guidance documents that are developed to assist in compliance with applicable regulations are entitled to special weight; CLI-15-6, 81 NRC 356 (2015)

standard review plans do not have the force and effect of law; CLI-15-6, 81 NRC 358 n.85 (2015)

the GALL Report and the Standard Review Plan are guidance documents, and therefore not binding, but they do carry special weight; CLI-12-5, 75 NRC 314 n.78 (2012)

contentions that neither explain how the application is inadequate nor identify which sections of the application are inadequate are inadmissible; LBP-11-21, 74 NRC 128 (2011)

legal question about what the license amendment request actually does demonstrates a genuine dispute and shows that an inquiry in depth is warranted; LBP-15-24, 82 NRC 91-92 & n.150 (2015)

board had a sufficient basis to find that petitioner had made the showing required to indicate an inquiry in depth was warranted and admit the contention, even though this may have been a close question; LBP-15-24, 82 NRC 91-92 & n.150 (2015)

**Yankee Atomic Electric Co.** (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 43, 75 n.30, rev’d in part on other grounds, CLI-96-7, 43 NRC 235 (1996)

contention alleging a material deficiency must link the claimed deficiency to a public health and safety or an environmental impact; LBP-15-1, 81 NRC 39-40 n.137 (2015)

materiality requirement for contention admission often dictates that any contention alleging deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-12-15, 76 NRC 26 (2012); LBP-12-27, 76 NRC 594 (2012)

**Yankee Atomic Electric Co.** (Yankee Nuclear Power Station), LBP-96-2, 43 NRC 61, 75-76 (1996), rev’d in part on other grounds, CLI-96-7, 43 NRC 235 (1996)

although boards do not decide the merits at the contention admissibility stage, materials cited as the basis for a contention are subject to scrutiny to determine whether, on their face, they actually support the facts alleged; LBP-12-12, 73 NRC 654 n.21 (2011)

termination with prejudice bars relitigation of similar issues; LBP-15-21, 82 NRC 18 n.22 (2015)

request that board impose additional discovery activities as a requirement of withdrawal of license amendment request is too broad because it goes beyond the scope of the admitted contentions and discovery is peculiarly related to particular proceedings and particular contentions; LBP-15-28, 82 NRC 242 (2015)

**Yankee Atomic Electric Co.** (Yankee Nuclear Power Station), LBP-04-27, 60 NRC 530, 542 n.3 (2004)

even if undisputed, the jurisdictional nature of standing in NRC proceedings requires independent examination by presiding officer; LBP-11-16, 73 NRC 654 n.21 (2011)

**Ziegler v. Connecticut General Life Insurance Co.**, 916 F.2d 548, 553 (9th Cir. 1990)

findings concerning personal knowledge are entirely factual and largely dependent on witness credibility; LBP-11-8, 73 NRC 371 (2011)
independent assessment of the safety aspects of the combined license application is required; CLI-15-13, 81 NRC 559 (2015)

amended regulations apply to obligations and disputes that arise after the effective date of the regulation; LBP-15-1, 81 NRC 31 n.76 (2015)

hearing’s uncontested status is defined indirectly in the definition of a contested proceeding; LBP-12-21, 76 NRC 234 n.80 (2012)

“presiding officer” in NRC adjudicatory proceedings is defined; LBP-11-22, 74 NRC 277 n.92 (2011)

licensing boards have authority to adjudicate exemption issues, but NRC Staff serves as an initial reviewer of exemption requests; LBP-12-6, 75 NRC 273 (2012)

Commission decision does not foreclose NRC Staff’s ability to request additional information on any part of the license transfer application; CLI-15-26, 82 NRC 412 n.33 (2015)

contention admissibility requirements do not apply to hearing demands on reactor operator license denials; LBP-13-3, 77 NRC 88-89 (2013)

if NRC Staff finds that an application does not comply with regulatory requirements, it must inform applicant in writing of the nature of any deficiencies or the reason for the proposed denial and the deadline for seeking a hearing; LBP-11-19, 74 NRC 63 n.8 (2011)

because an applicant denied an operator’s license (or a byproduct, source, special materials, or facility license) would be entitled to demand a hearing, rather than merely request a hearing, no more than 20 days would be required to prepare a document that would satisfy the conditions precedent to obtaining the hearing; LBP-13-3, 77 NRC 91 (2013)

contention admissibility standards of section 2.309(f)(1) do not apply to a hearing demand on denial of a senior reactor operator license, and petitioner lacked actual and constructive notice of the contention admissibility requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 89-90, 93, 94 (2013)

“demand” for hearing is understood to confer the right to a hearing; LBP-13-3, 77 NRC 90 (2013); LBP-14-4, 79 NRC 371 (2014)

demand for hearing on denial of application for a senior reactor operator license is granted; LBP-13-3, 77 NRC 84 (2013)

in denying an exemption request, Staff is required to inform applicant of the deadline for seeking a hearing; LBP-11-19, 74 NRC 62 n.7 (2011)

senior reactor operator license applicant who does not accept a proposed license denial may, within 20 days of the date of the denial letter, demand a hearing; LBP-14-2, 79 NRC 140, 203 (2014)
before a final decision approving or disapproving a construction authorization application may be reached, not only must the Staff complete its safety and environmental reviews but a formal hearing must be conducted, and the Commission’s own review of both contested and uncontested issues must take place; CLI-13-8, 78 NRC 226 (2013)

license amendment requests trigger hearing rights; LBP-13-7, 77 NRC 331 (2013)

opportunity for a hearing must be provided for an amendment to an operating license, combined license, or manufacturing license; LBP-15-17, 81 NRC 770 n.93 (2015)

if an application is withdrawn prior to issuance of a notice of hearing, the Commission shall dismiss the proceeding; CLI-13-10, 78 NRC 569 n.40 (2013)

upon receipt of a motion to withdraw an application, the board may place terms and conditions on the withdrawal, deny the application, or dismiss the application with prejudice; CLI-13-10, 78 NRC 567 (2013)

when the board has issued a Notice of Hearing, withdrawal of a license amendment request shall be on such terms as the presiding officer may prescribe; LBP-15-28, 82 NRC 240-41 n.53 (2015)

licensee may continue to operate reactor under an expired license if a license renew application is timely submitted; CLI-14-5, 79 NRC 256 (2014)

existing license will not be deemed to have expired until the license renewal application has been finally determined; CLI-15-6, 81 NRC 343 (2015)

plants may continue to operate until the operating license renewal adjudication is completed; LBP-13-13, 78 NRC 262 (2013)

power reactor licensee may preserve its license by filing a renewal application at least 5 years before its license is set to expire, affording the Staff ample time to complete the required environmental and safety reviews; LBP-11-30, 74 NRC 629 n.5 (2011)

time frame for SAMA analysis is inherent in NRC’s regulatory scheme, which provides for a 40-year license term, with the possibility of license renewal for an additional 20-year period; CLI-13-7, 78 NRC 214 n.81 (2013)

demands for a hearing by the subject of an enforcement order are automatic; LBP-14-4, 79 NRC 326 (2014)

 discrete enforcement actions such as orders and civil penalties involve defined opportunities for participation; CLI-15-5, 81 NRC 338 n.52 (2015)

if licensee or other person to whom an order is issued consents to its issuance, or the order confirms actions agreed to by the licensee or such other person, that consent or agreement constitutes a waiver by the licensee or such other person of a right to a hearing and any associated rights; LBP-14-4, 79 NRC 326 (2014)

NRC’s ability to issue orders to unlicensed persons is limited; LBP-14-4, 79 NRC 326 n.34 (2014)

orders issued under this section alter the requirements of a license and therefore fall generally under the terms of Atomic Energy Act § 189a; CLI-13-2, 77 NRC 44 (2013)

right to demand a hearing under this section is manifestly different from the opportunity to request a hearing under 10 C.F.R. 2.309; LBP-14-4, 79 NRC 371 (2014)

it is well within NRC’s discretion to impose specific requirements that clarify or go beyond those already established by regulations; LBP-14-4, 79 NRC 335 n.82 (2014)

period allotted for the filing of challenges to enforcement orders that impose some sanction is 20 days; LBP-13-3, 77 NRC 91 (2013)

distinction is made between the “person to whom the Commission has issued an order” and “any other person adversely affected by the order”; LBP-14-4, 79 NRC 348 n.23 (2014)
as de facto targets of an enforcement order, licensee employees have automatic standing if they adversely affected by an enforcement order; LBP-14-4, 79 NRC 345 (2014)
Commission did not intend to relieve third-party individuals who are not the subject of an enforcement order, but who nonetheless seek a hearing on the order, from satisfying the requirements for a petition for intervention in section 2.309; LBP-14-4, 79 NRC 325 (2014)
“demand” for a hearing is understood to confer a right to a hearing; LBP-14-4, 79 NRC 371 (2014)
demands for a hearing by the subject of an enforcement order are automatic without regard to satisfaction of section 2.309(d) and (f)(1); LBP-14-4, 79 NRC 342 (2014)
enforcement orders must inform licensee or any other person adversely affected by the order of his or her right to demand a hearing; LBP-14-4, 79 NRC 342, 371-72 (2014)
if an enforcement order blacklists a worker by name, he has the right to demand a hearing even though he may motivated by purely economic concerns; LBP-14-4, 79 NRC 347 (2014)
importance of the phrase “any other person adversely affected” is underscored by the fact that it was intentionally added in 1991; LBP-14-4, 79 NRC 348 (2014)
individuals who are adversely affected by an order have an automatic right to demand a hearing and need not comply with section 2.309(d) and (f); LBP-14-4, 79 NRC 349 (2014)
licensee and any other person adversely affected by an enforcement order have equal rights to a hearing; LBP-14-4, 79 NRC 347, 348 (2014)
meaning of “other person adversely affected by the order” is discussed; LBP-14-4, 79 NRC 347-48 (2014)
target of an enforcement order has the right to demand and receive, not merely request, a hearing; LBP-14-11, 80 NRC 128 (2014)
union’s argument that it may demand a hearing on a confirmatory order without complying with intervention requirements of section 2.309(a) is incorrect; LBP-14-4, 79 NRC 325 (2014)
whether economic concerns relating to job loss qualify as adverse effects within the meaning of the regulation is discussed; LBP-14-4, 79 NRC 346-47 (2014)
whether licensee employees, as represented by a union, have a right to demand a hearing because they are persons adversely affected by a confirmatory order is discussed; LBP-14-4, 79 NRC 343-46 (2014)

10 C.F.R. 2.202(a)(3)

“demand” for a hearing is understood to confer the right to a hearing; LBP-13-3, 77 NRC 90 (2013)
whether economic concerns relating to job loss qualify as adverse effects within the meaning of the regulation is discussed; LBP-14-4, 79 NRC 346-47 (2014)
whether licensee employees, as represented by a union, have a right to demand a hearing because they are persons adversely affected by a confirmatory order is discussed; LBP-14-4, 79 NRC 343-46 (2014)

10 C.F.R. 2.202(c)

“demand” for a hearing is understood to confer the right to a hearing; LBP-13-3, 77 NRC 90 (2013)

10 C.F.R. 2.203

NRC has a policy of encouraging settlements; LBP-14-4, 79 NRC 368 (2014)
only this section refers to a notice of hearing as part of the settlement procedure; LBP-15-30, 82 NRC 344-45 n.25 (2015)
presiding officer may order such adjudication of the issues as he may deem to be required in the public interest; LBP-14-4, 79 NRC 368 (2014)
public interest does not require additional adjudication of an enforcement matter and, given that all matters required to be adjudicated as part of this proceeding have been resolved, the proceeding is dismissed; LBP-11-3, 73 NRC 83 (2011)
settlement agreements are contingent upon approval by a licensing boards; LBP-15-21, 82 NRC 7 n.4 (2015)

10 C.F.R. 2.204

administrative action of issuing a demand for information is described; DD-15-11, 82 NRC 364 (2015)
NRC’s ability to issue orders to unlicensed persons is limited; LBP-14-4, 79 NRC 326 n.34 (2014)

10 C.F.R. 2.206

actions taken by licensee under 10 C.F.R. 50.59 do not give rise to hearing rights under the AEA but rather are monitored by NRC Staff’s inspections and oversight, which may be challenged only by a petition for enforcement; LBP-15-27, 82 NRC 196 (2015)
any member of the public may seek enforcement action associated with matters affecting plant operation, including the vitality of component maintenance programs; CLI-15-6, 81 NRC 367 n.140 (2015)
any person may file a request to institute a proceeding to modify, suspend, or revoke a license, or for any other action as may be proper; CLI-12-20, 76 NRC 439 n.10 (2012)

any person whose interests may be affected by the license renewal proceeding, and who wishes to participate as a party, must file a petition for leave to intervene within 60 days of the notice of hearing in accordance with this section; LBP-12-8, 75 NRC 544-45 (2012)

claim that a facility is improperly operating outside its licensing basis is appropriately raised in a petition to initiate an enforcement proceeding; LBP-15-27, 82 NRC 192 (2015)

Commission denies hearing request, but refers the matters raised to the Executive Director of Operations for consideration as a request for enforcement action; CLI-15-5, 81 NRC 333, 339 (2015); CLI-15-14, 81 NRC 730 (2015)

concerns about current or ongoing safety deficiencies can be raised as a petition for enforcement action; CLI-15-8, 81 NRC 508 n.62 (2015)

concerns about safety, licensee’s compliance with regulatory requirements, and adequacy of NRC oversight are appropriately addressed as requests for enforcement action; CLI-15-14, 81 NRC 733 (2015)

concerns with the current design and operation of a nuclear power plant are more properly addressed through a petition for enforcement action; LBP-15-13, 81 NRC 479 (2015)

contention claiming that modifications to repair or replace inadequate structural beams and columns is more appropriately presented as a request for enforcement action; CLI-15-5, 81 NRC 337 (2015)

dissatisfaction with regulatory requirements of 10 C.F.R. 50.75 is outside an enforcement petition; DD-11-4, 73 NRC 726 (2011)

hearing request on safety concerns over steam generator replacement is referred to the Executive Director for Operations for disposition; CLI-14-11, 80 NRC 168 (2014)

if an Indian tribe is of the view that its members face imminent harm from ongoing site operations, then it may, at any time, file a petition for enforcement action; CLI-12-4, 75 NRC 156 (2012)

if petitioner believes that licensee’s analysis is incomplete, inaccurate, or otherwise does not satisfy the section 50.54(q)(3) two-part test, petitioner can challenge the analysis through the enforcement process; CLI-15-20, 82 NRC 230 (2015)

if petitioner has a credible basis to question the adequacy of licensee’s compliance with 10 C.F.R. 50.54(q)(3), it may petition for enforcement action; LBP-15-4, 81 NRC 175 (2015)

if petitioner is concerned about the sufficiency of the ongoing oversight of a nuclear power plant and its current evacuation plan, it has the option of requesting a modification, suspension, or revocation of its operating license; LBP-11-29, 74 NRC 623 (2011)

members of the public may challenge an action taken under 10 C.F.R. 50.59 only by means of a petition under this section; LBP-13-7, 77 NRC 334 (2013); LBP-13-11, 78 NRC 180 (2013)

narrowly tailored condition will afford petitioner an opportunity to dispute a specific decommissioning fund disbursement via a letter to the NRC or a petition for enforcement action; LBP-15-28, 82 NRC 242 (2015)

pending tax litigation would not have a significant implication for public health and safety and, to the extent the claim is viable, it would be better handled through a petition for enforcement action; LBP-15-15, 81 NRC 616 n.120 (2015)

petition requesting that the NRC not allow restart after scheduled refueling outage until completion of all environmental remediation work and relevant reports on leaking tritium at the plant is denied; DD-11-1, 73 NRC 8-17 (2011)

petition will be reviewed only where petitioner specifies the bases for taking the requested action; DD-15-6, 81 NRC 890 (2015)

petitioner may file at any time a request for action if it wishes to challenge ongoing operations; CLI-15-25, 82 NRC 399 n.66 (2015)

petitioner’s concerns about tube leaks, unplanned power changes, and potential primary coolant contamination did not constitute any violations that were more than minor; DD-15-2, 81 NRC 206-11 (2015)

petitioner’s request for action relating to containment structural damage is mooted by licensee’s decision to shut down and defuel the facility; DD-14-3, 79 NRC 500 501-05 (2014)

petitioner’s request for enforcement action on earthquake-related issues is denied in part and granted in part; DD-12-1, 75 NRC 574-602 (2012)
petitioner’s request that NRC take escalated enforcement action against licensee concerning flooding protection is being addressed by the NRC’s request for information; DD-15-5, 81 NRC 877-83 (2015)

petitioners’ request for cold shutdown because of tritium contamination of groundwater is denied; DD-11-3, 73 NRC 378-90 (2011)

petitioners’ request that NRC issue a demand for information to compel boiling-water reactor licensees with Mark I and Mark II containment designs to describe how their individual facilities comply with 10 C.F.R. Part 50, Appendix A, GDC 44 and 10 C.F.R. 50.49; DD-15-11, 82 NRC 362-88 (2015)

record before the board falls far short of rebutting the presumption that a petition for license modification, suspension, or revocation is a meaningful avenue for seeking administrative relief; LBP-12-14, 76 NRC 8 n.36, 9-13 (2012)

referrals may be made when a petition does not satisfy the legal requirements for a hearing or intervention and it is determined that referral to the section 2.206 process is appropriate; CLI-12-20, 76 NRC 440 (2012)

request for action against reactor facilities that have projected shortfalls in their decommissioning trust funds is denied in part and granted in part; DD-11-7, 74 NRC 788-800 (2011)

request for cold shutdown because of inoperability of main steam safety relief valves is denied but petitioner’s concerns about the SRVs have been resolved; DD-11-6, 74 NRC 421-25 (2011)

request for enforcement action against U.S. Army for post-license-expiration possession and release into the environment of depleted uranium from spent spotting rounds is granted in part and denied in part; DD-11-5, 74 NRC 400-419 (2011)

request for enforcement action based on support beam deficiencies, flood protection inadequacy, flood risks from upstream dams, and primary reactor containment electrical penetration seals containing Teflon is denied because petitioner’s requests have been addressed through other actions; DD-15-4, 81 NRC 869-76 (2015)

request for enforcement action to address concerns about operability of the submerged and/or wetted non-environmentally qualified inaccessible cables is denied; DD-13-2, 78 NRC 186-98 (2013)

request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise technical specifications for spent fuel pool instrumentation is denied; DD-13-3, 78 NRC 573-83 (2013)

request for enforcement action to prevent reactor restart until applicable adequate protection standards regarding zero pressure boundary leakage and operation of the reactor have been met is denied; DD-11-2, 73 NRC 324-31 (2011)

request for immediate action on flaws in the control rod drive mechanisms did not meet the criteria for review; DD-15-3, 81 NRC 714 (2015)

request for immediate action on leakage from the safety injection refueling water tank did not meet the criteria for review; DD-15-3, 81 NRC 714 (2015)

request for immediate action to prevent restart because a piece of primary coolant pump impeller was lodged between the reactor vessel and the flow skirt is denied; DD-15-3, 81 NRC 713-27 (2015)

request that, following an earthquake that exceeded the operating basis, NRC suspend the operating licenses until completion of a set of activities described in the petition, is addressed; DD-15-9, 82 NRC 274-93 (2015)

request that licensee replace passive autocatalytic recombiners in the containment electrically powered thermal hydrogen recombiners is denied; DD-13-1, 77 NRC 347-55 (2013)

request that licensees should be required to maintain Emergency Response Data System capability throughout an accident will be addressed by an advance notice of proposed rulemaking; DD-14-2, 79 NRC 490-99 (2014)

request that NRC immediately shut down plants until all turbine building high-energy line break concerns are identified and those important to safety were corrected is granted in part; DD-14-5, 80 NRC 206-19 (2014)

request that NRC issue a demand for information from licensee relating to adequacy of financial assurances for decommissioning is denied; DD-11-4, 73 NRC 714-27 (2011)

request that NRC order licensee to submit a license amendment application for the design and installation of replacement steam generators and for additional enforcement action is moot; DD-15-7, 82 NRC 258-73 (2015)
request that NRC order licensees to comply with twelve specific recommendations in the Near-Term Task Force (NTTF) Report is addressed; DD-14-2, 79 NRC 490-99 (2014)
request that NRC order the immediate shutdown of all nuclear power reactors that are known to be located on or near an earthquake fault line is denied; DD-15-6, 81 NRC 884-93 (2015)
request that NRC order the immediate suspension of the operating licenses of all General Electric boiling-water reactors that use the Mark I primary containment system citing the Fukushima Dai-ichi accident in Japan as its rationale basis is resolved; DD-15-1, 81 NRC 193-204 (2015)
request that NRC revoke license for falsification of information is addressed; DD-14-4, 79 NRC 507-17 (2014)
request that NRC shut down or prohibit restart of nuclear power plants until a criminal investigation of a licensee contractor is complete and everything has been verified safe is denied; DD-14-1, 79 NRC 8-10 (2014)
request that NRC suspend operations at one plant, investigate whether licensee possesses sufficient funds to cease operations and decommission another, and investigate licensee’s current financial qualifications to determine whether it remains qualified to continue operating another plant is denied; DD-15-8, 82 NRC 108-34 (2015)
request that NRC suspend the operating licenses until completion of a set of activities related to the effects of an earthquake that exceeded the plant’s operating basis earthquake is granted in part and denied in part; DD-12-2, 76 NRC 392-415 (2012)
request that NRC take enforcement action to correct alleged noncompliance with fire protection regulations is granted; DD-12-3, 76 NRC 417-35 (2012)
request that NRC take enforcement action until the Licensee completes an independent root-cause assessment for the rise in ultimate heat sink temperature is denied; DD-15-10, 82 NRC 202-10 (2015)
to the extent petitioner believes there are existing management competence questions that merit immediate action, then its remedy is to direct the Staff’s attention to those matters by filing a request for action; CLI-11-11, 74 NRC 437 (2011)
to the extent petitioner seeks to have applicant implement safety measures in addition to those ordered, its recourse is to petition for rulemaking or to petition for license modification, suspension, or revocation; LBP-11-15, 76 NRC 7 n.36 (2012)

10 C.F.R. 2.206(a)
any person may file a request to institute a proceeding to modify, suspend, or revoke a license; CLI-15-14, 81 NRC 733 n.14 (2015); LBP-11-6, 73 NRC 217 n.78 (2010)
if evidence subsequently indicates that the design basis of an operating nuclear power plant will not withstand a maximum flooding event, members of the public may file a request to institute a proceeding to modify, suspend, or revoke a license; LBP-11-15, 73 NRC 643 n.23 (2011)
petitioner may file a request to institute a proceeding to modify, suspend, or revoke a license, or for any other action that may be proper, if it believes that applicant’s seismic design and licensing basis are now invalid and that safe operation of the plant can no longer be ensured; CLI-15-21, 82 NRC 307-08 (2015)
section 2.206 process provides a forum for individuals to advance their concerns and to obtain full or partial relief, or written reasons why the requested relief is not warranted, and the Commission may then review the NRC Staff’s findings on its own motion; CLI-12-20, 76 NRC 440 (2012)

10 C.F.R. 2.206(b)
director of NRC office with responsibility for the subject matter shall either institute the requested proceeding or advise the person who made the request in writing that no proceeding will be instituted, in whole or in part, with respect to the request and the reason for the decision; DD-15-7, 82 NRC 260-61 (2015)
section 2.206 process provides a forum for individuals to advance their concerns and to obtain full or partial relief, or written reasons why the requested relief is not warranted, and the Commission may then review the NRC Staff’s findings on its own motion; CLI-12-20, 76 NRC 440 (2012)

10 C.F.R. 2.206(c)
Commission on its own motion may review a decision that modifies, suspends, or revokes a license; CLI-15-14, 81 NRC 733 n.14 (2015)
section 2.206 process provides a forum for individuals to advance their concerns and to obtain full or partial relief, or written reasons why the requested relief is not warranted, and the Commission may then review the NRC Staff’s findings on its own motion; CLI-12-20, 76 NRC 440 (2012)

service of a filing is not complete until accompanied by a certificate of service and a request for oral argument; LBP-11-21, 74 NRC 121 n.15 (2011)

10 C.F.R. 2.302(d)(1)
an electronic filing is only complete when the filer performs the last act that it must perform to transmit a document in its entirety; LBP-11-13, 73 NRC 543 (2011)

10 C.F.R. 2.302(e)
service of a filing is not complete until accompanied by a certificate of service and a request for oral argument; LBP-11-21, 74 NRC 121 n.15 (2011)

10 C.F.R. 2.302(g)
failure to comply with NRC’s e-filing requirements without good cause or without obtaining an exemption from the requirements under this section can result in rejection of a pleading; LBP-15-4, 81 NRC 164 (2015)

10 C.F.R. 2.302(g)(1)
electronic filing is required unless the presiding officer grants an exemption permitting an alternative filing method for good cause shown, or unless the filing falls within the scope of an exception; CLI-13-9, 78 NRC 556 n.17 (2013); CLI-14-3, 79 NRC 36 n.28 (2014)

10 C.F.R. 2.304(d)
although the better practice would be to file a notice of appearance, the signature of a person signing a pleading is a representation that the document has been subscribed in the capacity specified with full authority; LBP-13-12, 78 NRC 241 n.9 (2013)

pro se representative in licensing board proceedings, like all other representatives and/or lawyers, are required to be accurate and truthful and are subject to reprimand, censure, or suspension for failing in these duties; LBP-13-8, 78 NRC 19 n.25 (2013)

10 C.F.R. 2.304(d)
submitted documents must be signed; LBP-11-2, 73 NRC 43 (2011)

10 C.F.R. 2.304(d)(1)(ii)
persons without digital ID certificates may sign electronically by typing “Executed in Accord with 10 C.F.R. 2.304(d)” or its equivalent on the signature line and including the date of signature and the signatory’s name, capacity, address, phone number, and e-mail address; LBP-11-2, 73 NRC 43 (2011)

10 C.F.R. 2.306(a)
holidays and weekends are excluded from the date calculation for filing new contentions; LBP-15-24, 82 NRC 98 n.195 (2015)

10 C.F.R. 2.307
“good cause” in this section does not share the same definition that is used for good cause in section 2.309(c); LBP-15-1, 81 NRC 30 n.73 (2015)

health issues or an unexpected weather event are reasons that might constitute good cause for purposes of requesting an extension under this section; LBP-13-9, 78 NRC 46 (2013); LBP-14-5, 79 NRC 383 n.25 (2014)

if intervenor cannot meet the requirements for filing a contention under the new section 2.309(c)(1), he or she can still take advantage of an extension request if unanticipated events, such as a weather event or unexpected health issues, prevented participant from filing for a reasonable period of time after the deadline; LBP-15-1, 81 NRC 30 n.73 (2015)

if the reason a motion to admit a new or amended contention was filed after the deadline does not relate to the substance of the filing itself, the standard in this section applies in determining whether the motion can be considered timely; LBP-13-9, 78 NRC 46 (2013)

intervention petitioner can justify missing the filing deadline by showing that the delay was caused by factors such as a weather event or unexpected health issues; LBP-12-25, 76 NRC 543 n.13 (2012); LBP-12-27, 76 NRC 593 n.55 (2012)

time for submitting a new/amended contention motion based on information that would be newly available, materially different, and otherwise timely submitted given the information’s availability can be extended if the extension request is based on good cause; LBP-13-10, 78 NRC 131 n.5 (2013)
to be admissible, late-filed contentions must not only meet standards of section 2.309(f)(1), but must also satisfy the timeliness requirements of section 2.309(c) or this section; LBP-13-9, 78 NRC 46 (2013)

10 C.F.R. 2.307(a)

filing deadlines may be extended or shortened either by the Commission or the presiding officer for good cause, or by stipulation approved by the Commission or the presiding officer; LBP-13-9, 78 NRC 46 (2013); LBP-14-5, 79 NRC 382 (2014)

good cause in this section does not share the same definition that is used for good cause in section 2.309(c); LBP-13-9, 78 NRC 46 (2013); LBP-14-5, 79 NRC 383 n.25 (2014)

if the reason a motion to admit a new or amended contention was filed after the initial deadline does not relate to the substance of the filing itself, the standard in this section applies in determining whether the motion can be considered timely; LBP-14-5, 79 NRC 382 (2014)

intervenors’ request for extension of time is granted because it is unopposed and intervenors have shown good cause for the modest extension; CLI-14-10, 80 NRC 161 n.16 (2014)

State intervenor provided good cause for its late E-filing submission because it submitted its petition to NRC by e-mail before the deadline lapsed and the delay was purely a matter of obtaining digital credentials for the system, not an attempt to gain extra time to prepare a pleading or otherwise to flout the NRC’s procedural requirements; LBP-15-4, 81 NRC 163 (2015)

10 C.F.R. 2.308

licensing boards are the appropriate finders of fact in most circumstances, and referral of a matter for a fact-specific dispute occurs in the ordinary course of business; CLI-13-9, 78 NRC 560 n.36 (2013)

10 C.F.R. 2.309

amendment of this section in 2012 was to simplify the rules, not fundamentally change the rationale boards use to admit new/amended contentions; LBP-15-11, 81 NRC 408 n.30 (2015)

board is directed to consider whether a confirmatory action letter issued to licensee constitutes a de facto license amendment that would be subject to a hearing opportunity under AEA § 189a, and, if so, whether the petition meets the standing and contention admissibility requirements; CLI-12-20, 76 NRC 440 (2012)

contention that draft environmental assessment fails to adequately address potential impacts of the reasonably foreseeable expansion of an independent spent fuel storage installation on cultural and historic resources is admissible; LBP-14-6, 79 NRC 426 (2014)

contention that NRC has not fulfilled its trust responsibility in its analysis and conclusion of the cumulative impacts on historic and cultural resources from the reasonably foreseeable expansion of an independent spent fuel storage installation is admissible; LBP-14-6, 79 NRC 430 (2014)

contentions must satisfy the twin precepts of timeliness and admissibility; LBP-13-10, 78 NRC 130 (2013)

content of licensees’ responses may lead to additional regulatory actions to update plants’ licensing bases, such as orders, license amendments, or rulemakings, for which the public would have participation rights; CLI-15-14, 81 NRC 743 (2015)

even if contentions are based on NRC Staff’s FSEIS, intervenor still bears the responsibility of demonstrating that a new contention merits admission and meets all six admission requirements; LBP-15-16, 81 NRC 703 (2015)

newly constituted board applied the reopening standard to new contentions filed after the prior proceeding was terminated for want of pending or admitted contentions; LBP-11-22, 74 NRC 269 n.50 (2011)

organizations that seek to establish standing to intervene may do so by demonstrating either organizational standing or representational standing; LBP-12-10, 75 NRC 637 (2012)

person adversely affected by an enforcement order has a legal right to demand a hearing; LBP-14-4, 79 NRC 341-43 (2014)

petition pursuant to 10 C.F.R. 2.714, which was abolished in 2004, is treated as though filed under this section; LBP-13-12, 78 NRC 240 n.1 (2013)

petitioner may file new contentions if there are data or conclusions in the NRC draft or final environmental impact statement or environmental assessment that differ significantly from data or conclusions in applicant’s documents; LBP-15-11, 81 NRC 408 (2015)

referral to licensing board includes threshold issues such as standing, timeliness, and satisfaction of contention admissibility standards; CLI-15-14, 81 NRC 735 (2015)
standard for admission of new or amended contentions involves a balancing of eight factors; CLI-12-15, 75 NRC 723 n.96 (2012).

to gain admission of a new or amended contention, a party must meet the requirements of both paragraphs (c) and (f) of this section; LBP-15-16, 81 NRC 703 (2015).

10 C.F.R. 2.309(a)

tested hearing is not required if no petitioner has satisfied the criteria for intervention; LBP-11-22, 74 NRC 275 (2011).

intervention petition is denied for failure to proffer an admissible contention; LBP-11-21, 74 NRC 119 (2011).

intervention petitioner must establish standing and submit at least one admissible contention that meets the requirements of 10 C.F.R. 2.309(f); CLI-12-19, 76 NRC 380 (2012); CLI-15-21, 82 NRC 301-02 (2015); LBP-11-2, 73 NRC 37 (2011); LBP-11-6, 73 NRC 168 (2010); LBP-11-13, 73 NRC 542 (2011); LBP-11-16, 73 NRC 652, 654 (2011); LBP-11-21, 74 NRC 121 (2011); LBP-11-22, 74 NRC 278 (2011); LBP-11-29, 74 NRC 616, 617 (2011); LBP-12-8, 75 NRC 546 (2012); LBP-12-25, 76 NRC 543 (2012); LBP-13-8, 78 NRC 6, 8 (2013); LBP-13-11, 78 NRC 179 (2013); LBP-13-12, 78 NRC 241 (2013); LBP-15-5, 81 NRC 254 (2015); LBP-15-13, 81 NRC 463, 467 (2015); LBP-15-17, 81 NRC 777 (2015); LBP-15-19, 81 NRC 819 (2015); LBP-15-20, 81 NRC 832 (2015); LBP-15-26, 82 NRC 172 (2015).

to intervene as a party, a union must establish standing and proffer at least one admissible contention; LBP-14-4, 79 NRC 325 (2014).

10 C.F.R. 2.309(a)-(f)

admissible contention is required for grant of a hearing request; LBP-15-17, 81 NRC 758 (2015).

for proceedings in which a Federal Register notice is not published, the hearing request shall be filed by the later of 60 days after publication of notice on the NRC website or 60 days after the requestor receives actual notice of a pending application, but not more than 60 days after agency action on the application; CLI-14-11, 80 NRC 172 (2014).

to obtain a hearing, petitioner must show that its request is timely, that it has standing to obtain a hearing, and that it has proposed at least one admissible contention; CLI-14-11, 80 NRC 171 (2014); CLI-15-5, 81 NRC 333 (2015).

10 C.F.R. 2.309(b)

intervenor and potential intervenors have a period of time to file new or amended contentions in response to a draft environmental impact statement; LBP-13-9, 78 NRC 60 (2013).

intervention petitioners must demonstrate standing and proffer an admissible contention; CLI-15-23, 82 NRC 325 (2015).

timeliness of an initial hearing petition in different situations is defined as being filed between 20 and 60 days after certain specified events; LBP-15-11, 81 NRC 408 n.28 (2015).

timeliness requirement does not apply because no formal proceeding has commenced; LBP-15-27, 82 NRC 189 n.31 (2015).

10 C.F.R. 2.309(b)(3)

in proceedings for which a Federal Register notice of agency action is published, a hearing request must be filed not later than the time specified in the notice or if no notice is specified, 60 days from the date of publication of the notice; CLI-15-5, 81 NRC 332 n.13 (2015).

10 C.F.R. 2.309(b)(3)(i)

contentions must be raised at the earliest possible opportunity; CLI-15-1, 81 NRC 7 (2015).

for proceedings for which a Federal Register notice of agency action is published, the hearing request must be filed not later than the time specified in the notice of proposed action; CLI-14-11, 80 NRC 172 (2014); LBP-15-13, 81 NRC 467 n.60 (2015).

10 C.F.R. 2.309(b)(3)(i)-(ii)

intervention petitions must be filed within 60 days based on the documents then in existence, meaning that the petition must be based on the documents submitted with the application; LBP-11-22, 74 NRC 271 (2011).

10 C.F.R. 2.309(b)(4)

in proceedings for which a notice of agency action is not published, a hearing request must be filed not later than the latest of 60 days after publication of notice on the NRC website or 60 days after the
requestor receives actual notice of a pending application but not more than 60 days after agency action on the application; CLI-15-5, 81 NRC 332 n.13 (2015)

10 C.F.R. 2.309(b)-(c)

intervention petitioner must either file its petition by the date specified in the Federal Register notice or show good cause for filing after the deadline; LBP-12-25, 76 NRC 543 n.13 (2012)

10 C.F.R. 2.309(c)

amended contentions must satisfy either the timeliness standards of section 2.309(f)(2) or the balancing test in this section for nontimely contentions, and the general contention admissibility criteria in section 2.309(f)(1); LBP-12-9, 75 NRC 620 (2012)

consideration of a contention under a balancing of the factors set forth in this section must weigh in favor of admitting the contention; LBP-12-11, 75 NRC 735 (2012)

contentions must be raised at the earliest possible opportunity; CLI-15-1, 81 NRC 7 (2015)

contentions that fail to satisfy timeliness standards in section 2.309(f)(2) may still be admitted pursuant to a balancing test governing nontimely filings that weighs the factors set forth in this section; LBP-12-7, 75 NRC 510 (2012)

even when a proposed new contention is not found timely, it may be admitted if it meets a balancing of the eight nontimely filing factors; LBP-11-39, 74 NRC 867 n.15 (2011)

good cause for failure to file on time is the most important factor of the late-filing criteria; LBP-11-9, 73 NRC 401 (2011); LBP-11-32, 74 NRC 662 (2011)

good cause for late filing exists when information on which the filing is based was not previously available and is materially different from information previously available and the filing has been submitted in a timely fashion based on the availability of the subsequent information; LBP-13-9, 78 NRC 46 (2013)

if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to the requirements of this section which specifically apply to nontimely filings; LBP-12-18, 76 NRC 138 (2012)

if good cause for a late filing is not shown, a board may still permit the late filing, but petitioner or intervenor must make a strong showing on the other factors; LBP-11-9, 73 NRC 401 (2011)

if intervenors file a new or amended contention, with supporting materials, within 60 days after pertinent information first becomes available, then the contention will be deemed timely filed and intervenors will be absolved of their obligation to satisfy the late-filing requirements; LBP-11-22, 74 NRC 281 (2011)

if intervenors sought to introduce new issues, then they should have filed a new or amended contention; CLI-15-9, 81 NRC 529 (2015)

if petitioner submits a proposed contention after the initial filing deadline announced in the applicable Federal Register notice for submitting a hearing petition, it will not be entertained absent a determination by the presiding officer that petitioner has demonstrated good cause; LBP-13-9, 78 NRC 45-46 (2013); LBP-14-5, 79 NRC 382 (2014); LBP-15-11, 81 NRC 407 (2015)

material difference must exist between information on which a contention is based and information that was previously available, e.g., a difference between the environmental report and the draft EIS or the draft EIS and the final EIS; CLI-15-1, 81 NRC 7 (2015)

motions to reopen relating to a contention not previously in controversy among the parties must also satisfy the requirements for nontimely contentions and the admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-3, 75 NRC 140 (2012); LBP-12-10, 75 NRC 639 (2012); LBP-15-14, 81 NRC 595 n.29 (2015)

motions to reopen to admit a new contention must be submitted in a timely fashion, based on new information that is materially different from information previously available, or a balancing of the factors listed in this section must weigh in favor of admitting the contention; LBP-12-16, 76 NRC 47-48 (2012)

new contentions must be based upon information that was not previously available, is materially different from information previously available, and is timely filed; LBP-14-8, 79 NRC 523 (2014)

new contentions must be submitted in a timely fashion based on the availability of the information on which they are based; CLI-15-17, 82 NRC 43 (2015)

NRC frowns on intervenors seeking to introduce a new contention later than the deadline established by its regulations, and it accordingly holds them to a higher standard for the admission of such contentions; CLI-11-2, 73 NRC 338 (2011)
petitioners who choose to wait to raise contentions that could have been raised earlier risk the possibility that there will not be a material difference between the application and the Staff’s review documents, thus rendering any newly proposed contention on previously available information impermissibly late; CLI-15-1, 81 NRC 7 (2015).

petitioners who have not shown good cause for their late filing must demonstrate that the balance of the remaining factors weighs in their favor; CLI-12-21, 76 NRC 500 n.60 (2012).

proponent of a contention is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement for its admission; CLI-12-13, 75 NRC 686 n.30 (2012).

request for hearing regarding a newly proffered contention cannot be admitted unless it satisfies the stringent standards for reopening the record; LBP-11-20, 74 NRC 77 n.75 (2011).

should requirements for reopening the record be satisfied, the requirements for untimely contentions must also be satisfied, as well as the contention admissibility criteria of section 2.309(f)(1); LBP-11-35, 74 NRC 718 (2011).

balance of factors must weigh in favor of granting a motion to reopen that relates to a contention not previously in controversy; LBP-12-1, 75 NRC 5-6 (2012).

proper mechanism for raising Fukushima-related, application-specific concerns in ongoing combined license cases is to file a new contention, consistent with the procedural rules applicable to the proceeding; CLI-11-5, 74 NRC 150 n.19 (2011).

this section deals with the admission of untimely contentions; LBP-11-9, 73 NRC 400 (2011).

to be admissible, late-filed contentions must not only meet standards of section 2.309(f)(1), but must also satisfy the timeliness requirements of this section or section 2.307; LBP-13-9, 78 NRC 46 (2013).

to the extent that contentions raise matters other than onsite spent fuel storage, the board should assess their admissibility under generally applicable rules of practice; CLI-14-8, 80 NRC 80 (2014).

to the extent that issues appropriately within the scope of license renewal are identified, NRC procedural rules provide avenues for the submission of proposed contentions on those issues; CLI-11-5, 74 NRC 164 (2011).

untimeliness constitutes sufficient grounds on its own for denying the motion to reopen and thus the board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 49 (2012).

where a motion to reopen relates to a contention not previously in controversy, section 2.326(d) requires that the motion demonstrate that the balance of the untimely filing factors favors granting the motion to reopen; LBP-11-23, 74 NRC 296 (2011).

whether and how NRC Staff fulfills its consultation obligations are issues that could form the basis for a new contention that might appropriately be made in a timely fashion after Staff issues its draft environmental impact statement; CLI-15-18, 82 NRC 147 n.56 (2015).

with respect to contentions filed after the initial petition, intervenors have the burden to show that they meet the criteria of this section; LBP-11-7, 73 NRC 286 n.203 (2011).

10 C.F.R. 2.309(c)(1).

after the section 2.309(b) deadline has passed for submitting an initial hearing petition with one or more accompanying contentions, petitioner/intervenor who wishes to amend an already submitted or admitted contention or gain admission of a new contention must file a motion for leave to file such a new or amended contention; LBP-13-10, 78 NRC 130 (2013).

although an intervention petition itself was timely filed, the board must balance the eight factors to determine whether petitioner’s late-filed exhibits are admissible; LBP-11-13, 73 NRC 543 (2011).

contention submitted after the initial filing deadline for submitting a hearing request will not be entertained absent a determination by the presiding officer that petitioner has demonstrated good cause; CLI-14-11, 80 NRC 175-176 (2014); LBP-15-15, 81 NRC 601 (2015).

contention that draft EIS is deficient because its evaluation of the operation of the radial collector wells does not preclude the possibility that they will change the plume dynamics of the industrial wastewater facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 824 (2015).

contention that environmental review documents fail to identify source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene in groundwater is inadmissible as untimely; LBP-15-19, 81 NRC 822 (2015).
eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 30 n.73 (2015)
good cause is the most important of the late-filing factors; CLI-12-10, 75 NRC 489 n.47 (2012); LBP-11-2, 73 NRC 38 (2011); LBP-12-12, 75 NRC 749 (2012)
if a new or amended contention is deemed untimely under section 2.309(f)(2)(iii), it will be evaluated under this section, which requires a balancing of eight factors to determine whether it is admissible; LBP-11-9, 73 NRC 401 (2011); LBP-11-10, 73 NRC 446 (2011); LBP-11-32, 74 NRC 662 (2011); LBP-12-12, 75 NRC 748 (2012); LBP-12-23, 76 NRC 484 (2012)
if any portion of a filing is untimely tendered, it must be accompanied by a motion to file out of time; LBP-11-13, 73 NRC 545 (2011)
late-filed contention shall not be considered by a licensing board unless petitioner demonstrates that a multifactor balancing test weighs in favor of consideration; LBP-11-2, 73 NRC 38 (2011); LBP-11-6, 73 NRC 246 (2010); LBP-11-7, 73 NRC 278-79 (2011)
new claim would not have met the timeliness standards because petitioner could have raised its environmental justice concerns when it filed its initial petition; CLI-15-18, 82 NRC 147 n.59 (2015)
new or amended contentions based on material information that has subsequently become available must meet three additional requirements as well as the general contention admissibility requirements of section 2.309(f)(1); LBP-14-6, 79 NRC 410 (2014)
prejudice is not a factor in the balancing test for nontimely filings; LBP-11-13, 73 NRC 543 n.37 (2011)
standard for admission of new or amended contentions involves a balancing of eight factors; CLI-12-10, 75 NRC 489 n.47 (2012)
10 C.F.R. 2.309(c)(1)(i)
contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-13-10, 78 NRC 144 (2013)
good cause for the failure to file on time is the most important of the late-filing factors; CLI-12-15, 75 NRC 723 n.96 (2012); LBP-11-2, 73 NRC 38 (2011); LBP-11-13, 73 NRC 543 (2011)
new contentions cannot be based on previously available information; LBP-15-11, 81 NRC 418 (2015)
10 C.F.R. 2.309(c)(1)(ii)-(iii)
contention that DEIS must identify the percentage of radial collector well water drawn from underneath the industrial wastewater facility is inadmissible; LBP-15-19, 81 NRC 826 (2015)
good cause for a newly proposed contention exists when information on which it is based was not previously available and is materially different than information previously available and has been submitted in a timely fashion based on the availability of the subsequent information; CLI-15-1, 81 NRC 7 n.29 (2015); LBP-15-1, 81 NRC 29-30 (2015); LBP-15-11, 81 NRC 407-08 (2015); LBP-15-15, 81 NRC 601 (2015)
intervention petitioner can justify filing a petition after the initial deadline has expired by showing that the contention is based on new information and that the petition was filed promptly after the new information became available; LBP-12-24, 76 NRC 543 n.13 (2012); LBP-12-27, 76 NRC 593 (2012)
new/amended contentions must demonstrate good cause for post-initial-hearing petition deadline filing, based on three factors; LBP-13-10, 78 NRC 130 (2013)
persons not currently a party may file timely petitions to intervene provided that they satisfy the good-cause criteria; LBP-15-6, 81 NRC 318 (2015)
requirements for demonstrating good cause are the same as the requirements for filing late contentions previously available under section 2.309(f)(2)(iii); LBP-15-1, 81 NRC 30 n.72 (2015)
10 C.F.R. 2.309(c)(1)(i)-(viii)
contentions that fail to satisfy timeliness standards in section 2.309(f)(2) may still be admitted pursuant to a balancing of the eight criteria of this section; LBP-12-9, 75 NRC 621 (2012)
eight-factor balancing test is applied to determine whether nontimely contentions should be admitted; LBP-12-27, 76 NRC 593 n.56 (2012)
good cause for late filing is entitled to the most weight; LBP-11-15, 73 NRC 634 (2011)
motion to reopen that relates to a contention not previously in controversy among the parties must also satisfy the requirements for nontimely contentions; CLI-11-8, 74 NRC 226 (2011)

10 C.F.R. 2.309(c)(1)(ii)

intervenors have standing based upon their proximity to the proposed facility; LBP-12-12, 75 NRC 750 (2012)

10 C.F.R. 2.309(c)(1)(iii)

contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-15-10, 78 NRC 144 (2013)

contentions relying on information and findings discussed in the notice of proposed rulemaking, as opposed to tentative rules or policy determinations, are not timely filed; LBP-15-15, 81 NRC 614 (2015)

degree to which new/amended contentions will be considered timely submitted is generally defined by the presiding officer as a specific period following the triggering event that makes the previously unavailable/materially different information available so as to be the basis for the new/amended contention; LBP-13-10, 78 NRC 131 (2013)

determination as to whether requests or petitions are filed in a timely manner shall be subject to a reasonableness standard and are not subject to the 30-day deadline applicable to motions by existing parties to add or amend contentions; LBP-15-6, 81 NRC 318 (2015)

new or amended contention is considered timely if it is filed within 60 days of the date when the material information first became available to the moving party through service, publication, or any other means; LBP-15-1, 81 NRC 30 (2015)

10 C.F.R. 2.309(c)(1)(vii)

where admission of a late-filed contention would cause a material delay in the proceeding weighed against admission of the contention; CLI-12-15, 75 NRC 723 n.96 (2012)

10 C.F.R. 2.309(c)(2)

contention questioning the adequacy of NRC Staff’s consultation efforts with Native American tribes is admissible; LBP-13-9, 78 NRC 51 (2013)

if the reason that a motion to admit a new or amended contention was filed after the deadline does not relate to the substance of the filing itself, the standard in section 2.307 applies in determining whether the motion can be considered timely; LBP-13-9, 78 NRC 46 (2013)

intervention petitioner can justify missing the filing deadline by showing that the delay was caused by factors such as a weather event or unexpected health issues; LBP-12-25, 76 NRC 543 n.13 (2012); LBP-12-27, 76 NRC 593 n.55 (2012)

new contention is inadmissible because it relies on information that is not materially different from information previously available and already in the record; LBP-15-16, 81 NRC 704-05 (2015)

persistent difficulties with the NRC electronic filing system despite petitioners’ good-faith efforts is good cause for late filing; LBP-11-2, 73 NRC 38 (2011)

10 C.F.R. 2.309(c)(2)(i)

State intervenor provided good cause for its late E-filing submission because it submitted its petition to NRC by e-mail before the deadline lapsed and the delay was purely a matter of obtaining digital credentials for the system, not an attempt to gain extra time to prepare a pleading or otherwise to flout the NRC’s procedural requirements; LBP-15-4, 81 NRC 163 (2015)

10 C.F.R. 2.309(c)(4)

new or amended contentions generally must meet the six admissibility factors specified in section 2.309(c)(4); LBP-13-10, 78 NRC 131 (2013)

10 C.F.R. 2.309(d)

individual member who qualifies an organization for standing must have suffered or might suffer a concrete and particularized injury that is fairly traceable to the challenged action, likely redressable by a favorable decision, and arguably within the zone of interests protected by the governing statute; LBP-14-4, 79 NRC 328 (2014)

intervention petitioners must demonstrate standing and proffer an admissible contention; LBP-11-22, 74 NRC 278 (2011); LBP-11-29, 74 NRC 616 (2011); CLI-15-23, 82 NRC 325 (2015); LBP-15-6, 81 NRC 317 (2015)
to establish representational standing, organizations must show that at least one of its members may be harmed by the licensing action and would have standing to sue in his or her own right, identify that member by name and address, show that the organization is authorized to request a hearing on behalf of that member, and show that the interests that the representative organization seeks to protect are germane to its own interests; LBP-12-10, 75 NRC 638 (2012)

10 C.F.R. 2.309(d)(1)

intervention petitioners must establish standing by demonstrating the nature of their right under the Atomic Energy Act to be made a party to the proceeding, nature and extent of their interest in the proceeding, and possible effect of any decision in the proceeding on their interest; LBP-12-24, 76 NRC 507 (2012); LBP-15-13, 81 NRC 463 (2015); LBP-15-19, 81 NRC 819 (2015)

petitioners must state their name, address, and telephone number, the nature of their right to be made a party, the nature and extent of their property, financial, or other interest in the proceeding, and the possible effect of any decision or order that may be issued in the proceeding on their interest; LBP-11-2, 73 NRC 41 n.49 (2011); LBP-11-6, 73 NRC 168 (2010); LBP-11-16, 73 NRC 652 (2011); LBP-11-29, 74 NRC 616 (2011)

10 C.F.R. 2.309(d)(1)(i)

although NRC regulations mandate that a petition contain the name, address, and telephone number of petitioner, the Commission’s hearing notice advises prospective petitioners not to include personal privacy information, such as home addresses or home phone numbers in their filings; LBP-11-21, 74 NRC 123 (2011)

intervention petition must contain the name, address, and phone number of the requestor or petitioner; LBP-15-20, 81 NRC 837 n.40 (2015)

10 C.F.R. 2.309(d)(1)(i)-(iii)

request for hearing must state name and identity of requestor, nature of requestor’s right to be a party, and nature and extent of the requestor’s/petitioner’s property, financial, or other interests in the proceeding; LBP-14-4, 79 NRC 350 (2014)

10 C.F.R. 2.309(d)(1)(i)-(iv)

intervention petitions must include petitioner’s name, address, and telephone contact information, nature of petitioner’s right under the Atomic Energy Act to be made a party, nature of petitioner’s interest in the proceeding, and possible effect of any decision or order that might be issued on petitioner’s interest; LBP-11-21, 74 NRC 121 (2011); LBP-12-3, 75 NRC 176 (2012); LBP-12-15, 76 NRC 23 (2012); LBP-13-6, 77 NRC 269 (2013)

10 C.F.R. 2.309(d)(1)(ii)-(iv)

in ruling on standing and determining whether petitioner has established the necessary interest, licensing boards are directed to follow the guidance found in judicial concepts of standing; LBP-11-4, 73 NRC 125 n.147 (2011)

NRC generally applies traditional judicial standing concepts which require a showing that the individual has suffered or might suffer a concrete and particularized injury that is fairly traceable to the challenged action, likely redressible by a favorable decision, and arguably within the zone of interests protected by the governing statutes; LBP-11-13, 73 NRC 546 (2011)

to demonstrate standing, petitioner must describe the nature of petitioner’s right to be made a party, nature and extent of petitioner’s property, financial, or other interest, and possible effect of any subsequent decision or order on petitioner’s interest; LBP-13-8, 78 NRC 6 (2013); LBP-15-17, 81 NRC 770 (2015)

10 C.F.R. 2.309(d)(2)

board is obliged to independently assess petitioners’ standing, even if it is unchallenged; LBP-15-5, 81 NRC 256 (2015); LBP-15-17, 81 NRC 776 (2015)

municipality is deemed to have standing in a reactor licensing proceeding that involves a facility located within its boundaries; LBP-11-6, 73 NRC 169 (2010)

standing criteria for federally recognized Indian tribes are less stringent, but only where the facility at issue is within the tribe’s boundaries; LBP-12-24, 76 NRC 507 n.14 (2012)

when a governmental organization, including a federally recognized Native American tribe, is unable to establish standing because the facility or nuclear material in question does not fall within its jurisdictional boundaries, that entity nonetheless may be accorded standing if its boundaries come within a distance from the nuclear facility or material that otherwise would establish standing for an individual
or nongovernmental organization, whether via a proximity presumption or otherwise; LBP-13-6, 77 NRC 272 n.7 (2013)
10 C.F.R. 2.309(d)(3)

as de facto targets of an enforcement order, licensee employees have automatic standing if they adversely
affected by an enforcement order; LBP-14-4, 79 NRC 345 n.16 (2014)

boards have an independent obligation to determine whether petitioners meet the threshold criteria for
intervention even if their standing is uncontested; LBP-11-2, 73 NRC 41 (2011); LBP-12-24, 76 NRC 507 (2012)
10 C.F.R. 2.309(e)
discretionary intervention is permitted only where at least one petitioner has established standing and at
least one admissible contention has been admitted; CLI-14-11, 80 NRC 179 (2014); CLI-15-14, 81 NRC 738 n.41 (2015); LBP-11-29, 74 NRC 617 (2011); LBP-14-4, 79 NRC 332-33 (2014)

individuals or groups may seek discretionary intervention if the requirements necessary to be afforded
standing as of right cannot be established; LBP-13-6, 77 NRC 270 n.4 (2013)

intervention as a matter of discretion is permitted only where at least one petitioner has established
standing and at least one admissible contention has been admitted, and petitioner has addressed the six
factors in its initial petition; CLI-15-14, 81 NRC 738 n.41 (2015)
10 C.F.R. 2.309(f)
admissibility of contention that severe accident mitigation alternatives analysis fails to evaluate the impact
that a severe accident at one unit would have on the operation of a proposed nearby unit is decided; LBP-15-5, 81 NRC 273 (2015)

admissible contention is required for grant of a hearing request; LBP-15-17, 81 NRC 758 (2015)
admissible contentions must meet all six pleading requirements; CLI-15-21, 82 NRC 504 n.40 (2015); LBP-11-6, 73 NRC 170 (2010); LBP-11-16, 73 NRC 654-55 (2011); LBP-11-25, 74 NRC 390 (2011); LBP-11-39, 74 NRC 867 (2011); LBP-12-10, 75 NRC 661 (2012); LBP-12-15, 76 NRC 25 (2012);
LBP-12-18, 76 NRC 156 (2012); LBP-12-23, 76 NRC 486 (2012); LBP-15-4, 81 NRC 164 (2015); LBP-15-5, 81 NRC 257 (2015); LBP-15-6, 81 NRC 320 n.36 (2015); LBP-15-13, 81 NRC 467 (2015);
LBP-15-16, 81 NRC 703-04 (2015); LBP-15-17, 81 NRC 777 (2015); LBP-15-18, 81 NRC 798 (2015);

amended contentions must satisfy general contention admissibility criteria and either the timeliness
standards of section 2.309(x2) or the balancing test in section 2.309(c) for nontimely contentions;
LBP-12-9, 75 NRC 620 (2012)

any person or organization seeking to intervene as a party in an NRC adjudicatory proceeding addressing a
proposed licensing action must establish standing and proffer at least one admissible contention;
LBP-11-1, 73 NRC 350 (2011)

board concludes that contention is not admissible because it fails to satisfy criteria of this section, and
thus need not rule on its timeliness; LBP-15-29, 82 NRC 253 n.32 (2015)
Commission’s intent is to focus litigation on concrete issues and result in a clearer and more focused record for decision and to ensure that the Commission expends resources to support the hearing process only for issues that are appropriate for, and susceptible to, resolution in an NRC hearing; LBP-11-16, 73 NRC 655 (2011)

contention admissibility requirements do not apply to hearing demands submitted under section 2.103(b)(2) and petitioner lacked actual and constructive notice of the contention admissibility requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 88 (2013)

contention asserting that applicant’s environmental report fails to address the reasonably foreseeable impacts of climate change on water availability is admissible; LBP-11-16, 73 NRC 692 (2011)

contention asserting that NRC’s environmental review of the license renewal application has not met the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and Management Act is inadmissible; LBP-12-10, 75 NRC 635 (2012)

contention challenging applicant’s consideration of new and significant information regarding cleanup costs is inadmissible; LBP-12-8, 75 NRC 560 (2012)

contention claims must be set forth with particularity; CLI-12-1, 75 NRC 55 (2012)

contention contesting adequacy of hydrogeologic information provided in application regarding fluid migration is admissible; LBP-13-6, 77 NRC 289 (2013)

contention questioning the adequacy of NRC Staff’s consultation efforts with Native American tribes is admissible; LBP-13-9, 78 NRC 51 (2013)

contention that the draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 88 (2013)

contention that the draft environmental impact statement fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 93 (2013)

contention that the environmental report is deficient in concluding that environmental impacts from proposed deep injection wells will be small because the ER fails to identify the source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene is admissible; LBP-12-9, 75 NRC 625 (2012)

failure to comply with any of the pleading requirements renders a contention inadmissible; LBP-14-8, 79 NRC 524 (2014)

hearing request is granted where petitioners have submitted a timely petition, established representational standing, and proffered an admissible contention; LBP-15-20, 81 NRC 832 (2015)

hearing requests or intervention petitions must set forth with particularity the contentions sought to be raised, meeting all six pleading standards of this section; CLI-12-5, 75 NRC 306-07 (2012); CLI-12-8, 75 NRC 396 (2012); CLI-15-20, 82 NRC 221 (2015); LBP-11-21, 74 NRC 124 (2011)

if intervenors reference new material in the final supplemental environmental impact statement but do not address the six elements of this section, such references to new material do not give rise to either a new or an amended contention; LBP-14-5, 79 NRC 385 (2014)

if reopening standards are inapplicable, or if reopening criteria have been satisfied, a new contention must also meet the standards for contention admissibility; LBP-11-35, 74 NRC 718, 719 (2011)

in addition to being timely, new contention must satisfy the six-factor admissibility standard; LBP-15-19, 81 NRC 820 (2015); LBP-15-23, 82 NRC 59 (2015)

in addition to satisfying the timeliness standards in 10 C.F.R. 2.309(f)(2) or the balancing test in 10 C.F.R. 2.309(c), a newly proffered contention must satisfy the admissibility criteria of this section; LBP-12-7, 75 NRC 510-11 (2012); LBP-12-9, 75 NRC 622 (2012)

intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or other sources of new and materially different information, provided that it does so promptly after the new information becomes available and that it successfully fulfills the general contention admissibility requirements; LBP-11-22, 74 NRC 268 (2011)

intervention petition is denied for failure to submit an admissible contention; LBP-13-11, 78 NRC 178, 181 (2013)

intervention petitioner must base its environmental contentions on information available at the time its intervention petition is to be filed, including applicant’s environmental report; CLI-14-2, 79 NRC 21 (2014)
intervention petitioner need not discuss every portion of the application that bears any relation to the issue being contested, but only provide a brief explanation of the argument and a concise statement of the relevant facts; CLI-14-2, 77 NRC 25 (2014)

intervention petitioners must not only demonstrate standing, but must also put forward at least one admissible contention; LBP-12-8, 75 NRC 548 (2012)

intervention petitions must demonstrate that the issue raised in a contention is within the scope of the proceeding; CLI-13-2, 77 NRC 43 n.16 (2013)

motion to reopen will not be granted unless all criteria of this section are satisfied; CLI-11-8, 74 NRC 221-22 (2011); LBP-11-20, 74 NRC 91 (2011)

motions to reopen must include affidavits setting forth the factual and/or technical bases for the claim that the criteria of this section have been met; LBP-11-23, 74 NRC 293 (2011)

motions to reopen relating to a contention not previously in controversy among the parties must also satisfy the requirements for nontimely contentions and the admissibility requirements; LBP-12-10, 75 NRC 639 (2012)

new and amended contentions submitted after an intervenor’s initial hearing request are evaluated under 10 C.F.R. 2.309(f)(2) for timeliness and, if found timely, their general admissibility is analyzed; LBP-11-10, 73 NRC 445 (2011)

new contentions filed after the record has closed must also meet the standards for contention admissibility; LBP-11-20, 74 NRC 78 (2011); LBP-11-23, 74 NRC 296 (2011)

new contentions must satisfy six pleading requirements; LBP-14-8, 79 NRC 524 (2014)

new or amended contentions based on material information that has subsequently become available must meet the general contention admissibility requirements of this section as well as the three requirements in section 2.309(f)(2); LBP-14-6, 79 NRC 410 (2014)

new or amended contentions must satisfy the substantive contention admissibility standards and failure to meet any of them renders a contention inadmissible; LBP-14-5, 79 NRC 381-82 (2014); LBP-15-11, 81 NRC 407 (2015); LBP-15-15, 81 NRC 500-01 (2015)

NRC rules provide a mechanism for supplementing an original NEPA analysis, but the rules do not guarantee a hearing; CLI-13-7, 78 NRC 211 (2013)

one demanding a hearing on a challenge to an enforcement order need not comply with the requirements of this section; LBP-13-3, 77 NRC 91, 94 (2013)

petitioners have not raised an issue material to findings that the NRC must make to support final decisions and they are unable to satisfy contention admissibility standards or meet the criteria to reopen a closed record; CLI-15-4, 81 NRC 231 n.47 (2015)

pleading requirements for and admissible contentions are described; LBP-13-6, 77 NRC 283-84 (2013)

post-hearing-petition contention (new or amended contention) also must satisfy the substantive contention admissibility standards; LBP-13-9, 78 NRC 45 (2013)

proponent of a contention is responsible for formulating the contention and providing the necessary support to satisfy the admissibility requirements; CLI-15-23, 82 NRC 325-26 (2015)

purpose of contention pleading requirements is to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-12-25, 76 NRC 544 (2012); LBP-13-8, 78 NRC 9 (2013); LBP-15-5, 81 NRC 257-58 (2015)

regardless of when filed, all proposed contentions must comply with the general contention admissibility criteria of this section; LBP-11-7, 73 NRC 280 (2011); LBP-11-9, 73 NRC 400 n.55 (2011)

request for hearing regarding a newly proffered contention cannot be admitted unless it satisfies the stringent standards for reopening the record; LBP-11-20, 74 NRC 77 n.75 (2011)

requirement of this section to file contentions, and thus the requirement to satisfy the contention admissibility requirements, applies only to hearing requests and petitions to intervene; LBP-13-3, 77 NRC 89-90 (2013)

requirements for an admissible contention are specified; LBP-12-3, 75 NRC 190-91 (2012)

standards for reopening the record are discussed; LBP-11-23, 74 NRC 295-96 (2011)

statement of supporting facts or expert opinion to establish how the project would impair visual resources, rather than mere speculation, is required for an admissible contention; LBP-12-3, 75 NRC 207 (2012)

to be accepted for hearing, contentions must meet strict admissibility standards; CLI-12-10, 75 NRC 482 (2012)
to be admissible, late-filed contentions must not only meet standards of this section, but must also satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 46 (2013)
when omissions are cured by the subsequent issuance of licensing-related documents, intervenor must timely file a new or amended contention if it intends to challenge the sufficiency of the new information; LBP-12-5, 75 NRC 238 (2012)
10 C.F.R. 2.309(f)(1)-(2)
to the extent that issues appropriately within the scope of license renewal are identified, NRC procedural rules provide avenues for the submission of proposed contentions on those issues; CLI-11-5, 74 NRC 164 (2011)

10 C.F.R. 2.309(f)(1)(i)

admissibility of contention questioning whether a confirmatory order imposes reporting obligations on the licensee employees that are overly broad, e.g., that exceed NRC’s authority under section 73.56(f)(3), is discussed; LBP-14-4, 79 NRC 365 (2014)
allegations of inadequacies and omissions in NRC Staff’s environmental assessment satisfy the requirement to provide a specific statement of the issue of law or fact to be raised; LBP-15-13, 81 NRC 472 (2015)
contention that the draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 86 (2013)
contention that the draft environmental impact statement fails to demonstrate adequate technical sufficiency and fails to present information in a clear, concise manner to enable effective public review is inadmissible; LBP-13-9, 78 NRC 64 (2013)
narrowed reformulation of contention regarding tribal hunting and fishing includes a specific statement of the issue of fact or law to be raised or controverted; LBP-15-5, 81 NRC 268 (2015)

10 C.F.R. 2.309(f)(1)(i)-(ii)

contention of omission on a matter related to the National Environmental Policy Act must describe the information that should have been included in applicant’s environmental report and provide the legal basis that requires the omitted information to be included; LBP-15-5, 81 NRC 258 (2015)
two issues in one contention are best evaluated as separate contentions; LBP-15-5, 81 NRC 268 (2015)

10 C.F.R. 2.309(f)(1)(i)-(iv)
at the contention admissibility stage, boards merely decide whether a contention satisfies the six pleading criteria; LBP-11-16, 73 NRC 690 (2011)
contention questioning the accuracy of the SAMA results, given the geographic location and variable meteorological conditions at the site and the large population base surrounding the plant, is admissible; LBP-11-2, 73 NRC 70 (2011)
to be admitted for adjudication, a contention, regardless of when it is filed, must also satisfy the requirements of this section; LBP-11-2, 73 NRC 44-45 (2011); LBP-11-13, 73 NRC 550 (2011); LBP-11-15, 73 NRC 635 (2011)

10 C.F.R. 2.309(f)(1)(i)-(v)

contention that the draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 68-69 (2013)

10 C.F.R. 2.309(f)(1)(i)-(vi)
admissibility of contention asserting that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on licensee’s off-duty employees not otherwise required by 10 C.F.R. 73.56(f)(1)-(3) is argued; LBP-14-4, 79 NRC 363, 365-66 (2014)
any contention, regardless of when it is filed, must meet the requirements of this section; CLI-15-23, 82 NRC 325 (2015); LBP-11-20, 74 NRC 92 (2011); LBP-11-29, 74 NRC 617 (2011); LBP-11-32, 74 NRC 662 (2011); LBP-12-8, 75 NRC 548 (2012); LBP-13-8, 78 NRC 8-9 (2013); LBP-14-6, 79 NRC 409 (2014)
contention that license renewal application fails to adequately address the risks of flooding from failure of upstream dams is inadmissible; LBP-13-8, 78 NRC 11 (2013)
contentions must be set forth with particularity and must meet all six contention admissibility factors; CLI-15-18, 82 NRC 138 (2015)

failure to meet any of the contention admission criteria renders the contention inadmissible; LBP-12-24, 76 NRC 509 (2012); LBP-14-5, 79 NRC 382 (2014); LBP-14-6, 79 NRC 409 (2014); LBP-15-1, 81 NRC 28-29 (2015)

general requirements for admissibility for all contentions are set forth; LBP-12-27, 76 NRC 591-92 (2012)

intervenors must assert a sufficiently specific challenge that demonstrates that further inquiry is warranted; CLI-11-9, 74 NRC 247 (2011)

intervention petitioner must, in addition to demonstrating standing, propose at least one contention that meets the criteria of this regulation; CLI-15-21, 82 NRC 301-02 (2015)

new contention filed after the record has closed must satisfy the general contention admissibility requirements; LBP-11-34, 74 NRC 696 (2011); LBP-12-11, 75 NRC 735 (2012); LBP-12-16, 76 NRC 48 (2012)

new or amended contentions generally must meet the six admissibility factors specified in this section; LBP-13-10, 78 NRC 131-32 (2013)

