of an earthquake that exceeded the plant’s operating basis earthquake is granted in part and denied in part; DD-12-2, 76 NRC 391 (2012)
request under 10 C.F.R. 50.54(i) is to enable the Commission to determine whether or not the license should be modified, suspended, or revoked; CLI-15-14, 81 NRC 729 (2015)
SUSPENSION OF PROCEEDING
agencies must set and complete proceedings on license applications with due regard for the rights and privileges of all the interested parties or adversely affected persons and within a reasonable time; CLI-12-6, 75 NRC 352 (2012)
all final decisions for licenses that relied on the Waste Confidence Decision and Temporary Storage Rule were suspended; CLI-15-4, 81 NRC 221 (2015)
although NRC rules require that motions be addressed to the presiding officer when a proceeding is pending, suspension motions are best addressed to the Commission; CLI-11-5, 74 NRC 141 (2011)
because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petition and motions itself; CLI-14-9, 80 NRC 147 (2014)
because waste confidence undergirds certain agency licensing decisions, the Commission held that the NRC should not issue licenses affected by the Waste Confidence Decision until the remanded issues are resolved; CLI-14-3, 79 NRC 31 (2014)

board does not consider intervenor’s petition, which requests rulemaking and suspension of the proceeding, because the discussion in the petition’s body specifically directs those requests to the Commission, which has already responded to the requests; LBP-11-34, 74 NRC 685 (2011)

Commission declined to suspend any adjudications or final licensing decisions, finding no imminent risk to public health and safety or to common defense and security because of the Fukushima accident; CLI-12-2, 75 NRC 63 (2012); CLI-12-5, 75 NRC 301 (2012); CLI-12-9, 75 NRC 421 (2012)

Commission denied suspension petitions and intervenors’ motion to admit the new continued storage safety findings contentions; LBP-15-9, 81 NRC 396 (2015)

Commission may consider requests to suspend or hold proceedings in abeyance pursuant to its inherent supervisory authority over agency proceedings; CLI-11-5, 74 NRC 141 (2011)

Commission responses to requests for suspension of reactor licensing reviews and associated adjudications in the wake of the Three Mile Island accident and 9/11 terrorist attacks are discussed; LBP-11-37, 74 NRC 774 (2011)

decision to suspend final licensing decisions is highly dependent upon the facts and requires a judgment that the significance of the matter raised is so substantial as to warrant suspension; CLI-15-14, 81 NRC 729 (2015)

for pending license renewal applications, where the period of extended operation will not begin for at least a year, there is no imminent threat to public health and safety that requires suspension of licensing proceedings or decisions; LBP-11-35, 74 NRC 701 (2011)

for post-disaster suspension of proceedings, the Commission considers whether moving forward will jeopardize the public health and safety, continuing the review process will prove an obstacle to fair and efficient decisionmaking, and going forward will prevent appropriate implementation of any pertinent rule or policy changes that might emerge from its ongoing evaluation; CLI-11-5, 74 NRC 141 (2011); LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011)

Fukushima events do not present a sufficiently grave threat to public safety that reactor licensing proceedings should be suspended; CLI-12-11, 75 NRC 525 (2012); CLI-12-14, 75 NRC 692 (2012); LBP-12-1, 75 NRC 1 (2012)

given that NRC will have the opportunity to further consider the concerns that rulemaking petitioners have expressed, and as it further considers actions related to the Fukushima events, it declines to suspend any proceeding pending resolution of the rulemaking petition; CLI-14-7, 80 NRC 1 (2014)

in issuing the suspension of final licensing decisions in proceedings, NRC recognized that it could not move forward without first addressing the D.C. Circuit’s remand because the vacatur left a regulatory gap in the Part 51 regulations that undergird licensing reviews in those matters; CLI-14-7, 80 NRC 1 (2014)

in light of current fiscal constraints, the board suspends the proceeding on the Department of Energy’s application for authorization to construct a national high-level nuclear waste repository; LBP-11-24, 74 NRC 368 (2011)

in the context of NRC’s post-Fukushima activities, nothing learned to date requires immediate cessation of NRC review of license applications; CLI-15-19, 82 NRC 151 (2015)

licensing boards (as opposed to the Commission) are not empowered to grant a request to suspend a licensing proceeding pending disposition of a rulemaking petition; LBP-11-35, 74 NRC 675 (2011)

moving forward with decisions and proceedings will have no effect on NRC’s ability to implement necessary rule or policy changes that might come out of its review of the Fukushima accident; LBP-11-35, 74 NRC 701 (2011)

NEPA does not require that NRC suspend its licensing decisions upon receipt of a claim of new and significant information; CLI-14-7, 80 NRC 1 (2014)

no imminent risk to public health and safety or to the common defense and security post-Fukushima necessitates suspensions; LBP-12-18, 76 NRC 127 (2012)

NRC considers suspension to be a drastic action that is not warranted absent immediate threats to public health and safety or other compelling reason; CLI-11-5, 74 NRC 141 (2011)
NRC is not required to conduct a rulemaking proceeding or to withhold action on pending or future applications for nuclear power reactor operating licenses until it makes a determination that high-level radioactive wastes can be permanently disposed of safely; CLI-15-4, 81 NRC 221 (2015) petition for suspension of proceeding following 9/11 attack was denied because even if the licensing, construction, and shipping processes went forward as planned, no radiological materials would be present onsite for at least 2 years, so there was no immediate threat to public safety; CLI-11-5, 74 NRC 141 (2011)

petitioners have not shown compelling circumstances requiring NRC to suspend final licensing decisions pending completion of rulemaking; CLI-14-7, 80 NRC 1 (2014)

petitions to suspend final reactor licensing decisions pending a waste confidence safety finding were denied; DD-15-9, 82 NRC 274 (2015)

post-9/11 suspension was neither necessary nor appropriate where shipments of spent fuel to the facility were at least 2 years down the road; CLI-11-5, 74 NRC 141 (2011)

request for suspension of proceedings and other relief after the Fukushima Dai-ichi accident was denied; CLI-15-13, 81 NRC 555 (2015)

requests to suspend ongoing adjudicatory and licensing activities pending full consideration of the safety and environmental implications of the Fukushima accident are denied; CLI-11-10, 74 NRC 251 (2011); LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-18, 76 NRC 127 (2012)

rulemaking petitioner may request the Commission to suspend all or any part of any licensing proceeding to which the petitioner is a party pending disposition of the petition for rulemaking; CLI-11-5, 74 NRC 141 (2011); CLI-12-6, 75 NRC 352 (2012); CLI-14-6, 79 NRC 445 (2014); CLI-14-7, 80 NRC 1 (2014)

section 2.802(d) suspension request is inapplicable where no petition for rulemaking has been filed before the Commission; CLI-14-6, 79 NRC 445 (2014)

should a suspended adjudication resume, the Commission will consider appeals in due course, consistent with relevant Subpart J rules; CLI-13-8, 78 NRC 219 (2013)

sole provision of NRC’s procedural rules explicitly authorizing stay applications is available only to parties to adjudicatory proceedings seeking stays of decisions or actions of a presiding officer pending the filing and resolution of a petition for review; CLI-11-5, 74 NRC 141 (2011)

suspension is a drastic action that is not warranted absent compelling circumstances; CLI-12-6, 75 NRC 352 (2012)

suspension of license renewal proceedings in light of the Fukushima accident is unnecessary because current regulatory and oversight processes provide reasonable assurance that each plant continues to comply with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-12-6, 75 NRC 352 (2012)

suspension of licensing proceedings is a drastic action that is not warranted absent immediate threats to public health and safety or other compelling reason; CLI-15-19, 82 NRC 151 (2015)

suspension provision provides an opportunity for a participant to ensure that a successful rulemaking petition is applied in an ongoing adjudication; CLI-14-7, 80 NRC 1 (2014)

suspension request that would have halted final licensing decisions pending action on a petition for rulemaking regarding NRC Staff’s review of the potential expedited transfer of spent fuel from pools to dry casks was denied; CLI-15-13, 81 NRC 555 (2015)

to determine whether suspension of an adjudication or licensing decision is warranted, the Commission considers whether moving forward will jeopardize the public health and safety, prove an obstacle to fair and efficient decisionmaking, or prevent appropriate implementation of any pertinent rule or policy changes; CLI-12-6, 75 NRC 352 (2012); CLI-14-7, 80 NRC 1 (2014)

SYNERGISTIC EFFECTS

“synergistic” refers to the joint action of different parts or sites which, acting together, enhance the effects of one or more individual sites; LBP-15-5, 81 NRC 249 (2015)

TAILINGS

section 11e(2) byproduct material is tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-12-3, 75 NRC 164 (2012)
the byproduct material category was created in 1978 by the Uranium Mill Tailings and Reclamation Act to afford NRC regulatory jurisdiction over mill tailings at active and inactive uranium milling sites; LBP-12-3, 75 NRC 164 (2012)

TECHNICAL QUALIFICATIONS

request that NRC order licensees to revise their technical specifications to address requirements to have one train of onsite emergency electrical power operable for spent fuel pool makeup and spent fuel pool instrumentation when there is irradiated fuel in the spent fuel pool, regardless of the operational mode of the reactor is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

TECHNICAL SPECIFICATIONS

almost every item originally contained in TSs has some conceivable connection to safety, but this general premise is insufficient, by itself, as a ground for intervention; LBP-12-25, 76 NRC 540 (2012) applicants for nuclear power plant operating licenses must include TSs as part of the license; DD-13-3, 78 NRC 571 (2013) because changes to TSs require a license amendment, technical specifications should be limited to those plant conditions most important to safety; LBP-13-7, 77 NRC 307 (2013) because TSs are an integral part of an operating license, changes to technical specifications require a license amendment; LBP-13-7, 77 NRC 307 (2013)

construction permit applications must include the principal design criteria for a proposed facility and describe the design bases and their relationship to the principal design criteria in the preliminary safety analysis report; DD-13-3, 78 NRC 571 (2013)

contention challenging removal of details from licensee’s TSs to a licensee-controlled document was rejected; LBP-12-25, 76 NRC 540 (2012)

contention that challenges entire steam generator replacement project, rather than any aspect of the proposed changes to four TSs identified in the license amendment request, is outside the scope of the proceeding; LBP-13-11, 78 NRC 177 (2013)

criteria for limiting conditions for operation address aspects of reactor operation that contribute to prevention of accidents and provide the capability to provide immediate mitigation of accidents; DD-13-3, 78 NRC 571 (2013)

criteria to be used in determining what items must be included in TSs are identified; LBP-13-7, 77 NRC 307 (2013)

design features to be included in TSs are those features of the facility such as materials of construction and geometric arrangements, which, if altered or modified, would have a significant effect on safety and are not covered by other TSs; DD-13-3, 78 NRC 571 (2013) every license to operate a nuclear power reactor must contain a list of TSs necessary for adequate protection of public health and safety; LBP-12-25, 76 NRC 540 (2012)

“exigent circumstances” determination seems compelled by the fact that violation of the TSs limit for the plant, whatever the cause of the temperature increase, requires a dual-unit shutdown; LBP-15-13, 81 NRC 456 (2015)

for limiting conditions for operation of a nuclear reactor, TSs must be established for each item meeting one or more of the four criteria specified in 10 C.F.R. 50.36(c)(2)(ii); DD-13-3, 78 NRC 571 (2013)

information on the amount, kind, and source of special nuclear material, the place of use, and the particular characteristics of the facility must be included; LBP-12-25, 76 NRC 540 (2012)

license amendment to eliminate numerous detailed procedures for monitoring routine radioactive releases from the TSs and transfer them to a licensee-controlled document would allow licensee to make future changes to the radiation monitoring procedures without going through another license amendment; LBP-12-25, 76 NRC 540 (2012)

licensee may take reasonable action that departs from a license condition or a TS in an emergency when the action is immediately needed to protect the public health and safety and no action consistent with license conditions and TSs that can provide adequate or equivalent protection is immediately apparent; DD-11-6, 74 NRC 420 (2011)

licensee must notify NRC as soon as practical and in all cases within 1 hour of the occurrence, of any deviation from a plant’s TS; DD-11-6, 74 NRC 420 (2011)

licensee must request a license amendment if the proposed action requires that existing TSs be changed; LBP-13-7, 77 NRC 307 (2013)
licensees must obtain NRC approval before implementing changes to the facility or facility procedures that do not meet certain criteria; DD-13-3, 78 NRC 571 (2013)

limiting conditions for operation are the lowest functional capability or performance levels of equipment required for safe operation of the facility; DD-13-3, 78 NRC 571 (2013)

limits for safety system settings and control settings, limiting conditions for operation, surveillance requirements, design features, and administrative controls must be included; DD-13-3, 78 NRC 571 (2013)

NRC has authority to determine, and to prescribe by rule or regulation, what additional information should be included in TSs to ensure public health and safety; LBP-12-25, 76 NRC 540 (2012); LBP-13-7, 77 NRC 307 (2013)

NRC revised 10 C.F.R. 50.36 in 1995 and established clearer criteria as to what constitutes a TS that must be in the license; LBP-12-25, 76 NRC 540 (2012)

NRC’s original rule governing TSs, 10 C.F.R. 50.36, was promulgated in 1968 and lacked well-defined criteria as to what requirements need to be a TS and what provisions need not be in the license; LBP-12-25, 76 NRC 540 (2012)

overall integrated leakage rate must not exceed the allowable leakage rate with margin, as specified in the Technical Specifications; LBP-15-26, 82 NRC 163 (2015)

petitioner must explain, with specificity, particular safety or legal reasons why moving a requirement from the license into a licensee-controlled document would be improper; LBP-12-25, 76 NRC 540 (2012)

petitioners’ reliance on loss of future opportunities to challenge by adjudicatory intervention licensee-initiated changes in the low-level effluent monitoring details fell short of an admissible contention; LBP-12-25, 76 NRC 540 (2012)

proximity presumption applied where petitioners’ contention concerned a license amendment to move the schedule for the withdrawal of reactor vessel material specimens from the TSs to the updated safety analysis report; LBP-15-17, 81 NRC 753 (2015)

reactor operating licenses must include TSs that include specific characteristics of the facility and such other information as the Commission may, by rule or regulation, deem necessary in order to enable it to find that the utilization of special nuclear material will provide adequate protection to the health and safety of the public; LBP-13-7, 77 NRC 307 (2013)

request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise TSs for spent fuel pool instrumentation is denied; DD-13-3, 78 NRC 571 (2013)

request that applicability for TS be revised to include secondary containment, secondary containment isolation dampers, standby gas treatment system, control room emergency ventilation, and control room air conditioning system, whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

request that applicability for TS be revised to include spent fuel storage pool water level and AC and DC sources and distribution systems for shutdown whenever irradiated fuel is stored in the spent fuel pool instead of only when irradiated fuel assemblies are being moved in the SFP or secondary containment is denied; DD-13-3, 78 NRC 571 (2013)

request that NRC modify the administrative controls section of the standard TSs for each operating reactor design to reference the approved EOP technical guidelines for that plant design is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

request that TS for control room emergency ventilation system instrumentation be changed to require that the control building air intake radiation-high function be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

request that TS for secondary containment isolation instrumentation be changed to require the reactor building exhaust radiation-high function to be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

revisions to TSs that are necessary to allow licensee to operate safely with the replacement steam generators after they have been installed require a license amendment; LBP-13-11, 78 NRC 177 (2013)

safety limits for nuclear reactors are limits on important process variables that are found to be necessary to reasonably protect the integrity of the physical barriers that guard against the uncontrolled release of radioactivity; DD-13-3, 78 NRC 571 (2013)

technical requirements that are incorporated in an NRC license are the TSs; LBP-12-25, 76 NRC 540 (2012)
subject index

to amend a license, including TSs in the license, an application for amendment must be filed, fully
describing the changes desired; CLI-15-22, 82 NRC 310 (2015)
TSs derived from the analyses and evaluations included in the safety analysis report are required;
DD-13-3, 78 NRC 571 (2013)
updated final safety analysis reports can be modified without a license amendment as long as the
modifications do not involve a change to the TSs or an unreviewed safety question; LBP-13-7, 77 NRC
307 (2013)
technical support center
NRC Staff found acceptable combined license applicant’s plan to use a single technical support center for
existing and proposed units, to be colocated in the basement of the new nuclear operations building,
between the protected areas of the three units, which is a departure from the AP1000 DCD; CLI-12-9,
75 NRC 421 (2012)
relocation of a technical support center requires separate NRC approval; CLI-12-9, 75 NRC 421 (2012)

temperature
alternate pressurized thermal shock rule changes how licensees derive projected reference temperatures for
the components of their reactor pressure vessels; LBP-15-17, 81 NRC 753 (2015)
application to use alternate pressurized thermal shock rule must contain the projected embrittlement
reference temperatures along various portions of the reactor pressure vessel, from the present to a future
point, compared to the alternate screening criteria; LBP-15-17, 81 NRC 753 (2015)
embrittlement model projects the reference temperatures for various parts of the reactor pressure vessel at
the end of life of the plant; LBP-15-17, 81 NRC 753 (2015)
in calculating embrittlement reference temperatures, licensee must calculate neutron flux through the
reactor pressure vessel using a methodology that has been benchmarked to experimental measurements
and with quantified uncertainties and possible biases; LBP-15-17, 81 NRC 753 (2015)
licensee can use a set of generic mean nil-ductility reference temperature values if measured values are
not available; LBP-15-17, 81 NRC 753 (2015)
licensee must establish the nil-ductility reference temperature for the reactor pressure vessel material in
the annealed state, before the reactor was operational, for various key points along the RPV;
LBP-15-17, 81 NRC 753 (2015)
licensees have to verify that their reference temperature calculations at the time of the application match
up with surveillance data; LBP-15-17, 81 NRC 753 (2015)
reactor pressure vessel temperature data from other plants are included, and licensees must consider these
data under certain circumstances; CLI-15-22, 82 NRC 310 (2015)
reference temperature shift is the difference in reference temperature from the unirradiated to the
post-irradiated states; LBP-15-17, 81 NRC 753 (2015)
reference temperature values are compared to the alternate screening criteria to determine whether the
reactor pressure vessel is safe to operate; LBP-15-17, 81 NRC 753 (2015)
requirements of 10 C.F.R. 50.61 are compared with new rule in section 50.61a to predict future reference
temperatures across the reactor pressure vessel; CLI-15-22, 82 NRC 310 (2015)
surveillance data must be used in the consistency check when it is a heat-specific match for one or more
of the materials for which the reference temperature is being calculated and three or more different
neutron fluences exist for a specific material; LBP-15-17, 81 NRC 753 (2015)
updated embrittlement model is used to predict future reference temperatures across the reactor pressure
vessel, which is then verified by existing surveillance data; CLI-15-22, 82 NRC 310 (2015)

temperature limits
alternate screening criteria consist of eighteen different reference temperature limits that depend on reactor
pressure vessel wall thickness and the part of the RPV under consideration; LBP-15-17, 81 NRC 753
(2015)
COL application included a request for a departure from the wet-bulb noncoincident temperature, which is
considered Tier 1 information and part of the certified design and thus a regulatory exemption is
required; CLI-12-9, 75 NRC 421 (2012)
“exigent circumstances” determination seems compelled by the fact that violation of the technical
specifications limit for the plant, whatever the cause of the temperature increase, requires a dual-unit
shutdown; LBP-15-13, 81 NRC 456 (2015)
SUBJECT INDEX

high temperature in the engineered safety feature switchgear rooms is discussed; DD-14-5, 80 NRC 205 (2014)
if the reference values projected at specific areas of the reactor pressure vessel for the end of life of the
plant surpass the current screening criteria, licensee must submit a safety analysis and obtain NRC
approval to continue to operate; LBP-15-17, 81 NRC 753 (2015)
request that NRC take enforcement action until licensee completes an independent root-cause assessment
for the rise in ultimate heat sink temperature is denied; DD-15-10, 82 NRC 201 (2015)
when the reference temperature of a reactor pressure vessel is above the screening limit, the RPV is
considered to have an unreasonably high risk of fracture from a pressurized thermal shock event;
LBP-15-17, 81 NRC 753 (2015)