NRC rules of practice are designed to avoid unfocused inquiry in contested proceedings; CLI-15-1, 81 NRC 11 (2015)

petitioners do not need to cite a specific portion of the application to support a contention of omission; LBP-15-5, 81 NRC 283 (2015)

portions of a contention relevant to the completion of the Endangered Species Act § 7 consultation process and the adequacy of the NRC Staff’s impact analyses relevant to the three named species meet the admissibility standards; LBP-13-9, 78 NRC 100-01 (2013)

request for hearing or petition for leave to intervene must explain proposed contentions with particularity; CLI-11-8, 74 NRC 228 (2011)

requirements for an admissible contention are provided; CLI-15-8, 81 NRC 504 (2015)

to be admissible, contentions must satisfy the six basic requirements of specificity, brief explanation, scope, materiality, concise statement of alleged facts or expert opinion, and genuine dispute; LBP-12-24, 76 NRC 508-09 (2012); LBP-12-25, 76 NRC 544 (2012)

brief explanation of the basis for a contention is an explanation of the rationale or theory of the contention; LBP-15-20, 81 NRC 849 (2015)

brief explanation of the basis for a contention is required; CLI-15-25, 82 NRC 400 (2015); LBP-11-13, 73 NRC 558 (2011)

challenges to the admissibility of a contention on the ground that basis does not include sufficient facts, evidence, or supporting factual information are misguided; LBP-15-20, 81 NRC 849 (2015)

claim that NRC Staff did not engage in the consultation process relevant to issues addressed by the Migratory Bird Treaty Act and that the impacts to wildlife with respect to this Act are inadequately analyzed is inadmissible; LBP-13-9, 78 NRC 101 (2013)

contention alleging that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 472-73 (2015)

petitioner must explain the basis for each proffered contention by stating alleged facts or expert opinions that support petitioner’s position and on which petitioner intends to rely in litigating the contention at hearing; CLI-15-8, 81 NRC 504 (2015)

providing a brief explanation of the basis for a contention is but one of the six requirements for establishing that a contention is admissible; LBP-11-34, 74 NRC 698 (2011)

safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is inadmissible in license renewal proceedings; LBP-13-8, 78 NRC 16 (2013)
scope of an admitted contention depends in large part on the bases set forth in the brief explanation of the basis for the contention; LBP-12-23, 76 NRC 463 (2012)
to make additional claims in a contention, intervenor must provide a sufficient explanation of its concern and a concise statement of the alleged facts supporting its position; LBP-14-5, 79 NRC 395 (2014)
10 C.F.R. 2.309(f)(1)(iii)

admissibility of contention questioning whether a confirmatory order imposes reporting obligations on the licensee employees that are overly broad, e.g., that exceed NRC’s authority under section 73.56(f)(3), is discussed; LBP-14-4, 79 NRC 366 (2014)

all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-12-3, 75 NRC 191 (2012); LBP-12-15, 76 NRC 25 (2012); LBP-12-25, 76 NRC 552 (2012); LBP-12-27, 76 NRC 594 (2012)

applicant’s rule exemption request could be subject to litigation in a combined license proceeding, and thus is within the scope of the proceeding; LBP-11-10, 73 NRC 452 (2011)

assertions of a need to implement filtered vented containment are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 757 (2011)
because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the ability of buried structures to perform their intended functions as defined by 10 C.F.R. 54.4(a)(1)-(3), the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 60 (2011)

challenges to applicant’s compliance with the loss-of-large-areas requirements of 10 C.F.R. 50.54(b)(2) are not admissible because they are not within the scope of a license renewal proceeding; LBP-11-21, 74 NRC 129 (2011)

challenges to extensive damage mitigation guidelines are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 757 (2011)

challenges to NRC’s assumptions about operators’ capability to mitigate an accident are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 757 (2011)

challenges to NRC’s excessive secrecy regarding accident mitigation measures are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 757 (2011)

challenges to NRC’s previous rejection of petitioner’s concerns regarding environmental impacts of high-density pool storage of spent fuel are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 757 (2011)

challenges to spent fuel pools are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 757 (2011)

contention asserting that a license renewal environmental report must include a discussion of need for power is inadmissible; LBP-11-13, 73 NRC 556-57 (2011)

contention asserting that applicant’s Integrated Plant Assessment for the license renewal application fails to identify and assess safety-related incidents at the plant in its required time-limited aging analysis is a safety contention is not admissible; LBP-13-8, 78 NRC 21-22 (2013)

contention is material to the result of the proceeding because it concerns whether the LAR demonstrates equivalent margins of safety as required by regulation; LBP-15-20, 81 NRC (2015)

contention is within the scope of license renewal proceeding because NRC regulations require that the environmental report include a severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 298 (2015)

contention outside the scope of a proceeding is not admissible for hearing in that proceeding; CLI-15-21, 82 NRC 305 (2015)

contention that applicant fails to include need-for-power analyses in its environmental reports for operating license renewal is inadmissible; LBP-13-12, 78 NRC 243 (2013)

contention that challenges the entire steam generator replacement project, rather than any aspect of the proposed changes to four technical specifications identified in the license amendment request is outside the scope of a license amendment proceeding; LBP-13-11, 78 NRC 182 (2013)

contention that challenges the legal sufficiency of the final environmental impact statement for a combined license is within the scope of the proceeding; LBP-12-18, 76 NRC 157 (2012)

contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing

508
licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 244 (2013)

contention that license renewal application has failed to establish that the effects of aging on relay switches and snubbers will be adequately managed for the period of extended operation is not within the scope of the proceeding; LBP-15-6, 81 NRC 324 (2015)

contention that licensee’s history of managing whistleblower complaints regarding safety issues demonstrates that the plant will not be operated safely during the license renewal term is inadmissible; LBP-13-8, 78 NRC 33 (2013)

contention that operating license should not be renewed unless and until applicant establishes that the plant can withstand and be safely shut down following an earthquake is not within the scope of a license renewal proceeding; LBP-15-6, 81 NRC 321 (2015)

contention that requests a remedy that is beyond the scope of the proceeding is not admissible; LBP-14-4, 79 NRC 358 (2014)

contention that severe accident mitigation alternatives analysis fails to evaluate the impact that a severe accident at one unit would have on the operation of a proposed nearby unit is within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 274 (2015)

contention that wastewater contains chemical contaminants that are not discussed in the environmental report, and that when the wastewater is discharged via deep injection wells, the chemicals might migrate to an aquifer is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 191 (2010)
contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to a licensing board; LBP-13-6, 77 NRC 285 (2013)

environmental justice is a Category 2 issue, within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 282 (2015)
given that petitioner is challenging an omission in applicant’s environmental report of material that petitioner alleges is required to be there, the issue is within the scope of the proceeding; LBP-12-8, 75 NRC 556-57 (2012)
labor disputes are not within the scope of enforcement proceedings; LBP-14-4, 79 NRC 337 (2014)
licensing board lacks authority to hold a hearing on the adequacy of a different agency’s regulations; LBP-15-5, 81 NRC 306 (2015)

litigability of the adequacy of applicant’s efforts to address current operational issues is excluded from a license renewal proceeding; CLI-11-11, 74 NRC 435 (2011)
petitioner must demonstrate that the issue raised in a contention is within the scope of the proceeding; LBP-12-3, 75 NRC 191 (2012); LBP-15-5, 81 NRC 258 (2015)
petitioner’s challenge to applicant’s use of Three Mile Island data constitutes a genuine dispute on a material issue and is within the scope of the license renewal proceeding because it challenges the adequacy of the environmental report; LBP-12-8, 75 NRC 560 (2012)

petitioner’s issue of NRC Staff’s compliance with its NEPA obligation to undertake a full evaluation of the environmental impacts associated with a proposed federal action is within the scope of an operating license amendment proceeding and material to the findings NRC must make; LBP-15-13, 81 NRC 472 (2015)
suppositions/speculation regarding effectiveness of hydrogen control mechanisms are outside the scope of a license renewal proceeding; LBP-11-35, 74 NRC 757 (2011)
to assess whether a contention is within the scope of, and material to, the proceeding, boards need to know the legal basis (safety or environmental) of the contention; LBP-13-8, 78 NRC 11 (2013)
to satisfy contention admissibility requirements, petitioner must demonstrate that the issue raised in its contention is within the scope of the proceeding; CLI-15-25, 82 NRC 398 (2015)
Fukushima-related contention is denied for failure to show that the contention is within the scope of the proceeding or is material to the findings NRC must make to support the requested licensing action; LBP-11-37, 74 NRC 783 n.6 (2011)
petitioner must demonstrate that the issue raised in the contention falls within the scope of the proceeding and is material to the findings that the NRC must make; CLI-15-8, 81 NRC 504 (2015); CLI-15-20, 82 NRC 221 (2015)

adequacy of the equivalent margins analysis is material to the agency’s decision to approve or deny the license amendment request; LBP-15-20, 81 NRC 850 (2015)
admissibility of contention questioning whether a confirmatory order imposes reporting obligations on licensee employees that are overly broad, e.g., that exceed NRC’s authority under section 73.56(f)(3), is discussed; LBP-14-4, 79 NRC 366 (2014)
all contentions must proffer an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-12-15, 76 NRC 26 (2012); LBP-12-18, 76 NRC 158 (2012); LBP-12-27, 76 NRC 594 (2012)
alleged deficiencies or errors in a license application must have some independent health and safety significance; LBP-11-23, 74 NRC 336 (2011)
although NRC’s Fukushima lessons-learned review continues, petitioners have not pointed to concrete information that is material to the findings the NRC must make to support the actions proposed by petitioners; CLI-12-7, 75 NRC 389 (2012)
because the shield building functions as a radiation and biological shield, failure or collapse of the shield building due to cracking propagation could lead to health and safety impacts and thus petitioner’s contention concerns a matter that could impact the grant or denial of a pending license application; LBP-15-1, 81 NRC 39 (2015)
contention asserting that DEIS must include the Corps of Engineers Clean Water Act section 404 permit analysis in order to satisfy NEPA fails to raise a material issue; LBP-15-23, 82 NRC 60, 63 (2015)
contention that applicant has failed to establish in its aging management plan that the effects of aging will be adequately managed for the period of extended operation does not raise an issue that is material to findings NRC must make to support the proposed licensing action; LBP-15-6, 81 NRC 324-25 (2015)
contention that DEIS is deficient because its evaluation of the operation of the radial collector wells does not preclude the possibility that they will change the plume dynamics of the industrial wastewater facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 824 (2015)
contention that DEIS must identify the percentage of radial collector well water drawn from underneath the industrial wastewater facility is inadmissible; LBP-15-19, 81 NRC 826-27 (2015)
contention that does not focus at all on the technical specifications that are the subject of its request raises no issues that are material to any findings the NRC must make to approve the license amendment request; LBP-13-11, 78 NRC 182 (2013)
contention that fails to raise a material issue is inadmissible; LBP-12-25, 76 NRC 548 (2012); LBP-15-26, 82 NRC 177 (2015)
contention that final environmental assessment fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-15-11, 81 NRC 427 (2015)
contention that license renewal application has failed to establish that the effects of aging on relay switches and snubbers will be adequately managed for the period of extended operation is not material to findings NRC must make; LBP-15-6, 81 NRC 324 (2015)
contention that operating license should not be renewed unless and until applicant establishes that the plant can withstand and be safely shut down following an earthquake is not material a license renewal proceeding; LBP-15-6, 81 NRC 321-22 (2015)
contention that severe accident mitigation alternatives analysis fails to evaluate the impact that a severe accident at one unit would have on the operation of a proposed nearby unit is material to the license renewal proceeding; LBP-15-5, 81 NRC 274 (2015)
failure to show the final supplemental EIS’s air emissions data represent new or materially different information renders a new contention inadmissible; LBP-14-5, 79 NRC 399 (2014)
if a contention makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-15-5, 81 NRC 259 (2015)

inadequacy in the severe accident mitigation alternatives analysis is material if license renewal applicant failed to consider complete information without justifying why particular information was omitted; LBP-15-5, 81 NRC 298 (2015)

intentional malevolent acts, such as sabotage and terrorism, are not material to the SAMA findings the NRC must make in deciding whether to extend an operating license; LBP-11-13, 73 NRC 571 (2011)

intervenors need only demonstrate that the issue raised in the contention is material to a licensing decision, i.e., would make a difference in the licensing decision; LBP-11-7, 73 NRC 292 (2011)

labor disputes are not within the scope of enforcement proceedings; LBP-14-4, 79 NRC 337 (2014)

petitioner fails to demonstrate that the issue of radiation dispersal due to site inundation is material to the findings the NRC must make to support approving a combined license application; LBP-12-7, 75 NRC 517 (2012)

petitioner must also show that its contention is material to the findings NRC must make to support issuance of the license amendments; CLI-15-25, 82 NRC 402 (2015)

petitioner must demonstrate that the issue raised in a contention is within the scope of the proceeding and material to the findings NRC must make to support the action involved in the proceeding; CLI-12-15, 75 NRC 709 (2012); LBP-12-13, 75 NRC 790 (2012); LBP-12-3, 75 NRC 191 (2012); LBP-15-20, 81 NRC 850 (2015)

petitioner’s issue of NRC Staff’s compliance with its NEPA obligation to undertake a full evaluation of the environmental impacts associated with a proposed federal action is within the scope of an operating license amendment proceeding and material to the findings NRC must make; LBP-15-13, 81 NRC 472 (2015)

petitioner’s speculation that, because of the Fukushima accident, NRC would consider a much broader and more rigorous array of severe accident mitigation alternatives than have been previously considered fails to satisfy the materiality requirement; LBP-11-35, 74 NRC 757 (2011)

petitioners did not demonstrate that the issue of whether the MACCS2 code was subject to quality assurance is material to the findings the NRC must make under NEPA to support the requested license extension; LBP-11-13, 73 NRC 571 (2011)

radiological claims that represent a direct challenge to prior license amendments authorizing extended power uprates are outside the scope of a license amendment proceeding; LBP-15-13, 81 NRC 478 (2015)

simply referencing a study without explaining the information’s significance relative to the potential containment leakage monitored by the testing at issue does not establish its materiality; LBP-15-26, 82 NRC 178 (2015)

there is no legal requirement that applicant consider population projections to the end of the license term, but petitioner could succeed in raising such a contention if it demonstrated that considering such data would be material to the proceeding; LBP-12-8, 75 NRC 555 (2012)

to assess whether a contention is within the scope of, and material to, the proceeding, boards need to know the legal basis (safety or environmental) of the contention; LBP-13-8, 78 NRC 11 (2013)

to be admissible, contentions must present a genuine dispute on a material fact; LBP-14-5, 79 NRC 395 n.100 (2014)

whether the safe shutdown earthquake exceedance in applicant’s exemption request does in fact comply with 10 C.F.R. Part 50, Appendix S and 10 C.F.R. 100.23 is a question currently before the NRC Staff and is thus material to the NRC’s licensing decision in this proceeding; LBP-11-10, 73 NRC 452 (2011)

10 C.F.R. 2.309(f)(1)(v)

alleged facts and expert opinions in intervention petition and associated exhibits are sufficient to satisfy regulatory requirements; LBP-15-13, 81 NRC 472 (2015)

bare assertions and speculation do not meet the Commission’s standard of a concise statement of the alleged facts or expert opinions together with references to the specific sources and documents upon which the petitioner relies; LBP-11-21, 74 NRC 133 (2011); LBP-13-8, 78 NRC 14 (2013)
because of the need to provide specific support for a contention in order to raise a genuine dispute, the
true dispute admissibility requirement is sometimes discussed together with the requirement for
petitioners and intervenors to provide factual or expert support for their allegations; LBP-15-1, 81 NRC
38 (2015)
“belief” that is not supported by alleged facts or expert opinion renders a contention inadmissible;
LBP-15-26, 82 NRC 177 n.28 (2015)
board erred in admitting a contention that lacks the required support; CLI-12-5, 75 NRC 322 (2012)
by failing to provide any support that the integrity of leaking structures has the potential to prevent
licensee from maintaining pressure, providing flow, or both, petitioners do not present the requisite
factual bases; LBP-11-2, 73 NRC 61 (2011)
by pointing to the exemptions and the license amendment request, petitioner has adequately supported its
statement that the LAR is legally deficient in light of the granted exemptions; LBP-15-24, 82 NRC 102
(2015)
claim that NRC Staff did not engage in the consultation process relevant to issues addressed by the
Migratory Bird Treaty Act and that the impacts to wildlife with respect to this Act are inadequately
analyzed is inadmissible; LBP-13-9, 78 NRC 101 (2013)
claim that the draft environmental impact statement does not adequately assess the impacts to threatened
and endangered species is rejected; LBP-13-9, 78 NRC 101 (2013)
concern about computer modeling methodology used to calculate groundwater quantity impacts is
inadmissible as lacking sufficient factual or expert support and as failing to establish a material factual
or legal dispute; LBP-12-3, 75 NRC 200 (2012)
contention alleging deficiencies in Corp of Engineers’ compensatory mitigation methods under the Clean
Water Act lacks alleged facts or expert opinions; LBP-15-23, 82 NRC 65 n.30 (2015)
contention concerning cultural and historic resources is not admissible because it provides no alleged facts
or expert opinions; LBP-14-6, 79 NRC 443 (2014)
contention contesting failure of applicant to evaluate groundwater impacts of in situ recovery is
inadmissible for failure to present factual allegations and/or expert opinion to support the contention;
LBP-13-6, 77 NRC 295 (2013)
contention that draft EIS is deficient because its evaluation of the operation of the radial collector wells
does not preclude the possibility that they will change the plume dynamics of the industrial wastewater
facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 824 (2015)
contention that draft EIS must identify the percentage of radial collector well water drawn from
underneath the industrial wastewater facility is inadmissible; LBP-15-19, 81 NRC 826-27 (2015)
contention that future expansion of independent spent fuel storage installation will cause a high and
adverse impact on archaeological and cultural resources because there is a potential for unre corded
cultural resources on the property is admissible; LBP-14-6, 79 NRC 415 (2014)
contention that is primarily based on the fact that steam generator replacements in other reactors have
experienced problems is not adequately supported; LBP-13-11, 78 NRC 182 (2013)
contentions must be raised with sufficient detail to put the parties on notice of the issues to be litigated;
CLI-11-11, 74 NRC 437 (2011)
contentions must provide a concise statement of the alleged facts or expert opinions that support
petitioner’s position on the issue and on which the petitioner intends to rely at hearing, together with
references to the specific sources and documents on which the petitioner intends to rely to support its
position; LBP-14-6, 79 NRC 441 (2014)
failure to reference specific sources showing that wind or other renewables are viable sources of baseload
power within the service area, renders a contention inadmissible; LBP-15-5, 81 NRC 279 (2015)
failure to show the final supplemental environmental impact statement’s air emissions data represent new
or materially different information renders a new contention inadmissible; LBP-14-5, 79 NRC 399
(2014)
for a contention to be admissible, petitioner must, among other things, provide a concise statement of the
alleged facts or expert opinions that support its position on the issue and on which petitioner intends to
rely at hearing, together with references to the specific sources and documents that support its position;
CLI-12-5, 75 NRC 346 n.265 (2012)
intervenor need not make its case at the contention admission stage, but must indicate what facts or
expert opinions provide the basis for its contention; LBP-13-6, 77 NRC 291 (2013)
intervenors must provide a concise statement of the facts or expert opinions that support their position and upon which they intend to rely at hearing; LBP-12-15, 76 NRC 26 (2012); LBP-12-18, 76 NRC 162-63 (2012); LBP-12-27, 76 NRC 595 (2012)

license renewal contention alleging higher cancer death rates in local counties than the state average is inadmissible because it is based on unsupported speculation; LBP-13-8, 78 NRC 19-20 (2013)

only alleged facts, not evidence or expert opinion, are required to support contention admissibility; LBP-13-8, 78 NRC 14 (2013)

petitioner has provided adequate support for its claim that there are numerous new severe accident mitigation alternatives candidates that should be evaluated for their significance; LBP-12-8, 75 NRC 557 (2012)

petitioner is obliged to present factual allegations and/or expert opinion necessary to support its contention; LBP-12-3, 75 NRC 191 (2012); CLI-12-7, 75 NRC 390 (2012); LBP-12-8, 75 NRC 559 (2012); LBP-13-6, 77 NRC 285 (2013)

petitioner may question the practice for severe accident mitigation alternatives analysis to utilize mean consequence values, which results in an averaging of potential consequences, but must support such a challenge with alleged facts or expert opinion; LBP-11-13, 73 NRC 576 n.296 (2011)

petitioner must explain the basis for each proffered contention by stating alleged facts or expert opinions that support petitioner’s position and on which petitioner intends to rely in litigating the contention at hearing; CLI-15-8, 81 NRC 504 (2015); LBP-15-1, 81 NRC 38 (2015); LBP-15-5, 81 NRC 258, 275 (2015); LBP-15-20, 81 NRC 851 (2015)

petitioner must provide references to specific sources and documents on which petitioner intends to rely to support its contention; LBP-12-8, 75 NRC 560 (2012); LBP-13-8, 78 NRC 14 (2013)

petitioner must state the alleged facts or expert opinions that support its position and on which it intends to rely at hearing; CLI-15-20, 82 NRC 221 (2015); LBP-11-13, 73 NRC 572 (2011)

petitioners do not provide any alleged facts or expert support indicating that the river valley is within the geographic area for which applicant was required to model atmospheric dispersion; LBP-11-13, 73 NRC 573 (2011)

petitions that lack alleged facts or expert opinions to support the contention are inadmissible; LBP-11-29, 74 NRC 621 (2011)

pleading requirements calling for a recitation of facts or expert opinion supporting the issue raised are inapplicable to a contention of omission beyond identifying the regulatively required missing information; LBP-15-5, 81 NRC 258 (2015)

safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is inadmissible in license renewal proceeding; LBP-13-8, 78 NRC 16 (2013)

support required for a contention necessarily will depend on the issue sought to be litigated; CLI-11-11, 74 NRC 442 (2011)

support required for a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-3, 75 NRC 138 (2012)

to make additional claims on a contention, intervenor must provide a sufficient explanation of its concern and a concise statement of the alleged facts supporting its position; LBP-14-5, 79 NRC 395 (2014)

10 C.F.R. 2.309(f)(1)(v)-(vi)

contention that applicant fails to include need-for-power analyses in its environmental reports for operating license renewal is inadmissible; LBP-13-12, 78 NRC 243 (2013)

contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 245 (2013)

contentions must provide factual support for underlying claims and identify a genuine dispute with the applicant on a material issue; CLI-14-6, 79 NRC 447 (2014); LBP-15-20, 81 NRC 850 (2015)

contentions must raise a genuine dispute with the license application and must have underlying factual or legal support; CLI-12-15, 75 NRC 709 (2012)

contentions that are not accompanied by sufficient factual support to raise a genuine dispute are inadmissible; LBP-13-12, 78 NRC 240 (2013)
absence of a prohibition is not sufficient justification to admit a contention; CLI-15-23, 82 NRC 326 (2015)

admissibility of contention questioning whether a confirmatory order imposes reporting obligations on licensee employees that are overly broad, e.g., that exceed NRC’s authority under section 73.56(f)(3), is discussed; LBP-14-4, 79 NRC 366 (2014)

all properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-12-3, 75 NRC 192 (2012)

as to whether the connected-action aspect of 40 C.F.R. 1508.25(a)(1) supports an improper-segmentation contention’s admissibility, petitioners have not providing sufficient supporting information to show that a genuine dispute exists on the material issue; LBP-13-10, 78 NRC 149, 150 (2013)

at the contention admissibility stage, the burden is on intervenors to demonstrate a deficiency in the application; CLI-11-9, 74 NRC 243-44 (2011)

bald allegations do not suffice to support contention admissibility; LBP-13-8, 78 NRC 14 (2013)

boards must not adjudicate the merits of allegations at the contention admissibility stage of an NRC proceeding, but, to be admissible, a contention must provide more than a bare assertion, and must explain the supporting reasons for the dispute raised in that contention; LBP-11-16, 73 NRC 664, 667 (2011)

by failing to acknowledge, much less challenge with specificity, the safety and environmental evaluations that applicant will perform prior to construction and operation of a supplemental onsite LLRW storage facility, the contention fails to demonstrate the existence of a genuine dispute with the combined license application on a material issue of law or fact; LBP-12-7, 75 NRC 518 (2012)

claim that the draft environmental impact statement does not adequately assess the impacts to threatened and endangered species is rejected; LBP-13-9, 78 NRC 101 (2013)

concern about computer modeling methodology used to calculate groundwater quantity impacts is inadmissible as lacking sufficient factual or expert support and as failing to establish a material factual or legal dispute; LBP-12-3, 75 NRC 200 (2012)

contention admissibility rules require that a proposed contention be supported by alleged fact or expert opinion; CLI-12-7, 75 NRC 390 (2012)

contention alleging deficiencies in Corp of Engineers’ compensatory mitigation methods under the Clean Water Act fail to articulate how the DEIS’s analysis of mitigation proposals is speculative or lacks an adequate assessment of effectiveness is inadmissible; LBP-15-23, 82 NRC 66 (2015)

contention alleging that license renewal application fails to consider plutonium fuel use, which would place it outside the current licensing basis, is inadmissible; LBP-13-8, 78 NRC 23 (2013)

contention as reformulated by the board is inadmissible; CLI-15-18, 82 NRC 149 (2015)

contention asserting that DEIS must include the Corps of Engineers Clean Water Act section 404 permit analysis in order to satisfy NEPA fails to demonstrate a genuine dispute with the DEIS; LBP-15-23, 82 NRC 60 (2015)

contention bases that do not pertain specifically to the license renewal application do not provide sufficient information to demonstrate a genuine dispute with applicant on a material issue; CLI-15-11, 81 NRC 549 (2015)

contention contesting failure of applicant to evaluate groundwater impacts of in situ recovery is inadmissible for failure to present factual allegations and/or expert opinion to support the contention; LBP-13-6, 77 NRC 295 (2013)

contention is inadmissible because it fails to controvert a specific portion of the combined license application or otherwise explain why applicant’s analyses or conclusions are incorrect or inadequate; LBP-11-15, 73 NRC 643 (2011)
contention is inadmissible for failure to show that a genuine dispute exists with applicant on a material issue of law or fact; LBP-11-33, 74 NRC 682-83 (2011); LBP-15-26, 82 NRC 175-76 (2015)
contention must provide sufficient information to show a genuine dispute with applicant on a material issue of law or fact; CLI-15-20, 82 NRC 221 (2015); LBP-12-13, 75 NRC 790 (2012)
contention of omission claims that the application fails to contain information on a relevant matter as required by law and provides the supporting reasons for petitioner’s belief; LBP-15-5, 81 NRC 258 (2015)
contention quotes text from a notice of proposed rulemaking, but it never ties the statements from the NOPR to any specific section of the environmental assessment, and thus fails to raise a genuine dispute with the EA; LBP-15-15, 81 NRC 614 n.111, 617 (2015)
contention that applicant fails to include need-for-power analyses in its environmental reports for operating license renewal is inadmissible; LBP-13-12, 78 NRC 243 (2013)
contention that applicant has failed to establish in its aging management plan that the effects of aging will be adequately managed for the period of extended operation fails to demonstrate the existence of a genuine dispute with applicant; LBP-15-6, 81 NRC 325 (2015)
contention that considers the terms of a confirmatory order warranted or unwarranted is irrelevant if they fall within NRC’s authority to impose; LBP-14-4, 79 NRC 335 (2014)
contention that DEIS is deficient because its evaluation of the operation of the radial collector wells does not preclude the possibility that they will change the plume dynamics of the industrial wastewater facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 824 (2015)
contention that DEIS must identify the percentage of radial collector well water drawn from underneath the industrial wastewater facility is inadmissible; LBP-15-19, 81 NRC 826-27 (2015)
contention that does not actually challenge any specific part of the integrated plant assessment or time-limited aging analyses fails to demonstrate the existence of a genuine dispute with the applicant; LBP-15-6, 81 NRC 322 (2015)
contention that fails to provide sufficient information to show that a genuine dispute exists with a combined license application on a material issue of law or fact is inadmissible; LBP-11-15, 73 NRC 637, 638 n.17 (2011)
contention that future expansion of independent spent fuel storage installation will cause a high and adverse impact on archaeological and cultural resources because there is a potential for unrecorded cultural resources on the property is admissible; LBP-14-6, 79 NRC 415 (2014)
contention that license renewal application lacks supporting documentation providing the analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 27 (2013)
contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 244 (2013)
contention that license renewal application has failed to establish that the effects of aging on relay switches and snubbers will be adequately managed for the period of extended operation fails to demonstrate the existence of a genuine dispute with the applicant; LBP-15-6, 81 NRC 324 (2015)
contention that NRC or licensee has abused or exceeded its lawful discretion with respect to nuclear safety programs is not admissible because it fails to provide sufficient information to show that a genuine dispute exists on a material issue of law or fact; LBP-14-4, 79 NRC 337 (2014)
contention that NRC Staff’s environmental assessment fails to consider that applicant’s use of copper sulfate to control algae blooms will increase reactor operating temperatures in relation to waste is inadmissible; LBP-15-13, 81 NRC 478 (2015)

contention that provides no reference to any specific portion of the license amendment request that petitioners dispute is inadmissible; LBP-13-11, 78 NRC 182 (2013)

contention that requiring the tribe to formulate contentions before a final EIS is released and failing to follow scoping process violates NEPA is inadmissible; LBP-13-9, 78 NRC 74-75 (2013)

contention that the draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 83, 86 (2013)

contention that the draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 68 (2013)

contention that the draft environmental impact statement fails to demonstrate adequate technical sufficiency and fails to present information in a clear, concise manner to enable effective public review is inadmissible; LBP-13-9, 78 NRC 64 (2013)

contention that the draft environmental impact statement fails to include a reviewable plan for disposal of 11e(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 70 (2013)

contention was inadmissible because petitioner offered nothing to link the outcome of the Fukushima events to either the nuclear power plant or the license renewal application and thus failed to show any dispute with the application; CLI-12-13, 75 NRC 685 (2012)

contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-13-6, 77 NRC 285 (2013)

contentions must provide sufficient information to show a genuine dispute with applicant on a material issue of law or fact; CLI-15-8, 81 NRC 504 (2015)

contentions should refer to portions of the application that petitioner disputes along with supporting reasons for each dispute, and if petitioner believes that an application fails altogether to contain information required by law, petitioner must identify each failure and provide supporting reasons for petitioner’s belief; CLI-15-8, 81 NRC 504 (2015)

failure to provide a direct critique of the analysis in the environmental report discussing the potential for offshore power and interconnected wind farms is a failure to identify a genuine dispute with the applicant; LBP-15-5, 81 NRC 279 (2015)

failure to show that the final supplemental environmental impact statement’s air emissions data represent new or materially different information renders a new contention inadmissible; LBP-14-5, 79 NRC 399 (2014)

Fukushima-related contention based on a Staff Requirements Memorandum is inadmissible because the SRM does not define or impose any new requirements arising from the Fukushima accident and thus fails to establish a genuine dispute on a material issue of law or fact; LBP-11-37, 74 NRC 784 n.7 (2011)

Fukushima-related contention is denied for failure to reference any specific portion of the application at issue; LBP-11-37, 74 NRC 783 n.6 (2011)

if a contention makes a prima facie allegation that the application omits information required by law, it necessarily presents a genuine dispute with applicant on a material issue and raises an issue plainly material to an essential finding of regulatory compliance needed for license issuance; LBP-15-5, 81 NRC 259 (2015)

if petitioner believes that an application fails altogether to contain information required by law, petitioner must identify each failure and provide supporting reasons for petitioner’s belief; CLI-15-20, 82 NRC 221-22 (2015)

intervenors need not prove their case on the merits, but need only allege some facts or expert opinion that support their position and demonstrate a genuine dispute with the sufficiency of the FEIS; LBP-12-18, 76 NRC 163 (2012)

intervention petitions must be filed within 60 days based on the documents then in existence, meaning that the petition must be based on the documents submitted with the application; LBP-11-22, 74 NRC 271 (2011)
labor disputes are not within the scope of enforcement proceedings; LBP-14-4, 79 NRC 337 (2014)
licensing boards do not conduct evidentiary hearings to decide whether a future petition to intervene will
be filed as predicted; LBP-12-12, 75 NRC 752-53 (2012)
other than hypothesizing that there will be a failure of the nuclear reactor vessel because of increased
stress brought by the proposed license amendment request, the contention does not provide sufficient
information to show that a genuine dispute exists; LBP-11-29, 74 NRC 621 (2011)
petitioner must provide sufficient information to show that a genuine dispute exists with applicant/licensee
on a material issue of law or fact, including references to specific portions of the application that
petitioner disputes and the supporting reasons for each dispute; CLI-14-2, 79 NRC 25, 30 (2014);
CLI-15-25, 82 NRC 403 (2015); LBP-11-21, 74 NRC 137-38 (2011); LBP-13-8, 78 NRC 14 (2013);
petitioner must refer to specific portions of the application that it disputes, along with the supporting
reasons for each dispute; CLI-15-20, 82 NRC 221 (2015)
petitioner’s burden on a contention of omission is to identify the omission and the supporting reasons for
petitioners’ belief that the application fails to contain information on a relevant matter as required by
law; LBP-15-5, 81 NRC 258 (2015)
petitioners allege a specific material error in applicant’s SAMA analysis in its failure to consider the
potential for a severe accident at one unit to negatively impact safe operation at a proposed unit,
thereby potentially increasing the total damage that would result from a severe accident; LBP-15-5, 81
NRC 275 (2015)
petitioners must provide a nexus between its concerns and any deficiencies in applicant’s SAMA analysis,
which would be necessary to establish a genuine dispute for an admissible contention; CLI-15-18, 82
NRC 141 (2015)
petitions that lack alleged facts or expert opinions to support the contention are inadmissible; LBP-11-29,
74 NRC 621 (2011)
properly formulated contentions must focus on the license application in question, challenging either
specific portions of, or alleged omissions from, the application (including the safety analysis
report/technical report and the ER) so as to establish that a genuine dispute exists with the applicant on
a material issue of law or fact; LBP-12-15, 76 NRC 27 (2012); LBP-12-27, 76 NRC 595 (2012)
requests for hearing must provide sufficient information to show that a genuine dispute exists with the
applicant/licensee on a material issue of law or fact; LBP-13-3, 77 NRC 91 (2013)
requirement that a contention refer to specific portions of the application ensures that the board will be
able to determine whether the contention is within the scope of the proceeding and that applicant knows
which portions of the application it must defend; LBP-15-20, 81 NRC 561-62 (2015)
safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is
inadmissible in license renewal proceeding; LBP-13-8, 78 NRC 16 (2013)
support required for a contention necessarily will depend on the issue sought to be litigated; CLI-11-11,
74 NRC 442 (2011)
to be admissible a contention must provide sufficient information to show that a genuine dispute exists
with the applicant/licensee on a material issue of law or fact, including references to specific portions
of the application that petitioner disputes; CLI-11-9, 74 NRC 244 n.65 (2011); LBP-12-24, 76 NRC 537
(2012); LBP-15-1, 81 NRC 37 (2015)
to demonstrate the admissibility of a NEPA contention that an applicant failed to consider a viable
alternative to its proposed action, petitioner must show that its contention presents a genuine dispute;
CLI-12-5, 75 NRC 342-43 (2012)
to the extent a contention is premised on error, it is inadmissible for failing to raise a genuine dispute of
fact; LBP-11-6, 73 NRC 202 (2010)
to the extent that intervenors’ proposed contention is based on asserted deficiencies in NRC Staff’s
process for soliciting public participation pursuant to the National Historic Preservation Act, the
contention fails to demonstrate a genuine dispute on a material issue of fact or law; LBP-12-23, 76
NRC 486 (2012)
vague accusation does not rise to the level of an admissible genuine dispute of material fact or law;
LBP-11-10, 73 NRC 452 (2011)
where NRC Staff has yet to complete any draft or final environmental or safety review, contentions must
challenge the application itself; LBP-11-29, 74 NRC 620 (2011)
contentions for adjudicatory hearings must raise a genuine dispute with the applicant/licensee on a material issue of law or fact; CLI-12-10, 75 NRC 486 (2012)

although environmental contentions are, in essence, challenges to NRC Staff’s compliance with NEPA, those contentions must be raised, if possible, in response to applicant’s environmental report; CLI-15-1, 81 NRC 7 (2015); LBP-11-32, 74 NRC 661 n.15, 665 n.27, 669 n.34(2011); LBP-11-38, 74 NRC 830 (2011); LBP-15-19, 81 NRC 819 (2015)

although petitioner proffered a contention within 30 days of events that prompted it, this does not automatically render a newly proffered contention timely; LBP-11-15, 73 NRC 636 (2011)

amendment of contentions and submission of new contentions are allowed when good cause is shown; CLI-12-1, 75 NRC 56 (2012)

because the motion and contention are based on information that is neither new nor materially different from information that was previously available, the motion to reopen and accompanying contention are untimely; LBP-12-11, 75 NRC 739 (2012)

challenge to the inputs and methodology in the SAMA analysis is impermissibly late; CLI-12-10, 75 NRC 488-89 (2012)

claims in a contention that did not genuinely stem from the specific amendments to the aging management plan or from particular information in the revised GALL Report were untimely under standards for admission of new or amended contentions; CLI-12-10, 75 NRC 492 (2012)

contention filed after the deadline for initial intervention petitions must be submitted in a timely fashion, based on new information that is materially different from information previously available; LBP-12-11, 75 NRC 734-35 (2012)

contentions filed after the deadline for initial intervention petitions also must satisfy the standards for late-filed contentions; CLI-12-10, 75 NRC 483 (2012); CLI-12-15, 75 NRC 709 (2012)

contentions must be based on documents or other information available at the time the petition is to be filed, such as the application, supporting safety analysis report, environmental report, or other supporting document filed by an applicant or licensee, or otherwise available to a petitioner; LBP-11-29, 74 NRC 620 n.37 (2011)

filing of amended or new contentions is permitted only with leave of the board and upon a showing that it is based on information not previously available and materially different and the filing is timely; LBP-12-13, 75 NRC 788 n.13 (2012)

for a new contention to be admissible, the new information must, in and of itself, be sufficient to support its admissibility; LBP-11-20, 74 NRC 82 (2011)

for a reopening motion to be timely presented, movant must show that the issue sought to be raised could not have been raised earlier; LBP-11-20, 74 NRC 85 n.110 (2011)

if a contention is based upon new information, it must meet the standards of this section; LBP-11-35, 74 NRC 719 (2011)

if new information becomes available that, e.g., an endangered species has been living on the site or that the facility has been leaking tritium into the groundwater, then a new contention alleging that the environmental report as originally filed did not comply with Part 51 may be filed; LBP-11-32, 74 NRC 670 (2011)

if there are data or conclusions in the NRC draft or final environmental impact statement that differ significantly from data or conclusions in applicant’s documents, late-filing standards are no bar to the admission of properly supported contentions; LBP-15-11, 81 NRC 423 n.130 (2015)

intervenor may need to amend an admitted environmental contention based on applicant’s environmental report, or file a new contention altogether challenging Staff’s draft environmental impact statement; LBP-12-12, 75 NRC 768 (2012)

intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or other sources of new and materially different information, provided that it does so promptly after the new information becomes available and that it successfully fulfills the general contention admissibility requirements; LBP-11-22, 74 NRC 268 (2011)

intervenor may propose new or amended contentions based on data or conclusions in the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, that

518
differ significantly from the data or conclusions in the applicant’s environmental documents; LBP-11-6, 73 NRC 177 n.25 (2010); LBP-11-7, 73 NRC 277 (2011)

intervenors are not only permitted but are required to file their contentions in response to the license application, rather than await a fully formalized administrative decision; LBP-12-19, 76 NRC 198 (2012)

intervenors fail to show that, with respect to terrestrial and wetland mitigation plans, there are data or conclusions in the draft environmental impact statement that differ significantly from the data or conclusions in the applicant’s documents; LBP-12-12, 75 NRC 759 (2012)

intervenors must file their NEPA contentions based on the environmental report; LBP-12-12, 75 NRC 752 (2012)

late-filed contentions must show that the information upon which the new contention is based was not previously available and is materially different than information previously available; CLI-12-10, 75 NRC 492 n.69 (2012)

material difference must exist between information on which a contention is based and information that was previously available, e.g., a difference between the environmental report and the draft EIS or the draft EIS and the final EIS; CLI-15-1, 81 NRC 7 (2015)

motions to amend a contention must be based on new information that is materially different from information previously available and must be submitted in a timely fashion; LBP-12-27, 76 NRC 601 (2012)

NEPA-related contentions initially are based on applicant’s environmental report which will inform the Staff’s NEPA review; CLI-13-7, 78 NRC 213 n.76 (2013); LBP-13-10, 78 NRC 132 (2013)

new and amended contentions submitted after an intervenor’s initial hearing request are evaluated under this section for timeliness and, if found timely, their general admissibility is analyzed pursuant to 10 C.F.R. 2.309(f)(1); LBP-11-10, 73 NRC 445 (2011)

new contentions filed after the initial filing may only be admitted upon a showing that the information upon which they are based was not previously available and is materially different than information previously available and they have been submitted in a timely fashion based on the availability of the subsequent information; LBP-12-18, 76 NRC 136-37 (2012)

new contentions must be timely and based on new information relevant to the plant and the application that is materially different from information previously available; LBP-12-1, 75 NRC 12 (2012)

new contentions submitted within 30 days of the occurrence of the triggering the event are timely; LBP-12-18, 76 NRC 137 (2012)

new environmental contentions may be filed if data or conclusions in the draft environmental impact statement differ significantly from the data or conclusions in the environmental report; LBP-11-32, 74 NRC 670 (2011); LBP-11-33, 74 NRC 682 n.12 (2011); LBP-11-34, 74 NRC 698 (2011); LBP-11-39, 74 NRC 866 (2011)

new or amended contentions are considered to be timely if filed within 60 days of any triggering event; LBP-11-9, 73 NRC 397 (2011)

new or amended contentions filed after the initial filing period has expired may be admitted as timely only with leave of the licensing board if it meets the timeliness standards of this section; LBP-12-7, 75 NRC 509 (2012); LBP-12-12, 75 NRC 748 (2012)

NRC preserves the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information; LBP-11-22, 74 NRC 264 (2011)

NRC rules contain ample provisions through which litigants may seek admission of new or amended contentions; CLI-12-13, 75 NRC 689 (2012)

petitioner must base its environmental contentions on information available at the time its intervention petition is to be filed, including applicant’s environmental report; CLI-14-2, 79 NRC 21 (2014)

petitioner must file NEPA-related contentions based on applicant’s environmental report, but new or amended contentions are explicitly permitted if there are data or conclusions in the NRC draft or final environmental impact statement that differ significantly from data or conclusions in applicant’s documents; LBP-12-12, 75 NRC 752, 755-56 (2012); LBP-12-13, 75 NRC 788 n.13 (2012)

petitioner or intervenor may file timely new or amended contentions, with leave of the board, if the three requirements of this section are met; LBP-11-9, 73 NRC 400-01 (2011)

petitioner will have an opportunity to submit contentions based on the final supplemental environmental impact statement if appropriate; LBP-13-9, 78 NRC 75 (2013)
petitioners and intervenors are obliged to challenge applicant’s environmental report; LBP-11-7, 73 NRC 276 (2011)
proponent of a contention is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement for its admission; CLI-12-13, 75 NRC 686 n.30 (2012)
this section deals with the factors that govern the admission of timely new or amended contentions; LBP-11-9, 73 NRC 400 (2011)
time for challenging the environmental report passes when NRC Staff releases its draft supplemental environmental impact statement, but contentions challenging the ER can be filed with the initial petition and prior to the time Staff’s environmental review documents are completed; LBP-12-11, 75 NRC 737 (2012)
untimeliness constitutes sufficient grounds on its own for denying the motion to reopen and thus the board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 49 (2012)
when determining whether a new contention is timely for purposes of reopening a record, the Commission looks to whether the information on which it is based was previously available or whether it is materially different from what was previously available, and whether it has been submitted in a timely fashion based on the information’s availability; CLI-12-21, 76 NRC 498 (2012)
where a supplemental environmental impact statement is being prepared, intervenor may submit proposed new contentions based on new information, including new information in the SER and Staff NEPA documents; LBP-11-22, 74 NRC 272 (2011)
where the information in the draft environmental impact statement is so different from the information in the environmental report that the DEIS dispenses with and moots the issues raised in the original contention, intervenor must file a new or amended contention against the DEIS; LBP-11-1, 73 NRC 26 (2011)
with respect to contentions filed after the initial petition, intervenors have the burden to show that they meet the criteria of this section; LBP-11-7, 73 NRC 286 n.203 (2011)
10 C.F.R. 2.309(f)(2)(i)
for a newly proffered contention to be timely, it must be based on information that was not previously available; LBP-11-15, 73 NRC 636 (2011)
10 C.F.R. 2.309(f)(2)(i) & (ii)
 adoption of building code rules by a state presents new and materially different information not previously available, upon which intervenors may rest their proposed contention; LBP-11-7, 73 NRC 290 n.233 (2011)
because petitioner fails to show that the possibility of site inundation is based on new and materially different information added to the environmental report as part of applicant’s revised low-level radioactive waste management plan or identify any new and materially different information on which its site-inundation argument is based, this argument is not timely; LBP-12-7, 75 NRC 514-15 (2012)
request to admit a new or amended contention requires petitioner to show that the information upon which it is based was not previously available and is materially different from information previously available; CLI-14-2, 79 NRC 21 (2014)
10 C.F.R. 2.309(f)(2)(i)-(iii)
amended contentions filed after the initial filing period has expired may be admitted only with leave of the licensing board if they satisfy the three criteria of this section; LBP-12-9, 75 NRC 620-21 (2012)
contentions submitted after the initial filing period for receipt of petitions to intervene must be based on information not previously available and materially different than information previously available and must be submitted in a timely fashion based on availability of the new information; LBP-12-27, 76 NRC 592-93 (2012)
good cause exists when the requirements of this section are satisfied; LBP-14-5, 79 NRC 382 (2014)
if, within 60 days after pertinent information supporting a new contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding construction of a mixed oxide facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements or the requirements for reopening the record; LBP-11-9, 73 NRC 401 (2011)
intervenors may file new or amended contentions in response to the draft environmental impact statement if they can satisfy the test of this section; LBP-12-12, 75 NRC 752 (2012)
new or amended contentions may be filed after initial docketing with leave of the presiding officer upon a showing that the information upon which the contention is based was not previously available, is based on materially different information previously unavailable, and has been submitted in a timely fashion based on the availability of the subsequent information; CLI-11-2, 73 NRC 339 (2011); LBP-11-7, 73 NRC 277-78 (2011); LBP-11-10, 73 NRC 445 (2011)

new or amended contentions may be filed based on the draft environmental impact statement if based on new and materially different information, whether contained in the DEIS itself or some other source, and if it is filed in a timely manner once the new information becomes available or any delay is excused pursuant to section 2.309(c)(1); LBP-12-12, 75 NRC 752 (2012)

new or amended contentions must be based on information not previously available and materially different from previously available information and be submitted in a timely fashion based on the availability of the subsequent information; LBP-14-6, 79 NRC 410 (2014)

new or amended contentions may be filed based on the draft environmental impact statement if based on new and materially different information, whether contained in the DEIS itself or some other source, and if it is filed in a timely manner once the new information becomes available or any delay is excused pursuant to section 2.309(c)(1); LBP-12-12, 75 NRC 752 (2012)

new or amended contentions must be based on information not previously available and materially different from previously available information and be submitted in a timely fashion based on the availability of the subsequent information; LBP-11-25, 74 NRC 389 (2011); LBP-11-39, 74 NRC 866 (2011)

timely new or amended contentions may be admitted if it meets three pleading requirements; LBP-11-32, 74 NRC 661 (2011)

10 C.F.R. 2.309(f)(2)(ii)

new contentions must be based on information materially different than the information previously available; CLI-14-2, 79 NRC 21 (2014); LBP-11-15, 73 NRC 636 (2011); LBP-14-5, 79 NRC 396-97 (2011)

10 C.F.R. 2.309(f)(2)(iii)

any contention filed within 30 days of the date when new and material information on which it is based first became available is regarded as timely; LBP-11-7, 73 NRC 287 (2011); LBP-11-39, 74 NRC 867 (2011); LBP-12-9, 75 NRC 621 (2012); LBP-12-23, 76 NRC 484 (2012)

by filing proposed new or amended contentions within the time specified in the initial scheduling order, petitioner satisfies timeliness requirements but would still have to satisfy the other requirements of section 2.309(f)(2) or the requirements of section 2.309(c), as well as the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); LBP-11-22, 74 NRC 262-63 (2011)

contention or amendment or supplement to a contention is considered timely if filed within 60 days of the date when the material information on which it is based first becomes available to the moving party through service, publication, or any other means; LBP-12-12, 75 NRC 748 (2012); LBP-12-27, 76 NRC 593 (2012)

10 C.F.R. 2.309(g)

petitioner may address the selection of hearing procedures, taking into account the provisions of 10 C.F.R. 2.310; LBP-11-16, 73 NRC 706 (2011)

petitioner requesting Subpart G procedures must demonstrate by reference to the contention and the bases provided and the specific procedures in Subpart G that resolving the contention will require resolution of material issues of fact that may be best determined through use of the identified procedures; LBP-11-2, 73 NRC 78 (2011)

10 C.F.R. 2.309(h)(2)

petitioner is generally afforded 7 days to file its reply; LBP-12-3, 75 NRC 187 n.21 (2012)

reply must be filed within 7 days after the filing of answers to an intervention petition; LBP-11-21, 74 NRC 120 n.14 (2011)

state government has standing because the facility is located within the boundaries of the state and, accordingly, no further demonstration of standing is required; LBP-15-4, 81 NRC 163 (2015); LBP-15-18, 81 NRC 794 (2015); LBP-15-26, 82 NRC 173 (2015); LBP-15-24, 82 NRC 71 n.2 (2015)

10 C.F.R. 2.309(h)(3)

parties do not have an automatic right to respond to reply briefs; LBP-11-34, 74 NRC 695 (2011)

petitions, answers, and replies are allowed unless otherwise specified by the Commission or the presiding officer, but no other written answers or replies will be entertained; LBP-11-2, 73 NRC 39 (2011)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 2.309(i)(2) petitioner has the right to file a reply; LBP-15-13, 81 NRC 461 (2015)
10 C.F.R. 2.310 upon admission of a contention, a board must identify the specific hearing procedure to be used in the adjudication; LBP-11-16, 73 NRC 706 (2011)
10 C.F.R. 2.310(a) in the interest of expediting the further proceedings, hearing on senior reactor operator license denial will be conducted under the provisions of Subpart L of the Commission’s Rules of Practice; LBP-13-3, 77 NRC 98 (2013)
license renewal proceeding may be conducted under the relatively informal procedures of Subpart L; LBP-11-2, 73 NRC 79 (2011)
procedural rules in Subpart L govern most adjudicatory proceedings; CLI-14-5, 79 NRC 259 (2014)
proceedings for the grant, renewal, licensee-initiated amendment, or termination of licenses or permits subject to Part 55 may be conducted under the procedures of Subpart L; LBP-11-16, 73 NRC 706 (2011); LBP-13-3, 77 NRC 98 n.79 (2013)
upon admission of a contention in a licensing proceeding, the board must identify the specific hearing procedures to be used to adjudicate the contention; LBP-11-2, 73 NRC 78 (2011); LBP-11-13, 73 NRC 587 (2011)
10 C.F.R. 2.310(b) enforcement proceedings are typically conducted pursuant to the procedures in Subpart G; LBP-13-3, 77 NRC 98 n.79 (2013); LBP-14-11, 80 NRC 128 n.8 (2014)
10 C.F.R. 2.310(b)-(c) unless the parties agree otherwise, enforcement matters and licensing of uranium enrichment facility construction and operation must be conducted under Subpart G; LBP-11-2, 73 NRC 79 n.322 (2011)
10 C.F.R. 2.310(d) in reactor licensing matters, the relatively formal procedures provided in Subpart G of Part 2 govern if a contention necessitates resolution of issues of material fact relating to the occurrence of a past activity, where the credibility of an eyewitness may reasonably be expected to be at issue, and/or issues of motive or intent of the party or eyewitness material to the resolution of the contested matter; LBP-11-2, 73 NRC 78 (2011); LBP-11-16, 73 NRC 706 (2011)
10 C.F.R. 2.310(g) Commission has authority to rule that a license transfer case be adjudicated under Subpart L; CLI-14-5, 79 NRC 259 (2014)
licensing boards have all the powers necessary to perform their duties, including powers to regulate the conduct of the participants; LBP-13-2, 77 NRC 75 n.12 (2003)
procedural rules in Subpart M govern adjudications on transfer applications; CLI-14-5, 79 NRC 259 (2014)
10 C.F.R. 2.310(h) unless the parties request a hearing pursuant to Subpart N, the board will hold a hearing pursuant to the procedures announced in Subpart L; LBP-13-3, 77 NRC 98 n.79 (2013)
10 C.F.R. 2.310(h)(1) if the hearing on a contention is expected to take no more than 2 days to complete, the board can impose the Subpart N procedures for expedited proceedings with oral hearings specified in 10 C.F.R. 2.1400-.1407; LBP-11-13, 73 NRC 587 (2011)
10 C.F.R. 2.310(g) licensing boards have all the powers necessary to perform their duties, including powers to regulate the conduct of the participants and to issue orders necessary to carry out their duties and responsibilities; LBP-13-2, 77 NRC 75 n.12 (2003)
10 C.F.R. 2.311 appeal as of right on the question of whether an initial intervention petition should have been wholly denied, or alternatively, was granted improperly are governed by this section; CLI-12-7, 75 NRC 385 n.16 (2012)
appeals from an order ruling on the admission of new or amended contentions is not permitted; LBP-14-5, 79 NRC 401 (2014)

522
limited interlocutory appeal right attaches only when the board has fully ruled on the initial intervention petition, that is, when it has admitted or rejected all proposed contentions; LBP-14-8, 79 NRC 528 (2014)

review of a board’s dismissal of some contentions would normally await the end of the case; CLI-12-19, 76 NRC 388 (2012)

10 C.F.R. 2.311(a)

piecemeal review of licensing board rulings during ongoing proceedings is disfavored; CLI-13-3, 77 NRC 54 (2013)

this section governs appeals of board rulings on hearing requests, petitions to intervene, and access to certain nonpublic information; CLI-12-6, 75 NRC 361 (2012)

this section is applicable to an appeal of a board decision rejecting an intervention petition and a hearing request; CLI-14-6, 79 NRC 446 (2014)

10 C.F.R. 2.311(a)(1) & (2)

appeals as of right are allowed on the question of whether an intervention petition should have been wholly denied; CLI-12-12, 75 NRC 606 (2012)

10 C.F.R. 2.311(b)

briefs on appeal must conform to the requirements stated in section 2.341(c)(2); CLI-11-8, 74 NRC 219 (2011)

replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 260 n.36 (2012)

10 C.F.R. 2.311(c)

appeal as of right from a board’s ruling on an intervention petition is permitted upon denial of a petition to intervene and/or request for hearing, on the question as to whether it should have been granted; CLI-14-3, 79 NRC 36 (2014); LBP-15-1, 81 NRC 46 (2015)

appeal as of right will be granted on the question whether a request for hearing or petition to intervene should have been granted; CLI-15-21, 82 NRC 301 (2015)

appeals of contention admissibility rulings are available only upon denial of a petition to intervene and/or request for hearing on the question of whether it should have been granted or upon the grant of a petition to intervene and/or request for hearing on the question of whether it should have been wholly denied; CLI-12-8, 75 NRC 396-97 (2012); CLI-13-3, 77 NRC 54 (2013)

denial of hearing request is appealable as of right; CLI-13-2, 77 NRC 44 n.20 (2013)

petitioner is not allowed to reply to its opponent’s answer; CLI-13-2, 77 NRC 44 n.20 (2013)

piecemeal review of licensing board rulings during ongoing proceedings is disfavored; CLI-13-3, 77 NRC 54 (2013)

10 C.F.R. 2.311(d)

licensing board order granting a request for hearing on the question whether the request should have been wholly denied is appealable; CLI-15-23, 82 NRC 324 (2015)

piecemeal review of licensing board rulings during ongoing proceedings is disfavored; CLI-13-3, 77 NRC 54 (2013)

10 C.F.R. 2.311(d)(1)

appeal as of right from a board’s ruling on an intervention petition is permitted upon granting of a petition to intervene and/or request for hearing, on the question as to whether it should have been wholly denied; CLI-12-12, 75 NRC 606 (2012); CLI-12-19, 76 NRC 379 (2012); CLI-13-3, 77 NRC 54 (2013); CLI-14-3, 79 NRC 36 (2014); CLI-15-18, 82 NRC 157 n.8 (2015); CLI-15-25, 82 NRC 393 (2015); LBP-15-1, 81 NRC 46 (2015)

applicant denied a senior reactor operator license has the right to demand a hearing, rather than being required to negotiate the contention admissibility requirements and a possible appeal in the event a hearing is granted; LBP-13-3, 77 NRC 92 n.53 (2013)

because the board granted a hearing request, its decision to reject some contentions may not be appealed until the end of the case; CLI-14-2, 79 NRC 13 n.3 (2014)

Commission affirmed the board’s standing ruling, but declined to accept review of challenges to the board’s admission of two contentions because petitioner had failed to perfect its appeal by challenging the validity of the board’s admissibility rulings regarding other contentions; LBP-15-3, 81 NRC 77 (2015)

Commission discourages piecemeal appeals; CLI-12-12, 75 NRC 607 (2012)
LEGAL CITATIONS INDEX
REGULATIONS

NRC rules of practice provide for an automatic right to appeal a licensing board decision deciding standing and contention admissibility, on the question whether a petition to intervene and request for hearing should have been granted, or denied in its entirety; CLI-11-11, 74 NRC 431 (2011); CLI-12-8, 75 NRC 396-97 (2012); CLI-14-2, 79 NRC 13 (2014)

10 C.F.R. 2.311(e)
appeal of an order selecting a hearing procedure is permitted on the question as to whether the selection of the particular hearing procedures was in clear contravention of the criteria set forth in section 2.310; CLI-14-3, 79 NRC 36 n.29 (2014)

10 C.F.R. 2.314
counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal authority that is adverse to the director’s position, especially when the target of the government’s enforcement action is not represented by counsel; LBP-14-11, 80 NRC 127-28 n.6 (2014)
“representative” means the attorney or other authorized representative of a party who has entered a notice of appearance; LBP-11-5, 73 NRC 139 (2011)

10 C.F.R. 2.314(b)
although the better practice would be to file a notice of appearance, pursuant to section 2.304(d), the signature of a person signing a pleading is a representation that the document has been subscribed in the capacity specified with full authority; LBP-13-12, 78 NRC 241 n.9 (2013)
duly authorized member or officer may represent his or her partnership, corporation, or unincorporated association even if he or she is not an attorney at law, but the representative’s notice of appearance must state the basis of his or her authority to act on behalf of the party; LBP-11-13, 73 NRC 548 (2011)

10 C.F.R. 2.314(c)
licensing boards may impose reprimands, censures, or suspensions from proceedings on contumacious parties or their representatives; LBP-13-2, 77 NRC 76 n.13 (2003)
pro se representatives in licensing board proceedings, like all other representatives and/or lawyers, are required to be accurate and truthful and are subject to reprimand, censure, or suspension for failing in these duties; LBP-13-8, 78 NRC 19 n.25 (2013)

10 C.F.R. 2.315(a)
board accepted written limited appearance statements from members of the public in connection with the hearing; LBP-14-3, 79 NRC 277 n.36 (2014)
board permitted any person who was not a party to the proceeding to submit written limited appearance statements concerning the issues in the proceeding; LBP-13-13, 78 NRC 274 (2013)
boards may entertain oral and written limited appearance statements from members of the public in connection with a mandatory uncontested proceeding; LBP-11-26, 74 NRC 517, 535 n.13 (2011)
limited appearance statements do not constitute evidence but may assist the board and/or parties in defining the issues being considered; LBP-13-13, 78 NRC 274 (2013); LBP-15-27, 82 NRC 188 n.26 (2015)
no duty is imposed on a board to respond to limited appearance statements as litigable concerns; LBP-11-11, 73 NRC 521 n.31 (2011)

10 C.F.R. 2.315(c)
boards may afford an interested state, local governmental body, and federally recognized Indian tribe that has not been admitted as a party under section 2.309 a reasonable opportunity to participate in a hearing; LBP-15-19, 81 NRC 828 (2015)
governmental entity is permitted to participate in the proceeding as an interested local governmental body and will thus have the opportunity to support intervenors’ already-admitted contention; LBP-15-19, 81 NRC 822 n.35 (2015)
interested governmental entities who failed to raise admissible contentions were eligible to participate in the license renewal proceeding; LBP-13-13, 78 NRC 265-66 (2013)
interested governmental entity may introduce evidence, interrogate witnesses where cross-examination by the parties is permitted, advise the Commission without being required to take a position with respect to
the issue, file proposed findings, and petition for review by the Commission; LBP-11-6, 73 NRC 166 n.4 (2010); LBP-15-19, 81 NRC 818, 828 n.63 (2015)

local governmental body that is not admitted as a party shall, upon request, be permitted to participate in a hearing as an interested nonparty; LBP-11-6, 73 NRC 166 n.4 (2010)

representative of a governmental entity that wishes to participate as a nonparty in the proceeding must identify those contentions on which it will participate in advance of any hearing held; LBP-15-11, 81 NRC 405 n.6 (2015)

10 C.F.R. 2.315(d)

amicus curiae briefs may be filed when the Commission has taken up a matter pursuant to section 2.341 or sua sponte; CLI-13-9, 78 NRC 556 n.17 (2013); CLI-14-11, 80 NRC 171 n.20 (2014); CLI-15-1, 81 NRC 5 n.19 (2015); CLI-15-4, 81 NRC 225 n.8 (2015); CLI-15-5, 81 NRC 333 n.19 (2015); CLI-15-23, 82 NRC 324 n.16 (2015); CLI-15-24, 82 NRC 334 n.17 (2015)

persons who are not parties may file an amicus curiae brief; CLI-15-1, 81 NRC 5 n.19 (2015)

state government may file an amicus brief within the time allowed to the party whose position the brief will support; CLI-15-2, 81 NRC 216 (2015)

10 C.F.R. 2.316

any consolidation of multiple parties’ presentations of evidence that would prejudice the rights of any party may not be ordered; LBP-11-4, 73 NRC 124 (2011)

contention challenging sufficiency of the draft environmental impact statement as it pertains to the protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 105 (2013)

10 C.F.R. 2.317(b)

consolidating proceedings is the exception rather than the rule; CLI-14-5, 79 NRC 261 n.37 (2014)

litigant asking for consolidation of proceedings has the burden of showing that it will be conducive to the proper dispatch of the Commission’s business and to the ends of justice and will be conducted in accordance with the other provisions of Subpart C; CLI-14-5, 79 NRC 261 n.37 (2014)

10 C.F.R. 2.318

commencement of a proceeding is described; CLI-12-3, 75 NRC 140 n.47 (2012)

10 C.F.R. 2.318(a)

board jurisdiction terminates when the period within which the Commission may direct that the record be certified to it for final decision expires, when the Commission renders a final decision, or when the presiding officer withdraws from the case; CLI-12-14, 75 NRC 697 (2012); CLI-12-17, 76 NRC 210 n.11 (2012)

this regulation does not provide an exhaustive list of every situation where board jurisdiction lapses; CLI-12-17, 76 NRC 210 (2012); CLI-12-14, 75 NRC 701 (2012)

three occasions that could trigger termination of the presiding officer’s jurisdiction are delineated; LBP-11-22, 74 NRC 276 (2011)

where an amended version of a dismissed contention was pending before the board, the board retains jurisdiction to decide whether to admit the proposed contention; LBP-11-22, 74 NRC 263 (2011)

10 C.F.R. 2.319

although boards are accorded considerable discretion to manage proceedings before them, they need not exercise it; LBP-15-15, 81 NRC 615 n.114 (2015)

boards are given broad discretion in the conduct of NRC adjudicatory proceedings, and the Commission generally defers to board case-management decisions; LBP-15-15, 81 NRC 615 n.114 (2015)

boards must exercise all the powers necessary to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-11-22, 74 NRC 282 (2011)

broad discretion is given to NRC licensing boards in the conduct of NRC adjudicatory proceedings, and the Commission generally defers to board case management decisions; CLI-14-10, 80 NRC 164 (2014)

Commission generally defers to licensing boards on case management issues; CLI-11-13, 74 NRC 640 (2011)
contention challenging sufficiency of the draft environmental impact statement as it pertains to the protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 105 (2013)

licensing boards have all the powers necessary to perform their duties; LBP-13-2, 77 NRC 75 n.12 (2003)

licensing boards have authority to adjudicate exemption issues, but NRC Staff serves as an initial reviewer of exemption requests; LBP-12-6, 75 NRC 273 (2012)

licensing boards have broad powers to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-15-30, 82 NRC 344 (2015)

presiding officers have the duty to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, and to avoid delay and to maintain order and have all the powers necessary to those ends; CLI-14-10, 80 NRC 164 n.38 (2014); LBP-11-22, 74 NRC 280 (2011)

10 C.F.R. 2.319(c)

consolidating proceedings is the exception rather than the rule; CLI-14-5, 79 NRC 261 n.37 (2014)

10 C.F.R. 2.319(d)

board has ample authority to ensure that evidence offered concerning microcracking is limited to that specific material issue and does not stray into issues outside the scope of the license amendment proceeding; LBP-15-20, 81 NRC 859 (2015)

boards are not precluded from considering documents despite their hearsay nature; LBP-11-14, 73 NRC 600 n.59 (2011)

boards may on motion or on their own initiative strike any portion of a written presentation that is unreliable; LBP-11-14, 73 NRC 600 n.59 (2011)

in proceedings under Part 2, strict rules of evidence do not apply to written submissions; LBP-11-14, 73 NRC 600 n.59 (2011); LBP-12-21, 76 NRC 248 n.171 (2012)

10 C.F.R. 2.319(e)

presiding officer may restrict irrelevant, immaterial, unreliable, duplicative, or cumulative evidence and/or arguments; LBP-11-13, 73 NRC 556 n.134 (2011)

10 C.F.R. 2.319(e), and (g)

board has ample authority to ensure that evidence offered concerning microcracking is limited to that specific material issue and does not stray into issues outside the scope of the license amendment proceeding; LBP-15-20, 81 NRC 859 (2015)

10 C.F.R. 2.319(k)

licensing boards are expected to set procedures to ensure that the case is managed efficiently, in a manner that is fair to all of the parties; CLI-14-10, 80 NRC 164 n.39 (2014)

10 C.F.R. 2.319(l)

boards are encouraged to refer rulings that raise significant and novel legal or policy issues, the resolution of which would materially advance the orderly disposition of the proceeding; CLI-12-13, 75 NRC 685 n.23 (2012)

should a licensing board decision raise novel legal or policy questions, boards are to certify to the Commission those questions that would benefit from Commission consideration; CLI-11-5, 74 NRC 170 (2011); LBP-11-32, 74 NRC 671-72 (2011)

10 C.F.R. 2.320

boards may take disciplinary action against a party that fails to comply with any prehearing order, as long as the action is just; CLI-14-10, 80 NRC 164-165 (2014)

if a party fails to file an answer or pleading within the time prescribed in 10 C.F.R. Part 2 or as specified in the notice of hearing or pleading, to appear at a hearing or prehearing conference, to comply with any prehearing order entered by the presiding officer, or to comply with any discovery order entered by the presiding officer, the Commission or the presiding officer may make any orders in regard to the failure that are just; CLI-14-2, 79 NRC 14 n.10 (2014)

10 C.F.R. 2.321(c)

licensing boards have authority to adjudicate exemption issues, but NRC Staff serves as an initial reviewer of exemption requests; LBP-12-6, 75 NRC 273 (2012)

motion to reply is denied because no compelling circumstances are presented; CLI-12-6, 75 NRC 373 (2012)
presiding officers have the duty to conduct a fair and impartial hearing according to law, to take
appropriate action to control the prehearing and hearing process, and to avoid delay and to maintain
order and have all the powers necessary to those ends; CLI-14-10, 80 NRC 164 n.38 (2014)
10 C.F.R. 2.323
although MRC rules do not provide for filing of amicus curiae briefs on motions filed pursuant to this
section, as a matter of discretion, the Commission has reviewed both the brief and NRC Staff’s
opposition; CLI-13-9, 78 NRC 556 n.17 (2013)
heightened showing is required to prevent overuse of sua sponte review, including a demonstration of
if any portion of a filing is untimely tendered, it must be accompanied by a motion to file out of time;
LBP-11-13, 73 NRC 545 (2011)
requests for action from the presiding officer in an NRC adjudicatory proceeding must come in the form
of a motion; CLI-15-13, 81 NRC 569 n.86 (2015)
10 C.F.R. 2.323(a)
if applicants believe that their actions render a contention moot, then they should promptly filed a motion
for summary disposition; LBP-12-19, 76 NRC 202 n.103 (2012)
motions must be filed no later than 10 days after the occurrence or circumstance from which the motion
arises; LBP-12-26, 76 NRC 566 (2012)
10 C.F.R. 2.323(b)
all motions must include a certification that movant has made a sincere effort to contact other parties in
the proceeding and resolve the issue raised in the motion, and that the movant’s efforts to resolve the
issue have been unsuccessful; LBP-11-2, 73 NRC 47 (2011)
because applicant did not comply with this section, the board does not consider information supplied with
applicant’s letter in connection with the board’s analysis of petitioner’s contention; LBP-11-2, 73 NRC
47 (2011)
Fukushima-related contention is denied for failure of its proponent to contact the other parties to resolve
the issue presented by the contention prior to its submission; LBP-11-37, 74 NRC 635 n.13 (2011);
LBP-11-34, 74 NRC 695 (2011); LBP-12-27, 76 NRC 601 (2012)
10 C.F.R. 2.323(c)
aplicant has no right to reply and may be granted permission only in compelling circumstances, such as
where movant demonstrates that it could not reasonably have anticipated the arguments to which it
evidentiary objections made for the first time after briefing has been completed unfairly deprive
petitioners of the opportunity to file the response expressly provided in the NRC’s procedural rules;
movant has no right to reply except as permitted by the presiding officer and only in compelling
circumstances; LBP-15-28, 82 NRC 235 n.8 (2015)
parties do not have an automatic right to respond to reply briefs; LBP-11-34, 74 NRC 695 (2011)
replies to motions that would otherwise be unauthorized are allowed if there are compelling
circumstances, such as where the moving party demonstrates that it could not reasonably have
anticipated the arguments to which it seeks leave to reply; CLI-11-14, 74 NRC 808 n.39 (2011);
CLI-14-3, 79 NRC 35 n.27 (2014)
10 C.F.R. 2.323(d)
counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal
authority that is adverse to the director’s position, especially when the target of the government’s
enforcement action is not represented by counsel; LBP-14-11, 80 NRC 127-28 n.6 (2014)
pro se representative in licensing board proceedings, like all other representatives and/or lawyers, are
required to be accurate and truthful and are subject to reprimand, censure, or suspension for failing in
these duties; LBP-13-8, 78 NRC 19 n.25 (2013)
10 C.F.R. 2.323(e)
motion for reconsideration is denied for failure to meet the high standard of this section; LBP-12-26, 76
NRC 563 (2012)
LEGAL CITATIONS INDEX

REGULATIONS

motion for reconsideration is procedurally defective, out of time, and fails to assert compelling circumstances justifying reconsideration; CLI-13-7, 78 NRC 204 n.14 (2013)
motion for reconsideration should not include new arguments or evidence unless it relates to a board concern that applicant could not reasonably have anticipated; LBP-14-7, 79 NRC 458 (2014)
motions for reconsideration must be filed within 10 days of the action for which reconsideration is requested; CLI-12-17, 76 NRC 209 n.7 (2012); CLI-14-10, 80 NRC 164 n.34 (2014); LBP-11-15, 73 NRC 616 n.16 (2011)
motions for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid; CLI-14-1, 79 NRC 3 n.6 (2014); LBP-11-15, 73 NRC 616 n.16 (2011)
petition for review is treated as a petition for reconsideration; CLI-12-17, 76 NRC 209 (2012)
reconsideration motion fails to identify a significant factual or legal matter that the board overlooked or provide compelling circumstances that render the board’s decision invalid; LBP-14-7, 79 NRC 458 (2014)
reconsideration motions may not be filed except upon leave of the adjudicatory body that rendered the decision and that procedural deficiency is reason enough to deny the request; CLI-12-17, 76 NRC 209 n.7 (2012)

10 C.F.R. 2.323(f)
boards are authorized to refer a ruling to the Commission at the earliest opportunity if the board determines that the decision or ruling involves a novel issue that merits Commission review; CLI-11-5, 74 NRC 170 (2011); LBP-11-32, 74 NRC 671-72 (2011)
boards are encouraged to refer rulings that raise significant and novel legal or policy issues, the resolution of which would materially advance the orderly disposition of the proceeding; CLI-12-13, 75 NRC 685 n.23 (2012)
licensing board refers ruling that applicant has no legal duty to supplement an originally compliant environmental report to incorporate new and significant information that arises after the ER was duly submitted; LBP-11-32, 74 NRC 657 (2011)
referred rulings or certified questions must raise significant and novel legal or policy issues or issues whose early resolution would materially advance the orderly disposition of the proceeding; CLI-15-1, 81 NRC 9 n.39 (2015)

10 C.F.R. 2.323(f)(1)
board denies petition for rule waiver but refers the decision to the Commission because the legal issue presented by the petition is novel and worthy of the Commission’s immediate attention; LBP-13-1, 77 NRC 60, 69 (2013)
boards should refer rulings that raise novel or legal policy issues that would benefit from Commission review; CLI-11-11, 74 NRC 455 (2011)

10 C.F.R. 2.325
applicant bears the burden of proof in a licensing proceeding; LBP-14-1, 79 NRC 52-53 (2014); LBP-14-3, 79 NRC 278 (2014)
applicant for an exemption bears the burden of proof on all issues; LBP-12-6, 75 NRC 268 (2012)
applicant in a licensing proceeding bears the burden of proof by a preponderance of the evidence on safety issues that it is entitled to the applied-for license; LBP-11-38, 74 NRC 829 (2011); LBP-12-17, 76 NRC 80 n.40 (2012)
as proponent of the agency action at issue, applicant generally has the burden of proof in a licensing proceeding; LBP-15-3, 81 NRC 84 (2015); LBP-15-16, 81 NRC 641 (2015)
moving party bears the burden of meeting reopening standards, and applicant retains the burden of proof on the question whether the license should be issued; CLI-15-19, 82 NRC 157 n.29 (2015)
on safety issues, license applicants have the burden of establishing entitlement to the applied-for license by a preponderance of the evidence; LBP-12-5, 75 NRC 235 (2012); LBP-13-13, 78 NRC 279 (2013); LBP-14-3, 79 NRC 278 (2014)
party moving for sanctions has the burden of establishing by a preponderance of the evidence that petitioner violated the protective order; LBP-13-2, 77 NRC 75 (2003)
regardless of the issuance of the license, the burden at hearing remains on applicant and, with respect to NEPA compliance, on NRC Staff; CLI-15-17, 82 NRC 41 (2015)
summary disposition movant bears the initial burden of demonstrating that no genuine issue as to any material fact exists and that it is entitled to judgment as a matter of law; LBP-11-14, 73 NRC 595 (2011); LBP-12-23, 76 NRC 450 (2012)

unless the presiding officer otherwise orders, applicant or proponent of an order has the burden of proof; LBP-14-2, 79 NRC 149 (2014); LBP-15-2, 81 NRC 57 n.63 (2015)

10 C.F.R. 2.326

bare assertions and speculation do not supply the requisite support to satisfy the standards for reopening a record; LBP-11-35, 74 NRC 729 (2011)
because the motion to reopen and contention are based on information that is neither new nor materially different from information that was previously available, the motion and contention are untimely; LBP-12-11, 75 NRC 739 (2012)
because the record is closed, petitioner’s motion must meet the requirements for reopening; LBP-12-11, 75 NRC 734 (2012)

“closed record” refers to a record developed at an evidentiary hearing; LBP-11-22, 74 NRC 281 (2011)

combined license cannot be issued until the foreign ownership issue is properly corrected and then applicants may motion to reopen the record; LBP-12-19, 76 NRC 187 (2012)

contention asserting that the NRC’s environmental review of the license renewal application has not met the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and Management Act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 635 (2012)

for new contentions to be admitted after the record has closed, petitioner must satisfy the Commission’s demanding regulatory requirements for reopening the record; LBP-11-20, 74 NRC 69 (2011); LBP-11-23, 74 NRC 293, 295 n.37 (2011); LBP-11-35, 74 NRC 718 (2011)

heavier burden applies to motions to reopen than to proponents of contentions in ongoing proceedings; CLI-11-5, 74 NRC 169 (2011)

if a petition is rejected or dismissed at the docketing stage (before the evidentiary record has ever been opened), then subsequent petitions, in addition to meeting all other requirements, must also show that the evidentiary record should be reopened; LBP-14-4, 79 NRC 374 (2014)

importance of finality in adjudicatory proceedings is reflected in this rule; CLI-15-19, 82 NRC 155 (2015)

intervenor must show that a materially different result would be likely if the new contention is admitted; LBP-11-22, 74 NRC 281 (2011)

intervenors seeking admission of new evidence after a licensing board has closed the evidentiary record must demonstrate sufficient grounds for reopening the record; CLI-12-10, 75 NRC 483 (2012)
motions to reopen a closed record are governed by this section; CLI-12-3, 75 NRC 138 (2012); CLI-12-6, 75 NRC 367 (2012); CLI-15-19, 82 NRC 155 (2015)
motions to reopen to admit a new contention must meet all requirements of this section as well as sections 2.309(c) and 2.309(f)(2); LBP-12-16, 76 NRC 47-48 (2012)
nor new contentions filed after the record has closed must satisfy the timeliness requirement of either 10 C.F.R. 2.309(f)(2) or 2.309(e), and the admissibility requirements of section 2.309(f)(1), as well as the reopening requirements; LBP-11-22, 74 NRC 269 n.54 (2011)

newly constituted board applied the reopening standard to new contentions filed after the prior proceeding was terminated for want of pending or admitted contentions; LBP-11-22, 74 NRC 269 n.50 (2011)

NRC rules contain ample provisions through which litigants may seek admission of new or amended contentions; CLI-12-13, 75 NRC 689 (2012)

petitioners have not raised an issue material to findings that the NRC must make to support final decisions in the captioned matters and they are unable to satisfy contention admissibility standards or meet the criteria to reopen a closed record; CLI-15-4, 81 NRC 231 n.47 (2015)

proper mechanism for raising Fukushima-related, application-specific concerns in ongoing combined license cases is to file a new contention, consistent with the procedural rules applicable to the proceeding; CLI-11-5, 74 NRC 150 n.19 (2011)

10 C.F.R. 2.326(a)

all factors must be met for a motion to reopen to be granted; CLI-12-3, 75 NRC 143 (2012)
because the previous licensing board terminated the adjudicatory proceeding that was convened to consider challenges to the operating license renewal application, challengers must satisfy the stringent requirements for reopening; LBP-12-10, 75 NRC 638-39 (2012)
exceptionally grave issues may be considered in the discretion of the presiding officer even if untimely presented; LBP-12-1, 75 NRC 5 (2012)
motion to reopen will not be granted unless movant satisfies all three criteria listed in this regulation and the motion is accompanied by an affidavit that satisfies section 2.326(b); CLI-15-19, 82 NRC 156 (2015)
motions to reopen must be supported by affidavit, be timely, address a significant safety or environmental issue, and demonstrate that a materially different result would have been likely if the evidence had been available; LBP-11-20, 74 NRC 74-75 (2011); LBP-11-35, 74 NRC 718 (2011); LBP-12-1, 75 NRC 5 (2012); LBP-14-8, 79 NRC 523 (2014); LBP-15-14, 81 NRC 594 (2015)
new contention needs to meet requirements of this section, must be timely, must concern a significant environmental or safety issue, and must demonstrate the likelihood of a materially different result; CLI-12-14, 75 NRC 700 n.54 (2012); LBP-14-8, 79 NRC 523 (2014)
NRC imposes a deliberately heavy burden on an intervenor who seeks to supplement the evidentiary record after it has been closed, even with respect to an existing contention; CLI-11-2, 73 NRC 338 (2011)
petitioners’ proposed Fukushima contention lacked the kind of significance and potential for a different result that would justify restarting already-closed hearings; CLI-12-11, 75 NRC 533 (2012)
10 C.F.R. 2.326(a)(1) board has discretion to consider an untimely motion to reopen if the motion presents an exceptionally grave issue; LBP-15-14, 81 NRC 594 (2015)
claims in a contention that did not genuinely stem from the specific amendments to the aging management plan or from particular information in the revised GALL Report were untimely under standards for reopening the evidentiary record; CLI-12-10, 75 NRC 492 (2012)
contention that the frequency of occurrence of severe accidents is erroneously underestimated should have been raised at the outset of the license renewal proceeding and thus is untimely; LBP-11-35, 74 NRC 748 (2011)
exceptionally grave issues may be considered in the discretion of the presiding officer even if untimely presented; CLI-12-10, 75 NRC 496 n.84 (2012); LBP-11-20, 74 NRC 73 n.62 (2011); LBP-11-35, 74 NRC 728 (2011); LBP-12-1, 75 NRC 14 (2012); LBP-12-11, 75 NRC 739 (2012); LBP-12-16, 76 NRC 57 (2012)
motions to reopen a closed record must be timely; CLI-11-2, 73 NRC 339 (2011); CLI-12-21, 76 NRC 498 (2012)
motions to reopen must be timely and based on new information relevant to the plant and the application that is materially different from information previously available; LBP-12-1, 75 NRC 12 (2012)
NRC recognizes an exception to the timeliness requirement in rare instances in which petitioner raises an exceptionally grave issue; CLI-11-2, 73 NRC 342 n.43 (2011)
reopening will only be allowed where proponent presents material, probative evidence that either could not have been discovered before or could have been discovered but is so grave that, in the judgment of the presiding officer, it must be considered anyway; CLI-12-10, 75 NRC 498 (2012)
untimeliness constitutes sufficient grounds on its own for denying the motion to reopen and thus the board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 49 (2012)
10 C.F.R. 2.326(a)(3) motions to reopen must be timely, address a significant safety or environmental issue, and show that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-12-3, 75 NRC 138 (2012); CLI-12-6, 75 NRC 367 (2012); CLI-12-10, 75 NRC 406 (2012); CLI-12-15, 75 NRC 713 (2012)
reopening criteria that must be satisfied are discussed; LBP-11-20, 74 NRC 92 (2011)
10 C.F.R. 2.326(a)(2)-(3) petitioner has not satisfied reopening standards because it has not raised a significant environmental issue and has not demonstrated that a materially different result would be likely if the contention had been considered initially; CLI-15-11, 81 NRC 549 (2015)
boards are better positioned than the Commission to consider, in the first instance, whether petitioner has shown that a materially different result is likely should it prove the claims in the contention; CLI-12-14, 75 NRC 702 (2012)
motions to reopen must demonstrate that a materially different result would likely have been reached had its purported new evidence been considered initially; CLI-11-2, 73 NRC 346 (2011); CLI-12-10, 75 NRC 498 (2012); CLI-12-10, 75 NRC 498 (2012); LBP-12-1, 75 NRC 16 (2012); LBP-12-19, 76 NRC 204 n.112 (2012)
petitioner does not demonstrate, with the level of support required under section 2.326(b), that a materially different result would have been likely had the possibility of recriticality over a period longer than 24 hours, or even 4 days, been considered in the SAMA analysis initially; CLI-12-3, 75 NRC 143-44 (2012)
petitioner failed to satisfy NRC standards for reopening because its motion was untimely and it failed to demonstrate that a materially different result would be or would have been likely had the newly proffered evidence been considered initially; CLI-11-2, 73 NRC 335 (2011)
petitioner must satisfy the reopening criteria, which include demonstrating the likelihood of a materially different result in the SAMA analysis if the newly proffered evidence were considered; CLI-12-15, 75 NRC 715 (2012)
affidavits supporting a motion to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-11-8, 74 NRC 222 (2011); CLI-12-3, 75 NRC 139, 149 & n.112 (2012); CLI-12-6, 75 NRC 367 (2012); CLI-12-10, 75 NRC 496 (2012); CLI-12-14, 75 NRC 700 n.54 (2012); CLI-12-15, 75 NRC 713 (2012); LBP-11-20, 74 NRC 75, 92 (2011); LBP-11-23, 74 NRC 296 (2011); LBP-11-35, 74 NRC 718-19, 724, 753 (2011); LBP-12-1, 75 NRC 5 (2012); LBP-12-10, 75 NRC 639, 651-52 (2012); LBP-14-8, 79 NRC 523 (2014)
affidavits containing bare assertions and speculation do not supply the requisite support for a motion to reopen; CLI-11-2, 73 NRC 346 (2011)
bare assertions are insufficient to demonstrate a genuine dispute on a material issue of law or fact under NRC’s general contention admissibility requirements in section 2.309(f)(1)(vi), let alone a motion to reopen, which sets a higher evidentiary standard; CLI-12-3, 75 NRC 149 (2012)
evidence contained in affidavits accompanying motions to reopen must meet admissibility standards; LBP-15-14, 81 NRC 594 n.24 (2015)
level of support required to sustain a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-6, 75 NRC 367 (2012)
motions to reopen must also be accompanied by affidavits that set forth the factual and/or technical bases for movant’s claim; LBP-15-14, 81 NRC 594, 596 (2015)
motions to reopen must be supported by affidavit, be timely, address a significant safety or environmental issue, and demonstrate that a materially different result would have been likely if the evidence had been available; LBP-14-8, 79 NRC 523 (2014)
reply affidavit that did not accompany the motion to reopen will not be considered in determining whether petitioners have satisfied this section; LBP-12-10, 75 NRC 652 n.124 (2012)
boards are to consider NRC Staff’s projected schedule for completion of its safety and environmental evaluations in developing the hearing schedule; LBP-12-3, 75 NRC 208 (2012)

criteria for reopening a closed record when the motion relates to a contention not previously in controversy are set out; LBP-11-20, 74 NRC 76 (2011)

an adjudicatory hearing can be closed if the Commission orders it; LBP-11-5, 73 NRC 134 n.4 (2011)

initial scheduling orders set forth issues or matters in controversy to be determined in the proceeding; LBP-14-11, 80 NRC 128 (2014)

shortly after a hearing request has been granted, the board must set a schedule to govern the proceeding; LBP-11-22, 74 NRC 279 (2011)

boards must use the applicable Model Milestones in 10 C.F.R. Part 2, Appendix B as a starting point for the schedule, but the board shall make appropriate modifications based upon the circumstances of each case; LBP-11-22, 74 NRC 279 (2011)

purpose of scheduling orders is to ensure proper case management, with the objective of expediting disposition of the proceeding, establishing early and continuing control so that the proceeding will not be protracted because of lack of management, and discouraging wasteful prehearing activities; LBP-15-29, 82 NRC 253-54 (2015)

one fundamental purpose of the prehearing conference and the scheduling order is expediting the disposition of the proceeding; LBP-12-19, 76 NRC 200 (2012)
10 C.F.R. 2.332(d)
hearings on environmental issues addressed in the environmental impact statement may not commence before issuance of the final EIS; CLI-15-17, 82 NRC 45 n.76 (2015); LBP-13-13, 78 NRC 275-76 (2013); LBP-11-22, 74 NRC 272 n.69 (2011); LBP-11-30, 74 NRC 631 (2011); LBP-15-3, 81 NRC 122 n.49 (2015)

hearings on safety issues may commence before publication of NRC Staff’s safety evaluation if commencing the hearings at that time would expedite the proceeding; LBP-11-22, 74 NRC 272 n.69 (2011); LBP-11-30, 74 NRC 631 (2011); LBP-13-13, 78 NRC 275 (2013)

presiding officer must take into consideration NRC Staff’s projected schedule for completion of its safety and environmental evaluations to ensure that the hearing schedule does not adversely impact Staff’s ability to complete its reviews in a timely manner; LBP-13-13, 78 NRC 275 (2013)

10 C.F.R. 2.333
contention challenging sufficiency of the draft environmental impact statement as it pertains to the protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 105 (2013)

10 C.F.R. 2.333(b)
file filing deadlines will not be modified unless a party, in advance of the deadline, petitions the board for a change and demonstrates that there is good cause for such a change; LBP-14-11, 80 NRC 136 (2014)

10 C.F.R. 2.335
absent a rule waiver, NRC rules and regulations are not subject to attack in an adjudicatory proceeding; CLI-14-6, 79 NRC 447 (2014); CLI-15-22, 82 NRC 316 (2016); LBP-11-13, 73 NRC 568 (2011)
board improperly allowed petitioner to challenge the generic environmental impact statement’s finding regarding severe accident consequences; CLI-15-6, 81 NRC 379 (2015)
board is prohibited from imposing restrictions on the use of 10 C.F.R. 50.61a that go beyond the requirements in the regulation; CLI-15-22, 82 NRC 316 (2016)
boards are precluded from hearing rule challenge absent a showing of special circumstances; LBP-14-9, 80 NRC 49 (2014)

boards cannot add a new requirement to a regulation; LBP-15-17, 81 NRC 788 (2015)
boards cannot prohibit what regulations allow except under specific conditions; LBP-15-17, 81 NRC 780 (2015)

Category 1 issues are not subject to challenge in a relicensing proceeding because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-11-13, 73 NRC 551 (2011); LBP-11-21, 74 NRC 132 (2011)
challenges to the ABWR design certification are impermissible; LBP-11-38, 74 NRC 844 (2011)
contention is a challenge to section 50.61a itself, which is impermissible; LBP-15-17, 81 NRC 781 (2015)
contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; LBP-13-6, 74 NRC 242 (2011); LBP-15-26, 82 NRC 175 n.22 (2015)
generic environmental analysis is incorporated into NRC regulations, and thus Category 1 generic findings may not be challenged in individual licensing proceedings unless accompanied by a petition for rule waiver; CLI-15-6, 81 NRC 350-51 (2015)

no rule or regulation of the Commission, or any provision thereof, concerning the licensing of production and utilization facilities, source material, special nuclear material, or byproduct material is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; CLI-11-8, 74 NRC 229 (2011)

Part 51’s license renewal provisions cover environmental issues relating to onsite spent fuel storage generically and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-11-13, 73 NRC 570 (2011)
parties with new and significant information that could undermine the rationale for a Commission regulation must seek a rulemaking instead of challenging the regulation in a particular proceeding unless the information uniquely applies to a given adjudication; LBP-11-35, 74 NRC 242 (2011); LBP-15-26, 82 NRC 175 n.22 (2015)

petitioner’s suggestion that issuance of a license immediately upon completion of NRC Staff’s review where a hearing is pending is inappropriate constitutes an attack on the regulation itself, which is not allowed in an individual adjudication in the absence of a waiver; CLI-15-17, 82 NRC 41 n.49 (2015)
LEGAL CITATIONS INDEX
REGULATIONS

rule waiver petitions must address the criteria in this regulation; CLI-15-22, 82 NRC 318 (2016)
term “petition” in this section refers to the waiver petition, not a petition to intervene; CLI-11-11, 74
NRC 448 n.116 (2011)
to the extent that petitioner challenges the generic environmental impact statement, its remedy is a petition
for rulemaking or a petition for a waiver of the rules based on circumstances; CLI-11-11, 74 NRC 456
(2011)
waivers of NRC regulations may be granted in extraordinary situations where special circumstances can
be demonstrated; LBP-13-12, 78 NRC 242 (2013)
absent a waiver, no rule or regulation of the Commission, or any provision thereof, is subject to attack
by way of discovery, proof, argument, or other means in any adjudicatory proceeding subject to 10
C.F.R. Part 2; CLI-11-8, 74 NRC 229 (2011); CLI-12-6, 75 NRC 364 (2012); CLI-12-19, 76 NRC 380
(2012); CLI-15-19, 82 NRC 157 (2015); CLI-15-20, 82 NRC 218 n.40 (2015); CLI-15-21, 82 NRC 302
(2015); LBP-11-2, 73 NRC 46 (2011); LBP-11-13, 73 NRC 550, 553, 566 n.204 (2011); LBP-11-16, 73
NRC 655 701, 702 (2011); LBP-11-21, 74 NRC 125, 136, 140 (2011); LBP-11-29, 74 NRC 617-18
(2011); LBP-11-35, 74 NRC 714 (2011); LBP-12-8, 75 NRC 566 (2012); LBP-12-12, 75 NRC 755
(2012); LBP-12-24, 76 NRC 530 (2012); LBP-13-12, 78 NRC 242 (2013); LBP-14-16, 80 NRC 193
(2014); LBP-15-4, 81 NRC 164 (2015); LBP-15-5, 81 NRC 272 n.128 (2015); LBP-15-6, 81 NRC 325
(2015); LBP-15-17, 81 NRC 778 (2015); LBP-15-24, 82 NRC 76 n.37 (2015); LBP-15-26, 82 NRC 175
n.22 (2015)
adjudications are not the proper arena for challenges to NRC regulations; CLI-13-1, 77 NRC 9-10, 35
(2013); LBP-13-1, 77 NRC 62 (2013)
board admitted a contention on a conditional basis, pending Commission ruling on merits of petition for
waiver of NRC regulations; CLI-11-11, 74 NRC 444 (2011)
challenge to use of an alternate concentration limit is an impermissible challenge to an NRC regulation;
collateral attacks on NRC regulations, unsupported by any showing of special circumstances warranting a
waiver, are rejected; LBP-14-16, 80 NRC 202 (2014)
collateral challenge to NRC emergency response data system rule is inadmissible; CLI-15-20, 82 NRC
218 (2015)
combined license applicant may reference an as-yet-uncertified design at its own risk; CLI-12-9, 75 NRC
429-30 (2012)
contention outside the scope of a proceeding is not admissible for hearing in that proceeding; CLI-15-21,
82 NRC 305 (2015)
contention that applicant fails to include need-for-power analyses in its environmental reports for operating
license renewal is inadmissible; LBP-13-12, 78 NRC 243 (2013)
contention that it is premature to relicense nuclear facilities with existing permits that will not expire for
11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing
licenses will result in environmental impact statements that will be stale by the time the existing
licenses expire is inadmissible; LBP-13-12, 78 NRC 244 (2013)
contention that, in the event of a core melt accident, applicant’s emergency plan should order an
evacuation of persons within a 10-mile radius of the facility attacks NRC’s emergency planning
regulation; LBP-11-15, 73 NRC 638 (2011)
contentions calling for requirements in excess of those imposed by regulations will be rejected as a
collateral attack on regulations; CLI-12-5, 75 NRC 315 n.88 (2012)
contentions challenging applicable statutory requirements or Commission regulations are not admissible in
contentions challenging existing NRC safety regulations are barred from consideration in adjudicatory
proceedings; LBP-12-18, 76 NRC 158 (2012)
contentions that are the subject of general rulemaking by the Commission may not be litigated in
individual licensing proceedings; CLI-14-8, 80 NRC 79 n.27 (2014)
contentions that challenge an agency rule or regulation without a waiver, in addition to being expressly
prohibited, are outside the scope of the proceeding; CLI-15-21, 82 NRC 302 (2015)
contentions that challenge an NRC regulation are inadmissible; LBP-13-9, 78 NRC 73 (2013);
LBP-13-12, 78 NRC 240 (2013)
even if petitioner disputes that the Commission’s newly adopted Continued Storage Rule satisfies the requirements of the National Environmental Policy Act or the court’s decision, it cannot challenge the adoption or validity of the rule itself before a board; LBP-14-15, 80 NRC 155 (2014)
limited exception to NRC’s general prohibition against challenges to its rules or regulations in adjudicatory proceedings is provided; CLI-13-7, 78 NRC 206 (2013)
litigants may not challenge a rule in NRC adjudicatory proceedings absent a showing of special circumstances; CLI-15-1, 81 NRC 10 (2015)
participant may request waiver of a current rule or regulation in a specific proceeding under special circumstances as an exception to the prohibition against challenging NRC rules or regulations in adjudicatory proceedings; CLI-14-7, 80 NRC 6 (2014)
petitioners are not barred from contending that additional testing is necessary to show margins of safety equivalent to those of the ASME BPV Code, Section XI, Appendix G because petitioners allege noncompliance with 10 C.F.R. Part 50, Appendix G and not Appendix H; LBP-15-20, 81 NRC 845 (2015)
regulations can be challenged only under extremely limited circumstances; LBP-15-5, 81 NRC 302 n.363 (2015)
scope of license amendment proceedings is limited to the license amendment request; LBP-15-24, 82 NRC 76 n.37 (2015)
to the extent a contention would require licensee to maintain the ERDS link or to create another ERDS-like system after its reactor is permanently shut down and defueled, it is an impermissible collateral attack on a regulation; LBP-15-4, 81 NRC 167 (2015)
to the extent petitioner seeks to raise a generic challenge to the 10-mile plume exposure pathway EPZ, such an argument constitutes an impermissible challenge to 10 C.F.R. 50.47(c)(2); LBP-11-15, 73 NRC 642 n.22 (2011)
to the extent that intervenors challenge all radiological releases from nuclear power plants, the contention presents an impermissible challenge to the NRC’s regulations; LBP-12-12, 75 NRC 782 (2012)
to the extent that petitioner challenges the board’s decision to apply the reopening standards strictly, its challenge constitutes an improper collateral attack on NRC regulations; CLI-11-2, 73 NRC 338 n.21 (2011)
use of “and” in the list of requirements for rule waiver means that all four factors must be met; CLI-11-11, 74 NRC 452 n.138 (2011)
10 C.F.R. 2.335(a)-(b)
petitioners cannot challenge an NRC regulation without first obtaining a waiver; LBP-15-20, 81 NRC 840 (2015)
10 C.F.R. 2.335(a)-(d)
procedure for obtaining a rule waiver is set out; CLI-12-19, 76 NRC 380 (2012)
10 C.F.R. 2.335(b)
absent a waiver, contentions that raise a direct or indirect challenge to a Commission regulation are inadmissible; LBP-11-16, 73 NRC 702 (2011); LBP-15-4, 81 NRC 164-65 (2015)
any request for a rule waiver or exception must be accompanied by an affidavit that identifies the subject matter of the proceeding as to which the application of the regulation would not serve the purposes for which the regulation was adopted, and the affidavit must state with particularity the special circumstances alleged to justify the waiver or exception requested; LBP-11-16, 73 NRC 702 n.351 (2011)
collateral attacks on NRC regulations, unsupported by any showing of special circumstances warranting a waiver, are rejected; LBP-14-15, 80 NRC 153 (2014); LBP-14-16, 80 NRC 202 (2014)
limited exception to NRC’s general prohibition against challenges to its rules or regulations in adjudicatory proceedings is provided; CLI-11-11, 74 NRC 448 (2011); CLI-13-7, 78 NRC 206 (2013)
litigants may not challenge a rule in NRC adjudicatory proceedings absent a showing of special circumstances; CLI-15-1, 81 NRC 10 (2015); LBP-15-4, 81 NRC 173 (2015); LBP-15-5, 81 NRC 272 n.129 (2015)
no rule or regulation of the Commission, or any provision thereof is subject to attack in any adjudicatory proceeding subject to 10 C.F.R. Part 2 except as provided by the waiver provision of this regulation; LBP-15-24, 82 NRC 76 n.37 (2015)
NRC rules provide a mechanism for supplementing an original NEPA analysis, but the rules do not guarantee a hearing; CLI-13-7, 78 NRC 211 (2013)

participant may request the waiver of a current rule or regulation in a specific proceeding under special circumstances as an exception to the prohibition against challenging NRC rules or regulations in adjudicatory proceedings; CLI-11-11, 74 NRC 448 (2011); CLI-14-7, 80 NRC 6 (2014); LBP-14-16, 80 NRC 193 (2014)

petition for rule waiver or exception must allege special circumstances that were not considered, either explicitly or by necessary implication, in the rulemaking proceeding leading to the rule sought to be waived and those circumstances must be unique rather than common to a large class of facilities; LBP-12-6, 75 NRC 271 (2012)

petitioner who believes a regulation should not be applied in a particular proceeding may seek a waiver of that regulation; LBP-13-1, 77 NRC 63 (2013)

petitioners are not required to demonstrate that their complaint is unique to the facility in question or that their complaint reflects a significant safety issue; LBP-13-1, 77 NRC 64 (2013)

rule waiver petitions must be accompanied by an affidavit that identifies the specific aspects of the subject matter of the proceeding as to which the application of the rule or regulation would not serve the purposes for which it was adopted; CLI-11-11, 74 NRC 448, 449 n.123 (2011); CLI-12-6, 75 NRC 364 (2012); CLI-12-19, 76 NRC 387 (2012); CLI-13-7, 78 NRC 206-07 (2013); CLI-15-6, 81 NRC 379 n.204 (2015); CLI-15-21, 82 NRC 302 (2015); LBP-11-35, 74 NRC 714 (2011); LBP-12-6, 75 NRC 271 (2012); LBP-12-24, 76 NRC 539 (2012); LBP-13-1, 77 NRC 63, 66 (2013); LBP-13-12, 78 NRC 243 (2013); LBP-14-16, 80 NRC 194 (2014); LBP-15-3, 81 NRC 96 n.22 (2015); LBP-15-17, 81 NRC 778 n.156 (2015)

special circumstances are required for a rule waiver; LBP-14-16, 80 NRC 186 (2014)

to challenge generic application of a rule, petitioner seeking waiver must show that there is something extraordinary about the subject matter of the proceeding such that the rule should not apply; CLI-13-7, 78 NRC 207 (2013)

to litigate a SAMA-related contention in adjudicatory proceedings where the SAMA-analysis exception applies, petitioner must obtain a waiver by satisfying the requirements in this section as well as the contention admissibility criteria in section 2.309(f)(1); CLI-13-7, 78 NRC 212 (2013)

to obtain waiver of a rule, the allegation of special circumstances must be set forth with particularity and supported by an affidavit or other proof; CLI-12-6, 75 NRC 364 (2012); LBP-14-16, 80 NRC 196 n.79 (2014); LBP-15-5, 81 NRC 272 n.129 (2015)

to waive the generic assessment in NRC regulations to permit adjudication of issues involving the environmental impact of spent fuel pool accidents in this license renewal proceeding, the Commission must conclude that the rule’s strict application would not serve the purpose for which it was adopted; CLI-11-11, 74 NRC 449 (2011)

10 C.F.R. 2.335(b)-(c)

presiding officers must dismiss any petition for waiver that does not make a prima facie showing of special circumstances with respect to the subject matter of the particular proceeding such that application of the rule or regulation would not serve the purposes for which it was adopted; LBP-11-35, 74 NRC 714 (2011)

10 C.F.R. 2.335(b)-(d)

Commission remands license renewal proceeding to the board for the limited purpose of considering a rule waiver petition; CLI-12-19, 76 NRC 378 (2012)

conditions necessary for grant of a rule waiver are outlined; LBP-15-6, 81 NRC 325 (2015)

10 C.F.R. 2.335(c)

role of the board when a rule waiver request is filed is limited to determining whether petitioner has made a prima facie showing that it has satisfied 10 C.F.R. 2.335(b), and if not, the board may not further consider the matter; LBP-13-1, 77 NRC 64 (2013)

10 C.F.R. 2.335(d)

Commission may direct further proceedings as it considers appropriate to aid its determination; CLI-11-11, 74 NRC 448 n.117 (2011)

licensing board initially determines, based on the record, whether a prima facie showing has been made by the petitioner for its rule waiver request, and then the board must certify the matter directly to the
**LEGAL CITATIONS INDEX**

**REGULATIONS**

Commission for a final determination; LBP-13-1, 77 NRC 64 (2013); LBP-14-16, 80 NRC 193, 194 (2014)

10 C.F.R. 2.336
“disclosing party” means the party required to make mandatory disclosure; LBP-11-5, 73 NRC 136 (2011)
each party to a proceeding must disclose all documents relevant to the admitted contentions, except those
documents for which a claim of privilege or protected status is made; LBP-11-5, 73 NRC 132 (2011)
“receiving party” means the party to whom the mandatory disclosure must be made; LBP-11-5, 73 NRC 139 (2011)

SUNSI policy does not expand upon or create any new category of legally privileged or confidential
information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 139-40 (2011)

10 C.F.R. 2.336(a)
board suspended mandatory disclosure obligations until further notice; CLI-12-14, 75 NRC 695 (2012)
10 C.F.R. 2.336(a)(3)
claim and identification of privileged materials must occur within the time provided for disclosing
withheld materials; LBP-12-3, 75 NRC 208 n.37 (2012); LBP-13-6, 77 NRC 303 n.35 (2013)
parties must list documents claimed to be privileged or protected on a privilege log; LBP-11-5, 73 NRC 132 (2011)

10 C.F.R. 2.336(b)
because parties to a Subpart L proceeding may not seek discovery from the other parties to the
proceeding, all such parties must make periodic mandatory disclosures; LBP-14-2, 79 NRC 146 (2014)
NRC Staff is exempted from the obligations of the protective order, even though Staff might hold many
documents that are subject to the mandatory disclosure requirements; LBP-11-5, 73 NRC 133 (2011)
10 C.F.R. 2.336(b)(3)
in a Subpart L proceeding, NRC Staff must disclose or provide documents that support Staff’s review of
the application or proposed action, together with a list of all otherwise-discoverable documents for
which a claim of protected or privileged status is being made; LBP-13-5, 77 NRC 238 (2013)

10 C.F.R. 2.336(b)(5)
claim and identification of privileged materials must occur within the time provided for disclosing
withheld materials; LBP-12-3, 75 NRC 208 n.37 (2012); LBP-13-6, 77 NRC 303 n.35 (2013)
in a Subpart L proceeding, NRC Staff must disclose or provide documents that support Staff’s review of
the application or proposed action, together with a list of all otherwise-discoverable documents for
which a claim of protected or privileged status is being made; LBP-13-5, 77 NRC 238, 246 (2013)
10 C.F.R. 2.336(c)
all disclosures under this section must be accompanied by a certification (in the form of a sworn
affidavit) that all relevant materials required by this section have been disclosed, and that the
disclosures are accurate and complete as of the date of the certification; LBP-14-2, 79 NRC 147 (2014)

10 C.F.R. 2.336(d)
disclosure updates shall include any documents subject to disclosure that were not included in any
previous disclosure update; LBP-14-2, 79 NRC 147 (2014)
if a board issues a scheduling order before the effective date of the final rule that incorporates this
section, which currently requires parties to update their disclosures every 14 days, that obligation would
change to every month on a day specified by the board, unless the parties agree otherwise, once the
effective date of the rule is reached; LBP-15-1, 81 NRC 31 n.75 (2015)
parties to a Subpart L proceeding must update their disclosures every month after initial disclosures on a
due date selected by the presiding officer in the order admitting contentions; LBP-14-2, 79 NRC 147 (2014)

10 C.F.R. 2.336(e)(1)
parties, including NRC Staff, may be sanctioned for noncompliance with the disclosure regulations;
LBP-14-2, 79 NRC 147 (2014)
10 C.F.R. 2.336(e)(2)
presiding officer may impose sanctions on a party that fails to provide any document required to be
disclosed, unless the party demonstrates good cause for its failure to make the disclosure; LBP-14-2, 79
NRC 147 (2014)
10 C.F.R. 2.337

evidence contained in affidavits supporting a motion to reopen must meet the admissibility standards of
this section; CLI-12-6, 75 NRC 367 (2012)

this section, in establishing the evidentiary standard of “relevant, material, and reliable evidence” being
admissible in a hearing, thereby establishes the right of all parties to present such admissible evidence;
LBP-11-4, 73 NRC 124 (2011)

10 C.F.R. 2.337(a)

boards accord each exhibit weight to the extent that it is relevant, material, and reliable; LBP-11-18, 74
NRC 36 (2011)

evidence contained in affidavits supporting a motion to reopen must meet the admissibility standards, i.e.,
be relevant, material, and reliable; CLI-12-3, 75 NRC 138-39 (2012); CLI-12-6, 75 NRC 367 (2012);
LBP-11-23, 74 NRC 304 n.78 (2011)

only relevant, material, and reliable evidence that is not unduly repetitious will be admitted; LBP-12-21,
76 NRC 248 n.171 (2012)

10 C.F.R. 2.337(f)

although this section, by its terms, applies to evidence at hearings, the bounds this rule places on official
notice is also appropriate for the contention admissibility stage of a proceeding; LBP-11-7, 73 NRC 290
n.231 (2011)

board takes official notice of the contents of a document that was discussed at the hearing but was not
submitted as an exhibit by any party; LBP-13-13, 78 NRC 390 n.984 (2013)

licensing board takes official notice of NRC-issued licenses; LBP-15-3, 81 NRC 140 n.64 (2015)

licensing board takes official notice of NRC regulatory guide; LBP-15-3, 81 NRC 83 n.11 (2015)

promulgation of state regulations falls within the broad reach of any fact of which a court of the United
States may take judicial notice or of any technical or scientific fact within the knowledge of the
Commission as an expert body; LBP-11-7, 73 NRC 290 n.231 (2011)

10 C.F.R. 2.337(f)(1)

boards may take official notice of any fact of which a court of the United States may take judicial notice
or of any technical or scientific fact within the knowledge of the Commission as an expert body;
LBP-11-20, 74 NRC 101 n.56 (2011)

Google Maps and Mapquest searches of distance from petitioner’s address may be used to establish
proximity to a proposed facility; LBP-12-3, 75 NRC 189 n.26 (2012)

10 C.F.R. 2.338

boards are empowered to approve settlements proposed by the parties; LBP-15-30, 82 NRC 344 n.25
(2015)

Commission, like other adjudicatory bodies, looks with favor upon settlements; LBP-14-4, 79 NRC 333
(2014)

fair and reasonable settlement of issues proposed for litigation is encouraged; LBP-15-21, 82 NRC 6-7

structures governing settlements are set forth; LBP-15-21, 82 NRC 7 (2015)

this section is a new provision that consolidates and amplifies the previous rules pertaining to settlement;

10 C.F.R. 2.338(a)

NRC has a policy of encouraging settlements; LBP-14-4, 79 NRC 368 (2014)

10 C.F.R. 2.338(b)

parties pursuing settlement may seek to have a settlement judge appointed; LBP-14-11, 80 NRC 133
(2014)

10 C.F.R. 2.338(f)

settlement is encouraged, but the fact that a possible settlement is being negotiated does not change any
of the deadlines set forth in the initial scheduling order; LBP-14-11, 80 NRC 133 (2014)

10 C.F.R. 2.338(g)

form of settlement agreements is set forth; LBP-15-21, 82 NRC 7 (2015)

presiding officer approval for settlements in contested proceedings with admitted contentions is evidenced
from other provisions of section 2.338; LBP-15-30, 82 NRC 344 n.25 (2015)

settlement must be in the form of a proposed settlement agreement, a consent order, and a motion for its
entry that includes the reasons why it should be accepted; LBP-15-30, 82 NRC 344 n.25 (2015)
LEGAL CITATIONS INDEX
REGULATIONS

10 C.F.R. 2.338(b)
content of settlement agreements is set forth; LBP-15-21, 82 NRC 7-8 (2015)

10 C.F.R. 2.338(c)(i)
board finds that it is not necessary for a notice of hearing to be issued before the board can approve a
in an enforcement proceeding, due weight must be given to NRC Staff’s position; LBP-15-21, 82 NRC 8
(2015)
NRC’s policy of encouraging settlements specifically recognizes that settlements are not inviolate, and the
presiding officer or Commission may order adjudication of the issues that the presiding officer or
Commission finds is required in the public interest to dispose of the proceeding; LBP-14-4, 79 NRC
368 (2014)

parties bring settlement requests pursuant to this regulation; LBP-15-30, 82 NRC 344 n.25 (2015)
settlement agreement approval process is discussed; LBP-15-21, 82 NRC 7-8 (2015)
settlements approved by a presiding officer are subject to Commission review; LBP-15-21, 82 NRC 8
(2015)
upon review of a settlement agreement, the board is satisfied that its terms reflect a fair and reasonable
settlement in keeping with the objectives of the NRC’s enforcement policy, and satisfy the requirements
of 10 C.F.R. 2.338(g) and (h); LBP-11-3, 73 NRC 83 (2011)

10 C.F.R. 2.340
automatic stay provisions were removed in 2007; CLI-11-5, 74 NRC 155 n.49 (2011)

10 C.F.R. 2.340(a)
boards have limited authority to consider matters in addition to those properly put into controversy by the
parties; LBP-11-9, 73 NRC 417-18 (2011)
boards may consider any matter, but only to the extent that the board determines that a serious safety,
environmental, or common defense and security matter exists, and the Commission approves of an
examination of and decision on the matter upon its referral by the board; LBP-11-9, 73 NRC 418
(2011)
requesting authorization from the Commission for the board, on its own motion, to examine and decide
the serious safety or common defense and security matters underlying contentions is allowed to be used
for matters that were initially raised by a party, where that party later withdrew; LBP-11-9, 73 NRC
414 (2011)

10 C.F.R. 2.340(a)(2)(ii)
where NRC Staff takes action pursuant to a determination of no significant hazards consideration and
issues a license amendment prior to a presiding officer’s initial decision, the Staff will thereafter take
appropriate action (if necessary) in accordance with the presiding officer’s decision; CLI-15-25, 82 NRC

10 C.F.R. 2.340(b)
adequacy of NRC Staff’s review of transmission-corridor impacts might be appropriate for the board’s
consideration sua sponte; CLI-15-1, 81 NRC 4 (2015)
because the final environmental impact statement had been issued and the board had ruled that a
contention remained procedurally defective, it was an appropriate point for board consideration of
whether the contention merited sua sponte review; LBP-14-9, 80 NRC 37 (2014)
boards must request Commission approval to undertake sua sponte review; CLI-15-1, 81 NRC 4-5 (2015);
LBP-14-9, 80 NRC 27 (2014)
licensing boards may request Commission approval to consider the merits of a serious environmental issue
even when it was excluded from the proceeding for procedural reasons; LBP-14-9, 80 NRC 38 (2014)
sua sponte authority of presiding officer is compared under predecessor rule 10 C.F.R. 2.760a; LBP-14-9,
80 NRC 38 (2014)
untimely filed contention is appropriate for sua sponte board review; LBP-14-9, 80 NRC 26-27 (2014)
with Commission’s express approval, a licensing board may make findings on a serious safety,
environmental, or common defense and security matter not put into controversy by the parties;

10 C.F.R. 2.340(b)(1)
boards may make findings of fact and conclusions of law on any matter not put into controversy by the
parties, but only to the extent that the presiding officer determines that a serious safety, environmental,
or common defense and security matter exists, and the Commission approves of an examination of and
decision on the matter upon its referral by the presiding officer; LBP-14-9, 80 NRC 38 (2014)
10 C.F.R. 2.341
amicus curiae filings are allowed at the Commission’s discretion or sua sponte; CLI-15-4, 81 NRC 225
n.8 (2015); CLI-15-10, 81 NRC 537-38 n.5 (2015)
as a consequence of the Commission ruling that the board should have terminated the proceeding once it
resolved all contentions, all of the board’s earlier interlocutory orders become ripe for appellate review;
CLI-12-14, 75 NRC 699 (2012)
because the Commission’s vacatur order does not address the merits, it need not address an argument that
NRC Staff impermissibly raises objections to the merits of the board’s decision without filing a petition
for review; CLI-13-9, 78 NRC 559 n.31 (2013)
cases to board rulings on late-filed contentions normally fall under NRC rules for interlocutory
review; CLI-12-7, 75 NRC 385 (2012)
Commission exercises its discretion to review a board decision that raises a potentially recurring
procedural issue of some importance; CLI-12-14, 75 NRC 699 (2012)
following issuance of the board’s final dispositive decision on contentions held in abeyance, and
consistent with NRC procedural rules, applicant and intervenor will have the opportunity to appeal the
Board’s decisions; CLI-14-3, 79 NRC 37 (2014)
brightened showing is required to prevent overuse of sua sponte review, including a demonstration of
in light of the board’s limited jurisdiction, it concludes that petitioner may appeal its decision
immediately; LBP-14-8, 79 NRC 528-29 (2014)
petitioners have a right to reply to petitions for review subject to this section; CLI-12-6, 75 NRC 360
n.33 (2012)
piecemeal review of licensing board rulings during ongoing proceedings is disfavored; CLI-13-3, 77 NRC
54 (2013)
review of a board’s dismissal of some contentions would normally await the end of the case; CLI-12-19,
76 NRC 388 (2012)
settlemnt approved by a presiding officer are subject to Commission review; LBP-15-21, 82 NRC 8
(2015)
this section applies to appeals of rulings on new contentions filed after initial intervention petitions;
CLI-12-7, 75 NRC 385 (2012)
time for petitioning for review of any of a board’s prior interlocutory rulings will run from the date of
the Commission’s ruling closing the record; CLI-12-14, 75 NRC 703 (2012)
waive confidence contentions’ pendency creates some uncertainty as to whether petitioner may appeal the
board’s ruling on a proposed contention, or whether it must await resolution of the waste confidence
issue; LBP-14-8, 79 NRC 528 (2014)
10 C.F.R. 2.341(a)(1)
this section governs review of the majority of presiding officer decisions; CLI-12-6, 75 NRC 361 (2012)
10 C.F.R. 2.341(a)(4)(iii) & (iv)
review is granted where petitions for review raise substantial questions of law and procedure; CLI-15-6,
81 NRC 369 (2015)
10 C.F.R. 2.341(b)
following issuance of the board’s final dispositive decision on contentions held in abeyance, and
consistent with NRC procedural rules, applicant and intervenor will have the opportunity to appeal the
Board’s decisions; CLI-14-3, 79 NRC 37 (2014)
petition for review of order dismissing final contention and terminating proceeding must be filed within
25 days after the order is served; LBP-15-22, 82 NRC 51 (2015)
petitioner will have an opportunity to challenge the board’s contention admissibility decision at the end of
the case; CLI-12-13, 75 NRC 688-89 (2012)
piecemeal review of licensing board rulings during ongoing proceedings is disfavored; CLI-13-3, 77 NRC
54 (2013)
with the board’s termination of the proceeding, the board’s interlocutory rulings on contention
admissibility became ripe for appeal; CLI-11-9, 74 NRC 236 (2011)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 2.341(b)(1)
petitions for review are allowed after a full or partial initial decisions, both of which are considered final
decisions; CLI-11-10, 74 NRC 255 (2011); CLI-11-14, 74 NRC 810 (2011)
petitions for review must be filed within 15 days; CLI-12-17, 76 NRC 209 n. 7 (2012)

10 C.F.R. 2.341(b)(1)-(3)
parties may choose whether to submit a petition for review, an answer in support of the petition, or
neither; CLI-11-14, 74 NRC 808 n.36 (2011)

10 C.F.R. 2.341(b)(2)
intervenors’ motion for an enlargement of the page limit for their petition for review is granted;
CLI-14-10, 80 NRC 161 n.16 (2014)

10 C.F.R. 2.341(b)(2)-(3)
petitions for review of partial initial decision and any answer shall conform to the requirements of this
section; LBP-12-5, 75 NRC 255 (2012)

10 C.F.R. 2.341(b)(3)
although rules do not provide for filing of reply briefs, as a matter of discretion the Commission reviews
a reply brief; CLI-15-7, 81 NRC 492 n.68 (2015)
any other party to the proceeding may file an answer supporting or opposing Commission review;
CLI-15-6, 81 NRC 368 n.149 (2015)
the petitioning party may file reply briefs; CLI-15-7, 81 NRC 492 n.68 (2015)

10 C.F.R. 2.341(b)(4)
Commission may, as a matter of discretion, grant review of a full or partial initial decision, giving due
weight to the existence of a substantial question with respect to any of the considerations outlined in
this regulation; CLI-12-1, 75 NRC 45-46 (2012); CLI-15-2, 81 NRC 214 (2015); CLI-15-19, 82 NRC
154 (2015)
petition for review may be granted if it presents a substantial question with respect to one or more of
five considerations; CLI-11-2, 73 NRC 336-37 (2011)
standard for discretionary review is described; CLI-15-7, 81 NRC 493 (2015)

10 C.F.R. 2.341(b)(4)(i)
grant of discretionary review requires that intervenors raise a substantial question that the board’s findings
of fact are clearly erroneous; CLI-14-10, 80 NRC 166 (2014); CLI-15-7, 81 NRC 497 (2015)
important questions of law and material fact merit Commission review; CLI-15-6, 81 NRC 351 (2015)

10 C.F.R. 2.341(b)(4)(ii)
petition for review must raise a substantial question with respect to whether a necessary legal conclusion
is without governing precedent or is contrary to established law; CLI-15-7, 81 NRC 494, 496 (2015)

10 C.F.R. 2.341(b)(4)(iii)
applicants satisfied the regulatory standards for discretionary review by identifying a substantial question as
to whether the board decision reaches at least one necessary legal conclusion without governing
precedent or addresses at least one substantial and important question of law, policy, or discretion;
CLI-13-1, 77 NRC 17 (2013)

10 C.F.R. 2.341(b)(4)(iv)
important questions of law and material fact merit Commission review; CLI-15-6, 81 NRC 351 (2015)
termination petitioner may not attack generic NRC requirements or regulations or express generalized
grievances about NRC policies; CLI-15-9, 81 NRC 527-28 n.98 (2015)

10 C.F.R. 2.341(b)(5)
Commission declines to consider new arguments raised on appeal that the board did not have the
opportunity to consider; CLI-15-17, 82 NRC 40 n.46 (2015)

10 C.F.R. 2.341(c)(2)
briefs on appeal are limited to 30 pages in length, absent Commission order directing otherwise;
CLI-11-8, 74 NRC 219 (2011)
page limit for appellate briefs excludes tables of content and citation, appropriate exhibits, and statutory or regulatory extracts; CLI-11-8, 74 NRC 219 (2011)

10 C.F.R. 2.341(d)
motions for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have been reasonably anticipated, which renders the decision invalid; CLI-14-1, 79 NRC 3 n.6 (2014)
petition for review is treated as a petition for reconsideration; CLI-12-17, 76 NRC 209 (2012)

10 C.F.R. 2.341(f)
Commission will consider taking discretionary interlocutory review where the requesting party shows that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-15-17, 82 NRC 37 (2015)

10 C.F.R. 2.341(f)(1)
boards are encouraged to refer rulings that raise significant and novel legal or policy issues, the resolution of which would materially advance the orderly disposition of the proceeding; CLI-12-13, 75 NRC 685 (2012)
piecemeal review of licensing board decisions is disfavored, but boards may refer rulings that, although interlocutory, raise significant and novel legal or policy issues or require Commission resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 206 (2013)
referred rulings or certified questions must raise significant and novel legal or policy issues or issues whose early resolution would materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 206 n.25 (2013); CLI-15-1, 81 NRC 9 n.39 (2015)
review of a board’s certified question that raises a significant and novel issue whose early resolution will materially advance the orderly disposition of the proceeding is granted; CLI-11-4, 74 NRC 2 (2011)

10 C.F.R. 2.341(f)(2)
Commission may grant interlocutory review if the issue for which the party seeks review threatens the party adversely affected by it with immediate and serious irreparable impact which could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-15-17, 82 NRC 335 (2015)

10 C.F.R. 2.341(f)(2)(i)
denial of summary disposition neither threatens the Staff with immediate and serious irreparable impact which could not be alleviated through a petition for review of the presiding officer’s final decision nor affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-10, 74 NRC 256 (2011)

10 C.F.R. 2.342
because this section does not apply to petitioner’s motion for a stay, the Commission does not address applicant’s request to strike the motion because it exceeds that rule’s 10-page limit; CLI-12-11, 75 NRC 528 n.26 (2012)
Commission considers requests for stays of licensing board decisions under this section; CLI-12-11, 75 NRC 528 (2012)
this provision explicitly authorizing stay applications is available only to parties to adjudicatory proceedings seeking stays of decisions or actions of a presiding officer pending the filing and resolution of a petition for review; CLI-11-5, 74 NRC 158 (2011)

10 C.F.R. 2.342(a)

regulation applies only to decisions or actions of a presiding officer or licensing board in a proceeding to which the movant is a party pending the filing and resolution of a petition for review; CLI-14-4, 79 NRC 252 (2014)

10 C.F.R. 2.342(e)

four factors must be addressed when the Commission or presiding officer is asked to stay the effectiveness of a presiding officer’s decision or action during the pendency of an appeal; CLI-15-17, 82 NRC 38 n.27 (2015)

in deciding motions seeking a stay of agency action pending judicial review, the Commission looks to the same four-part test that governs stays of licensing board decisions pending Commission review; CLI-12-11, 75 NRC 538-29 (2012)

irreparable injury is the most important of the factors for grant or denial of a stay; LBP-15-2, 81 NRC 53-54 (2015)

standards of this section are applied to requests to stay presiding officer decisions; CLI-14-6, 79 NRC 449 n.30 (2014)

10 C.F.R. 2.343

in its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative; CLI-11-8, 74 NRC 219 n.15 (2011); CLI-12-12, 75 NRC 613-14 (2012)

10 C.F.R. 2.345

petition for review is treated as a petition for reconsideration; CLI-12-17, 76 NRC 209 (2012)

10 C.F.R. 2.345(a)(1)

reconsideration motions must be filed within 10 days of the action for which reconsideration is requested; CLI-12-17, 76 NRC 209 n.7 (2012)

10 C.F.R. 2.345(b)

if leave to file a motion for reconsideration is granted, the motion must demonstrate a compelling circumstance, such as the existence of a clear and material error in a decision, which could not have reasonably been anticipated, which renders the decision invalid; CLI-12-17, 76 NRC 209 (2012)

10 C.F.R. 2.346(i)

Secretary of the Commission refers motions to reopen to the Atomic Safety and Licensing Board Panel pursuant to her authority; CLI-12-14, 75 NRC 702 n.61 (2012)

10 C.F.R. 2.390

flooding hazard reevaluation report contains security-related information, and so a portion of the document is not publicly available; DD-15-4, 81 NRC 872 (2015); DD-15-5, 81 NRC 880 (2015)

NRC regulations encompass the FOIA exemptions as well as instructions for outside entities who might submit nonpublic information to the NRC; CLI-13-5, 77 NRC 228 (2013)

10 C.F.R. 2.390(a)(1), (3), (4)

parties shall produce, as part of their mandatory disclosures, privilege logs covering any documents claimed to qualify for protected status as security-related information and/or as protected information; LBP-11-5, 73 NRC 133 (2011)

10 C.F.R. 2.390(a)(1)-(9)

SUNSI policy does not expand upon or create any new category of legally privileged or confidential information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 139-40 (2011)

10 C.F.R. 2.390(a)(4)

confidential commercial information, release of which likely would lead to substantial competitive harm, is entitled to protection; CLI-15-24, 82 NRC 334 (2015)

10 C.F.R. 2.390(a)(5)

among the categories of privileged documents are interagency or intra-agency memorandums or letters that would not be available by law to a party other than an agency in litigation with the Commission; LBP-13-5, 77 NRC 238 (2013)

543
LEGAL CITATIONS INDEX
REGULATIONS

10 C.F.R. 2.390(b)
protective order, and the good-faith representation and designation of documents as protected documents,
serves in lieu of the requirement for marking and for an affidavit; LBP-11-5, 73 NRC 141 n.18 (2011)

10 C.F.R. 2.390(b)(6)
if the Commission determines on appeal that information withheld under a protective order should have
been publicly disclosed, it will direct that such information and the transcript of the related in camera
session be made publicly available; CLI-15-24, 82 NRC 338 n.40 (2015)

in camera hearing sessions may be held when information sought to be withheld from public disclosure is

10 C.F.R. 2.390(d)(1)
parties shall produce, as part of their mandatory disclosures, privilege logs covering any documents
claimed to qualify for protected status as security-related information and/or as protected information
under; LBP-11-5, 73 NRC 133 (2011)

10 C.F.R. 2.402
consolidating proceedings is the exception rather than the rule; CLI-14-5, 79 NRC 261 n.37 (2014)

10 C.F.R. 2.702(f)
licensee’s motion to quash subpoena duces tecum because production of the requested file would
compromise its employee concerns program by potentially subjecting information contained in the file to
public disclosure as an official agency record under FOIA is denied; CLI-13-5, 77 NRC 226-27 (2013)

10 C.F.R. 2.704(a)
within 45 days of the initial scheduling order, target of the enforcement order must provide certain
information and documents to the NRC enforcement director; LBP-14-11, 80 NRC 133-34 (2014)

10 C.F.R. 2.704(a)(2)
scope of mandatory disclosures that parties must make under Subpart G is defined by the disputed issues
alleged with particularity in the pleadings; LBP-14-11, 80 NRC 128 (2014)

10 C.F.R. 2.705(b)
NRC Staff counsel may file written interrogatories that the target of an enforcement order must answer;
LBP-14-11, 80 NRC 134 (2014)

10 C.F.R. 2.705(b)(1)
scope of discovery under Subpart G covers any matter that is relevant to the subject matter involved in
the proceeding, whether it relates to the claim or defense of any other party; LBP-14-11, 80 NRC
128-29 (2014)

10 C.F.R. 2.705(f)
as soon as practicable after issuance of the initial scheduling order, parties shall meet to discuss the
nature and basis of their claims and defenses and the possibilities for a prompt settlement or resolution
of the proceeding or any portion thereof, to make or arrange for the disclosures required by section
2.704, and to develop a proposed discovery plan; LBP-14-11, 80 NRC 132-33 (2014)
discovery may not begin until 10 days after petitioner and the Director have held the mandatory
consultation; LBP-14-11, 80 NRC 134 (2014)

10 C.F.R. 2.706(a)
NRC Staff counsel may take the deposition of the target of an enforcement order or any other person;
LBP-14-11, 80 NRC 134 (2014)

10 C.F.R. 2.707(a)
NRC Staff counsel may require the target of an enforcement order to provide the Director with a copy of
any designated relevant document that is within his possession, custody, or control; LBP-14-11, 80 NRC
134 (2014)

10 C.F.R. 2.709
within certain constraints, target of an enforcement order may pursue discovery against the NRC Staff;
LBP-14-11, 80 NRC 134 (2014)

10 C.F.R. 2.709(a)(1)
target of an enforcement order may require NRC Staff to attend a prehearing meeting where he can
require that Staff member to answer questions orally under oath; LBP-14-11, 80 NRC 134 (2014)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 2.709(a)(2) target of an enforcement order may serve interrogatories on NRC Staff, must show that answers to the interrogatories are necessary to a proper decision in the proceeding, and may ask the board to direct NRC Staff to answer those interrogatories; LBP-14-11, 80 NRC 134 (2014)

10 C.F.R. 2.709(a)(3), (4) target of an enforcement order may require NRC Staff to attend a prehearing meeting where he can require that Staff member to answer questions orally under oath; LBP-14-11, 80 NRC 134 (2014)

10 C.F.R. 2.709(a)(6) scope of mandatory disclosures that parties must make under Subpart G is defined by the disputed issues alleged with particularity in the pleadings; LBP-14-11, 80 NRC 128 (2014)

10 C.F.R. 2.709(d) boards can request that a document for which a deliberative process privilege is claimed be provided to it for in camera inspection; LBP-13-5, 77 NRC 245 n.64 (2013)

10 C.F.R. 2.710 contradictory provisions of subsections (a) and (b) are discussed; LBP-11-23, 74 NRC 332 (2011) standard for deciding motions for summary disposition in Subpart L proceedings closely parallels the standard used by the federal courts in deciding motions for summary judgment; LBP-11-31, 74 NRC 648 (2011)

10 C.F.R. 2.710(a) all material facts set forth in the statement required to be served by summary disposition movant will be considered to be admitted unless controverted by the statement required to be served by the opposing party; LBP-11-4, 73 NRC 123 (2011); LBP-12-26, 76 NRC 564 (2012)

if summary disposition movant meets its burden, the nonmoving party must counter each adequately supported material fact with its own statement of material facts in dispute and supporting documentation and cannot rely on mere allegations or denials, or the facts in controversy will be deemed admitted; LBP-11-14, 73 NRC 595 (2011); LBP-12-23, 76 NRC 450 (2012)

if the opponent of summary disposition declines to oppose the moving party’s prima facie showing of undisputed material facts, those facts will be considered admitted; LBP-12-4, 75 NRC 218-19 (2012) motions for summary disposition must contend that there are facts on which there is no genuine issue to be heard; LBP-14-5, 79 NRC 395 n.100 (2014)

summary disposition may be entered with respect to all or any part of the matters involved in the proceeding if the motion, along with any appropriate supporting materials, shows that there is no genuine issue as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-12-2, 75 NRC 163 n.18 (2012)

this section establishes not only an obligation but also a right to respond in a summary disposition context; LBP-11-4, 73 NRC 124 (2011)

10 C.F.R. 2.710(b) at issue is not whether evidence unmistakably favors one side or the other, but whether there is sufficient evidence favoring the summary disposition opponent for a reasonable trier of fact to find in favor of that party; LBP-11-4, 73 NRC 100 (2011)

if evidence in favor of the summary disposition opponent is merely colorable or not significantly probative, summary disposition may be granted; LBP-11-4, 73 NRC 100 (2011)

if no answer to a summary disposition motion is filed, the decision sought, if appropriate, must be rendered; LBP-12-26, 76 NRC 564 (2012)

if reasonable minds could differ as to the import of the evidence, summary disposition is not appropriate; LBP-11-20, 74 NRC 103-04 n.72 (2011)

only disputes over facts that might affect the outcome of a proceeding would preclude summary disposition; LBP-11-4, 73 NRC 100 (2011)

opponent of a summary disposition motion cannot rest on the allegations or denials of a pleading, but instead must go beyond the pleadings and by its own affidavits, or the depositions, answers to interrogatories, and admissions on file, designate specific facts showing that there is a genuine issue for trial; LBP-12-4, 75 NRC 218 (2012)
at issue is not whether evidence unmistakably favors one side or the other, but whether there is sufficient evidence favoring the summary disposition opponent for a reasonable trier of fact to find in favor of that party; LBP-11-4, 73 NRC 100 (2011)
even where no factual dispute exists, summary disposition may only be granted if movant is entitled to judgment as a matter of law; LBP-12-26, 76 NRC 573 (2012)
if evidence in favor of the summary disposition opponent is merely colorable or not significantly probative, summary disposition may be granted; LBP-11-4, 73 NRC 100 (2011)
motions for summary disposition shall be granted if filings in the proceeding, depositions, answers to interrogatories, and admissions on file, together with the statements of the parties and the affidavits, if any, show that there is no genuine dispute as to any material fact and that the moving party is entitled to a decision as a matter of law; LBP-11-7, 73 NRC 263 (2011); LBP-11-14, 73 NRC 594 (2011); LBP-12-2, 75 NRC 163 n.18 (2012); LBP-12-4, 75 NRC 218 (2012); LBP-12-19, 76 NRC 190 (2012); LBP-12-23, 76 NRC 450 (2012); LBP-12-26, 76 NRC 564, 573, 574 (2012)
motions for summary disposition will be granted if there is no genuine issue as to any material fact and the moving party is entitled to a decision as a matter of law; LBP-11-17, 74 NRC 20 n.40 (2011); LBP-11-31, 74 NRC 648, 649 (2011)
only disputes over facts that might affect the outcome of a proceeding would preclude summary disposition; LBP-11-4, 73 NRC 100 (2011)
summary disposition movant bears the initial burden of demonstrating that no genuine issue as to any material fact exists and that it is entitled to judgment as a matter of law; LBP-12-23, 76 NRC 466 (2012)
where a nonmoving party declines to oppose a motion for summary disposition, the board shall accept as admitted the moving party’s prima facie showing of material facts, but boards cannot grant summary disposition unless movant discharges its burden of demonstrating that it is entitled to a decision as a matter of law; LBP-12-4, 75 NRC 219 (2012)
where the time for filing contentions had expired in a given case, no new TMI-related contentions would be accepted absent a showing of good cause and a balancing of the late-filing factors; CLI-11-5, 74 NRC 154 (2011)
to the extent that the board relied on a precedent that allowed notice pleading under this regulation in making its contention admissibility determination, it erred; CLI-15-23, 82 NRC 325 n.21 (2015)
affidavits shall set forth such facts as would be admissible in evidence and shall show affirmatively that the affiant is competent to testify to the matters stated therein; LBP-11-23, 74 NRC 332 (2011)
if on the basis of the petition, affidavit, and any response provided for in paragraph (b) of this section, the presiding officer determines that a prima facie showing has been made, the presiding officer shall, before ruling thereon, certify the matter directly to the Commission; CLI-11-11, 74 NRC 448 n.116 (2011)
matters not put into controversy by the parties will be examined and decided by the presiding officer only in extraordinary circumstances where he determines that a serious safety, environmental, or common defense and security matter exists; LBP-14-9, 80 NRC 38 n.63 (2014)
Commission temporarily suspended the immediate effectiveness rule following the Three Mile Island accident; CLI-11-5, 74 NRC 153 (2011)
if intervenor wishes to effect a substantive change to Part 50, Appendix E, § VI.2, it may petition for rulemaking; LBP-15-4, 81 NRC 175 (2015)
if petitioner’s challenge to an agency rule or regulation relates to an issue of broader significance, then filing a petition for rulemaking is the better approach; CLI-13-7, 78 NRC 208 n.42 (2013)
insular as applicant contends that NRC’s requirements for self-guarantors are not useful or relevant in evaluating the financial condition of numerous similarly situated corporations, applicant may petition NRC to amend its rules at any time; LBP-12-6, 75 NRC 260 (2012)
parties with new and significant information that could undermine the rationale for a Commission regulation must seek a rulemaking instead of challenging the regulation in a particular proceeding unless the information uniquely applies to a given adjudication; LBP-11-35, 74 NRC 715-16 (2011)
petitioner may file a petition for rulemaking to expand the scope of NRC license renewal regulations if it believes that applicant’s seismic design and licensing basis are now invalid and that safe operation of the plant can no longer be assured; CLI-15-21, 82 NRC 308 (2015)
petitioner must avail itself of a rulemaking petition if it wishes to pursue a challenge to a Commission rule; CLI-14-6, 79 NRC 447 (2014); LBP-11-15, 73 NRC 638 (2011); LBP-13-6, 77 NRC 298 (2013)
petitioners request that NRC amend 10 C.F.R. 54.17(c) to permit a reactor licensee to file a license renewal application no sooner than 10 years before the expiration of the current license; CLI-11-1, 73 NRC 2-3 (2011)
sole remedy to challenge the wisdom or lawfulness of 10 C.F.R. 51.53(c)(2) is to file a petition for rulemaking with the Commission; LBP-13-12, 78 NRC 242 (2013)
to the extent petitioner seeks to have applicant implement safety measures in addition to those ordered, its recourse is to petition for rulemaking or for license modification, suspension, or revocation; LBP-12-14, 76 NRC 7 n.36 (2012)
to the extent that petitioner challenges the generic environmental impact statement, its remedy is a petition for rulemaking or a petition for a waiver of the rules based on circumstances; CLI-11-11, 74 NRC 456 (2011)
10 C.F.R. 2.802(a)
any interested person may petition the Commission to issue, amend, or rescind any regulation; CLI-12-19, 76 NRC 387 n.56 (2012); CLI-13-7, 78 NRC 208 n.42 (2013); CLI-13-10, 78 NRC 569 n.39 (2013)
rulemaking petitioners assert that NRC Staff’s review of the expedited-transfer issue generated new and significant information regarding the environmental impacts of spent fuel storage; CLI-14-7, 80 NRC 5 (2014)
10 C.F.R. 2.802(d)
licensing boards (as opposed to the Commission) are not empowered to grant a request to suspend a licensing proceeding pending disposition of a rulemaking petition; LBP-11-33, 74 NRC 679 n.5 (2011)
rulemaking petitioner may request that the Commission suspend all or any part of any licensing proceeding to which the petitioner is a party pending disposition of the petition for rulemaking; CLI-11-5, 74 NRC 173 (2011); CLI-12-6, 75 NRC 357 n.12 (2012); CLI-14-6, 79 NRC 448 (2014); CLI-14-7, 80 NRC 6 (2014)
suspension provision provides an opportunity for a participant to ensure that a successful rulemaking petition is applied in an ongoing adjudication; CLI-14-7, 80 NRC 7 (2014)
10 C.F.R. 2.805
contents of the licensees’ responses may lead to additional regulatory actions to update plants’ licensing bases, such as orders, license amendments, or rulemakings, for which the public would have participation rights; CLI-15-14, 81 NRC 743 (2015)
10 C.F.R. 2.900-2.913
board determined that the oral portion of the proceeding should be closed to the public to allow for the free-ranging and thorough examination of witnesses and to ensure the effective safeguard and prevention from disclosure of restricted data; LBP-12-21, 76 NRC 231 (2012)
10 C.F.R. 2.1015
should a suspended adjudication resume, the Commission will consider appeals in due course, consistent with relevant Subpart J rules; CLI-13-8, 78 NRC 234 n.77 (2013)
10 C.F.R. 2.1019(i)
licensing board directed parties defending depositions to make efforts to identify and obtain Licensing Support Network documents that must be indexed for the benefit of other parties and to circulate those indexes as soon as practicable; CLI-11-13, 74 NRC 638 n.14 (2011)
10 C.F.R. 2.1022
discovery cannot be completed nor can the evidentiary hearing be held until the safety evaluation report and all necessary environmental impact statements are completed; CLI-13-8, 78 NRC 227 (2013)
before a final decision approving or disapproving a construction authorization application may be reached, not only must NRC Staff complete its safety and environmental reviews but a formal hearing must be conducted, and the Commission’s own review of both contested and uncontested issues must take place; CLI-13-8, 78 NRC 226 (2013)

10 C.F.R. 2.1026(a)

subject to exceptions, the presiding officer must adhere to the schedule set forth in 10 C.F.R. Part 2, Appendix D; CLI-13-8, 78 NRC 232 n.66 (2013)

10 C.F.R. Part 2, Subpart L

complexity and number of issues in a proceeding do not per se lead ineluctably to the conclusion that cross-examination is necessary to ensure a fair and adequate hearing; CLI-12-18, 76 NRC 375 (2012)

10 C.F.R. 2.1202(a)

NRC Staff issuance of a license during pendency of a hearing is allowed if it provides the board and parties notice and an explanation why the public health and safety are protected and why the action is in accord with the common defense and security; CLI-15-17, 82 NRC 35 n.11, 41 (2015)

“prompt” issuance is not defined as an immediate one; LBP-15-2, 81 NRC 53 n.33 (2015)

timing of license issuance is informed by instruction for NRC Staff to promptly issue its approval or denial of the application consistent with its findings, and despite the pendency of a hearing; LBP-15-2, 81 NRC 53 n.33 (2015); LBP-15-16, 81 NRC 638 n.104 (2015)

10 C.F.R. 2.1202(b)(1)(i)

NRC Staff will become a party to cases involving an application denied by the NRC Staff; CLI-14-5, 79 NRC 264 n.48 (2014)

10 C.F.R. 2.1203

NRC Staff is also under a special obligation in Subpart L proceedings to create and to maintain a hearing file; LBP-14-2, 79 NRC 147 (2014)

NRC Staff violated requirements for initial disclosure of all relevant documents; LBP-14-2, 79 NRC 243 (2014)

10 C.F.R. 2.1203(b)

hearing file consists of any correspondence between the applicant/licensee and the NRC that is relevant to the proposed action; LBP-14-2, 79 NRC 243 n.664 (2014)

10 C.F.R. 2.1203(c)

NRC Staff has a continuing duty to keep the hearing file up to date; LBP-14-2, 79 NRC 147, 243 n.664 (2014)

10 C.F.R. 2.1203(d)

parties to a Subpart L proceeding may not seek discovery from the other parties to the proceeding; LBP-14-2, 79 NRC 146 (2014)

Subpart L procedures provide for a more informal proceeding in which discovery is generally prohibited except for specified mandatory disclosures under 10 C.F.R. 2.336 and the mandatory production of the hearing file under 10 C.F.R. 2.1203(a); LBP-11-13, 73 NRC 587 (2011)

10 C.F.R. 2.1205

affidavits are required to support statements of fact, and in ruling on summary disposition motions the standards of subpart G shall apply; LBP-11-23, 74 NRC 332 (2011)

if a party believes an admitted contention is mooted by the inclusion of additional information, that party may file a motion for summary disposition; LBP-14-5, 79 NRC 385 (2014)

in Subpart L proceedings, licensing boards must apply the summary disposition standard for Subpart G proceedings, found in 10 C.F.R. 2.710; LBP-11-14, 73 NRC 594 (2011); LBP-12-23, 76 NRC 450 (2012)

summary disposition is appropriate where alleged omission from initial renewal application is cured in updated SAMA analysis; LBP-15-29, 82 NRC 253 (2015)

test for the “materially different result” requirement of section 2.326(a)(3), is whether it has been shown that a motion for summary disposition could be defeated; LBP-11-20, 74 NRC 94 (2011); LBP-12-1, 75 NRC 27 (2012)

to remove an admitted contention from the proceeding, a party must file, and a board must grant, a motion for summary disposition; LBP-14-5, 79 NRC 384 (2014)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 2.1205(a)
motions for summary disposition must be in writing and must include a written explanation of the basis
of the motion, and affidavits to support statements of fact; LBP-12-4, 75 NRC 218 (2012)

10 C.F.R. 2.1205(b)
summary disposition opponent has 20 days from proponent’s filing of its motion to oppose that motion;
LBP-12-7, 75 NRC 511-12 (2012)

10 C.F.R. 2.1205(c)
in a proceeding governed by Subpart L, the board is to apply the standards of Subpart G when ruling on
motions for summary disposition; LBP-11-4, 73 NRC 98 (2011); LBP-11-7, 73 NRC 263 (2011);
LBP-11-17, 74 NRC 20 n.40 (2011); LBP-12-2, 75 NRC 163 n.18 (2012); LBP-12-4, 75 NRC 218
(2012); LBP-12-19, 76 NRC 190 n.120 (2012)
successful motions for summary disposition must show that movant is entitled to a decision as a matter
of law; LBP-11-31, 74 NRC 649 (2011)
summary disposition of a contention is appropriate when there no longer exists any genuine dispute over
a material fact and the moving party is entitled to judgment as a matter of law; LBP-11-17, 74 NRC
20 (2011)
summary disposition shall be granted if the filings in the proceeding, depositions, answers to
interrogatories, and admissions on file, together with the statements of the parties and the affidavits, if
any, show that there is no genuine issue as to any material fact and that the moving party is entitled to
a decision as a matter of law; LBP-12-26, 76 NRC 564 (2012)
standard for deciding motions for summary disposition in Subpart L proceedings is found in section
2.710; LBP-11-31, 74 NRC 648 (2011)

10 C.F.R. 2.1207
in a proceeding to be conducted under Subpart L, the evidentiary record is opened upon the filing of the
initial written statements of position and written testimony with supporting affidavits on the
admitted contentions; LBP-11-22, 74 NRC 281 n.112 (2011)
taking of evidence for the record in a Subpart L hearing is described; CLI-12-3, 75 NRC 140 n.47 (2012)
written prefilled testimony and exhibits are typically submitted well in advance of the evidentiary hearing,
and in most common types of hearings, licensing boards themselves, not the parties, orally examine the
witnesses; LBP-12-21, 76 NRC 248 n.171 (2012)

10 C.F.R. 2.1207(a)
where parties have provided prefilled direct testimony in Subpart L cases and submitted a list of
confidential proposed questions for the board to ask the witnesses, the need for cross-examination by
parties should be a rare circumstance, except where questions of witness credibility, motive, or intent
are at issue; CLI-12-18, 76 NRC 375-76 (2012)

10 C.F.R. 2.1207(a)(2)
requests for protected documents shall be filed within 60 days of the listing of the document on the
privilege log and, in any event, no later than 10 days after the deadline for filing rebuttal testimony;
LBP-11-5, 73 NRC 141 (2011)

10 C.F.R. 2.1207(a)(3)
parties filed proposed questions for the board to ask at the evidentiary hearing; LBP-13-13, 78 NRC 277
(2013)

10 C.F.R. 2.1207(a)(3)(iii)
proposed questions filed by all parties will be publicly released by order of the board 30 days after its
decision; LBP-13-13, 78 NRC 277 (2013)
questions proposed by all parties will be publicly released by order of this board 30 days after issuance
of its partial initial decision; LBP-14-3, 79 NRC 277 n.40 (2014)

10 C.F.R. 2.1207(b)(6)
when using Subpart L procedures, the board has the primary responsibility for questioning the witnesses
at any evidentiary hearing; LBP-11-13, 73 NRC 587 (2011)

10 C.F.R. 2.1210
partial initial decision constitutes a final decision of the Commission 40 days from the date of issuance or
the first agency business day following that date if it is a Saturday, Sunday, or federal holiday unless a
petition for review is filed in accordance with section 2.1212; LBP-12-5, 75 NRC 255 (2012)
10 C.F.R. 2.1210(c)(3) initial decision shall include the additional Staff actions necessary if inconsistent with prior Staff action approving or denying the application; CLI-15-17, 82 NRC 40 n.47 (2015)
licenses may be altered as a result of the evidentiary hearing; CLI-15-17, 82 NRC 41 (2015)
10 C.F.R. 2.1212 petition for review may be granted if it presents a substantial question with respect to one or more five considerations; CLI-11-2, 73 NRC 336-37 (2011)
10 C.F.R. 2.1213 if NRC Staff grants a renewed license before a hearing takes place, the Tribe may seek a stay of Staff’s action; CLI-12-4, 75 NRC 156 (2012)
notification of renewal of source materials license triggers the 5-day filing deadline to apply for a stay of the license; LBP-15-2, 81 NRC 49-50 (2015)
10 C.F.R. 2.1213(a) intervenors may seek a stay of NRC Staff’s immediately effective license issuance; LBP-15-3, 81 NRC 78 n.3 (2015)
10 C.F.R. 2.1213(d) in determining whether to grant or deny an application for a stay, a board must balance four separate interests; LBP-15-2, 81 NRC 53 (2015)
movant has the burden of persuasion on the four stay factors; LBP-15-2, 81 NRC 53 (2015)
movant must address the four factors relevant to a stay motion; CLI-15-17, 82 NRC 38 n.27 (2015)
10 C.F.R. 2.1213(d)(1) section 2.341(f)(2)(i) is compared; CLI-15-17, 82 NRC 39 n.41 (2015)
10 C.F.R. 2.1300 Commission has authority to rule that a license transfer case be adjudicated under Subpart L; CLI-14-5, 79 NRC 259 (2014)
scope of Subpart M proceedings covers all adjudicatory proceedings on an application for transfer of control of an NRC license, without distinction as to how the proceeding commences; CLI-14-5, 79 NRC 259 n.26 (2014)
10 C.F.R. 2.1308 absent a unanimous preference for a hearing consisting of written comments, the license transfer hearing will be an oral one; CLI-14-5, 79 NRC 264 (2014)
within 15 days from an order granting a hearing, each party must indicate what kind of hearing it prefers; CLI-14-5, 79 NRC 264 (2014)
10 C.F.R. 2.1309(a)(7) although NRC Staff is not required to be a party to a license transfer adjudication, the Commission directs the Staff to become a party; CLI-14-5, 79 NRC 264 (2014)
10 C.F.R. 2.1316 NRC Staff is required to notify the presiding officer and the parties whether it desires to participate as a party in a license transfer proceeding; CLI-14-5, 79 NRC 264 n.47 (2014)
10 C.F.R. 2.1316(b) NRC Staff is not required to be a party to a license transfer adjudication; CLI-14-5, 79 NRC 264 (2014)
10 C.F.R. 2.1319(a) ordinarily, the Commission itself presides over license transfer hearings, but NRC rules allow the Commission to designate one or more Commissioners or any other person permitted by law to preside; CLI-14-5, 79 NRC 263 n.44 (2014)
record of licensing board evidentiary hearing on license transfer application must be certified to the Commission; CLI-15-26, 82 NRC 410 (2015)
10 C.F.R. 2.1320(b)(1) presiding officer may certify questions or refer rulings to the Commission for decision; CLI-14-5, 79 NRC 264 n.46 (2014)
where the Commission does not preside over a license transfer proceeding, the presiding officer will certify the completed hearing record to the Commission, which may then issue its decision on the hearing or provide that additional testimony be presented; CLI-14-5, 79 NRC 263 n.44 (2014); LBP-14-10, 80 NRC 85-86 (2014)