TEMPORARY STORAGE RULE
all final decisions for licenses that relied on the Waste Confidence Decision and Temporary Storage Rule
were suspended; CLI-15-4, 81 NRC 221 (2015)
NRC’s Waste Confidence Decision Update and Temporary Storage Rule were invalidated because there
was not even a prospective site for a repository, let alone progress toward the actual construction of
one; LBP-14-16, 80 NRC 183 (2014)
regulation governing the storage and disposal of spent nuclear fuel was vacated; LBP-14-15, 80 NRC 151
(2014)

TERMINATION OF LICENSE
agreement state license termination regulations are not less protective than or incompatible with NRC’s in
making the terms of restricted release considerably more difficult than those for unrestricted release;
CLI-11-12, 74 NRC 460 (2011)
ALARA principle as a general regulatory principle or as used in NRC’s license termination rule does not
incorporate or call for any comparative analysis of doses from restricted and unrestricted release;
CLI-11-12, 74 NRC 460 (2011)
ALARA principle has been incorporated into the restricted-use portion of the license termination rule to
screen out sites that should be removing contamination to achieve unrestricted use; CLI-11-12, 74 NRC
460 (2011)
ALARA requirement in section 20.1101(b) applies to the dose criteria for license termination; CLI-11-12,
74 NRC 460 (2011)
because New Jersey has adopted more stringent criteria for license termination under restricted release
than for unrestricted release, as well as more conservative criteria than NRC’s, New Jersey’s regulations
are compatible with NRC’s agreement-state policy; CLI-13-6, 78 NRC 155 (2013)
despite having passed the initial eligibility test for restricted release, if licensee cannot satisfy dose
criteria, its site will not be considered acceptable for license termination under restricted conditions;
CLI-13-6, 78 NRC 155 (2013)
dose limit for license termination is a constraint within the public dose limit of 25 mrem per year to
members of the public; CLI-11-12, 74 NRC 460 (2011)
nothing in NRC license termination regulations, including the ALARA principle incorporated into section
20.1403(a), calls for a comparison of doses of the restricted-release and unrestricted-release
decommissioning options; CLI-13-6, 78 NRC 155 (2013)
NRC explicitly expressed a preference for unrestricted release in adopting its license termination rule;
CLI-11-12, 74 NRC 460 (2011)
NRC prefers that licensees satisfy radiation dose criteria for license termination through
unrestricted-release decommissioning if it is cost-beneficial to do so; CLI-13-6, 78 NRC 155 (2013)
sites will be considered acceptable for license termination under restricted conditions if licensee can
demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of
section 20.1402 would result in net public or environmental harm or were not being made because the
residual levels associated with restricted conditions are ALARA; CLI-13-6, 78 NRC 155 (2013)
termination for restricted use relies on legally enforceable institutional controls to achieve the 25-mrem
dose limit; CLI-11-12, 74 NRC 460 (2011)
termination for unrestricted use allows no dependence on governmental monitoring of engineered barriers
and land-use restrictions to achieve a maximum dose of 25 mrem per year to a member of the public;
CLI-11-12, 74 NRC 460 (2011)
unrestricted release and restricted release are both available as independent regulatory options that would provide adequate protection to the public health and safety if the applicable dose and other criteria are met; CLI-11-12, 74 NRC 460 (2011)

TERMINATION OF PROCEEDING

adjudicatory proceeding on license amendment is not terminated by issuance of the amendment; CLI-15-17, 82 NRC 33 (2015)
adjudicatory proceedings terminate if intervenor either settles or abandons all of its contentions; LBP-11-22, 74 NRC 259 (2011)
as a consequence of Commission ruling that board should have terminated the proceeding once it resolved all contentions, all of the board’s earlier interlocutory orders become ripe for appellate review; CLI-12-14, 75 NRC 692 (2012)
because previous licensing board terminated the adjudicatory proceeding that was convened to consider challenges to the operating license renewal application, challengers must satisfy the stringent requirements for reopening; LBP-12-10, 75 NRC 633 (2012)
boards may continue the adjudicatory proceeding until the deadlines for filing proposed new contentions have expired and the board has resolved all admitted and proposed contentions filed within the deadlines; LBP-11-22, 74 NRC 259 (2011)
if a board grants summary disposition of a foreign ownership contention, it could terminate the proceeding or move ahead with a pending environmental contention; LBP-12-19, 76 NRC 184 (2012)
licensing board’s dismissal of all pending contentions on mootness grounds due to new information ordinarily would terminate the proceeding, but new contentions could be filed on new information before termination; LBP-11-22, 74 NRC 259 (2011)
licensing board’s termination of the contested portion of a proceeding after granting summary disposition on the only pending contentions was not compelled by either precedent or regulation; LBP-11-22, 74 NRC 259 (2011)
motion to withdraw application without prejudice is granted and proceeding is terminated; CLI-14-8, 80 NRC 71 (2014)
NRC practice of closing the hearing record after resolution of the last live contention, and of holding new contentions to the higher reopening standard, has been upheld by higher courts; CLI-12-14, 75 NRC 692 (2012)
NRC Staff’s unopposed motion to terminate the proceeding is granted; LBP-11-12, 73 NRC 531 (2011)
NRC’s transfer of regulatory authority to the State of New Jersey is now final and the licensing board no longer has the jurisdiction it had retained over the proceeding, and the board terminates the proceeding; LBP-15-10, 81 NRC 390 (2015)
once all contentions have been decided, the contested proceeding is terminated; CLI-12-14, 75 NRC 692 (2012); CLI-14-6, 79 NRC 445 (2014); LBP-12-19, 76 NRC 184 (2012); LBP-15-9, 81 NRC 396 (2015); LBP-15-30, 82 NRC 339 (2015)
operating license renewal proceeding is terminated following Commission reversal of board’s decision admitting three contentions; LBP-15-25, 82 NRC 161 (2015)
proceeding is terminated because applicants have failed to provide information to show that they have changed their ownership situation so as to satisfy foreign ownership, control, and domination requirements; LBP-12-22, 76 NRC 443 (2012)
proceeding is terminated following Commission reversal of board decision admitting one contention; LBP-15-31, 82 NRC 358 (2015)
terminating an adjudication has significant implications for the rights of intervenors under Atomic Energy Act § 189a; LBP-11-22, 74 NRC 259 (2011)
termination with prejudice bars relitigation of similar issues; LBP-15-21, 82 NRC 1 (2015)
with board’s termination of the proceeding, interlocutory rulings on contention admissibility became ripe for appeal; CLI-11-9, 74 NRC 233 (2011)

TERRORISM

any changes in NRC rules post-9/11 that might bear on license renewal reviews could be addressed via late-filed contentions; CLI-11-5, 74 NRC 141 (2011)
applicants should rely on the generic environmental impact statement for terrorism-related issues in a license renewal application; CLI-11-11, 74 NRC 427 (2011)

1376
as an alternative ground for excluding a NEPA terrorism contention, NRC Staff’s determination in the generic environmental impact statement that the environmental impacts of a terrorist attack were bounded by those resulting from internally initiated events is sufficient to address the environmental impacts of terrorism; CLI-11-11, 74 NRC 427 (2011)
based on his education and experience, intervenors’ witness was found qualified to testify but not specifically on issues related to nuclear engineering, such as events at the Fukushima Dai-ichi plant, core damage frequency calculations, and effectiveness of SAMDAs; LBP-11-38, 74 NRC 817 (2011)
board applied the late-filing standards to a post-9/11 contention related to the risk of a terrorist attack on the ISFSI and found the contention timely but denied admission of both the safety and environmental aspects; CLI-11-5, 74 NRC 141 (2011)
Commission has determined that there is no relationship between NRC licensing actions and terrorism; LBP-12-21, 76 NRC 218 (2012)
Commission responses to requests for suspension of reactor licensing reviews and associated adjudications in the wake of the Three Mile Island accident and 9/11 terrorist attacks are discussed; LBP-11-37, 74 NRC 774 (2011)
issues are dependent upon the actions and decisions of the President, Congress, international organizations, and officials of other nations, and constitute issues of international policy unrelated to NRC’s licensing criteria; LBP-12-21, 76 NRC 218 (2012)
licensing boards applied existing procedural rules to new contentions and motions to reopen filed in response to the September 11, 2001, terrorist attacks; CLI-12-13, 75 NRC 681 (2012)
NEPA does not require NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-11-11, 74 NRC 427 (2011); LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
NRC has analyzed terrorist acts in connection with license renewal and concluded that the core damage and radiological release from such acts would be no worse than the damage and release expected from internally initiated events; LBP-11-2, 73 NRC 28 (2011)
NRC is required to analyze potential terrorist attacks as part of its NEPA review with regard to facilities located in the Ninth Circuit; CLI-11-11, 74 NRC 427 (2011); LBP-12-21, 76 NRC 218 (2012); LBP-14-6, 79 NRC 404 (2014)
petition for suspension of proceeding following 9/11 attack was denied because even if the licensing, construction, and shipping processes went forward as planned, no radiological materials would be present onsite for at least 2 years, so there was no immediate threat to public safety; CLI-11-5, 74 NRC 141 (2011)
petitioners asserted that NRC actions following the events of September 11, 2001, and the accident at Fukushima Dai-ichi were insufficient to satisfy NRC’s general obligation under the Atomic Energy Act to protect public health and safety; CLI-15-4, 81 NRC 221 (2015)
post-9/11 abeyance of a proceeding was denied where the proceeding was at an early stage, there was no risk of immediate threat to public health and safety, there were non-terrorism-related contentions to be considered, and the only harm to petitioner would be inevitable litigation costs; CLI-11-5, 74 NRC 141 (2011)
post-9/11 suspension was neither necessary nor appropriate where shipments of spent fuel to the facility were at least 2 years down the road; CLI-11-5, 74 NRC 141 (2011)
protecting against the threat of air attacks is not within licensees’ responsibilities because a private security force cannot reasonably be expected to defend against such attacks and adequate protection is ensured through the actions of other federal agencies with defense capabilities and air-safety expertise; CLI-11-4, 74 NRC 1 (2011)
TESTIMONY
at the request of any party a court must order witnesses excluded so that they cannot hear other witnesses’ testimony; LBP-12-21, 76 NRC 218 (2012)
courts exclude witnesses prior to their testimony to discourage or expose outright fabrication and restrain the natural tendency of witnesses to tailor their testimony to that of earlier witnesses; LBP-12-21, 76 NRC 218 (2012)
expert opinion that merely states a conclusion without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-15-23, 82 NRC 321 (2015)
written prefilled testimony and exhibits are typically submitted well in advance of the evidentiary hearing, and in most common types of hearings, licensing boards themselves, not the parties, orally examine the witnesses; LBP-12-21, 76 NRC 218 (2012)

TESTING

acceptance criteria for Type A leak rate limits embodied in the technical specification are established to ensure that, in the event of a design-basis accident, the dose received by a member of the public will not exceed the regulatory limits; LBP-15-26, 82 NRC 163 (2015)

although licensee can change from one proven test to another without prior NRC approval, it would need to follow the screening process under 10 C.F.R. 50.59 to ensure that it doesn’t affect safety of the plant; LBP-13-13, 78 NRC 246 (2013)

Commission placed no historical-event restriction on reactors electing to comply with Appendix J through performance-based testing; LBP-15-26, 82 NRC 163 (2015)

even if licensee chooses to satisfy a license condition by incorporating the condition into its inservice testing program, it still must comply with 10 C.F.R. 50.55a(f)(4) throughout the life of the plant; CLI-12-9, 75 NRC 421 (2012)

if a different state-of-the-art test is developed prior to the time of the actual testing, applicant is allowed the flexibility to use the state-of-the-art test, subject to a prescreening for whether NRC approval is required; LBP-13-13, 78 NRC 246 (2013)

inservice testing and inspection program for squib valves in combined license applications is discussed; CLI-15-13, 81 NRC 555 (2015)

intervenors opposed renewal of the nuclear power plant license, and proposed new contentions for increased ultrasonic testing of sand bed epoxy coating integrity; LBP-15-1, 81 NRC 15 (2015)

intervenors’ requests for more testing, more methods of testing, and more information, without an explanation of why the current program is inadequate, do not create a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)

licensees may make changes in the procedures described in the updated final safety analysis report and conduct tests or experiments not otherwise described in the UFSAR, without obtaining a license amendment; CLI-14-4, 79 NRC 249 (2014)

licensees must conduct periodic containment leakage tests to ensure that leakage does not exceed the allowable rates specified in the technical specifications and the containment will perform its design function following an accident up to and including the plant design-basis accident; LBP-15-26, 82 NRC 163 (2015)

no reduction in the amount of fracture toughness testing is allowed without NRC approval; CLI-15-23, 82 NRC 321 (2015)

NRC could require modifications to the inservice testing program pursuant to compliance backfit provisions; CLI-12-2, 75 NRC 63 (2012)

purpose of the testing program for squib valves is to ensure that the valves operate as intended under design conditions; CLI-15-13, 81 NRC 555 (2015)

required Type A containment leakage tests measure total leakage rate from all potential paths, including containment liner welds, valves, fittings, and components that penetrate the containment; LBP-15-26, 82 NRC 163 (2015)

simply referencing a study without explaining the information’s significance relative to the potential containment leakage monitored by the testing at issue does not establish its materiality; LBP-15-26, 82 NRC 163 (2015)

to reach a finding of reasonable assurance that the public health and safety will be protected, the Commission imposed a license condition relating to a testing program for squib valves; CLI-12-9, 75 NRC 421 (2012)

Type B pneumatic tests detect and measure local leakage rates across pressure-retaining, leakage-limiting boundaries other than valves; LBP-15-26, 82 NRC 163 (2015)

Type C pneumatic tests measure containment isolation valve leakage rates; LBP-15-26, 82 NRC 163 (2015)

See also Surveillance Testing
TESTS
any operation of that might result in in-plane vibrations due to fluid elastic instability is inconsistent with
the analyses or descriptions in the UFSAR is the type of test or experiment that triggers the obligation
to seek a license amendment; LBP-13-7, 77 NRC 307 (2013)
licensee must seek a license amendment before implementing a test or experiment that will result in a
departure from a method of evaluation described in the updated final safety analysis report used in
establishing the design basis or in the safety analysis; LBP-13-7, 77 NRC 307 (2013)
licensees must periodically update their final safety analysis reports to reflect changes to the facility,
make changes in the procedures as described in the UFSAR, and conduct tests or experiments not
described in the UFSAR; LBP-13-7, 77 NRC 307 (2013)
“tests or experiments not described in the UFSAR” constitute any activity where any structure, system, or
component is utilized or controlled in a manner that is either outside the reference bounds of the design
bases as described in the UFSAR or inconsistent with the analyses or descriptions in the UFSAR;
LBP-13-7, 77 NRC 307 (2013)

THEFT
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to
rapidly assess the validity of alleged thefts; LBP-14-1, 79 NRC 39 (2014)
capability to rapidly assess the validity of alleged thefts is aimed at the rapid determination of whether an
actual loss of 5 or more formula kilograms occurred; LBP-14-1, 79 NRC 39 (2014)
capability to resolve alarms within approved time periods is most clearly aimed at the prompt
investigation of anomalies potentially indicative of SSNM losses; LBP-14-1, 79 NRC 39 (2014)
contention challenging applicant’s ability to rapidly assess the validity of alleged thefts is decided;
LBP-14-1, 79 NRC 39 (2014)
contention that applicant’s revised material control and accounting plan fails to show how confirmation
and verification of theft of plutonium will be carried out in the specified timelines is inadmissible;
CLI-15-9, 81 NRC 512 (2015)
licensee must be able to rapidly assess the validity of alleged thefts; CLI-15-9, 81 NRC 512 (2015)
licensees are not required to conduct assessments of alleged thefts without the use of their records
systems, or by first verifying the integrity and accuracy of those records systems; LBP-14-1, 79 NRC
39 (2014)
no requirement to quantify the potential for an adversary to take measures to conceal any abnormalities in
MMIS and PLC mapping can reasonably be found in (or implied by) the language of 10 C.F.R.
74.55(b)(1); LBP-14-1, 79 NRC 39 (2014)
“power of detection” means the probability that the critical value of a statistical test will be exceeded
when there is an actual loss of a specific quantity of strategic special nuclear material; CLI-15-9, 81
NRC 512 (2015)
rapid determination of SSNM theft assessment should be completed within an 8- or 72-hour timeline;
LBP-14-1, 79 NRC 39 (2014)

THREE MILE ISLAND ACCIDENT
Commission responses to requests for suspension of reactor licensing reviews and associated adjudications
in the wake of the TMI accident and 9/11 terrorist attacks are discussed; LBP-11-37, 74 NRC 774
(2011)
Commission temporarily suspended the immediate effectiveness rule following the TMI accident;
CLI-11-5, 74 NRC 141 (2011)
following the accident, NRC set safety goals with respect to severe accidents; LBP-12-18, 76 NRC 127
(2012)
licensing boards applied existing procedural rules to new contentions and motions to reopen filed in
response to the TMI accident; CLI-12-13, 75 NRC 681 (2012)
petitioner’s challenge to applicant’s use of TMI data constitutes a genuine dispute on a material issue and
is within the scope of the license renewal proceeding because it challenges the adequacy of the
environmental report; LBP-12-8, 75 NRC 539 (2012)
where the time for filing contentions had expired in a given case, no new TMI-related contentions would
be accepted absent a showing of good cause and a balancing of the late-filing factors; CLI-11-5, 74
NRC 141 (2011)
TIME LIMITED AGING ANALYSES

aging management review is required only for equipment that performs its intended function without moving parts or without a change in configuration or property; LBP-15-6, 81 NRC 314 (2015)

applicants must reassess any TLAAs to show either that the analyses will remain valid throughout the period of extended operation or that the effects of aging on the subject component will be managed during that time period; CLI-15-6, 81 NRC 340 (2015)

contention that does not actually challenge any specific part of the integrated plant assessment or TLAAs fails to demonstrate the existence of a genuine dispute with applicant; LBP-15-6, 81 NRC 314 (2015)

license renewal applicants are required to reassess any TLAAs that were based upon a particular time period, such as an assumed service life of a specific number of years or some period of operation defined by the original 40-year license term; LBP-13-13, 78 NRC 246 (2013)

license renewal safety review is limited to licensee’s management of aging for certain systems, structures, and components, and review of TLAAs; LBP-15-5, 81 NRC 249 (2015)

operating license renewal applicants must reassess TLAAs made during the original license term and based upon the length of the original license term; LBP-11-21, 74 NRC 115 (2011)

reassessment of TLAAs must show that the earlier analysis will remain valid for the extended operation period or modify and extend the analysis to apply to a longer term, such as 60 years, or otherwise demonstrate that the effects of aging will be adequately managed in the renewal term; LBP-13-13, 78 NRC 246 (2013)

relay switches and snubbers are not subject to an aging management review; LBP-15-6, 81 NRC 314 (2015)

to evaluate an operating license renewal application, the NRC reviews the management of aging effects and TLAAs of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)

TIME LIMITS

licensees must activate the emergency response data system as soon as possible but not later than 1 hour after declaring an Emergency Class of alert, site area emergency, or general emergency; CLI-15-20, 82 NRC 211 (2015)

licensees shall resolve the nature and cause of any MCA alarm within approved time periods; LBP-14-1, 79 NRC 39 (2014)

material control and accounting alarms are not required to be resolved within any particular time frame, only that a time period be approved by NRC Staff; LBP-14-1, 79 NRC 39 (2014)

NRC must be notified within 24 hours of failure to resolve an alarm within the approved time period; LBP-14-1, 79 NRC 39 (2014)

petitioner provides no support for the proposition that applicant must demonstrate that each individual resolution method can be completed, by itself, within the approved time period; LBP-14-1, 79 NRC 39 (2014)

rapid determination of strategic special nuclear material theft assessment should be completed within an 8- or 72-hour timeline; LBP-14-1, 79 NRC 39 (2014)

there is no time limit on when a licensee can seek an amendment to the license conditions relating to its decommissioning trust fund; LBP-15-24, 82 NRC 68 (2015)

TOTAL EFFECTIVE DOSE EQUIVALENT
dose limit for individual members of the public from a licensed activity is 100 millirem per year; CLI-11-12, 74 NRC 460 (2011)

for license termination under restricted conditions, licensee must provide legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 mrem (0.25 mSv) per year; CLI-13-6, 78 NRC 155 (2013)
sites will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a Total Effective Dose Equivalent to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and that the residual radioactivity has been reduced to levels that are as low as reasonably achievable; CLI-13-6, 78 NRC 155 (2013)
SUBJECT INDEX

TRAINING
license applications will be approved if, in addition to other requirements met, applicant is qualified by
training and experience to use the material for the purpose requested in such manner as to protect
health and minimize danger to life or property; DD-14-4, 79 NRC 506 (2014)
licensee is banned from engaging in NRC-licensed activities, including performing, supervising, or
assisting in any industrial radiographic operations and must complete a formal radiation safety officer
training course; LBP-15-21, 82 NRC 1 (2015)
petitioner’s concern that information provided by licensee concerning training received by its employees
was not accurate and in violation was not substantiated; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to conduct periodic training and exercises for multiunit and prolonged
station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to modify the technical guidelines to include emergency operations
procedures, severe accident mitigation guidelines, and extensive damage mitigation guidelines in an
integrated manner, specify clear command and control strategies for their implementation, and stipulate
appropriate qualification and training for those who make decisions during emergencies is being
addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
whether exercise frequency is adequate to maintain personnel knowledge and skill to implement
emergency responsibilities for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC
455 (2011)
TRANSBOUNDARY IMPACTS
First Nations in Canada must receive invitations to participate in the environmental impact statement
scoping process when there are transboundary environmental impacts from a project; LBP-12-12, 75
NRC 742 (2012)
NEPA regulations do not apply to any environmental effects that NRC’s domestic licensing and related
regulatory functions may have upon the environment of foreign nations; LBP-12-12, 75 NRC 742
(2012)
TRANSCRIPTS
transcript of Atomic Safety and Licensing Board hearings will be available for inspection in the agency’s
public records system; LBP-11-5, 73 NRC 131 (2011)
TRANSFER OF CONTROL
NRC approval is required for transfer of control of ownership and/or operating authority responsibilities
within the facility operating license; DD-15-8, 82 NRC 107 (2015)
NRC’s transfer of regulatory authority to the State of New Jersey is now final and the licensing board no
longer has the jurisdiction it had retained over the proceeding, and the board terminates the proceeding;
LBP-15-10, 81 NRC 399 (2015)
TRANSFORMERS
board compared transformers with other types of components listed in 10 C.F.R. 54.21(a)(1)(i) as
expressly subject to or excluded from aging management review; CLI-15-6, 81 NRC 340 (2015)
board examined how a transformer performs its intended function to determine whether it undergoes a
change in configuration or properties; CLI-15-6, 81 NRC 340 (2015)
transformers perform their intended function through a change in state similar to switchgear, power
supplies, battery chargers, and power inverters which have been excluded from aging management
review; CLI-15-6, 81 NRC 340 (2015)
TRANSIMISSION LINES
adequacy of NRC Staff’s review of transmission-corridor impacts might be appropriate for the board’s
consideration sua sponte; CLI-15-1, 81 NRC 1 (2015)
agency’s consideration of three alternative routes is sufficient to meet its NEPA obligations to consider
reasonable transmission line route alternatives; LBP-11-6, 73 NRC 149 (2011)
although NRC takes the position that it lacks authority to impose environmental restrictions on
transmission corridors, those impacts should have been analyzed as a direct effect of the NRC action
even under NRC’s new interpretation; LBP-14-9, 80 NRC 15 (2014)
approval of permits to a nuclear power plant was conditioned on the rerouting of two offsite transmission
lines to avoid environmental impacts on marshlands, tree species, and migratory waterfowl; LBP-14-9,
80 NRC 15 (2014)
SUBJECT INDEX

building of transmission lines is excluded from the definition of construction; LBP-14-9, 80 NRC 15 (2014)

by 1974, NRC had adopted an aggressive approach to its environmental responsibilities in the context of transmission line siting; LBP-14-9, 80 NRC 15 (2014)

excluding the transmission corridor from the scope of the proposed action also removes it from the limitation on actions; LBP-14-9, 80 NRC 15 (2014)

for an action such as a transmission corridor that will not be constructed by or expressly permitted by the federal agency preparing an environmental impact statement, there must be sufficient federal control and responsibility that the action qualifies as a federal action; LBP-14-9, 80 NRC 15 (2014)

for construction of a transmission corridor to constitute a connected action, three requirements must be met; LBP-14-9, 80 NRC 15 (2014)

impacts of the possible routes that applicant will use for its transmission lines must be analyzed for applicant to give the NRC the requisite information to make an informed decision on its license application; LBP-11-6, 73 NRC 149 (2011)

in ruling that NRC had appropriately interpreted the Atomic Energy Act to include regulatory authority over attendant transmission lines, the court did not decide whether NEPA is an independent source of substantive jurisdiction; LBP-14-9, 80 NRC 15 (2014)

in the 2007 limited work authorization rule, NRC decided that the building of transmission lines to serve a nuclear power plant would no longer be classified as a construction activity and would no longer require authorization from NRC; LBP-14-9, 80 NRC 15 (2014)

Limited Work Authorization Rule expressly excludes transmission lines from the delineated construction activities that would require NRC approval before being undertaken; CLI-15-1, 81 NRC 1 (2015)

NEPA’s requirement to discuss alternatives to the proposed action does not extend to the construction of transmission line corridors, because it is not “construction” as defined in 10 C.F.R. 50.10; LBP-11-6, 73 NRC 149 (2011)

NRC authority to review offsite impacts of transmission lines goes beyond merely factoring them into a final cost-benefit balance and includes as well authority where necessary to impose license conditions to minimize those impacts; LBP-11-6, 73 NRC 149 (2011)

NRC can, as a condition of licensure, insist that offsite transmission lines built solely to serve a nuclear facility be designed to minimize environmental disturbance; LBP-14-9, 80 NRC 15 (2014)

NRC has authority to impose environmental restrictions on new transmission lines intended to serve new nuclear power plants; LBP-14-9, 80 NRC 15 (2014)

NRC has long interpreted its statutory authority under the Atomic Energy Act to include conditioning approval of nuclear power plant licenses on environmentally acceptable routing of transmission lines; LBP-14-9, 80 NRC 15 (2014)

NRC’s decision to include transmission lines that serve a nuclear power plant within the definition of “utilization facility” in NEPA, 42 U.S.C. § 2014(cc), was upheld; LBP-14-9, 80 NRC 15 (2014)

power plants without transmission lines are like airplanes that can’t fly; LBP-14-9, 80 NRC 15 (2014)

proposed transmission-line corridor is discussed; CLI-15-13, 81 NRC 555 (2015)

regulation of offsite transmission lines is within NRC’s authority under section 101 of the Atomic Energy Act and nothing in the AEA precludes NRC from implementing, through issuance of conditional licenses, NEPA’s environmental mandate; LBP-14-9, 80 NRC 15 (2014)

shared transmission corridor is an offsite transmission line excluded from environmental impact analysis; LBP-15-5, 81 NRC 249 (2015)

where increased air pollution in California resulting from two export turbines at a Mexican plants was a direct effect of the new transmission lines, DOE was required to evaluate the air pollution impacts under NEPA; LBP-14-9, 80 NRC 15 (2014)

TRANSMISSION SERVICES

member transmission providers are owners of transmission facilities, with the regional transmission organization exercising functional control over those facilities, calculating available transmission capability, and receiving, approving, and scheduling transmission service; LBP-12-15, 76 NRC 14 (2012)

regional transmission organization status was granted to provide open access to an electricity transmission system to all member utilities in 15 Midwestern states and one Canadian province; LBP-12-15, 76 NRC 14 (2012)
SUBJECT INDEX

TRANSPARENCY
NRC has a strong policy in favor of openness and transparency; LBP-11-5, 73 NRC 131 (2011)

TRANSPORTATION OF RADIOACTIVE MATERIALS
every environmental report prepared for the construction permit stage, the early site permit stage, or the
combined license stage of a light-water-cooled nuclear power reactor must contain a statement
concerning transportation of fuel and radioactive wastes to and from the reactor; LBP-12-12, 75 NRC
742 (2012)
section 51.52(b) does not establish limits on power or on fuel enrichment, but instead requires applicant
to perform an analysis if the conditions of section 51.52(a) are not met; LBP-12-12, 75 NRC 742
(2012)

TRANSPORTATION OF SPENT FUEL
cask certification for transportation poses such a minimal environmental impact that it merits a categorical
exclusion from NEPA; LBP-14-6, 79 NRC 404 (2014)
post-9/11 suspension was neither necessary nor appropriate where shipments of spent fuel to the facility
were at least 2 years down the road; CLI-11-5, 74 NRC 141 (2011)

TREATIES
Indian tribe’s treaty-based claims of ownership of mining site and international treaty-based claims cannot
support the admission of environmental assessment contention; LBP-15-11, 81 NRC 401 (2015)

TRITIUM
dose limits from tritium in groundwater for individual members of the public were never approached;
DD-11-1, 73 NRC 7 (2011)
NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater
remains well below the ALARA dose objectives; DD-11-1, 73 NRC 7 (2011)
petition requesting that the NRC not allow restart after scheduled refueling outage until completion of all
environmental remediation work and relevant reports on leaking tritium at the plant is denied; DD-11-1,
73 NRC 7 (2011)
petitioners’ request for cold shutdown because of radiological contamination of groundwater from tritium
is denied; DD-11-3, 73 NRC 375 (2011)

TRUST RELATIONSHIP DOCTRINE
allegation that the Continued Storage Rule and generic environmental impact statement fail to address the
trust responsibility the NRC owes an Indian tribe represents a collateral attack on the Continued Storage
Rule and GEIS; LBP-14-16, 80 NRC 183 (2014)
applicant is not required to discuss the federal government’s trust responsibility to Indian tribes in its
environmental report; LBP-12-24, 76 NRC 503 (2012)
applicant owes no duty to address the federal government’s trust responsibility in its environmental report;
LBP-14-6, 79 NRC 404 (2014)
contention that NRC has not fulfilled its trust responsibility in its analysis and conclusion of the
cumulative impacts on historic and cultural resources from the reasonably foreseeable expansion of an
independent spent fuel storage installation is admissible; LBP-14-6, 79 NRC 404 (2014)
federal government owes a trust responsibility to Indian tribes; LBP-12-24, 76 NRC 503 (2012)
federal trust responsibility to Indian tribes extends not just to the Interior Department, but attaches to the
federal government as a whole; LBP-12-24, 76 NRC 503 (2012)
federal trust responsibility to Indian tribes rests solely with the federal government and cannot be
discharged by applicants; LBP-12-24, 76 NRC 503 (2012)
for federal agencies that do not manage, control, or supervise Indian affairs, unless there is a specific
duty that has been placed on the agency with respect to Indians, this responsibility is discharged by the
agency’s compliance with general regulations and statutes not specifically aimed at protecting Indian
tribes; LBP-14-6, 79 NRC 404 (2014)
government fulfills its trust duties by executing federal law, not by waiving federal law; LBP-14-6, 80
NRC 183 (2014)
government’s trust responsibility is at its apex when it comes to managing tribal resources and preventing
confiscation or environmental degradation of those resources; LBP-14-6, 80 NRC 183 (2014)
NRC considered Indian tribe’s trust responsibility concerns during its rulemaking; LBP-14-16, 80 NRC
183 (2014)

1383
NRC exercises its fiduciary duty in the context of its authorizing statutes, including the Atomic Energy Act, and implements any fiduciary responsibility by ensuring that tribal members receive the same protections under implementing regulations that are available to other persons; LBP-14-16, 80 NRC 183 (2014)

TURBINE BUILDING
request that NRC immediately shut down plants until all turbine building high-energy line break concerns are identified and those important to safety were corrected is granted in part; DD-14-5, 80 NRC 205 (2014)

U.S. ARMY CORPS OF ENGINEERS
contention alleging deficiencies in compensatory mitigation methods under the Clean Water Act lack alleged facts or expert opinions; LBP-15-23, 82 NRC 55 (2015)
contention asserting that draft environmental impact statement must include the CWA 404 permit analysis in order to satisfy NEPA fails to raise a material issue; LBP-15-23, 82 NRC 55 (2015)
NRC Staff’s environmental review was conducted in cooperation with ACE, with NRC acting as lead agency and ACE as cooperating agency under a memorandum of understanding because applicants also needed permits from ACE to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012)
petitioner’s demand for compliance with U.S. Army Corps of Engineers requirements is not within the scope of a combined license proceeding, because it is not the province of the NRC to enforce another agency’s regulations; LBP-11-6, 73 NRC 149 (2011)

U.S. CONSTITUTION
equal protection principles require that all persons similarly situated shall be treated alike; LBP-11-15, 73 NRC 629 (2011)
Supreme Court is permitted to decide legal questions only in the context of actual cases or controversies; CLI-13-9, 78 NRC 551 (2013)
the equal protection component of the Fifth Amendment’s Due Process Clause applies to federal action, and the Equal Protection Clause of the Fourteenth Amendment applies to state action; LBP-11-15, 73 NRC 629 (2011)