10 C.F.R. 2.1331

upon completion of a license transfer hearing, the Commission will issue a written opinion including its decision on the license transfer application and the reasons for the decision; CLI-14-5, 79 NRC 263 n.44 (2014)

10 C.F.R. 2.1402(b)

selection of hearing procedures for contentions at the outset of a proceeding is not immutable because availability of Subpart G procedures under 10 C.F.R. 2.310(d) depends critically on whether the credibility of eyewitnesses is important in resolving a contention, and witnesses relevant to each contention are not identified, under 10 C.F.R. 2.336(a)(1), until after contentions are admitted; LBP-11-13, 73 NRC 588 n.389 (2011)

10 C.F.R. Part 2, Appendix B

evidentiary hearing should begin 175 days after release of NRC Staff’s environmental review document; CLI-15-17, 82 NRC 45 n.77 (2015)
in an uncontested operating license proceeding, the Commission would informally review the Staff recommendations, and the license would issue only after Commission action; CLI-11-5, 74 NRC 153 n.34 (2011)

10 C.F.R. Part 2, Appendix B, § II

boards are directed to rule within 140 days of the date of the referral on whether the hearing request should be granted; CLI-15-14, 81 NRC 735 n.28 (2015)

boards should develop schedules that will provide a fair and expeditious procedure for resolving new or amended contentions that might be proposed during the course of the proceeding, not just those already admitted; LBP-11-22, 74 NRC 279 (2011)

filing of new contentions based on the SER and Staff NEPA documents is expressly contemplated by the Model Milestones and scheduling orders; LBP-11-22, 74 NRC 272 (2011)

Model Milestones permit the filing of proposed late-filed contentions on the Safety Evaluation Report and necessary National Environmental Policy Act documents within 30 days of the issuance of those documents; LBP-11-22, 74 NRC 262, 279 (2011)
schedule for Subpart L proceedings, including the closing of the record, is described; CL-12-3, 75 NRC 140 n.47 (2012)

when establishing a schedule, boards are to consider NRC’s interest in providing a fair and expeditious resolution of the issues sought to be admitted for adjudication in the proceeding, along with other factors; LBP-11-22, 74 NRC 279 (2011)

10 C.F.R. Part 2, Appendix B, § III

once the nature of a license transfer hearing is settled, Subpart M and NRC Model Milestones set a default schedule for the remainder of the proceeding; CLI-14-5, 79 NRC 264 (2014)

10 C.F.R. Part 2, Appendix D

discovery cannot be completed nor can the evidentiary hearing be held until the safety evaluation report and all necessary environmental impact statements are completed; CLI-13-8, 78 NRC 227 (2013)

10 C.F.R. 9.19(b)

any reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions that are exempt; LBP-11-5, 73 NRC 139 n.14 (2011)

10 C.F.R. 12.101

parties who prevail against the government in certain types of agency proceedings are allowed to recover attorneys’ fees and other expenses incurred in connection with the proceeding unless the government’s position was substantially justified, or other special circumstances render an award unjust; LBP-11-8, 73 NRC 354 (2011)

10 C.F.R. 12.103

adversary adjudications conducted by the Commission pursuant to any other statutory provision that requires a proceeding before the NRC to be so conducted as to fall within the meaning of adversary adjudication under Equal Access to Justice Act are included; LBP-11-8, 73 NRC 354 (2011)
for a prevailing party to recover attorneys’ fees and expenses, the party must have incurred those fees and expenses in connection with the adversary adjudication in question; LBP-11-8, 73 NRC 362 (2011)

prevailing party is not entitled to an award for attorneys’ fees and expenses if the position of the Commission over which the applicant has prevailed was substantially justified; LBP-11-8, 73 NRC 368 (2011)

within 30 days of the Commission’s decision upholding the board majority decision setting aside the NRC Staff’s immediately effective enforcement order, petitioner applied for an award of over $250,000 in attorneys’ fees; LBP-11-8, 73 NRC 353 (2011)

board’s determination of whether the government’s position was substantially justified is made on the basis of the written record and oral argument; LBP-11-8, 73 NRC 368 (2011)

ALARA is defined as every reasonable effort to maintain exposures to radiation as far below the dose limits in Part 20 as is practical consistent with the purpose for which the licensed activity is undertaken; CLI-11-12, 74 NRC 480 (2011)

ALARA principle as used in NRC regulations does not mean as low as achievable as a comparison between achievable doses, but rather as low as reasonably achievable below the dose limits; CLI-11-12, 74 NRC 491 (2011)

annual 100-millirem limit for members of the public is defined to include radiation exposure to construction workers; CLI-12-2, 75 NRC 108 (2012)

“residual radioactivity” is defined as radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee’s control; CLI-13-6, 78 NRC 166 (2013)

uranium enrichment facility applicant’s commitment to monitoring and the corrective action program provides reasonable assurance that public health and safety will be protected and applicant has a program in compliance with the regulations; LBP-12-21, 76 NRC 336 (2012)

ALARA is a general requirement for all doses to members of the public established in the radiation protection programs in Part 20, including the license termination dose criteria; CLI-11-12, 74 NRC 480 (2011)

ALARA requirement in this section applies to the dose criteria for license termination; CLI-11-12, 74 NRC 481 (2011)

licensee must establish that the dose to a member of the public with legally enforceable institutional controls in place will not exceed 25 mrem per year, and is as low as reasonably achievable; CLI-11-12, 74 NRC 481 (2011)

radiation protection requirements with which licensees must comply, such as procedures and controls to reduce occupational doses and doses to members of the public to levels that are as low as reasonably achievable, are outlined; LBP-12-4, 75 NRC 217 (2012)

annual 100-millirem limit for members of the public is defined to include radiation exposure to construction workers; CLI-12-2, 75 NRC 108 (2012)

dose limit for individual members of the public from a licensed activity is a total effective dose equivalent of 100 millirem per year; CLI-11-12, 74 NRC 480 (2011)

dose limits for individual members of the public are 100 millirem in a year; DD-11-3, 73 NRC 382 (2011)

dose limits from tritium in groundwater for individual members of the public were never approached; DD-11-1, 73 NRC 11 (2011)

uranium enrichment facility licensee must survey radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits for individual members of the public in section 20.1301; LBP-12-21, 76 NRC 366 (2012)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 20.1401(d)
agreement states may adopt license termination requirements that incorporate more conservative dose
calculation methodologies than NRC requirements; CLI-11-12, 74 NRC 482-83 (2011)

10 C.F.R. 20.1402
dose limit for license termination is a constraint within the public dose limit of 25 mrem per year to
members of the public; CLI-11-12, 74 NRC 480 (2011)
for license termination under either restricted use or unrestricted use, dose to a member of the public
must not only be 25 mrem per year or lower but also as low as reasonably achievable; CLI-11-12, 74
NRC 481 (2011)
objective of decommissioning is to reduce residual radioactivity in structures, soils, groundwater, and other
media at the site so that the concentration of each radionuclide that could contribute to residual
radioactivity is indistinguishable from the background radiation concentration for that nuclide; CLI-13-1,
77 NRC 6 (2013)
provisions of this section govern unrestricted release; CLI-13-6, 78 NRC 166 n.43 (2013)
sites not eligible for restricted release must be remediated to unrestricted use; CLI-11-12, 74 NRC 481
(2011)
sites will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable
from background radiation results in a Total Effective Dose Equivalent to an average member of the
critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater
sources of drinking water, and that the residual radioactivity has been reduced to levels that are as low
as reasonably achievable; CLI-13-6, 78 NRC 159 n.7 (2013)
terminating a license for unrestricted use allows no dependence on governmental monitoring of engineered
barriers and land-use restrictions to achieve a maximum dose of 25 mrem per year to a member of the
public; CLI-11-12, 74 NRC 480-81 (2011)
to provide adequate protection to the public upon license termination, NRC has established a maximum
dose level to the public of 25 mrem per year, which licensee must satisfy without regard to cost, and
regardless of whether decommissioning is to be accomplished through restricted or unrestricted release;
CLI-13-6, 78 NRC 162 n.18 (2013)
10 C.F.R. 20.1403
determination expressly required by the text “further reductions in residual radioactivity . . . were not
being made because the residual levels associated with restricted conditions are ALARA” is an inquiry
that focuses on how far it is possible, on a cost-effective basis, to further reduce the “residual levels”;
CLI-13-6, 78 NRC 168 (2013)
for license termination under either restricted use or unrestricted use, doses to a member of the public
must not only be 25 mrem per year or lower but also as low as reasonably achievable; CLI-11-12, 74
NRC 481 (2011)
if a licensee is able to demonstrate initial eligibility for restricted release, it must then show that the
restricted-release dose criteria will be met; CLI-11-12, 74 NRC 481 (2011)
terminating a license for restricted use relies on legally enforceable institutional controls to achieve the 25
mrem dose limit; CLI-11-12, 74 NRC 481 (2011)
10 C.F.R. 20.1403(a)
ALARA analysis calls for licensee seeking to use restricted release to analyze whether it would be
cost-beneficial to remove enough radioactive contamination from the site so that doses to the public are
no higher than 25 mrem per year without reliance on restricted-release controls; CLI-13-6, 78 NRC 162
(2013)
ALARA-based analysis must be performed to identify whether a site is eligible or ineligible for further
consideration of restricted release; CLI-11-12, 74 NRC 481 (2011)
ALARA principle incorporated into this section serves as a regulatory tool to limit the use of restricted
release, i.e., to screen out sites that should be removing contamination to achieve unrestricted use;
CLI-13-6, 78 NRC 162 (2013)
board provides textual analysis and additional clarifying explanation of its interpretation of this section;
CLI-13-6, 78 NRC 159 (2013)
“further reductions” necessarily refers to further reductions from the level of residual radioactivity that a
licensee proposes to leave in place under its proposed restricted-release decommissioning plan;
CLI-13-6, 78 NRC 167 (2013)
initial eligibility demonstration employs a cost-benefit analysis, either a conventional ALARA analysis or an analysis of net public or environmental harm, which incorporates a subset of the factors used in a conventional ALARA analysis; CLI-11-12, 74 NRC 481 (2011)

licensee must demonstrate through either method that further reducing proposed residual radioactivity to unrestricted-release levels, without considering the impacts of institutional controls and engineered barriers associated with restricted release, would not be cost-beneficial; CLI-13-6, 78 NRC 167 (2013)

licensee seeking to demonstrate eligibility to pursue restricted release must show that further reductions, to a dose level of 25 mrem, of the levels of residual radioactivity proposed to be left in place under a restricted-release plan either would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA; CLI-13-6, 78 NRC 167 (2013)

licensees, in determining whether levels are ALARA, are to consider detriments, such as traffic accidents; CLI-13-6, 78 NRC 169 (2013)

nothing in NRC license termination regulations calls for a comparison of doses of restricted-release and unrestricted-release decommissioning options; CLI-13-6, 78 NRC 161 (2013)

NRC prefers that licensees satisfy radiation dose criteria for license termination through unrestricted-release decommissioning if it is cost-beneficial to do so; CLI-13-6, 78 NRC 160 (2013)

objective of decommissioning is to reduce residual radioactivity in structures, soils, groundwater, and other media at the site so that the concentration of each radionuclide that could contribute to residual radioactivity is indistinguishable from the background radiation concentration for that nuclide; CLI-13-1, 77 NRC 6 (2013)

one of the benefits of removing enough radioactivity to cross the 25-mrem threshold is that the value of the affected property is likely to increase, and it is in this sense that NRC guidelines contemplate, as part of the ALARA analysis, a comparison between restricted release and unrestricted release; CLI-13-6, 78 NRC 172 (2013)

“reductions in residual radioactivity” refers only to dose reductions to the public that can be accomplished solely through the steps associated with unrestricted-release decommissioning, i.e., removal of contaminated material or decontamination; CLI-13-6, 78 NRC 166-67 (2013)

“residual levels,” as used in the phrase “were not being made because the residual levels . . . are ALARA,” refers back to, and is shorthand for, the term “residual radioactivity” used earlier in the introductory language; CLI-13-6, 78 NRC 168 (2013)

results of ALARA analysis will determine licensee’s initial eligibility to pursue restricted release; CLI-13-6, 78 NRC 162 (2013)

sites will be considered acceptable for license termination under restricted conditions if licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of section 20.1402 would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA; CLI-13-6, 78 NRC 161 n.11 (2013)

to qualify for license termination under restricted release, licensee must demonstrate why further reductions in residual radioactivity that would be necessary to decommission a site pursuant to an unrestricted-release plan are not being made; CLI-13-6, 78 NRC 166 (2013)

words “further reductions in residual radioactivity necessary to comply with the provisions of § 20.1402”are analyzed; CLI-13-6, 78 NRC 166 (2013)

10 C.F.R. 20.1403(b)

dose limit for license termination is a constraint within the public dose limit of 25 mrem per year to members of the public; CLI-11-12, 74 NRC 480 (2011)

for license termination under restricted conditions, licensee must provide legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 mrem (0.25 mSv) per year; CLI-13-6, 78 NRC 159 n.7 (2013)

if licensee demonstrates, through either of the two cost-benefit approaches, that removing radioactive contamination to the unrestricted-use level would not be cost-beneficial, then licensee must show that, with the addition of engineered barriers and institutional controls, the average annual dose to the public
will not exceed 25 mrem per year and is as low as reasonably achievable; CLI-13-6, 78 NRC 163 (2013)

licensee must establish that the dose to a member of the public with legally enforceable institutional controls in place will not exceed 25 mrem per year, and is as low as reasonably achievable; CLI-11-12, 74 NRC 481 (2011)

to provide adequate protection to the public upon license termination, NRC has established a maximum dose level to the public of 25 mrem per year, which licensee must satisfy without regard to cost, and regardless of whether decommissioning is to be accomplished through restricted or unrestricted release; CLI-13-6, 78 NRC 162 n.18 (2013)

10 C.F.R. 20.1403(c)
despite having passed the initial eligibility test for restricted release, if licensee cannot satisfy dose criteria, its site will not be considered acceptable for license termination under restricted conditions; CLI-13-6, 78 NRC 163 (2013)

if institutional controls fail and engineered barriers have degraded over a period of time, the dose to a member of the public will not exceed 100 mrem per year, or 500 mrem per year under certain circumstances, and is as low as reasonably achievable; CLI-11-12, 74 NRC 481-82 (2011)

licensee must show that, if institutional controls fail, enough residual radioactivity has been removed from the site so that the average annual dose to the public will not exceed 100 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 163 (2013)

New Jersey has adopted license termination requirements that incorporate more conservative dose calculation methodologies than NRC requirements; CLI-11-12, 74 NRC 483 (2011)

reducing residual radioactivity from preexisting levels to the lowest level that can be accomplished cost-beneficially facilitates greater protection of public health and safety in the event engineered barriers and institutional controls fail over the long term; CLI-13-6, 78 NRC 170 (2013)

10 C.F.R. 20.1406

combined license applications include operational procedures to minimize contamination of the facility and environment, facilitate eventual decommissioning, and minimize generation of radioactive waste; CLI-12-2, 75 NRC 108 (2012)

10 C.F.R. 20.1501(a)

uranium enrichment facility licensee’s radiological surveys must be as necessary and reasonable for compliance, and must include magnitude and extent of radiation levels, concentrations or quantities of radioactive material, and potential radiological hazards; LBP-12-21, 76 NRC 366 (2012)

10 C.F.R. Part 20, Appendix B

Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 565 (2011)

10 C.F.R. Part 20, Appendix B, tbl. 2

minimum detectable concentrations for gaseous effluent and evaporator condensate must be 5% or less of the concentrations listed in the table; LBP-11-26, 74 NRC 570 n.32 (2011)

10 C.F.R. Part 20, Appendix B, tab. 2, col. 2

discharges of chemicals and other effluents from the cooling basin to groundwater or surface water must remain within limits stated in this table; LBP-11-16, 73 NRC 679 (2011)

10 C.F.R. Part 20, Appendix D
even with the additional conservatisms, concentrations at potential receptor locations resulting from bounding accidental effluent release scenarios remain within applicable regulatory limits; CLI-12-9, 75 NRC 451 (2012)

10 C.F.R. 21.3

applicant requests an exemption from the definitions of “commercial grade items,” “basic component,” “critical characteristic,” “dedication,” and “dedicated entity” to permit applicant to have some procurement flexibility; LBP-11-11, 73 NRC 504 (2011)

10 C.F.R. 30.4

applicant seeks an exemption from the requirements of this section to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 503-04 (2011)
“byproduct material” refers to the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed for its source material content; LBP-15-16, 81 NRC 626 n.2 (2015)

“commencement of construction” includes clearing of land, excavation, or other substantial action that would adversely affect the natural environment of a site; LBP-11-11, 73 NRC 506 (2011); LBP-11-26, 74 NRC 538 (2011)

10 C.F.R. 30.9(a)
information provided to NRC by license applicant shall be complete and accurate in all material respects; DD-14-4, 79 NRC 508, 509, 513, 514-15 (2014)
petitioner’s concern that information provided by licensee concerning training received by its employees was not accurate and in violation was not substantiated; DD-14-4, 79 NRC 510, 511, 516 (2014)

10 C.F.R. 30.10(a)(1)
choosing to store a radiographic exposure device at a facility that did not comply with NRC security requirements and was not an authorized storage location under the license is considered deliberate misconduct; LBP-14-11, 80 NRC 129 (2014)

10 C.F.R. 30.11(a)
NRC may grant an exemption from the regulatory requirements if it determines the exemption is authorized by law and will not endanger life or property or the common defense and security and is otherwise in the public interest; LBP-11-11, 73 NRC 497 (2011)

10 C.F.R. 30.32(a)
license application for byproduct material may incorporate information contained in previous applications, statements, or reports filed with the Commission, provided that the reference is clear and specific; LBP-12-24, 76 NRC 517 n.69 (2012)

10 C.F.R. 30.33(a)(3)
license applications will be approved if, in addition to other requirements met, applicant is qualified by training and experience to use the material for the purpose requested in such manner as to protect health and minimize danger to life or property; DD-14-4, 79 NRC 516 (2014)

10 C.F.R. 30.33(a)(5)
applicant seeks an exemption from the requirements of this section to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 503-04 (2011)
for a proposed nuclear materials-related activity, commencement of construction relative to that activity prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-11, 73 NRC 506 (2011); LBP-11-26, 74 NRC 538 (2011)
preconstruction activities that are allowed under Part 50 are also allowed for materials licenses; LBP-11-26, 74 NRC 539 (2011)

10 C.F.R. 30.34(e)
NRC may issue a license to impose such additional conditions, requirements, and limitations as may be necessary to effectuate the purposes of the Atomic Energy Act and the agency’s regulations; LBP-11-11, 73 NRC 497 (2011)

10 C.F.R. 30.35(a)-(b)
financial assurance requirements are structured according to the quantity of material that will be authorized for possession and use; CLI-11-4, 74 NRC 9 (2011)

10 C.F.R. 30.35(f)(2)
applicant’s commitment to provide a letter of credit issued by a financial institution whose operations are regulated and examined by a federal or state agency is sufficient to satisfy decommissioning funding assurance requirements; CLI-11-4, 74 NRC 2 (2011); LBP-11-26, 74 NRC 517-18 (2011)

10 C.F.R. 30.35(f)(2)(ii)
an acceptable trustee includes an appropriate state or federal government agency or an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency; CLI-11-4, 74 NRC 4 n.15 (2011)
because it has chosen a surety method, licensee must ensure that the letter of credit is payable to a trust established for decommissioning costs; CLI-11-4, 74 NRC 3 (2011)
10 C.F.R. Part 30, Appendix A, § II.B financial tests for parent company guarantees and self-guarantees require that an independent certified public accountant review the data used in the financial test and require that the licensee inform NRC within 90 days of any matters coming to the auditor’s attention that cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test; CLI-11-4, 74 NRC 7 n.31 (2011)

10 C.F.R. Part 30, Appendix C licensees have not been permitted to include the value of goodwill to meet the 10:1 tangible net worth requirement; LBP-12-6, 75 NRC 262 (2012)

request for exemption from requirements of this regulation to allow applicant to act as a self-guarantor of decommissioning funds without satisfying the financial test for self-guarantors is denied; LBP-12-6, 75 NRC 259 (2012)

request for hearing on Staff denial of permission to use an alternate method for demonstrating decommissioning funding assurance is granted; LBP-11-19, 74 NRC 62 (2011)

10 C.F.R. Part 30, Appendix C, § II.A financial test for self-guarantee of the decommissioning funding obligation requires that licensee maintain a bond rating of “A” or better and have a tangible net worth at least 10 times the total current decommissioning cost estimate; LBP-12-6, 75 NRC 261 (2012)

10 C.F.R. Part 30, Appendix C, § II.A.1 intangible assets may be used to meet specified criteria in the financial tests for self-guarantees; CLI-13-1, 77 NRC 8 (2013)

to qualify for the alternative method of self-funding for decommissioning, licensee must have, among other things, a tangible net worth at least ten times the total current decommissioning cost estimate (a 10:1 ratio requirement); CLI-13-1, 77 NRC 6 (2013)

10 C.F.R. Part 30, Appendix C, § II.A.3 to qualify for the alternative method of self-funding for decommissioning, licensee must have, among other things, a bond rating of “A” or better, as issued by Standard and Poor’s or Moody’s; CLI-13-1, 77 NRC 6 (2013)

10 C.F.R. Part 30, Appendix C, § II.B.2 financial tests for parent company guarantees and self-guarantees require that an independent certified public accountant review the data used in the financial test and require that the licensee inform NRC within 90 days of any matters coming to the auditor’s attention that cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test; CLI-11-4, 74 NRC 7 n.31 (2011)

10 C.F.R. Part 30, Appendix C, § II.B.3 to use the self-guarantee mechanism to fulfill its decommissioning funding obligation, a licensee that issues bonds must annually satisfy the financial test set forth in this regulation; CLI-13-1, 77 NRC 12-13 (2013); LBP-12-6, 75 NRC 261 (2012)

10 C.F.R. 34.3 “radiographer’s assistant,” is defined; LBP-15-21, 82 NRC 10 n.7 (2015)

10 C.F.R. 40.3 assessment of monetary penalty against U.S. Army for possession of depleted uranium without a license is denied; DD-11-5, 74 NRC 404 (2011)

possession of depleted uranium at multiple installations without an NRC license and performance of decommissioning at a military installation without proper NRC authorization is a violation; DD-11-5, 74 NRC 403 (2011)

10 C.F.R. 40.4 applicant seeks an exemption from the requirements of this section to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 503-04 (2011)

“byproduct material” refers to the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed for its source material content; LBP-15-16, 81 NRC 626 n.2 (2015)
“commencement of construction” includes clearing of land, excavation, or other substantial action that would adversely affect the natural environment of a site; LBP-11-11, 73 NRC 506 (2011); LBP-11-26, 74 NRC 538 (2011)
“construction” and “commencement of construction” are defined; LBP-12-3, 75 NRC 193-94 (2012)
“construction” does not include site exploration, including preconstruction monitoring to establish background information related to the environmental impacts of construction or operation, or the protection of environmental values; LBP-15-3, 81 NRC 91 (2015)
definition of byproduct material was clarified by adding the clause “including discrete surface wastes resulting from uranium solution extraction processes”; LBP-15-16, 81 NRC 636 n.92 (2015)
grounds for license denial exist if, prior to issuance of a license to possess and use source and byproduct materials for uranium milling, there is commencement of construction by an applicant; LBP-12-3, 75 NRC 193 (2012)
nothing in the definition of "construction" precludes the installation of wells or the use of monitoring protocols as needed to provide those background data; LBP-15-3, 81 NRC 91 (2015)
“source material” is defined as uranium being extracted through the ISL process; LBP-15-16, 81 NRC 626 n.1 (2015)

10 C.F.R. 40.9
licensee or applicant must inform the NRC of information that applicant or licensee has identified as having a significant implication for public health and safety or common defense and security; LBP-15-15, 81 NRC 616 n.120 (2015)
materials license application must provide analyses that are adequate, accurate, and complete in all material respects to demonstrate that cultural and historic resources are identified and protected; LBP-15-16, 81 NRC 643 n.141 (2015)

10 C.F.R. 40.14
exemption from decommissioning funding requirements to allow applicant to act as a self-guarantor without satisfying the financial test for self-guarantors must be in the public interest or otherwise satisfy the requirements of this section; LBP-12-6, 75 NRC 259, 269 (2012)
exemptions from the alternative financial test for self-guarantee of the decommissioning funding obligation that are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest are permitted; LBP-12-6, 75 NRC 262 (2012)

10 C.F.R. 40.14(a)
NRC may grant an exemption from regulatory requirements if it determines that the exemption is authorized by law and will not endanger life or property or the common defense and security and is otherwise in the public interest; LBP-11-11, 73 NRC 497 (2011)
source materials licensees can seek an exemption from the decommissioning financial assurance requirements; CLI-13-1, 77 NRC 9 (2013)

10 C.F.R. 40.31(a)
license for source material may incorporate information contained in previous applications, statements, or reports filed with the Commission, provided that the reference is clear and specific; LBP-12-24, 76 NRC 518 n.69 (2012)

10 C.F.R. 40.31(f)
applicant for a license to possess and use source and AEA §11c(2) byproduct material for the purpose of in situ uranium recovery must submit an environmental report with its application; LBP-15-3, 81 NRC 82 (2015)
contention that materials license amendment application fails to provide sufficient information regarding the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 23 (2014)

10 C.F.R. 40.31(h)
regulation applies to uranium mills, but not to in situ recovery facilities; LBP-14-5, 79 NRC 397 (2014)

10 C.F.R. 40.31(i)
admissibility of contention that environmental documents lack an adequate description of financial assurances sufficient to ensure the payment of the costs of restoration and long-term monitoring of up to 30 years is decided; LBP-15-15, 81 NRC 6002-03 (2015)
10 C.F.R. 40.32(c) water balance in the final supplemental environmental impact statement is appropriate and in accordance with NRC regulatory guidance and federal regulations; LBP-15-16, 81 NRC 683 n.404 (2015)
10 C.F.R. 40.32(e) applicant is not prohibited from gathering complete information on baseline water quality; LBP-12-3, 75 NRC 193 (2012)
applicant seeks an exemption from the requirements of this section to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 503-04 (2011)
commencement of construction is prohibited prior to a NEPA determination; LBP-15-16, 81 NRC 660 n.250 (2015)
for a proposed nuclear materials-related activity, commencement of construction relative to that activity prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of authorization to conduct that activity; LBP-11-11, 73 NRC 506 (2011); LBP-11-26, 74 NRC 538 (2011); LBP-12-3, 75 NRC 193 (2012)
in situ recovery license applicant is barred from installing a complete wellfield and associated monitor well networks until after a license is issued; LBP-15-3, 81 NRC 91 (2015)
preconstruction activities that are allowed under Part 50 are also allowed for materials licenses; LBP-11-26, 74 NRC 539 (2011)
10 C.F.R. 40.36 request for exemption from requirements of this regulation to allow applicant to act as a self-guarantor of the funds necessary for eventually decommissioning a facility, without satisfying the financial test for self-guarantors is denied; LBP-12-6, 75 NRC 259 (2012)
with limited exceptions, source material licensees must demonstrate that they can pay for the decommissioning of their regulated facilities; CLI-13-1, 77 NRC 5 (2013); LBP-12-6, 75 NRC 260-61 (2012)
10 C.F.R. 40.36(a) source materials licensees must submit a decommissioning funding plan far in advance of submitting the actual plans for decommissioning; CLI-13-1, 77 NRC 6 (2013)
10 C.F.R. 40.36(a)-(b) financial assurance requirements are structured according to the quantity of material that will be authorized for possession and use; CLI-11-4, 74 NRC 9 (2011)
10 C.F.R. 40.36(b)(2) certification of financial assurance may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material; CLI-11-4, 74 NRC 9 n.43 (2011)
10 C.F.R. 40.36(d) applicant seeks authorization to provide financial assurance for decommissioning funding on a forward-looking, incremental basis; LBP-11-11, 73 NRC 503 (2011)
certification of financial assurance may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material; CLI-11-4, 74 NRC 9 n.43 (2011)
de decommissioning funding plans must include a periodically adjusted cost estimate, specify the method for assuring that sufficient funds will be available when needed, and certify that the amount assured for decommissioning meets or exceeds estimated decommissioning costs; CLI-13-1, 77 NRC 6 (2013)
request for an exemption that would enable it to provide decommissioning funding on a forward-looking, incremental basis, at a rate proportional to the then-current decontamination and decommissioning liability is granted; CLI-11-4, 74 NRC 3 n.4 (2011)
source materials licensees must submit a decommissioning funding plan far in advance of submitting the actual plans for decommissioning; CLI-13-1, 77 NRC 6 (2013)
10 C.F.R. 40.36(e) request for hearing on Staff denial of permission to use an alternative method for demonstrating decommissioning funding assurance is granted; LBP-11-19, 74 NRC 62 (2011)
source materials licensees have numerous options for meeting their decommissioning funding obligations; LBP-12-6, 75 NRC 261 (2012)
source materials licensees must submit a decommissioning funding plan far in advance of submitting the actual plans for decommissioning; CLI-13-1, 77 NRC 6 (2013)

10 C.F.R. 40.36(e)(3)

goovernment licensees must demonstrate financial assurance for decommissioning by prepayment, use of a surety method, insurance, or other guarantee method, or use of an external sinking fund; CLI-13-1, 77 NRC 5-6 (2013)

10 C.F.R. 40.36(e)(2)

applicant’s commitment to provide a letter of credit issued by a financial institution whose operations are regulated and examined by a federal or state agency is sufficient to satisfy decommissioning funding assurance requirements; CLI-11-4, 74 NRC 2 (2011); LBP-11-26, 74 NRC 517-18 (2011)
bond-issuing licensees may provide a self-guarantee of funds for decommissioning costs based on a financial test set forth in Appendix C of Part 30; CLI-13-1, 77 NRC 6 (2013)

10 C.F.R. 40.36(e)(2)(ii)

an acceptable trustee includes an appropriate state or federal government agency or an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency; CLI-11-4, 74 NRC 4 n.15 (2011)
because it has chosen a surety method, licensee must ensure that the letter of credit is payable to a trust established for decommissioning costs; CLI-11-4, 74 NRC 3 (2011)

10 C.F.R. 40.38(a)

this section applies only to enrichment facility licensee USEC, and it has no relevance to any other enrichment facility applicant; LBP-11-11, 73 NRC 488 n.16 (2011)

10 C.F.R. 40.41(c)

water balance in the final supplemental environmental impact statement is appropriate and in accordance with NRC regulatory guidance and federal regulations; LBP-15-16, 81 NRC 683 n.404 (2015)

10 C.F.R. 40.41(e)

NRC may issue a license to impose such additional conditions, requirements, and limitations as may be necessary to effectuate the purposes of the Atomic Energy Act and the agency’s regulations; LBP-11-11, 73 NRC 497 (2011)

10 C.F.R. 40.41(e)(2)

issued licenses can be revoked, conditioned, modified, or affirmed based on the evidence reviewed at the evidentiary hearing; LBP-15-16, 81 NRC 638 n.104 (2015)

10 C.F.R. 40.41(g)

NRC is required to verify through inspection that the facility has been constructed in accordance with the requirements of the license; LBP-12-21, 76 NRC 259-60 (2012)
uranium enrichment facility cannot be operated until the agency verifies through inspection that the facility has been constructed in accordance with the license; LBP-11-11, 73 NRC 509 (2011)

10 C.F.R. 40.42

licensee must submit a decommissioning plan when it decides to cease NRC-licensed activities at its facility; CLI-13-1, 77 NRC 6 (2013)

10 C.F.R. 40.42(a)

each specific license expires at the end of the day on the expiration date stated in the license unless licensee has filed an application for renewal not less than 30 days before the expiration date stated in the existing license; CLI-15-17, 82 NRC 38 n.30 (2015)
having submitted its license renewal application more than 30 days prior to the scheduled expiration of its current license, licensee is allowed to continue operations under that license; LBP-11-30, 74 NRC 631 (2011)
specific license expires on the expiration date stated in the license, unless the licensee has filed a request for renewal not less than 30 days prior to the expiration date, and a license in timely renewal expires on the day on which NRC makes a final determination to deny the request, or, if the determination states an expiration date, then the stated expiration date; CLI-12-4, 75 NRC 156 n.9 (2012)
timing of source materials license renewal application enables licensee to operate under NRC’s timely renewal provision until the agency renews the license; LBP-15-2, 81 NRC 50, 57 n.66 (2015)
when licensee has made timely and sufficient application for a renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency; LBP-11-30, 74 NRC 629 n.5 (2011)
when licensee has made timely and sufficient application for a renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency; LBP-15-11, 81 NRC 404 n.2 (2015)

10 C.F.R. 40,42(d), (e), 40.42(g)(4)(v) admissibility of contention that applicant submit a decommissioning plan and related updated financial plans is decided; LBP-15-15, 81 NRC 603 (2015)

10 C.F.R. Part 40, Appendix A contention that DSEIS lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is admissible; LBP-13-10, 78 NRC 135 (2013) contention that final supplemental environmental impact statement fails to comply with NRC regulations and NEPA because it lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is decided; LBP-15-3, 81 NRC 85 (2015) intervenors fail to establish the validity of their various challenges to the adequacy of the FSEIS description of the baseline water quality at the ISR site; LBP-15-3, 81 NRC 111 (2015) neither “baseline” nor “background” is explicitly defined; LBP-15-16, 81 NRC 659 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 4(e) contention that materials license amendment application fails to provide sufficient information regarding the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 23 (2014) regulation refers to safety criteria that apply to applicants and licensees and is not relevant to the NEPA review; LBP-13-9, 78 NRC 109 (2013)

10 C.F.R. Part 40, Appendix A, Criterion 5B (a) nothing in this criterion precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to properly characterize the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 92 (2015) post-licensing, preoperational activities conducted to comply with Part 40, Appendix A, Criterion 7 are associated with compliance with the dictates of this regulation; LBP-15-3, 81 NRC 75 n.2 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5B(5) applicant’s use of alternate concentration limits is a legal right; LBP-13-9, 78 NRC 87 (2013) background water quality data are used to establish existing hazardous constituent concentrations in an aquifer, which can then be used to set post-operational concentration limits; LBP-15-16, 81 NRC 659 (2015) Commission-approved background cannot be established until after an ISR license has been issued; LBP-15-3, 81 NRC 91 (2015) purpose of ACLs is to address situations where restoring groundwater to baseline conditions or MCLs would not be practicable; LBP-13-9, 78 NRC 88-89 n.355 (2013) requirements for groundwater restoration standards for ISR mining operations are set forth; LBP-15-3, 81 NRC 113 (2015) three alternative standards for groundwater restoration at ISR facilities are background concentrations, maximum values from chart 5C, or an alternate concentration limit; LBP-13-9, 78 NRC 89 n.355 (2013)

10 C.F.R. Part 40, Appendix A, Criterion 5B(5)(a) no in situ recovery facility has ever requested that all OZ aquifer groundwater hazardous constituents be restored to CAB concentrations or Criterion 5B(5)(b) MCLs, as those are currently defined; LBP-15-3, 81 NRC 129 n.58 (2015) “primary groundwater restoration” is to return the constituent to background levels; LBP-15-3, 81 NRC 114 (2015) subset of the production and injection wells to be drilled within the boundaries of the ISR wellfield is to be used to sample groundwater from the aquifer prior to the commencement of operations to establish hazardous constituent Commission-approved background concentrations; LBP-15-3, 81 NRC 76 (2015)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. Part 40, Appendix A, Criterion 5B(5)(a)-(c)
bounded analysis provided in the final supplemental environmental impact statement, as supplemented in
the record, provides sufficient information about a reasonable range of hazardous constituent
collection values associated with potential post-operational alternate concentration limits so as to
provide an appropriate NEPA assessment of the environmental impacts that will occur if applicant
cannot restore groundwater to primary or secondary limits; LBP-15-3, 81 NRC 153 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5B(5)(b)
EPA drinking water maximum contaminant levels continue to be an accepted groundwater restoration
standard; LBP-15-3, 81 NRC 116 n.46 (2015)

“secondary groundwater restoration” is restoration of constituent levels to the drinking water limits
enumerated in Appendix A, Table 5C; LBP-15-3, 81 NRC 114 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5B(5)(c)
claim that alternate concentration limit could not be accurately generated until the post-operational
decommissioning process did not account for the possible creation of a bounded analysis based on the
historical experience at other ISR sites; LBP-13-10, 78 NRC 137 (2013)

contention asserting that because no previous ISL/ISR mining operation has been able to restore
groundwater to baseline standards, applicant will be required to request that the Commission set an
alternate concentration limit for aqueous contaminants is admissible; LBP-12-3, 75 NRC 196 (2012)

contention that FSEIS fails to analyze environmental impacts that will occur if applicant cannot restore
groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 111 (2015)

NRC regulations explicitly allow the use of alternate concentration limits for hazardous constituents;

restoration to an alternate concentration limit is permitted only when restoration to a primary or the
secondary Table 5C standard is not practically achievable; LBP-15-3, 81 NRC 114 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5B(6)
restoration to an alternate concentration limit is permitted only when restoration to a primary or the
secondary Table 5C standard is not practically achievable; LBP-15-3, 81 NRC 114 (2015)

to have an alternate concentration limit approved, licensee must demonstrate that the hazardous constituent
value is as low as reasonably achievable, after considering practicable corrective actions, and that the
constituent will not pose a substantial present or potential hazard to human health or the environment as
long as the ACL is not exceeded; LBP-15-3, 81 NRC 114 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5B(6)(a)(i)-(x)
nineteen factors must be considered in making the “present and potential hazard” finding requisite to
Commission approval of an alternate concentration limit; LBP-15-3, 81 NRC 114 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5C
EPA drinking water maximum contaminant levels continue to be an accepted groundwater restoration
standard; LBP-15-3, 81 NRC 116 n.46 (2015)

10 C.F.R. Part 40, Appendix A, Criterion 5G(2)
contention that materials license amendment application fails to provide sufficient information regarding
the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 23
(2014)

regulation refers to safety criteria that apply to applicants and licensees and is not relevant to the NEPA
review; LBP-13-9, 78 NRC 109 (2013)

10 C.F.R. Part 40, Appendix A, Criterion 7
activities associated with, and the data coming from, prelicensing groundwater monitoring activities are
associated with compliance with the dictates of this regulation; LBP-15-3, 81 NRC 75 n.2 (2015)

applicant must establish a prelicensing monitoring program that is used to provide complete baseline data
on the in situ recovery site and its environs; LBP-15-3, 81 NRC 89 (2015); LBP-15-16, 81 NRC 659
(2015)

applicant must provide complete baseline data on a milling site and its environs; LBP-15-16, 81 NRC 660
(2015)

applicant’s monitoring program for establishing existing site characterization baseline values for certain
site groundwater constituents prior to issuance of a sources materials license for ISR facility construction
and operation need not, to comply with NEPA and NRC’s Part 51 implementing regulations, be
conducted so as to also provide background information needed to set Appendix A, Criterion 5B groundwater protection standards; LBP-15-3, 81 NRC 111 (2015)
contention alleging that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is decided; LBP-15-16, 81 NRC 659-60 (2015)
nothing in this criterion precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in an applicant’s prelicensing program were adequate to provide the necessary information to properly characterize the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 92 (2015)
to comply with NEPA and Part 51 implementing regulations, applicant’s prelicensing monitoring program for site characterization is not required to be conducted so as to provide information needed to set Appendix A, Criterion 5B groundwater protection standards; in accord with an Appendix A, Criterion 7A preoperational license condition-based monitoring program; LBP-15-3, 81 NRC 153 (2015)
10 C.F.R. Part 40, Appendix A, Criterion 7A
licensee shall establish a detection monitoring program needed for NRC to set the site-specific groundwater protection standards in paragraph 5B(1) of this appendix, and the monitoring program must be in place when specified by NRC in license conditions; LBP-15-3, 81 NRC 91 (2015)
nothing in this criterion precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to properly characterize the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 92 (2015)
post-licensing, preoperational activities conducted to comply with this Criterion are associated with compliance with the dictates of this regulation; LBP-15-3, 81 NRC 75 n.2 (2015)
10 C.F.R. Part 40, Appendix A, Criterion 9
financial surety arrangements must be established by each mill operator before the commencement of operations to ensure that sufficient funds will be available to carry out the decontamination and decommissioning of the mill and site and for the reclamation of any tailings or waste disposal areas; LBP-15-15, 81 NRC 615 n.116 (2015)
10 C.F.R. Part 50
stringent safety requirements apply to the construction and operation of reactor spent fuel pools and independent spent fuel storage installations; CLI-15-4, 81 NRC 240 (2015)
10 C.F.R. 50.2
“applicant” means a person or entity applying for a license; LBP-14-7, 79 NRC 476 (2014)
current licensing basis includes plant-specific design-basis information as documented in the most recent final safety analysis report; LBP-11-21, 74 NRC 130 (2011)
“decommissioning” is defined; LBP-15-28, 82 NRC 236 n.13 (2015)
“design bases” refers to information that identifies the specific functions to be performed by an SSC of a facility and the specific values or ranges of values chosen for controlling parameters as reference bounds for design; DD-15-11, 82 NRC 369 (2015); LBP-12-24, 76 NRC 538 (2012)
nuclear reactor is an apparatus, other than an atomic weapon, designed or used to sustain nuclear fission in a self-supporting chain reaction; DD-13-3, 78 NRC 581 (2013)
“permanent cessation of operations” for a nuclear power reactor facility is defined as a certification by a licensee to the NRC that it has permanently ceased or will permanently cease reactor operations; LBP-15-4, 81 NRC 170 n.77 (2015)
“permanent fuel removal” from a nuclear power reactor facility is defined as a certification by the licensee to the NRC that it has permanently removed all fuel assemblies from the reactor vessel; LBP-15-4, 81 NRC 170 n.77 (2015)
production and utilization facilities are defined; LBP-12-19, 76 NRC 191 n.31 (2012)
production and utilization facilities include nuclear power reactors; LBP-11-25, 74 NRC 390 n.58 (2011)
utilization facilities include commercial nuclear power reactors; LBP-13-7, 77 NRC 328 n.34 (2013)
10 C.F.R. 50.9(a)
applicants must provide information that is complete and accurate in all material respects; LBP-15-24, 82 NRC 79, 98 (2015)
information provided to NRC by an applicant must be complete and accurate in all material respects; LBP-11-32, 74 NRC 668 n.31 (2011)

10 C.F.R. 50.9(b)
applicants shall notify NRC of information identified by applicant as having, for the regulated activity, a significant implication for public health and safety or common defense and security; LBP-11-32, 74 NRC 668 n.31 (2011)

10 C.F.R. 50.10
determination the Commission must make is whether NRC Staff review of a limited work authorization has been adequate to support the findings found in this section; CLI-12-2, 75 NRC 74 (2012)
limited work authorization rule narrowed the scope of activities requiring permission from NRC in the form of an LWA by eliminating the concept of commencement of construction formerly described in section 50.10(c) and the authorization formerly described in section 50.10(e)(1); LBP-14-9, 80 NRC 31 (2014)
NEPA’s requirement to discuss alternatives to the proposed action does not extend to the construction of transmission line corridors, because it is not “construction” as defined in the regulation; LBP-11-6, 73 NRC 207 n.63 (2010)

10 C.F.R. 50.10(a)(2)
activities that are no longer considered “construction” are listed; LBP-11-11, 73 NRC 506 n.23 (2011); LBP-11-26, 74 NRC 539 n.14 (2011)

10 C.F.R. 50.10(a)(2)(iii), (vii)
construction of a transmission line is defined as a preconstruction activity; LBP-12-12, 75 NRC 778 (2012)

10 C.F.R. 50.10(a)(2)(vii)
in the 2007 limited work authorization rule, NRC decided that the building of transmission lines to serve a nuclear power plant would no longer be classified as a construction activity and would no longer require authorization from NRC; LBP-14-9, 80 NRC 49 (2014)
limited work authorization rule expressly excludes transmission lines from the delineated construction activities that would require NRC approval before being undertaken; CLI-15-1, 81 NRC 10 n.48 (2015)

10 C.F.R. 50.10(c)
amendment to the definition of construction generally prohibited, absent an NRC construction permit, any clearing of land, excavation, or other substantial action that would adversely affect the natural environment of a site and construction of nonnuclear facilities such as turbogenerators and turbine buildings for use in connection with the facility; LBP-14-9, 80 NRC 29 (2014)
NRC’s broad definition of “construction” in the pre-2007 version of the regulation was originally added to Part 50 because of the interpretation that enactment of NEPA required NRC to expand its permitting/licensing authority; LBP-14-9, 80 NRC 53 (2014)

10 C.F.R. 50.10(d)
certain “construction” activities are allowed at a reactor site pursuant to a limited work authorization as long as a site redress plan is submitted; LBP-11-11, 73 NRC 507 (2011)

10 C.F.R. 50.10(e)(iii)-(iv)
scope of Commission examination of the adequacy of NRC Staff’s safety review of a limited work authorization application is described; CLI-12-2, 75 NRC 75 (2012)

10 C.F.R. 50.10(g)
certain “construction” activities are allowed at a reactor site pursuant to a limited work authorization as long as a site redress plan is submitted; LBP-11-11, 73 NRC 507 (2011)

10 C.F.R. 50.12
for there to be any statutory right to a hearing on the granting of a rule exemption, such a grant must be part of a proceeding for the granting, suspending, revoking, or amending of any license or construction permit under the Atomic Energy Act; CLI-13-1, 77 NRC 10 n.37 (2013)
rule exemption requests that do not involve special circumstances must be denied as a matter of law; CLI-13-1, 77 NRC 16, 35 n.188 (2013)

10 C.F.R. 50.12(a)(1)
exemption from a regulation will be granted when the request is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security; LBP-11-10, 73 NRC 451 n.158 (2011)
exemption from a regulation will be granted if application of the regulation in the particular circumstances conflicts with other NRC rules or requirements, would not serve or is not necessary to achieve the underlying purpose of the rule, would result in undue hardship or other costs, would not benefit public health and safety, would provide only temporary relief, or there is present any other material circumstance not considered when the regulation was adopted; LBP-11-10, 73 NRC 451 n.158 (2011)

because current levels of emergency planning are required by regulation, licensee cannot make changes contemplated in its license amendment request without first receiving certain regulatory exemptions; LBP-15-18, 81 NRC 795 (2015)
demonstration that application of a regulation is not necessary to achieve its underlying purpose is listed as a special circumstance warranting an exemption; CLI-12-9, 75 NRC 448 (2012)
exemption should be granted if special circumstances exist, such as when compliance is not necessary to satisfy the purpose of the regulations from which an exemption is sought; LBP-12-6, 75 NRC 270 (2012)
exemption may be appropriate where there is present any circumstance that was not considered by NRC when it promulgated the pertinent regulation in the first place; LBP-12-6, 75 NRC 270 (2012)
operating license application may incorporate any pertinent info submitted with application for construction permit; LBP-12-24, 76 NRC 518 n.69 (2012)
denial of license transfer applications typically is on grounds of operating costs and inability to pay the annual cost for spent fuel storage; CLI-14-5, 79 NRC 260 (2014)
general information required for a license transfer application is provided in this regulation; CLI-14-5, 79 NRC 260 n.32 (2014)
limited scope of review called for under Part 54, renewal of a license for a research reactor, is essentially a fresh operating license review; CLI-11-11, 74 NRC 436 n.47 (2011)
electric utility applicant for an operating license is exempt from a financial qualifications review; DD-15-8, 82 NRC 110 (2015)
license transfer applicant must show that the proposed transferee has the financial qualifications to carry out activities for which the license is sought; CLI-15-26, 82 NRC 411 (2015)
source of funds for operating and maintenance expenses would be unaffected by a transaction for decommissioning funding; CLI-11-4, 74 NRC 7 n.30 (2011)
apPLICANT must submit information that demonstrates that it possesses or has reasonable assurance of obtaining funds necessary to cover estimated operating costs for the period of the license; CLI-15-8, 81 NRC 506 n.48, 508-09 (2015)
five years of financial revenue-and-expense estimates must be submitted as part of a license transfer application; CLI-15-26, 82 NRC 409-10 (2015)
license transfer applicant must submit estimates for total annual operating costs for each of the first 5 years of facility operation; CLI-15-8, 81 NRC 509 n.65 (2015)
Commission decision does not foreclose NRC Staff's ability to request additional information on any part of the license transfer application; CLI-15-26, 82 NRC 412 n.33 (2015)
NRC has authority to request that an established or newly formed entity submit additional or more detailed information respecting its financial arrangements and status of funds; DD-15-8, 82 NRC 111 (2015)
emergency planning zones are approximately a 10-mile radius around a reactor unit as adjusted to reflect the road network and land use; CLI-12-9, 75 NRC 458 (2012)
10 C.F.R. 50.33(k)  
licensees must submit, with each operating license application, certification specifying how financial 
assurance for decommissioning will be provided; DD-15-8, 82 NRC 111 (2015)

10 C.F.R. 50.33(k)(1)  
license transfer applicant must show reasonable assurance of sufficient funds to decommission the facility; 
CLI-15-8, 81 NRC 505 (2015)

10 C.F.R. 50.34  
construction permit applications must include the principal design criteria for a proposed facility, describe 
design bases and their relationship of to the principal design criteria in the preliminary safety analysis report; DD-13-3, 78 NRC 577 (2013)

limited scope of review called for under Part 54, renewal of a license for a research reactor, is essentially 
a fresh operating license review; CLI-11-11, 74 NRC 436 n.47 (2011)

10 C.F.R. 50.34(a)(3)(i)  
applicant for a construction permit must include the principal design criteria for a proposed facility and 
the relationship of the design bases to the PDC as part of the preliminary safety analysis report; 

10 C.F.R. 50.34(b)  
operating license applicant must present the design bases of the facility and safety analyses of the facility 
as a whole in the final SAR; DD-15-11, 82 NRC 365 (2015)

10 C.F.R. 50.34(b)(4)  
contention that final safety analysis report is deficient because it does not include information provided in 
apPLICANT’S seismic evaluation process report is rejected; LBP-15-14, 81 NRC 593 (2015)

final safety analysis report must take into account any pertinent information developed since the submittal 
of the preliminary safety analysis report; LBP-15-14, 81 NRC 593 (2015)

10 C.F.R. 50.34(a)  
combined license application must identify the means for keeping levels of radioactive material in 
efluentes to unrestricted areas as low as is reasonably achievable; LBP-11-6, 73 NRC 245 (2010)

10 C.F.R. 50.36  
criteria for limiting conditions for operation address aspects of reactor operation that contribute to 
prevention of accidents and provide the capability to immediately mitigate accidents; DD-13-3, 78 NRC 
576-77 (2013)

criteria to be used in determining what items must be included in technical specifications are identified; 
LBP-13-7, 77 NRC 330 n.37 (2013)

if petitioner wishes to pursue its concerns about the safety of relocating certain surveillance frequencies 
generically, it may, at any time, file a petition for rulemaking to amend the regulation; CLI-13-10, 78 
NRC 569 (2013)

NRC revised this rule in 1995 and established clearer criteria as to what constitutes a technical 
specification that must be in the license; LBP-12-25, 76 NRC 550 (2012)

technical specifications are those technical requirements that are incorporated in an NRC license; 
LBP-12-25, 76 NRC 549 n.21 (2012)

technical specifications derived from the analyses and evaluations included in the safety analysis report 
are required; DD-13-3, 78 NRC 575 (2013)

technical specifications must include limits for safety system settings and control settings, limiting 
conditions for operation, surveillance requirements, design features, and administrative controls; 
DD-13-3, 78 NRC 575 (2013)

10 C.F.R. 50.36(b)  
NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse 
environmental impacts that might otherwise be caused by the construction or operation of a nuclear 
power plant; LBP-14-9, 80 NRC 49 (2014)

10 C.F.R. 50.36(c)(1)(i)(A)  
safety limits for nuclear reactors are limits on important process variables that are found to be necessary 
to reasonably protect the integrity of the physical barriers that guard against the uncontrolled release of 
radioactivity; DD-13-3, 78 NRC 575, 580 (2013)
10 C.F.R. 50.36(c)(2)
limiting conditions for operation are the lowest functional capability or performance levels of equipment
required for safe operation of the facility; DD-13-3, 78 NRC 575 (2013)

10 C.F.R. 50.36(c)(2)(ii)
technical specifications for limiting conditions for operation of a nuclear reactor must be established for
each item meeting one or more of the four criteria specified in this regulation; DD-13-3, 78 NRC 576, 582 (2013)

10 C.F.R. 50.36(c)(3)
surveillance requirements relate to test, calibration, or inspection to ensure that the necessary quality of
systems and components is maintained, that facility operation will be within safety limits, and that the
limiting conditions for operation will be met for certain structures, systems, and components; CLI-13-10,
78 NRC 565 n.6 (2013)

10 C.F.R. 50.36(c)(4)
design features to be included in the technical specifications are those features of the facility such as
materials of construction and geometric arrangements, which, if altered or modified, would have a
significant effect on safety and are not covered by other TSs; DD-13-3, 78 NRC 576 (2013)

10 C.F.R. 50.36(a) & (b)
NRC is clearly authorized to require licensees to protect the environment and to prevent them from
causing adverse environmental impacts; LBP-13-4, 77 NRC 217 (2013)

10 C.F.R. 50.38
absent a transfer, license renewal application will be denied where licensee remains under foreign
ownership, control, or domination; CLI-14-5, 79 NRC 256 (2014)

contention alleging that statutory and regulatory prohibitions on foreign ownership, control, or domination
forbid the licensing of proposed units is decided; LBP-14-3, 79 NRC 271, 272, 273, 278, 281, 300, 314
(2014)

10 C.F.R. 50.38
any alien or any corporation or other entity that the Commission knows or has reason to believe is
owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government is ineligible
to apply for and obtain a license; CLI-13-4, 77 NRC 102-03 n.1 (2013); CLI-15-7, 81 NRC 482, 485,
486 n.29, 491 (2015); LBP-11-25, 74 NRC 391 (2011); LBP-12-19, 76 NRC 191 (2012)

applicants are ineligible to obtain a license because they fail to meet the requirements of the AEA and
NRC regulations regarding foreign ownership; LBP-12-22, 76 NRC 443 (2012)

combined license will not be issued where applicants are 100% owned by a foreign corporation, which is
85% owned by the French government, and the foreign corporation has the power to exercise
ownership, control, or domination over applicants, and the Negation Action Plan submitted by applicants
does not negate this situation; LBP-12-19, 76 NRC 188 (2012)

connection of the three prohibitions on foreign ownership with the conjunction “or” rather than “and”
shows that a license may not be granted if any of the three prohibitions is violated; LBP-12-19, 76
NRC 195-96 (2012)

foreign-owned, -controlled, or -dominated entity is ineligible to apply for, let alone obtain, a combined
license; LBP-11-25, 74 NRC 394-95 (2011); LBP-12-19, 76 NRC 201 (2012)

10 C.F.R. 50.40
considerations that NRC should review for grant of a license amendment are defined in this regulation;
LBP-15-17, 81 NRC 778 (2015)

in determining whether a license amendment, construction permit, or early site permit will be issued to
applicant, common standards of this regulation are applied; LBP-15-20, 81 NRC 841 (2015)

10 C.F.R. 50.40(a)
there must be reasonable assurance that the activities at issue will not endanger the health and safety of
the public; CLI-15-22, 82 NRC 316 n.44 (2016)

10 C.F.R. 50.43(a)(3)
notice of combined license applications must be published in the Federal Register for 4 consecutive
weeks; CLI-12-2, 75 NRC 74 n.46 (2012)

10 C.F.R. 50.44
measures for combustible gas control for nuclear power reactors are discussed; DD-13-1, 77 NRC 352,
353-54 (2013)
10 C.F.R. 50.47
emergency plans are approved by the NRC and FEMA and are updated on an ongoing basis; CLI-15-6, 81 NRC 378 (2015)

10 C.F.R. 50.47(a)(1)(i)
license amendment requests do not require an updated or separate emergency plan unless such a plan would be germane to the type of license amendment request under review or is part of a licensee’s periodic update of emergency plans; LBP-11-29, 74 NRC 622 (2011)

no finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency is necessary for issuance of a renewed nuclear power reactor operating license; CLI-15-6, 81 NRC 377 (2015); LBP-11-29, 74 NRC 622-23 (2011); LBP-13-13, 78 NRC 539 (2013)
nuclear power reactors must have emergency plans in place to respond to accidents despite the fact that Table B-1 within 10 C.F.R. Part 51 concludes that the environmental impacts of both design basis and severe accidents at a nuclear reactor are small for all plants; LBP-13-13, 78 NRC 542 (2013)

10 C.F.R. 50.47(a)(1)(ii)
before issuing a combined license, NRC must conclude that there is reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-11-6, 73 NRC 227 (2010)

10 C.F.R. 50.47(a)(2)
in any NRC licensing proceeding, a FEMA finding will constitute a rebuttable presumption on questions of adequacy and implementation ability of state and local emergency plans; LBP-11-6, 73 NRC 227 (2010); LBP-15-4, 81 NRC 175 n.107 (2015)

NRC Staff considers FEMA’s findings on emergency plans in making its necessary finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; CLI-12-9, 75 NRC 456 (2012)
offsite emergency plans are reviewed biennially by NRC and the Federal Emergency Management Agency in a comprehensive emergency preparedness exercise; CLI-15-6, 81 NRC 377 (2015)

10 C.F.R. 50.47(b)
emergency planning zones are approximately a 10-mile radius around a reactor unit as adjusted to reflect the road network and land use; CLI-12-9, 75 NRC 458 (2012)
licensee is prohibited from simply disconnecting its ERDS when the reactor is powered down during decommissioning; LBP-15-4, 81 NRC 178-79 (2015)

proposed staffing changes meet emergency plan standards and provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency commensurate with credible accidents in the permanently shutdown and defueled condition; CLI-15-20, 82 NRC 220 (2015)

10 C.F.R. 50.47(b)(2), (4), (5)
licensee’s obligation to provide emergency planning data is discussed; LBP-15-4, 81 NRC 180 (2015)

10 C.F.R. 50.47(b)(6)
adequate provisions must exist for prompt communications among principal response organizations to emergency personnel and to the public; LBP-15-4, 81 NRC 180 (2015)

licensee’s obligation to provide emergency planning data is discussed; LBP-15-4, 81 NRC 180 (2015)

10 C.F.R. 50.47(b)(9)
licensee’s obligation to provide emergency planning data is discussed; LBP-15-4, 81 NRC 180 (2015)

10 C.F.R. 50.47(b)(10)
contention that, in the event of a core-melt accident, applicant’s emergency plan should order an evacuation of persons within a 10-mile radius of the facility attacks this emergency planning regulation; LBP-11-15, 73 NRC 638 (2011)
sheltering must be considered in developing the recommended range of protective actions in an emergency plan; LBP-11-6, 73 NRC 232 n.96 (2010)

10 C.F.R. 50.47(c)(2)
NRC provides for a plume exposure pathway emergency planning zone and an ingestion exposure pathway EPZ around nuclear power plants in the event of a nuclear accident; LBP-11-15, 73 NRC 640 (2011)
NRC’s safety regulations cover a 50-mile planning area; LBP-14-4, 79 NRC 375 n.74 (2014)
to the extent petitioner seeks to raise a generic challenge to the 10-mile plume exposure pathway EPZ, such an argument constitutes an impermissible challenge to this regulation; LBP-11-15, 73 NRC 642 n.22 (2011)

10 C.F.R. 50.47(e)

holder of a combined license for a newly built reactor may not load fuel or operate except as provided in accordance with Appendix E; LBP-15-4, 81 NRC 171 (2015)

10 C.F.R. 50.48

safety contention challenging aging management of electrical transformers does not include transformer support structures; LBP-13-13, 78 NRC 403 n.1085 (2013)

10 C.F.R. 50.48(b)

unapproved operator manual actions represent potential noncompliances; DD-12-3, 76 NRC 423 (2012)

10 C.F.R. 50.49

cables important to safety must be designed to meet their intended function for the environment that they are subjected to and if cables have been exposed to conditions for which they are not designed, licensees must demonstrate, through testing or monitoring, reasonable assurance that the cables can perform their intended design function for the licensed operating term; DD-13-2, 78 NRC 190 (2013)

cables subject to the environmental qualification standards of this regulation are cables that are important to the safety of a nuclear power plant and are required to function during an accident when exposed to harsh environmental conditions; LBP-13-13, 78 NRC 377 (2013)

design-basis events are defined; DD-15-11, 82 NRC 369 (2015)

environmentally qualified cable is defined; LBP-13-13, 78 NRC 377 (2013)

licensees must ensure that electrical cables are designed to function in environmental conditions during normal operation and during accidents; DD-13-2, 78 NRC 189 (2013)

licensees must establish an environmental qualification program for electrical equipment important to safety that would be exposed to harsh environmental conditions expected to develop as a result of design-basis accidents; DD-15-11, 82 NRC 364, 368 (2015)

particular requirements for the environmental qualification of electric components important to safety for nuclear power plants are set forth; CLI-12-10, 75 NRC 490 n.49 (2012)

10 C.F.R. 50.49(a)

licensees are required to establish a program for qualifying certain defined electric equipment; LBP-11-20, 74 NRC 111 (2011)

10 C.F.R. 50.49(b)

safety-related electric equipment that must be environmentally qualified is described; LBP-11-20, 74 NRC 111 (2011)

10 C.F.R. 50.49(c)

electric equipment important to safety but located in a mild environment does not fall within the scope of this rule; CLI-12-10, 75 NRC 490 n.49 (2012)

environmental qualification of electric equipment important to safety located in an environment that would at no time be significantly more severe than the environment that would occur during normal plant operation is not included within the scope of this section; LBP-11-20, 74 NRC 112 (2011)

mild environment would at no time be significantly more severe than the environment that would occur during normal plant operation, including anticipated operational occurrences; CLI-12-10, 75 NRC 490 n.49 (2012)

requirements to establish an environmental qualification program do not apply to equipment in a mild environment; DD-15-11, 82 NRC 368 (2015)

10 C.F.R. 50.49(d)

licensees have identified, and NRC has accepted, lists of equipment important to safety subject to environmental qualification; DD-15-11, 82 NRC 369 (2015)

10 C.F.R. 50.49(e)

environmental qualification program must include and be based on temperature and pressure, humidity, submergence (if the equipment could be subject to submergence) that could result from a design-basis accident, chemical effects, aging, synergistic effects, and margins; DD-15-11, 82 NRC 369 (2015)
10 C.F.R. 50.51(a) time frame for SAMA analysis is inherent in NRC’s regulatory scheme, which provides for a 40-year license term, with the possibility of license renewal for an additional 20-year period; CLI-13-7, 78 NRC 214 n.81 (2013)

10 C.F.R. 50.54(a) licensee must implement managerial and administrative controls to ensure safe operation through implementation of the facility’s quality assurance program; DD-13-3, 78 NRC 577 (2013)

10 C.F.R. 50.54(bb) licensees must submit for NRC approval their plans to manage spent fuel after the permanent cessation of reactor operation; CLI-15-4, 81 NRC 240 (2015)

10 C.F.R. 50.54(f) as part of the NRC post-Fukushima lessons-learned activities, NRC is requiring all licensees to reevaluate seismic hazards at their sites, and to this end, issued a request for information; DD-15-1, 81 NRC 197 (2015) flood hazard reevaluations being performed pursuant to a request for information are beyond the current design/licensing basis of operating plants; DD-15-4, 81 NRC 872 (2015) NRC addressed concerns about flooding at GE Mark I and II boiling water reactors through a request for information; DD-15-1, 81 NRC 200 (2015)

NRC’s post-Fukushima lessons learned and information-gathering process authorizes NRC to collect information from licensees to determine whether licenses should be modified, suspended, or revoked; LBP-15-27, 82 NRC 187 (2015) petitioner’s request that the NRC take escalated enforcement action against licensee concerning flooding protection is being addressed by NRC’s request for information; DD-15-5, 81 NRC 879-80, 881 (2015) request for information instructed all licensees to reevaluate seismic hazards at their sites using updated seismic hazard information, present-day guidance and methodologies, and a risk evaluation; DD-15-6, 81 NRC 888 (2015) request that NRC order licensees to determine and implement required staff to fill all necessary positions for responding to a multunit event until rulemaking is complete is addressed; DD-14-2, 79 NRC 495 (2014) request that NRC order licensees to perform seismic and flood protection walkdowns to identify and address plant-specific vulnerabilities and verify the adequacy of monitoring and maintenance for protection features such as watertight barriers and seals in the interim period until longer-term actions are completed to update the design basis for external events is addressed; DD-14-2, 79 NRC 493 (2014) request that NRC order licensees to reevaluate seismic and flooding hazards at their sites against current NRC requirements and guidance, and if necessary, update the design basis and structures, systems, and components important to safety to protect against the updated hazards is addressed; DD-14-2, 79 NRC 498 (2014) request under this section is to enable the Commission to determine whether or not the license should be modified, suspended, or revoked; CLI-15-14, 81 NRC 737 (2015) seismic hazard reevaluations of all nuclear power reactors are not de facto license amendments because they do not amend any facility’s license; LBP-15-27, 82 NRC 192 (2015)

10 C.F.R. 50.54(hh) extensive damage mitigation guidelines are intended to guide onsite emergency actions and they include guidance and strategies intended to maintain or restore core cooling and containment and spent fuel pool cooling capabilities under the circumstances associated with the loss of large areas of the plant due to fire or explosion; LBP-12-18, 76 NRC 150 (2012)

10 C.F.R. 50.54(hh)(2) apparent gaps in this regulation are outlined; LBP-11-21, 74 NRC 139-40 (2011) challenge to applicant’s compliance with this section falls outside the scope of a license renewal proceeding; LBP-11-21, 74 NRC 131 (2011) challenges to this provision are neither germane to age-related degradation nor unique to the license renewal period; LBP-11-21, 74 NRC 130 (2011) current reactor licensees comply with the requirements of this section through conditions on their operating licenses; LBP-11-21, 74 NRC 131 (2011)
evaluation of existing dose projection models or a dose assessment are not required; CLI-11-9, 74 NRC 244 (2011)
licensees must develop and implement guidance and strategies intended to maintain or restore core
cooling, containment, and spent fuel pool cooling capabilities under the circumstances associated with
loss of large areas of the plant due to explosions or fire; CLI-11-5, 74 NRC 149 n.14 (2011);
CLI-12-2, 75 NRC 100 (2012); DD-15-11, 82 NRC 375 (2015)
request that NRC order licensees to provide reasonable protection for equipment from the effects of
design-basis external events and to add equipment as needed to address multunit events while other
requirements are being revised and implemented is addressed; DD-14-2, 79 NRC 491 (2014)
severe accident mitigative strategy requirements for licensees are set forth; CLI-11-9, 74 NRC 238 (2011)
this section applies to both current reactor licensees under Part 50 and new applicants for licenses under
Part 52; LBP-11-21, 74 NRC 130 (2011)
this section requires use of readily available resources and identification of potential practicable areas for
the use of beyond-readily-available resources, indicating NRC’s preference for practicability; CLI-11-9,
74 NRC 243 n.57 (2011)
10 C.F.R. 50.54(o)
primary reactor containments are subject to the requirements 10 C.F.R. Part 50, Appendix J; LBP-15-26,
82 NRC 168 (2015)
10 C.F.R. 50.54(q)
licensee must maintain an emergency plan, review it annually through an independent reviewer, and
conduct periodic exercises to measure the plan’s effectiveness; CLI-15-6, 81 NRC 377 (2015)
relocation of a technical support center requires separate NRC approval; CLI-12-9, 75 NRC 456 (2012)
10 C.F.R. 50.54(q)(1)(iii)
reduction in emergency plan effectiveness means a reduction in licensee’s capability to perform an
emergency planning function in the event of a radiological emergency; CLI-15-20, 82 NRC 219 n.55
(2015)
10 C.F.R. 50.54(q)(1)(iv)
evacuation plan as changed must continue to meet the requirements in Part 50, Appendix E and the
standards in section 50.47(b); CLI-15-20, 82 NRC 219 (2015).
licensee changes to its emergency plan must not reduce the effectiveness of the plan; CLI-15-20, 82 NRC
219 (2015)
10 C.F.R. 50.54(q)(2)
all Part 50 licensees must meet emergency planning requirements, regardless of whether the facility is
operating or has been permanently shut down and decontaminated; LBP-15-18, 81 NRC 796 n.16 (2015)
holder of a license under Part 50, or a combined license under Part 52, shall follow and maintain the
effectiveness of an emergency plan that meets the requirements in Appendix E to Part 50; LBP-15-4,
81 NRC 171 n.87 (2015)
10 C.F.R. 50.54(q)(3)
licensee does not have the discretion to remove the emergency response data system without first
performing and meeting the two-part screening test in this section; CLI-15-20, 82 NRC 228 (2015)
licensee may change its emergency plan without prior NRC approval if licensee completes and retains an
analysis demonstrating that the revised emergency plan satisfies a two-part test; CLI-15-20, 82 NRC 219
(2015)
licensee may revise an emergency plan without prior NRC approval if the screening criteria are met;
CLI-15-20, 82 NRC 228-29 (2015)
licensees whose emergency plan describes emergency response data system or its use during an
emergency would need to process a change to their emergency plans; CLI-15-20, 82 NRC 219 (2015)
to discontinue the ERDS link, analysis showing that such a change does not reduce the plan’s
10 C.F.R. 50.54(x)
licensee may take reasonable action that departs from a license condition or a technical specification in an
emergency when the action is immediately needed to protect the public health and safety and no action
consistent with license conditions and technical specifications that can provide adequate or equivalent
protection is immediately apparent; DD-11-6, 74 NRC 423 (2011)
10 C.F.R. 50.55a applicants must implement the edition and addendum of the ASME Code for Operation and Maintenance of Nuclear Plants, incorporated by reference in this section, 12 months before fuel loading; CLI-12-2, 75 NRC 92 (2012)
ASME Code for Operation and Maintenance of Nuclear Power Plants is incorporated by reference; CLI-12-9, 75 NRC 461 (2012); CLI-15-13, 81 NRC 578-79 (2015)
10 C.F.R. 50.55a(b)(2) latest edition and addenda of the ASME Boiler and Pressure Vessel Code has been incorporated by reference; LBP-15-20, 81 NRC 834 n.8 (2015)
10 C.F.R. 50.55a(b), 50.55a(g)(4) this section on inservice inspections incorporates by reference the requirements of section XI of the ASME Boiler and Pressure Vessel Code; CLI-11-8, 74 NRC 230 (2011)
10 C.F.R. 50.55a(f)(4) even if licensee chooses to satisfy a license condition by incorporating the condition into its IST program, it still must comply with this section throughout the life of the plant; CLI-12-9, 75 NRC 464 (2012)
10 C.F.R. 50.55a(f)(4)(i) after the rulemaking is completed, licensees for new reactors will be required to comply with the ASME code preservice and inservice surveillance provisions for squib valves; CLI-15-13, 81 NRC 579 (2015)
10 C.F.R. 50.55a(g)(4) inservice visual inspection of containment system must comply with ASME Boiler and Pressure Vessel Code Section XI; LBP-15-26, 82 NRC 170-71 n.11 (2015)
10 C.F.R. 50.57(a)(3) Commission must find that activities authorized by a license amendment can be conducted without endangering the health and safety of the public and will be in compliance with Commission regulations; LBP-15-20, 81 NRC 841 (2015)
contention about a matter not covered by a specific rule need only allege that the matter poses a significant safety problem; LBP-15-17, 81 NRC 787 (2015); LBP-15-20, 81 NRC 847-48, 854 n.151 (2015)
licensee is prohibited from simply disconnecting its ERDS when the reactor is powered down during decommissioning; LBP-15-4, 81 NRC 178-79 (2015)
there must be reasonable assurance that the activities at issue will not endanger the health and safety of the public; CLI-15-22, 82 NRC 316 n.44 (2016)
10 C.F.R. 50.57(a)(3)(i) perfection in plant construction and the facility construction quality assurance program is not a precondition for a license under either the Atomic Energy Act or NRC regulations; LBP-14-7, 79 NRC 471 (2014)
10 C.F.R. 50.58(b)(5) no significant hazards consideration determination permits NRC to make an authorized license amendment effective immediately rather than awaiting the outcome of an adjudicatory challenge; LBP-15-26, 82 NRC 172 n.14 (2015)
10 C.F.R. 50.58(b)(6) apart from discretionary review by the Commission, NRC Staff’s no significant hazards consideration determination under section 50.92(c) may not be contested; LBP-15-26, 82 NRC 178 & n.30, 180 (2015)
no petition or other request for review of or hearing on the NRC Staff’s significant hazards determination will be entertained by the Commission; LBP-13-11, 78 NRC 181 n.18 (2013)
no significant hazards consideration determination is a procedural decision barred from litigation; LBP-15-13, 81 NRC 477 (2015); LBP-15-17, 81 NRC 790 (2015)
10 C.F.R. 50.59 actions taken by licensee under this regulation do not give rise to hearing rights under the AEA; LBP-15-27, 82 NRC 195-96 (2015)
admissibility of contention that a license amendment will be required for licensee to update and maintain accurate design basis documents is decided; CLI-15-5, 81 NRC 336-37 (2015)
admissibility of contention that licensee is undertaking modifications for protection against severe flooding in the event of upstream dam failures that will require a license amendment is decided; CLI-15-5, 81 NRC 335 (2015)

although licensee can change from one proven test to another without prior NRC approval, it would need to follow the screening process under this section to ensure that it doesn’t affect safety of the plant; LBP-13-13, 78 NRC 391 (2013)

any changes to the facility as described in the final safety analysis report must be either submitted to the NRC for approval through a license amendment or changed in accordance with the provisions of this section; DD-11-3, 73 NRC 385 (2011)

applicant can only make a change in its procedures if screening demonstrates that this regulation does not apply or if the review under this regulation demonstrates that there are no remaining unreviewed safety questions; LBP-13-13, 78 NRC 365, 387 (2013)

applicant’s commitment in the updated final safety analysis report cannot be changed without NRC Staff oversight and, specifically, evaluation of the eight criteria listed in this regulation; LBP-13-13, 78 NRC 363-64 (2013)

challenges to licensee actions taken under this regulation may only be taken by means of a petition for enforcement action under 10 C.F.R. 2.206; CLI-15-5, 81 NRC 337 (2015)

contention that steam generator replacement project be deemed an experiment and that an adjudicatory public hearing be convened for independent analysis of the project before it is implemented is inadmissible; LBP-13-11, 78 NRC 179-80 (2013)

degree to which this section applies is controlled not by how a modification is labeled but by whether the substance of the change brings that revision within the confines of this section; LBP-12-25, 76 NRC 552 n.23 (2012)

except where the Commission determines that a discretionary hearing is warranted, section 2.206 provides the means to challenge licensee actions under this section; CLI-12-20, 76 NRC 439 n.10 (2012)

if a different state-of-the-art test is developed prior to the time of the actual testing, applicant is allowed the flexibility to use the state-of-the-art test, subject to a prescreening for whether NRC approval is required; LBP-13-13, 78 NRC 392 (2013)

if licensee is unable to operate a reactor in strict accordance with its license, it must seek authorization from NRC for a license amendment; LBP-13-7, 77 NRC 331 (2013)

licensee must obtain a license amendment from NRC if a change to its facility triggers the safety standards described in this section; LBP-13-7, 77 NRC 318 (2013)

licensee will determine whether any proposed changes to the plant, procedures, license, or licensing basis associated with its design reconstitution effort require a license amendment; CLI-15-5, 81 NRC 337 (2015)

licensees are allowed to make changes to a facility without obtaining a license amendment if certain criteria are satisfied; CLI-14-11, 80 NRC 168, 179 (2014)

licensees must obtain NRC approval before implementing changes to the facility or facility procedures that do not meet certain criteria; DD-13-3, 78 NRC 577-78 (2013)

licensing board used the criteria of this section as an analytical tool to address the question of whether a confirmatory action letter issued to licensee by NRC Staff constituted a de facto license amendment that would be subject to a hearing opportunity; LBP-13-11, 78 NRC 181 (2013)

licensing boards have no authority to hear challenges to actions taken under this regulation; LBP-13-11, 78 NRC 181 (2013)

members of the public may challenge an action taken under this section only by means of a petition under 10 C.F.R. 2.206; LBP-13-7, 77 NRC 334 (2013); LBP-13-11, 78 NRC 180 (2013)

petitioners’ argument that power reactor is being operated as a test reactor reflects a misreading of the regulations; LBP-15-20, 81 NRC 863 (2015)

request that NRC immediately revoke prior preapproval of the hardened vent system or direct torus vent system at each GE BWR Mark I unit has been addressed by an order modifying licenses with regard to reliable hardened containment vents capable for operation under severe accident conditions; DD-15-1, 81 NRC 198-99 (2015)

request that NRC order licensee to submit a license amendment application for the design and installation of replacement steam generators and for additional enforcement action is moot; DD-15-7, 82 NRC 258-73 (2015)
standards are provided for a licensee to request a license amendment before it may make changes in the facility as described in the updated final safety analysis report; LBP-13-7, 77 NRC 329 (2013)

this regulation is not a process for verifying design adequacy, and required design control measures for verifying adequacy of design are expected to be implemented before entering the section 50.59 process; DD-15-7, 82 NRC 264 (2015)