UNCERTAINTIES
because need-for-power assessments necessarily entail forecasting power demands in light of substantial uncertainty and the duty of providing adequate and reliable service to the public, they are inherently conservative; LBP-11-7, 73 NRC 254 (2011)
Commission requests briefing from NRC Staff on the level of uncertainty that NRC Staff considers acceptable for the implementation cost portion of the cost-benefit analysis, and why; CLI-15-3, 81 NRC 217 (2015)
decisionmakers must weigh the cost of uncertainty; LBP-15-3, 81 NRC 65 (2015)
NEPA does not require agencies to resolve all uncertainties, including uncertainties associated with the NUREG-1150 values used in the severe accident mitigation alternatives analysis; LBP-13-13, 78 NRC 246 (2013)

UNCONTESTED ISSUES
because the scope of intervenors’ participation in adjudications is limited to their admitted contentions, they are barred from participation in the uncontested portion of the hearing; LBP-14-9, 80 NRC 15 (2014)
licensing board role is not confined to arbitration of those environmental controversies as may happen to have been placed before them by the litigants in the particular case; LBP-14-9, 80 NRC 15 (2014)
NRC must conduct a hearing on the uncontested environmental and safety aspects of the proposed plant; LBP-13-4, 77 NRC 107 (2013)

UNCONTESTED LICENSE APPLICATIONS
boards are to make independent environmental judgments with respect to certain NEPA findings, though even then they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-26, 74 NRC 499 (2011)
boards may entertain oral and written limited appearance statements from members of the public in connection with a mandatory uncontested proceeding; LBP-11-26, 74 NRC 499 (2011) for mandatory proceeding on a uranium enrichment facility license, a licensing board is to conduct a simple sufficiency review rather than a de novo review on both safety and environmental issues; LBP-11-26, 74 NRC 499 (2011) function of uncontested hearings is only to review the adequacy of NRC Staff’s work, not to make a de novo inquiry into NEPA issues; LBP-14-9, 80 NRC 15 (2014) in operating license proceeding, the Commission would informally review the Staff recommendations, and the license would issue only after Commission action; CLI-11-5, 74 NRC 141 (2011) licensing board must narrow its inquiry to those topics or sections in Staff documents that it deems most important and should concentrate on portions of the documents that do not on their face adequately explain the logic, underlying facts, and applicable regulations and guidance; LBP-11-26, 74 NRC 499 (2011) NRC has a duty to ensure, among other things, that it has adhered to its obligations under the National Environmental Policy Act; CLI-15-1, 81 NRC 1 (2015) NRC needs to conduct only a single licensing action and adjudicatory proceeding to authorize construction and operation of a mandatory hearing regarding the application and the Staff’s associated safety and environmental reviews, despite the absence of a petitioner challenging applicant’s request; LBP-11-26, 74 NRC 499 (2011) NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-26, 74 NRC 499 (2011) uncontested early site permit proceeding is subject to mandatory hearing requirements; LBP-11-10, 73 NRC 424 (2011)

UNRESOLVED SAFETY ISSUES
applicant can only make a change in its procedures if screening demonstrates that 10 C.F.R. 50.59 does not apply or if the review under this regulation demonstrates that there are no remaining unreviewed safety questions; LBP-13-13, 78 NRC 246 (2013)

UNRESTRICTED RELEASE
agreement state license termination regulations are not less protective than or incompatible with NRC’s in making the terms of restricted release considerably more difficult than those for unrestricted release; CLI-11-12, 74 NRC 460 (2011) ALARA principle as a general regulatory principle or as used in NRC’s license termination rule does not incorporate or call for any comparative analysis of doses from restricted and unrestricted release; CLI-11-12, 74 NRC 460 (2011) ALARA principle has been incorporated into the restricted-use portion of the license termination rule to screen out sites that should be removing contamination to achieve unrestricted use; CLI-11-12, 74 NRC 460 (2011) board provides textual analysis and additional clarifying explanation of its interpretation of 10 C.F.R. 20.1403(a); CLI-13-6, 78 NRC 155 (2013) doses yielded by restricted-release and unrestricted-release decommissioning options are not susceptible to being compared meaningfully because of the significantly different risks and uncertainties associated with each option; CLI-13-6, 78 NRC 155 (2013) if no radiological hazards exist at the site, the license can be terminated, and the site can be considered an unrestricted area; CLI-13-1, 77 NRC 1 (2013) nothing in NRC license termination regulations, including the ALARA principle incorporated into section 20.1403(a), calls for a comparison of doses of the restricted-release and unrestricted-release decommissioning options; CLI-13-6, 78 NRC 155 (2013) NRC explicitly expressed a preference for unrestricted release in adopting its license termination rule; CLI-11-12, 74 NRC 460 (2011) NRC regulations neither explicitly nor implicitly require a comparison of the levels of protection afforded by the unrestricted and restricted decommissioning options; CLI-11-12, 74 NRC 460 (2011) one of the benefits of removing enough radioactivity to cross the 25-mrem threshold is that the value of the affected property is likely to increase, and it is in this sense that NRC guidelines contemplate, as
part of the ALARA analysis, a comparison between restricted release and unrestricted release; CLI-13-6, 78 NRC 155 (2013)
“reductions in residual radioactivity” refers only to dose reductions to the public that can be accomplished solely through the steps associated with unrestricted-release decommissioning, i.e., removal of contaminated material or decontamination; CLI-13-6, 78 NRC 155 (2013)
sites will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a Total Effective Dose Equivalent to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and that the residual radioactivity has been reduced to levels that are as low as reasonably achievable; CLI-13-6, 78 NRC 155 (2013)
terminating a license for unrestricted use allows no dependence on governmental monitoring of engineered barriers and land-use restrictions to achieve a maximum dose of 25 mrem per year to a member of the public; CLI-11-12, 74 NRC 460 (2011)
unrestricted release and restricted release are both available as independent regulatory options that would provide adequate protection to the public health and safety if the applicable dose and other criteria are met; CLI-11-12, 74 NRC 460 (2011)

URANIUM ENRICHMENT FACILITIES

all credible accident sequences must be identified in the ISA Summary as well as items relied on for safety and necessary safety controls; LBP-12-21, 76 NRC 218 (2012)
along with the requirement to perform an integrated safety analysis is the requirement for applicant to provide the NRC Staff with an ISA summary, the content of which is specified in 10 C.F.R. 70.65(b); LBP-11-11, 73 NRC 455 (2011)
analysis of potential volcanic hazard at applicant’s site raises the question of whether the probability of such an event is sufficiently low to be considered “highly unlikely”; LBP-11-11, 73 NRC 455 (2011)
applicant and NRC Staff treatment of need for the construction and operation of uranium enrichment facilities should explain why the proposed action is needed, describe the underlying need for the proposed action, but should not be written merely as a justification of the proposed action or to alter the choice of alternatives; LBP-11-26, 74 NRC 499 (2011)
appli cant for a Part 70 license is required to establish and maintain a safety program, which includes performing an integrated safety analysis; LBP-11-11, 73 NRC 455 (2011)
appli can t is not required by NRC to submit a redress plan relative to preconstruction activities or, absent state or local requirements, take any remedial action regarding preconstruction activities if it decides not to complete the project or is denied agency authorization to construct and operate the facility; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
appli can t is required to evaluate and reduce the risk of events that could have significant impacts on workers or the public; LBP-12-21, 76 NRC 218 (2012)
appli can t is required to prepare an environmental report; LBP-12-21, 76 NRC 218 (2012)
appli can t is to provide an items-relied-on-for-safety boundary package to verify that a facility is constructed in accord with all license requirements; LBP-11-11, 73 NRC 455 (2011)
appli can t must establish and maintain a configuration management system to evaluate, implement, and track changes to the site, structures, processes, systems, equipment, components, computer programs, and activities of personnel; LBP-12-21, 76 NRC 218 (2012)
appli can t must indicate the period of time for which a Part 70 license is requested; LBP-11-11, 73 NRC 455 (2011)
appli can t seeking a specific license for a facility is required to submit a decommissioning funding plan consistent with 10 C.F.R. 70.25(e); CLI-11-4, 74 NRC 1 (2011)
appli can t seeks an exemption from regulations to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 455 (2011)
appli can t’s commitment to monitoring and the corrective action program provides reasonable assurance that public health and safety will be protected and applicant has a program in compliance with the regulations; LBP-12-21, 76 NRC 218 (2012)
applicant’s commitment to use a letter of credit issued by a financial institution whose operations are regulated and examined by a federal or state agency complies with the regulatory requirements for decommissioning financial assurance; LBP-11-26, 74 NRC 499 (2011)

applicant’s integrated safety analysis must consider potential accident sequences caused either by deviations in the processes that will be conducted at the proposed facility or by credible external events, including natural phenomena; LBP-11-11, 73 NRC 455 (2011)

applicant’s radiological measurements and monitoring program is subject to scrutiny; LBP-11-26, 74 NRC 499 (2011)

application of 10 C.F.R. 40.38(a) and 70.40 is limited to USEC alone, so that they have no relevance to any other enrichment facility applicant; LBP-11-11, 73 NRC 455 (2011)

applications are required to contain a description of the security program to protect against unauthorized disclosure of classified matter in accord with Part 95; LBP-11-11, 73 NRC 455 (2011)

applications must identify radiological and chemical hazards, facility hazards that could affect safety of licensed materials, potential accident sequences and their consequences and likelihood of occurrence, and each item relied on for safety; LBP-12-21, 76 NRC 218 (2012)

as part of its NEPA analysis, NRC must provide information that addresses the purpose and need for the proposed action; LBP-11-26, 74 NRC 499 (2011)

basic regulatory framework that governs the licensing is found in 10 C.F.R. Part 70, but Parts 19, 20, 21, 25, 30, 40, 51, 71, 73, 74, 95, 140, 170, 171, are also applicable; LBP-11-11, 73 NRC 455 (2011)

because the application for a facility is governed by AEA §§ 53 and 63, 42 U.S.C. § 2073, 2093, foreign ownership and control issues would be evaluated under sections 57 and 69; LBP-11-11, 73 NRC 455 (2011)

change requests are reviewed against the criteria in the license application and the criteria in 10 C.F.R. 70.72 to determine whether NRC approval is required prior to implementing the change; LBP-12-21, 76 NRC 218 (2012)

consequences of loss of offsite power are discussed; LBP-11-11, 73 NRC 455 (2011)

construction inspection program is discussed; LBP-11-26, 74 NRC 499 (2011)

credibility of hazard from wildfires is discussed; LBP-11-11, 73 NRC 455 (2011)

deferral of execution of the financial instruments for decommissioning funding until after the license has issued is not allowed; CLI-11-4, 74 NRC 1 (2011)

depleted uranium and the other waste generated by uranium enrichment facilities are not spent fuel, transuranic waste, or 11e(2) byproduct material or specific kinds of wastes such as irradiated fuel and the liquid and solid wastes resulting from the processing of irradiated fuel, and thus are classified as low-level waste; LBP-12-21, 76 NRC 218 (2012)

design of new facilities must provide for adequate protection against natural phenomena, fires and explosions, chemical risks produced from licensed material, facility conditions, and hazardous chemicals produced from licensed material; LBP-12-21, 76 NRC 218 (2012)

deviations from the original design must be evaluated against the criteria in 10 C.F.R. 70.72 to determine if a license amendment is required or if applicant could make the change without NRC approval; LBP-12-21, 76 NRC 218 (2012)

each decommissioning funding plan must include a signed original of the instrument obtained to provide financial assurance for decommissioning at the time the plan is submitted; CLI-11-4, 74 NRC 1 (2011)

ensuring continued availability of diverse, reliable sources of domestic enrichment services to provide low-enriched uranium for domestic power reactors supports a finding of need for the facility; LBP-11-26, 74 NRC 499 (2011)

Environmental Protection Agency possesses authority to set numerical standards for air pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)

evidence of significant actual utility commitments provides a compelling showing in support of the need for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)

examples of need for the proposed facility include a benefit provided if the proposed action is granted or descriptions of the detriment that will be experienced without approval of the proposed action; LBP-11-26, 74 NRC 499 (2011)

facilities are to be licensed pursuant to Atomic Energy Act §§ 53 and 63; LBP-12-21, 76 NRC 218 (2012)
facility security clearance requires a determination that granting the clearance would not be inconsistent with the national interest, including a finding that the facility is not under foreign ownership, control, or influence to such a degree that a determination could not be made; LBP-11-11, 73 NRC 455 (2011)

factor bolstering need for a facility is the recognized margin level that exists in the existing enrichment market to offset potential supply problems as well as maintain a level of reasonable market competition; LBP-11-26, 74 NRC 499 (2011)

for proposed nuclear materials-related activity, including uranium enrichment, commencement of construction prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)

fugitive dust generation from preconstruction activities is discussed; LBP-11-26, 74 NRC 499 (2011)

Fukushima accident does not provide a seriously different picture of the environmental impact of a proposed uranium enrichment facility from what was previously envisioned; LBP-11-26, 74 NRC 499 (2011)

guidance documents do not have the force of law, but the Standard Review Plan for the Review of a License Application for a Fuel Cycle Facility has benefited from extensive consideration within the agency, with which the Commission has never expressed disagreement; LBP-12-21, 76 NRC 218 (2012)

high-consequence events are required to be highly unlikely and intermediate-consequence events to be unlikely; LBP-12-21, 76 NRC 218 (2012)

highly site-specific seismic hazard analysis reflects consideration not only of the location and magnitude of historic earthquakes, but also the nature of the bedrock and the style of faulting in the surrounding region; LBP-11-11, 73 NRC 455 (2011)

holders of a Parts 40/70 uranium enrichment facility license are required to maintain adequate nuclear liability insurance, with proof of such insurance necessary prior to a license being issued; LBP-11-11, 73 NRC 455 (2011)

in mandatory hearings, Commission discussion regarding alternative site review supplements the environmental impact statement; LBP-11-26, 74 NRC 499 (2011)

integrated safety analysis requirements for licensing are detailed; LBP-12-21, 76 NRC 218 (2012)

integrated safety analysis summary must accompany the license application and contain a general description of the site and the facility with emphasis on factors that could affect safety and description of each process analyzed in the ISA; LBP-12-21, 76 NRC 218 (2012)

items relied on for safety should be described in sufficient detail to allow a Staff reviewer to understand the IROFS’s functions in relation to the performance standards in section 70.61, which specifies limitations on the levels of risk for credible high- and intermediate-consequence accidents and nuclear criticality accidents; LBP-11-11, 73 NRC 455 (2011)

items relied on for safety that are a central focus of the integrated safety analysis process are the subject of three proposed license conditions; LBP-11-11, 73 NRC 455 (2011)

license applications must contain the place at which the activity is to be performed and the general plan for carrying out the activity as well as a description of equipment and facilities that will be used by applicant to protect health and minimize danger to life or property; LBP-12-21, 76 NRC 218 (2012)

license must have a condition requiring licensee to maintain and follow a source material control and accounting program and maintain records of any MC&A program changes made without Commission approval for 5 years from the date of the change; LBP-11-11, 73 NRC 455 (2011)

licensee must provide semiannual radiological release reports to NRC; LBP-12-21, 76 NRC 218 (2012)

licensee must submit an annual update of the integrated safety analysis summary; LBP-12-21, 76 NRC 218 (2012)

licensee must submit biannual reports to the NRC specifying the quantity of each of the principal radionuclides released to unrestricted areas in liquid and gaseous effluents during the previous 6 months of operation, and such other information as the Commission may require to estimate maximum potential annual radiation doses to the public resulting from effluent releases; LBP-12-21, 76 NRC 218 (2012)

licensee must survey radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits for individual members of the public in section 20.1301; LBP-12-21, 76 NRC 218 (2012)
SUBJECT INDEX