10 C.F.R. 50.59(a)(6)

any operation of that might result in in-plane vibrations due to fluid elastic instability is inconsistent with the analyses or descriptions in the UFSAR is the type of test or experiment that triggers the obligation to seek a license amendment; LBP-13-7, 77 NRC 343 (2013)

“tests or experiments not described in the UFSAR,” constitute any activity where any structure, system, or component is utilized or controlled in a manner that is either outside the reference bounds of the design bases as described in the UFSAR or inconsistent with the analyses or descriptions in the UFSAR; LBP-13-7, 77 NRC 343 (2013)

10 C.F.R. 50.59(c)

10 C.F.R. 50.59(c)(1)

activities the licensee may pursue without submitting a license amendment request, including certain tests or experiments, are defined; LBP-15-17, 81 NRC 791 (2015)

circumstances under which licensee may make changes to its facility and procedures as described in its updated FSAR and conduct tests or experiments not otherwise described in the UFSAR without obtaining a license amendment are discussed; CLI-12-20, 76 NRC 438-39 n.5 (2012); CLI-14-11, 80 NRC 168 n.3 (2014)

if a procedure is not specifically called out in the updated final safety analysis report, licensee may change it without using the license amendment process described in this regulation; LBP-13-13, 78 NRC 365 (2013)

licensees may make changes in the procedures described in updated final safety analysis report and conduct tests or experiments not otherwise described in the UFSAR, without obtaining a license amendment; CLI-14-4, 79 NRC 250 n.4 (2014)

licensees must periodically update their final safety analysis reports to reflect changes to the facility, make changes in the procedures as described in the UFSAR, and conduct tests or experiments not described in the UFSAR; LBP-13-7, 77 NRC 329 (2013)

10 C.F.R. 50.59(c)(1)(i)

licensee must request a license amendment if the proposed action requires that existing technical specifications be changed; LBP-13-7, 77 NRC 329 (2013)

revisions to technical specifications that are necessary to allow licensee to operate safely with the replacement steam generators after they have been installed require a license amendment; LBP-13-11, 78 NRC 180 (2013)

technical specifications are those technical requirements that are incorporated in an NRC license; LBP-12-25, 76 NRC 549 n.21 (2012)

10 C.F.R. 50.59(c)(2)

changes with respect to components (e.g., steam generators) are permitted without a license amendment under prescribed conditions that assure that the replacement components are sufficiently similar to the original that safety requirements are maintained or improved; LBP-13-7, 77 NRC 339 (2013)

conditions under which licensee must seek a license amendment are specified; LBP-13-7, 77 NRC 330 (2013)

10 C.F.R. 50.59(c)(2)(vii) & (viii)

“design bases” means information that identifies the specific functions to be performed by a structure, system, or component of a facility, and the specific values or ranges of values chosen for controlling parameters as reference bounds for a design; LBP-13-7, 77 NRC 330-31 n.38 (2013)
any operation of that might result in in-plane vibrations due to fluid elastic instability is inconsistent with 
the analyses or descriptions in the UFSAR is the type of test or experiment that triggers the obligation 
to seek a license amendment; LBP-13-7, 77 NRC 343 (2013)
licensee must seek a license amendment before implementing a test or experiment that will result in a 
departure from a method of evaluation described in the updated final safety analysis report used in 
establishing the design basis or in the safety analysis; LBP-13-7, 77 NRC 341 (2013)

failure to provide an appropriate basis for a determination that the change in the method of evaluation did 
not require a license amendment prior to implementing the change constitutes a violation; DD-15-7, 82 
NRC 262 (2015)

licensee must maintain records of changes in the facility made pursuant to section 50.59(c)(1) that include 
a written evaluation that provides the bases for the determination that the change does not require a 
license amendment pursuant to section 50.59(c)(2); CLI-14-11, 80 NRC 169 n.4 (2014)

where there was no reasonable likelihood that a change in the method of evaluation would have required 
a license amendment, the change was a minor violation; DD-15-7, 82 NRC 262 (2015)

neutron radiation embrittlement of reactor pressure vessel walls, decreasing their fracture toughness, is 
discussed; LBP-15-17, 81 NRC 759, 762 (2015)

requirements of this rule are compared with new rule in section 50.61a to predict future reference 
temperatures across the reactor pressure vessel; CLI-15-22, 82 NRC 313 (2016)

surveillance data are continuously integrated into future embrittlement projections; LBP-15-17, 81 NRC 
763 (2015)

if reference values projected at specific areas of the reactor pressure vessel for the end of life of the 
plant surpass the current screening criteria, licensee must submit a safety analysis and obtain NRC 
approval to continue to operate; LBP-15-17, 81 NRC 763 n.37 (2015)

pressurized thermal shock screening criterion is given for plates, forgings, and axial and circumferential 
weld materials; LBP-15-17, 81 NRC 763 (2015)

when the reference temperature of a reactor pressure vessel is above the screening limit, the RPV is 
considered to have an unreasonably high risk of fracture from a pressurized thermal shock event; 
LBP-15-17, 81 NRC 763 (2015)

if NRC does not approve continued operation based on licensee’s safety analysis, licensee must request an 
opportunity to modify the reactor pressure vessel or related reactor systems to reduce the potential for 
failure of the reactor vessel due to pressurized thermal shock events; LBP-15-17, 81 NRC 763-64 
(2015)

plant-specific surveillance data must be integrated into the transition fracture toughness reference 
temperature estimate; LBP-15-17, 81 NRC 762 n.27, 765 n.54 (2015)

applicant requests an operating license amendment to implement alternate fracture toughness requirements 
for protection against pressurized thermal shock events; LBP-15-17, 81 NRC 758 (2015)

licensee is not required to collect additional surveillance data from the subject plant, but rather licensee 
must use any data that demonstrate the embrittlement trends for the materials, including surveillance 
programs at other plants with or without a surveillance program integrated under Part 50, Appendix H; 
CLI-15-22, 82 NRC 318 (2016)

licensees seeking to use the updated methodology in this section must submit a license amendment 
request under section 50.90; CLI-15-22, 82 NRC 313 (2016)

material samples used in a licensee’s consistency check must be from the same heat, but there is no 
requirement that the sample come from the reactor pressure vessel subject to the license amendment 
request; CLI-15-22, 82 NRC 318 (2016)
probabilistic embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data in a process called the consistency check; CLI-15-22, 82 NRC 313 (2016); LBP-15-17, 81 NRC 765 (2015)

10 CFR 50.61a, equations 1, 5

reference temperature shift is the difference in reference temperature from the unirradiated to the post-irradiated states; LBP-15-17, 81 NRC 769 n.87 (2015)

10 CFR 50.61a, equations 5-7

consistency check does not rely on information that is unique to a particular reactor pressure vessel, but instead on the chemical properties and fluence of the material samples; LBP-15-17, 81 NRC 788 (2015)

10 CFR 50.61a(a)(2)-(6)

information that license amendment request must contain to use updated embrittlement model is described; CLI-15-22, 82 NRC 313 (2016)

10 CFR 50.61a(a)(10)

licensee is not required to collect additional surveillance data from the subject plant, but rather must use any data that demonstrate the embrittlement trends for the materials, including surveillance programs at other plants with or without a surveillance program integrated under Part 50, Appendix H; CLI-15-22, 82 NRC 318 (2016)

licensees must use data from other reactors (sister-plant data) when they are available, provided the data are from material samples of the same heat; CLI-15-22, 82 NRC 313 (2016)

surveillance data include any data that demonstrate embrittlement trends for the beltline materials; LBP-15-17, 81 NRC 783 (2015)

surveillance data include data from other plants, and licensees must consider these data under certain circumstances; CLI-15-22, 82 NRC 313 n.19 (2016)

surveillance data need not be obtained from the same reactor pressure vessel that is the subject of the license amendment; CLI-15-22, 82 NRC 313 (2016); LBP-15-17, 81 NRC 767 (2015)

use of a material sample in the consistency check is not dependent on its location inside a reactor pressure vessel or which RPV it comes from; LBP-15-17, 81 NRC 788 (2015)

10 CFR 50.61a(c)(1)-(2)

application to use Alternate PTS Rule must contain the projected embrittlement reference temperatures along various portions of the reactor pressure vessel, from the present to a future point, compared to the Alternate Screening Criteria and assessment of flaws in the reactor pressure vessel; LBP-15-17, 81 NRC 766 (2015)

10 CFR 50.61a(c)(2)

licensee must separately examine for flaws in the reactor vessel; LBP-15-17, 81 NRC 766 n.58 (2015)

10 CFR 50.61a(c)(3)

reference temperature values are compared to the alternate screening criteria to determine whether the reactor pressure vessel is safe to operate; LBP-15-17, 81 NRC 766 (2015)

10 CFR 50.61a(d)(1)

alternate pressurized thermal shock rule provides measures for ongoing reporting; LBP-15-17, 81 NRC 765 n.49 (2015)

10 CFR 50.61a(d)(2)-(7)

alternate pressurized thermal shock rule specifies mitigation processes for licensees if they project they will exceed (or they do exceed) the rules’ screening criteria; LBP-15-17, 81 NRC 765 n.49 (2015)

10 CFR 50.61a(e)

application to use Alternate PTS Rule must contain an assessment of flaws in the reactor pressure vessel; LBP-15-17, 81 NRC 766 (2015)

10 CFR 50.61a(f)

alternate pressurized thermal shock rule changes how licensees derive projected reference temperatures for the components of their reactor pressure vessels; LBP-15-17, 81 NRC 765 (2015)

application to use alternate PTS rule must contain the projected embrittlement reference temperatures along various portions of the reactor pressure vessel, from the present to a future point, compared to the Alternate Screening Criteria and assessment of flaws in the reactor pressure vessel; LBP-15-17, 81 NRC 766 (2015)
in calculating embrittlement reference temperatures, licensee must calculate neutron flux through the
reactor pressure vessel using a methodology that has been benchmarked to experimental measurements
and with quantified uncertainties and possible biases; LBP-15-17, 81 NRC 766 (2015)
10 C.F.R. 50.61a(f)(1)(i)(S)
embrittlement model projects the reference temperatures for various parts of the reactor pressure vessel at
the end of life of the plant; LBP-15-17, 81 NRC 766 n.61 (2015)
10 C.F.R. 50.61a(f)(4)
licensee must establish the nil-ductility reference temperature for the reactor pressure vessel material in
the annealed state, before the reactor was operational for various key points along the RPV; LBP-15-17,
81 NRC 766 (2015)
10 C.F.R. 50.61a(f)(4)(i), (ii)
licensee can use a set of generic mean nil-ductility reference temperature values if measured values are
not available; LBP-15-17, 81 NRC 766 n.60 (2015)
10 C.F.R. 50.61a(f)(6)
if three or more surveillance data points measured at three or more different neutron fluences exist for a
specific material, licensee shall determine if the surveillance data show a significantly different trend
than the embrittlement model predicts; LBP-15-17, 81 NRC 784 (2015)
l licensees have some discretion in considering other plant-specific information that may be helpful in
aligning their embrittlement models with the surveillance data; LBP-15-17, 81 NRC 768 (2015)
10 C.F.R. 50.61a(f)(6), equations 5-7
differing amounts of copper, nickel, phosphorus, and manganese between material samples for the
consistency check are accounted for; LBP-15-17, 81 NRC 792 n.256 (2015)
10 C.F.R. 50.61a(f)(6)(i)
alternate pressurized thermal shock rule is designed to enable all commercial pressurized water reactor
licensees to assess the state of their reactor pressure vessels relative to a new criterion without the need
to make new material property measurements, instead using only information that is currently available;
LBP-15-17, 81 NRC 765 (2015)
licensee must perform a consistency check of its embrittlement model against available surveillance data;
LBP-15-17, 81 NRC 765 (2015)
licensees have to verify that their reference temperature calculations at the time of the application match
up with surveillance data; LBP-15-17, 81 NRC 766-67 (2015)
licensees must use data from other reactors (sister-plant data) when they are available, provided the data
are from material samples of the same heat; CLI-15-22, 82 NRC 313 (2016)
surveillance data include data from other plants, and licensees must consider these data under certain
circumstances; CLI-15-22, 82 NRC 313 n.19 (2016)
surveillance data used in the consistency check need not come from the same reactor pressure vessel that
is the subject of the license amendment request; CLI-15-22, 82 NRC 313 (2016)
to verify calculations used to support the license amendment request to use updated embrittlement model,
licensees must compare their calculations to heat-specific surveillance data; CLI-15-22, 82 NRC 313
(2016)
when fluence of a material sample is known, it must be used in the consistency check if it is of the
appropriate chemical composition; CLI-15-22, 82 NRC 319 n.65 (2016)
10 C.F.R. 50.61a(f)(6)(i)(A)
material samples used in a licensee’s consistency check must be from the same heat, but there is no
requirement that the sample come from the reactor pressure vessel subject to the license amendment
10 C.F.R. 50.61a(f)(6)(i)(A), (B)
surveillance data must be used in the consistency check when it is a heat-specific match for one or more
of the materials for which the reference temperature is being calculated and three or more different
neutron fluences exist for a specific material; LBP-15-17, 81 NRC 788 (2015)
10 C.F.R. 50.61a(f)(6)(i)(B)
consistency check is required if three or more surveillance data points measured at three or more different
neutron fluences exist for a specific material; LBP-15-17, 81 NRC 767 (2015)
consistency check seeks to compare, for a specific material type, the model’s projected embrittlement with the actual embrittlement values at the same fluence provided by material samples; LBP-15-17, 81 NRC 788 (2015)
if fewer than three surveillance data points exist for a specific material, then the embrittlement model must be used without performing the consistency check; LBP-15-17, 81 NRC 767 (2015)
purpose of the consistency check is to determine if the surveillance data show a significantly different trend than the embrittlement model predicts; LBP-15-17, 81 NRC 767 (2015)
three or more samples are required to conduct a consistency check; LBP-15-17, 81 NRC 769 n.84 (2015)
alternate pressurized thermal shock rule changes how licensees derive projected reference temperatures for the components of their reactor pressure vessels; LBP-15-17, 81 NRC 765 (2015)
if the embrittlement model deviates from the physical samples over the limits specified in the regulation, licensee must submit additional evaluations and seek approval for the deviations from the Director of the Office of Nuclear Reactor Regulation; LBP-15-17, 81 NRC 767-68 (2015)
alternate screening criteria consist of eighteen different reference temperature limits that depend on reactor pressure vessel wall thickness and the part of the RPV under consideration; LBP-15-17, 81 NRC 765 (2015)
each nuclear power plant must be able to cool the reactor core and maintain containment integrity in the event of a station blackout of a specified duration; LBP-12-18, 76 NRC 168-69 (2012)
for purposes of the license renewal rule, NRC Staff has determined that the plant system portion of the offsite power system that is used to connect the plant to the offsite power source should be included within the scope of the station blackout rule; CLI-12-5, 75 NRC 321 (2012)
revision of this section to expand the coping capability to include cooling the spent fuel, preventing a loss-of-coolant accident, and preventing containment failure would be a significant benefit; LBP-12-18, 76 NRC 147, 169 (2012)
safety contention challenging aging management of electrical transformers does not include transformer support structures; LBP-13-13, 78 NRC 403 n.1085 (2013)
active components are excluded from aging management review on the basis of existing regulatory requirements for maintenance and monitoring of structures, systems, and components; CLI-15-6, 81 NRC 348 (2015)
because irradiated fuel is continually present in the spent fuel pool once the reactor discharges the first batch of spent fuel, and conditions are most challenging during reactor shutdown for refueling, maintenance of equipment related to the safe storage of spent fuel is typically addressed as part of shutdown risk management; DD-13-3, 78 NRC 579 (2013)
licensees must monitor structures, systems, and components in a manner sufficient to provide reasonable assurance that the SSCs are capable of supporting their intended function; CLI-15-6, 81 NRC 348 n.30 (2015); DD-15-3, 81 NRC 724 (2015)
relay switches and snubbers do not rely on time-limited assumptions based on the plant’s operating term, but rather are subject to ongoing maintenance programs; LBP-15-6, 81 NRC 323 (2015)
Maintenance Rule requires monitoring of a component’s performance or condition; CLI-15-6, 81 NRC 364 n.120 (2015)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 50.65(a)(4) guidance for implementation of risk management requirements during shutdown operations is provided; DD-13-3, 78 NRC 579 (2013)
10 C.F.R. 50.65(b) all structures and components that are important to safety must be maintained to manage the effects of aging, but most systems, structures, and components are adequately maintained under existing programs as required by the Maintenance Rule; CLI-15-6, 81 NRC 352 (2015)
10 C.F.R. 50.71 current licensing basis includes plant-specific design-basis information as documented in the most recent final safety analysis report; LBP-11-21, 74 NRC 130 (2011)
10 C.F.R. 50.71(e) although NRC Staff reviews submissions under this regulation for compliance with such administrative requirements as timeliness and content, it does not approve substantive changes, such as changes to a seismic analysis, as part of the process; LBP-15-27, 82 NRC 196 (2015)
final safety analysis reports must be updated so that NRC is aware of changes that are made that do not require prior NRC approval; CLI-12-2, 75 NRC 81 (2012)
licensees are required to update their final safety analysis report, which was originally submitted as part of the application for the license, to ensure that the information included in the FSAR contains the latest information developed; CLI-15-14, 81 NRC 742 n.8 (2015); DD-11-3, 73 NRC 385 (2011); DD-15-11, 82 NRC 365 (2015); LBP-15-27, 82 NRC 195 (2015)
licensees must periodically submit an updated FSAR to the agency, but NRC does not review the submittals for accuracy or otherwise approve the analyses therein; CLI-15-14, 81 NRC 746 (2015)
submittal of updated FSAR pages does not constitute a licensing action but is only intended to provide information; LBP-15-27, 82 NRC 195 (2015)
this regulation is only a reporting requirement; LBP-15-27, 82 NRC 195 (2015)
updates to the UFSAR are controlled by the requirements of 10 C.F.R. 50.90 and 50.59; CLI-15-14, 81 NRC 746 n.37 (2015)
10 C.F.R. 50.71(e)(4) licensees must update their final safety analysis reports every 2 years; CLI-15-14, 81 NRC 747 (2015); LBP-15-27, 82 NRC 196 (2015)
10 C.F.R. 50.72 ERDS activation requirement applies only to operating nuclear power reactors; LBP-15-4, 81 NRC 170, 172 (2015)
exception provision is most reasonably interpreted as exempting from the ERDS program all nuclear reactors that have permanently ceased operations and defueled, i.e., that are permanently shut down; LBP-15-4, 81 NRC 167 (2015)
licensee of a permanently shutdown reactor is never required to activate the ERDS link, and thus it follows that such a licensee need not maintain the ERDS link; LBP-15-4, 81 NRC 167 (2015)
licensee’s failure to timely notify NRC about safety relief valve failure and inoperability is a violation; DD-11-6, 74 NRC 422-23 (2011)
10 C.F.R. 50.72(a)(4) activating the emergency response data system must be performed as soon as possible but at most within 1 hour of an emergency declaration; CLI-15-20, 82 NRC 224 n.92 (2015)
emergency response data system activation requirements are specified; CLI-15-20, 82 NRC 214 n.8 (2015)
licensees must activate the emergency response data system as soon as possible but not later than 1 hour after declaring an emergency class of alert, site area emergency, or general emergency; CLI-15-20, 82 NRC 214 (2015); LBP-15-4, 81 NRC 170 (2015)
provision directing licensees to activate ERDS during exigent circumstances applies only to operating nuclear power reactors; LBP-15-4, 81 NRC 161 (2015)
this section describes implementation, maintenance and activation of the ERDS system in the event of an emergency; LBP-15-4, 81 NRC 184 n.36 (2015)
10 C.F.R. 50.72(b) licensee must notify NRC as soon as practical, and in all cases within 1 hour of the occurrence, of any deviation from a plant’s technical specifications; DD-11-6, 74 NRC 423 (2011)
LEGAL CITATIONS INDEX
REGULATIONS

10 C.F.R. 50.73
relief valve failure and inoperability found during the refueling outage, which potentially affected the
ability of the SRVs to satisfy design actuation requirements, meets the requirements for a licensee event
report; DD-11-6, 74 NRC 423 (2011)

10 C.F.R. 50.73(a)(2)(i)(B)
evidence that relief valve failure and inoperability may have existed for a period of time greater than
allowed by technical specifications is a reportable event; DD-11-6, 74 NRC 423 (2011)

10 C.F.R. 50.75
financial qualifications review for decommissioning funding assurance is revisited every year until the
license is terminated; DD-11-4, 73 NRC 718 (2011)

license transfer applicant must show reasonable assurance of sufficient funds to decommission the facility;
CLI-15-8, 81 NRC 505 (2015)

licensee must file an annual report to NRC certifying that financial assurance for decommissioning will be
or has been provided in an amount that may be more, but not less, than the amount stated in the
regulations, adjusted as appropriate for changes in labor, energy, and waste burial costs; DD-11-3, 73
NRC 388 (2011)

10 C.F.R. 50.75(b) and (c)
estimated amount of decommissioning funds must be reported to NRC; DD-11-7, 74 NRC 790 (2011)

10 C.F.R. 50.75(c)
decommissioning funding requirements encompass costs of low-level waste burial; CLI-15-8, 81 NRC 511
(2015)

formulas, based on reactor type and power level, are provided for determining minimum dollar amounts
required to demonstrate reasonable assurance of decommissioning funding; CLI-15-8, 81 NRC 505
(2015)

licensees may use a site-specific methodology to determine the decommissioning funding needed as long
as the amount is greater than the decommissioning cost estimate derived from formulas in this section;
DD-11-7, 74 NRC 791 (2011)

licensees must use the formulas in this section to estimate the minimum funding amount needed for
radiological decommissioning; DD-11-7, 74 NRC 791 (2011)

10 C.F.R. 50.75(c) & n.1
spent fuel management is not a decommissioning activity; LBP-15-24, 82 NRC 73 (2015)

without an exemption from the NRC, licensee is prohibited from using decommissioning funds for spent
fuel management because it is not an allowable decommissioning expense; LBP-15-28, 82 NRC 236
(2015)

10 C.F.R. 50.75(c)(2)
licensees must annually adjust the amount of decommissioning funding assurance; DD-15-8, 82 NRC 111
(2015)

10 C.F.R. 50.75(c)(1)
NRC monitors the status of decommissioning funds and, when necessary, requires additions to funds
through parent company guarantees, cash deposits, or other methods permitted under this regulation;
DD-15-8, 82 NRC 112 (2015)

10 C.F.R. 50.75(e)(1)(i)
financial assurance for decommissioning may be based on the prepayment method; CLI-15-8, 81 NRC
505 (2015)

10 C.F.R. 50.75(e)(1)(ii)
licensee who has collected funds based on a site-specific estimate under section 50.75(b)(1) may take
credit for projected earnings on the external sinking funds using up to a 2% annual real rate of return
from the time of future funds’ collection through the decommissioning period, provided that the
site-specific estimate is based on a period of safe storage that is specifically described in the estimate;
DD-11-4, 73 NRC 717-18 (2011)

use of the 4.81% forecast interest rate and the 2.81% annual inflation rate is in compliance; DD-11-4, 73
NRC 718 (2011)

10 C.F.R. 50.75(e)(1)(v)
contracts that licensee is relying on for decommissioning funding must be reported to NRC; DD-11-7, 74
NRC 791 (2011)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 50.75(e)(2)
if NRC Staff makes a finding of no reasonable assurance, NRC reserves the right to take steps to ensure
a licensee’s adequate accumulation of decommissioning funds; DD-11-4, 73 NRC 718 (2011)
NRC reserves the right to review, as necessary, the rate of accumulation of decommissioning funds and
to take additional actions, as appropriate on a case-by-case basis, to ensure an adequate accumulation of
decommissioning funds; DD-11-7, 74 NRC 791, 792 (2011)
10 C.F.R. 50.75(e)(3)
apPLICant is required to submit a report on its decommissioning funding assurance mechanism after
combined licenses are issued and no later than 30 days after the NRC publishes notice of intended
operation in the Federal Register; CLI-12-2, 75 NRC 83 (2012)
10 C.F.R. 50.75(f)
an annual report on recalculations of decommissioning cost estimates and projected available
decommissioning funding must be submitted by a licensee for a plant that has closed before the end of
its licensed life; DD-11-4, 73 NRC 716-17 (2011)
two years before permanent cessation of operations, licensee must submit a preliminary decommissioning
cost estimate that includes a plan for adjusting decommissioning funds to demonstrate that funds will be
available when needed to cover decommissioning costs; DD-15-8, 82 NRC 112 (2015)
10 C.F.R. 50.75(f)(1)
status of decommissioning funds must be reported to NRC at least once every 2 years; DD-15-8, 82 NRC
111-12 (2015)
10 C.F.R. 50.75(f)(1) and (2)
power reactor licensees must report decommissioning funding assurance information to NRC at least once
every 2 years; DD-11-7, 74 NRC 790 (2011)
10 C.F.R. 50.75(f)(2)
power reactor licensees must report to the NRC at least once every 2 years on the status of their
decommissioning funding for each reactor or part of a reactor that they own; DD-11-4, 73 NRC 716
(2011)
10 C.F.R. 50.75(h)
if licensee amends any of its grandfathered license conditions that were related to the decommissioning
trust fund, from that point forward licensee must comply with all of the requirements of this regulation;
10 C.F.R. 50.75(h)(1)-(4)
license amendment request seeks to replace 30-day notice requirement and other plant-specific license
conditions with the decommissioning fund requirements; LBP-15-28, 82 NRC 236 (2015)
reporting and recordkeeping rules for decommissioning trusts are government by this regulation;
10 C.F.R. 50.75(h)(1)(iv)
decommissioning trust fund cannot be used for nondecommissioning expenses that are not allowed under
this regulation; LBP-15-24, 82 NRC 72 n.8, 77, 80, 81 (2015)
exemption from regulations will only be issued if the license is granted; LBP-15-24, 82 NRC 82 (2015)
if license amendment request is approved, licensee will no longer have to provide 30-day notice to the
Commission once it begins decommissioning and starts making withdrawals from the decommissioning
licensee seeks regulatory exemptions to allow it to use decommissioning funds to manage spent fuel and
eliminate the 30-day notice requirement that would otherwise apply to spent fuel management;
30-day notice is not required for decommissioning withdrawals made under section 50.82(a)(8);
10 C.F.R. 50.75(h)(5)
contention frames a legal dispute over the meaning of this regulation’s direction that a license amendment
shall be in accord with the provisions of paragraph (h) of this section; LBP-15-24, 82 NRC 101-02
(2015)
if a licensee with existing license conditions relating to decommissioning trust agreements elects to amend
these conditions, the license amendment shall be in accordance with the provisions of paragraph (h) of
this section; LBP-15-24, 82 NRC 79 n.65 (2015)
petitioner has identified a genuine legal dispute concerning whether a license amendment can be in accordance with the provisions of paragraph (h) of 10 C.F.R. 50.75 where a plant is already exempt from two provisions of 10 C.F.R. 50.75(b)(1)(iv); LBP-15-24, 82 NRC 102 (2015) 

state has demonstrated that its contention is relevant to the findings NRC must make before approving the license amendment request because, to approve the amendment, NRC Staff must find that applicant’s LAR is in accordance with this regulation; LBP-15-24, 82 NRC 84-85 (2015) 

there is no time limit on when licensee can seek an amendment to the license conditions relating to its decommissioning trust fund; LBP-15-24, 82 NRC 92-93 (2015) 

where license conditions predate issuance of this regulation, the plant was grandfathered and allowed to keep its existing license conditions; LBP-15-24, 82 NRC 72 (2015); LBP-15-28, 82 NRC 243 n.70 (2015)

10 C.F.R. 50.80 

commitments in the revised combined license application restrict foreign ownership share to no more than 10% and require NRC consent for any change in foreign ownership of 5% or more; LBP-14-3, 79 NRC 302 n.214 (2014) 

licensee is required to submit a license transfer application to NRC; CLI-14-5, 79 NRC 256 n.5 (2014) 

NRC approval is required for transfer of control of ownership and/or operating authority responsibilities within the facility operating license; DD-15-8, 82 NRC 112 (2015) 

10 C.F.R. 50.80(a) 

written consent from NRC is required for all license transfers; CLI-15-8, 81 NRC 502 (2015); CLI-15-26, 82 NRC 411 (2015) 

10 C.F.R. 50.80(b)(1)(i) 

license transfer applicant must show reasonable assurance of sufficient funds to decommission the facility; CLI-15-8, 81 NRC 505 (2015) 

proposed transferee for an operating license must satisfy the same financial qualification requirements that apply to an applicant for an initial operating license; CLI-15-26, 82 NRC 411 (2015) 

subject areas that license transfer applications must address are outlined; CLI-15-8, 81 NRC 511 (2015)

10 C.F.R. 50.80(b)(2) 

subject areas that license transfer applications must address are outlined; CLI-15-8, 81 NRC 511 (2015) 

10 C.F.R. 50.80(c)(1) 

license transfer applicant must demonstrate that the proposed transferee is qualified to hold the license; CLI-15-26, 82 NRC 411 (2015) 

10 C.F.R. 50.82 

areas of minor radioactive contamination are evaluated and remediated as needed during plant decommissioning; DD-11-1, 73 NRC 12 (2011) 

10 C.F.R. 50.82(a)(1)(i) 

licensee must provide certifications to NRC Staff that it has permanently ceased power operations; DD-15-7, 82 NRC 261 (2015) 

10 C.F.R. 50.82(a)(1)(i) & (ii) 

licensee must provide certifications to NRC Staff that it has permanently ceased power operations and that all fuel has been permanently removed from the reactor vessel; DD-14-3, 79 NRC 500, 503 (2014); DD-15-1, 81 NRC 203 (2015)

10 C.F.R. 50.82(a)(1)(ii) 

licensee must provide certifications to NRC Staff that it has permanently removed fuel from its reactors; DD-15-7, 82 NRC 261 (2015)

10 C.F.R. 50.82(a)(2) 

docketing of certifications of shutdown and defueling means that licensee’s Part 50 license no longer authorizes operation of the reactor or emplacement or retention of fuel into the reactor vessel; DD-14-3, 79 NRC 500, 503 (2014) 

upon docketing of certifications for permanent cessation of operations and permanent removal of fuel from the reactor vessel, license will no longer authorize operation of the reactor or emplacement or retention of fuel in the reactor vessel; CLI-15-20, 82 NRC 215 (2015); DD-15-7, 82 NRC 261 (2015); LBP-15-4, 81 NRC 170 n.80 (2015)
10 C.F.R. 50.82(a)(3)
nuclear power facility arguably exists until final decommissioning, which may take up to 60 years, or
longer if approved by the Commission; LBP-15-4, 81 NRC 169 n.76 (2015)

10 C.F.R. 50.82(a)(4)(i)
licensee must submit a post-shutdown decommissioning activities report before or within 2 years following
permanent cessation of operations; DD-15-8, 82 NRC 112 (2015)
to disburse funds without prior notice, licensee must provide a description of the planned
decommissioning activities along with a schedule for their accomplishment; LBP-15-24, 82 NRC 81
(2015)

10 C.F.R. 50.82(a)(8)
function of the procedural and administrative changes is merely to facilitate the orderly conduct of
licensee’s business and to ensure that information needed by NRC to perform its regulatory functions is
readily available; LBP-15-24, 82 NRC 83 (2015)
given that licensee has not included discovery of unexpected levels of contaminants, and contamination in
places not previously expected, in the decommissioning cost estimate, such fund withdrawals would
require a 30-day notice; LBP-15-24, 82 NRC 88-89 (2015)
if license amendment request is approved, licensee will no longer have to provide 30-day notice to the
Commission once it begins decommissioning and starts making withdrawals from the decommissioning
licensee must provide a 30-day notice for all withdrawals other than ordinary administrative expenses to
operate the decommissioning fund, but those notices are no longer required once decommissioning has
begun and withdrawals are made under this regulation; LBP-15-24, 82 NRC 72-73 (2015)

10 C.F.R. 50.82(a)(8)(i)(A)
decommissioning trust funds may be used by licensees if withdrawals are for expenses for legitimate
decommissioning activities consistent with the definition of decommissioning in section 50.2;
LBP-15-24, 82 NRC 72 n.9 (2015)
licensee seeks regulatory exemptions to allow it to use decommissioning funds to manage spent fuel and
eliminate the 30-day notice requirement that would otherwise apply to spent fuel management;

10 C.F.R. 50.82(a)(8)(i)(B)
licensees cannot make decommissioning fund withdrawals that would reduce the value of the trust below
an amount necessary to place and maintain the reactor in a safe storage condition if unforeseen
conditions or expenses arise; LBP-15-24, 82 NRC 77 (2015)
NRC requires a contingency factor for decommissioning funds to provide for unforeseen events that may
happen during operations or decommissioning that could increase the overall costs of this activity;
potential consequences of insufficient offsite storage for spent fuel is one of the unforeseen conditions
that this regulation was promulgated to address; LBP-15-24, 82 NRC 90 (2015)

10 C.F.R. 50.82(a)(8)(i)(B)(C)
licensee cannot reduce the value of the decommissioning trust below an amount necessary to place and
maintain the reactor in a safe storage condition if unforeseen conditions or expenses arise and licensee
must maintain its ability to complete funding of any shortfalls in the decommissioning trust needed to
ensure the availability of funds to ultimately release the site and terminate the license; LBP-15-24, 82
NRC 73 (2015)
licensee is required to ensure that the site can be safely maintained and decommissioned, even in the face
of unexpected costs; LBP-15-24, 82 NRC 80 (2015)

10 C.F.R. 50.82(a)(8)(ii)-(v)
instead of providing notice before each decommissioning expense, licensee must submit a
decommissioning cost estimate and timeline, called a Post Shutdown Decommissioning Activities Report,
and annual reports on expenditures; LBP-15-24, 82 NRC 73 (2015)

10 C.F.R. 50.90
applicant must fully describe in its license amendment request the changes desired; LBP-15-24, 82 NRC
98 (2015)
circumstances under which licensee may make changes to its facility and procedures as described in its updated FSAR and conduct tests or experiments not otherwise described in the UFSAR without obtaining a license amendment are discussed; CLI-12-20, 76 NRC 438-39 n.5 (2012)

FSAR updates must reflect changes that licensee has made through a license amendment request and certain changes that do not require a license amendment; LBP-15-27, 82 NRC 195 (2015)

if licensee sought to make a change to a surveillance frequency that did not conform to the NEI 04-10 standard, then it would then need to request a license amendment; CLI-13-10, 78 NRC 565 n.9 (2013)

licensee cannot be exempted from license conditions without a license amendment modifying such conditions; LBP-15-28, 82 NRC 238 n.26 (2015)

licensees cannot amend the terms of their license unilaterally; CLI-14-11, 80 NRC 173 (2014)

licensees may make changes in the procedures described in its updated final safety analysis report and conduct tests or experiments not otherwise described in the UFSAR without obtaining a license amendment; CLI-14-4, 79 NRC 250 n.4 (2014)

licensees seeking to use the updated methodology in 10 C.F.R. 50.61a must submit a license amendment request; CLI-15-22, 82 NRC 313 (2016)

NRC licensees require a license amendment to modify license conditions; LBP-15-24, 82 NRC 74 (2015)

to amend a license, including technical specifications in the license, an application for amendment must be filed, fully describing the changes desired; CLI-15-22, 82 NRC 316 (2016)

to take advantage of the Alternate PTS Rule, licensee must request approval from the Office of Nuclear Reactor Regulation, in accordance with the procedures for submitting a license amendment; LBP-15-17, 81 NRC 766 (2015)

when licensee wants to amend a license, application for an amendment must be filed with the Commission; CLI-15-5, 81 NRC 334 (2015); CLI-15-14, 81 NRC 741 (2015)

10 C.F.R. 50.90-.92

if licensee is unable to operate a reactor in strict accordance with its license, it must seek authorization from NRC for a license amendment; LBP-13-7, 77 NRC 331 (2013)

10 C.F.R. 50.91

process for making the no significant hazards consideration determination is discussed; LBP-15-26, 82 NRC 172 n.14 (2015)

10 C.F.R. 50.91(a)(1)

when licensee submits its license amendment application to NRC, it must provide the agency its analysis about the issue of no significant hazards consideration using the standards in 10 C.F.R. 50.92; LBP-15-17, 81 NRC 790 n.238 (2015)

10 C.F.R. 50.91(a)(4)

final no significant hazards consideration determination allows the Commission to issue the challenged license amendment before the petitioner’s request for a hearing is adjudicated; LBP-15-17, 81 NRC 790 n.238 (2015)

license amendment will be effective on issuance, even if adverse public comments have been received and even if an interested person meeting the provisions for intervention has filed a request for a hearing; LBP-15-17, 81 NRC 790 n.238 (2015)

10 C.F.R. 50.91(a)(5)

“exigent circumstances” determination seems compelled by the fact that violation of the technical specifications limit for the plant, whatever the cause of the temperature increase, requires a dual unit shutdown; LBP-15-13, 81 NRC 477 (2015)

where the Commission finds that an emergency situation exists, in that failure to act in a timely way would result in derating or shutdown of a nuclear power plant, it may issue a license amendment involving no significant hazards consideration without prior notice and opportunity for a hearing or for public comment; LBP-15-13, 81 NRC 477 (2015)

10 C.F.R. 50.91(a)(6)

NRC Staff may determine that exigent circumstances exist such that there is insufficient time for a full 30-day public comment period on a license amendment request; LBP-15-13, 81 NRC 476 (2015)

where the Commission finds that exigent circumstances exist and it also determines that an amendment involves no significant hazards considerations, it will provide a hearing after issuance, if one has been requested by a person who satisfies the intervention requirements of 10 C.F.R. 2.309; CLI-15-25, 82 NRC 393 n.21 (2015)
when licensee requests an amendment, it must notify the state in which its facility is located of its request by providing that state with a copy of its application; LBP-15-28, 82 NRC 243 n.72 (2015)

licensee is prohibited from simply disconnecting its ERDS when the reactor is powered down during decommissioning; LBP-15-4, 81 NRC 178-79 (2015)

there can be no actual license amendment until and unless it is issued by the NRC Staff; LBP-13-7, 77 NRC 327 (2013)

determinations on whether to grant an applied-for license amendment are to be guided by the considerations that govern the issuance of initial licenses or construction permits to the extent applicable and appropriate; CLI-15-22, 82 NRC 316 n.44 (2016); LBP-15-17, 81 NRC 778 (2015); LBP-15-20, 81 NRC 840-41 (2015)

despite a no significant hazards consideration determination on a proposed amendment are discussed; LBP-15-26, 82 NRC 172 n.14 (2015)

licensing boards lack jurisdiction to adjudicate challenges to NRC Staff’s proposed no significant hazards consideration determination; LBP-13-11, 78 NRC 181 n.18 (2013)

backfitting includes the modification of or addition to systems, structures, components, or designs of a facility; LBP-11-17, 74 NRC 17 n.19 (2011)

Commission administratively exempted from the backfit rule, an order to the combined license holder to address spent fuel pool instrumentation requirements not specified in the certified design as enhanced protective measures that represent a substantial increase in the protection of public health and safety; CLI-12-9, 75 NRC 443 n.101 (2012)

Commission requests briefing from NRC Staff on the circumstances, if any, NRC Staff would judge a potentially cost-beneficial mitigation alternative to warrant further NRC consideration outside of the license renewal review, either via a backfit analysis or as part of another process; CLI-15-3, 81 NRC 219 (2015)

if combined licenses issue without including license conditions, NRC regulations relevant to the finality of decisions could result in some additional administrative requirements to satisfy in imposing new requirements on licensee; CLI-12-9, 75 NRC 439 (2012)

licenses may be amended to add appropriate conditions, depending on whether the conditions are within the scope of the certified design; CLI-12-9, 75 NRC 438 (2012)

NRC may impose new requirements defined as “backfitting” on previously licensed power reactors only if it finds that there is a substantial increase in the overall protection of public health and safety or the common defense and security and the direct and indirect costs of implementation for that facility are justified in view of this increased protection; LBP-11-17, 74 NRC 22 n.53, 26 (2011); LBP-12-18, 76 NRC 154 n.124 (2012)

when NRC imposes new regulatory requirements that are important safety enhancements but not deemed necessary to ensure adequate protection of public health and safety, NRC often does not require existing licensees to implement them based on considerations such as whether they are cost-beneficial; CLI-12-2, 75 NRC 127 (2012)

NRC could require modifications to the in-service testing program pursuant to compliance backfit provisions; CLI-12-2, 75 NRC 93 (2012)

an exception to the backfit rule is provided if the Commission determines that regulatory action is necessary to ensure that the facility provides adequate protection to the health and safety of the public and is in accord with the common defense and security; CLI-12-9, 75 NRC 440 n.98 (2012); LBP-12-18, 76 NRC 154 n.124 (2012)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. Part 50, Appendix A, GDC 2
NRC Staff ensures that applicant’s design basis for the new units will protect public health and safety by verifying that the design basis will withstand maximum flooding events; LBP-11-2, 73 NRC 217 n.78 (2010)
structures, systems, and components important to safety shall be designed to withstand the effects of natural phenomena such as floods without loss of capability to perform their safety functions; LBP-13-8, 78 NRC 12 (2013)

10 C.F.R. Part 50, Appendix A, GDC 11
reactors must exhibit a negative void coefficient in the power operating range; LBP-12-12, 75 NRC 774-75 (2012)

10 C.F.R. Part 50, Appendix A, GDC 14
wear of steam generator tubes is of critical importance to evaluations performed in the final safety analysis report, because the tubes are part of the reactor coolant pressure boundary, and assurance of their integrity is required; LBP-13-7, 77 NRC 336-37 n.44 (2013)

10 C.F.R. Part 50, Appendix A, GDC 19
applicant must ensure that its control room remains habitable in case of accidental release of hazardous gases; CLI-12-9, 75 NRC 454 (2012)

10 C.F.R. Part 50, Appendix A, GDC 44
applicability of these regulations to boiling water reactor spent fuel pools is discussed; DD-15-11, 82 NRC 364-68 (2015)
plants must employ an ultimate heat sink to transfer heat from structures, systems, and components that are important to safety; LBP-15-13, 81 NRC 459 n.5 (2015)
system must be provided to transfer heat from structures, systems, and components important to safety to an ultimate heat sink under normal operating and accident conditions, and must be able to perform this safety function with either onsite or offsite power, assuming a single component failure; DD-15-11, 82 NRC 366 (2015)

10 C.F.R. Part 50, Appendix A, GDC 61
establishing safety limits for stored irradiated fuel is not appropriate, but measures to prevent a significant loss of coolant inventory under accident conditions that could challenge the cooling of the stored fuel are documented in the updated final safety analysis report; DD-13-3, 78 NRC 581 (2013)
fuel storage system must be designed to prevent significant reduction in coolant inventory under accident conditions and with a residual heat removal capability having reliability and testability that reflects the importance to safety of decay heat and other residual heat removal; DD-15-11, 82 NRC 365-66 (2015)
spent fuel storage systems must be designed to ensure adequate safety under normal and postulated accident conditions; CLI-15-4, 81 NRC 240 (2015)

10 C.F.R. Part 50, Appendix B
applicant must establish and implement its own quality assurance program when it enters into a contract for the conduct of safety-related combined license application activities and to retain overall control of safety-related activities performed by the contractor; CLI-14-10, 80 NRC 159 n.7 (2014)
during the license renewal period, the regulations of this section concerning ongoing inspections and audits apply; LBP-13-13, 78 NRC 381 (2013)
license applicant may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part thereof, but applicant retains responsibility for the quality assurance program; LBP-12-23, 76 NRC 476 (2012); LBP-14-7, 79 NRC 477 (2014)
petitioners’ assertions that the MACCS2 code was not subjected to quality assurance requirements is deficient because a SAMA analysis is not subject to such requirements; LBP-11-2, 73 NRC 69 (2011)
“quality assurance” comprises all those planned and systematic actions necessary to provide adequate confidence that a structure, system, or component will perform satisfactorily in service; DD-15-2, 81 NRC 207-08 (2015)
quality assurance requirements apply to design of the safety-related functions of the structures, systems, and components that prevent or mitigate the consequences of postulated accidents; LBP-14-7, 79 NRC 474 (2014)
use of the past tense when referring to “quality assurance applied to the design” shows that safety-related design activities must have been performed under an acceptable QA program even though those
activities were performed prior to the date on which the combined license application (which includes the FSAR) was filed with the NRC; LBP-14-7, 79 NRC 474 (2014)

10 C.F.R. Part 50, Appendix B, Introduction

quality assurance includes quality control, which comprises those quality assurance actions related to the physical characteristics of a material, structure, component, or system that provide a means to control the quality of the material, structure, component, or system to predetermined requirements; LBP-14-7, 79 NRC 469 n.109 (2014)

10 C.F.R. Part 50, Appendix B, Criterion I

applicant may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part thereof, but shall retain responsibility for the program; CLI-14-10, 80 NRC 165-66 (2014)

10 C.F.R. Part 50, Appendix B, Criterion III

failure to verify adequacy of thermal-hydraulic and flow-induced vibration design of the replacement steam generators was determined to be of very low safety significance, because the tubes did not leak and continued to meet the required structural integrity criterion; DD-15-7, 82 NRC 263-64 (2015)

licensee’s operation of primary coolant pumps contrary to plant licensing and the FSAR is a violation of this criterion; DD-15-3, 81 NRC 725 (2015)

10 C.F.R. Part 50, Appendix B, Criterion XI

licensees must assess the condition of their components, monitor performance of structures, systems, and components to ensure that they can fulfill their intended functions, and establish a suitable test program to demonstrate that components will perform satisfactorily in-service; DD-13-2, 78 NRC 189 (2013)

10 C.F.R. Part 50, Appendix B, Criterion XVI

because all aspects of licensee’s current licensing basis will remain in effect during the period of extended operation, in the event that renewed licenses are issued, the requirements that conditions adverse to quality be corrected will apply; LBP-13-13, 78 NRC 332-33 (2013)

quality assurance programs must establish measures to ensure that conditions adverse to quality are promptly identified and corrected; LBP-14-7, 79 NRC 470 (2014)

10 C.F.R. Part 50, Appendix B, Criterion XVIII

comprehensive system of planned and periodic audits shall be carried out to verify compliance with all aspects of the quality assurance program and to determine effectiveness of the program; LBP-14-7, 79 NRC 480 (2014)

10 C.F.R. Part 50, Appendix E

emergency planning zones are approximately a 10-mile radius around a reactor unit as adjusted to reflect the road network and land use; CLI-12-9, 75 NRC 458 (2012)

license amendment requests do not require an updated or separate emergency plan unless such a plan would be germane to the type of license amendment request under review or is part of a licensee’s periodic update of emergency plans; LBP-11-29, 74 NRC 622 (2011)

NRC provides for a plume exposure pathway emergency planning zone and an ingestion exposure pathway EPZ around nuclear power plants in the event of a nuclear accident; LBP-11-15, 73 NRC 640 (2011)

proposed staffing changes meet emergency plan standards and provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency commensurate with credible accidents in the permanently shutdown and defueled condition; CLI-15-20, 82 NRC 220 (2015)

10 C.F.R. Part 50, Appendix E, § IV.A

during a nuclear emergency in the United States, the individual licensee and the appropriate state and local government officials have direct responsibilities for the coordinated response to the event; LBP-11-15, 73 NRC 641 (2011)

10 C.F.R. Part 50, Appendix E, § IV.E.9

combined license applicant’s emergency plan must contain and describe adequate provisions for emergency facilities and equipment, including at least one onsite and one offsite communications system, each of which shall have a backup power source; LBP-11-15, 73 NRC 637 (2011)

10 C.F.R. Part 50, Appendix E, § IV.F.2

offsite emergency plans are reviewed biennially by NRC and the Federal Emergency Management Agency in a comprehensive emergency preparedness exercise; CLI-12-9, 75 NRC 456 (2012); CLI-15-6, 81 NRC 377 (2015)
activities that the closed plants in 1991 are exempt from performing are limited to only implementation and maintenance of the ERDS; LBP-15-4, 81 NRC 184 (2015)

any alleged ambiguity in the exception provision is eliminated when the regulatory language is examined in light of the regulatory history and framework; LBP-15-4, 81 NRC 174 n.100 (2015)

ERDS is a direct electronic data link between licensees of operating reactors and the NRC Operations Center, and its objective is to allow NRC to monitor critical parameters during an emergency; LBP-15-4, 81 NRC 171 (2015)

if this section were a one-time requirement that applied only to units existing in 1991, that would mean it was not intended to apply prospectively to newly built reactors; LBP-15-4, 81 NRC 171 (2015)

NRC, in its capacity as the federal agency charged with regulating the nuclear industry in a manner that protects public health and safety, monitors nuclear emergencies; LBP-11-15, 73 NRC 641 (2011)

participation in the emergency response data system is mandatory; CLI-15-20, 82 NRC 214 (2015)

regulatory history, like the regulation itself, is focused entirely on implementation and maintenance of the ERDS operations with not one word about decommissioning the system; LBP-15-4, 81 NRC 182 (2015)

when selected plant data are not available on licensee’s onsite computer system, retrofitting of data points is not required; CLI-15-20, 82 NRC 214 n.10 (2015)

all nuclear power facilities that are shut down permanently or indefinitely are exempted from participating in the ERDS program; LBP-15-4, 81 NRC 161, 167 (2015)

any facility with an operating reactor unit is required to provide ERDS for that unit, regardless of the status of other reactors at the facility; LBP-15-4, 81 NRC 168 (2015)

except Big Rock Point and all nuclear power facilities that are shut down permanently or indefinitely, onsite hardware for the emergency response data system shall be provided at each unit by the licensee to interface with the NRC receiving system; CLI-15-20, 82 NRC 214 n.14 (2015); LBP-15-4, 81 NRC 161, 172 (2015)

if licensee of a permanently shutdown reactor is never required to activate the ERDS link, it must be concluded that such a licensee is exempt from the ERDS program; LBP-15-4, 81 NRC 170 (2015)

meaning of “shut down permanently” is discussed; CLI-15-20, 82 NRC 226 (2015)

nuclear power facilities that are shut down permanently are exempt from the need to provide an emergency response data system interface with the NRC; CLI-15-20, 82 NRC 218 (2015)

nuclear power facility has shut down permanently within the meaning of this regulation when it has permanently ceased reactor operations, and permanently removed fuel from the reactor vessel, as those terms are defined in 10 C.F.R. 50.2; LBP-15-4, 81 NRC 169-70 (2015)

plants that are shut down do not have to provide the ERDS hardware, or assemble and transmit data; LBP-15-4, 81 NRC 181 (2015)

scope of the ERDS exception is informed by the regulatory history, which states that ERDS is to be used by licensees of operating reactors; LBP-15-4, 81 NRC 167 (2015)

parameters from which ERDS transmits data points for boiling water reactors are identified; LBP-15-4, 81 NRC 169 n.73 (2015)

each licensee is required to complete implementation of the ERDS by February 13, 1093, or before initial escalation to full power, whichever comes later; LBP-15-4, 81 NRC 161, 171 n.87, 189 (2015)

licensees may follow regulatory guides to determine equivalent safety margins, or may use any other methods, procedures, or selection of materials data and transients to demonstrate compliance with this regulation; LBP-15-20, 81 NRC 835 n.20 (2015)

materials in a reactor vessel must maintain a minimum level of 50 ft-lb of Charpy upper-shelf energy, which is a measurement of the amount of energy the material can absorb at high temperatures before it fractures and fails; LBP-15-20, 81 NRC 833 (2015)
equivalent margins analysis must demonstrate that the calculated energy will provide margins of safety against fracture that are equivalent to those required by Appendix G of Section XI of the ASME Code; 

licensees have the option of demonstrating that values of Charpy upper-shelf energy below 50 ft-lb will provide margins of safety against fracture equivalent to those required by Appendix G of Section XI of the ASME BPV Code; 

under normal plant conditions, materials at the beltline of the reactor pressure vessel must maintain Charpy upper-shelf energy of no less than 50 ft-lb (68 joules); 

contention contesting adequacy of licensee’s equivalent margins analysis is not a challenge to NRC regulations; 

licensees must attach a particular number of surveillance capsules to specified areas within the reactor vessel, typically near the inside vessel wall at the beltline; 

reactor vessel material surveillance programs provide material property data necessary to implement a regulatory scheme to protect reactor pressure vessels from failure due to withstand a pressurized thermal shock event; 

surveillance program to monitor pressurized water reactor pressure vessel is described; 

minimum frequency with which surveillance capsules must be tested is set by ASTM Standard E 185 (1982 version), which is incorporated into Appendix H; 

pressurized water reactor pressure vessel surveillance program relies on physical material samples, also known as specimens, capsules, or coupons, which are withdrawn periodically from the reactor vessel; 

exemption from the surveillance program is allowed if a reactor’s lifetime irradiation levels are below a certain threshold; 

physical specimens must come from near the inside vessel wall in the beltline region so that the specimen irradiation history duplicates the neutron spectrum, temperature history, and maximum neutron fluence experienced by the reactor vessel inner surface; 

NRC must preapprove the schedule for removing material samples from the reactor vessel; 

surveillance capsule withdrawal schedule is not part of the plant’s license; 

integrated surveillance program among similar reactors is allowed if the reactors have sufficiently similar design and operating features to permit accurate comparisons of the predicted amount of radiation damage; 

no reduction in the amount of testing is allowed without NRC approval; 

NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater remains well below the ALARA dose objectives; 

containment system is defined as the principal barrier, after the reactor coolant pressure boundary, to prevent release of quantities of radioactive material that would have a significant radiological effect on public health; 

leakage rate acceptance limit is based on minimizing leakage that would occur at the calculated peak containment internal pressure related to the design-basis loss-of-coolant accident;
required Type A containment leakage tests measures total leakage rate from all potential leakage paths, including containment liner welds, valves, fittings, and components that penetrate the containment; LBP-15-26, 82 NRC 168 n.4 (2015)

10 C.F.R. Part 50, Appendix J, Option B, §I

licensees must conduct periodic containment leakage tests to ensure that leakage does not exceed the allowable rates specified in the technical specifications and the containment will perform its design function following an accident up to and including the plant design-basis accident; LBP-15-26, 82 NRC 168 (2015)

10 C.F.R. Part 50, Appendix J, Option B, §§II and III

contention argument is an improper attempt to graft a historical-event criterion onto the performance-criteria specified in Appendix J, Option B; LBP-15-26, 82 NRC 175 (2015)

10 C.F.R. Part 50, Appendix J, Option B, §III.A

Commission placed no historical-event restriction on reactors electing to comply with Appendix J through performance-based testing; LBP-15-26, 82 NRC 175 & n.24 (2015)

overall integrated leakage rate must not exceed allowable leakage rate with margin, as specified in the Technical Specifications; LBP-15-26, 82 NRC 170 n.9 (2015)

periodic visual inspections of the accessible interior and exterior surfaces of the containment system are required to identify structural deterioration that may affect containment integrity; LBP-15-26, 82 NRC 170 (2015)

Type B pneumatic tests detect and measure local leakage rates across pressure-retaining, leakage-limiting boundaries other than valves; LBP-15-26, 82 NRC 168-69 (2015)

10 C.F.R. Part 50, Appendix J, Option B, §III.B

Type C pneumatic tests measure containment isolation valve leakage rates; LBP-15-26, 82 NRC 168-69 (2015)

10 C.F.R. Part 50, Appendix R, §II

objectives of licensee’s fire protection program to extend the concept of defense-in-depth to fire protection are discussed; DD-12-3, 76 NRC 421 (2012)

10 C.F.R. Part 50, Appendix R, §III.F

fire detection systems shall be automatic and capable of operating with or without offsite power; DD-12-3, 76 NRC 422 (2012)

NRC Staff will disposition violations as part of its ongoing reactor oversight process, and evidentiary hearings before NRC at the request of third parties are not a part of this process; DD-12-3, 76 NRC 425 (2012)

10 C.F.R. Part 50, Appendix R, §III.G

licensee cited for violations for use of unapproved operator manual actions to mitigate safe shutdown equipment malfunctions caused by a fire-induced single spurious actuation in lieu of protecting the equipment; DD-12-3, 76 NRC 424 (2012)

NRC Staff will disposition violations as part of its ongoing reactor oversight process, and evidentiary hearings before NRC at the request of third parties are not a part of this process; DD-12-3, 76 NRC 425 (2012)

plants licensed to operate before January 1, 1979, must meet fire safety regulations; DD-12-3, 76 NRC 420 (2012)

unapproved operator manual actions represent potential noncompliances; DD-12-3, 76 NRC 423 (2012)

underlying purpose of this regulation is to ensure that the ability to achieve and maintain safe shutdown is preserved following a fire event; DD-12-3, 76 NRC 421 (2012)

10 C.F.R. Part 50, Appendix R, §III.G.2

means to ensure that a redundant train of safe-shutdown cables and equipment is free of fire damage in instances in which redundant trains are located in the same fire area outside of primary containment are described; DD-12-3, 76 NRC 421 (2012)

use of operator manual actions in lieu of the protection methods specified in this regulation is not consistent with the regulations and plants need regulatory approval for each specific OMA proposed; DD-12-3, 76 NRC 421 (2012)

10 C.F.R. Part 50, Appendix S, §III

safe shutdown earthquake is defined; LBP-11-10, 73 NRC 452 (2011)
qualitative benefits and costs in the cost-benefit analysis for the uranium enrichment facility are estimated to be small, moderate, or large, using the same general definitions found in the regulations of this part; LBP-12-21, 76 NRC 306 (2012)
relative to NEPA, in mandatory hearings, boards are to determine whether the review conducted by NRC Staff has been adequate, but they need not rethink or redo every aspect of the NRC Staff’s environmental findings or undertake their own fact-finding activities; LBP-11-11, 73 NRC 476 n.10 (2011)
uranium enrichment facility applicant is required to prepare an environmental report; LBP-12-21, 76 NRC 291 (2012)

because the Commission has established a requirement to provide information to be used by NRC staff in fulfillment of its obligation under the National Environmental Policy Act, suitability of applicant’s SAMA analysis must be judged by the requirements of NEPA; LBP-11-18, 74 NRC 37 (2011)
section 51.28(a)(5) is subject to the general limitation that the NRC’s NEPA regulations do not apply to any environmental effects that NRC’s domestic licensing and related regulatory functions may have upon the environment of foreign nations; LBP-12-12, 75 NRC 754-55 (2012)

severe accident mitigation alternatives analyses are required pursuant to NEPA; LBP-11-13, 73 NRC 571 (2011)

construction of a transmission line is defined as a preconstruction activity; LBP-12-12, 75 NRC 778 (2012)
Limited Work Authorization Rule expressly excludes transmission lines from the delineated construction activities that would require NRC approval before being undertaken; CLI-15-1, 81 NRC 10 n.48 (2015)

building of transmission lines is excluded from the definition of construction; LBP-14-9, 80 NRC 31 (2014)

contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 55 (2013)

admissibility of contention that environmental assessment fails to adequately describe or analyze proposed mitigation measures is decided; LBP-15-11, 81 NRC 430 (2015)
admissibility of contention that environmental assessment fails to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 443 (2015)
admissibility of contention that environmental assessment fails to provide an analysis of the impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 447 (2015)
admissibility of contention that final environmental assessment fails to adequately analyze cumulative impacts is decided; LBP-15-11, 81 NRC 432 (2015)
admissibility of contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with restoration standards and difficulty and cost in achieving the them and the use of the alternative standards permitted under the proposed rules is decided; LBP-15-15, 81 NRC 607, 608 (2015)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 418 (2015)
agency is required to consider all reasonable alternatives under the National Environmental Policy Act; LBP-15-15, 81 NRC 607-08 (2015)
compliance with NEPA is ultimately the responsibility of NRC; CLI-12-13, 75 NRC 684 (2012)
contention alleging that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies, is decided; LBP-15-16, 81 NRC 659-60 (2015)

contention that draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 83 (2013)

contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 58, 110 (2013)

contention that draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 65 (2013)

contention that draft environmental impact statement fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 94-95 (2013)

contention that draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 86 (2013)

contention that draft environmental impact statement fails to include a reviewable plan for disposal of 11e(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 69 (2013)

contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess adequate confinement and potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 55, 107 (2013)

contention that draft environmental impact statement fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 89 (2013)

contention that draft supplemental environmental impact statement fails to consider connected actions is admissible; LBP-13-9, 78 NRC 75 (2013)

contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as untimely; LBP-15-11, 81 NRC 428 (2015)

contention that environmental assessment violates the National Environmental Policy Act in its failure to provide an analysis of the groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 424 (2015)

contention that final environmental assessment fails to adequately analyze all reasonable alternatives is inadmissible; LBP-15-11, 81 NRC 434 (2015)

contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 434-35 (2015)

contention that final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 393 (2014)

contention that NRC has failed to engage other relevant federal, state, and local agencies and has not analyzed impacts subject to jurisdiction and control of these other agencies, and has thus failed to comply with NEPA’s action-forcing mandate and general purpose is inadmissible; LBP-13-9, 78 NRC 82 (2013)

mitigation measures must be discussed in the final supplemental environmental impact statement; LBP-15-16, 81 NRC 687 (2015)

NRC has the right to prepare an independent environmental impact statement whenever NRC has regulatory authority over an activity; LBP-13-9, 78 NRC 82-83 (2013)

10 C.F.R. 51.10(a)

although NRC regulations do not require NRC Staff to analyze the environmental impacts of NRC licensing actions on the environment of foreign nations, Staff extended its outreach to international organizations to inform its analysis of the potential environmental impacts of the project; CLI-15-13, 81 NRC 581 (2015)

Commission shall prepare an environmental impact statement during review of the early site permit application; LBP-11-10, 73 NRC 440 n.93 (2011)
NRC, as an independent regulatory agency, is not bound by those portions of CEQ’s NEPA regulations that have a substantive impact on the way in which NRC performs its regulatory functions; CLI-11-11, 74 NRC 444 (2011) to evaluate a license renewal application for a nuclear power reactor, NRC reviews the management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 the environmental impacts and alternatives to the proposed action in accordance with Part 51; LBP-11-17, 74 NRC 21 (2011)

10 C.F.R. 51.14(a)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 172 (2010) purpose of applicant’s environmental report is to aid the Commission in its preparation of an environmental impact statement; LBP-12-9, 75 NRC 623 (2012)

10 C.F.R. 51.14(a)(3)
purpose of applicant’s environmental report is to assist NRC in preparing the agency’s own environmental analysis; LBP-11-28, 74 NRC 608 (2011)

10 C.F.R. 51.14(b)
applicant’s environmental report is not the vehicle for the NRC Staff’s safety review; LBP-11-6, 73 NRC 216 (2010)

Council on Environmental Quality regulations that define the scope of an environmental impact statement to include cumulative impacts are incorporated; LBP-12-3, 75 NRC 201 (2012) “cumulative impact” is defined as the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions; LBP-12-24, 76 NRC 511 (2012) cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time; LBP-13-4, 77 NRC 120 (2013) definition of “connected actions” in 40 C.F.R. 1508.25 is also adopted by this NRC regulation; LBP-14-9, 80 NRC 41 (2014) effects and impacts as used in this regulation are synonymous with 40 C.F.R. 1508.8; LBP-13-4, 77 NRC 120 (2013) environmental impact statements must address the cumulative impact of the proposed action, which is defined as the impact on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions; LBP-13-4, 77 NRC 120 (2013) in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the Council on Environmental Quality; LBP-11-7, 73 NRC 301 n.314 (2011) irrespective of the cause of the impact or the appropriate level of administrative scrutiny, for the purpose of NEPA evaluation, NRC regulations categorize impacts into direct, indirect, and cumulative; LBP-11-26, 74 NRC 546 (2011) NRC adopted the Council on Environmental Quality’s definition of “effects” in 40 C.F.R. 1508.8; LBP-14-9, 80 NRC 42 (2014) NRC has expressly adopted, and is therefore bound by, the CEQ definition of cumulative impacts; LBP-14-6, 79 NRC 420 (2014) scope of environmental concerns that must be considered in the environmental impact statement are discussed; LBP-11-6, 73 NRC 172-73 (2010) scope of the term “impact” includes cumulative impacts; LBP-12-24, 76 NRC 513 (2012) separate actions are connected if, among other things, they cannot or will not proceed unless other actions are taken previously or simultaneously, or they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-12-12, 75 NRC 779 (2012); LBP-14-6, 79 NRC 421 (2014) when drafting an environmental impact statement, agency’s scope of review must include analysis of any connected or cumulative actions to the central proposed action; LBP-15-16, 81 NRC 697 (2015)

10 C.F.R. 51.20
NRC Staff is required to prepare environmental impact statements for reactor licensing proceedings; CLI-14-7, 80 NRC 6 n.13 (2014)
10 C.F.R. 51.20(a)(1)  
environmental impact statement is required when the proposed project is a major federal action  
significantly affecting the quality of the human environment; LBP-15-15, 81 NRC 616 (2015)

10 C.F.R. 51.20(b)(1)  
actions requiring an environmental impact statement or a supplement to an EIS are a limited work  
authorization, construction permit for a nuclear power reactor, testing facility, or fuel reprocessing plant,  
or an early site permit; LBP-11-10, 73 NRC 440 n.93 (2011)

10 C.F.R. 51.20(b)(2)  
an environmental impact statement is required for renewal of an operating license for a nuclear power  
reactor; LBP-12-1, 75 NRC 36 (2012)

NRC’s review of a COL application is the type of proposed action obliging the Staff to prepare an  
environmental impact statement or a supplement thereto; LBP-11-39, 74 NRC 868 (2011)

10 C.F.R. 51.20(b)(8)  
issuing a license to possess and use source material to a uranium milling facility is identified as a major  

NRC Staff must prepare an environmental impact statement in connection with a license to possess and  
use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery; LBP-15-3,  
81 NRC 83 (2015)

10 C.F.R. 51.22(a)  
actions that the Commission, by rule or regulation, has declared to be a categorical exclusion do not  
individually or cumulatively have a significant effect on the human environment; LBP-14-6, 79 NRC  
413 n.40 (2014)

categories of actions are exempt from NEPA review where NRC has made a generic finding that the  
actions do not individually or cumulatively have a significant effect on the human environment;  

10 C.F.R. 51.22(b)  
admissibility of contention that final environmental assessment fails to satisfy NRC’s requirement for an  
environmental impact statement when there are unresolved conflicts concerning reasonable alternatives is  

any interested person may challenge the use of a categorical exclusion by presenting special  

petitioners’ request for waiver of 10 C.F.R. 51.22(c)(15) has not shown that there are unresolved conflicts  
concerning alternative uses of available resources; CLI-11-3, 73 NRC 621 n.33 (2011)

special circumstances exception allows petitioner to challenge a no significant hazards consideration  
determination; LBP-15-26, 82 NRC 182 (2015)

10 C.F.R. 51.22(c)(9)  
license amendment request is not categorically exempt from environmental review if it involves a  
significant hazards consideration that excludes it from categorical exemption pursuant to the criteria in  
paragraph (i); LBP-15-26, 82 NRC 180 (2015)

10 C.F.R. 51.22(c)(10)(ii)  
recordkeeping or administrative procedures are categorically excluded from environmental review;  

10 C.F.R. 51.22(c)(13)  
cask certification for transportation poses such a minimal environmental impact that it merits a categorical  
exclusion from NEPA; LBP-14-6, 79 NRC 413 (2014)

10 C.F.R. 51.22(c)(15)  
categorical exclusion from the NEPA requirement to prepare an environmental assessment or  
environmental impact statement for the issuance of import licenses involving low-level radioactive waste  
is provided; CLI-11-3, 73 NRC 619, 620 (2011)

request for rule waiver is denied; CLI-11-3, 73 NRC 616 (2011)