licensee’s radiological surveys must be as necessary and reasonable for compliance, and must include magnitude and extent of radiation levels, concentrations or quantities of radioactive material, and potential radiological hazards; LBP-12-21, 76 NRC 218 (2012)
minimum detectable concentrations for gaseous effluent and evaporator condensate must be 5% or less of the concentrations listed in Part 20, App. B, tbl. 2; LBP-11-26, 74 NRC 499 (2011)
NRC has a clear statutory mandate to regulate the construction and operation of a facility; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
NRC is required to verify through inspection that the facility has been constructed in accordance with the requirements of the license; LBP-12-21, 76 NRC 218 (2012)
NRC may deny applicant a license based on foreign ownership, control, or domination concerns to the extent it concludes granting such a license would be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)
NRC shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 455 (2011)
NRC Staff authorization permitting applicant to defer execution of any final letters of credit for decommissioning financial assurance until after a license is issued but before receipt of licensed material might be problematic; LBP-11-26, 74 NRC 499 (2011)
NRC Staff granted an exemption from 10 C.F.R. 74.33(c)(5) subject to license conditions that require applicant to submit, for the Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 218 (2012)
NRC Staff imposed a license condition to ensure that clearances are obtained before classified matter is processed, stored, reproduced, transmitted, handled, or accessed; LBP-11-11, 73 NRC 455 (2011)
Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 499 (2011)
Part 70 establishes the basic regulatory framework that governs the licensing of an enrichment facility; LBP-11-26, 74 NRC 499 (2011)
Pentapartite Agreement between the United States and four European governments to prevent new restricted data from being disseminated to European nationals will be a prerequisite to the NRC Staff issuing a facility clearance; LBP-11-11, 73 NRC 455 (2011)
previously recognized availability policy for domestic enrichment services supports a NEPA finding of a need for the construction and operation of uranium enrichment facilities; LBP-11-26, 74 NRC 499 (2011)
process designs should be described in a level of detail in the integrated safety analysis that is sufficient to allow a Staff reviewer to understand the theory of operation for the process; LBP-11-11, 73 NRC 455 (2011)
qualitative benefits and costs in the cost-benefit analysis for the uranium enrichment facility are estimated to be small, moderate, or large, using the same general definitions found in the regulations of Part 51; LBP-12-21, 76 NRC 218 (2012)
relationship between the uranium enrichment facility’s product and production of high-level waste is too attenuated to show the requirement of a reasonably close causal relationship required by NEPA; LBP-12-21, 76 NRC 218 (2012)
relative to foreign ownership or control, NRC imposes restrictions on the physical security and control of information at licensed facilities to safeguard restricted data and national security information; LBP-11-11, 73 NRC 455 (2011)
reports to the agency regarding unapproved changes made to the material control and accounting program must be filed within no more than 6 months after the changes; LBP-11-11, 73 NRC 455 (2011)
seismic avoidance areas are discussed; LBP-11-26, 74 NRC 499 (2011)
to perform an appropriate integrated safety analysis, NUREG-1520 standard review plan guidance for fuel cycle facilities indicates that applicant should identify the process designs, accident sequences, and items relied upon for safety that are associated with the facility; LBP-11-11, 73 NRC 455 (2011)
under 10 C.F.R. 40.41(g) and 70.32(k), a uranium enrichment facility cannot be operated until the agency verifies through inspection that the facility has been constructed in accordance with the license; LBP-11-11, 73 NRC 455 (2011)
1389
under risk-informed performance-based requirements, applicants must ensure that each item relied on for safety will be available and reliable to perform its function when needed; LBP-11-11, 73 NRC 455 (2011)
visual impact of operation of a facility on the quality of recreational experience is discussed; LBP-11-26, 74 NRC 499 (2011)
Waste Confidence Rule on its face does not apply to uranium enrichment facilities; LBP-12-21, 76 NRC 218 (2012)
whether exercise frequency is adequate to maintain personnel knowledge and skill to implement emergency responsibilities for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)
winter weather- and earthquake-related site selection criteria are discussed; LBP-11-26, 74 NRC 499 (2011)
whether exercise frequency is adequate to maintain personnel knowledge and skill to implement emergency responsibilities for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)
financial qualifications of applicant to fund construction are discussed; LBP-11-11, 73 NRC 455 (2011)
for mandatory proceedings, licensing boards are to conduct a simple sufficiency review rather than a de novo review on both AEA and NEPA issues; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2012)
giving appropriate deference to NRC Staff technical expertise, boards are to probe the logic and evidence supporting NRC Staff findings and decide whether those findings are sufficient to support license issuance; LBP-12-21, 76 NRC 218 (2012)
in mandatory hearing, licensing boards are to make independent environmental judgments with respect to certain NEPA findings; LBP-11-11, 73 NRC 455 (2011)
in mandatory hearing, licensing boards are to determine whether the environmental review conducted by NRC Staff has been adequate, but they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
level of detail required for a licensing decision does not require a final facility design or an absolutely complete identification of all items relied on for safety and accident sequences, but instead sufficient information must be provided to understand the process and functions of items relied on for safety and to afford reasonable assurance that the integrated safety analysis is complete; LBP-12-21, 76 NRC 218 (2012)
license conditions imposed on applicant as a result of NRC Staff’s review process and applicant-requested exemptions from agency regulatory requirements that are granted by Staff have a strong potential to fall into a “non-routine matter” category; LBP-11-11, 73 NRC 455 (2011)
licensing boards conducting mandatory hearings on uncontested issues are expected to take an independent hard look at NRC Staff safety and environmental findings but are not to replicate NRC Staff work; LBP-12-21, 76 NRC 218 (2012)
licensing board’s role in mandatory hearings is to carefully probe Staff findings by asking appropriate questions and by requiring supplemental information when necessary, but the NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-11, 73 NRC 455 (2011)

NRC needs to conduct only a single licensing action and adjudicatory proceeding to authorize construction and operation and a mandatory hearing regarding the application and the Staff’s associated safety and environmental reviews, despite the absence of a petitioner challenging applicant’s request; LBP-11-26, 74 NRC 499 (2011)

NRC shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of the facility; LBP-12-21, 76 NRC 218 (2012)

NRC Staff’s underlying technical and factual findings are not open to board reconsideration unless, after a review of the record, the board finds the NRC Staff review inadequate or its findings insufficient; LBP-11-26, 74 NRC 499 (2011)

NRC will hold a hearing under 10 C.F.R. Part 2, Subparts A, C, G, and I, on each application for issuance of a license for construction and operation of a uranium enrichment facility and will publish public notice of the hearing in the Federal Register at least 30 days before the hearing; LBP-12-21, 76 NRC 218 (2012)

nuclear nonproliferation issues span a host of factors far removed from and far afield from the NRC’s decision whether to license a uranium enrichment facility; LBP-12-21, 76 NRC 218 (2012)

terrorism and nuclear nonproliferation issues are dependent upon the actions and decisions of the President, Congress, international organizations, and officials of other nations, and constitute issues of international policy unrelated to NRC’s licensing criteria; LBP-12-21, 76 NRC 218 (2012)

URANIUM FUEL CYCLE

all fuel cycle and waste management issues, including low-level waste storage and disposal, mixed waste storage and disposal, onsite spent fuel storage, and transportation, are Category 1 issues with a small impact; LBP-11-2, 73 NRC 28 (2011)

for power reactors, NRC Staff review should encompass emissions from the uranium fuel cycle as well as from construction and operation of the facility to be licensed; LBP-11-26, 74 NRC 499 (2011)

URANIUM MILL TAILINGS

“byproduct material” refers to the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed for its source material content; LBP-15-16, 81 NRC 618 (2015)

URANIUM MINING AND MILLING

admissibility of contention that final environmental assessment failed to conduct the required hard look at impacts of the proposed mine associated with restoration standards and difficulty and cost in achieving them and the use of the alternative standards permitted under the proposed rules is decided; LBP-15-15, 81 NRC 598 (2015)

although 10 C.F.R. Part 40 applies to ISL mining, some of the specific requirements in Part 40, such as many of those in Appendix A, address hazards posed only by conventional uranium milling operations; LBP-15-16, 81 NRC 618 (2015)

although the Part 40, Appendix A criteria were developed for conventional uranium milling facilities, they have since been applied in limited fashion to ISR facilities; LBP-15-3, 81 NRC 65 (2015)

applicant must establish a preoperational monitoring program that must be conducted to provide complete baseline data on a milling site and its environs; LBP-15-16, 81 NRC 618 (2015)

as distance increases from the in situ recovery facility, petitioner with an upgradient water source must expect to provide the board with some analysis as to how any contamination will affect any wells alleged to be impacted by the facility; LBP-12-3, 75 NRC 164 (2012)

“byproduct material” is categorized as tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-15-11, 81 NRC 401 (2015)

for petitioners claiming to be using water from the same aquifer as for the uranium ore source, regardless of distance from the facility in question, licensing boards have found that a plausible pathway
SUBJECT INDEX

connecting the proposed mining operation to their water source has been shown so as to establish petitioners’ standing; LBP-12-3, 75 NRC 164 (2012)
grounds for license denial exist if, prior to issuance of a license to possess and use source and byproduct materials for uranium milling, there is commencement of construction by an applicant; LBP-12-3, 75 NRC 164 (2012)
NRC could consider adopting, at least for the initial construction/operation authorization of in situ recovery facilities, a standing regime by which persons living or having substantial contacts within a 50-mile radius of the facility are afforded standing; LBP-12-3, 75 NRC 164 (2012)
organizational interest in protecting natural resources with a focus on groundwater contamination from uranium mining is insufficient to establish organizational standing; LBP-13-6, 77 NRC 253 (2013)
petitioner whose property is upgradient but nonetheless located in close proximity to a proposed in situ recovery facility may be able to establish its plausible pathway with a less particularized showing; LBP-12-3, 75 NRC 164 (2012)
petitioners considerably upgradient of a mining area must provide scientific or technical support for how contaminated material from an in situ recovery site might plausibly enter their drinking water to fulfill the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)
standing was found for petitioner fishing a river 60 miles downstream from a proposed in situ recovery facility expansion alleged to allow drainage into the river from operations; LBP-12-3, 75 NRC 164 (2012)
surface water contamination has played a significant role in standing determinations in in situ recovery cases; LBP-12-3, 75 NRC 164 (2012)
the in situ recovery process, which is also referred to as the in situ leach process, is described; LBP-12-3, 75 NRC 164 (2012)
when an ore zone and petitioner’s water source exist in separate aquifers, the injury/causeation question is whether there is an interconnection between those aquifers; LBP-12-3, 75 NRC 164 (2012)
See also In Situ Leach Mining

UTILIZATION FACILITY

NRC’s decision to include transmission lines that serve a nuclear power plant within the definition of “utilization facility” in NEPA, 42 U.S.C. § 2014(cc), was upheld; LBP-14-9, 80 NRC 15 (2014)

VACATUR

because the Commission’s vacatur order does not address the merits, it need not address an argument that NRC Staff impermissibly raises objections to the merits of the Board’s decision without filing a petition for review; CLI-13-9, 78 NRC 551 (2013)
Commission decision to vacate an unreviewed board decision does not intitle any opinion on the soundness of the board’s decision; CLI-13-9, 78 NRC 551 (2013); CLI-13-10, 78 NRC 563 (2013) decisions that have been vacated also should not be used for guidance; CLI-13-9, 78 NRC 551 (2013)
denial of vacatur is merely one application of the principle that a suitor’s conduct in relation to the matter at hand may dissuise him to the relief he seeks; CLI-13-9, 78 NRC 551 (2013)
in issuing the suspension of final licensing decisions in proceedings, NRC recognized that it could not move forward without first addressing the D.C. Circuit’s remand because the vacatur left a regulatory gap in the Part 51 regulations that undergird licensing reviews in those matters; CLI-14-7, 80 NRC 1 (2014)

it is the Commission’s customary practice to vacate a challenged licensing board decision when, during the pendency of an appeal, the proceeding becomes moot; CLI-13-10, 78 NRC 563 (2013)
regulation governing the storage and disposal of spent nuclear fuel was vacated; LBP-14-15, 80 NRC 151 (2014)
vacatur is not automatic, but will depend on the nature and character of the conditions that have caused the case to become moot; CLI-13-9, 78 NRC 551 (2013)

stare decisis is not implicated where the board decision is unreviewed and therefore not binding on future tribunals, but as a prudential matter, the Commission vacancies such decisions when appellate review is cut short by mootness; CLI-13-9, 78 NRC 551 (2013)
vacatur is designed to eliminate confusion and disagreement over what an unreviewed board decision may mean or what effect it may have in the resolution of safety or environmental issues in a future proceeding; CLI-13-9, 78 NRC 551 (2013)
vacatur is not automatic, but will depend on the nature and character of the conditions that have caused the case to become moot; CLI-13-9, 78 NRC 551 (2013)
where the reviewing court vacates a rule without reinstating the old rule, failure to reinstate the old rule creates a temporary regulatory vacuum; CLI-14-8, 80 NRC 71 (2014)

VALIDATION
agency’s failure to adequately validate a quantitative model on which it relies may lead the reviewing court to conclude that the agency’s decision is arbitrary, capricious, or contrary to law; LBP-15-20, 81 NRC 829 (2015)

VALVES
after the rulemaking is completed, licensees for new reactors will be required to comply with the ASME code preservice and inservice surveillance provisions for squib valves; CLI-15-13, 81 NRC 555 (2015) although the Commission found NRC Staff’s review of combined license applications rigorous, it imposed a condition requiring implementation of a squib-valve surveillance program prior to fuel load; CLI-15-13, 81 NRC 555 (2015)
basis of NRC Staff’s reasonable assurance finding on combined license applicant’s squib valve inspection program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75 NRC 63 (2012)
in the event of a severe accident in an AP1000, squib valves, which are explosively activated, reduce pressure and inject water as needed into the reactor vessel; CLI-15-13, 81 NRC 555 (2015)
inservice testing and inspection program for squib valves in combined license applications is discussed; CLI-15-13, 81 NRC 555 (2015)
licensing board imposes a license condition directing implementation of a surveillance program for explosively actuated valves prior to fuel load; CLI-12-2, 75 NRC 63 (2012)
purpose of the testing program for squib valves is to ensure that the valves operate as intended under design conditions; CLI-15-13, 81 NRC 555 (2015)
to reach a finding of reasonable assurance that the public health and safety will be protected, the Commission imposed a license condition relating to testing program for squib valves; CLI-12-9, 75 NRC 421 (2012)
See also Containment Isolation Valves; Safety Relief Valves

VENTILATION SYSTEMS
applicant need not submit information regarding control room habitability and ventilation system design in the site safety analysis report portion of an early site permit application; LBP-11-16, 73 NRC 645 (2011)
request that NRC immediately revoke prior preapproval of the hardened vent system or direct torus vent system at GE BWR Mark I units has been addressed by an order modifying licenses; DD-15-1, 81 NRC 193 (2015)
request that technical specification for control room emergency ventilation system instrumentation be changed to require that the control building air intake radiation-high function be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

VENTING
assertions of a need to implement filtered vented containment are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
extisting containment vent systems at BWRs with Mark I containments provide a capability to vent the containment under design-basis conditions; DD-15-1, 81 NRC 193 (2015)
licensees of boiling water reactors with Mark I and II containments are required to design and install a venting system that provides venting capability from the wetwell during severe accident conditions; DD-15-1, 81 NRC 193 (2015)
request that NRC order licensees to include a reliable hardened vent in boiling-water reactor Mark I and Mark II containments is addressed; DD-14-2, 79 NRC 489 (2014)

VERIFICATION
accuracy is an integral component of the regulatory requirement that addresses item presence verification; CLI-15-9, 81 NRC 512 (2015)
any statistical sampling plan for verifying the presence and integrity of strategic special nuclear material items must have at least 99 percent power of detecting item losses that total 5 formula kg or more, plantwide, within 30 calendar days for Category IA items and 60 calendar days for Category IB items contained in a vault or in a permanently controlled access area isolated from the rest of the material access area; CLI-15-9, 81 NRC 512 (2015)
applicant’s strategic special nuclear material item monitoring approach, as enhanced by an item verification procedure, provides reasonable assurance that the quantitative accuracy of the MMIS/PLC data is sufficient to enable the procedures employing those data to meet the regulatory requirements; LBP-14-1, 79 NRC 39 (2014)

applicant’s verification of the integrity of the strategic special nuclear material vault boundaries on a daily basis exceeds the regulatory requirement to verify the integrity of the items every 30 or 60 days; LBP-14-1, 79 NRC 39 (2014)

by verifying integrity of storage area boundaries, applicant can verify the integrity of all strategic special nuclear material items in storage within the required 30- and 60-day time frames; LBP-14-1, 79 NRC 39 (2014)

consistency check compares mean and slope of the embrittlement model curve against surveillance data and checks to confirm that outliers fall within acceptable residual values provided in the regulation; LBP-15-17, 81 NRC 753 (2015)

consistency check is required if three or more surveillance data points measured at three or more different neutron fluences exist for a specific material; LBP-15-17, 81 NRC 753 (2015)

consistency check seeks to compare, for a specific material type, the model’s projected embrittlement with the actual embrittlement values at the same fluence provided by material samples; LBP-15-17, 81 NRC 753 (2015)

contention that applicant’s revised material control and accounting plan fails to show how confirmation and verification of theft of plutonium will be carried out in the specified timelines is inadmissible; CLI-15-9, 81 NRC 512 (2015)

if fewer than three surveillance data points exist for a specific material, then the embrittlement model must be used without performing the consistency check; LBP-15-17, 81 NRC 753 (2015)

licensees have to verify that their reference temperature calculations at the time of the application match up with surveillance data; LBP-15-17, 81 NRC 753 (2015)

licensees must verify on a statistical sampling basis, the presence and integrity of strategic special nuclear material items; CLI-15-9, 81 NRC 512 (2015)

meaning of “verify” in the context of strategic special nuclear material item presence verification is discussed; CLI-15-9, 81 NRC 512 (2015)

neither the plain language of 10 C.F.R. 74.55(b)(1) nor its regulatory history suggests that verifications of strategic special nuclear material item integrity must be in any way physical; LBP-14-1, 79 NRC 39 (2014)

purpose of the consistency check is to determine if the surveillance data show a significantly different trend than the embrittlement model predicts; LBP-15-17, 81 NRC 753 (2015)

section 50.59 is not a process for verifying design adequacy, and required design control measures for verifying adequacy of design are expected to be implemented before entering the section 50.59 process; DD-15-7, 82 NRC 257 (2015)

section 74.55 is not rendered superfluous by a reading that verifying the integrity of a storage area boundary will suffice to verify the integrity of the strategic special nuclear material items contained therein; LBP-14-1, 79 NRC 39 (2014)

surveillance data used in the consistency check need not come from the same reactor pressure vessel that is the subject of the license amendment request; CLI-15-22, 82 NRC 310 (2015)

three or more samples are required to conduct a consistency check; LBP-15-17, 81 NRC 753 (2015)

updated embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data; CLI-15-22, 82 NRC 310 (2015)

when fluence of a material sample is known, it must be used in the consistency check if it is of the appropriate chemical composition; CLI-15-22, 82 NRC 310 (2015)

VIOLATIONS

agencies violate NEPA when their EIS fails to adequately respond to the critical opinions of their own experts; LBP-12-18, 76 NRC 127 (2012)

alleged violations of state law are outside the scope of, and not material to, an adjudicatory proceeding; LBP-15-24, 82 NRC 68 (2015)

allowing agencies to avoid a NEPA violation through a subsequent, conclusory statement that it would not have reached a different result even with the proper analysis would significantly undermine the statutory scheme; LBP-12-17, 76 NRC 71 (2012)
although petitioner’s inadvertent publication of protected information was a serious offense that exposed
mootant to potential economic harm and undermined integrity of the adjudicative proceeding, the
significance of petitioner’s misconduct is alleviated to some degree by the immediate corrective action
taken by petitioner; LBP-13-2, 77 NRC 71 (2013)
board denies a motion seeking sanctions against petitioner for violating the governing protective order and
non-disclosure agreement, but imposes a document review requirement upon petitioner in light of its
misconduct and to enhance future compliance with the proceeding’s protective order; LBP-13-2, 77
NRC 71 (2013)
contention alleging that licensee had a repeated pattern of violations which could undermine its ability to
manage aging during the period of extended operations is not within the scope of license renewal;
LBP-13-8, 78 NRC 1 (2013)
effect of a pattern of quality assurance violations is not necessarily to show that particular safety-related
information is false, but to erode confidence that NRC can reasonably have in, and create substantial
uncertainty about the quality of, the work that is tainted by the alleged QA violations; LBP-12-23, 76
NRC 445 (2012)
failure to provide an appropriate basis for a determination that the change in the method of evaluation did
not require a license amendment prior to implementing the change constitutes a violation of 10 C.F.R.
50.59(d)(1); DD-15-7, 82 NRC 257 (2015)
licensee is cited for use of unapproved operator manual actions to mitigate safe shutdown equipment
malfunctions caused by a fire-induced single spurious actuation in lieu of protecting the equipment;
DD-12-3, 76 NRC 416 (2012)
licensee’s operation of primary coolant pumps contrary to plant licensing and the FSAR is a violation of
NRC has discretion in specifying the level of foreign ownership that would constitute a violation of the
Atomic Energy Act; LBP-12-19, 76 NRC 184 (2012)
NRC Staff violated requirements for initial disclosure of all relevant documents; LBP-14-2, 79 NRC 131
(2014)
NRC Staff will disposition violations as part of its ongoing reactor oversight process, and evidentiary
hearings before NRC at the request of third parties are not a part of this process; DD-12-3, 76 NRC
416 (2012)
NRC violated the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence
Decision and accompanying Temporary Storage Rule; CLI-12-16, 76 NRC 63 (2012)
NRC’s adjudicatory process is not the proper forum for investigating alleged violations that are primarily
the responsibility of other federal, state, or local agencies; LBP-11-6, 73 NRC 149 (2011)
party moving for sanctions has the burden of establishing by a preponderance of the evidence that
petitioner violated the protective order; LBP-13-2, 77 NRC 71 (2013)
past violations of NRC regulations would indicate a deficiency in an application only if they are directly
germane to the licensing action, rather than being of simply historical interest; CLI-12-2, 73 NRC 63
(2012)
possession of depleted uranium at multiple installations without an NRC license and performance of
decommissioning at a military installation without proper NRC authorization is a violation of 10 C.F.R.
40.3; DD-11-5, 74 NRC 399 (2011)
rule that excluded certain environmental impacts from NEPA consideration and deferred totally to
environmental quality standards devised and administered by other agencies violated NEPA; LBP-15-23,
82 NRC 55 (2015)
when considering whether a disclosure of proprietary information was an isolated incident or part of a
pattern of behavior, licensing boards may consider the circumstances underlying the disclosure, the
corrective action taken, and petitioner’s representation that no disclosure will occur in the future;
LBP-13-2, 77 NRC 71 (2015)
where there was no reasonable likelihood that a change in the method of evaluation would have required
a license amendment, the change was a minor violation; DD-15-7, 82 NRC 257 (2015)
See also Notice of Violation
VOLCANOES
analysis of potential hazard at proposed uranium enrichment facility site raises question whether
probability of event is low enough to be considered “highly unlikely”; LBP-11-11, 73 NRC 455 (2011)
SUBJECT INDEX

WAIVER

agency waives the deliberative process privilege for a document when it discloses the same document or one containing equivalent text; LBP-13-5, 77 NRC 233 (2013) arguments not raised before the board or not clearly articulated in the petition for review are deemed waived; LBP-15-5, 81 NRC 249 (2015) because the Equal Access to Justice Act operates as a waiver of sovereign immunity, it must be narrowly construed to avoid creating a waiver that Congress did not intend; LBP-11-8, 73 NRC 349 (2011) Equal Access to Justice Act renders the United States liable for attorney’s fees for which it would not otherwise be liable, and thus amounts to a partial waiver of sovereign immunity, and any such waiver must be strictly construed in favor of the United States; LBP-11-8, 73 NRC 349 (2011) if licensee or other person to whom an order is issued consents to its issuance, or the order confirms actions agreed to by the licensee or such other person, that consent or agreement constitutes a waiver by the licensee or such other person of a right to a hearing and any associated rights; LBP-14-4, 79 NRC 319 (2014) NRC regional office has the discretion to grant a waiver for retesting on a passed test for a senior reactor operator applicant who has failed only one part of the test if it determines that sufficient justification is presented; LBP-14-2, 79 NRC 131 (2014) once Congress has waived sovereign immunity over certain subject matter, a court should be careful not to assume the authority to narrow the waiver that Congress intended; LBP-14-1, 79 NRC 349 (2011) senior reactor operator applicant who has passed either the written examination or operating test and failed the other may request in a new application on Form NRC-398 to be excused from reexamination on the portions of the examination or test that the applicant has passed; LBP-14-2, 79 NRC 131 (2014)

WAIVER OF OBJECTION

Category 1 issues in section 51.53(c)(3)(i) are excluded from site-specific review absent a waiver of the rule; CLI-12-19, 76 NRC 377 (2012) objection not timely made is considered to be waived; LBP-15-20, 81 NRC 829 (2015)

WAIVER OF RULE

absent a rule waiver, NRC Staff is not expected to revisit the impact determinations made in the Continued Storage GEIS as part of its site-specific NEPA reviews; CLI-15-10, 81 NRC 535 (2015) absent a waiver, contentions challenging applicable statutory requirements or NRC regulations are not admissible; LBP-11-21, 74 NRC 115 (2011) absent a waiver, contentions that raise a direct or indirect challenge to a Commission regulation must be rejected; LBP-15-4, 81 NRC 156 (2015); LBP-15-20, 81 NRC 829 (2015) absent a waiver, no rule or regulation of the Commission, or any provision thereof, is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding subject to 10 C.F.R. Part 2; CLI-14-6, 79 NRC 445 (2014); CLI-15-19, 82 NRC 151 (2015); LBP-11-35, 74 NRC 701 (2011); LBP-13-12, 78 NRC 239 (2013); LBP-15-24, 82 NRC 68 (2015); LBP-15-26, 82 NRC 163 (2015) absent demonstration that petitioner’s alleged special circumstances are unique to the facility rather than common to a large class of facilities, the request for waiver of regulations excluding spent fuel pool issues from license renewal proceedings is denied; LBP-11-35, 74 NRC 701 (2011) all four factors in 10 C.F.R. 2.335(b) must be met; LBP-13-1, 77 NRC 57 (2013); LBP-14-15, 80 NRC 151 (2014); LBP-14-16, 80 NRC 183 (2014) all four of the Millstone rule waiver requirements derive from the language and purpose of section 2.335(b); LBP-14-16, 80 NRC 183 (2014) any request for a rule waiver or exception must be accompanied by an affidavit that identifies the subject matter of the proceeding as to which the application of the regulation would not serve the purposes for which the regulation was adopted, and the affidavit must state with particularity the special circumstances alleged to justify the waiver or exception requested; LBP-11-16, 73 NRC 645 (2011) board denied petition for rule waiver but referred the decision to the Commission because the legal issue presented by the petition is novel and worthy of the Commission’s immediate attention; LBP-13-1, 77 NRC 57 (2013)
SUBJECT INDEX

case law test for rule waiver establishes an appreciably higher burden for would-be waiver seekers than does 10 C.F.R. 2.335(b); LBP-14-16, 80 NRC 183 (2014)

Category 1 issues are not subject to challenge in a relicensing proceeding, absent a waiver under 10 C.F.R. 2.335, because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-15-5, 81 NRC 249 (2015)

challenge to a Commission rule or regulation is outside the scope of an adjudicatory hearing unless the petitioner first obtains a waiver; CLI-12-19, 76 NRC 377 (2012); CLI-15-21, 82 NRC 295 (2015); LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

challenges to Category 1 findings based on new and significant information require a waiver of 10 C.F.R. Part 51, Subpart A, Appendix B, in order to be litigated in a license renewal adjudication; CLI-13-7, 78 NRC 199 (2013)

Commission approval of a rule waiver could allow a contention on a Category 1 issue to proceed where special circumstances exist; CLI-15-6, 81 NRC 340 (2015)

Commission remands license renewal proceeding to the board for the limited purpose of considering a rule waiver petition; CLI-12-19, 76 NRC 377 (2012)

conditions necessary for grant of a rule waiver are outlined; LBP-15-6, 81 NRC 314 (2015)

even a properly supported request for a waiver cannot be granted when it seeks to exempt circumstances that are common to a large class of facilities rather than unique; LBP-13-12, 78 NRC 239 (2013)

even proximity to a nuclear power facility or independent spent fuel storage installation is hardly unique in context of a rule waiver request; LBP-14-16, 80 NRC 183 (2014)

four-factor test for grant of a waiver is presented; CLI-12-6, 75 NRC 352 (2012); LBP-14-16, 80 NRC 183 (2014)

four-factor test for showing of special circumstances demonstrating that application of a rule would not serve the purpose for which it was adopted is outlined; CLI-12-19, 76 NRC 377 (2012)

four-factor test is applied to rule waiver requests; CLI-15-21, 82 NRC 295 (2015)

generic environmental analysis is incorporated into NRC regulations, and thus Category 1 generic findings may not be challenged in individual licensing proceedings unless accompanied by a petition for rule waiver; CLI-15-6, 81 NRC 340 (2015)

government fulfills its trust duties by executing federal law, not by waiving federal law; LBP-14-16, 80 NRC 183 (2014)

in extraordinary situations where special circumstances can be demonstrated, waivers may be granted; LBP-13-12, 78 NRC 239 (2013)

intervenors in adjudicatory proceedings are prohibited from challenging regulations unless they first obtain a waiver by showing special circumstances; LBP-14-15, 80 NRC 151 (2014)

licensing board erred in concluding that it is impossible to waive the exception in a rule; CLI-13-7, 78 NRC 199 (2013)

licensing board initially determines, based on the record, whether a prima facie showing has been made by petitioner for its rule waiver request, and then the board must certify the matter directly to the Commission for a final determination; LBP-14-16, 80 NRC 183 (2014)

Millstone rule waiver decision, which aggregates cases interpreting the waiver standard, is an example of a uniform, permissible interpretation of NRC regulations; CLI-13-7, 78 NRC 199 (2013)

no NRC rule or regulation or provision thereof is subject to attack in an adjudicatory proceeding unless a waiver is granted by the Commission; LBP-14-16, 80 NRC 183 (2014)

NRC case law has given meaning to the “special circumstances” requirement for rule waiver; CLI-13-7, 78 NRC 199 (2013)

NRC has endorsed a four-pronged test for grant of a rule waiver, all factors of which must be met; LBP-11-35, 74 NRC 701 (2011)

participant may petition that a Commission rule or regulation be waived with respect to the license application under consideration; CLI-11-3, 73 NRC 613 (2011); CLI-11-11, 74 NRC 427 (2011)

participant may request waiver of a current rule or regulation in a specific proceeding under special circumstances as an exception to the prohibition against challenging NRC rules or regulations in adjudicatory proceedings; CLI-14-7, 80 NRC 1 (2014); LBP-14-16, 80 NRC 183 (2014)

parties seeking a rule waiver must attach an affidavit that, among other things, states with particularity the special circumstances claimed to justify the waiver or exception requested; CLI-12-6, 75 NRC 352
party can petition for waiver of a specific NRC regulation, based on a showing of special circumstances such that application of the rule would not serve the purposes for which it was adopted; CLI-12-6, 75 NRC 352 (2012); CLI-15-6, 81 NRC 340 (2015); CLI-15-3, 81 NRC 65 (2015); CLI-15-5, 81 NRC 249 (2015); LBP-15-17, 81 NRC 753 (2015)

petition for waiver of a specific NRC regulation must satisfy a four-factor test; LBP-15-17, 81 NRC 753 (2015)

petitioner cannot use one regulation to challenge another without first obtaining a waiver by showing special circumstances; LBP-15-4, 81 NRC 156 (2015)

petitioners are not required to demonstrate that their complaint is unique to the facility in question or that their complaint reflects a significant safety issue; LBP-13-1, 77 NRC 57 (2013)

petitioners face a substantial burden; CLI-13-7, 78 NRC 199 (2013)

petitioners, not just parties, may request a rule waiver in NRC adjudicatory proceedings; CLI-12-19, 76 NRC 377 (2012)

possibility that new SAMA candidates may become available cannot be the basis for a successful petition to waive 10 C.F.R. 51.53(c)(3)(ii)(L), because the Commission knew that SAMA technology would change, but was confident that processes, other than the SAMA analysis process, would adequately address any such developments; LBP-13-1, 77 NRC 57 (2013)

presiding officers must dismiss any petition for waiver that does not make a prima facie showing of special circumstances with respect to the subject matter of the particular proceeding; LBP-11-35, 74 NRC 701 (2011)

prima facie showing on a rule waiver request is not a final determination on the merits, but merely requires presentation of enough information to allow the board to infer, absent disproof, that special circumstances exist; LBP-14-16, 80 NRC 183 (2014)

procedure for obtaining a rule waiver is set out in 10 C.F.R. 2.335(a)-(d); CLI-12-19, 76 NRC 377 (2012)

replies to waiver petitions are allowed; CLI-11-3, 73 NRC 613 (2011)

request for waiver of 10 C.F.R. 51.22(c)(15) is denied; CLI-11-3, 73 NRC 613 (2011)

role of the board when a rule waiver request is filed is limited to determining whether petitioner has made a prima facie showing that it has satisfied 10 C.F.R. 2.335(b), and if not, the board may not further consider the matter; LBP-13-1, 77 NRC 57 (2013)

rule waiver petitions are reviewed under section 2.335 as well as case law; CLI-13-7, 78 NRC 199 (2013)

rule waiver requests must demonstrate that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which it was adopted; CLI-15-21, 82 NRC 295 (2015)

rule waiver should not be granted unless the petition relates to a significant safety problem; LBP-14-16, 80 NRC 183 (2014)

rule waiver test applies equally to safety and significant environmental concerns; LBP-14-16, 80 NRC 183 (2014)

rule waiver would be necessary to litigate the issue of potentially new and significant information pertaining to bird collisions; CLI-13-7, 78 NRC 199 (2013)

ruling on petitions for waiver of application of the waste confidence rule in independent spent fuel storage installation license renewal proceeding is deferred and held it in abeyance; LBP-12-24, 76 NRC 503 (2012)

showing of special circumstances demonstrating that application of the rule would not serve the purpose for which it was adopted is required for rule waiver; CLI-12-19, 76 NRC 377 (2012); LBP-12-24, 76 NRC 503 (2012)

showing of uniqueness is necessary to justify setting aside a regulation for the purposes of a specific proceeding; CLI-13-7, 78 NRC 199 (2013)
sole ground for petition of waiver or exception is that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which the rule or regulation was adopted; CLI-11-11, 74 NRC 427 (2011); CLI-13-7, 78 NRC 199 (2013); LBP-11-35, 74 NRC 701 (2011); LBP-13-1, 77 NRC 57 (2013); LBP-14-16, 80 NRC 183 (2014)
special circumstances for rule waiver are present only if the petition properly pleads one or more facts, not common to a large class of applicants or facilities, that were not considered either explicitly or by necessary implication in the proceeding leading to the rule sought to be waived; LBP-14-16, 80 NRC 183 (2014)
to challenge a Category 1 issue such as public health, petitioner must request a waiver and show that unique circumstances warrant a site-specific determination; LBP-15-5, 81 NRC 249 (2015)
to challenge generic application of a rule, petitioner seeking waiver must show that there is something extraordinary about the subject matter of the proceeding such that the rule should not apply; CLI-13-7, 78 NRC 199 (2013)
to determine whether a petitioner has demonstrated that application of a regulation would not serve the purposes for which it was adopted, a board must first determine the purpose of rule or regulation for which waiver is sought; LBP-13-1, 77 NRC 57 (2013)
to litigate a SAMA-related contention in adjudicatory proceedings where the SAMA-analysis exception applies, petitioner must obtain a rule waiver as well as satisfy the contention admissibility criteria in section 2.309(f)(1); CLI-13-7, 78 NRC 199 (2013)
to meet the waiver standard, the party seeking a waiver must attach an affidavit that, among other things, states with particularity the special circumstances claimed to justify the waiver or exception requested; CLI-11-11, 74 NRC 427 (2011); LBP-15-5, 81 NRC 249 (2015)
to waive a Part 110 rule or regulation, petitioner must show special circumstances concerning the subject of the hearing such that application of the rule or regulation would not serve the purposes for which it was adopted; CLI-11-3, 73 NRC 613 (2011)
to waive the generic assessment in NRC regulations to permit adjudication of issues involving the environmental impact of spent fuel pool accidents in a license renewal proceeding, the Commission must conclude that the rule’s strict application would not serve the purpose for which it was adopted; CLI-11-11, 74 NRC 427 (2011)
ubiquitous issue that clearly applies to a large class of people or facilities is ineligible for a waiver; LBP-11-16, 73 NRC 645 (2011)
uniqueness factor of the waiver test is discussed; LBP-11-35, 74 NRC 701 (2011)
use of “and” in the list of requirements for rule waiver means that all four factors must be met; CLI-11-11, 74 NRC 427 (2011)
waiver of a rule pertaining to the agency’s environmental responsibilities is possible; CLI-13-7, 78 NRC 199 (2013)
waiver petition would permit consideration of an issue in an adjudicatory proceeding that would otherwise impermissibly challenge an NRC rule or regulation; CLI-14-7, 80 NRC 1 (2014)
waiver should be granted only if the rule’s strict application would not serve the purposes for which it was adopted, movant has alleged special circumstances that were not considered either explicitly or by necessary implication in the rulemaking proceeding, those circumstances are unique to the facility rather than common to a large class of facilities, and waiver is necessary to reach a significant safety problem; LBP-12-24, 76 NRC 503 (2012)
where petitioner has successfully made a prima facie showing for rule waiver, the board shall, before ruling on the petition, certify the matter directly to the Commission, and the Commission shall determine whether to grant or deny the waiver request; LBP-13-1, 77 NRC 57 (2013)
where the circumstances on which the proponent relies are common to a large class of applicants or facilities, the waiver will not be granted; LBP-11-16, 73 NRC 645 (2011)
where the rules in question, as well as the contention itself, address compliance with NEPA and not safety issues under the Atomic Energy Act, the rule waiver is needed to address a significant environmental issue instead of a significant safety issue; LBP-14-16, 80 NRC 183 (2014)
SUBJECT INDEX