10 C.F.R. 51.22(c)(21)  
license transfer applications need not include an environmental analysis under NEPA; CLI-15-8, 81 NRC  
510 (2015)
exemptions from decommissioning fund expenditure notification requirements are categorically excluded from environmental review as administrative changes that do not increase the risk of public radiation exposure; LBP-15-28, 82 NRC 237 (2015)
exemptions from decommissioning fund withdrawals were categorically excluded from environmental review as administrative changes that did not increase the risk of public radiation exposure; LBP-15-24, 82 NRC 74 (2015)
10 C.F.R. 51.23
Commission instituted a rulemaking to revise the agency’s generic determination on the environmental impacts of continued storage of spent nuclear fuel; LBP-14-12, 80 NRC 139 (2014)
generic findings are reflected regarding impacts of spent fuel storage after the cessation of licensed operation of a nuclear power plant; CLI-14-8, 80 NRC 74 (2014)
no additional procedural steps are necessary to add the impacts of continued storage to existing environmental impact statements because this regulation, by its terms, has already done so; CLI-15-10, 81 NRC 542 (2015)
purpose of the regulation is to restrict repetitive litigation at the licensing board level on the continued storage and disposal of spent nuclear fuel; LBP-14-16, 80 NRC 198 (2014)
regulation governing the storage and disposal of spent nuclear fuel was vacated; LBP-14-15, 80 NRC 154 (2014); LBP-15-1, 81 NRC 21 (2015)
when considering continued storage in licensing reviews with previously completed final environmental impact statements, NRC Staff is expected to use a consistent and transparent process to ensure that all stakeholders are aware of how the environmental impacts of continued storage are considered in each licensing action affected by this regulation; CLI-15-10, 81 NRC 544 (2015)
10 C.F.R. 51.23(a)
Commission believes there is reasonable assurance that sufficient repository capacity will be available within 30 years beyond the licensed life for operation of any reactor to dispose of the commercial high-level waste and spent fuel originating in such reactor and generated up to that time; LBP-11-16, 73 NRC 701 (2011)
rule expressed the Commission’s reasonable assurance that a repository was likely to be available by 2007-2009; LBP-14-16, 80 NRC 188 (2014)
ruling on petitions for waiver of application of the waste confidence rule in independent spent fuel storage installation license renewal proceeding is deferred and the contention held it in abeyance; LBP-12-24, 76 NRC 507 n.6 (2012)
spent fuel can be stored safely and without significant environmental impacts for at least 60 years beyond the licensed life for operation and there is reasonable assurance that sufficient mined geologic repository capacity will be available when necessary; CLI-14-8, 80 NRC 74 (2014)
spent nuclear fuel can be stored safely at licensed nuclear facilities until such time as a long-term geologic storage facility is constructed; LBP-12-24, 76 NRC 809 (2012)
Waste Confidence Rule concerning storage and disposal of high-level waste is vacated and the issue is remanded to the Commission to generate either a generic analysis that is forward looking and has enough breadth to the support the Commission’s conclusions or a site-specific environmental impact statement in all relevant proceedings; LBP-13-13, 78 NRC 270 (2013)
10 C.F.R. 51.23(b)
absent a rule waiver, NRC Staff is not expected to revisit the impact determinations made in the Continued Storage GEIS as part of its site-specific NEPA reviews; CLI-15-10, 81 NRC 539 n.13 (2015)
agency did not need to assess site-specific impacts of continuing to store spent fuel in either an onsite or offsite storage facility in new reactor licensing environmental impact statements or environmental assessments beyond the expiration dates of reactor licenses; LBP-14-16, 80 NRC 188 (2014)
allegation that the Continued Storage Rule and generic environmental impact statement fail to address the trust responsibility the NRC owes an Indian tribe represents a collateral attack on the Continued Storage Rule and GEIS; LBP-14-16, 80 NRC 192-193 (2014)
because this regulation prescribes a specific procedure for incorporating the environmental impacts of continued storage into a site-specific analysis, this procedure, rather than a procedure set forth in the general provisions of Part 51, governs NRC environmental review; CLI-15-10, 81 NRC 540 (2015)
“deemed incorporated” function of this regulation provides administrative efficiency by adding the environmental impacts of continued storage to site-specific environmental impact statements without additional work by NRC Staff; CLI-15-10, 81 NRC 539 (2015)
discussion of any environmental impact of spent fuel storage during the period following the term of the reactor operating license in any environmental impact statement, environmental assessment, environmental report, or other analysis prepared in connection with enumerated power reactor and dry cask licenses is excluded; CLI-14-8, 80 NRC 74, 78 (2014)
discussion of any environmental impact of spent fuel storage in reactor facility storage pools or independent spent fuel storage installations for the period following the term of the reactor operating license or amendment, reactor combined license or amendment, or initial ISFSI license or amendment for which application is made, is required in any environmental report, environmental impact statement, environmental assessment, or other analysis; LBP-11-16, 73 NRC 701 (2011)
environmental impacts of at-reactor and away-from-reactor storage of spent fuel are considered for 60 years after the end of a reactor’s licensed life for operation, an additional 100 years of storage, and the indefinite storage of spent nuclear fuel and incorporated into site-specific environmental impact statements; CLI-15-10, 81 NRC 541 (2015)
environmental impacts of continued storage have been incorporated into the environmental impact statements at issue in the proceedings by operation of law; CLI-15-10, 81 NRC 539 (2015)
impact determinations in the Continued Storage generic environmental impact statement shall be deemed incorporated into the environmental impact statements associated with combined license and license renewal applications; CLI-15-10, 81 NRC 537 (2015)
license applicants are not required to discuss the environmental impacts of spent nuclear fuel storage in a reactor facility storage pool or an ISFSI for the period following the term of the reactor operating license, reactor combined license, or ISFSI license; LBP-12-24, 76 NRC 509 (2012); LBP-14-16, 80 NRC 192 n.57 (2014)
waste confidence undergirds certain agency licensing decisions, in particular new reactor licensing and reactor license renewal; CLI-12-16, 76 NRC 66 (2012); CLI-14-8, 80 NRC 76 (2014)
10 C.F.R. 51.26
where an environmental assessment resulted in a finding of no significant impact, a full environmental impact statement is unnecessary; CLI-15-17, 82 NRC 41 n.53 (2015)
10 C.F.R. 51.26(d)
when a supplement to an environmental impact statement is prepared, NRC Staff need not conduct a scoping process; LBP-13-9, 78 NRC 73, 75 (2013)
10 C.F.R. 51.28
definition of the scope of the environmental impact statement is the responsibility of the NRC Staff; LBP-14-9, 80 NRC 52 (2014)
10 C.F.R. 51.28(a)(5)
applicant has no duty to invite affected Indian tribes to participate in the environmental scoping process; LBP-15-5, 81 NRC 280 (2015)
First Nations in Canada must receive invitations to participate in the environmental impact statement scoping process when there are transboundary environmental impacts from a project; LBP-12-12, 75 NRC 753 (2012)
NRC Staff has a duty to invite any affected Indian tribe to participate in the environmental scoping process; LBP-15-5, 81 NRC 279-80 (2015)
10 C.F.R. 51.29
definition of the scope of the environmental impact statement is the responsibility of the NRC Staff; LBP-14-9, 80 NRC 52 (2014)
10 C.F.R. 51.29(a)(1)
NRC is directed to use the Council on Environmental Quality regulation 40 C.F.R. 1502.4 in defining the scope of its impact statements; LBP-12-12, 75 NRC 778-79 n.212 (2012); LBP-14-6, 79 NRC 420 n.81 (2014); LBP-14-9, 80 NRC 40, 52 n.157 (2014)
NRC Staff must correctly evaluate basic issues whether or not they were raised by intervenors; LBP-14-9, 80 NRC 69 (2014)
scope of an environmental impact statement is governed by the provisions of 40 C.F.R. 1502.4; LBP-11-10, 73 NRC 440 (2011)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 51.29(b)
NRC Staff must prepare a summary of determinations and conclusions and provide it to scoping participants; LBP-13-9, 78 NRC 72 (2013)

10 C.F.R. 51.30
when an environmental assessment is appropriate, it need only include a brief discussion of environmental impacts of the proposed action; LBP-14-6, 79 NRC 436 (2014)

10 C.F.R. 51.30(a)(1)
environmental assessment, and associated finding of no significant impact, must contain sufficient discussion of environmental impacts and the reasons why the proposed action will not have a significant effect on the quality of the human environment; LBP-15-13, 81 NRC 471 (2015)

10 C.F.R. 51.31
an environmental assessment can be the basis of a finding under section 51.32 that the proposed agency action will not have a significant effect upon the environment such that a full-blown EIS (or supplemental EIS) is not required; LBP-13-6, 77 NRC 300 n.32 (2013)

10 C.F.R. 51.31(a)
environmental assessment, and associated finding of no significant impact, must contain sufficient discussion of environmental impacts and the reasons why the proposed action will not have a significant effect on the quality of the human environment; LBP-15-13, 81 NRC 471 (2015)

10 C.F.R. 51.32
issuance of an environmental assessment is appropriate where NRC Staff determines that the proposed project will result in no significant impacts; LBP-15-11, 81 NRC 415 (2015)

10 C.F.R. 51.32(a)
preparation of an environmental impact statement for the proposed action is unnecessary if NRC Staff determines that the proposed action will not have a significant effect on the quality of the human environment; CLI-15-25, 82 NRC 392 n.18 (2015)

10 C.F.R. 51.32(a)(3)
environmental assessment, and associated finding of no significant impact, must contain sufficient discussion of environmental impacts and the reasons why the proposed action will not have a significant effect on the quality of the human environment; LBP-15-13, 81 NRC 471 (2015)

10 C.F.R. 51.33
NRC Staff may publish a draft finding of no significant impact for public comment, but it is not required to do so in all cases; CLI-15-17, 82 NRC 41 n.53 (2015)

10 C.F.R. 51.41
as a practical matter, Staff relies heavily upon applicant’s environmental report in preparing its environmental impact statement; LBP-11-38, 74 NRC 830 (2011); LBP-12-5, 75 NRC 236 (2012); LBP-12-17, 76 NRC 81 (2012); LBP-14-7, 79 NRC 459 (2014)
NEPA obligates NRC Staff to undertake a full and independent evaluation of the environmental impacts of applicant’s proposed action; LBP-12-9, 75 NRC 626 n.16 (2012)
NRC is required to independently assess the validity of the information that applicant submits in its environmental report; LBP-13-4, 77 NRC 213 (2013)
NRC Staff is empowered to issue requests for additional information relevant to an applicant’s environmental report; LBP-11-33, 74 NRC 681 n.9 (2011); LBP-11-34, 74 NRC 697 (2011)
to assist NRC in preparation of a supplemental environmental impact statement, license renewal applicants are required to prepare an environmental report; CLI-13-7, 78 NRC 210 (2013)

10 C.F.R. 51.45
applicant is not required to assess cumulative impacts in its environmental report, but NUREG-1748 requests that applicant discuss any past, present, or reasonably foreseeable future actions that could result in cumulative impacts when combined with the proposed action; LBP-12-24, 76 NRC 536 (2012)
apPLICANT IS NOT REQUIRED TO DISCUSS THE FEDERAL GOVERNMENT’S TRUST RESPONSIBILITY TO INDIAN TRIBES IN ITS ENVIRONMENTAL REPORT; LBP-12-24, 76 NRC 520 (2012)
contention alleging that applicant’s environmental report does not evaluate the impacts on water availability fails to show a genuine dispute; LBP-11-16, 73 NRC 682-83, 685 (2011)
contention asserting that the applicant’s environmental report fails to address the reasonably foreseeable impacts of climate change on water availability is admissible; LBP-11-16, 73 NRC 692 (2011)

597
contention claiming that the environmental report’s discussion of environmental effects and cumulative impacts of seepage from the cooling basin into groundwater and surface water through undocumented or unplugged oil and gas wells and borings fails to comply with the requirements of this section is admissible; LBP-11-16, 73 NRC 675, 677 (2011)

contention that materials license amendment application fails to provide sufficient information regarding the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 23 (2014)

materials license application must provide analyses that are adequate, accurate, and complete in all material respects to demonstrate that cultural and historic resources are identified and protected; LBP-15-16, 81 NRC 643 n.141 (2015)

mere promise by applicant to follow applicable regulations in capping and abandoning active and inactive oil and gas wells in the footprint of the cooling basin and plant is insufficient to satisfy the NRC’s regulations; LBP-11-16, 73 NRC 678 (2011)

NRC must prepare an environmental impact statement that adequately evaluates the environmental impacts of relicensing, including impacts to tribal hunting and fishing rights and subsistence consumption; LBP-15-5, 81 NRC 282 (2015)

severe accident mitigation alternatives must be considered in environmental reports; CLI-11-5, 74 NRC 167 n.100 (2011)

10 C.F.R. 51.45(a)

applicant may submit a supplement to an environmental report at any time; CLI-12-13, 75 NRC 687 n.31 (2012); LBP-12-13, 75 NRC 788 (2012)

to assist NRC in preparation of a supplemental environmental impact statement, license renewal applicants are required to prepare an environmental report; CLI-13-7, 78 NRC 210 (2013)

types of information that an environmental report must contain are described; CLI-13-7, 78 NRC 210 (2013)

10 C.F.R. 51.45(b)

applicant for a uranium ISR license is required to provide data from a groundwater monitoring program that are sufficient to establish a prelicensing site characterization baseline for assessing the potential effects of facility operations on local groundwater quality; LBP-15-3, 81 NRC 88 (2015)

“baseline” data describe results of applicant’s preoperational or baseline groundwater quality sampling program providing data on project-wide groundwater conditions; LBP-15-16, 81 NRC 660-61 (2015)

environmental reports must contain a description of the proposed action, a statement of its purposes, and a description of the environment affected; LBP-15-3, 81 NRC 83 (2015)

environmental reports must discuss impacts of the proposed action on the environment, adverse environmental effects that cannot be avoided, alternatives to the proposed action, relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity, and any irreversible and irretrievable commitments of resources; LBP-12-9, 75 NRC 623 n.10 (2012)

final supplemental environmental impact statement must include an analysis of cultural impacts; LBP-15-16, 81 NRC 650 (2015)

10 C.F.R. 51.45(b)(1)

applicant must submit an environmental report discussing the impact of the proposed action on the environment; LBP-11-6, 73 NRC 197 n.50, 216(2010); LBP-12-24, 76 NRC 513 (2012)

cumulative impacts analysis is included within the scope of environmental impact statements; LBP-12-3, 75 NRC 202 n.33 (2012)

environmental reports must discuss environmental impacts in proportion to their significance; LBP-11-6, 73 NRC 173 (2010); LBP-12-9, 75 NRC 623 (2012)

10 C.F.R. 51.45(b)(1)-(2)

applicant’s environmental report must describe reasonably foreseeable environmental impacts, discussed in proportion to their significance, and adverse environmental effects that cannot be avoided should the proposal be implemented; LBP-11-6, 73 NRC 191, 242 (2010); LBP-11-16, 73 NRC 678 (2011); LBP-12-9, 75 NRC 630 (2012)

10 C.F.R. 51.45(b)(1), (2), (5)

requirements for environmental reports are listed; LBP-14-9, 80 NRC 58 (2014)
10 C.F.R. 51.45(b)(1)-(5) environmental reports must discuss the five elements of this regulation; LBP-15-3, 81 NRC 83 (2015)
10 C.F.R. 51.45(b)(3) applicant is to provide in its environmental report an analysis of alternatives to the proposed action that is sufficiently complete to aid NRC Staff in developing and exploring its own set of alternatives; LBP-11-13, 73 NRC 552 (2011); LBP-11-21, 74 NRC 137 n.126 (2011); LBP-12-8, 75 NRC 562, 567 (2012)
applicant must provide a discussion of the no-action alternative in its environmental report; LBP-12-8, 75 NRC 567 (2012)
applicant’s environmental report must discuss appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-11-6, 73 NRC 197 n.50 (2010)
merely describing an alternative is insufficient to comply with NEPA; LBP-11-14, 73 NRC 605 n.92 (2011)
10 C.F.R. 51.45(b)(5) applicant’s environmental report is to discuss any irreversible and irretrievable commitments of resources that would be involved in the proposed action; LBP-12-3, 75 NRC 196 (2012)
nonspeculative irreversible and irretrievable commitment of resources requires that an environmental report provide an impacts analysis of such an occurrence; LBP-13-10, 78 NRC 137 (2013)
10 C.F.R. 51.45(c) applicant’s environmental report must contain a sufficient analysis of potential environmental consequences and alternatives to enable the NRC Staff to prepare an environmental impact statement that fulfills the agency’s obligations under NEPA; LBP-11-14, 73 NRC 598 (2011) as a practical matter, Staff relies heavily upon applicant’s environmental report in preparing its environmental impact statement; LBP-11-38, 74 NRC 830 (2011); LBP-14-7, 79 NRC 459 (2014)
contention that environmental report does not satisfy NEPA because it does not consider a range of mitigation measures to mitigate the risk of catastrophic fires in densely packed, closed-frame spent fuel storage pools is decided; LBP-15-5, 81 NRC 265 (2015)
environmental report must contain a full discussion of mitigation plans; LBP-11-6, 73 NRC 208 (2010)
environmental report must contain an analysis of the cumulative impacts of the activities to be authorized by a combined license; LBP-11-6, 73 NRC 173 (2010)
environmental report must include an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-11-6, 73 NRC 173 (2010);
LBP-11-13, 73 NRC 552 (2011) environmental report shall include an analysis that considers and balances environmental effects of the proposed action, environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-12-8, 75 NRC 562 (2012); LBP-12-9, 75 NRC 623 n.10 (2012)
environmental report should contain sufficient data to aid the Commission in its development of an independent analysis; CLI-12-13, 75 NRC 687 n.31 (2012); LBP-12-9, 75 NRC 623 (2012); LBP-11-6, 73 NRC 173, 242 (2010)
in light of preconstruction impacts described in the environmental report, the ER must contain an analysis of the cumulative impacts of the activities to be authorized by the combined license; LBP-12-9, 75 NRC 623 n.10 (2012)
it is applicant’s responsibility to include information in the environmental report that NRC Staff needs to prepare the draft environmental impact statement, including information on alternatives available for reducing or avoiding adverse environmental effects; LBP-12-12, 75 NRC 769-70 (2012)
license renewal applicant’s environmental report must contain a consideration of alternatives for reducing adverse impacts for all Category 2 license renewal issues in Appendix B; LBP-11-21, 74 NRC 132 (2011)
merely describing an alternative is insufficient to comply with NEPA; LBP-11-14, 73 NRC 605 n.92 (2011)

NRC limits the scope of environmental analysis of preconstruction activities to activities falling within the scope of its regulatory authority; CLI-12-9, 75 NRC 472 (2012)

NRC Staff relies heavily on applicant’s environmental report in preparing its environmental impact statement; LBP-12-5, 75 NRC 236 (2012); LBP-12-17, 76 NRC 81 (2012)

regulation contains no language modifying NRC Staff’s obligation under NRC and CEQ regulations to include connected actions in the scope of the proposed action, and the statement of considerations cannot interpret what the regulation itself does not contain; LBP-14-9, 80 NRC 52-53 (2014)

NRC Staff relies heavily on applicant’s environmental report in preparing its environmental impact statement; LBP-12-5, 75 NRC 236 (2012); LBP-12-17, 76 NRC 81 (2012)

regulation contains no language modifying NRC Staff’s obligation under NRC and CEQ regulations to include connected actions in the scope of the proposed action, and the statement of considerations cannot interpret what the regulation itself does not contain; LBP-14-9, 80 NRC 52-53 (2014)

10 C.F.R. 51.45(d)

applicant is not required to explain in its environmental report every aspect of the process it must pursue in the course of obtaining a federal permit, license, or approval; LBP-12-15, 76 NRC 35 n.6 (2012)

applicant’s environmental report must identify and discuss the status of all permits, licenses, and other approvals that are required from federal, state, and local agencies; LBP-11-16, 73 NRC 704 n.364 (2011); LBP-12-12, 75 NRC 763 (2012)

if applicant was required to update its environmental report every time NRC issued a request for additional information, there would need to be dozens, if not hundreds, of such updates; LBP-12-13, 75 NRC 787 n.9 (2012)

implication that any agency prerequisite with which applicant must comply to operate a plant during an extended term constitutes an “approval” under this section would entail an unreasonably strained definition of “approval”; LBP-12-15, 76 NRC 34 (2012)

information request from NRC Staff is not an approval that needed to be listed in applicant’s environmental report; LBP-15-27, 82 NRC 193 n.50 (2015)

none of the post-Fukushima orders or information requests can be characterized as approvals that must be obtained in connection with renewal of an operating license; LBP-12-15, 76 NRC 34 (2012)

to consider any or all of NRC Staff documents as “approvals” by reason of the fact that they request information that will be used to assess compliance with agency requirements would impose an unintended reporting encumbrance; LBP-12-15, 76 NRC 34 n.5 (2012)

10 C.F.R. 51.49(e)

for a limited work authorization application for a site where a construction permit was issued but construction of the plant was never completed, the environmental report may incorporate the earlier environmental impact statement; LBP-12-24, 76 NRC 518 n.69 (2012)

10 C.F.R. 51.50

contention alleging that applicant’s environmental report does not evaluate the impacts on water availability fails to show a genuine dispute; LBP-11-16, 73 NRC 682-83, 685 (2011)

10 C.F.R. 51.50(b)(1)

applicant’s environmental report must include an evaluation of alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-11-16, 73 NRC 697 (2011)

early site permit applicant is required to evaluate alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-11-16, 73 NRC 699 (2011)

10 C.F.R. 51.50(b)(2)

applicant’s environmental report need not include an assessment of the economic, technical, or other benefits (e.g., need for power) and costs of the proposed action; LBP-11-16, 73 NRC 696 (2011)

10 C.F.R. 51.50(c)

an environmental report is required for a combined license application; CLI-11-5, 74 NRC 167 n.100 (2011); LBP-12-9, 75 NRC 623 (2012)

contentions that challenge applicant’s environmental report are within the scope of a combined license proceeding; LBP-12-9, 75 NRC 630 (2012)

10 C.F.R. 51.50(c)(1)(iii)

environmental reports must include new information when a prior license has been issued for the facility, and the ER in question is associated with a subsequent license for the same facility; LBP-11-32, 74 NRC 667 (2011)
10 C.F.R. 51.50(c)(2), (3)  
environmental report for a combined license application may incorporate NRC’s environmental assessment  
for a standard design certification or an underlying manufacturing license; LBP-12-24, 76 NRC 518  
n.69 (2012)

10 C.F.R. 51.51(a)  
contributions of the uranium fuel cycle must be evaluated and added to the environmental costs of a  
proposed new nuclear power plant; LBP-11-26, 74 NRC 543 (2011)

10 C.F.R. 51.52  
every environmental report prepared for the construction permit stage, the early site permit stage, or the  
combined license stage of a light-water-cooled nuclear power reactor must contain a statement  
concerning transportation of fuel and radioactive wastes to and from the reactor; LBP-12-12, 75 NRC  
771 (2012)

10 C.F.R. 51.52(b)  
for reactors not meeting the conditions of section 51.52(a), the environmental report shall contain a full  
description and detailed analysis of the environmental effects of transportation of fuel and wastes to and  
from the reactor, including assessments of the environmental impact under normal conditions of  
transport and for the environmental risk from accidents in transport; LBP-12-12, 75 NRC 773 (2012)  
this section does not establish limits on power or on fuel enrichment, but instead requires applicant to  
perform an analysis if the conditions of section 51.52(a) are not met; LBP-12-12, 75 NRC 773 (2012)

10 C.F.R. 51.53  
types of information that an environmental report must contain are described; CLI-13-7, 78 NRC 210  
(2013)

10 C.F.R. 51.53(a)  
environmental reports prepared under the provisions of this section may incorporate by reference any  
information contained in a prior environmental report or supplement thereto that relates to the  
production or utilization facility or site, or any information contained in a final environmental document  
previously prepared by the NRC Staff that relates to the production or utilization facility or site;  
LBP-12-24, 76 NRC 518 n.69 (2012)

10 C.F.R. 51.53(b)  
section 51.53(c)(3)(iv) does not apply to license amendment applicants requesting a power uprate;  
LBP-11-29, 74 NRC 624 (2011)

10 C.F.R. 51.53(b)(2)  
costs and benefits of the energy-efficient building code are essential to determine whether the adoption of  
an energy-efficient building code should be included as an alternative; LBP-11-21, 74 NRC 136 (2011)

10 C.F.R. 51.53(c)  
license renewal applicant’s environmental report may adopt the findings of the generic environmental  
impact statement, but must also include site-specific analyses of Category 2 issues; CLI-15-6, 81 NRC  
351 (2015)

license renewal applicants must submit an environmental report to aid NRC Staff in its preparation of a  
supplemental environmental impact statement; CLI-12-13, 75 NRC 684 (2012)

license renewal applicants need not provide a site-specific analysis of the environmental impacts of spent  
fuel storage in their environmental report; CLI-11-11, 74 NRC 445 (2011)

10 C.F.R. 51.53(c)(1)  
license renewal applications must include an environmental report to assist NRC Staff in preparing its  
environmental impact statement; LBP-12-8, 75 NRC 549 (2012)

10 C.F.R. 51.53(c)(2)  
alternatives for reducing adverse environmental impacts, including impacts of severe accidents, are among  
the limited issues within the scope of a license renewal proceeding; LBP-11-13, 73 NRC 550 (2011)  
alternatives for mitigating severe accidents; LBP-11-2, 73 NRC 45 (2011)

contention that applicant fails to include need-for-power analyses in its environmental reports for operating  
license renewal is inadmissible; LBP-13-12, 78 NRC 242, 243 (2013)

contention that the environmental report fails to satisfy this section because it does not include  
information about plans to modify the facility in response to post-Fukushima enforcement order is  
inadmissible; LBP-12-15, 76 NRC 28 (2012)
discussion of the economic costs and benefits of the proposed action and alternatives is required if such
costs and benefits are essential for a determination regarding the inclusion of an alternative in the range
of alternatives considered; LBP-11-21, 74 NRC 136 (2011)
environmental reports for license renewal need only consider those alternatives that are reasonable;
LBP-12-15, 76 NRC 36 (2012)
license renewal applicant’s environmental report must address environmental impacts of the proposed
action and compare them to impacts of alternative actions; CLI-12-5, 75 NRC 338 (2012); CLI-12-8, 75
NRC 397 (2012); LBP-12-8, 75 NRC 549, 567 (2012); LBP-12-15, 76 NRC 36 (2012)
license renewal applicants need not include a need-for-power discussion in their environmental reports;
CLI-14-6, 79 NRC 447 (2014); LBP-11-2, 73 NRC 53 (2011); LBP-11-13, 73 NRC 556-57 (2011);
LBP-11-21, 74 NRC 136 (2011)
NRC Staff is required to issue a final environmental impact statement that thoroughly and objectively
evaluates reasonable alternatives to the proposed action; LBP-12-17, 76 NRC 113 (2012)
purpose of the regulation is described; CLI-11-11, 74 NRC 449 (2011)
sole remedy to challenge the wisdom or lawfulness of this regulation is to file a petition for rulemaking
under section 2.802 with the Commission; LBP-13-12, 78 NRC 242 (2013)
to the extent that applicant proposes modifications to the facility in response to a request for information,
NEPA also requires the consideration of the effectiveness and relative costs of a range of alternatives
for satisfying the NRC’s concerns; LBP-12-15, 76 NRC 32 (2012)
10 C.F.R. 51.53(c)(3)
contradiction between paragraphs (ii)(L) and (iv) is discussed; LBP-13-1, 77 NRC 62 (2013)
issues that a license renewal applicant must address in its environmental report, as well as those that it
need not address, are listed; LBP-12-8, 75 NRC 549 (2012)
10 C.F.R. 51.53(c)(3)(i)
any contention on a Category 1 issue amounts to a challenge to the regulation barring challenges to
generic environmental findings; CLI-12-19, 76 NRC 384 (2012)
because Category 1 issues already have been reviewed on a generic basis, applicant’s environmental
report need not provide a site-specific analysis of these issues; CLI-11-11, 74 NRC 445 (2011);
LBP-11-21, 74 NRC 132 (2011)
because it is a Category 1 issue, license renewal applicants need not address bird collisions in their
environmental reports unless they are aware of relevant new and significant information; CLI-13-7, 78
NRC 213 (2013)
Category 1 impacts are those that NRC has determined are common across plants and are outside the
scope of individual license renewal proceedings; LBP-13-13, 78 NRC 490 (2013)
challenges to the basic regulatory structure of the NRC’s design basis and generic environmental impacts
already assessed through rulemaking are inadmissible; LBP-11-32, 74 NRC 663 (2011)
environmental report for the license renewal stage need not contain environmental analysis of Category 1
license renewal applicant can adopt findings of the generic environmental impact statement, designated as
Category 1 issues in Table B-1 of Appendix B to Subpart A of Part 51; LBP-13-13, 78 NRC 285
(2013)
license renewal applicant need not include analyses of the environmental impacts of Category 1 issues in
its environmental report because NRC Staff incorporates the GEIS analysis of Category 1 issues as part of
the overall cost-benefit balance in the supplemental environmental impact statement for license
renewal; CLI-12-19, 76 NRC 381 n.18 (2012)
license renewal applicants whose facilities qualify for the SAMA-analysis exception are exempt from
addressing severe accident mitigation in their environmental reports, just as they would be exempt from
addressing Category 1 issues; CLI-13-7, 78 NRC 212 n.66 (2013)
10 C.F.R. 51.53(c)(3)(i-(ii)
environmental impacts of license renewal are classified as either Category 1, which are generically
addressed by the NRC’s generic environmental impact statement for license renewal, or Category 2,
which are analyzed on a site-specific basis; LBP-11-17, 74 NRC 21 (2011)
10 C.F.R. 51.53(c)(3)(ii)
environmental report must analyze environmental impacts of a license renewal on matters identified as
license renewal applicant can adopt findings of the generic environmental impact statement but must also include site-specific analyses of certain environmental impacts in its environmental report, designated as Category 2 issues; LBP-13-13, 78 NRC 285 (2013)

license renewal applicants must provide a plant-specific analysis of issues designated as Category 2; CLI-11-11, 74 NRC 445 n.99 (2011); CLI-12-19, 76 NRC 381 (2012); LBP-11-21, 74 NRC 132 (2011)
types of information that an environmental report must contain are described; CLI-13-7, 78 NRC 210 (2013)

10 C.F.R. 51.53(c)(3)(ii)(B)
license renewal applicants must submit documentation of their compliance with sections 316(a) and (b) of the Clean Water Act concerning thermal discharges; LBP-12-16, 76 NRC 53 (2012)
license renewal applicants whose plants use once-through cooling systems must provide a copy of current Clean Water Act 316(b) determinations and, if necessary, a 316(a) variance in accordance with 40 C.F.R. Part 125, or equivalent state permits and supporting documentation; LBP-12-10, 75 NRC 676 (2012)

10 C.F.R. 51.53(c)(3)(ii)(E)
license renewal applicants must assess the impact of the proposed action on threatened or endangered species in accordance with the Endangered Species Act as part of their environmental report; LBP-12-10, 75 NRC 642 (2012)

10 C.F.R. 51.53(c)(3)(ii)(L)
alternatives for reducing adverse environmental impacts, including impacts of severe accidents, are among the limited issues within the scope of a license renewal proceeding; LBP-11-13, 73 NRC 550 (2011)
alternatives to mitigate severe accidents must be considered for all plants that have not considered such alternatives; LBP-11-2, 73 NRC 46 (2011); LBP-11-13, 73 NRC 566 (2011)
although a consideration of alternatives to mitigate severe accidents must be provided if not previously performed, applicant must provide this analysis only for those issues identified as Category 2 issues in Appendix B to Subpart A of Part 51; LBP-11-2, 73 NRC 65 (2011)
although disagreement over proper interpretation of NRC regulations may give rise to an admissible contention, petitioner’s proposed interpretation is in direct conflict with the plain meaning of the regulation and its Statement of Considerations; LBP-12-8, 75 NRC 566 (2012)
although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants, NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review; LBP-12-26, 76 NRC 569 (2012)
among the limited issues within the scope of a license renewal proceeding are cost-effective alternatives for mitigating severe accidents; LBP-11-2, 73 NRC 45 (2011)
applicant is exempt from including in its environmental report a site-specific severe accident mitigation alternatives analysis because NRC Staff previously considered severe accident mitigation design alternatives in its final environmental impact statement; CLI-13-7, 78 NRC 202-03 (2013)
applicant’s estimate and NRC Staff’s approval of projected population estimate for severe accident mitigation analysis are reasonable and satisfy the requirements under NEPA and this regulation; LBP-13-13, 78 NRC 484 (2013)
applicant’s severe accident mitigation alternatives analysis is sufficiently site specific and its use and NRC Staff’s approval of the NUREG-1150 TIMDEC and CDNFRM input values is reasonable and appropriate and satisfies the requirements under NEPA; LBP-13-13, 78 NRC 465, 474 (2013)
applicant’s use of the MAAP code to generate fission product source terms for use in its severe accident mitigation alternatives analysis is reasonable under NEPA; LBP-12-26, 76 NRC 581 (2012)
at the contention admissibility stage, it is simply not appropriate for boards to decide what additional information, if any, is necessary to cure a claimed deficiency in a license application; CLI-11-11, 74 NRC 439-40 (2011)
board denies petition for rule waiver but refers the decision to the Commission because the legal issue presented by the petition is novel and worthy of the Commission’s immediate attention; LBP-13-1, 77 NRC 60 (2013)
contention is within the scope of license renewal proceeding because NRC regulations require that the environmental report include a severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 298 (2015)
contention regarding mitigation alternatives is effectively a collateral attack on this regulation, which
exempts applicants from having to reanalyze severe accident mitigation alternatives during the renewal
process; LBP-14-15, 80 NRC 153 (2014)
contention that challenges lack of severe accident mitigation alternatives analysis in applicant’s
environmental report is inadmissible; CLI-13-7, 78 NRC 203 (2013)
contention that severe accident mitigation alternatives analysis does not accurately reflect decontamination
and cleanup costs is decided; LBP-13-13, 78 NRC 450 (2013)
environmental analysis of severe accidents is designated as a Category 2 site-specific issue for license
renewal, and therefore the SAMA analysis normally is subject to challenge in a license renewal
adjudicatory proceeding; CLI-13-7, 78 NRC 211 (2013)
environmental reports must include a discussion of severe accident mitigation alternatives if NRC has not
considered them previously for the applicant’s plant; CLI-13-7, 78 NRC 210 (2013)
exception in this section operates as the functional equivalent of a Category 1 issue, removing severe
accident mitigation alternatives from litigation in case-by-case license renewal adjudications; CLI-13-7,
78 NRC 203 (2013)
final supplemental environmental impact statement must demonstrate that the NRC Staff has received
sufficient information to take a hard look at severe accident mitigation alternatives; LBP-11-17, 74 NRC
27 (2011)
for license renewal, analysis of the potential mitigation of, and alternatives to, severe accidents is required
on a site-specific basis; LBP-11-17, 74 NRC 25 (2011)
intent of NRC in promulgating this regulation is to exempt applicants from being required to submit
SAMA analyses in the license renewal proceedings for Limerick, Watts Bar, and Comanche Peak;
LBP-12-8, 75 NRC 566 (2012)
license renewal applicant is not required to perform a new severe accident mitigation alternatives analysis;
LBP-14-15, 80 NRC 153 (2014)
license renewal applicants must provide a severe accident mitigation alternatives analysis if NRC Staff has
not yet previously considered SAMAs for the applicant’s plant in an environmental impact statement or
related supplement, or in an environmental assessment; CLI-12-5, 75 NRC 322-23 (2012); CLI-12-19,
76 NRC 380, 382, 383 (2012); CLI-15-18, 82 NRC 139 n.16 (2015); LBP-11-17, 74 NRC 21, 27
(2011); LBP-11-18, 74 NRC 37 (2011); LBP-11-21, 74 NRC 132 (2011); LBP-12-8, 75 NRC 564
(2012); LBP-13-1, 77 NRC 61 (2013)
license renewal applicants whose facilities qualify for the SAMA-analysis exception are exempt from
addressing severe accident mitigation in their environmental reports, just as they would be exempt from
addressing Category 1 issues; CLI-13-7, 78 NRC 212 n.66 (2013)
licensing board erred in concluding that it is impossible to waive the exception in this section; CLI-13-7,
78 NRC 206 (2013)
NEPA requires NRC to provide a reasonable mitigation alternatives analysis, containing reasonable
estimates, including, where appropriate, full disclosures of any known shortcomings in available
methodology, incomplete or unavailable information and significant uncertainties, and a reasoned
evaluation of whether and to what extent these or other considerations credibly could or would alter
the analysis on which SAMAs are considered; LBP-11-38, 74 NRC 832 (2011)
NRC did not mandate a specific approach to SAMA analyses, but instead, stated that it would review
each severe accident mitigation consideration provided by a license renewal applicant on its merits and
determine whether it constitutes a reasonable consideration of SAMAs; CLI-13-7, 78 NRC 214 n.82
(2013)
petitioner’s assertion that severe accidents from spent fuel pools must be considered in applicant’s SAMA
analysis is in direct conflict with NRC regulations; LBP-11-2, 73 NRC 65 (2011)
possibility that new SAM candidates may become available cannot be the basis for a successful petition
to waive this regulation, because the Commission knew that SAMA technology would change, but was
confident that processes, other than the SAMA analysis process, would adequately address any such
developments; LBP-13-1, 77 NRC 67-68 (2013)
preponderance of the evidence shows that applicant’s estimate and the NRC Staff’s approval of the
projected population are reasonable and satisfy NEPA requirements and this regulation; LBP-13-13, 78
NRC 489 (2013)
purpose of subsection (L) is to limit the analysis during relicensing to exclude consideration of SAMAs regarding plant operation that were previously considered; LBP-13-1, 77 NRC 64-65 (2013)
purpose of the exemption is to reflect NRC's view that one severe accident mitigation alternatives analysis, as a general matter, satisfies NRC obligation to consider measures to mitigate both the risk and the environmental impacts of severe accidents; CLI-13-7, 78 NRC 210 (2013); LBP-14-15, 80 NRC 154 (2014)
requirement for license renewal applicants to consider severe accident mitigation alternatives stems from this environmental regulation; CLI-12-10, 75 NRC 484 (2012)
SAM A analysis fulfills the requirement to provide a consideration of alternatives to mitigate severe accidents; LBP-11-13, 73 NRC 566 (2011)
severe accident mitigation alternatives analyses are required pursuant to NEPA; LBP-11-13, 73 NRC 571 (2011)
severe accident mitigation alternatives analysis for relicensing must be performed by licensee and included in the license renewal application; LBP-12-26, 76 NRC 567 (2012)
severe accident mitigation alternatives analysis is a Category 2 issue and SAMAs must be considered for all plants that have not considered such alternatives; CLI-12-19, 76 NRC 381 (2012); LBP-12-8, 75 NRC 551 (2012)
severe accident mitigation alternatives analysis is not part of NRC's safety review for license renewal under the Atomic Energy Act, but is instead a mitigation alternatives analysis conducted pursuant to the National Environmental Policy Act; CLI-12-1, 75 NRC 41 (2012); CLI-12-15, 75 NRC 706 (2012)
severe accident mitigation alternatives analysis is required for license renewal; LBP-13-13, 78 NRC 286 (2013)
severe accident mitigation alternatives analysis is required to discuss a recently discovered fault located near the plant; LBP-15-29, 82 NRC 248 (2015)
severe accident mitigation alternatives analysis must be considered as part of the environmental report and, ultimately, as part of NRC Staff's supplemental environmental impact statement for a power reactor license renewal; LBP-15-5, 81 NRC 260 (2015)
site-specific consideration of severe accident mitigation alternatives is required at the time of license renewal unless a previous consideration of such alternatives regarding plant operation has been included in a final environmental impact statement, final environmental assessment, or a related supplement; CLI-11-5, 74 NRC 166 n.100 (2011)
subsection (L) operates as the functional equivalent of a Category I issue, removing SAM As from litigation in case-by-case license renewal adjudications; LBP-13-1, 77 NRC 67 (2013)
10 C.F.R. 51.53(c)(3)(i) among the limited issues within the scope of a license renewal proceeding are alternatives for reducing adverse environmental impacts listed as Category 2 issues in Appendix B to Subpart A of 10 C.F.R. Part 51; LBP-11-2, 73 NRC 45 (2011); LBP-11-13, 73 NRC 550 (2011)
10 C.F.R. 51.53(c)(3)(iv) applicant is not barred from voluntarily supplementing its environmental report; LBP-11-32, 74 NRC 668 n.30 (2011)
because it is a Category I issue, license renewal applicants need not address bird collisions in their environmental reports unless they are aware of relevant new and significant information; CLI-13-7, 78 NRC 213 (2013)
environmental reports must contain any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware; CLI-12-19, 76 NRC 382 (2012); CLI-13-7, 78 NRC 210 (2013); LBP-11-29, 74 NRC 624 (2011); LBP-11-32, 74 NRC 666, 667 (2011); LBP-12-8, 75 NRC 549, 550 (2012); LBP-13-1, 77 NRC 62 (2013)
environmental reports must discuss new SAMAs addressed in more recent reports for other nuclear power plants of the same or similar boiling water reactor Mark II design; LBP-14-15, 80 NRC 152-53 (2014)
given that petitioner is challenging an omission in applicant’s environmental report of material that petitioner alleges is required to be there, the issue is within the scope of the proceeding; LBP-12-8, 75 NRC 556-57 (2012)
“new and significant information” requirement does not override, for purposes of litigating the issues in an adjudicatory proceeding, the exclusion of Category 1 issues in section 51.53(c)(3)(i) from site-specific review; CLI-12-19, 76 NRC 384 (2012)

NRC Staff is not barred from filing a request for additional information asking the applicant to supplement the environmental report; LBP-11-32, 74 NRC 668 n.30 (2011)

phrase “new” requires that the environmental report include environmental information that is new as compared to the original ER for the same facility and new as of the time of submission of the required ER, but does not impose a continuing duty to supplement an ER that was compliant when submitted; LBP-11-32, 74 NRC 667 (2011)

this section does not apply to license amendment applicants requesting a power uprate; LBP-11-29, 74 NRC 624 (2011)

10 C.F.R. 51.53(d)

applicant need not submit an environmental report until the final stage of decommissioning as part of its license termination plan; LBP-15-24, 82 NRC 95 (2015)

environmental reports must include new information when a prior license has been issued for the facility, and the ER in question is associated with a subsequent license for the same facility; LBP-11-32, 74 NRC 667 (2011)

post-operating license stage supplement to applicant’s environmental report may incorporate by reference any information contained in applicant’s construction permit stage environmental report; LBP-12-24, 76 NRC 518 n.69 (2012)

10 C.F.R. 51.60

applicant may incorporate material by reference that the applicant itself has previously submitted, not material prepared by NRC Staff; LBP-12-24, 76 NRC 518 n.69, 532-33 (2012)

contention that materials license amendment application fails to provide sufficient information regarding the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 23 (2014)

10 C.F.R. 51.60(a)

for materials license amendment or renewal applications or other form of permission for which applicant has previously submitted an environmental report, the supplement to applicant’s ER may be limited to incorporating by reference, updating, or supplementing the information previously submitted to reflect any significant environmental change, including any resulting from operational experience or a change in operations or proposed decommissioning activities; LBP-12-24, 76 NRC 518 n.69 (2012)

10 C.F.R. 51.60(b)

applicant for a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery must submit an environmental report with its application; LBP-15-3, 81 NRC 82 (2015)

10 C.F.R. 51.61

regulation applies to an application for an independent spent fuel storage installation; LBP-15-24, 82 NRC 95 n.172 (2015)

10 C.F.R. 51.62(a)

environmental report for application for land disposal of radioactive waste may incorporate by reference information contained in the application or in any previous application, statement, or report filed with the Commission provided that such references are clear and specific; LBP-12-24, 76 NRC 517-18 n.69 (2012)

10 C.F.R. 51.67

DOE may be required to supplement its final EIS when there is new information relevant to environmental concerns and bearing on the proposed action or its impacts; CLI-13-8, 78 NRC 232 (2013)

10 C.F.R. 51.70

admissibility of contention that environmental assessment fails to adequately describe or analyze proposed mitigation measures is decided; LBP-15-11, 81 NRC 430 (2015)

admissibility of contention that environmental assessment fails to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 443 (2015)
admissibility of contention that environmental assessment fails to provide an analysis of the impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 447 (2015)
admissibility of contention that final environmental assessment fails to adequately analyze cumulative impacts is decided; LBP-15-11, 81 NRC 432 (2015)
admissibility of contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with restoration standards is decided; LBP-15-15, 81 NRC 607, 608 (2015)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 418 (2015)
agency is required to consider all reasonable alternatives under the National Environmental Policy Act; LBP-15-15, 81 NRC 607-08 (2015)
although NRC has issued a generic environmental impact statement for in situ uranium recovery facilities that assesses potential ISR facility construction/operation/decommissioning impacts, for the initial licensing of each individual ISR facility, NRC Staff will first prepare a draft supplemental environmental impact statement; LBP-15-3, 81 NRC 83 (2015)
contention that draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 83 (2013)
contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 58, 110 (2013)
contention that draft environmental impact statement fails to adequately assess cumulative impacts of the proposed action and another proposed ISL uranium mining operation is inadmissible; LBP-13-10, 78 NRC 141 (2013)
contention that draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 65 (2013)
contention that draft environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 137, 139 (2013)
contention that draft environmental impact statement fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 94-95 (2013)
contention that draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 86 (2013)
contention that draft environmental impact statement fails to include a reviewable plan for disposal of 11(e)(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 69 (2013)
contention that draft environmental impact statement fails to include adequate hydrological information to demonstrate applicant’s ability to contain groundwater fluid migration is admissible; LBP-13-10, 78 NRC 139, 140 (2013)
contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 55, 107 (2013)
contention that draft environmental impact statement fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 89 (2013)
contention that draft environmental impact statement lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is admissible; LBP-13-10, 78 NRC 135 (2013)
contention that draft supplemental environmental impact statement fails to consider connected actions is admissible; LBP-13-9, 78 NRC 75 (2013)
contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as untimely; LBP-15-11, 81 NRC 428 (2015)
contention that environmental assessment violates the National Environmental Policy Act in its failure to provide an analysis of the groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 424 (2015)
contention that final environmental assessment fails to adequately analyze all reasonable alternatives is inadmissible; LBP-15-11, 81 NRC 434 (2015)
contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 434-35 (2015)
contention that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies, is decided; LBP-15-16, 81 NRC 659-60 (2015)
contention that final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 393 (2014)
contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-13-10, 78 NRC 144 (2013)
mitigation measures must be discussed in the final supplemental environmental impact statement; LBP-15-16, 81 NRC 687 (2015)
NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)

10 C.F.R. 51.70(b)
contention that draft environmental impact statement fails to demonstrate adequate technical sufficiency and fails to present information in a clear, concise manner to enable effective public review is inadmissible; LBP-13-9, 78 NRC 61 (2013)
contention that final environmental assessment fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-15-11, 81 NRC 427 (2015)
NRC Staff need not replicate the work completed by another entity, but rather must independently review and find relevant and scientifically reasonable any outside reports or analyses on which it intends to rely in its environmental impact statement; LBP-11-1, 73 NRC 25 n.9 (2011)
NRC Staff will independently evaluate and be responsible for the reliability of all information used in the draft environmental impact statement; LBP-13-4, 77 NRC 213 (2013)

10 C.F.R. 51.71
admissibility of contention that environmental assessment fails to adequately describe or analyze proposed mitigation measures is decided; LBP-15-11, 81 NRC 430 (2015)
admissibility of contention that environmental assessment fails to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 443 (2015)
admissibility of contention that environmental assessment fails to provide an analysis of the impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 447 (2015)
admissibility of contention that final environmental assessment fails to adequately analyze cumulative impacts is decided; LBP-15-11, 81 NRC 432 (2015)
admissibility of contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with restoration standards is decided; LBP-15-15, 81 NRC 607, 608 (2015)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 418 (2015)
agency is required to consider all reasonable alternatives under the National Environmental Policy Act; LBP-15-15, 81 NRC 607-08 (2015)
contention that draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 83 (2013)
contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 110 (2013)
contention that draft environmental impact statement fails to adequately assess cumulative impacts of the proposed action and another proposed ISL uranium mining operation is inadmissible; LBP-13-10, 78 NRC 141 (2013)
contention that draft environmental impact statement fails to adequately assess the likelihood and impacts of fluid migration to the adjacent groundwater is admissible; LBP-13-10, 78 NRC 139, 140 (2013)
contention that draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 65 (2013)
contention that draft environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 137, 139 (2013)
contention that draft environmental impact statement fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 94-95 (2013)
contention that draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 86 (2013)
contention that draft environmental impact statement fails to include a reviewable plan for disposal of 11e(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 69 (2013)
contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess adequate confinement and potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 107 (2013)
contention that draft environmental impact statement fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 89 (2013)
contention that draft environmental impact statement lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is admissible; LBP-13-10, 78 NRC 135 (2013)
contention that draft supplemental environmental impact statement fails to consider connected actions is admissible; LBP-13-9, 78 NRC 75 (2013)
contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as untimely; LBP-15-11, 81 NRC 428 (2015)
contention that environmental assessment violates the National Environmental Policy Act in its failure to provide an analysis of the groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 424 (2015)
contention that final environmental assessment fails to adequately analyze all reasonable alternatives is inadmissible; LBP-15-11, 81 NRC 434 (2015)
contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 434-35 (2015)
contention that final supplemental environmental impact statement fails to provide an adequate baseline groundwater characterization or demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies, is decided; LBP-15-16, 81 NRC 659-60 (2015)
contention that final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 393 (2014)
contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-13-10, 78 NRC 144 (2013)
contention that draft environmental impact statement indicates what other interests and considerations of federal policy, including factors not related to environmental quality, if applicable, are relevant to the consideration of environmental effects of the proposed action; LBP-14-6, 79 NRC 436 (2014)
draft environmental impact statement must address matters specified in section 51.45; LBP-14-9, 80 NRC 58 n.184 (2014)
environmental impacts will be considered irrespective of whether a certification or license from the appropriate authority has been obtained; LBP-15-16, 81 NRC 699 (2015)
even if not quantifiable, important qualitative considerations must also be addressed in an environmental impact statement; LBP-11-23, 74 NRC 345 (2011)
for each license renewal application, NRC Staff must prepare a plant-specific supplement to the generic environmental impact statement that adopts applicable generic impact findings from the GEIS and analyzes site-specific impacts; LBP-12-8, 75 NRC 549 (2012)
mitigation measures must be discussed in the final supplemental environmental impact statement; LBP-15-16, 81 NRC 687 (2015)
NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.28 (2010)
suspension of proceedings is not appropriate where petitioners seek revision of NRC’s existing rules, and no regulatory gap currently exists with regard to those provisions; CLI-14-7, 80 NRC 9 n.32 (2014)
there is no enumeration of the required contents of a draft environmental impact statement regarding endangered or threatened species; LBP-12-12, 75 NRC 762 (2012)
10 C.F.R. 51.71(a) generic environmental impact statement for in-situ leach uranium milling facilities addresses, among other topics, matters specified in section 51.45; LBP-15-3, 81 NRC 83-84 (2015)
purpose of applicant’s environmental report is to assist NRC in preparing the agency’s own environmental analysis; LBP-11-28, 74 NRC 608 (2011)
10 C.F.R. 51.71(b) although a draft supplemental environmental impact statement may rely in part on applicant’s environmental report, NRC Staff must independently evaluate and be responsible for the reliability of all information used in the DSEIS; LBP-15-3, 81 NRC 84 (2015)
NRC Staff must include in the final supplemental environmental impact statement an analysis of significant problems and objections raised by any affected Indian tribes, and by other interested persons; LBP-15-16, 81 NRC 650, 655 (2015)
10 C.F.R. 51.71(c) although NRC Staff, in its draft environmental impact statement, did not explain the Great Lakes Compact’s review process, it satisfied its duty by stating that applicant must obtain a water withdrawal permit from the state and citing the governing Michigan statute; LBP-12-12, 75 NRC 764-65 (2012)
10 C.F.R. 51.71(d) although license requirements and other environmental quality standards are to be considered in assessing environmental impacts, they do not negate NRC Staff’s responsibility to consider all environmental effects; LBP-15-3, 81 NRC 115 (2015)
analysis for all draft and final environmental impact statements, by virtue of section 51.90, will, to the fullest extent practicable, quantify the various factors considered; LBP-15-3, 81 NRC 115 (2015)
apPLICANT’S radiological measurements and monitoring program is subject to scrutiny; LBP-11-26, 74 NRC 565 (2011)
draft environmental impact statement must consider the economic, technical, and other benefits and costs of the proposed action; LBP-11-7, 73 NRC 282 n.175 (2011)
draft environmental impact statement must include a preliminary analysis that considers and weighs the environmental effects of and alternatives to the proposed action and alternatives available for reducing or avoiding adverse environmental effects; LBP-12-18, 76 NRC 160, 175-76 (2012); LBP-14-9, 80 NRC 43 (2014)
final supplemental environmental impact statement must include an analysis of cultural impacts; LBP-15-16, 81 NRC 650 (2015)
if important factors in the cost-benefit balancing cannot be quantified, they may be discussed qualitatively; LBP-11-7, 73 NRC 282 n.173 (2011)
NRC is required to consider alternatives available for reducing or avoiding adverse environmental effects; LBP-11-7, 73 NRC 282 n.175 (2011)
NRC must address any purported need for additional power during its environmental review of a combined license application; LBP-11-7, 73 NRC 282 n.175 (2011)
NRC Staff is to consider and weigh the environmental, technical, and other costs and benefits of a proposed action and alternatives, and, to the fullest extent practicable, quantify the various factors considered; LBP-11-7, 73 NRC 282 n.173 (2011)
NRC’s obligation to evaluate new recommendations for enhanced accident mitigation does not depend upon whether intervenors have identified unique characteristics of the site or the proposed new reactor; LBP-12-18, 76 NRC 144 (2012)

once NRC has properly defined the scope of the proposed action, including any connected actions, the agency’s environmental impact statement must evaluate the environmental effects of the proposed action; LBP-14-9, 80 NRC 42 (2014)

petitioners question applicant’s failure to consider the qualitative benefits of installing engineered filters; LBP-15-5, 81 NRC 264 (2015)

to the extent that there are important qualitative considerations or factors that cannot be quantified in the environmental impact statement, those considerations or factors will be discussed in qualitative terms; LBP-11-23, 74 NRC 336 (2011); LBP-15-3, 81 NRC 115 (2015); LBP-15-5, 81 NRC 263 (2015)

when connected actions have been identified, the agency must evaluate any potential effects in the environmental impact statement; LBP-15-16, 81 NRC 697 (2015)

where environmental impacts are practically quantifiable, NRC has a duty to discuss them in those terms in the final supplemental environmental impact statement; LBP-15-3, 81 NRC 115 (2015)

10 C.F.R. 51.71(d) & n.3

blanket reliance by NRC Staff on Clean Water Act permits is not permitted; LBP-14-9, 80 NRC 63-64 (2014)

compliance with the Clean Water Act does not negate the requirement for NRC to weigh all environmental effects of a proposed action; LBP-12-16, 76 NRC 57 (2012)

compliance with the environmental quality standards and requirements of the Federal Water Pollution Control Act is not a substitute for, and does not negate the requirement for NRC to weigh all environmental effects of the proposed action, including the degradation, if any, of water quality; LBP-15-11, 81 NRC 439 (2015)

if a federal or state environmental agency issues a permit to the operator of a nuclear power plant that imposes numerical limits on the amount of pollution that the plant may emit, then NRC’s final environmental impact statement may reasonably assume that the company’s emissions will comply with those numerical limits; LBP-13-4, 77 NRC 218 n.96 (2013)

10 C.F.R. 51.72

asserted new information must present a seriously different picture of the environmental impact of the proposed project than what was previously envisioned; LBP-12-1, 75 NRC 15 n.57 (2012)

NRC rules provide a process to prepare supplemental draft or final environmental impact statements when the agency identifies new and significant information; CLI-14-7, 80 NRC 8 (2014)

only where new information presents a seriously different picture of the environmental impact of the proposed project from what was previously envisioned is supplementation of an environmental impact statement required; LBP-11-39, 74 NRC 868 (2011)

10 C.F.R. 51.72(a)

circumstances under which NRC Staff must prepare supplemental environmental review documents are described; CLI-11-5, 74 NRC 167 (2011); LBP-11-33, 74 NRC 682 n.12 (2011)

NRC Staff must include new and significant information in the supplemental draft environmental impact statement; LBP-11-34, 74 NRC 697-98 (2011)

NRC will supplement an EIS if there are substantial changes in the proposed action relevant to environmental concerns or new and significant circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; CLI-12-7, 75 NRC 388 (2012); LBP-11-33, 74 NRC 681 (2011)

10 C.F.R. 51.72(a)(2)

draft environmental impact statements must capture and address any new and significant information that arises in the interval after the applicant files its originally compliant environmental report; LBP-11-32, 74 NRC 667, 669 n.33 (2011)

if recommendations of the NRC’s Near-Term Task Force review of the Fukushima Dai-ichi accident constitute relevant new and significant information, the draft supplemental environmental impact statement must address it; LBP-11-28, 74 NRC 608 (2011)

supplement to the draft or final environmental impact statement is required if there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-28, 74 NRC 609 (2011); LBP-11-32, 74 NRC 662, 672 (2011)
where NRC intends to mandate that an originally compliant environmental document be supplemented, it does so explicitly; LBP-11-32, 74 NRC 666-67 (2011)

10 C.F.R. 51.72(b)
NRC Staff has the option of preparing a supplement to a draft or final environmental impact statement when, in its opinion, preparation of a supplement will further the purposes of NEPA; CLI-11-5, 74 NRC 167 n.103 (2011)

10 C.F.R. 51.73
although NRC must respond to the significant views of other agencies, particularly if they are critical of NRC’s analysis, that duty applies at the final environmental impact statement stage after the draft EIS has been circulated to interested federal and state agencies for their review and comment; LBP-12-12, 75 NRC 760 (2012)
NRC rules provide a mechanism for supplementing an original NEPA analysis; CLI-13-7, 78 NRC 211 (2013)

NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)

NRC’s NEPA regulations require a request for public comment on a draft environmental impact statement and a supplement to a DEIS distributed in accordance with 10 C.F.R. 51.74 and on any supplement to the FEIS prepared pursuant to 10 C.F.R. 51.92(a) or (b); LBP-14-9, 80 NRC 68 (2014)
petitioner may submit to NRC Staff any information that it believes to be new and significant by participating in NRC’s parallel NEPA process wherein an opportunity for public comment on the draft supplemental EIS is provided; CLI-13-7, 78 NRC 212 (2013)

public comment period is required for draft and supplemental environmental impact statements; CLI-12-16, 76 NRC 67 (2012)

10 C.F.R. 51.74
although NRC must respond to the significant views of other agencies, particularly if they are critical of NRC’s analysis, that duty applies at the final environmental impact statement stage after the draft EIS has been circulated to interested federal and state agencies for their review and comment; LBP-12-12, 75 NRC 760 (2012)

NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)

petitioner may submit to NRC Staff any information that it believes to be new and significant by participating in NRC’s parallel NEPA process wherein an opportunity for public comment on the draft supplemental EIS is provided; CLI-13-7, 78 NRC 212 (2013)

10 C.F.R. 51.75(c)
issuance of a combined license is a major federal action significantly affecting the quality of the human environment, and requiring an environmental impact statement; LBP-13-4, 77 NRC 119 (2013)

10 C.F.R. 51.90
legal requirements applicable to a draft environmental impact statement, as specified in sections 51.70(b) and 51.71, are imposed on a final EIS; LBP-15-3, 81 NRC 115 (2015)

NRC Staff must prepare a final environmental impact statement in accordance with the requirements of section 51.71 for a draft environmental impact statement; LBP-12-18, 76 NRC 160 (2012); LBP-14-9, 80 NRC 43, 58 n.184 (2014)

NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)
once NRC has properly defined the scope of the proposed action, including any connected actions, the agency’s environmental impact statement must evaluate the environmental effects of the proposed action; LBP-14-9, 80 NRC 42 (2014)
when connected actions have been identified, the agency must evaluate any potential effects in the environmental impact statement; LBP-15-16, 81 NRC 697 (2015)

10 C.F.R. 51.90-94
contention that final supplemental environmental impact statement fails to comply with NRC regulations and NEPA because it lacks an adequate description of the present baseline (i.e., original or premining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is decided; LBP-15-3, 81 NRC 85, 111 (2015)
contention that FSEIS fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 111 (2015)

10 C.F.R. 51.91 additional content is required in a final environmental impact statement compared to a draft EIS; LBP-15-3, 81 NRC 115 n.44 (2015)

NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)

10 C.F.R. 51.91(a)(1) analysis and response to state’s extensive comments to the draft supplemental environmental impact statement regarding state-specific energy conservation and efficiency as a replacement alternative fulfills NRC Staff’s obligation to take a hard look at alternatives; LBP-13-13, 78 NRC 519, 520 (2013)

NRC Staff is not obligated to fully adopt, or agree with, all comments to the draft supplemental environmental impact statement regarding the no-action alternative; LBP-13-13, 78 NRC 521 (2013)

10 C.F.R. 51.91(a)(1)(i)-(v) final environmental impact statements will include responses to any comments on the draft environmental impact statement; LBP-13-13, 78 NRC 508 (2013)

10 C.F.R. 51.92 NRC rules provide a process to prepare supplemental draft or final environmental impact statements when the agency identifies new and significant information; CLI-14-7, 80 NRC 8 (2014)

when a supplement to a final environmental impact statement is required and what it must contain are outlined; LBP-15-3, 81 NRC 115 n.44 (2015)

when an environmental impact statement is prepared at the early site permit stage, NRC Staff must prepare a supplemental EIS for the combined license focusing on issues related to the impacts of construction and operation for which new and significant information has been identified; CLI-12-2, 75 NRC 117 (2012)

with respect to the need to supplement an issued final EIS, the party offering the new contention has the burden of presenting information sufficient to show that there is a genuine issue regarding whether the NRC Staff should supplement its document; LBP-15-16, 81 NRC 704 (2015)

10 C.F.R. 51.92(a) circumstances under which NRC Staff must prepare supplemental environmental review documents are described; CLI-11-5, 74 NRC 167 n.103 (2011); LBP-11-33, 74 NRC 681, 682 n.12 (2011)

duty to supplement the final supplemental environmental impact statement is mandatory, is not avoidable through findings of compliance with the agency’s safety regulations, and is waivable only where the consequences are remote and highly improbable; CLI-12-11, 75 NRC 532 (2012)

final environmental impact statement may be supplemented if, before a proposed action is taken, new and significant information comes to light that bears on the proposed action or its impacts; CLI-12-6, 75 NRC 376 n.147 (2012); CLI-12-7, 75 NRC 388 (2012)

NRC Staff must prepare supplemental environmental review documents when there are substantial changes in the proposed action that are relevant to environmental concerns or significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-12-18, 76 NRC 162 (2012)

10 C.F.R. 51.92(a)(1)-(2)

before taking a proposed action, Staff must issue a supplemental environmental impact statement if there are substantial changes in the proposed action that are relevant to environmental concerns or there are new and significant circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-39, 74 NRC 868 (2011)

10 C.F.R. 51.92(a)(2) environmental assessment cannot import previous environmental analyses without consideration of subsequent developments at the site and to hold otherwise would render meaningless NEPA’s requirement to supplement an environmental impact statement or environmental assessment; CLI-15-25, 82 NRC 399 (2015)

if the NRC Staff safety review reveals any new and significant information relating to the environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 413 (2014)
importing analysis from a previously completed environmental assessment while disregarding intervening events would render meaningless NEPA’s requirement to supplement an environmental impact statement or EA; LBP-15-13, 81 NRC 471 n.89 (2015)
new information in the Fukushima Task Force Report is relevant to environmental concerns; LBP-12-18, 76 NRC 167 (2012)
regulation does not apply to the question whether the environmental assessment adequately describes the current environment, but rather applies when considering whether to supplement an environmental analysis for the period between issuance of the final document and before the agency has taken the proposed action; CLI-15-25, 82 NRC 399 (2015)
supplement to the draft or final environmental impact statement is required if there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-32, 74 NRC 662, 668, 672 (2011); LBP-12-18, 76 NRC 157, 166 (2012)
supplementation of a final environmental impact statement is required when a final action has not been taken and there are new and significant circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; CLI-15-10, 81 NRC 542 (2015)
where NRC intends to mandate that an originally compliant environmental document be supplemented, it does so explicitly; LBP-11-32, 74 NRC 667 (2011)
10 C.F.R. 51.92(c)
NRC Staff has the option of preparing a supplement to a draft or final environmental impact statement when, in its opinion, preparation of a supplement will further the purposes of NEPA; CLI-11-5, 74 NRC 167 n.103 (2011)
10 C.F.R. 51.92(c)(3)
final supplemental environmental impact statement did not contain a separate discussion of alternative sites because these were assessed at the early site permit stage; CLI-12-2, 75 NRC 118 n.352 (2012)
10 C.F.R. 51.92(d)
when a supplement to an environmental impact statement is prepared, NRC Staff need not conduct a scoping process; LBP-13-9, 78 NRC 73, 75 (2013)
10 C.F.R. 51.92(g)(1)
NRC’s NEPA regulations require a request for public comment on a draft environmental impact statement and a supplement to a DEIS distributed in accordance with 10 C.F.R. 51.74 and on any supplement to the FEIS prepared pursuant to 10 C.F.R. 51.92(a) or (b); LBP-14-9, 80 NRC 68 (2014)
10 C.F.R. 51.93
distribution requirements for a final environmental impact statement (and a supplement thereto) are imposed; LBP-15-3, 81 NRC 115 n.44 (2015)
NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)
10 C.F.R. 51.94
final environmental impact statement (or supplement thereto) must be considered in the agency’s decisionmaking; LBP-15-3, 81 NRC 115 n.44 (2015)
NRC Staff’s NEPA responsibilities for preparing an environmental impact statement are described; LBP-11-6, 73 NRC 177 n.25 (2010)
10 C.F.R. 51.95
preponderance of the evidence supports conclusion that NRC Staff’s reasoned, qualitative approach to weighing the costs and benefits of plant shutdown on property values and the local community is reasonable and satisfies regulatory requirements; LBP-13-13, 78 NRC 505 (2013)
suspension of proceedings is not appropriate where petitioners seek revision of NRC’s existing rules, and no regulatory gap currently exists with regard to those provisions; CLI-14-7, 80 NRC 9 n.32 (2014)
10 C.F.R. 51.95(e)
for each license renewal application, NRC Staff must prepare a plant-specific supplement to the generic environmental impact statement that adopts applicable generic impact findings from the GEIS and analyzes site-specific impacts; LBP-12-8, 75 NRC 549 (2012); LBP-12-10, 75 NRC 644 (2012)
NRC Staff uses applicant’s environmental report as a starting point for its own environmental review of a license renewal application, the results of which are published as a supplement to the generic environmental impact statement; CLI-15-6, 81 NRC 351 (2015)
to assist NRC in preparation of a supplemental environmental impact statement, license renewal applicants are required to prepare an environmental report; CLI-13-7, 78 NRC 210 (2013)

10 C.F.R. 51.95(c)(2)
NRC Staff is not required to analyze the need for power for license renewal; LBP-13-13, 78 NRC 519 n.1929 (2013)
supplemental environmental impact statements for license renewal are not required to include discussion of need for power or the economic costs and economic benefits of the proposed action or of alternatives to the proposed action; LBP-13-13, 78 NRC 507 (2013)

10 C.F.R. 51.95(c)(3)
if NRC Staff had in hand new information that could render invalid the original site-specific analysis, then such information should be identified and evaluated by Staff for its significance, consistent with NEPA requirements; CLI-12-19, 76 NRC 385-86 n.54 (2012)
NRC rules provide a mechanism for supplementing an original NEPA analysis; CLI-13-7, 78 NRC 211 (2013)

10 C.F.R. 51.95(c)(4)
environmental impacts of license renewal are classified as either Category 1, which are addressed by the NRC’s generic environmental impact statement for license renewal, or Category 2, which are analyzed on a site-specific basis; LBP-11-17, 74 NRC 21 (2011)
license renewal applicant need not include analyses of the environmental impacts of Category 1 issues in its environmental report because NRC Staff incorporates the GEIS analysis of Category 1 issues as part of the overall cost-benefit balance in the supplemental environmental impact statement for license renewal; CLI-12-19, 76 NRC 381 n.18 (2012)
license renewal applicants must identify in their environmental reports any new and significant information of which the applicant is aware to assist in the preparation of NRC’s new-and-significant-information analysis; CLI-13-7, 78 NRC 210 (2013)
NRC rules provide a mechanism for supplementing an original NEPA analysis; CLI-13-7, 78 NRC 211 (2013)
NRC Staff must make a recommendation on the environmental acceptability of the license renewal action, and the Commission shall determine whether or not the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; CLI-12-8, 75 NRC 399 n.36 (2012)

10 C.F.R. 51.101(a)
excluding the transmission corridor from the scope of the proposed action also removes it from the limitation on actions; LBP-14-9, 80 NRC 56 (2014)
important consequence of decision whether to include new construction within the scope of the proposed action is that, if it is included, it will be subject to the limitation on actions in this regulation; LBP-14-9, 80 NRC 44 (2014)

10 C.F.R. 51.101(a)(1)
when NRC Staff prepares a final environmental impact statement, then, until a record of decision is issued, no action concerning the proposal may be taken by the Commission that would have an adverse environmental impact or limit the choice of reasonable alternatives; LBP-14-9, 80 NRC 44 (2014)

10 C.F.R. 51.101(a)(2)
any action concerning applicant’s proposal that would have an adverse environmental impact or limit the choice of reasonable alternatives may be grounds for denial of a license; LBP-14-9, 80 NRC 44 (2014)

10 C.F.R. 51.102(a)
as part of its environmental review, NRC Staff must prepare a Record of Decision to accompany any Commission decision on any action for which a final EIS has been prepared; LBP-13-13, 78 NRC 525 (2013)

10 C.F.R. 51.102(b)
NRC Staff typically prepares the record of decision; LBP-13-13, 78 NRC 525 (2013)

10 C.F.R. 51.102(c)
final supplemental environmental impact statement is merged with any relevant licensing board decision; CLI-15-6, 81 NRC 387 (2015)
initial decision of the presiding officer or final decision of the Commissioners acting as a collegial body will constitute the record of decision; CLI-15-6, 81 NRC 387 (2015)
LEGAL CITATIONS INDEX
REGULATIONS

this provision replaced a previous version that expressly permitted licensing boards to modify the content of an environmental impact statement; CLI-15-6, 81 NRC 387-88 (2015)
10 C.F.R. 51.103(a)(3)
record of decision must discuss relevant factors including economic and technical considerations among alternatives; LBP-11-7, 73 NRC 282 n.175 (2011)
10 C.F.R. 51.103(a)(4)
NRC’s record of decision for the license must state whether the Commission has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm from the alternative selected, and if not, to explain why those measures were not adopted; LBP-11-17, 74 NRC 22 (2011); LBP-12-18, 76 NRC 161 (2012)
one once NRC completes its environmental review, its record of decision must summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-11-17, 74 NRC 22 (2011); LBP-12-18, 76 NRC 161 (2012); LBP-13-9, 78 NRC 69 (2013)
10 C.F.R. 51.105(b)
presiding officer in an early site permit hearing shall not admit contentions proffered by any party concerning the benefits assessment if those issues were not addressed by applicant in the early site permit application; LBP-11-16, 73 NRC 696 (2011)
10 C.F.R. 51.107
Commission must determine whether the NRC Staff’s review of a combined license application has been adequate to support the findings set forth in this regulation; CLI-12-9, 75 NRC 428 (2012)
10 C.F.R. 51.107(a)
determination the Commission must make is whether NRC Staff review of a combined license application has been adequate to support the findings found in this section; CLI-12-2, 75 NRC 74 (2012); CLI-15-13, 81 NRC 557, 589 (2015)
environmental issues that the Commission must consider in the mandatory portion of a combined license proceeding are outlined; CLI-15-13, 81 NRC 560 (2015)
in uncontested hearings, it is NRC’s duty to ensure, among other things, that it has adhered to its obligations under the National Environmental Policy Act; CLI-15-1, 81 NRC 11 n.54 (2015)
10 C.F.R. 51.107(a)(1)
final environmental impact statements must comply with sections 102(2)(A), (C), and (E) of NEPA and the agency’s Part 51 regulations; LBP-14-9, 80 NRC 37-58 (2014)
10 C.F.R. 51.107(a)(1)-(4)
NRC must conduct a hearing on the uncontested environmental and safety aspects of the proposed plant; LBP-13-4, 77 NRC 220 n.99 (2013)
scope of Commission examination of whether environmental requirements of a combined license application have been met is described; CLI-12-2, 75 NRC 75 (2012)
10 C.F.R. 51.107(a)(2)
under NEPA, NRC independently considers the final balance among the conflicting factors contained in the record in determining whether the combined licenses should issue; CLI-12-9, 75 NRC 465 (2012)
10 C.F.R. 51.107(a)(3)
although NRC does not license construction or operation of a transmission corridor, it has the authority to deny the license for a proposed nuclear plant if, for example, the total environmental costs of the new reactor and connected actions exceed the benefits; LBP-12-12, 75 NRC 779-80 (2012)
environmental, economic, technical, and other benefits must be weighed against environmental and other costs for each proposed action; LBP-11-7, 73 NRC 281 (2011)
in every combined license proceeding, the Commission may require implementation of mitigation measures it deems necessary and appropriate by imposing conditions in the license; LBP-12-18, 76 NRC 161 (2012)
in every combined license proceeding, the presiding officer must determine whether the license should be issued, denied, or appropriately conditioned to protect environmental values; LBP-13-4, 77 NRC 217 (2013)
NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse environmental impacts that might otherwise be caused by the construction or operation of a nuclear power plant; LBP-14-9, 80 NRC 49 (2014)
NRC uses environmental impact information to determine, after weighing the environmental, economic, technical, and other benefits against environmental and other costs, whether the combined license should be issued, denied, or appropriately conditioned to protect environmental values; LBP-12-12, 75 NRC 780 (2012); LBP-14-9, 80 NRC 42 (2014)

10 C.F.R. 51.107(b)(3)
matter resolved in an early site permit proceeding may be revisited in the combined license proceeding when new and significant information is presented; LBP-11-10, 73 NRC 431 (2011)