WASTE
See Radioactive Waste

WASTE CONFIDENCE RULE

all final decisions for licenses that relied on the Waste Confidence Decision and Temporary Storage Rule were suspended; CLI-15-4, 81 NRC 221 (2015)
as an exercise of its inherent supervisory authority over adjudications, the Commission directed that waste confidence contentions and any related contentions that may be filed in the near term be held in abeyance pending further order; LBP-12-24, 76 NRC 503 (2012); LBP-13-1, 77 NRC 57 (2013); LBP-14-6, 79 NRC 404 (2014)
because waste confidence undergirds certain agency licensing decisions, the Commission held that the NRC should not issue licenses affected by the Waste Confidence Decision until the remanded issues are resolved; CLI-14-3, 79 NRC 31 (2014)
Commission believes that there is reasonable assurance that sufficient repository capacity will be available within 30 years beyond the licensed life for operation of any reactor to dispose of the commercial high-level waste and spent fuel originating in such reactor and generated up to that time; LBP-11-16, 73 NRC 645 (2011)
Commission directed licensing boards to reject pending waste confidence contentions after adopting a generic environmental impact statement to identify and analyze environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-5, 81 NRC 249 (2015)
Commission directed that licensing boards hold wastedisposal contentions in abeyance pending further Commission order, which would be issued in conjunction with a then to-be-determined agency response to the District of Columbia Circuit’s ruling; CLI-14-8, 80 NRC 71 (2014); LBP-14-12, 80 NRC 138 (2014)
contention challenging the Waste Confidence Rule may not be admitted absent a waiver or exception; LBP-11-16, 73 NRC 645 (2011)
in its Waste Confidence Decision, NRC failed to consider environmental impacts of a repository never becoming available, its analysis of spent fuel pool leaks was not forward-looking, and it had not sufficiently considered the consequences of spent fuel pool fires; CLI-15-4, 81 NRC 221 (2015)
in light of the vacatur of the Waste Confidence Decision and Temporary Storage Rule, environmental reports consider the reasonably foreseeable impacts of permanent storage of spent fuel, and contentions concerning the failure of the ER to do so must be held in abeyance; LBP-12-24, 76 NRC 503 (2012)
in view of the special circumstances presented by waste confidence, the Commission directed that those contentions and any related contentions filed in the near term be held in abeyance pending its further order; CLI-14-3, 79 NRC 31 (2014)
it is in the public interest for adjudications to proceed, except for contentions associated with waste confidence issues; CLI-12-16, 76 NRC 63 (2012)
licensing boards are directed to reject pending waste confidence contentions that had been held in abeyance; LBP-14-15, 80 NRC 151 (2014)
licensing boards were instructed to hold in abeyance any contentions on Waste Confidence matters until after the Commission’s issuance of a new generic environmental impact statement; LBP-14-16, 80 NRC 183 (2014)
motion to admit a new waste-confidence-related contention is being held in abeyance; CLI-13-7, 78 NRC 199 (2013)
NRC violated the National Environmental Policy Act in issuing its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule; CLI-12-16, 76 NRC 63 (2012)
NRC will not issue final licenses dependent upon the Waste Confidence Rule until the court’s remand is appropriately addressed; CLI-12-17, 76 NRC 207 (2012); LBP-12-21, 76 NRC 218 (2012)
NRC’s current rule concerning the storage and disposal of high-level waste was remanded to the Commission to generate either a generic analysis that is forward looking and has enough breadth to support the Commission’s conclusions or site-specific environmental impact statements in all relevant proceedings; LBP-12-21, 76 NRC 218 (2012)
NRC’s Waste Confidence Decision Update and Temporary Storage Rule were invalidated because there was not even a prospective site for a repository, let alone progress toward the actual construction of one; LBP-14-16, 80 NRC 183 (2014)
SUBJECT INDEX

on its face, the rule does not apply to uranium enrichment facilities; LBP-12-21, 76 NRC 218 (2012)
pending resolution of issues with NRC’s waste confidence rule, waste confidence contentions should be
held in abeyance; LBP-13-4, 77 NRC 107 (2013)
public comment will be afforded in advance on any generic waste confidence document that NRC issues
on remand, be it a fresh rule, a policy statement, an environmental assessment, or an environmental
impact statement; CLI-12-16, 76 NRC 63 (2012)
regarding waste confidence, NRC failed to comply with the National Environmental Policy Act in issuing
its 2010 update to the Waste Confidence Decision and accompanying Temporary Storage Rule;
CLI-14-3, 79 NRC 31 (2014)
rule concerning storage and disposal of high-level waste is vacated and the issue remanded to the
Commission to generate either a generic analysis that is forward looking and has enough breadth to the
support the Commission’s conclusions or a site-specific environmental impact statement in all relevant
proceedings; LBP-13-13, 78 NRC 246 (2013)
rule expressed the Commission’s reasonable assurance that a repository was likely to be available by
2007-2009; LBP-14-16, 80 NRC 183 (2014)
ruling on petitions for waiver of application of the waste confidence rule in independent spent fuel
storage installation license renewal proceeding is deferred and held it in abeyance; LBP-12-24, 76 NRC
503 (2012)
spent fuel can be stored safely and without significant environmental impacts for at least 60 years beyond
the licensed life for operation and there is reasonable assurance that sufficient mined geologic repository
capacity will be available when necessary; CLI-14-8, 80 NRC 71 (2014)
waste confidence and similar contentions are held in abeyance pending further order from the
Commission; LBP-14-8, 79 NRC 519 (2014)
waste confidence undergirds certain agency licensing decisions, in particular new reactor licensing and
reactor license renewal; CLI-12-16, 76 NRC 63 (2012)
WASTE DISPOSAL
because petitioner fails to address information in the draft supplemental environmental impact statement
and generic EIS that is relevant to the issue it raises, the board must reject arguments relating to liquid
waste disposal; LBP-13-9, 78 NRC 37 (2013)
Commission chose to review intervenors’ motion along with similar motions in other proceedings and
associated petitions to suspend reactor licensing pending issuance of waste confidence safety findings;
CLI-15-6, 81 NRC 340 (2015)
contention that draft environmental impact statement fails to take a hard look at impacts of the proposed
mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that final environmental assessment fails to conduct the required hard look at impacts of the
proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11,
81 NRC 401 (2015)
environmental waste confidence contentions are dismissed; CLI-15-6, 81 NRC 340 (2015)
petitions to suspend final reactor licensing decisions pending a waste confidence safety finding were
denied; DD-15-9, 82 NRC 274 (2015)
See also Radioactive Waste Disposal
WASTE PROCESSING
key action that will allow incineration of imported low-level-radioactive waste material is the domestic
license authorizing such processing, not NRC’s grant of an import license; CLI-11-3, 73 NRC 613
(2011)
licensee must provide for ready retrieval of spent fuel from storage for further processing or disposal;
LBP-12-24, 76 NRC 503 (2012)
state reviewed the applications and the authorizations and found no technical reason to prohibit processing
of imported waste; CLI-11-3, 73 NRC 613 (2011)
WASTE STORAGE
See Radioactive Waste Storage
WASTEWATER
contention that draft EIS is deficient because its evaluation of operation of radial collector wells does not
preclude the possibility that they will change the plume dynamics of the industrial wastewater
facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 815 (2015)
contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 401 (2015)

ccontention that wastewater contains chemical contaminants that are not discussed in the environmental report, and that when the wastewater is discharged via deep injection wells, the chemicals might migrate to an aquifer is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)

WATER POLLUTION

apply for a federal discharge permit must provide a certification from the state that the proposed activity will not violate state water pollution control standards; LBP-12-16, 76 NRC 44 (2012)

contention claiming that environmental report’s discussion of environmental effects and cumulative impacts of seepage from the cooling basin into groundwater and surface water through undocumented or unplugged oil and gas wells and borings fails to comply with the requirements of this section is admissible; LBP-11-16, 73 NRC 645 (2011)

Corps of Engineers may not issue a 404 permit if there exists a practicable alternative that would have less adverse impact on the aquatic system, the permit would cause significant degradation of the water of the United States, or appropriate and practicable mitigation has not been undertaken; LBP-14-9, 80 NRC 15 (2014)

for petitioners claiming to be using water from the same aquifer as for the uranium ore source, regardless of distance from the facility in question, licensing boards have found that a plausible pathway connecting the proposed mining operation to their water source has been shown so as to establish petitioners’ standing; LBP-12-3, 75 NRC 164 (2012)

license renewal applicants must submit documentation of compliance with sections 316(a) and (b) of the Clean Water Act concerning thermal discharges; LBP-12-16, 76 NRC 44 (2012)

potential increases in nutrient concentration or eutrophication as a result of dewatering associated with construction and/or operation of the proposed plant are discussed; LBP-13-4, 77 NRC 107 (2013)

standing was found for petitioner fishing a river 60 miles downstream from a proposed in situ recovery facility expansion alleged to allow drainage into the river from operations; LBP-12-3, 75 NRC 164 (2012)

surface water contamination has played a significant role in standing determinations in in situ recovery cases; LBP-12-3, 75 NRC 164 (2012)

when an ore zone and petitioner’s water source exist in separate aquifers, the injury/causeation question is whether there is an interconnection between these aquifers; LBP-12-3, 75 NRC 164 (2012)

when petitioners considerably upgradient of the mining area fail to explain how contaminated material from the in situ recovery site might plausibly enter their drinking water, they fail to demonstrate the causation element necessary to establish their standing; LBP-12-3, 75 NRC 164 (2012)

See also Groundwater Contamination; National Pollutant Discharge Elimination System Permit

WATER QUALITY

admissibility of contention that environmental assessment fails to adequately describe and analyze aquifer restoration goals in light of new standards for determining alternative control limits is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental documents and associated monitoring values and restoration goals rely on baseline data calculations that are inadequate and unacceptable is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 401 (2015)

applicant for a uranium ISR license is required to provide data from a groundwater monitoring program that are sufficient to establish a pre-licensing site characterization baseline for assessing the potential effects of facility operations on local groundwater quality; LBP-15-3, 81 NRC 65 (2015)

applicant’s monitoring program for establishing existing site characterization baseline values for certain site groundwater constituents need not be conducted so as to also provide background information needed to set Appendix A, Criterion 5B groundwater protection standards; LBP-15-3, 81 NRC 65 (2015)
background water quality data are used to establish existing hazardous constituent concentrations in an aquifer, which can then be used to set post-operational concentration limits; LBP-15-16, 81 NRC 618 (2015)

“baseline” data describe results of applicant’s preoperational or baseline groundwater quality sampling program providing data on project-wide groundwater conditions; LBP-15-16, 81 NRC 618 (2015)

claim that application fails to adequately present the true extent of historical exploration drilling, borehole abandonment details, R&D testing, changes to groundwater water quality, and interconnections of geologic strata contains no alleged facts to support this opinion and thus does not raise a genuine dispute; LBP-12-3, 75 NRC 164 (2012)

Commission-approved background cannot be established until after an ISR license has been issued; LBP-15-3, 81 NRC 65 (2015)

compliance with the environmental quality standards and requirements of the Federal Water Pollution Control Act is not a substitute for, and does not negate the requirement for NRC to weigh all environmental effects of the proposed action, including the degradation, if any, of water quality; LBP-15-11, 81 NRC 401 (2015)

concern about computer modeling methodology used to calculate groundwater quantity impacts is inadmissible as lacking sufficient factual or expert support and as failing to establish a material factual or legal dispute; LBP-12-3, 75 NRC 164 (2012)

contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that draft environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)

contention that draft environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that draft environmental impact statement lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is admissible; LBP-13-10, 78 NRC 117 (2013)

contention that final supplemental environmental impact statement fails to comply with NRC regulations and NEPA because it lacks an adequate description of the present baseline groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner is decided; LBP-15-3, 81 NRC 65 (2015)

contention that final supplemental environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-14-5, 79 NRC 377 (2014)

determination of background groundwater quality to include sampling of wells that are hydraulically upgradient of the waste management area is not required if non-upgradient well sampling will provide an indication of background groundwater quality that is representative, or more representative, than that provided by upgradient wells; LBP-15-3, 81 NRC 65 (2015)

EPA drinking water maximum contaminant levels continue to be an accepted groundwater restoration standard; LBP-15-3, 81 NRC 65 (2015)

groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

if impacts are unavoidable, applicant shall provide mitigation measures that must be, to the extent practicable, sufficient to replace lost aquatic resource functions; LBP-15-23, 82 NRC 55 (2015)

in areas with a designated use as aquatic habitat, cooling water intake structures hinder the attainment of water quality standards; LBP-12-16, 76 NRC 44 (2012)

in exempting an aquifer from MCLs, EPA has to find that the aquifer cannot and will not serve as a source of drinking water because it is mineral producing and can be demonstrated to contain minerals that, considering their quantity and location, are expected to be commercially producible; LBP-15-3, 81 NRC 65 (2015)

intervenors fail to establish the validity of their various challenges to the adequacy of the FSEIS description of the baseline water quality at the ISR site; LBP-15-3, 81 NRC 65 (2015)
SUBJECT INDEX

NRC Staff may rely on the scientific data and inferences drawn by another government agency but need not slavishly defer to that agency’s findings or its conclusions about water quality; LBP-13-4, 77 NRC 107 (2013)

purpose of alternate concentration limits is to address situations where restoring groundwater to baseline conditions or MCLs would not be practicable; LBP-13-9, 78 NRC 37 (2013)
samples taken from one well located hydrologically upgradient are part of the groundwater sampling protocol; LBP-15-3, 81 NRC 65 (2015)

three alternative standards for groundwater restoration at ISR facilities are background concentrations, maximum values from chart 5C, or an alternate concentration limit; LBP-13-9, 78 NRC 37 (2013)

waiting until after licensing, although before mining operations begin, to definitively establish the groundwater quality baselines and upper control limits is consistent with industry practice and NRC methodology, given the sequential development of in situ leach wellfields; LBP-15-16, 81 NRC 618 (2015)

WATER RIGHTS

federal government could assert an implied water right on behalf of a wildlife refuge; LBP-11-16, 73 NRC 645 (2011)
to show that it is within the realm of reason that the federal government may assert an implied water right, petitioner must provide some indicia of an attempt, plan, or intention; LBP-11-16, 73 NRC 645 (2011)

WATER SUPPLY

assurance of adequate cooling water supply for emergency and long-term shutdown decay heat removal shall be considered in the design of the nuclear power plant; LBP-11-16, 73 NRC 645 (2011)
contention alleging that final supplemental environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-14-5, 79 NRC 377 (2014)
contention claiming that the application insufficiently addresses the safety implications of low water availability is inadmissible for failure to raise a genuine dispute with the application because the contention does not provide specific references to relevant sections of the site safety analysis report that address low water considerations; LBP-11-16, 73 NRC 645 (2011)
contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 456 (2015)
contention that environmental assessment violates the National Environmental Policy Act in its failure to analyze groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 401 (2015)
in analyzing predictions of water availability in a report, NRC Staff consulted with the other government agencies to determine whether data from either of those agencies could be obtained to prepare a new water availability prediction; LBP-13-4, 77 NRC 107 (2013)

intervenors’ challenges to adequacy of applicant’s environmental report with respect to environmental impacts of dewatering associated with the proposed nuclear plant continue to serve as viable challenges to similar sections of Staff’s draft environmental impact statement and thus are not moot; LBP-11-1, 73 NRC 19 (2011)

NRC imposed requirements to provide makeup water independent of offsite power and the normal emergency alternating current power sources to maintain or restore spent fuel pool cooling capability in the event of an accident; DD-15-1, 81 NRC 193 (2015)
request that NRC order licensees to have an installed, seismically qualified means to spray water into the spent fuel pools, including an easily accessible connection to supply the water (e.g., using a portable pump or pumper truck) at grade outside the building is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide safety-related AC electrical power for the spent fuel pool makeup system is addressed; DD-14-2, 79 NRC 489 (2014)
to show that it is within the realm of reason that the federal government may assert an implied water right, petitioner must provide some indicia of an attempt, plan, or intention; LBP-11-16, 73 NRC 645 (2011)
SUBJECT INDEX