10 C.F.R. 51.107(d)
determination the Commission must make is whether NRC Staff review of a limited work authorization has been adequate to support the findings found in this section; CLI-12-2, 75 NRC 74 (2012)

10 C.F.R. 51.107(d)(1)(i)-(iv)
scope of Commission examination of whether environmental requirements of a limited work authorization have been met is described; CLI-12-2, 75 NRC 73 (2012)

10 C.F.R. 51.109(c)
presiding officer in the adjudication will determine the extent to which adoption by the NRC of DOE’s repository EIS and its supplements is practicable, which in turn will satisfy NRC’s NEPA obligations; CLI-13-8, 78 NRC 232 (2013)

10 C.F.R. 51.120
contention that final environmental assessment fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-13-9, 78 NRC 61 (2013); LBP-15-11, 81 NRC 427 (2015)

contention that the draft environmental impact statement fails to demonstrate adequate technical sufficiency is inadmissible; LBP-13-9, 78 NRC 61 (2013)

10 C.F.R. Part 51, Subpart A, Appendix A
contention that final environmental assessment fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-15-11, 81 NRC 427 (2015)

contention that the draft environmental impact statement fails to demonstrate adequate technical sufficiency and fails to present information in a clear, concise manner to enable effective public review is inadmissible; LBP-13-9, 78 NRC 61 (2013)

environmental impact statements must consider the alternative of no action; LBP-12-8, 75 NRC 567 (2012)

10 C.F.R. Part 51, Subpart A, Appendix A. § 4
as part of its NEPA analysis, NRC must provide information that addresses the purpose and need for the proposed action; LBP-11-26, 74 NRC 521 (2011)

when taking the requisite hard look at environmental consequences of the alternatives to the proposed licensing action, the environmental impact statement must discuss the no-action alternative; LBP-13-13, 78 NRC 507 (2013)

10 C.F.R. Part 51, Subpart A, Appendix A. § 5
alternatives analysis is the heart of the environmental impact statement; CLI-12-9, 75 NRC 473 (2012); CLI-15-13, 81 NRC 587 (2015); LBP-11-16, 73 NRC 699 (2011); LBP-12-17, 76 NRC 82 (2012)

environmental review identified an appropriate range of alternatives with respect to both alternative power sources and alternative sites, and adequately described the environmental impacts of each alternative; CLI-12-9, 75 NRC 474 (2012)

10 C.F.R. Part 51, Subpart A, Appendix A. § 7
regardless of their classification as direct, indirect, or cumulative, impacts that are reasonably foreseeable are to be assessed in an environmental impact statement; LBP-11-26, 74 NRC 546 (2011)

10 C.F.R. Part 51, Subpart A, Appendix B
Category 2 issues focus on severe accident mitigation, to further reduce severe accident risk (probability or consequences); CLI-12-19, 76 NRC 381 n.20 (2012)

environmental analysis of severe accidents is designated as a Category 2 site-specific issue for license renewal, and therefore the SAMA analysis normally is subject to challenge in a license renewal adjudicatory proceeding; CLI-13-7, 78 NRC 211 (2013)
NRC has resolved many environmental impacts for license renewal through a generic environmental impact statement and these issues need not be revisited in site-specific environmental impact statements; CLI-14-7, 80 NRC 6 n.13 (2014)

purpose of the regulation is described; CLI-11-11, 74 NRC 449 (2011)

rule waiver would be necessary to litigate the issue of potentially new and significant information pertaining to bird collisions in an adjudicatory proceeding; CLI-13-7, 78 NRC 213 (2013)

severe accident mitigation alternatives analysis is a Category 2 issue; CLI-12-19, 76 NRC 381 (2012);
LBP-12-15, 76 NRC 29 n.3 (2012)

severe accidents in the spent fuel pools are Category 1 issues that do not need to be included in the severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 307 (2015)

suspension of proceedings is not appropriate where petitioners seek revision of NRC’s existing rules, and no regulatory gap currently exists with regard to those provisions; CLI-14-7, 80 NRC 9 n.32 (2014)
to challenge a Category 1 issue such as public health, petitioner must request a waiver and show that unique circumstances warrant a site-specific determination; LBP-15-5, 81 NRC 302 (2015)

10 C.F.R. Part 51, Subpart A, Appendix B, n.2

Category 2 issues must be reviewed on a site-specific basis because they have not been determined to be essentially similar for all plants; LBP-11-13, 73 NRC 551 (2011); LBP-11-21, 74 NRC 132 (2011);

Commission has codified generic determinations for certain environmental issues, identified as Category 1
issues, for license renewal proceedings; LBP-11-13, 73 NRC 551 (2011)
issues that require site-specific analysis are identified as Category 2 issues; LBP-11-13, 73 NRC 551 (2011)

all uranium fuel cycle and waste management issues, including low-level waste storage and disposal,
mixed waste storage and disposal, onsite spent fuel storage, and transportation, are Category 1 issues
with a small impact; LBP-11-2, 73 NRC 75-76 (2011)

although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants,
NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review;
LBP-12-26, 76 NRC 569 (2012)

although potential severe accident mitigation alternatives must be considered for license renewal, no
site-specific severe accident impacts analysis needs to be done; CLI-12-15, 75 NRC 709 (2012)
bird collisions have not been found to be a problem at operating nuclear power plants and are not
expected to be a problem during the license renewal term; CLI-13-7, 78 NRC 212 (2013); LBP-13-1,
77 NRC 67 (2013)

Category 1 issues are environmental issues that NRC has resolved generically and therefore does not
consider in specific license renewal proceedings; CLI-15-18, 82 NRC 139 n.15 (2015)
consultation with appropriate agencies is needed at the time of license renewal to determine whether
threatened or endangered species are present and whether they would be adversely affected; LBP-12-10,
75 NRC 642 (2012)
determination that, for any license renewal of a nuclear power plant, the probability-weighted
consequences of a severe accident are small cannot be challenged; LBP-11-2, 73 NRC 46 (2011)
edangered/threatened species is a Category 2 issue that requires site-specific analysis in the supplemental
environmental impact statement; LBP-12-10, 75 NRC 644 (2012)
environmental impacts of license renewal are classified as either Category 1, which are addressed by the
NRC’s generic environmental impact statement for license renewal, or Category 2, which are analyzed
on a site-specific basis; LBP-11-17, 74 NRC 21 (2011)
environmental justice is a Category 2 issue, within the scope of a license renewal proceeding; CLI-15-6,
environmental report for license renewal must consider alternatives to mitigate severe accidents for all
plants that have not considered such alternatives; LBP-15-5, 81 NRC 274 n.137 (2015)
for a mitigation analysis, NEPA demands no fully developed plan or detailed examination of specific
measures that will be employed to mitigate adverse environmental effects; LBP-11-23, 74 NRC 330
(2011)
for all plants, onsite dry or pool storage can safely accommodate spent fuel accumulated from a 20-year
license extension with small environmental effects; LBP-11-13, 73 NRC 570 (2011)
for Category 1 issues, mitigation of adverse impacts has already been generically analyzed and it has already been determined that additional plant-specific mitigation measures are likely not to be sufficiently beneficial to warrant implementation; LBP-11-13, 73 NRC 570 (2011)
for generic analysis of severe accidents, the probability-weighted consequences of atmospheric releases, fallout onto open bodies of water, releases to groundwater, and societal and economic impacts of severe accidents are of small significance for all plants; CLI-11-5, 74 NRC 166 n.100 (2011)
groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue; LBP-12-8, 75 NRC 552 (2012)
if NRC Staff has not already considered site-specific severe accident mitigation alternatives for a facility, they must be considered as part of applicant’s environmental report and ultimately as part of NRC Staff’s supplemental EIS in a power reactor license renewal proceeding; LBP-11-17, 74 NRC 21 (2011)
impacts to subsistence consumption must be evaluated as part of the site-specific environmental justice analysis; LBP-15-5, 81 NRC 384, 285 (2015)
NRC has found, through its individual plant examination and individual plant examination for external events processes and other risk studies, that the severe accident risks are small for all U.S. licensed nuclear power plants; LBP-12-26, 76 NRC 568-69 (2012)
offsite land use is a Category 2 impact because land-use changes may be perceived by some community members as adverse and by others as beneficial, and so, NRC Staff is unable to assess generically the potential significance of site-specific offsite land use impacts; LBP-13-13, 78 NRC 490 (2013)
probability-weighted consequences of a severe accident (risk) are small in the context of a license renewal proceeding; CLI-15-6, 74 NRC 1001 (2015); CLI-12-15, 75 NRC 726 n.112 (2012)
severe accident mitigation alternatives analysis is a Category 2 issue and SAMAs must be considered for all plants that have not considered such alternatives; LBP-12-8, 75 NRC 551, 554 (2012); LBP-15-5, 81 NRC 260 (2015)
very essence of severe accident mitigation analysis is to assess to what extent the probability-weighted consequences of the analyzed severe accident sequences would decrease if a specific SAMA were implemented; LBP-11-2, 73 NRC 63 (2011)
10 C.F.R. Part 51, Subpart A, Appendix B, tbl. B-1 n.2
Category 1 issues are those resolved generically by the generic environmental impact statement and need not be addressed as part of license renewal; LBP-12-8, 75 NRC 549 (2012)
Category 2 issues require plant-specific review as part of license renewal; LBP-12-8, 75 NRC 549 (2012)
as a tool for assessing the significance of potential impacts, NRC regulations establish a standard scheme; LBP-11-26, 74 NRC 546 (2011)
definitions of “significance” are provided; LBP-11-4, 73 NRC 103 (2011)
relative to an individual ISR facility, when NRC Staff formulates its draft and final supplemental environmental impact statement conclusions regarding the environmental impacts of a proposed action or alternative actions, it uses as guidance a standard scheme to categorize or quantify the impacts; LBP-15-3, 81 NRC 84 (2015)
10 C.F.R. Part 51, Subpart A, Appendix B, tbl. B-1, n.4
shared transmission corridor is an offsite transmission line excluded from environmental impact analysis; LBP-15-5, 81 NRC 269 (2015)
“small,” “moderate,” and “large” environmental impacts are defined; LBP-13-8, 78 NRC 20 (2013)
“small” is defined in NRC regulations as environmental impacts that are not detectable or are so minor that they will neither destabilize nor noticeably alter any important attribute of the resource; LBP-13-13, 78 NRC 534 (2013)
10 C.F.R. Part 52
stringent safety requirements apply to the construction and operation of reactor spent fuel pools and independent spent fuel storage installations; CLI-15-4, 81 NRC 240 (2015)

619
LEGAL CITATIONS INDEX

REGULATIONS

this part governs issuance of early site permits, standard design certifications, combined licenses, standard design approvals, and manufacturing licenses for nuclear power facilities; LBP-11-21, 74 NRC 131 (2011)

10 C.F.R. 52.1(a)

an early site permit authorizes the use of a specific site for the construction and operation of a new nuclear power plant, with the actual construction and operation authorized by a subsequently issued combined license; LBP-11-10, 73 NRC 441 (2011)

10 C.F.R. Part 52, Subpart A

an ESP essentially allows an entity to bank a site for the possible future construction of a specified number of new nuclear power generation facilities; LBP-11-16, 73 NRC 650-51 (2011)

if applicant did not pursue an early site permit, all relevant site characteristics, including site geology, hydrology, seismology, and man-made hazards, as well as potential environmental impacts of the project, were studied as part of NRC Staff’s combined license review and are within the scope of the Commission decision; CLI-15-13, 81 NRC 559 (2015)

10 C.F.R. 52.12

an early site permit authorizes the use of a specific site for the construction and operation of a new nuclear power plant, with the actual construction and operation authorized by a subsequently issued combined license; LBP-11-10, 73 NRC 441 (2011)

10 C.F.R. 52.17

information regarding control room habitability and ventilation system design is not required in a site safety analysis report at the early site permit stage; LBP-11-16, 73 NRC 668 (2011)

10 C.F.R. 52.17(b)(2), (3)

early site permit applicants may propose complete and integrated emergency plans for review and approval in conjunction with their application, but they are not required to do so; CLI-12-2, 75 NRC 103 n.237 (2012)

10 C.F.R. 52.18

to issue an early site permit, NRC must comply with the National Environmental Policy Act; LBP-11-10, 73 NRC 440 n.93 (2011)

10 C.F.R. 52.21

an uncontested early site permit proceeding is subject to mandatory hearing requirements; LBP-11-10, 73 NRC 436 (2011)

presiding officer in an early site permit hearing shall not admit contentions proffered by any party concerning the benefits assessment if those issues were not addressed by the applicant in the early site permit application; LBP-11-16, 73 NRC 696 (2011)

10 C.F.R. 52.23(a)

an early site permit is valid for 20 to 40 years from the date of issuance; LBP-11-16, 73 NRC 686 (2011)

10 C.F.R. 52.33

an early site permit is valid for 20 to 40 years from the date of issuance; LBP-11-16, 73 NRC 686 (2011)

10 C.F.R. 52.39

insofar as a contention requests consideration of a dry cooling design alternative, that matter must be considered resolved in the early site permit proceeding; LBP-11-10, 73 NRC 431 (2011)

10 C.F.R. 52.39(a)(2)

contention should be deemed resolved during the early site permit proceeding if the subject of the contention was actually litigated and decided during the ESP proceeding, or the subject of the contention, although not actually litigated, was decided by the Staff, was necessary for the Staff to resolve in the ESP proceeding, and was within the scope of that proceeding as defined in the Federal Register notice of opportunity for a hearing; LBP-11-10, 73 NRC 433 (2011)

if a matter is resolved in an early site permit proceeding, then it is considered resolved in a subsequent combined license proceeding when the COLA references the ESP, subject to certain exceptions; LBP-11-10, 73 NRC 433 (2011)

where seismic suitability of a site was evaluated at the early site permit stage, further litigation of the geologic fault issue is foreclosed at the combined license stage; LBP-14-8, 79 NRC 522 (2014)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 52.39(c)(1)
in any combined license proceeding referencing an early site permit, any significant environmental issue
that was not resolved in the ESP proceeding, or any issue involving the impacts of construction and
operation of the facility that was resolved in the ESP for which significant new information has been
identified, may be litigated; LBP-11-10, 73 NRC 442 (2011)
in any combined license proceeding referencing an early site permit, contentions may be litigated on
whether the nuclear power reactor proposed to be built does not fit within one or more of the site
characteristics or design parameters included in the early site permit; LBP-11-10, 73 NRC 442 (2011)
10 C.F.R. 52.39(c)(1)(v)
matter resolved in an early site permit proceeding may be revisited in the combined license proceeding
when new and significant information is presented; LBP-11-10, 73 NRC 431 (2011)
10 C.F.R. 52.47(a)
combined license applications must contain a final safety analysis report that describes the facility,
presents the design bases and the limits on its operation, and presents a safety analysis of the structures,
systems, and components and of the facility as a whole; LBP-14-8, 79 NRC 525 (2014)
10 C.F.R. 52.47(a)(23), (27)
applications for certified reactor designs include a probabilistic risk assessment for severe accidents;
LBP-11-38, 74 NRC 825 (2011)
10 C.F.R. 52.55(c)
combined license applicant may reference a docketed-but-not-yet-certified design in its application, but
does so at its own risk; CLI-12-9, 75 NRC 429-30 (2012); LBP-11-10, 73 NRC 450 (2011)
10 C.F.R. 52.63
Commission administratively exempted, from the issue finality requirements, an order to the combined
license holder to address spent fuel pool instrumentation requirements not specified in the certified
design as enhanced protective measures that represent a substantial increase in the protection of public
health and safety; CLI-12-9, 75 NRC 443 n.101 (2012)
10 C.F.R. 52.63(a)
where the combined license application references a certified design, elements of the licensing basis
already have been established, and thus NRC would have to establish a regulatory basis for any change
to the established design regardless of whether the COLs have issued; CLI-12-9, 75 NRC 438 n.87
(2012)
10 C.F.R. 52.63(a)(1)
challenging features of the AP1000 standard design is a matter for a design certification rulemaking, not a
combined license proceeding; CLI-11-8, 74 NRC 230 (2011)
10 C.F.R. 52.63(a)(5)
challenging features of the AP1000 standard design is a matter for a design certification rulemaking, not a
combined license proceeding; CLI-11-8, 74 NRC 230 (2011)
in making its combined license findings, the Commission will treat as resolved those matters resolved in
the issuance of a design certification rule; LBP-11-7, 73 NRC 274 (2011); LBP-11-38, 74 NRC 844
n.186 (2011)
10 C.F.R. 52.63(b)(1)
exemption requests are subjected to the same level of litigation as other issues that could be admissibly
raised in a COL proceeding; LBP-11-10, 73 NRC 451 n.157, 452 (2011)
grants of exemptions from referenced design certification rules are conditioned on the Commission’s
finding that the request complies with section 52.7 and that the special circumstances provided for
section 52.7 outweigh any decrease in safety that may result from the reduction in standardization
causd by the exemption; LBP-11-10, 73 NRC 451 (2011)
10 C.F.R. 52.73
applicants may incorporate a certified reactor design in a combined license application; LBP-11-10, 73
NRC 428 (2011)
combined license applications may reference a standard design certification and an early site permit;
CLI-12-2, 75 NRC 67-68 (2012)
10 C.F.R. 52.75
any person except one excluded by section 50.38 may file an application for a combined license for a
nuclear power facility; LBP-12-19, 76 NRC 191 (2012); LBP-14-3, 79 NRC 279 (2014)

621
foreign-owned, -controlled, or -dominated entity is ineligible to apply for, let alone obtain, a combined license; LBP-12-19, 76 NRC 201 (2012)

10 C.F.R. 52.75(a)
any person except one excluded by section 50.38 may file an application for a combined license for a nuclear power facility; CLI-13-4, 77 NRC 103 n.1 (2013); LBP-11-25, 74 NRC 395 n.91 (2011)

10 C.F.R. 52.79
although the combined license application is not expressly required to consider sea level rise, the board decides that the issue is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 236 (2010)
applicant’s plan to postpone most of its decisions about low-level radioactive waste disposal does not violate this section; LBP-11-31, 74 NRC 649 (2011)

10 C.F.R. 52.79(a)
information in the FSAR for controlling and limiting radioactive effluents and radiation exposures must be sufficient to enable the Commission to reach a final conclusion on all safety matters that must be resolved by the Commission before issuance of a combined license; LBP-11-31, 74 NRC 649 (2011)
motion for summary disposition is granted because there is no genuine issue or dispute as to any material fact and applicant’s low-level radioactive waste plan satisfies the requirements of this section; LBP-11-31, 74 NRC 52.79(a) (2011)

10 C.F.R. 52.79(a)(3)
COL applications must include kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-11-6, 73 NRC 245 (2010); LBP-11-31, 74 NRC 649 (2011); LBP-12-4, 75 NRC 217, 223 (2012)
combined license applications must provide a level of information on plans to manage and store low-level radioactive waste onsite sufficient to enable the Commission to conclude that the application will comply with 10 C.F.R. Part 20; CLI-11-10, 74 NRC 253 (2011)

no quantity or time restrictions relative to onsite storage of low-level radioactive waste is specified; LBP-12-4, 75 NRC 218 (2012)
whether offsite low-level radioactive waste storage and disposal facilities will ultimately be available is not material to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 222-23(2012)

10 C.F.R. 52.79(a)(11)
combined license application must describe the programs, and their implementation, necessary to ensure that systems and components meet the requirements of the ASME Boiler and Pressure Vessel Code and the ASME Code of Operation and Maintenance of Nuclear Power Plants in accordance with section 50.55a; CLI-11-8, 74 NRC 230 (2011)

10 C.F.R. 52.79(a)(21)
combined license applications must provide an emergency plan for the site; CLI-12-9, 75 NRC 455 (2012)

10 C.F.R. 52.79(a)(25)
combined license applicant’s final safety analysis report must describe the quality assurance program applied to the design and to be applied to the fabrication, construction, and testing, of the structures, systems, and components of the facility; LBP-14-7, 79 NRC 475 (2014)

10 C.F.R. 52.79(d)(1)
applicants referencing a certified design must provide sufficient information for NRC Staff to determine whether the site’s characteristics fall within the design’s parameters; CLI-15-13, 81 NRC 570 n.89 (2015)

10 C.F.R. 52.80(d)
COL applications must include a description and plans for implementation of the guidance and strategies required by section 50.54(hh)(2) for severe accident mitigation; CLI-11-9, 74 NRC 238 (2011)
combined license applications must include a description and plan for implementing the requirements for maintaining or restoring core cooling, containment, and spent fuel pool cooling capabilities; CLI-12-2, 75 NRC 100 (2012)
evaluation of existing dose projection models or a dose assessment is not required; CLI-11-9, 74 NRC 244 (2011)
this section mandates compliance with the agency’s loss-of-large-areas requirements in 10 C.F.R. 50.54(hh)(2), but does not apply to a license renewal proceeding; LBP-11-21, 74 NRC 131 (2011)
10 C.F.R. 52.83
where the combined license application references a certified design, elements of the licensing basis already have been established, and thus NRC would have to establish a regulatory basis for any change to the established design regardless of whether the COLs have issued; CLI-12-9, 75 NRC 438 n.87 (2012)
10 C.F.R. 52.87
independent assessment of the safety aspects of the combined license application is required; CLI-15-13, 81 NRC 559 (2015)
10 C.F.R. 52.93(a)(1)
combined license applicant incorporating a certified design may include in its COLA a request for an exemption from any part of a referenced design certification rule, which may be granted if NRC determines that the exemption complies with any exemption provisions of the referenced design certification rule, or with 10 C.F.R. 52.63 if there are no applicable exemption provisions in the referenced design certification rule; LBP-11-10, 73 NRC 451 (2011)
NRC Staff review included evaluation of exemption criteria; CLI-12-2, 75 NRC 82 (2012)
10 C.F.R. 52.97
basis of NRC Staff’s reasonable assurance finding on combined license applicant’s squib valve inspection program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75 NRC 91 (2012)
determination the Commission must make is whether NRC Staff review of a combined license application has been adequate to support the findings found in this section; CLI-12-2, 75 NRC 74 (2012); CLI-12-9, 75 NRC 427-28 (2012)
extent and type of information required in a COL application regarding the question of long-term, onsite low-level radioactive waste storage is disputed; CLI-11-10, 74 NRC 255 (2011)
to authorize issuance of combined licenses, NRC must determine that applicable regulations have been met, there is reasonable assurance that the new reactors will be constructed and will operate in conformity with NRC regulations, and issuance of the licenses will not be inimical to the public health and safety; CLI-12-2, 75 NRC 125 (2012)
10 C.F.R. 52.97(a)
Commission concludes that NRC Staff’s review has been adequate to support the findings set forth in this regulation; CLI-15-13, 81 NRC 557, 589 (2015)
safety issues that the Commission must consider in the mandatory portion of a combined license proceeding are outlined; CLI-15-13, 81 NRC 560 (2015)
10 C.F.R. 52.97(a)(1)(i)
NRC Staff may not issue a notice of violation for failure to satisfy Appendix B requirements during the preapplication period, but it may deny a combined license for failure to satisfy the standards and requirements of the Commission’s regulations; LBP-14-7, 79 NRC 476 (2014)
10 C.F.R. 52.97(a)(1)(i)-(v)
scope of Commission examination of the adequacy of NRC Staff’s safety review of a combined license application is described; CLI-12-2, 75 NRC 74-75 (2012)
10 C.F.R. 52.97(a)(1)(iv)
combined license applicant’s status as a current power reactor licensee generally provides the necessary support for NRC Staff’s finding that applicant is technically qualified for a new license; CLI-12-2, 75 NRC 83 (2012)
10 C.F.R. 52.97(a)(1)(v)
NRC Staff, incident to its preparation of the safety evaluation report, is obliged to ensure that applicant’s design basis for the new units will protect public health and safety; LBP-11-6, 73 NRC 217 n.78 (2010)
10 C.F.R. 52.97(c)
in a combined license proceeding, the Commission may require implementation of mitigation measures it deems necessary and appropriate by imposing conditions in the license; LBP-12-18, 76 NRC 161 (2012)
10 C.F.R. 52.98
licenses may be amended to add appropriate conditions, depending on whether the conditions are within the scope of the certified design; CLI-12-9, 75 NRC 438 (2012)
10 C.F.R. 52.98(a)
when NRC imposes new regulatory requirements that are important safety enhancements but not deemed necessary to ensure adequate protection of public health and safety, NRC often does not require existing licensees to implement them based on considerations such as whether they are cost-beneficial; CLI-12-2, 75 NRC 127 (2012)
10 C.F.R. 52.98(c)
final safety analysis reports must be updated so that NRC is aware of changes that are made that do not require prior NRC approval; CLI-12-2, 75 NRC 81 (2012)
10 C.F.R. 52.102, 52.103
decision of the board or Commission becomes the record of decision, which may also incorporate the final supplemental environmental impact statement; CLI-15-6, 81 NRC 376 (2015)
10 C.F.R. 52.103(a)
applicant is required to submit a report on its decommissioning funding assurance mechanism after combined licenses are issued and no later than 30 days after the NRC publishes notice of intended operation in the Federal Register; CLI-12-2, 75 NRC 83 (2012)
10 C.F.R. Part 52, Appendix A, §§ VLB
all environmental issues concerning severe accident mitigation design alternatives associated with the information in NRC’s final environmental assessment for certified reactor design are deemed resolved for plants referencing this appendix whose site parameters are within those specified in the technical support document; LBP-11-7, 73 NRC 274 n.135 (2011)
10 C.F.R. Part 52, Appendix A, ¶ VLB.7
issues surrounding severe accident mitigation design alternatives that have been resolved by regulation may not be challenged in a combined license adjudication; CLI-11-6, 74 NRC 205, 206 (2011)
10 C.F.R. Part 52, Appendix A, ¶ VLB.7
NRC Staff’s creation of a list of site parameters for use in the combined license proceeding cannot cure the absence of a list of site parameters in the technical support document, rendering it impossible to resolve SAMDA issues by rule; LBP-11-7, 73 NRC 275-76 (2011)
10 C.F.R. Part 52, Appendix D, ¶ ILE
compliance with design-related information contained in the generic design control document that is approved but not certified (Tier 2 information) is required, but generic changes to and plant-specific departures from Tier 2 are governed by 10 C.F.R. Part 52, Appendix D, ¶ VIII; CLI-12-2, 75 NRC 87 n.131 (2012)
10 C.F.R. Part 52, Appendix D, ¶ ILE
“Tier 2×” means the portion of the Tier 2 information, designated as such in the generic design control document, that is subject to the change process in 10 C.F.R. Part 52, Appendix D, ¶ VIII.B.6; CLI-12-2, 75 NRC 97 n.190 (2012)
10 C.F.R. Part 52, Appendix D, ¶ IV.A.2
NRC Staff evaluated and approved exemption from regulatory requirements for organization and numbering of the combined license application; CLI-12-2, 75 NRC 82 (2012)
10 C.F.R. Part 52, Appendix D, ¶ IV.A.2.d
because departure from the wet-bulb noncoincident temperature is considered Tier 1 information or part of the AP1000 certified design, a regulatory exemption is required; CLI-12-9, 75 NRC 445 (2012)
10 C.F.R. Part 52, Appendix D, ¶ VIII
Commission administratively exempted, from the issue finality requirements, an order to the combined license holder to address spent fuel pool instrumentation requirements not specified in the certified design as enhanced protective measures that represent a substantial increase in the protection of public health and safety; CLI-12-9, 75 NRC 443 n.101 (2012)
10 C.F.R. Part 52, Appendix D, ¶ VIII.A.4
because departure from the wet-bulb noncoincident temperature is considered Tier 1 information or part of the AP1000 certified design, a regulatory exemption is required; CLI-12-9, 75 NRC 445 (2012)
10 C.F.R. Part 52, Appendix D, ¶ VIII.B.5.b
final safety analysis reports must be updated so that NRC is aware of changes that are made that do not require prior NRC approval; CLI-12-2, 75 NRC 81 (2012)
under its certified design, the Economic Simplified Boiling Water Reactor could maintain circulation long enough to permit safe shutdown of the reactor even if it were to lose offsite power and all of its backup generators failed to operate; LBP-15-5, 81 NRC 271 (2015)

nonpower reactors, including research and test reactors, differ as a class from nuclear power plants and are not covered by this part; CLI-11-11, 74 NRC 436 n.47 (2011)

Part 54 governs the issuance of renewed operating license; LBP-11-21, 74 NRC 131 (2011)

10 C.F.R. Part 54

this part governs the issuance of renewed operating license; LBP-11-21, 74 NRC 131 (2011)

10 C.F.R. Part 54

Part 54 governs issuance of renewed operating licenses and renewed combined licenses for nuclear power plants licensed pursuant to sections 103 or 104b of the Atomic Energy Act and Title II of the Energy Reorganization Act; CLI-11-11, 74 NRC 436 n.47 (2011)

10 C.F.R. 54.1

Part 54 governs issuance of renewed operating licenses and renewed combined licenses for nuclear power plants licensed pursuant to sections 103 or 104b of the Atomic Energy Act and Title II of the Energy Reorganization Act; CLI-11-11, 74 NRC 436 n.47 (2011)

10 C.F.R. 54.3

applicants must reassess any time-limited aging analyses to show either that the analyses will remain valid throughout the period of extended operation or that the effects of aging on the subject component will be managed during that time period; CLI-15-6, 81 NRC 349 n.34 (2015)

10 C.F.R. 54.3

current licensing basis includes applicant’s commitments through incorporation of applicant’s updated final safety analysis report supplement; LBP-13-13, 78 NRC 363 (2013)

10 C.F.R. 54.3

current licensing basis includes licensee’s commitments remaining in effect that were made in docketed licensing correspondence such as licensee responses to NRC bulletins, generic letters, and enforcement actions, as well as licensee commitments documented in NRC safety evaluations or licensee event reports; LBP-11-21, 74 NRC 130 n.86 (2011)

10 C.F.R. 54.3

facility’s current licensing basis contains any license conditions; LBP-11-21, 74 NRC 131 (2011)

10 C.F.R. 54.3

NRC’s ongoing regulatory process ensures that the current licensing basis of an operating plant remains acceptably safe; LBP-11-21, 74 NRC 127 (2011)

10 C.F.R. 54.3

operating license renewal applicants must reassess time-limited aging analyses made during the original license term and based upon the length of the original license term; LBP-11-21, 74 NRC 129 (2011)

10 C.F.R. 54.3(a)

commitments in the updated final safety analysis report and aging management plan are legally binding as part of the current licensing basis throughout the period of extended operation and can only be changed through the section 50.59 process; LBP-13-13, 78 NRC 366 (2013)

10 C.F.R. 54.3(a)

current licensing basis for an independent spent fuel storage installation includes plant-specific design-basis information defined in 10 C.F.R. 50.2 as documented in the most recent final safety analysis report; LBP-12-24, 76 NRC 538 (2012)

10 C.F.R. 54.3(a)
current licensing basis includes NRC regulations contained in 10 C.F.R. Part 50 and appendices thereto; LBP-13-8, 78 NRC 12 (2013)

10 C.F.R. 54.3(a)
current licensing basis is the set of NRC requirements (including regulations, orders, technical specifications, and license conditions) applicable to a specific plant, and includes the licensee’s written, docketed commitments for ensuring compliance with applicable NRC requirements and the plant-specific design basis; CLI-15-14, 81 NRC 744 n.19 (2015); LBP-11-17, 74 NRC 21 (2011); LBP-13-8, 78 NRC 12 n.17 (2013)

10 C.F.R. 54.3(a)

NRC’s ongoing regulatory process ensures that the current licensing basis of an operating plant remains acceptably safe; LBP-15-5, 81 NRC 289 (2015)

10 C.F.R. 54.3(a)

applicant for a renewed license must first identify all structures, systems, and components that serve a function relating directly or indirectly to safety, as defined by this regulation; CLI-15-6, 81 NRC 347 (2015)

10 C.F.R. 54.3(a)
safety significance of a structure, system, or component is defined in terms of its safety-related functions, and within the scope of license renewal are included those SSCs whose failure could prevent satisfactory accomplishment of the safety-related function; CLI-15-6, 81 NRC 347 n.25 (2015)

10 C.F.R. 54.4

scope of license renewal is defined; CLI-15-21, 82 NRC 299, 305 (2015); LBP-11-20, 74 NRC 108 (2011)
LEGAL CITATIONS INDEX

REGULATIONS

scope of license renewal safety review is limited to plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-11-2, 73 NRC 45 (2011); LBP-15-6, 81 NRC 321 (2015)

10 C.F.R. 54.4(a)

adequacy of plan to manage the effects of aging during the period of extended operation for buried pipes, tanks, and transfer canals that contain radioactive fluid is decided; LBP-13-13, 78 NRC 310-11 (2013)
focus of license renewal safety review is described; CLI-12-5, 75 NRC 303 (2012)
safety-related systems, structures, and components are those relied upon to remain functional during and following design-basis events to ensure specific functions; LBP-11-20, 74 NRC 110 (2011)

10 C.F.R. 54.4(a)(1)
scope of license renewal, including buried piping, addresses all safety-related structures, systems, and components that are relied upon to remain functional to ensure the integrity of the reactor coolant pressure boundary, the capability to shut down and maintain the safe shutdown of the reactor, or the capability to prevent or mitigate the consequences of accidents that could result in potential offsite radiation exposures; LBP-13-13, 78 NRC 314 (2013)
because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the ability of buried structures to perform their intended functions, the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 60 (2011)

10 C.F.R. 54.4(a)(1)(iii)

buried structures, systems, and components must also control inadvertent radiological releases to ensure that dose exposures are below the regulatory limits; LBP-13-13, 78 NRC 368 (2013)

10 C.F.R. 54.4(a)(2)

plant systems, structures, and components within the scope of license renewal are all non-safety-related systems, structures, and components whose failure could prevent satisfactory accomplishment of the capability to shut down the reactor and maintain it in a safe shutdown condition; LBP-13-13, 78 NRC 321 (2013); LBP-15-6, 81 NRC 322 n.46 (2015)

10 C.F.R. 54.4(a)(3)

for purposes of the license renewal rule, NRC Staff has determined that the plant system portion of the offsite power system that is used to connect the plant to the offsite power source should be included within the scope of the station blackout rule; CLI-12-5, 75 NRC 321 (2012)

10 C.F.R. 54.4(b)

buried structures, systems, and components must also control inadvertent radiological releases to ensure that dose exposures are below the regulatory limits; LBP-13-13, 78 NRC 368 (2013)

limited scope of the intended functions of structures, systems, and components subject to aging management review is described; CLI-12-5, 75 NRC 304 (2012)

10 C.F.R. 54.13(a)

information provided to NRC by an applicant must be complete and accurate in all material respects; LBP-11-32, 74 NRC 668 n.31 (2011)

10 C.F.R. 54.13(b)

applicants shall notify NRC of information identified by applicants as having, for the regulated activity, a significant implication for public health and safety or common defense and security; LBP-11-32, 74 NRC 668 n.31 (2011)

10 C.F.R. 54.17(c)

contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 244 (2013)
earliest that a license renewal application may be submitted is 20 years before the expiration date of the operating license in effect; CLI-13-7, 78 NRC 214 n.81 (2013); LBP-11-2, 73 NRC 52 (2011); LBP-13-12, 78 NRC 244 (2013)
time frame for SAMA analysis is inherent in NRC’s regulatory scheme, which provides for a 40-year license term, with the possibility of license renewal for an additional 20-year period; CLI-13-7, 78 NRC 214 n.81 (2013)
adequacy of plan to manage effects of aging during the period of extended operation for buried pipes, tanks, and transfer canals that contain radioactive fluid is decided; LBP-13-13, 78 NRC 311 (2013)
contents of a license renewal application are set forth; CLI-15-21, 82 NRC 299, 365 (2015); LBP-11-20, 74 NRC 111 (2011)
integrated plant assessment must demonstrate that effects of aging will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-13-13, 78 NRC 374 (2013)
license renewal applicant is not required to identify safety-related incidents that have occurred during the current licensing term; LBP-13-8, 78 NRC 22 (2013)

aging management review consists of identifying the aging effects, and the aging management plans will manage aging effects and demonstrate that passive, long-lived SSCs will perform their intended functions during the period of extended operation; LBP-13-13, 78 NRC 280 (2013)
although the current licensing basis is not evaluated in the license renewal process, its provisions and protections remain in effect, complementing and supplementing any additional measures added due to aging management requirements; LBP-13-13, 78 NRC 281 (2013)
apPLICANTS must demonstrate that they have programs in place that will effectively manage the effects of aging for specific types of structures and components during the period of extended operation; LBP-13-13, 78 NRC 280 (2013)
each application must contain an integrated plant assessment that is a detailed assessment, conducted at a component and structure level, rather than at a more generalized system level; LBP-13-13, 78 NRC 280 (2013)
license renewal applications must include an integrated plant assessment demonstrating that effects of aging on plant systems, structures, and components will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 347-48 (2015); LBP-13-8, 78 NRC 10 (2013)
safety contentions challenging aging management of electrical transformers is decided; LBP-13-13, 78 NRC 403 (2013)
safety contentions challenging aging management of non-environmentally qualified inaccessible medium-voltage cables and wiring are decided; LBP-13-13, 78 NRC 372 (2013)
scope of a license renewal safety review is limited to plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-15-6, 81 NRC 321 (2015)
structures, systems, and components are passive if they perform their intended function without moving parts or without a change in configuration or properties and the effects of aging degradation for these components are not readily monitorable; LBP-13-13, 78 NRC 404 (2013)

as a passive component with no moving parts, and no change in configuration, properties, or state, transformers must undergo aging management review; LBP-13-13, 78 NRC 449 (2013)
license renewal applicant is required to list structures and components subject to an aging management review; LBP-13-8, 78 NRC 22 (2013); LBP-13-13, 78 NRC 404 (2013)
with respect to the definition of “reasonable assurance,” applicant is required to show that safety features will fulfill their intended function, not that every structure will maintain its current licensing basis throughout the renewal period; LBP-15-5, 81 NRC 294 (2015)

aging management review only covers systems, structures, and components that perform their intended function without moving parts or without a change in configuration or properties; CLI-12-5, 75 NRC 303-04 (2012); CLI-15-6, 81 NRC 352 (2015); LBP-11-2, 73 NRC 57 (2011); LBP-13-13, 78 NRC 280 (2013); LBP-15-6, 81 NRC 322 (2015)
an illustrative list of structures and components that are subject to aging management review is provided in this section; CLI-12-5, 75 NRC 316 n.91 (2012); CLI-15-6, 81 NRC 348, 352 (2015); LBP-15-6, 81 NRC 322 (2015)
board compared transformers with other types of components listed in this regulation as expressly subject to aging management review or expressly excluded from aging management review; CLI-15-6, 81 NRC 354 (2015); LBP-13-13, 78 NRC 444 (2013)

board examined how a transformer performs its intended function to determine whether it undergoes a change in configuration or properties; CLI-15-6, 81 NRC 354 (2015)

power transformers are active devices that do not require aging management review or an aging management program; LBP-13-13, 78 NRC 438 (2013)

relay switches and snubbers are not subject to an aging management review; LBP-15-6, 81 NRC 322 (2015)

static components such as transistors and battery chargers are specifically excluded from aging management review; CLI-15-6, 81 NRC 360 n.97 (2015)

structures and components considered active and designated as excluded from aging management review are listed; LBP-15-6, 81 NRC 322 (2015)

structures and components considered passive and designated as subject to aging management review are listed; LBP-13-13, 78 NRC 432 n.1280 (2013)

transformer is an active component because it undergoes a change in properties when it performs its intended function transformers are more closely aligned with those components that require aging management review; LBP-13-13, 78 NRC 444-45 (2013)

transformers perform their intended function through a change in state similar to switchgear, power supplies, battery chargers, and power inverters, which have been excluded from aging management review; CLI-12-5, 75 NRC 318 n.99 (2012); CLI-15-6, 81 NRC 357, 359, 361 (2015); LBP-13-13, 78 NRC 432-33 (2013)

variety of electrical and instrumentation and control components are excluded from an aging management review for license renewal; CLI-12-5, 75 NRC 317 (2012)

10 C.F.R. 54.21(a)(1)(ii)

board reviews whether transformers are subject to replacement based on a qualified life or specified time period; LBP-13-13, 78 NRC 412 (2013)

license renewal applicants must conduct aging management reviews of any structure, system, or component that performs one of these intended functions if the SSC is long-lived (not subject to replacement based on a qualified life or specified time period); CLI-12-5, 75 NRC 304 (2012)

structures and components are subject to aging management review if they are not subject to routine replacement; CLI-15-6, 81 NRC 348 (2015)

10 C.F.R. 54.21(a)(3)

applicant’s aging management plan for flow-accelerated corrosion and the definition of flow-accelerated corrosion are discussed; LBP-13-13, 78 NRC 288 (2013)

applicants must demonstrate reasonable assurance that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the current licensing basis for the period of extended operation; CLI-12-5, 75 NRC 304 (2012); LBP-11-2, 73 NRC 60 (2011); LBP-15-6, 81 NRC 322-23 (2015)

by a preponderance of the evidence, applicant has provided reasonable assurance that the effects of aging on buried pipes that contain or may contain radioactive fluids can be adequately managed during the period of extended operation; LBP-13-13, 78 NRC 372 (2013)

contention that applicant has failed to establish in its aging management plan that the effects of aging will be adequately managed for the period of extended operation is inadmissible; LBP-15-6, 81 NRC 324 (2015)

integrated plant assessment must demonstrate that effects of aging for each structure and component will be managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 348 n.31 (2015); LBP-13-8, 78 NRC 34 (2013); LBP-13-13, 78 NRC 280, 374 (2013)

legal standards for license renewal applicant’s flow-accelerated corrosion management plan stand as a condition precedent to relicensing; LBP-13-13, 78 NRC 290 (2013)

license renewal applicant must provide a general description of the corporate-wide and plant-specific procedures sufficient to show that the ten elemental attributes of GALL have been addressed so as to
demonstrate that the effects of aging on buried pipes will be adequately managed throughout the period of extended operation; LBP-13-13, 78 NRC 324 (2013)

license renewal applicant must provide reasonable assurance that the intended functions of buried pipes, tanks, and transfer canals that contain radioactive fluid will be maintained in accordance with the current licensing basis for the period of extended operation; LBP-13-13, 78 NRC 314 (2013)

license renewal application must demonstrate that licensee will adequately manage effects of aging on passive, long-lived components so that their intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 352 (2015)

operating license renewal applicants must demonstrate how they will adequately manage the effects of aging during the proposed renewal term; LBP-11-21, 74 NRC 129 (2011)

preponderance of the evidence demonstrates that the elements of applicant’s aging management plan for non-EQ inaccessible medium- and low-voltage cables are consistent with the corresponding elements of the GALL Report and, as such, that program provides the requisite reasonable assurance; LBP-13-13, 78 NRC 402-03 (2013)

preponderance of the evidence supports the conclusion that applicant has demonstrated that the effects of aging from flow-accelerated corrosion on the intended functions of the piping and components susceptible to FAC will be adequately managed for the period of extended operation; LBP-13-13, 78 NRC 310 (2013)

statements in the license renewal application promising to develop and implement an aging management plan that would be consistent with the NRC guidance document applicable at the time the application was submitted is insufficient; LBP-13-13, 78 NRC 324, 366, 368 n.818 (2013)

structures and components associated only with active functions can be generically excluded from a license renewal aging management review; CLI-12-5, 75 NRC 304 (2012)

10 C.F.R. 54.21(b)

applicants must reassess any time-limited aging analyses to show either that the analyses will remain valid throughout the period of extended operation or that the effects of aging on the subject component will be managed during that time period; CLI-15-6, 81 NRC 349 n.34 (2015)

contention that license renewal application has failed to establish that the effects of aging on relay switches and snubbers will be adequately managed for the period of extended operation is inadmissible; LBP-13-13, 78 NRC 321 (2015)

10 C.F.R. 54.21(c)

updated final safety analysis report supplement represents the capturing of the critical aspects of the program into the applicant’s current licensing basis; LBP-13-13, 78 NRC 363, 364-65 (2013)
applicants must demonstrate that they have programs in place that will effectively manage the effects of aging for specific types of structures and components during the period of extended operation; LBP-13-13, 78 NRC 280 (2013) findings that NRC Staff must make for issuance of a renewed license are set forth; CLI-15-21, 82 NRC 299, 305 (2015); LBP-13-13, 78 NRC 281-82 (2013); LBP-15-6, 81 NRC 324 (2015) for license renewal, there must be reasonable assurance that applicant will manage the effects of aging on certain structures and components during extended operation; LBP-11-2, 73 NRC 60 n.195 (2011) safety contentions challenging aging management of electrical transformers is decided; LBP-13-13, 78 NRC 403 (2013) safety contentions challenging aging management of non-environmentally qualified inaccessible medium-voltage cables and wiring are decided; LBP-13-13, 78 NRC 372 (2013)

10 C.F.R. 54.29(a)(x)(i)
among the limited issues within the scope of a license renewal proceeding are plans to manage the effects of aging on enumerated functions of certain systems, structures, and components during the period of extended operation; LBP-11-2, 73 NRC 45 (2011) an operating license may be renewed if NRC finds, among other things, that actions have been identified and have been or will be taken to manage the effects of aging during the period of extended operation on the functionality of certain identified structures and components; CLI-11-11, 74 NRC 433 n.27 (2011) narrow and specific contention that alleges facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; CLI-12-5, 75 NRC 304 (2012)

10 C.F.R. 54.29(a)(x)(ii)
structures and components subject to aging management review include those that perform an intended function, as described in section 54.4; LBP-13-13, 78 NRC 404 (2013)

10 C.F.R. 54.29(a)(b)
scope of reactor operating license renewal review is outlined; LBP-11-17, 74 NRC 21 (2011)

10 C.F.R. 54.29(b)
among the limited issues within the scope of a license renewal proceeding are alternatives for reducing adverse environmental impacts listed as Category 2 issues in Appendix B to Subpart A of 10 C.F.R. Part 51; LBP-11-2, 73 NRC 45 (2011); LBP-11-13, 73 NRC 550 (2011) among the limited issues within the scope of a license renewal proceeding are cost-effective alternatives for mitigating severe accidents; LBP-11-2, 73 NRC 45 (2011) license renewal cannot be granted unless and until all the applicable requirements of 10 C.F.R. Part 51 have been satisfied; LBP-11-17, 74 NRC 27 n.76 (2011); LBP-11-18, 74 NRC 37 (2011)

10 C.F.R. 54.30
although monitoring/inspections performed during current operations under Part 50 and the current licensing basis are excluded from review during license renewal, the mere fact that the intended function of transformers is being monitored in accordance with the CLB does not exempt them from...
LEGAL CITATIONS INDEX

REGULATIONS

need to be included in an aging management review program for license renewal; LBP-13-13, 78 NRC 449 (2013)
matters relating to reasonable assurance of safety during the current license term are to be addressed under the current license and are outside the scope of a license renewal review; CLI-15-21, 82 NRC 300 (2015)
only structures and components with active functions that are readily monitorable are excluded from aging management review; LBP-13-13, 78 NRC 412 (2013)

10 C.F.R. 54.30(b)
allegations of noncompliance with already-issued, existing and open Commission orders are part of the current licensing basis and therefore cannot be challenged in a license renewal proceeding; LBP-15-5, 81 NRC 291 (2015)
compliance with orders issued as part of NRC’s ongoing oversight program are enforcement issues that are not within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 291 (2015)
compliance with the current licensing basis is not within the scope of a license renewal proceeding; LBP-13-8, 78 NRC 12 (2013)
enforcement orders are outside the scope of the license renewal proceeding; LBP-15-5, 81 NRC 292 (2015)
if compliance with the current licensing basis cannot be fully achieved during the current licensing term and must be consummated during the period of extended operation, then a contention raising issues about such CLB compliance is within the scope of license renewal; LBP-13-8, 78 NRC 14 (2013)
licensee’s compliance with the obligation to take measures under its current license is not within the scope of the license renewal review; LBP-11-2, 73 NRC 56 n.168 (2011)

10 C.F.R. 54.31(c)
if the renewed license is subsequently set aside on appeal, the previous operating license would be reinstated; LBP-12-16, 76 NRC 47 n.15 (2012)

10 C.F.R. 54.31(d)
plants for which a SAMA analysis was conducted for the first time under section 51.53(c)(3)(ii)(L) may face general criticism that the passage of time between original licensing and renewal has rendered their SAMA analysis out of date upon application for a subsequent renewal term; CLI-13-7, 78 NRC 214 (2013)

10 C.F.R. 54.33
all the information that applicant uses to support its license renewal application has to be maintained in an auditable and retrievable form; LBP-13-13, 78 NRC 325 (2013)

10 C.F.R. 54.33(c)
current licensing basis of an operating license shall continue during the license renewal period, but these conditions may be supplemented or amended as necessary to protect the environment during the term of the renewed license and will be derived from information contained in the supplement to the environmental report, as analyzed and evaluated in the NRC record of decision; LBP-11-17, 74 NRC 22 (2011)

10 C.F.R. 54.35
liquid released from a leaky pipe where the pressure boundary is maintained would not be sufficient to exceed the dose limits specified in 10 C.F.R. Part 54; LBP-13-13, 78 NRC 321 (2013)

10 C.F.R. 55.2
any individual who manipulates the controls of any facility licensed under Parts 50, 52, or 54 of NRC’s regulations is required to have an operator’s license; LBP-14-2, 79 NRC 141 (2014)

10 C.F.R. 55.4
“senior reactor operator” is any individual licensed under Part 55 to manipulate the controls of a facility and to direct the licensed activities of licensed operators; LBP-13-3, 77 NRC 85 (2013); LBP-14-2, 79 NRC 142 (2014)

10 C.F.R. 55.31
applicant who passes both a written examination and operating test and meets the other requirements specified in 10 C.F.R. Part 55 will be eligible to receive a senior reactor operator license; LBP-13-5, 77 NRC 236 (2013)
10 C.F.R. 55.33
senior reactor operator licenses are subject to the satisfaction of other licensing requirements not
considered in the adjudicatory proceeding, such as health, that the NRC Staff must assess before issuing
a license; LBP-14-2, 79 NRC 139, 246 (2014)
10 C.F.R. 55.33(a)
to obtain a senior reactor operator license, applicant must pass both the written examination and the
operating test and meet the other requirements specified in 10 C.F.R. Part 55; LBP-13-3, 77 NRC 85
(2013); LBP-14-2, 79 NRC 142 (2014)
10 C.F.R. 55.33(a)(2)
gal of senior reactor operator tests is to determine whether applicant’s level of knowledge and
understanding meets the minimum requirements to safely operate the facility for which the license is
sought; LBP-14-2, 79 NRC 142 (2014)
10 C.F.R. 55.35(b)
NRC regional office has the discretion to grant a waiver for retesting on a passed test for a senior reactor
operator applicant who has failed only one part of the test if it determines that sufficient justification is
presented; LBP-14-2, 79 NRC 143 (2014)
10 C.F.R. 55.35(b)
senior reactor operator license applicant who has passed either the written examination or operating test
and failed the other may request in a new application on Form NRC-398 to be excused from
reexamination on the portions of the examination or test that the applicant has passed; LBP-13-3, 77
NRC 85 (2013); LBP-14-2, 79 NRC 143 (2014)
10 C.F.R. 55.40
Commission shall use the criteria in NUREG-1021, Operator Licensing Examination Standards for Power
Reactors, in effect 6 months before the examination date to prepare the written examinations required
by sections 55.41 and 55.43 and the operating tests required by section 55.45; LBP-14-2, 79 NRC 142,
151 (2014)
10 C.F.R. 55.43, 55.45
applicant who passes both a written examination and operating test and meets the other requirements
specified in 10 C.F.R. Part 55 will be eligible to receive senior reactor operator license; LBP-13-5, 77
NRC 236 (2013)
10 C.F.R. 57.71
contention that draft environmental impact statement fails to adequately analyze groundwater quantity
impacts is admissible; LBP-13-9, 78 NRC 58 (2013)
10 C.F.R. 60.23
DOE may incorporate in its application for geologic repository information in previous reports filed with
the Commission, provided that such references are clear and specific; LBP-12-24, 76 NRC 518 n.69
(2012)
10 C.F.R. 61.55(a)(1) & (2)
NRC divides low-level radioactive waste into three classes (A, B, and C) based on the concentration and
types of long-lived and short-lived radionuclides; LBP-12-4, 75 NRC 216 n.5 (2012); LBP-12-7, 75
NRC 505 n.5 (2012)
10 C.F.R. 70.4
applicant seeks an exemption from the requirements of this section to permit it to begin certain
preconstruction activities at the site before completion of NRC’s environmental review under Part 51;
LBP-11-11, 73 NRC 503-04 (2011)
“commencement of construction” is defined to include clearing of land, excavation, or other substantial
action that would adversely affect the environment of the site; LBP-11-11, 73 NRC 506 (2011);
LBP-11-26, 74 NRC 538 (2011)
10 C.F.R. 70.17(a)
NRC may grant an exemption from regulatory requirements if it determines such an exemption is
authorized by law and will not endanger life or property or the common defense and security and is
otherwise in the public interest; LBP-11-11, 73 NRC 497 (2011); LBP-12-21, 76 NRC 240 n.118
(2012)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 70.21(c)
special nuclear material license applications may incorporate by reference information contained in previous applications, statements, or reports filed with the Commission if the references are clear and specific; LBP-12-24, 76 NRC 518 n.69 (2012)

10 C.F.R. 70.22(a)(2)
uranium enrichment facility license applications must contain the place at which the activity is to be performed and the general plan for carrying out the activity as well as a description of equipment and facilities that will be used by applicant to protect health and minimize danger to life or property; LBP-12-21, 76 NRC 236-37 (2012)

10 C.F.R. 70.22(a)(3)
applicant must indicate the period of time for which a Part 70 license is requested; LBP-11-11, 73 NRC 503 (2011)

10 C.F.R. 70.22(a)(7)
uranium enrichment facility license applications must contain the place at which the activity is to be performed and the general plan for carrying out the activity as well as a description of equipment and facilities that will be used by applicant to protect health and minimize danger to life or property; LBP-12-21, 76 NRC 236-37 (2012)

10 C.F.R. 70.22(b)
applicant’s program for control and accounting of special nuclear material must show how compliance with the requirements of section 74.51 will be accomplished; LBP-14-1, 79 NRC 51 n.56 (2014)

materials license amendment applications must contain a full description of the applicant’s program for control and accounting of special nuclear material to show how it will comply with the 10 C.F.R. Part 74 requirements; LBP-11-9, 73 NRC 394 n.1 (2011)

NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 82 (2012)

10 C.F.R. 70.22(m)
application for a uranium enrichment facility is required to contain a description of the security program to protect against unauthorized disclosure of classified matter in accord with Part 95; LBP-11-11, 73 NRC 489, 490 (2011)

10 C.F.R. 70.23(a)(6)
applicant’s proposed controls for strategic special nuclear material must be adequate to show compliance with material control and accounting regulations; LBP-14-1, 79 NRC 51 (2014)

10 C.F.R. 70.23(a)(7)
applicant seeks an exemption from the requirements of this section to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 503-04 (2011)

for a proposed nuclear materials-related activity, including uranium enrichment, commencement of construction relative to that activity prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-11, 73 NRC 506 (2011); LBP-11-26, 74 NRC 538 (2011)

preconstruction activities that are allowed under Part 50 are also allowed for materials licenses; LBP-11-26, 74 NRC 539 (2011)

10 C.F.R. 70.23a
NRC will hold a hearing under 10 C.F.R. Part 2, Subparts A, C, G, and I, on each application for issuance of a license for construction and operation of a uranium enrichment facility and will publish public notice of the hearing in the Federal Register at least 30 days before the hearing; LBP-12-21, 76 NRC 233 (2012)

10 C.F.R. 70.25(a)
depending on the quantity of material, Part 70 license applicants must submit either a decommissioning funding plan or a certification of financial assurance; CLI-11-4, 74 NRC 9 (2011)

10 C.F.R. 70.25(a)(1)
apPLICANT seeking a specific license associated with a uranium enrichment facility must submit a decommissioning funding plan; CLI-11-4, 74 NRC 9 (2011)
10 C.F.R. 70.25(a)-(b)
financial assurance requirements are structured according to the quantity of material that will be authorized for possession and use; CLI-11-4, 74 NRC 9 (2011)

10 C.F.R. 70.25(b)(1)-(2)
depending on the quantity of material, Part 70 license applicants must submit either a decommissioning funding plan or a certification of financial assurance; CLI-11-4, 74 NRC 9 (2011)

10 C.F.R. 70.25(b)(2)
certification of financial assurance may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material; CLI-11-4, 74 NRC 9 n.43 (2011)
certifications of financial assurance, which are used by applicants seeking to possess smaller quantities of material, are governed by this subsection; CLI-11-4, 74 NRC 9 (2011)
NRC Staff authorization permitting applicant to defer execution of any final letters of credit for decommissioning financial assurance until after a license is issued but before receipt of licensed material might be problematic; LBP-11-26, 74 NRC 518 (2011)

10 C.F.R. 70.25(d)
possibility limits associated with a certification of financial assurance are set forth in this subsection; CLI-11-4, 74 NRC 9 (2011)

10 C.F.R. 70.25(e)
applicant seeking a specific license for a uranium enrichment facility is required to submit a decommissioning funding plan consistent with this subsection; CLI-11-4, 74 NRC 9 (2011)
applicant seeks authorization to provide financial assurance for decommissioning funding on a forward-looking, incremental basis; LBP-11-11, 73 NRC 503 (2011)
deferral of execution of the financial instruments until after the license has issued is not allowed for a uranium enrichment facility; CLI-11-4, 74 NRC 9 (2011)
each decommissioning funding plan must include a signed original of the instrument obtained to provide financial assurance for decommissioning at the time the plan is submitted; CLI-11-4, 74 NRC 9 (2011)
request for an exemption that would enable it to provide decommissioning funding on a forward-looking, incremental basis, at a rate proportional to the then-current decontamination and decommissioning liability is granted; CLI-11-4, 74 NRC 3 n.4 (2011)

10 C.F.R. 70.25(f)(2)
applicant’s commitment to provide a letter of credit issued by a financial institution whose operations are regulated and examined by a federal or state agency is sufficient to satisfy decommissioning funding assurance requirements; CLI-11-4, 74 NRC 2 (2011); LBP-11-26, 74 NRC 517-18 (2011)

10 C.F.R. 70.25(f)(2)(ii)
an acceptable trustee includes an appropriate state or federal government agency or an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency; CLI-11-4, 74 NRC 4 n.15 (2011)
because it has chosen a surety method, licensee must ensure that the letter of credit is payable to a trust established for decommissioning costs; CLI-11-4, 74 NRC 3 (2011)

10 C.F.R. 70.31(a), (b)(2)
NRC may issue a license to impose such additional conditions, requirements, and limitations as may be necessary to effectuate the purposes of the Atomic Energy Act and the agency’s regulations; LBP-11-11, 73 NRC 497 (2011)

10 C.F.R. 70.31(e)
no license to construct and operate a uranium enrichment facility may be issued until a hearing pursuant to 10 C.F.R. Part 2, Subparts A, C, G, and I, is completed and decision issued on the application; LBP-12-21, 76 NRC 233 (2012)

10 C.F.R. 70.32(c)
if applicant decides to remove a method from the approved list of alarm resolution methods, it would have to follow the prescribed change process or the license amendment process; LBP-14-1, 79 NRC 103 n.342 (2014)
NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 82 (2012)
urain enrichment facility license must have a condition requiring the licensee to maintain and follow a source material control and accounting program and maintain records of any MC&A program changes made without Commission approval for 5 years from the date of the change; LBP-11-11, 73 NRC 501-02 (2011)
10 C.F.R. 70.32(c)(2)
reports to the agency regarding unapproved changes made to the material control and accounting program must be filed no more than 6 months after the changes; LBP-11-11, 73 NRC 502 (2011)
10 C.F.R. 70.32(k)
although construction of a fuel cycle facility can begin as soon as the license authorizing the facility is granted, prior to the introduction of UF₆ into any EREF module, NRC must verify through inspection that the facility was constructed in accordance with the agency’s regulatory requirements and license requirements; LBP-11-11, 73 NRC 502 (2011)
applicant is to provide an items-relied-on-for-safety boundary package to verify that a facility is constructed in accord with all license requirements; LBP-11-11, 73 NRC 500 (2011)
uranium enrichment facility cannot be operated until the agency verifies through inspection that the facility has been constructed in accordance with the license; LBP-11-11, 73 NRC 509 (2011); LBP-12-21, 76 NRC 259-60 (2012)
10 C.F.R. 70.34
if applicant decides to remove a method from the approved list of alarm resolution methods, it would have to follow the prescribed change process or the license amendment process; LBP-14-1, 79 NRC 103 n.342 (2014)
10 C.F.R. 70.40
this section applies only to enrichment facility licensee USEC and has no relevance to any other enrichment facility applicant; LBP-11-11, 73 NRC 488 n.16 (2011)
10 C.F.R. 70.59
Part 70 applicants are required to establish a radiological monitoring program to monitor and report the release of radiological gaseous and liquid effluents to the environment; LBP-11-26, 74 NRC 565 (2011)
uranium enrichment facility licensee must submit biannual reports to the NRC specifying the quantity of each of the principal radionuclides released to unrestricted areas in liquid and gaseous effluents during the previous 6 months of operation, and such other information as the Commission may require to estimate maximum potential annual radiation doses to the public resulting from effluent releases; LBP-12-21, 76 NRC 338-39, 365 (2012)
10 C.F.R. 70.61
analysis of potential volcanic hazard at applicant’s site raises the question whether the probability of such an event is sufficiently low to be considered “highly unlikely”; LBP-11-11, 73 NRC 518-19 (2011)
integrated safety analysis requirements for uranium enrichment facility licensing are detailed; LBP-12-21, 76 NRC 237 (2012)
under risk-informed performance-based requirements, applicants must ensure that each item relied on for safety will be available and reliable to perform its function when needed; LBP-11-11, 73 NRC 500 (2011)
10 C.F.R. 70.61(a)
appliance is required to evaluate and reduce the risk of events that could have significant impacts on workers or the public; LBP-12-21, 76 NRC 265 (2012)
10 C.F.R. 70.61(b), (c)
high-consequence events are required to be highly unlikely and intermediate-consequence events to be unlikely; LBP-12-21, 76 NRC 265 (2012)
10 C.F.R. 70.62
integrated safety analysis requirements for uranium enrichment facility licensing are detailed; LBP-12-21, 76 NRC 237 (2012)
level of design is sufficient to develop a safety basis for the facility that includes analysis of accident sequences, identification of IROFS, implementation of management measures to ensure the IROFS are available and reliable when needed, application of defense-in-depth measures, and commitment to codes and standards to support ongoing design and construction; LBP-12-21, 76 NRC 254 (2012)
LEGAL CITATIONS INDEX

REGULATIONS

10 C.F.R. 70.62(c)
applicant for a Part 70 license is required to establish and maintain a safety program, which includes
performing an integrated safety analysis; LBP-11-11, 73 NRC 480 (2011)
items relied on for safety that are a central focus of the integrated safety analysis process are the subject
of three proposed license conditions; LBP-11-11, 73 NRC 500 (2011)
uranium enrichment facility applications must identify radiological and chemical hazards, facility hazards
that could affect safety of licensed materials, potential accident sequences and their consequences and
likelihood of occurrence, and each item relied on for safety; LBP-12-21, 76 NRC 237 (2012)
10 C.F.R. 70.62(c)(1)(iv)
applicant’s integrated safety analysis must consider potential accident sequences caused either by
deviations in the processes that will be conducted at the proposed facility or by credible external events,
including natural phenomena; LBP-11-11, 73 NRC 480 (2011); LBP-12-21, 76 NRC 265 (2012)
10 C.F.R. 70.64(a)
design of new uranium enrichment facilities must provide for adequate protection against natural
phenomena, fires and explosions, chemical risks produced from licensed material, facility conditions, and
hazardous chemicals produced from licensed material; LBP-12-21, 76 NRC 237 (2012)
design of new uranium enrichment facilities must provide for emergency planning, continued operation of
essential utility services, inspection, testing, and maintenance of items relied on for safety, and criticality
control including adherence to the double contingency principle; LBP-12-21, 76 NRC 237 (2012)
10 C.F.R. 70.64(a)(2)
integrated safety analysis summary must assess potential accidents caused by credible external events and
design the facility to protect against natural phenomena; LBP-12-21, 76 NRC 265 (2012)
10 C.F.R. 70.65(b)
along with the requirement to perform an integrated safety analysis is the requirement for applicant to
provide the NRC Staff with an ISA summary, the content of which is specified; LBP-11-11, 73 NRC
481 (2011)
10 C.F.R. 70.65(b)
integrated safety analysis summary must accompany the uranium enrichment facility license application
and contain a general description of the site and the facility with emphasis on factors that could affect
safety and description of each process analyzed in the ISA; LBP-12-21, 76 NRC 237 (2012)
10 C.F.R. 70.72
deviations from the original design must be evaluated against the criteria in this regulation to determine if
a license amendment is required or if applicant could make the change without NRC approval;
LBP-12-21, 76 NRC 254, 259 (2012)
Staff proposes to include a condition in the license that incorporates a special authorization to permit
applicant to make changes to its SAR without seeking prior NRC approval; LBP-11-11, 73 NRC 505
(2011)
uranium enrichment facility licensee must submit an annual update of the integrated safety analysis
summary; LBP-12-21, 76 NRC 345 (2012)
10 C.F.R. 70.72(a)
applicant must establish and maintain a configuration management system to evaluate, implement, and
track changes to the site, structures, processes, systems, equipment, components, computer programs, and
activities of personnel; LBP-12-21, 76 NRC 254 (2012)
10 C.F.R. Part 72
stringent safety requirements apply to the construction and operation of reactor spent fuel pools and
independent spent fuel storage installations; CLI-15-4, 81 NRC 240 (2015)
10 C.F.R. 72.42(a)(2)
applications for renewal of an ISFSI license must describe the aging management plan for management of
issues associated with aging that could adversely affect structures, systems, and components important to
safety; LBP-12-24, 76 NRC 525 (2012)
10 C.F.R. 72.50(a)
written consent from NRC is required for all license transfers; CLI-15-8, 81 NRC 502 (2015)
10 C.F.R. 72.75
licensee assessed the structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS-HD dry cask storage systems for an earthquake and reviewed the event for reportability; DD-12-1, 75 NRC 595 (2012); DD-12-2, 76 NRC 401 (2012)

10 C.F.R. 72.104(a)-(c)
ISFSI licensees must limit releases of radioactive materials to as low as is reasonably achievable, and establish operational limits to prevent doses to the public that exceed the limits of this section; LBP-12-24, 76 NRC 529 (2012)

10 C.F.R. 72.106(b)
loss of spent fuel confinement would produce a dose of 0.15 rem at the nearest site boundary, which is less than the 5-rem limit; LBP-12-24, 76 NRC 529 (2012)

10 C.F.R. 72.122(f)
licensee must provide for ready retrieval of spent fuel from storage for further processing or disposal; LBP-12-24, 76 NRC 527 (2012)

10 C.F.R. 72.122(h)(1)
licensee must protect spent fuel cladding from degradation during storage or confine the fuel in such a way that degradation does not cause operational problems when removed from storage; LBP-12-24, 76 NRC 526-27 (2012)

10 C.F.R. 72.122(h)(4)
pressure monitoring system that functions to alert ISFSI operators of potential storage problems, specifically a leak of one of the seals, is intended to meet the requirements for monitoring of dry spent fuel storage; LBP-12-24, 76 NRC 523 (2012)

10 C.F.R. Part 72, Subpart K
general license may be granted to all Part 50 and Part 52 reactor licensees to store spent fuel in an independent spent fuel storage installation; CLI-15-4, 81 NRC 226 n.16 (2015)

10 C.F.R. Part 73
NRC defers to other agencies with greater expertise on an issue; CLI-11-4, 74 NRC 6 (2011)

10 C.F.R. 73.1
licensees must establish and maintain systems to protect against acts of radiological sabotage and to prevent the theft or diversion of special nuclear material; CLI-11-4, 74 NRC 6 (2011)

10 C.F.R. 73.54
cyber security plans must be submitted for NRC approval; CLI-12-2, 75 NRC 105 (2012)

10 C.F.R. 73.54(a)(4)
cyber security plans must take into account site-specific conditions; CLI-12-2, 75 NRC 105 (2012)

10 C.F.R. 73.54(f)
written policies, implementing procedures, site-specific analysis, and other supporting technical information developed to implement cyber security plans are subject to periodic inspection by NRC Staff; CLI-12-2, 75 NRC 105 (2012)

10 C.F.R. 73.56
it is well within NRC’s discretion to impose specific requirements that clarify or go beyond those already established by regulations; LBP-14-4, 79 NRC 335 (2014)

10 C.F.R. 73.56(a)(4)
access authorization rule leaves individual decisionmaking authority related to unescorted access to each licensee’s discretion; LBP-14-4, 79 NRC 336 (2014)

10 C.F.R. 73.56(f)
contents of licensee’s behavioral observation program cannot substitute for the duty of NRC Staff to be reasonably clear as to what is required of workers who are trying to comply with their legal obligation to report on their co-workers; LBP-14-4, 79 NRC 362 n.43 (2014)
reporting of observed behavior is the core concept of the behavioral observation program; LBP-14-4, 79 NRC 346 (2014)
reporting of observed conduct with a nexus to public health and safety or the common defense and security is required; LBP-14-4, 79 NRC 365 n.47 (2014)
there is no duty to report credible information; LBP-14-4, 79 NRC 346 (2014)
under an enforcement order, NRC requires that workers report any observed “illegal, unusual, or aberrant” behavior by their co-workers, words not appearing in this regulation; LBP-14-4, 79 NRC 346 (2014)
10 C.F.R. 73.56(f)(1)-(3)
contention alleges errors by NRC Staff in implementation of this regulation that fall within the zone of interests protected or regulated by those provisions; LBP-14-4, 79 NRC 356 (2014)
contention that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on the off-duty employees of licensee not otherwise required by the NRC to observe and report the offsite, off-duty conduct of fellow employees in inadmissible; LBP-14-4, 79 NRC 335 (2014)
licensee employees are protected against unnecessary or excessive restrictions on their conduct; LBP-14-4, 79 NRC 356 (2014)
10 C.F.R. 73.56(f)(2)
NRC’s enforcement order does not state that any reportable illegal, unusual, or aberrant behavior must have a nexus to public health and safety or the common defense and security in order to be reportable; LBP-14-4, 79 NRC 346 (2014)
10 C.F.R. 73.56(f)(3)
board finds that the terms endorsed in a confirmatory order provide more specificity than the applicable NRC regulation which rather broadly requires reporting of any questionable behavior patterns or activities; LBP-14-4, 79 NRC 336 (2014)
individuals who are subject to an access authorization program shall at a minimum, report any concerns arising from behavioral observation and are individually liable if they fail to do so; LBP-14-4, 79 NRC 344 (2014)
10 C.F.R. 73.80
NRC can issue an order suspending an individual from working anywhere in the nuclear industry who fails to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 345 (2014)
NRC can order an individual to pay civil penalties of up to $100,000 for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 345 (2014)
10 C.F.R. 73.81
NRC can take criminal enforcement action against an individual for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 345 (2014)
10 C.F.R. Part 74
material control and accounting system is required for a fuel fabrication facility; LBP-14-1, 79 NRC 44 (2014)
10 C.F.R. 74.4
“alarm” is defined; LBP-14-1, 79 NRC 128 (2014)
“Category IA material” is defined as strategic special nuclear material directly usable in the manufacture of a nuclear explosive device; CLI-15-9, 81 NRC 516 n.20 (2015); LBP-14-1, 79 NRC 56 n.80, 128 (2014)
“Category IB material” is defined as all strategic special nuclear material other than Category IA; CLI-15-9, 81 NRC 516 n.20 (2015); LBP-14-1, 79 NRC 56 n.80, 128 (2014)
circumstances when an MC&A alarm exists are described; LBP-14-1, 79 NRC 96 n.295, 129 (2014)
“controlled access area” is any temporarily or permanently established area that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; CLI-15-9, 81 NRC 517 n.20 (2015); LBP-14-1, 79 NRC 56 n.80, 128 (2014)
definition of “power of detection” does not explicitly require a demonstration of data accuracy; LBP-14-1, 79 NRC 77 n.198 (2014)
“formula kilogram” means strategic special nuclear material in any combination in a quantity of 1000 grams computed by the formula, grams = (grams contained U-235) + 2.5 (grams U-233 + grams plutonium); CLI-15-9, 81 NRC 516 n.16 (2015); LBP-14-1, 79 NRC 128 (2014)
“item” means any discrete quantity or container of special nuclear material or source material, not undergoing processing, having a unique identity and also having an assigned element and isotope quantity; LBP-14-1, 79 NRC 56 n.83, 128 (2014)
“material access area” is any location that contains special nuclear material, within a vault or a building, the roof, walls, and floor of which constitute a physical barrier; CLI-15-9, 81 NRC 517 n.20 (2015)
LEGAL CITATIONS INDEX

REGULATIONS

“power of detection” means the probability that the critical value of a statistical test will be exceeded when there is an actual loss of a specific quantity of strategic special nuclear material; CLI-15-9, 81 NRC 517 n.20 (2015); LBP-14-1, 79 NRC 56 n.85, 128-29 (2014)

“sealed source” means any special nuclear material that is physically encased in a capsule, rod, element, etc. that prevents the leakage or escape of the special nuclear material and that prevents removal of the special nuclear material without penetrations of the casing; LBP-14-1, 79 NRC 56 n.82, 129 (2014)

special nuclear material “item” is any discrete quantity or container of special nuclear material or source material, not undergoing processing, having a unique identity, and also having an assigned element and isotope quantity; CLI-15-9, 81 NRC 516 n.20 (2015)