WATER USE
an application for water use permits is evaluated by local governmental agencies; LBP-12-16, 76 NRC 44 (2012) applications for water use permits are evaluated by local governmental agencies; LBP-12-4, 77 NRC 107 (2013)
in areas with a designated use as aquatic habitat, cooling water intake structures hinder the attainment of water quality standards; LBP-12-16, 76 NRC 44 (2012)
intervenors’ challenge concerning the DEIS’s alleged failure to discuss the Great Lakes Compact’s process for regional review of its application for a consumptive water use permit is inadmissible; LBP-12-12, 75 NRC 742 (2012)
NRC’s analysis, in its final environmental impact statement, of issues relating to dewatering associated with construction and operation of the proposed plants is adequate and satisfied the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)
potential for increase in frequency of destructive wildfires due to altered natural hydroperiods discussed; LBP-13-4, 77 NRC 107 (2013)
potential increases in nutrient concentration or eutrophication as a result of dewatering associated with construction and/or operation of the proposed plant are discussed; LBP-13-4, 77 NRC 107 (2013)
state water use permit is required for construction and operation of the nuclear units, associated facilities, and transmission lines and corridor; LBP-13-4, 77 NRC 107 (2013)
WEB SITE
nonstatic nature of a website, in the absence of a stand-alone compact disc/digital video disc that would allow the board or parties to run a locked-down version of the website application, prevents consideration as evidence; LBP-15-3, 81 NRC 65 (2015)
WELDS
pressurized thermal shock screening criterion is given for plates, forgings, and axial and circumferential weld materials; LBP-15-17, 81 NRC 753 (2015)
WETLANDS
areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions and generally include swamps, marshes, bogs, and similar areas are designated as wetlands; LBP-13-4, 77 NRC 107 (2013)
assertion that final environmental impact statement inadequately addresses, and inappropriately characterizes as small, the plant’s dewatering-associated impacts to wetlands, floodplains, special aquatic sites, and other waters is litigated; LBP-13-4, 77 NRC 107 (2013)
combined license applicants must obtain permits from the U.S. Army Corps of Engineers in order to complete construction activities that may potentially affect wetlands; CLI-12-9, 75 NRC 421 (2012)
cumulative impacts of water withdrawals, climate change, and saltwater intrusion are discussed; LBP-13-4, 77 NRC 107 (2013)
ecological effects of seasonal fluctuations and hydroperiods are discussed; LBP-13-4, 77 NRC 107 (2013)
groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)
if impacts are unavoidable, applicant shall provide mitigation measures that must be, to the extent practicable, sufficient to replace lost aquatic resource functions; LBP-15-23, 82 NRC 55 (2015)
impact analysis of passive dewatering is discussed; LBP-13-4, 77 NRC 107 (2013)
 ecologists fail to show that, with respect to terrestrial and wetland mitigation plans, there are data or conclusions in the draft environmental impact statement that differ significantly from the data or conclusions in the applicant’s documents; LBP-12-12, 75 NRC 742 (2012)
intervenors’ challenges to adequacy of applicant’s environmental report with respect to environmental impacts of dewatering associated with the proposed nuclear plant continue to serve as viable challenges to similar sections of Staff’s draft environmental impact statement and thus are not moot; LBP-11-1, 73 NRC 19 (2011)
NRC Staff’s analysis, in its final environmental impact statement, of issues relating to dewatering associated with construction and operation of the proposed plants is adequate and satisfied the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)

1405
NRC Staff’s environmental review was conducted in cooperation with the U.S. Army Corps of Engineers, with NRC acting as lead agency and ACE as cooperating agency under a memorandum of understanding, because applicants also needed permits from ACE to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012). The proposed plant will impact at least 668 acres of wetlands and the construction and operation will require a permit from the U.S. Army Corps of Engineers; LBP-13-4, 77 NRC 107 (2013). “Special aquatic sites” are defined in accordance with guidelines issued by the U.S. Environmental Protection Agency and include six categories of special aquatic sites; LBP-13-4, 77 NRC 107 (2013). When a proposed project would cause discharge of dredged or fill material into wetlands, the applicant must seek a permit from the Corps of Engineers; LBP-15-23, 82 NRC 55 (2015).

**WETWELL**

Licensees of boiling water reactors with Mark I and Mark II containments are required to design and install a venting system that provides venting capability from the wetwell during severe accident conditions; DD-15-1, 81 NRC 193 (2015).

**WHISTLEBLOWERS**

The government may withhold from disclosure the identity of persons who furnish information of violations of law to officers charged with enforcement of the law; CLI-13-5, 77 NRC 223 (2013).

**WILDFIRES**

The credibility of hazard to uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011). The potential for increase in frequency of destructive wildfires due to altered natural hydroperiods is discussed; LBP-13-4, 77 NRC 107 (2013).

**WIND ENERGY**

A contention seeking full impacts analysis of the power supply alternative of wind, either alone or in combination with solar and storage, is inadmissible because it fails to adequately demonstrate the capacity to produce baseload power; LBP-12-15, 76 NRC 14 (2012). The failure to provide a direct critique of the environmental report analysis of the potential for offshore power and interconnected wind farms is a failure to identify a genuine dispute with applicant; LBP-15-5, 81 NRC 249 (2015). Petitioners must show concretely that wind could be a reliable, commercially viable source of baseload power during the license renewal period; LBP-15-5, 81 NRC 249 (2015). Technologies as a component of a baseload energy source in combination with compressed air energy storage facility, a natural gas plant, or both, are discussed; LBP-12-17, 76 NRC 71 (2012).

**WIND POWER**

Because a solely wind- or solar-powered facility could not satisfy the project’s purpose, there was no need to compare the impact of such facilities to the impact of the proposed nuclear plant; LBP-11-7, 73 NRC 254 (2011).

**WITHDRAWAL**

If an application is withdrawn prior to issuance of a notice of hearing, the Commission shall dismiss the proceeding; CLI-13-10, 78 NRC 563 (2013). Licensing boards may not raise issues sua sponte when the sole intervenor has withdrawn from the proceeding; LBP-11-22, 74 NRC 259 (2011). Motion to withdraw application without prejudice is granted and proceeding is terminated; CLI-14-8, 80 NRC 71 (2014). If request that board impose additional discovery activities as a requirement of withdrawal of license amendment request is too broad because it goes beyond the scope of the admitted contentions and discovery is peculiarly related to particular proceedings and particular contentions; LBP-15-28, 82 NRC 233 (2015). Unconditional withdrawal is generally appropriate if it would cause no prejudice to either the intervenors’ or the public’s interest; LBP-15-28, 82 NRC 233 (2015). Upon receipt of a motion to withdraw an application, the board may place terms and conditions on the withdrawal, deny the application, or dismiss the application with prejudice; CLI-13-10, 78 NRC 563 (2013). With license’s withdrawal of license amendment request, the proceeding is moot; CLI-13-10, 78 NRC 563 (2013).

See Motions to Withdraw.
SUBJECT INDEX

WITNESSES
at the request of any party a court must order witnesses excluded so that they cannot hear other witnesses’ testimony; LBP-12-21, 76 NRC 218 (2012)
courts exclude witnesses prior to their testimony to discourage or expose outright fabrication and restrain the natural tendency of witnesses to tailor their testimony to that of earlier witnesses; LBP-12-21, 76 NRC 218 (2012)
findings concerning personal knowledge are entirely factual and largely dependent on witness credibility; LBP-11-8, 73 NRC 349 (2011)
written prefiled testimony and exhibits are typically submitted well in advance of the evidentiary hearing, and in most common types of hearings, licensing boards themselves, not the parties, orally examine the witnesses; LBP-12-21, 76 NRC 218 (2012)

WITNESSES, EXPERT
ability of a totally unfunded group to provide testimony from experts is not taken into account in ruling on motions to reopen; LBP-11-20, 74 NRC 65 (2011)
bare assertions and speculation, even by an expert, are insufficient to trigger a full adjudicatory proceeding; CLI-12-15, 75 NRC 704 (2012)
based on his education and experience, intervenors’ witness was found qualified to testify but not specifically on issues related to nuclear engineering, such as events at the Fukushima Dai-ichi plant, core damage frequency calculations, and effectiveness of SAMDAs; LBP-11-38, 74 NRC 817 (2011)
“belief” that is not supported by alleged facts or expert opinion renders a contention inadmissible; CLI-15-26, 82 NRC 163 (2015)
boards may appropriately view petitioner’s supporting information in a light favorable to the petitioner, but neither mere speculation nor bare or conclusory assertions, even by an expert, will suffice to allow the admission of a proffered contention; LBP-13-10, 78 NRC 117 (2013)
conclusory assertion, even if made by an expert, is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; LBP-11-6, 73 NRC 149 (2011)
contention admission stage is not the appropriate point at which to evaluate witness credibility or to weigh competing evidence, but an expert must provide a reasoned basis or explanation for opinions in support of a contention; LBP-15-17, 81 NRC 753 (2015)
evidence in affidavits supporting a motion to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
expert has enough knowledge in the subject area to proffer an expert opinion for the purposes of determining contention admissibility; LBP-15-24, 82 NRC 68 (2015)
expert opinion that merely states a conclusion, e.g., the application is “deficient,” “inadequate,” or “wrong” without providing a reasoned basis or explanation for that conclusion is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-12-5, 75 NRC 301 (2012); CLI-15-23, 82 NRC 321 (2015); LBP-15-26, 82 NRC 163 (2015)
experts must have the requisite education, training, skill, or experience in operation of a nuclear power plant or in probabilistic risk assessment to support a contention; LBP-11-35, 74 NRC 701 (2011)
intervenors have demonstrated their ability to contribute to the development of a sound record where they have put forward in support of those contentions the views of a witness whose expertise has been recognized in other NRC proceedings; LBP-11-9, 73 NRC 391 (2011)
motions to reopen must be supported by an affidavit written by an individual with knowledge of the facts alleged, and the affidavit must explain why each of the criteria has been met; CLI-12-15, 75 NRC 704 (2012)
neither speculation nor conclusory assertions, even by an expert, alleging that a matter fails to satisfy the Atomic Energy Act or National Environmental Policy Act will suffice to allow admission of a contention; LBP-12-3, 75 NRC 164 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-15-1, 81 NRC 15 (2015)
petitioner is obliged to present factual allegations and/or expert opinion necessary to support its contention; LBP-12-27, 76 NRC 583 (2012)
petitioner’s assertion that recriticality is demonstrated by the relative quantities of radionuclides released is not self-evident and is clearly of the class of statements that must be supported by expert opinion; LBP-11-23, 74 NRC 287 (2011)
speculation by an expert cannot form the basis for admission of a contention on the basis of the matter being exceptionally grave; LBP-11-20, 74 NRC 65 (2011)
summary disposition is particularly inappropriate when a licensing board is presented with conflicting expert testimony, for at that stage of a proceeding it is not the role of licensing boards to untangle the expert affidavits and decide which experts are more correct; LBP-11-14, 73 NRC 591 (2011)
supporting affidavits must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; LBP-11-35, 74 NRC 701 (2011)
witness must have enough knowledge in the subject area to allow him to proffer an expert opinion for the purposes of determining contention admissibility; LBP-15-20, 81 NRC 829 (2015)

WRIT OF MANDAMUS
NRC is ordered to promptly resume the licensing process for the high-level radioactive waste repository construction authorization application unless and until Congress authoritatively says otherwise or there are no appropriated funds remaining; CLI-13-8, 78 NRC 219 (2013)

ZERO PRESSURE BOUNDARY
request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 323 (2011)

ZONE OF INTERESTS
contention alleges errors by NRC Staff in implementation of 10 C.F.R. 73.56(f)(1)-(3) that fall within the zone of interests protected or regulated by those provisions; LBP-14-4, 79 NRC 319 (2014)
in determining standing, boards should determine whether plaintiff’s grievance arguably falls within the zone of interests protected or regulated by the statutory provision invoked in the suit; LBP-14-4, 79 NRC 319 (2014)
test for standing is not meant to be especially demanding, there being no indication of congressional purpose to benefit the would-be plaintiff; LBP-14-4, 79 NRC 319 (2014)
to be adversely affected or aggrieved within the meaning of a statute, plaintiff must establish that the injury complained of falls within the zone of interests sought to be protected by the statutory provision whose violation forms the legal basis for the complaint; LBP-14-4, 79 NRC 319 (2014)
where plaintiff is not itself the subject of the contested regulatory action, the zone-of-interests test for standing denies a right of review if plaintiff’s interests are so marginally related to or inconsistent with the purposes implicit in the statute that it cannot be assumed that Congress intended to permit the suit; LBP-14-4, 79 NRC 319 (2014)
where plaintiff is not itself the subject of the contested regulatory action, the zone-of-interests test denies a right of review if plaintiff’s interests are so marginally related to or inconsistent with the purposes implicit in the statute that it cannot be assumed that Congress intended to permit the suit; LBP-14-4, 79 NRC 319 (2014)
whether plaintiff’s interest is arguably protected by the statute within the meaning of the zone-of-interests test is to be determined not by reference to the overall purpose of the Act in question, but by reference to the particular provision of law upon which plaintiff relies; LBP-14-4, 79 NRC 319 (2014)
whether the zone-of-interests test has been satisfied does not depend on how concrete or speculative the threat of injury may be; LBP-14-4, 79 NRC 319 (2014)

ZONE OF INTERESTS
statutes articulating the relevant zone of interests in NRC proceedings are the Atomic Energy Act and the National Environmental Policy Act; LBP-11-29, 74 NRC 612 (2011) his or her interests seeks to establish its representational standing, resides within 50 miles of the proposed facility, or has frequent contacts with the area affected by the proposed facility; LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011)
the rationale for proximity-based standing is that in construction permit and operating license cases, persons living within the roughly 50-mile radius of the facility face a realistic threat of harm if a release from the facility of radioactive material were to occur; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)
the record must show movant’s right to summary judgment with such clarity as to leave no room for controversy, and must demonstrate that his opponent would not be entitled to prevail under any discernible circumstances; LBP-11-4, 73 NRC 91 (2011)
the rules on contention admissibility are strict by design; LBP-11-16, 73 NRC 645 (2011)
the scope of an admitted contention is determined by the bases set forth in support of the contention; LBP-11-14, 73 NRC 591 (2011)

to be admissible, a newly proffered contention must satisfy either the timeliness standards in 10 C.F.R. 2.309(f)(2) or the standards in 10 C.F.R. 2.309(c)(1) for newly proffered nontimely contentions, and the contention admissibility standards in 10 C.F.R. 2.309(f)(1); LBP-11-15, 73 NRC 629 (2011)

to become a party, a petitioner must submit at least one admissible contention; LBP-11-16, 73 NRC 645 (2011)

to demonstrate representational standing, an organization must show that at least one of its members might be affected by the proceeding, identify that member by name and address, and show that the member has authorized the organization to represent him or her and to request a hearing on his or her behalf; LBP-11-6, 73 NRC 149 (2011)

to determine if a petitioner has sufficient interest in a proceeding to be entitled to intervene as a matter of right under section 189a, the Commission has long applied contemporaneous judicial concepts of standing; CLI-11-3, 73 NRC 613 (2011)

to determine whether the elements for standing are met, boards are to construe the petition in favor of the petitioner; LBP-11-16, 73 NRC 645 (2011)

to establish standing, an intervention petition must state petitioner’s name, address, and telephone number, the nature of the petitioner’s right to be made a party, the nature and extent of petitioner’s property, financial, or other interest, and the possible effect of any decision or order on petitioner’s interest; LBP-11-16, 73 NRC 645 (2011)

to establish standing, petitioner must allege a concrete and particularized injury that is fairly traceable to the challenged action and likely to be redressed by a favorable decision; CLI-11-3, 73 NRC 613 (2011)

to justify reopening the record, the moving papers must be strong enough, in the light of any opposing filings, to avoid summary disposition; CLI-11-2, 73 NRC 333 (2011)

to participate in a proceeding as an intervenor, petitioner must establish standing and proffer at least one admissible contention; LBP-11-2, 73 NRC 28 (2011); LBP-11-6, 73 NRC 149 (2011)

to the extent that petitioner challenges the board’s decision to apply the reopening standards strictly, its challenge constitutes an improper collateral attack on NRC regulations; CLI-11-2, 73 NRC 333 (2011)

traditional judicial standing concepts require a showing that the individual has suffered or might suffer a concrete and particularized injury that is fairly traceable to the challenged action, is likely redressed by a favorable decision, and is arguably within the zone of interests protected by the governing statutes; LBP-11-2, 73 NRC 28 (2011)

under the previous contention admissibility rule, a contention could be admitted and litigated based on little more than speculation, with parties attempting to unearth a case through cross-examination; LBP-11-6, 73 NRC 149 (2011)

understandable misapprehension of the start of the filing period for contentions, leading to inadvertent late filing of new contentions, establishes good cause to excuse missing the filing deadline pursuant to 10 C.F.R. 2.309(c)(1); LBP-11-9, 73 NRC 391 (2011)

when a contention alleges the need for further study of an alternative, from an environmental perspective, such reasonableness determinations are the merits, and should only be decided after the contention is admitted; LBP-11-2, 73 NRC 28 (2011)

when presented with conflicting expert opinions, licensing boards should be mindful that summary disposition is rarely proper; LBP-11-7, 73 NRC 254 (2011)

when ruling on motions for summary disposition, the Commission applies standards analogous to those used by federal courts when ruling on motions for summary judgment under Rule 56 of the Federal Rules of Civil Procedure; LBP-11-14, 73 NRC 591 (2011)

where a municipality seeks to participate in a reactor licensing proceeding that does not involve a facility within the municipality’s boundaries, it can, for purposes of establishing standing, rely on the 50-mile proximity presumption to the same extent as an individual or an organization; LBP-11-6, 73 NRC 149 (2011)

where applicant deletes a material portion of its application and replaces it with a changed explanation of legal compliance, that replacement is materially different information that was previously unavailable and thus can satisfy the requirements of 10 C.F.R. § 2.309(f)(2)(ii) and § 2.309(f)(1); LBP-11-9, 73 NRC 391 (2011)

where good cause is not shown for the late filing of a contention, the requester’s demonstration on the other factors must be particularly strong; LBP-11-15, 73 NRC 629 (2011)
with respect to contentions filed after the initial petition, failure to address the requirements of 10 C.F.R. 2.309(c) and (f)(2) is reason enough to reject the new contentions; LBP-11-7, 73 NRC 254 (2011)

with respect to contentions filed after the initial petition, Intervenors have the burden to show they meet the criteria of 10 C.F.R. 2.309(f)(2); LBP-11-7, 73 NRC 254 (2011)