“strategic special nuclear material” means uranium-235 (contained in uranium enriched to 20 percent or more in the U-235 isotope), uranium-233, or plutonium; CLI-15-9, 81 NRC 515 n.15 (2015); LBP-14-1, 79 NRC 44 n.1, 51 n.52, 129 (2014)

“tamper-safing” refers to use of devices on containers or vaults in a manner and at a time that ensures a clear indication of any violation of the integrity of previously made measurements of special nuclear material within the container or vault; CLI-15-9, 81 NRC 518 n.29 (2015); LBP-14-1, 79 NRC 56 n.81, 129 (2014)

“unit process” means an identifiable segment or segments of processing activities for which the amounts of input and output strategic special nuclear material are based on measurements; CLI-15-9, 81 NRC 516 n.16 (2015)

“vault” is a windowless enclosure with walls, floor, roof, and door(s) designed and constructed to delay penetration from forced entry; CLI-15-9, 81 NRC 516 n.20 (2015); LBP-14-1, 79 NRC 56 n.80 (2014)

10 C.F.R. 74.31

NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 82 (2012)

10 C.F.R. 74.33(c)(5)

NRC Staff granted an exemption from applicable regulatory requirements subject to license conditions that require applicant to submit, for the Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 230 (2012)

10 C.F.R. 74.41, & 74.51

NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 82 (2012)

10 C.F.R. 74.51(a)

applicants applying to possess 5 or more formula kilograms of strategic special nuclear material must maintain alarm resolution capabilities designed to achieve the performance objectives of this section; LBP-14-1, 79 NRC 96 (2014)

NRC may issue a license to possess and use 5 or more formula kilograms of strategic special nuclear material only if applicant can establish, implement, and maintain a Commission-approved material control and accounting system that will achieve general performance objectives; LBP-11-9, 73 NRC 419 (2011); LBP-14-1, 79 NRC 51 (2014)

section 74.55(b)(1) applies only to licensees that are authorized to possess 5 or more formula kilograms of strategic special nuclear material; LBP-14-1, 79 NRC 56 (2014)

10 C.F.R. 74.51(a)(1)

capability to resolve alarms within approved time periods is most clearly aimed at the prompt investigation of anomalies potentially indicative of SSNM losses; LBP-14-1, 79 NRC (2014)
capability to verify presence is most clearly aimed at ongoing confirmation of the presence of strategic special nuclear material in assigned locations; LBP-14-1, 79 NRC 56 n.84 (2014)

10 C.F.R. 74.51(a)(1)(5)

applicant for a license to possess and use strategic special nuclear material must establish, implement, and maintain an NRC-approved material control and accounting system that will address the loss or theft of such material; CLI-15-9, 81 NRC 515 (2015)

10 C.F.R. 74.51(a)(3)

capability to rapidly assess the validity of alleged thefts is aimed at the rapid determination of whether an actual loss of 5 or more formula kilograms occurred; LBP-14-1, 79 NRC 108 n.361 (2014)
rapid determination of SSNM theft assessment should be completed within an 8- or 72-hour timeline; LBP-14-1, 79 NRC 117 (2014)

10 C.F.R. 74.51(a)(4)
capability to verify integrity is most clearly aimed at the prompt investigation of anomalies potentially indicative of SSNM losses; LBP-14-1, 79 NRC 56 n.84 (2014)

10 C.F.R. 74.51(b)
to achieve strategic special nuclear material loss-related performance objectives, the material control and accounting system must provide the capabilities described in sections 74.55 and 74.57; LBP-14-1, 79 NRC 51 (2014)

10 C.F.R. 74.55
applicant’s proposal to seal and design strategic special nuclear material item storage locations to be tamper-safed or equivalent to tamper-safing such that confirmation that the physical boundary of these locations has not been breached ensures the integrity of these items; LBP-14-1, 79 NRC 57 (2014)

10 C.F.R. 74.55(a)
section 74.55(b)(1) applies only to licensees that are authorized to possess 5 or more formula kilograms of strategic special nuclear material; LBP-14-1, 79 NRC 56 (2014)

10 C.F.R. 74.55(b)
ability to detect the loss of plutonium in a timely manner, to allow for an effective response, is a crucial security requirement; LBP-11-9, 73 NRC 420 (2011)
deinition of “power of detection” does not explicitly require a demonstration of data accuracy; LBP-14-1, 79 NRC 77 n.198 (2014)

licensure must satisfy the regulation’s detection requirements for tamper-safed strategic special nuclear material items in order to achieve the performance objectives set out in section 74.51(a); LBP-14-1, 79 NRC 56 (2014)

licensees must verify on a statistical sampling basis, the presence and integrity of strategic special nuclear material items; CLI-15-9, 81 NRC 516 (2015)

meaning of “verify” in the context of item presence verification is discussed; CLI-15-9, 81 NRC 520 (2015)

requirement for 99% power of detection means that there must be a 99% probability that a missing item will be included within the sample chosen for inspection and would thus be detected; LBP-14-1, 79 NRC 56 n.85 (2014)

requirements for performance of applicant’s material control and accounting system neither prescribe nor proscribe any methodology for achievement of those performance requirements; LBP-14-1, 79 NRC 52 (2014)

statistical sampling is to be used to achieve verification of item presence and integrity but the regulation does not prescribe a particular method of sampling, only that statistical sampling must result in at least 99% power of detecting losses that total 5 formula kg or more; LBP-14-1, 79 NRC 56 (2014)

10 C.F.R. 74.55(b)(1)
any statistical sampling plan for verifying the presence and integrity of strategic special nuclear material items must have at least 99% power of detecting item losses; CLI-15-9, 81 NRC 516 (2015)

applicant has demonstrated that its program of automated equipment, computer systems (and their verification), and the use of secured and tamper-safed item storage area boundaries, satisfactorily demonstrates the ability to verify the presence and integrity of all strategic special nuclear material items in storage; LBP-14-1, 79 NRC 46, 50 (2014)

applicant satisfies the requirement to verify, on a statistical sampling basis, the integrity of SSNM items, with at least a 99% power of detecting losses totaling 5 formula kilograms or more, within 30 days for Category IA and 60 days for Category IB items; LBP-14-1, 79 NRC 70 (2014)

applicant’s daily reconciliation of the MMIS Perpetual Inventory Report and PLC mapping, as supported by its various accuracy-related programs and the MMIS verification procedure, provides reasonable assurance that it can verify the presence of all SSNM items in storage within the required 30- and 60-day time frames; LBP-14-1, 79 NRC 117 (2014)

applicant’s sampling method, which examines data representative of the entire set of SSNM items, and not a limited subset, samples 100% of SSNM items and thus complies with the requirement to sample a
sufficient number of items to result in at least 99% power of detecting the specified losses; LBP-14-1, 79 NRC 70 (2014)
applicant’s SSNM item monitoring approach, as enhanced by an item verification procedure, provides reasonable assurance that the quantitative accuracy of the MMIS/PLC data is sufficient to enable the procedures employing those data to meet the regulatory requirements; LBP-14-1, 79 NRC 92 (2014)
applicant’s verification of the integrity of the SSNM vault boundaries on a daily basis exceeds the regulatory requirement to verify the integrity of the items every 30 or 60 days; LBP-14-1, 79 NRC 74 n.187 (2014)
by verifying integrity of storage area boundaries, applicant can verify the integrity of all SSNM items in storage within the required 30- and 60-day time frames; LBP-14-1, 79 NRC 117 (2014)
contention that applicant’s revised material control and accounting plan is deficient because its item monitoring program does not have the capability to verify, on a statistical sampling basis, the presence and integrity of strategic special nuclear material losses that total 5 formula kilograms of plutonium or more, plantwide, within the time frames specified by the regulation is inadmissible; CLI-15-9, 81 NRC 514 (2015); LBP-14-1, 79 NRC 55-56 (2014)
determination regarding item integrity refers to the ability to determine that a container holding SSNM items has not been breached and that the amount of SSNM within has not been altered; LBP-14-1, 79 NRC 70 (2014)
neither the plain language of this section nor its regulatory history suggests that verifications of item integrity must be in any way physical; LBP-14-1, 79 NRC 75 (2014)
no requirement to quantify the potential for an adversary to take measures to conceal any abnormalities in MMIS and PLC mapping can reasonably be found in (or implied by) the language of this rule; LBP-14-1, 79 NRC 93 (2014)
quantitative accuracy of the MMIS/PLC computer system data must be considered in determining whether requirements of this section are satisfied by applicant’s plans; LBP-14-1, 79 NRC 81 (2014)
there is a general overarching requirement that applicant’s SSNM item monitoring method be sufficiently accurate to provide reasonable assurance that the specific regulatory requirement is satisfied; LBP-14-1, 79 NRC 87 (2014)
10 C.F.R. 74.55(e)
requirements for performance of applicant’s material control and accounting system neither prescribe nor prescribe any methodology for achievement of those performance requirements; LBP-14-1, 79 NRC 52 (2014)
10 C.F.R. 74.57(a)
applicants applying to possess 5 or more formula kilograms of SSNM must maintain alarm resolution capabilities designed to achieve the performance objectives of section 74.51(a); LBP-14-1, 79 NRC 96 (2014)
10 C.F.R. 74.57(b)
ability to resolve within approved time periods the nature and cause of any materials control and accounting alarm signaling the possible loss or theft of strategic special nuclear material, to allow for an effective response, is a crucial security requirement; LBP-11-9, 73 NRC 420 (2011)
applicant provides reasonable assurance that it can normally resolve an alarm within 3 days, fully satisfying regulatory requirements; LBP-14-1, 79 NRC 117 (2014)
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to resolve the nature and cause of any MC&A alarm within approved time periods in each of the four storage areas at issue; LBP-14-1, 79 NRC 46, 50 (2014)
contention that applicant’s revised material control and accounting plan is inadequate to satisfy the alarm resolution requirements is inadmissible; CLI-15-9, 81 NRC 514 (2015)
licensee must provide reasonable assurance that it can achieve the performance objectives set out in this regulation; CLI-15-9, 81 NRC 526 (2015)
licensees shall resolve the nature and cause of any MC&A alarm within approved time periods; LBP-14-1, 79 NRC 96 (2014)
MCA alarms are not required to be resolved within any particular time frame, only that a time period be approved by NRC Staff; LBP-14-1, 79 NRC 99 (2014)

petitioner provides no support for the proposition that applicant must demonstrate that each individual resolution method can be completed, by itself, within the approved time period; LBP-14-1, 79 NRC 99 (2014)

10 C.F.R. 74.57(c)
NRC must be notified within 24 hours of failure to resolve an alarm within the approved time period; LBP-14-1, 79 NRC 105 n.348 (2014)

10 C.F.R. 74.57(e)
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to rapidly assess the validity of alleged thefts; LBP-14-1, 79 NRC 46, 50 (2014)

contention challenging applicant’s ability to rapidly assess the validity of alleged thefts is decided; LBP-14-1, 79 NRC 108 (2014)

contention questioning whether applicant’s theft assessment commitment satisfies the regulatory requirements even though it relies on an underlying assumption of 100% accuracy of applicant’s MMIS/PLC computer records system is decided; LBP-14-1, 79 NRC 109 (2014)

contention that applicant’s revised material control and accounting plan fails to show how confirmation and verification of theft of plutonium will be carried out in the specified timelines is inadmissible; CLI-15-9, 81 NRC 514-15 (2015)

licensee must be able to rapidly assess the validity of alleged thefts; CLI-15-9, 81 NRC 525 (2015)

licensees are not required to conduct assessments of alleged thefts without the use of their records systems, or by first verifying the integrity and accuracy of those records systems; LBP-14-1, 79 NRC 116 (2014)

under this performance-based regulation, licensee is simply required to provide the capability to rapidly assess the validity of alleged thefts; LBP-14-1, 79 NRC 112 (2014)

using its MMIS and PLC mapping, applicant has capability to locate one SSNM item in 8 hours, and all SSNM items in vault storage in 72 hours and therefore provides reasonable assurance of its ability to rapidly assess the validity of an alleged theft; LBP-14-1, 79 NRC 117 (2014)

10 C.F.R. 75.55(b)
accuracy is an integral component of the portion of the regulatory requirement that addresses item presence verification; CLI-15-9, 81 NRC 524 n.73 (2015)

10 C.F.R. Part 95
relative to the issue of foreign ownership or control, NRC imposes restrictions on the physical security and control of information at licensed facilities to safeguard restricted data and national security information; LBP-11-11, 73 NRC 489 (2011)

Staff imposed a license condition to ensure that clearances are obtained before classified matter is processed, stored, reproduced, transmitted, handled, or accessed; LBP-11-11, 73 NRC 484-85 (2011)

10 C.F.R. 95.15
Pentapartite Agreement between the United States and four European governments to prevent new restricted data from being disseminated to European nationals will be a prerequisite to the NRC Staff issuing a facility clearance; LBP-11-11, 73 NRC 485 (2011)

10 C.F.R. 95.17
applicant must obtain a facility security clearance, which would include a determination that granting the clearance would not be inconsistent with the national interest, including a finding that the facility is not under foreign ownership, control, or influence to such a degree that a determination could not be made; LBP-11-11, 73 NRC 490 (2011)

10 C.F.R. 95.17(d)(1)
an enrichment facility security clearance requires a determination that granting the clearance would not be inconsistent with the national interest, including a finding that the facility is not under foreign ownership, control, or influence to such a degree that a determination could not be made; LBP-11-11, 73 NRC 489 (2011)

10 C.F.R. Part 100
acceptance criteria for Type A leak rate limits embodied in the technical specification are established to ensure that, in the event of a design-basis accident, the dose received by a member of the general public will not exceed the limits in this part; LBP-15-26, 82 NRC 168 n.4 (2015)
facility design and operation should ensure that radiological consequences of design basis events do not exceed 10 percent of dose limits; LBP-12-7, 75 NRC 518 (2012)

10 C.F.R. 100.20(b)
applicant must assess oil and gas wells and borings on and near the proposed site; LBP-11-16, 73 NRC 660 (2011)

10 C.F.R. 100.21
NRC Staff’s steps in the geographic and demographic review in the final safety evaluation report to determine whether the COL applicant has proposed an acceptable site, including acceptable site boundaries, with appropriate consideration of nearby populations and natural and manmade features, are described; CLI-12-9, 75 NRC 450 (2012)

10 C.F.R. 100.21(e)
applicant must assess oil and gas wells and borings on and near the proposed site and include them in the site safety evaluation report; LBP-11-16, 73 NRC 668 (2011)

10 C.F.R. 100.23
investigation of geological, seismological, and engineering characteristics of a site is required; LBP-14-8, 79 NRC 525 (2014)
principal geologic and seismic considerations that guide the Commission in its evaluation of the suitability of a proposed site and adequacy of the design bases are set forth; LBP-11-16, 73 NRC 658 (2011)

10 C.F.R. 100.23(c)
applicant shall investigate all geologic and seismic factors (e.g., volcanic activity) that may affect the design and operation of the proposed nuclear power plant irrespective of whether such factors are explicitly included in this section; LBP-11-16, 73 NRC 660 (2011)
geological, seismological, and engineering characteristics of a site and its environs must be investigated in sufficient scope and detail; LBP-11-10, 73 NRC 452 (2011)

10 C.F.R. 100.23(d)
factors used for a site geological and seismological evaluation are stated; LBP-11-10, 73 NRC 452 n.160 (2011); LBP-11-16, 73 NRC 659 (2011)
geologic and seismic siting factors considered for design must include a determination of the safe shutdown earthquake ground motion for the site and the potential for surface tectonic and non-tectonic deformations; LBP-11-16, 73 NRC 659 (2011)
sufficient geological, seismological, and geophysical data must be provided to clearly establish whether there is a potential for surface deformation; LBP-11-16, 73 NRC 659 (2011)

10 C.F.R. 100.23(d)(2)
applicant’s site safety analysis report must provide sufficient data to enable the requisite determination of the potential for surface deformation as a result of growth faults at the site; LBP-11-16, 73 NRC 656, 659 (2011)
contention that applicant’s site assessment has inadequately characterized the rate of movement of growth faults at the site, as it relates to its analysis of surface deformation is admissible; LBP-11-16, 73 NRC 663-64 (2011)

10 C.F.R. Part 100, Appendix A
applicant’s site safety analysis report must provide sufficient data to enable the requisite determination of the potential for surface deformation as a result of growth faults at the site; LBP-11-16, 73 NRC 658 (2011)
application of the operating basis earthquake analysis is restricted to those features of a nuclear power plant that are safety-related, as opposed to the operability of structures, systems, and components necessary for power generation; LBP-11-16, 73 NRC 660 (2011)
design bases for earthquakes are to be determined through evaluation of the geologic and seismic history of the site and surrounding region; DD-12-1, 75 NRC 589 (2012)
even though a cooling pond is not a safety-related structure, knowledge of faulting under the pool and the impact this faulting might have on the pool’s operation are required; LBP-11-16, 73 NRC 660 (2011)
one of the faults known to exist at the North Anna site are capable faults; DD-12-1, 75 NRC 597 (2012)
purpose of the seismic and geologic siting criteria is set forth; LBP-11-16, 73 NRC 660 (2011)
to demonstrate that no functional damage occurred as a result of the earthquake, licensee performed inspections, tests, and analyses to address the requirements of this regulation; DD-15-9, 82 NRC 278, 279 (2015)

10 C.F.R. Part 100, Appendix A, § V(a)(2)

before restart, licensee is required to demonstrate to NRC that no functional damage from seismic events has occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 576 (2012)

following an earthquake exceeding the design basis, the plant must remain shut down until licensee demonstrates to NRC that no functional damage occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 588 (2012); DD-12-2, 76 NRC 408-09 (2012); DD-15-9, 82 NRC 277, 278, 280 (2015)

licensee is required to shut down a nuclear power plant when the vibratory ground motion exceeds that of the operating basis earthquake; DD-12-1, 75 NRC 576 (2012); DD-12-2, 76 NRC 395, 399 (2012)

NRC’s independent technical evaluation of information submitted by licensee to demonstrate that no functional damage occurred as a result of an earthquake is described; DD-15-9, 82 NRC 280-82 (2015)

10 C.F.R. Part 100, Appendix A, ¶ Vi(d)(1)

plain language of this appendix speaks to the intention of the Commission to address other design conditions such as soil instability due to ground disruption not directly related to surface faulting; LBP-11-16, 73 NRC 660 (2011)

10 C.F.R. Part 100, Appendix A, ¶ Vi(d)(3)

assurance of adequate cooling water supply for emergency and long-term shutdown decay heat removal shall be considered in the design of the nuclear power plant; LBP-11-16, 73 NRC 671 (2011)

10 C.F.R. Part 100, Appendix A, ¶ Vi(b)(3)

design basis for surface faulting shall be taken into account in the design of the nuclear power plant by providing reasonable assurance that in the event of such displacement during faulting certain structures, systems, and components will remain functional; LBP-11-16, 73 NRC 659 (2011)

design provisions shall be based on an assumption that the design basis for surface faulting can occur in any direction and azimuth and under any part of the nuclear power plant unless evidence indicates this assumption is not appropriate, and shall take into account the estimated rate at which the surface faulting may occur; LBP-11-16, 73 NRC 659-60 (2011)

10 C.F.R. 110.32(f)(5)

NRC will issue a low-level radioactive waste export license if the receiving country has received a description of the equipment or material including the volume, physical and chemical characteristics, route of transit of shipment, and ultimate disposition (including forms of management or treatment) of the waste; CLI-11-3, 73 NRC 627 (2011)

10 C.F.R. 110.41(a)(8)

Department of State provides the Commission with Executive Branch views on the merits of import/export applications; CLI-11-3, 73 NRC 617 n.11 (2011)

NRC will issue a low-level radioactive Waste export license if it has been notified by the State Department that it is the judgment of the Executive Branch that the proposed export will not be inimical to the common defense and security; CLI-11-3, 73 NRC 627 (2011)

10 C.F.R. 110.41(b)(1)

NRC will issue a low-level radioactive waste export license if it has been notified by the State Department that it is the judgment of the Executive Branch that the proposed export will not be inimical to the common defense and security; CLI-11-3, 73 NRC 627 (2011)

10 C.F.R. 110.42(d)(1)

NRC will issue a low-level radioactive waste export license if it has made an independent judgment that the export will not be inimical to the common defense and security; CLI-11-3, 73 NRC 627 (2011)

10 C.F.R. 110.42(d)(2)

NRC will issue a low-level radioactive waste export license if the receiving country has found it has the administrative and technical capacity and regulatory structure to manage and dispose of the waste and consents to the receipt of the radioactive waste; CLI-11-3, 73 NRC 627 (2011)

NRC will issue a low-level radioactive waste export license if the receiving country has received a description of the equipment or material including the volume, physical and chemical characteristics,
route of transit of shipment, and ultimate disposition (including forms of management or treatment) of the waste; CLI-11-3, 73 NRC 627 (2011)
10 C.F.R. 110.43(d)
Southeast Compact Commission for Low-Level Radioactive Waste Management had no comments with regard to the import/export applications; CLI-11-3, 73 NRC 618 (2011)
state reviewed the applications and the authorizations and found no technical reason to prohibit processing of imported waste; CLI-11-3, 73 NRC 618 (2011)
10 C.F.R. 110.45
Commission considers the adequacy of information in the application as well as written comments from the public in making an import or export licensing decision; CLI-11-3, 73 NRC 624 (2011)
10 C.F.R. 110.50(a)(3)
key action that will allow incineration of imported low-level-radioactive waste material is the domestic license authorizing such processing, not NRC’s grant of an import license; CLI-11-3, 73 NRC 620 (2011)
10 C.F.R. 110.81
Commission considers the adequacy of information in the application as well as written comments from the public in making an import or export licensing decision; CLI-11-3, 73 NRC 624 (2011)
10 C.F.R. 110.82
intervention petition argues that a hearing should be held to address claimed deficiencies in import/export applications and public health, safety, security impacts and whether the applications set precedent; CLI-11-3, 73 NRC 618-19 (2011)
petitioner filed a timely request for hearing on the import/export license application to allow citizens of the area an opportunity to have their questions answered and raise any concerns in a public forum and to argue that every country should have the capability of processing its own nuclear waste; CLI-11-3, 73 NRC 618 (2011)
10 C.F.R. 110.83(a)
deadline for answer to hearing petition is specified; CLI-11-3, 73 NRC 619 (2011)
import/export license applicant argues that intervention petition should be denied because it was not served on all parties, petitioner does not have standing, and petitioner does not show that a discretionary hearing would be in the public interest or assist the Commission in making its required determinations; CLI-11-3, 73 NRC 618 (2011)
10 C.F.R. 110.83(b)
deadline for reply to an answer to a hearing petition is specified; CLI-11-3, 73 NRC 619 (2011)
10 C.F.R. 110.84(a)
discretionary hearing on an export or import license is allowed if a hearing would be in the public interest and would assist the Commission in making the statutory determinations required by the AEA; CLI-11-3, 73 NRC 624 (2011)
10 C.F.R. 110.111
petitioner requests a waiver from a 10 C.F.R. 51.22(c)(15); CLI-11-3, 73 NRC 619 (2011)
10 C.F.R. 110.111(a)
participant may petition that a Commission rule or regulation be waived with respect to the license application under consideration; CLI-11-3, 73 NRC 619 (2011)
10 C.F.R. 110.111(b)
to waive a Part 110 rule or regulation, petitioner must show that because of special circumstances concerning the subject of the hearing, application of a rule or regulation would not serve the purposes for which it was adopted; CLI-11-3, 73 NRC 619-20 (2011)
10 C.F.R. 110.111(d)
replies to waiver petitions are allowed; CLI-11-3, 73 NRC 619 (2011)
10 C.F.R. 140.13b
holders of a Part 40/70 uranium enrichment facility license are required to maintain adequate nuclear liability insurance, with proof of such insurance necessary prior to a license being issued; LBP-11-11, 73 NRC 498 (2011)
10 C.F.R. 150.20
except for ownership of NRC-licensed materials outlined in the settlement agreement, licensee will refrain from engaging in conducting radiography or a radiographer’s duties, or assisting, directing, or
supervising such activities in an NRC jurisdiction under an NRC license or an agreement state license; LBP-11-3, 73 NRC 88 (2011)
licensee is banned from engaging in NRC-licensed activities, including performing, supervising, or assisting in any industrial radiographic operations and must complete a formal radiation safety officer training course; LBP-15-21, 82 NRC 9 (2015)
10 C.F.R. 812.337(f)
because NRC’s decision to grant the exemptions is a matter of public record, the board takes notice that the exemptions have now been approved; LBP-15-24, 82 NRC 81 n.78 (2015)
12 C.F.R. 3.14, 4.6, and Subpart E
federal financial regulatory agencies regularly examine banks within their jurisdiction, generally at 12- or 18-month intervals; CLI-11-4, 74 NRC 5 n.21 (2011)
15 C.F.R. 930.57(a)
applicant is required to submit its certification from the relevant state of jurisdiction, indicating that the project in question will comply with the Coastal Zone Management Act; LBP-11-16, 73 NRC 704 n.364 (2011)
15 C.F.R. 930.60(a)
state agency’s 6-month review period of an applicant’s consistency certification begins on the date the state agency receives the consistency certification; LBP-11-16, 73 NRC 704 n.365 (2011)
33 C.F.R. 328.3(b)
“wetlands” are those areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions and generally include swamps, marshes, bogs, and similar areas; LBP-15-23, 82 NRC 61 (2015)
33 C.F.R. 332.1(c)(2)
before being granted a Clean Water Act section 404 permit, applicant must demonstrate to the Corps of Engineers that it has taken all appropriate and practicable steps to avoid and minimize adverse impacts; LBP-15-23, 82 NRC 61 (2015)
33 C.F.R. 332.1(f)(1)
Uniform Mitigation Assessment Method code and Wetland Assessment Technique for Environmental Review code methods reflect the Corps of Engineers’ preferred approach to compensatory mitigation under the Clean Water Act; LBP-15-23, 82 NRC 65 n.28 (2015)
33 C.F.R. 332.3(f)(1)
if impacts are unavoidable, applicant shall provide mitigation measures that must be, to the extent practicable, sufficient to replace lost aquatic resource functions; LBP-15-23, 82 NRC 61 (2015)
36 C.F.R. 60.4
federal agency must determine whether identified properties are eligible for listing on the National Register based on the criteria in this regulation; LBP-15-16, 81 NRC 638-39 (2015)
historical/cultural resources are considered eligible for listing on the National Register of Historic Places if they meet one or more of four criteria; LBP-11-26, 74 NRC 576 (2011)
36 C.F.R. 800.1(a)
NRC Staff is required to consult with interested parties, including Indian Tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 17 n.33 (2014)
36 C.F.R. 800.2(c)(2)(ii)
individual tribal representative does not have standing to sue under NHPA § 106 consultation provisions; LBP-13-6, 77 NRC 277 n.12 (2013)
NRC Staff is required to consult with interested parties, including Indian Tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 17 n.33 (2014)
consultation must provide an Indian tribe with a reasonable opportunity to identify its concerns about historic properties, advise on their identification and evaluation, articulate its views on the undertaking’s effects on such properties, and participate in the resolution of adverse effects; LBP-15-16, 81 NRC 639, 640, 651 (2015)

consultation with Indian tribes must recognize the government-to-government relationship between the federal government and Indian tribes; LBP-15-16, 81 NRC 639, 651 (2015)

contention questioning the adequacy of NRC Staff’s consultation efforts with Native American tribes is admissible; LBP-13-9, 78 NRC 51 (2013)

agency officials must, except where appropriate to protect confidentiality concerns of affected parties, provide the public with information about an undertaking and its effects on historic properties and seek public comment and input; LBP-12-23, 76 NRC 482-83 n.240 (2012)

agencies shall plan for involving the public in the National Historic Preservation Act § 106 process but may use the agency’s procedures for public involvement under NEPA if they provide adequate opportunities for public involvement; LBP-12-23, 76 NRC 481 (2012)

procedures for an agency to follow in complying with National Historic Preservation Act § 106 are listed; LBP-12-23, 76 NRC 481 (2012)

agencies shall plan for involving the public in the National Historic Preservation Act § 106 process but may use the agency’s procedures for public involvement under NEPA if they provide adequate opportunities for public involvement; LBP-12-23, 76 NRC 481 (2012)

in consultation with the SHPO/THPO, the agency official shall plan for involving the public in the section 106 process; LBP-12-23, 76 NRC 483 n.240 (2012)

federal agency must make a reasonable and good-faith effort to identify historic properties; LBP-15-16, 81 NRC 657 n.231 (2015)

though the materials license has already been issued, the land disturbance in the project area will proceed in stages in compliance with National Historic Preservation Act § 106; LBP-15-16, 81 NRC 657 n.231 (2015)

federal agency must assess the effects of the undertaking on any eligible historic properties found; LBP-15-16, 81 NRC 639 (2015)

under National Historic Preservation Act, federal agency must avoid or mitigate any adverse effects of its undertaking; LBP-15-16, 81 NRC 639 (2015)

under National Historic Preservation Act, federal agency must determine whether the effect of its undertaking will be adverse; LBP-15-16, 81 NRC 639 (2015)

agencies are encouraged to coordinate the NHPA § 106 process with the agency’s process for complying with NEPA; LBP-12-23, 76 NRC 481 (2012)

agency official may use the process and documentation required for the preparation of an EA/FONSI or an EIS/ROD to comply with National Historic Preservation Act § 106 in lieu of the procedures set forth in sections 800.3-800.6 if the agency official has notified in advance the SHPO/THPO and the Council that it intends to do so and the regulatory standards are met; LBP-12-23, 76 NRC 486 n.262 (2012)

in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe
LEGAL CITATIONS INDEX

REGULATIONS

them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC 639 n.110 (2015)
36 C.F.R. 800.9(a)
federal agency must assess the effects of the undertaking on any eligible historic properties found; LBP-15-16, 81 NRC 639 (2015)
36 C.F.R. 800.9(b)
under National Historic Preservation Act, federal agency must determine whether the effect of its undertaking will be adverse; LBP-15-16, 81 NRC 639 (2015)
36 C.F.R. 800.9(c)
under National Historic Preservation Act, federal agency must avoid or mitigate any adverse effects of its undertaking; LBP-15-16, 81 NRC 639 (2015)
programmatic agreement may be used to implement the NHPA §106 process in situations where the effects to historic properties cannot be fully determined prior to the approval of an undertaking, such as where an applicant proposes a phased approach to developing its project; LBP-15-16, 81 NRC 640 (2015)
40 C.F.R. Part 50
EPA’s National Ambient Air Quality Standards set maximum levels for air pollutants in the ambient air deemed to provide protection for human health and welfare; LBP-11-26, 74 NRC 555 (2011)
40 C.F.R. Part 61, Subpart W
radon emissions are regulated by EPA; LBP-15-16, 81 NRC 702 (2015)
40 C.F.R. 124.19
administrative challenges to EPA permits are to be filed 30 days after EPA’s final permit decision; LBP-14-4, 79 NRC 373 n.66 (2014)
40 C.F.R. 146.4(b)(1)
in exempting an aquifer from MCLs, EPA has to find that the aquifer cannot and will not serve as a source of drinking water because it is mineral producing and can be demonstrated to contain minerals that, considering their quantity and location, are expected to be commercially producible; LBP-15-3, 81 NRC 119 n.47 (2015)
40 C.F.R. 147.1401
EPA-approved state permitting authority for Class I injection wells is the regulatory entity from which applicant must seek and obtain the permit necessary to allow it to operate a deep injection well at the site; LBP-13-6, 77 NRC 299 (2013)
40 C.F.R. 230.10(a), (c), (d)
Corps of Engineers may not issue a 404 permit if there exists a practicable alternative that would have less adverse impact on the aquatic system, the permit would cause significant degradation of the water of the United States, or appropriate and practicable mitigation has not been undertaken; LBP-14-9, 80 NRC 63 (2014)
40 C.F.R. 264.97(a)(1)(i)
determination of background groundwater quality to include sampling of wells that are hydraulically upgradient of the waste management area is not required if non-upgradient well sampling will provide an indication of background groundwater quality that is representative, or more representative, than that provided by upgradient wells; LBP-15-3, 81 NRC 95-96 (2015)
water samples taken from one well located hydrologically upgradient are part of the groundwater sampling protocol; LBP-15-3, 81 NRC 95 (2015)
40 C.F.R. 1500.1(c)
NEPA’s fundamental purpose is helping public officials make decisions that are based on understanding of environmental consequences and that protect, restore, and enhance the environment; LBP-11-17, 74 NRC 27 (2011); LBP-11-23, 74 NRC 304, 329, 335 (2011)
40 C.F.R. 1501.4(c)(2)
NRC Staff may publish a draft finding of no significant impact for public comment, but it is not required to do in all cases; CLI-15-17, 82 NRC 41 n.53 (2015)
40 C.F.R. 1501.7
agency responsible for preparing an environmental impact statement must define the scope of the issues it will address; LBP-11-10, 73 NRC 440 (2011)
under NEPA, defining the scope of effects of a project requires engagement with governments of affected tribes through an early and open process aimed at identifying concerns, potential impacts, relevant effects of past actions, and possible alternative actions; LBP-15-16, 81 NRC 650 (2015)

40 C.F.R. 1502.4
agencies shall use the criteria for scope in 40 C.F.R. 1508.25 to determine which proposal shall be the subject of a particular environmental impact statement; LBP-11-10, 73 NRC 440 (2011); LBP-14-6, 79 NRC 420 n.81 (2014); LBP-14-9, 80 NRC 40 (2014)
proposals or parts of proposals that are related to each other closely enough to be, in effect, a single course of action shall be evaluated in a single impact statement; LBP-14-9, 80 NRC 52 (2014)

40 C.F.R. 1502.4(a)
agencies must make sure that the proposal that is the subject of an environmental impact statement is properly defined; LBP-13-10, 78 NRC 144 (2013)
proposals or parts of proposals that are related to each other closely enough to be, in effect, a single course of action shall be evaluated in a single impact statement; LBP-11-10, 73 NRC 440 (2011); LBP-12-12, 75 NRC 779 (2012); LBP-13-10, 78 NRC 144 (2013); LBP-14-6, 79 NRC 420 n.81 (2014); LBP-14-9, 80 NRC 40 (2014)

40 C.F.R. 1502.9(c)(1)(ii)
agencies shall prepare supplements to either draft or final environmental impact statements if there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-15-13, 81 NRC 471 n.89 (2015)
environmental assessment cannot import previous environmental analyses without considering subsequent developments at the site and to hold otherwise would render meaningless NEPA’s requirement to supplement an environmental impact statement or environmental assessment; CLI-15-25, 82 NRC 399 (2015); LBP-15-13, 81 NRC 471 n.89 (2015)
supplement to a draft or final EIS must be prepared if significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts arise; LBP-12-18, 76 NRC 161 (2012)

40 C.F.R. 1502.14
agencies must devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits; LBP-12-17, 76 NRC 82 (2012)
agencies must rigorously explore and objectively evaluate all reasonable alternatives and briefly discuss reasons for eliminating alternatives; LBP-12-17, 76 NRC 82 (2012); LBP-15-15, 81 NRC 607 n.57 (2015)
consideration of alternatives is the heart of the environmental impact statement; CLI-12-9, 75 NRC 473 (2012); LBP-11-35, 74 NRC 750 (2011); LBP-14-9, 80 NRC 43 (2014)
Council on Environmental Quality guidance does not bind NRC, but NRC gives it substantial deference; LBP-12-17, 76 NRC 82-83 (2012)
environmental impacts of the proposal and the alternatives shall include appropriate mitigation measures; LBP-15-16, 81 NRC 687 n.434 (2015)
federal agencies must rigorously explore and objectively evaluate all reasonable alternatives and devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits; LBP-11-14, 73 NRC 605 n.92 (2011)

40 C.F.R. 1502.14(a)
EPA requires federal agencies to rigorously explore and objectively evaluate all reasonable alternatives; LBP-12-17, 76 NRC 121 (2012); LBP-14-9, 80 NRC 43 (2014)
for alternatives that were eliminated from detailed study, agencies are to briefly discuss the reasons for having eliminated them; LBP-14-9, 80 NRC 43 (2014)

40 C.F.R. 1502.14(b)
when considering alternatives, agencies are to devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits; LBP-14-9, 80 NRC 43 (2014)

40 C.F.R. 1502.16
NEPA requires acknowledgment of tribal hunting and fishing rights, as well as an analysis of how the project will affect those rights; LBP-15-5, 81 NRC 282 (2015)
because federal agencies typically describe their consideration of the energy requirements of a proposed action, in the context of that analysis agencies should evaluate greenhouse gas emissions; LBP-11-26, 74 NRC 550 n.21 (2011)

mitigation discussion is required only in environmental impact statements; LBP-15-11, 81 NRC 431 n.190 (2015)

NEPA requires that the draft environmental impact statement include and discuss means to mitigate adverse environmental impacts; LBP-13-9, 78 NRC 65 (2013)

scientific and analytical section backing up the proposal and alternatives section of NEPA document must discuss any means to mitigate adverse environmental impacts not previously covered; LBP-15-16, 81 NRC 687 n.434 (2015)

an agency is required to do more than simply state that necessary information is unavailable; LBP-14-9, 80 NRC 62 n.206 (2014)

at the contention admissibility stage, it is simply not appropriate for boards to decide what additional information, if any, is necessary to cure a claimed deficiency in a license application; CLI-11-11, 74 NRC 439-40 (2011)

information may be unavoidably incomplete or unavailable, and under those circumstances, a final environmental impact statement can overcome this deficiency if it states that fact, explains how the missing information is relevant, sets forth the existing information, and evaluates the environmental impacts to the best of the agency’s ability; CLI-11-11, 74 NRC 444 n.94 (2011)

probabilistic analysis of the risks posed by the Shoreline Fault is essential to the SAMA, and must be included unless the cost is exorbitant; CLI-11-11, 74 NRC 439 (2011)

Staff’s ability to satisfy its NEPA obligations will be undermined if applicant either fails to include seismic information in its SAMA analysis, or, in omitting the information, fails to explain its absence and justify that the overall costs of obtaining it are exorbitant; CLI-11-11, 74 NRC 438, 439 (2011)

when information relevant to a reasonably foreseeable environmental effect is incomplete or unavailable, an agency is required to obtain the unavailable information and include it in the environmental impact statement as long as the costs are not exorbitant; LBP-14-9, 80 NRC 42 (2014)

environmental impact statements must address all reasonably foreseeable environmental impacts even if the probability of such an occurrence is low; LBP-14-9, 80 NRC 42 (2014)

the cost of obtaining information is exorbitant, NRC must still include in the environmental impact statement a statement that the information is unavailable, the relevance of the unavailable information, a summary of existing credible scientific evidence, and the agency’s evaluation of the impacts that might be caused; LBP-14-9, 80 NRC 42 (2014)

reasonably foreseeable environmental impacts that have catastrophic consequences, even if their probability of occurrence is low, must be considered in the environmental impact statement; LBP-11-23, 74 NRC 336 (2011)

weighing of the merits and drawbacks of the various alternatives need not be displayed in a monetary cost-benefit analysis and should not be when there are important qualitative considerations; LBP-11-7, 73 NRC 282 n.173 (2011)

although NRC must respond to the significant views of other agencies, particularly if they are critical of NRC’s analysis, that duty applies at the final environmental impact statement stage after the draft EIS has been circulated to interested federal and state agencies for their review and comment; LBP-12-12, 75 NRC 760 (2012)
at the time of its decision, each agency shall prepare a concise public record of decision; LBP-15-16, 81 NRC 694 n.486 (2015)

agency’s record of decision must include a concise discussion of mitigation measures; LBP-15-16, 81 NRC 687 n.434 (2015)

for agency decisions such as a combined license that are based on an environmental impact statement, a monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation; LBP-12-23, 76 NRC 462 (2012); LBP-15-16, 81 NRC 695 n.496, 696 (2015)

agencies may provide for monitoring to ensure that their decisions are carried out and should do so in important cases; LBP-15-16, 81 NRC 696 (2015)

lead agency must make available to the public the results of relevant monitoring of mitigation measures; LBP-15-16, 81 NRC 695 n.497 (2015)

NEPA encourages state participation when appropriate and authorized; LBP-15-11, 81 NRC 439 n.248 (2015)

coordination between a federal agency and a state requires active involvement between the two in order for the federal agency to meet its independent review burden; LBP-15-11, 81 NRC 439 n.248 (2015)

agency conducting a NEPA review shall independently evaluate the information submitted and shall be responsible for its accuracy; LBP-15-11, 81 NRC 439 n.248 (2015)

NRC must make a diligent effort to involve the public in implementation of NEPA procedures; LBP-15-16, 81 NRC 695 n.497 (2015)

cumulative impact is defined; LBP-13-9, 78 NRC 79 (2013)

cumulative exclusion is a generic finding that a category of actions do not individually or cumulatively have a significant effect on the human environment; LBP-15-26, 82 NRC 181 (2015)

“cumulative impact” is defined as the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions; LBP-12-24, 76 NRC 511 (2012); LBP-14-6, 79 NRC 418, 420 (2014); LBP-14-9, 80 NRC 43 (2014); LBP-15-16, 81 NRC 697 (2015)

cumulative impacts analysis is included within the scope of environmental impact statements; LBP-12-3, 75 NRC 201 (2012)

cumulative impacts can result from individually minor but collectively significant actions taking place over time; LBP-11-7, 73 NRC 301 n.314 (2011); LBP-11-26, 74 NRC 546 (2011); LBP-13-4, 77 NRC 120 (2013); LBP-14-6, 79 NRC 420 (2014)

in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the Council on Environmental Quality; LBP-11-7, 73 NRC 301 n.314 (2011)

irrespective of the cause of the impact or the appropriate level of administrative scrutiny, for the purpose of NEPA evaluation, NRC regulations categorize impacts into direct, indirect, and cumulative; LBP-11-26, 74 NRC 546 (2011)

projects that are not connected actions, but are physically related to the system, are cumulative actions and are subject to an examination of cumulative impacts; LBP-14-6, 79 NRC 422 (2014)

because federal agencies typically describe their consideration of the energy requirements of a proposed action, in the context of that analysis agencies should evaluate greenhouse gas emissions; LBP-11-26, 74 NRC 550 (2011)
LEGAL CITATIONS INDEX

REGULATIONS

direct impacts are those caused by the federal action, and occurring at the same time and place as that action, while indirect impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-11-7, 73 NRC 301 n.314 (2011); LBP-13-26, 74 NRC 546 (2011) “effects” include both direct effects, which are caused by the action and occur at the same time and place, and indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-14-9, 80 NRC 42 (2014) “effects” include ecological, aesthetic, historic, cultural, economic, social, or health, whether direct, indirect, or cumulative; LBP-14-9, 80 NRC 42 (2014) in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the Council on Environmental Quality; LBP-11-7, 73 NRC 301 n.314 (2011) irrespective of the cause of the impact or the appropriate level of administrative scrutiny, for the purpose of NEPA evaluation, NRC regulations categorize impacts into direct, indirect, and cumulative; LBP-11-26, 74 NRC 546 (2011) when information relevant to a reasonably foreseeable environmental effect is incomplete or unavailable, an agency is required to obtain the unavailable information and include it in the environmental impact statement as long as the costs are not exorbitant; LBP-14-9, 80 NRC 42 (2014) 40 C.F.R. 1508.8(a) direct effects are caused by the action and occur at the same time and place; LBP-13-4, 77 NRC 120 (2013) 40 C.F.R. 1508.8(b)
adverse environmental effects that must be assessed under NEPA include aesthetic, historic, cultural, economic, social, or health effects; LBP-15-16, 81 NRC 637 (2015) indirect effects are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-13-4, 77 NRC 120 (2013) within the rule of reason, an environmental impact statement must address both the direct and indirect effects or impacts; LBP-13-4, 77 NRC 120 (2013) 40 C.F.R. 1508.9, 1508.10, 1508.11, 1508.13 “environmental document” includes environmental assessment, environmental impact statement, finding of no significant impact, and notice of intent; LBP-15-16, 81 NRC 650 n.184 (2015) 40 C.F.R. 1508.20
mitigation under NEPA is defined; LBP-15-16, 81 NRC 687 (2015) 40 C.F.R. 1508.22 “environmental document” includes environmental assessment, environmental impact statement, finding of no significant impact, and notice of intent; LBP-15-16, 81 NRC 650 n.184 (2015) 40 C.F.R. 1508.23 preparation of an environmental impact statement on a proposal should be timed so that the final statement may be completed in time for the statement to be included in any recommendation or report on the proposal; LBP-14-9, 80 NRC 46 n.116 (2014) proposals may exist in fact as well as by agency declaration that one exists; LBP-14-9, 80 NRC 45 n.110 (2014) 40 C.F.R. 1508.25
agencies are to use the parameters laid out in this regulation when defining the scope of the environmental impact statement; LBP-13-10, 78 NRC 144 (2013) for construction of a transmission corridor to constitute a connected action, three requirements must be met; LBP-14-9, 80 NRC 45 (2014) in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the Council on Environmental Quality; LBP-11-7, 73 NRC 301 n.314 (2011) irrespective of the cause of the impact or the appropriate level of administrative scrutiny, for the purpose of NEPA evaluation, NRC regulations categorize impacts into direct, indirect, and cumulative; LBP-11-26, 74 NRC 546 (2011) non-NRC permits are interdependent parts of applicant’s proposed action and thus are connected actions; LBP-15-16, 81 NRC 700 (2015) proposed action that is the subject of an agency environmental impact statement must include all connected actions as defined in this regulation; LBP-14-9, 80 NRC 52 (2014)
scope of an environmental impact statement is defined as the range of action, alternatives, and impacts to be considered in the EIS; LBP-12-12, 75 NRC 778 (2012); LBP-14-9, 80 NRC 40 (2014)

when drafting an environmental impact statement, agency’s scope of review must include analysis of any connected or cumulative actions to the central proposed action; LBP-15-16, 81 NRC 697 (2015)

40 C.F.R. 1508.25(a)

three types of actions (connected, cumulative, and similar) are to be considered in looking to the scope of an EIS; LBP-13-10, 78 NRC 147 (2013)

40 C.F.R. 1508.25(a)(1)

although NEPA does not direct any particular substantive result, all environmental consequences of the proposed action, including connected actions, must be fully evaluated in the FEIS; LBP-12-12, 75 NRC 780 (2012)
in defining the scope of an environmental impact statement, all connected actions must be analyzed in one statement; LBP-11-10, 73 NRC 440 (2011); LBP-14-6, 79 NRC 420 (2014)

once NRC has properly defined the scope of the proposed action, including any connected actions, the agency’s environmental impact statement must evaluate the environmental effects of the proposed action; LBP-14-9, 80 NRC 42 (2014)
pertinent to the question of whether a facility is a connected action is whether the facility lacks any independent utility in the absence of the completion of the other sites; LBP-13-10, 78 NRC 148-49 (2013)

proposed action that is the subject of an environmental impact statement must include all connected actions; LBP-14-9, 80 NRC 41 (2014)

when connected actions have been identified, the agency must evaluate any potential effects in the environmental impact statement; LBP-15-16, 81 NRC 697 (2015)

40 C.F.R. 1508.25(a)(1)(i)-(iii)

scope of an environmental impact statement includes connected actions, which means that they are closely related and therefore should be discussed in the same impact statement; LBP-15-16, 81 NRC 697 (2015)
to determine whether actions are connected such that they should be discussed in the same environmental impact statement, an agency is to consider whether the actions automatically trigger other actions that may require an EIS, cannot or will not proceed unless other actions are taken previously or simultaneously, or are interdependent parts of a larger action and depend on the larger action for their justification; LBP-13-10, 78 NRC 147 (2013)

40 C.F.R. 1508.25(a)(1)(i) & (iii)

separate actions are connected if, among other things, they cannot or will not proceed unless other actions are taken previously or simultaneously, or they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-12-12, 75 NRC 779 (2012); LBP-14-6, 79 NRC 420-21, 423 (2014); LBP-14-9, 80 NRC 41 (2014)

40 C.F.R. 1508.25(a)(1)(iii)

although NRC may regard preconstruction activities as outside the scope of a combined license application, these activities are within the scope of the NEPA review because they are all connected actions; LBP-14-9, 80 NRC 35 (2014)

for an environmental impact statement, separate actions may be considered connected if, among other things, they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-11-10, 73 NRC 441 (2011)

40 C.F.R. 1508.25(a)(2)

cumulative actions are those that, when viewed with other proposed actions, have cumulatively significant impacts so that they should be discussed in the same environmental impact statement; LBP-13-10, 78 NRC 147 (2013)

projects that are not connected actions, but are physically related to the system, are cumulative actions and are subject to an examination of cumulative impacts; LBP-14-6, 79 NRC 422 (2014)

40 C.F.R. 1508.25(a)(3)

similar actions are those that, when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental impacts together, such as common timing or geography, so that the agency may wish to analyze them together; LBP-13-10, 78 NRC 147 (2013)
LEGAL CITATIONS INDEX
REGULATIONS

40 C.F.R. 1508.25(c)
an environmental impact statement must consider the direct, indirect, and cumulative impacts of an action; LBP-11-7, 73 NRC 301 n.314 (2011)
cumulative impacts analysis is included within the scope of environmental impact statements; LBP-12-3, 75 NRC 201 (2012)
scope of the term "impact" includes cumulative impacts; LBP-12-24, 76 NRC 513 (2012)
40 C.F.R. 1508.27
agencies should consider both the context and intensity of environmental impacts; LBP-11-26, 74 NRC 546 (2011)
in determining whether a federal action would significantly affect the environment, the agency should consider the degree to which the proposed action affects public health and safety; LBP-12-18, 76 NRC 160-61 (2012)
44 C.F.R. Part 350
radiological emergency response plan was developed by the State and approved by the Federal Emergency Management Agency to ensure that the State is prepared to handle the offsite effects of a radiological emergency; LBP-15-4, 81 NRC 165 (2015)
44 C.F.R. 350.2(g)-(i)
plume and ingestion exposure pathway EPZs for federal emergency management purposes are defined; LBP-11-15, 73 NRC 640 (2011)
50 C.F.R. 17.11
whooping crane and black-footed ferret are listed as threatened or endangered under the Endangered Species Act; LBP-15-11, 81 NRC 445 (2015)
50 C.F.R. 402.02
"major construction activity" is defined as a construction project, or other undertaking having similar physical impacts, that is a major federal action significantly affecting the quality of the human environment as referred to in NEPA; LBP-12-10, 75 NRC 640 n.42 (2012)
section 7 of the Endangered Species Act applies only where threatened and endangered species or critical habitats are present and impacts on a species are expected as a result of the proposed project; LBP-13-9, 78 NRC 96 (2013)
50 C.F.R. 402.06
preparation of the biological assessment may be consolidated with interagency cooperation procedures required by other statutes, such as NEPA; LBP-12-11, 75 NRC 736 (2012)
50 C.F.R. 402.06(a)
agencies are encouraged to incorporate consultation procedures on endangered/threatened species and essential fish habitat into their NEPA review; LBP-12-10, 75 NRC 644 n.69 (2012)
50 C.F.R. 402.10(a)
agencies are required to confer with the Fish and Wildlife Service on any action that is likely to jeopardize the continued existence of any proposed species or result in the destruction or adverse modification of proposed critical habitat; LBP-13-9, 78 NRC 95 (2013)
conference is required on any action likely to jeopardize the continued existence of any proposed species or result in the destruction or adverse modification of proposed critical habitat; LBP-12-10, 75 NRC 672 n.21 (2012)
50 C.F.R. 402.12
clarification is provided on the requirements with respect to biological assessments; LBP-12-11, 75 NRC 736 (2012)
50 C.F.R. 402.12(a)
action agency’s biological assessment may be used by the federal agency in determining whether formal consultation or a conference is necessary; LBP-12-10, 75 NRC 672 (2012)
each agency proposing to take an action that might be covered by the Endangered Species Act is to review its actions at the earliest possible time to determine whether any action may affect listed species or critical habitat; LBP-12-10, 75 NRC 640 (2012)
formal consultation is only required if the acting agency determines that its action may affect listed species or critical habitat; LBP-12-10, 75 NRC 640 (2012)

654
where an acting agency is engaged in major construction activities, the acting agency is to evaluate, through preparation of a biological assessment, whether the action is likely to adversely affect species or habitat; LBP-12-10, 75 NRC 640 (2012)

50 C.F.R. 402.12(c), (d)
to prepare a biological assessment, the acting agency must first request from the Services a list of endangered or threatened species or habitat that may be present in the area of the action, or provide to the Services its own list for their review; LBP-12-10, 75 NRC 640-41 (2012)

50 C.F.R. 402.12(d)
candidate species have no legal status and are accorded no protection under the Endangered Species Act; LBP-12-10, 75 NRC 659 n.160 (2012)

50 C.F.R. 402.12(f)
content of the biological assessment is at the discretion of the federal agency; LBP-12-11, 75 NRC 736 (2012)

50 C.F.R. 402.12(j)
action agency submits its completed biological assessment to the appropriate Service and awaits its determination of concurrence or nonconcurrence, which under the Services’ regulations is to be returned within 30 days; LBP-12-10, 75 NRC 641 (2012)

50 C.F.R. 402.12(k)
action agency’s biological assessment may be used by the federal agency in determining whether formal consultation or a conference is necessary; LBP-12-10, 75 NRC 672 (2012)

50 C.F.R. 402.12(k)(2)
even if the National Marine Fisheries Service disagrees with NRC’s no-effect determination, it may only request that NRC enter formal consultation, but NRC is not required to consent to the request; LBP-12-10, 75 NRC 657 (2012)

if the acting agency makes a “likely to affect” determination in the biological assessment, it is required to enter into formal consultation with the appropriate Service; LBP-12-10, 75 NRC 641 (2012)
National Marine Fisheries Service may request that NRC initiate formal consultation if it finds this to be appropriate; LBP-12-10, 75 NRC 673 n.22 (2012)

50 C.F.R. 402.13
“informal” consultation is an optional process that includes all discussions, correspondence, etc., between the U.S. Fish and Wildlife Service and the federal agency designed to assist the federal agency in determining whether formal consultation or a conference is required with the Service under section 7 of the Endangered Species Act applies only where threatened and endangered species or critical habitats are present and impacts on a species are expected as a result of the proposed project; LBP-13-9, 78 NRC 96 (2013)

50 C.F.R. 402.13(a)
if NRC engages in an informal consultation with the Fish and Wildlife Service and it is determined that the project will not adversely affect listed species or critical habitat, it need not engage in formal consultation; LBP-13-9, 78 NRC 100 (2013)

“informal consultation” is any communication between the acting agency and one of the Services designed to assist the acting agency in determining whether formal consultation is required; LBP-12-10, 75 NRC 658 n.155, 672 n.20 (2012)

when engaging in informal consultation, an agency must provide its determination as to whether the proposed action will affect threatened and endangered species to U.S. Fish & Wildlife Service and request FWS concurrence; LBP-15-11, 81 NRC 444 (2015)

50 C.F.R. 402.14
consultation with U.S. Fish & Wildlife Service is legally mandated for any agency action that may affect listed species or critical habitat; LBP-15-11, 81 NRC 445 (2015)

50 C.F.R. 402.14(a)
each federal agency shall review its actions at the earliest possible time to determine whether any action may affect listed species or critical habitat; LBP-12-10, 75 NRC 672 n.20 (2012)
even if the National Marine Fisheries Service disagrees with NRC’s no-effect determination, it may only request that NRC enter formal consultation, but NRC is not required to consent to the request; LBP-12-10, 75 NRC 657 (2012)

if a determination is made that the action may affect listed species or critical habitat, formal consultation is required; LBP-12-10, 75 NRC 672 n.20 (2012)

if the acting agency makes a “likely to affect” determination in the biological assessment, it is required to enter into formal consultation with the appropriate Service; LBP-12-10, 75 NRC 641 (2012)

if the Service does not concur with the agency’s “not likely to affect” determination, it may request that the acting agency enter into formal consultation; LBP-12-10, 75 NRC 641 (2012)

National Marine Fisheries Service may request that NRC initiate formal consultation if it finds this to be appropriate; LBP-12-10, 75 NRC 673 n.22 (2012)

only mandatory trigger for initiating formal consultation is if the acting agency itself determines that its action may affect listed species or critical habitat; LBP-12-10, 75 NRC 657 (2012)

only species listed as threatened or endangered under the Endangered Species Act are covered by the act’s formal consultation requirements; LBP-15-11, 81 NRC 445 (2015)

when a request is made to a federal agency to enter into consultation, the Director shall forward to the federal agency a written explanation of the basis for the request; LBP-12-10, 75 NRC 672 n.20 (2012)

50 C.F.R. 402.14(b)

federal agency need not initiate formal consultation if it determines, with the written concurrence of the Director, that the proposed action is not likely to adversely affect any listed species or critical habitat; LBP-12-10, 75 NRC 672 n.20 (2012)

50 C.F.R. 402.14(b)(1)

federal agency need not initiate formal consultation if, as a result of the preparation of a biological assessment under section 402.12 or as a result of informal consultation with the FWS under section 402.13, the federal agency determines, with the written concurrence of the U.S. Fish and Wildlife Service Director, that the proposed action is not likely to adversely affect any listed species or critical habitat; LBP-15-11, 81 NRC 445 (2015)

if the acting agency concludes in the biological assessment that the action is not likely to affect listed habitats or species, and the Service concurs, the acting agency need not enter formal consultation; LBP-12-10, 75 NRC 641 (2012)

50 C.F.R. 402.14(g)(b)

formal consultation includes preparation of a biological opinion by the Service, detailing the likely effects of the action on listed species or habitat as well as mitigation alternatives; LBP-12-10, 75 NRC 640 n.40, 641 n.46 (2012)

50 C.F.R. 600.905

agencies are advised to consult with National Marine Fisheries Service as early as practicable for any federal action that may adversely affect essential fish habitats, including renewals of licenses; LBP-12-10, 75 NRC 677 (2012)

all federal agencies must consult with the National Marine fisheries Service on any proposed actions that may adversely affect essential fish habitat; LBP-12-10, 75 NRC 677 (2012)

50 C.F.R. 600.905(a)(1)

consultation duty on essential fish habitats applies to license renewals; LBP-12-10, 75 NRC 643 (2012)

50 C.F.R. 600.905(a)(3)

consultation with the National Marine Fisheries Service on essential fish habitats should be initiated by the acting agency as early as practicable; LBP-12-10, 75 NRC 643 (2012)

50 C.F.R. 600.920(a)(1)-(3)

agencies are advised to consult with National Marine fisheries Service as early as practicable for any federal action that may adversely affect essential fish habitats, including renewals of licenses; LBP-12-10, 75 NRC 677 (2012)

agencies must provide a written assessment of the effects of their action on essential fish habitats; LBP-12-10, 75 NRC 677 (2012)

all federal agencies must consult with the National Marine fisheries Service on any proposed actions that may adversely affect essential fish habitat; LBP-12-10, 75 NRC 677 (2012)
50 C.F.R. 600.920(b) agency with authority to implement conservation recommendations must consult with the National Marine Fisheries Service on implementation of any conservation recommendations; LBP-12-10, 75 NRC 677 (2012)

issues of concern relative to living marine resources and essential fish habitat would be most appropriately addressed through the EPA’s National Pollutant Discharge Elimination System permit renewal process; LBP-12-10, 75 NRC 677 (2012)

National Marine Fisheries Service has the authority to consult with other agencies if, for example, only one of the agencies has the authority to implement measures necessary to minimize adverse effects on essential fish habitat and that agency does not act as the lead agency; LBP-12-10, 75 NRC 660 n.166 (2012)

50 C.F.R. 600.920(e) satisfying the requirements of other statutes does not in itself relieve a federal agency of its obligations to comply with the procedures set forth in the Endangered Species Act; LBP-12-10, 75 NRC 644 n.69 (2012)

50 C.F.R. 600.920(e)(1) for any federal action that may adversely affect essential fish habitats, federal agencies must provide the National Marine Fisheries Service with a written assessment of the effects of that action; LBP-12-10, 75 NRC 660 n.166 (2012)

50 C.F.R. 600.920(e)(1)-(4) agencies must provide a written assessment of the effects of their action on essential fish habitats; LBP-12-10, 75 NRC 677 (2012)

50 C.F.R. 600.920(e)(3) essential fish habitat assessment must describe the action, its potential effects on EFH, and proposed mitigation activities, if any; LBP-12-10, 75 NRC 643 (2012)

50 C.F.R. 600.920(f)(1) when preparation of the essential fish habitat assessment is consolidated with other environmental review procedures, the National Marine Fisheries Service is to have timely notification of actions that may adversely affect EFH, and whenever possible, at least 60 days’ notice prior to a final decision on an action; LBP-12-10, 75 NRC 643 (2012)

50 C.F.R. 600.920(k) federal agencies are not required to implement conservation recommendations where that agency does not have the statutory authority to implement those recommendations; LBP-12-10, 75 NRC 677 (2012)

50 C.F.R. 600.925(a) agency with authority to implement conservation recommendations must consult with the National Marine Fisheries Service on implementation of any conservation recommendations; LBP-12-10, 75 NRC 677 (2012)

federal agencies are not required to implement conservation recommendations where that agency does not have the statutory authority to implement those recommendations; LBP-12-10, 75 NRC 677 (2012)

National Marine Fisheries Service will not recommend that federal agencies take actions beyond their statutory authority; LBP-12-10, 75 NRC 651 (2012)

50 C.F.R. 600.925(a)-(b) National Marine Fisheries Service will not recommend that state or federal agencies take actions beyond their statutory authority; LBP-12-10, 75 NRC 643 (2012)
LEGAL CITATIONS INDEX
STATUTES

28 U.S.C. § 2342
only a party aggrieved can seek judicial review; CLI-12-11, 75 NRC 532 n.47 (2012)
only final NRC action is subject to judicial review; CLI-12-11, 75 NRC 528 n.26 (2012)

Administrative Procedure Act, 5 U.S.C. §§ 551-559
if NRC lacks sufficient information to reach an informed decision, then the agency has a duty to collect
further information and conduct further analysis; CLI-13-1, 77 NRC 29 (2013)

Administrative Procedure Act, 5 U.S.C. § 552(b)
purpose of notice of proposed rulemaking is not to set binding law or policy, but instead to provide
interested members of the public an opportunity to comment in a meaningful way on the agency’s

Administrative Procedure Act, 5 U.S.C. § 553
Continued Storage Rule and supporting generic environmental impact statement to assess the
environmental impacts of spent fuel storage after the end of a reactor’s license term were approved;
CLI-15-10, 81 NRC 537 (2015)

Administrative Procedure Act, 5 U.S.C. § 553(b)(3)
agency need not submit a full draft of a rule in a notice of proposed rulemaking; LBP-15-15, 81 NRC
611 (2015)
even a statement of the subjects and issues involved in a proposed rulemaking can suffice as long as it
provides notice to the public; LBP-15-15, 81 NRC 611 (2015)

Administrative Procedure Act, 5 U.S.C. § 554(a)
this section applies in every case of adjudication required by statute to be determined on the record after
opportunity for an agency hearing; LBP-11-8, 73 NRC 354-55 (2011)

Administrative Procedure Act, 5 U.S.C. § 556(d)
proponent of a rule or order has the burden of proof; LBP-15-2, 81 NRC 57 n.63 (2015)

Administrative Procedure Act, 5 U.S.C. § 558(c)
agencies must set and complete proceedings on license applications with due regard for the rights and
privileges of all interested parties or adversely affected persons and within a reasonable time;
CLI-12-6, 75 NRC 375 n.140 (2012)
each specific license expires at the end of the day on the expiration date stated in the license unless
licensee has filed an application for renewal not less than 30 days before the expiration date stated in
the existing license; CLI-15-17, 82 NRC 38 n.30 (2015)
suspending a final decision indefinitely in an adjudicatory proceeding upon receipt of a claim of new and
significant information runs counter to the goal of promoting fair and efficient resolution of disputes;
CLI-14-7, 80 NRC 8 n.30 (2014)

when licensee has made timely and sufficient application for a license renewal, a license with reference
to an activity of a continuing nature does not expire until the application has been finally determined
by the agency; LBP-11-30, 74 NRC 629 n.5 (2011); LBP-15-2, 81 NRC 50 n.10, 57 n.66 (2015);
LBP-15-11, 81 NRC 404 n.2 (2015)

Administrative Procedure Act, 5 U.S.C. § 702
allegation that agency conduct amounts to a legal wrong is sufficient to establish union’s right to judicial
review; LBP-14-4, 79 NRC 354 (2014)

person suffering legal wrong because of agency action, or adversely affected or aggrieved by agency
action within the meaning of a relevant statute, is entitled to judicial review thereof; LBP-14-4, 79
NRC 354 (2014)
LEGAL CITATIONS INDEX

STATUTES

Administrative Procedure Act, 5 U.S.C. § 706
NRC does not have authority to rule on challenges to Fish and Wildlife’s compliance with the Endangered Species Act; CLI-12-21, 76 NRC 495 n.21 (2012)

Administrative Procedure Act, 5 U.S.C. § 706(2)
agency’s failure to adequately validate a quantitative model on which it relies may lead the reviewing court to conclude that the agency’s decision is arbitrary, capricious, or contrary to law; LBP-15-20, 81 NRC 854 n.151 (2015)

Administrative Procedure Act, 5 U.S.C. § 706(2)(A)
arbitrary and unreasonable restrictions on the right to a hearing would violate the prohibition on agency action that is arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; LBP-11-22, 74 NRC 282 (2011)

federal policy supports special consideration where tribal religious exercise is threatened; LBP-15-16, 81 NRC 640-41 (2015)

Archaeological Resources Protection Act, 16 U.S.C. § 470aa et seq.
historic properties may be protected under this statute; LBP-15-2, 81 NRC 52 (2015)

basis for NRC authority to regulate the use of special nuclear material in facilities such as nuclear power reactors is established; CLI-15-4, 81 NRC 231 n.47 (2015)

Atomic Energy Act, 3d
the Purpose section specifically provides for creating a program to encourage widespread participation in order to achieve the policies set forth in the AEA; LBP-14-4, 79 NRC 372 n.60 (2014)

“byproduct material” is categorized as tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-12-3, 75 NRC 174 n.1 (2012); LBP-15-11, 81 NRC 435 n.218 (2015); LBP-15-16, 81 NRC 626 n.2 (2015)

Atomic Energy Act, 11z, 42 U.S.C. § 2014(z)
“source material” is defined; LBP-15-16, 81 NRC 626 (2015)

Atomic Energy Act, 53, 42 U.S.C. § 2073
NRC has clear statutory authority to regulate the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 474 (2011); LBP-11-26, 74 NRC 518-19 (2011)

Atomic Energy Act, 57, 42 U.S.C. § 2077
because the application for a uranium enrichment facility is governed by AEA §§ 53 and 63, 42 U.S.C. § 2073, 2093, foreign ownership and control issues would be evaluated under sections 57 and 69; LBP-11-11, 73 NRC 488 (2011)
this section prohibits the Commission from granting a license that would be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 488 (2011)

Atomic Energy Act, 57c(2), 42 U.S.C. § 2077(c)(2)
adquacy finding on applicant’s material control and accounting program requires the board to make a case-by-case determination, guided by the AEA mandate that no license to possess special nuclear material may be issued if issuance would be inimical to the common defense and security or would constitute an unreasonable risk to the health and safety of the public; LBP-14-1, 79 NRC 51 (2014) licensee must show with reasonable assurance that its proposed methodology for material control and accounting will not be inimical to the common defense and security and will not constitute an unreasonable risk to the health and safety of the public; CLI-15-9, 81 NRC 517 (2015)

Atomic Energy Act, 63, 42 U.S.C. § 2093
NRC has clear statutory authority to regulate the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 474 (2011); LBP-11-26, 74 NRC 518-19 (2011)

Atomic Energy Act, 69, 42 U.S.C. § 2099
because the application for a uranium enrichment facility is governed by AEA §§ 53 and 63, 42 U.S.C. § 2073, 2093, foreign ownership and control issues would be evaluated under sections 57 and 69; LBP-11-11, 73 NRC 488 (2011)
it is imperative that terms of a reactor operating license be clear and unambiguous and that licensee scrupulously adhere to those terms, because it is unlawful for any person within the United States to use any utilization facility except under and in accordance with a license issued by NRC; LBP-13-7, 77 NRC 328 (2013)

licensees may not, under penalty of law, deviate from the terms of their reactor operating licenses; LBP-13-7, 77 NRC 331 (2013)

to determine whether an ongoing CAL process process constitutes a de facto license amendment proceeding, the board must determine whether the requested change in operating authority sought by licensee is strictly in accordance with the terms and technical specifications in its existing license; LBP-13-7, 77 NRC 333 (2013)

Atomic Energy Act, 102a, 42 U.S.C. § 2132(a)

licenses for utilization or production facilities for industrial or commercial purposes must comply with the terms of AEA § 103; LBP-14-3, 79 NRC 278-79 (2014)

Congress thought foreign ownership itself should be sufficient to require denial of a license in some circumstances; LBP-12-19, 76 NRC 196 (2012)

connection of the three prohibitions on foreign ownership with the conjunction “or” rather than “and” shows that a license may not be granted if any of the three prohibitions is violated; LBP-12-19, 76 NRC 195 (2012)

contention alleging that statutory and regulatory prohibitions on foreign ownership, control, or domination forbid the licensing of proposed units is decided; LBP-14-3, 79 NRC 271, 272, 273, 278, 281, 300, 303-04, 314 (2014)

no license may be issued to an alien or any corporation or other entity if the Commission knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; LBP-11-25, 74 NRC 390-91 (2011)

NRC has substantial discretion in determining the threshold percentage at which foreign ownership becomes too great, but that threshold must at a minimum include 100% foreign ownership or the prohibition in the Act would be rendered superfluous; LBP-12-19, 76 NRC 196 (2012)

NRC is prohibited from issuing a license for a nuclear power reactor if it would be inimical to the health or safety of the public; LBP-13-4, 77 NRC 217 (2013)
NRC is prohibited from issuing a license for a production and utilization facility to any corporation or other entity if the Commission knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; CLI-13-4, 77 NRC 102 n.1 (2013); CLI-15-7, 81 NRC 482, 485, 486 n.29, 491, 495 n.83 (2015); LBP-12-19, 76 NRC 191 (2012)

perfection in plant construction and the facility construction quality assurance program is not a precondition for a license under either the Atomic Energy Act or the Commission’s regulations; LBP-14-7, 79 NRC 471 (2014)

Atomic Energy Act, 104, 42 U.S.C. § 2134

the Commission is prohibited from granting a license that would be inimical to the common defense and security or the health and safety of the public, and prohibits the granting of a license if the Commission knows or has reason to believe the applicant is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; LBP-11-11, 73 NRC 488 (2011)

Atomic Energy Act, 104d, 42 U.S.C. § 2134(d)

absent a transfer, license renewal application will be denied where licensee remains under foreign ownership, control, or domination; CLI-14-5, 79 NRC 256 (2014)

NRC is prohibited from issuing licenses for medical therapy and research and development facilities to any alien or any corporation or other entity if the Commission knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; CLI-15-7, 81 NRC 482 (2015)

Atomic Energy Act, 42 U.S.C. §§ 2155, 2156, and 2157

these sections do not apply to imports/exports involving waste that is contaminated with byproduct; CLI-11-3, 73 NRC 627 (2011)

Atomic Energy Act, 161, 42 U.S.C. § 2201

compliance with NRC requirements presumptively ensures adequate protection, but new information may reveal that additional requirements are warranted, and in such situations, the Commission may act in accordance with its statutory authority to require licensees and construction permit holders to take action in order to protect health and safety and common defense and security; LBP-12-18, 76 NRC 153 (2012)

general scope of the NRC’s authority is established, but it does not discuss spent fuel disposal; CLI-15-4, 81 NRC 233 (2015)

the Commission is empowered to issue an order amending any license as it deems necessary to effectuate the provisions of the Act to promote the common defense and security or to protect health or to minimize danger to life or property; LBP-13-7, 77 NRC 329 (2013)

Atomic Energy Act, 161b, 42 U.S.C. § 2201(b)

NRC is authorized to accord protection from radiological injury to both health and property interests; LBP-15-17, 81 NRC 776 (2015)

Atomic Energy Act, 161c, 42 U.S.C. § 2201(c)

licensee’s concerns about NRC’s administration of FOIA cannot overcome the agency’s duty to investigate alleged violations; CLI-13-5, 77 NRC 228 (2013)

NRC has authority to conduct any investigations it deems necessary and proper to the administration or enforcement of its authority, which includes any regulations or orders issued pursuant to the AEA; CLI-13-5, 77 NRC 227 (2013)

NRC is authorized to issue any necessary subpoenas; CLI-13-5, 77 NRC 227 (2013)

Atomic Energy Act, 181, 42 U.S.C. § 2231

board determined that the oral portion of the proceeding should be closed to the public to allow for the free-ranging and thorough examination of witnesses and to ensure the effective safeguard and prevention from disclosure of restricted data; LBP-12-21, 76 NRC 231 (2012)

Atomic Energy Act, 182, 42 U.S.C. § 2232

every license to operate a nuclear power reactor must contain a list of technical specifications necessary for adequate protection of public health and safety; LBP-12-25, 76 NRC 549 (2012)

information is specified that must be provided by an applicant for a license and it has no reference to spent fuel disposal; CLI-15-4, 81 NRC 233-34 (2015)

technical specifications must include information on the amount, kind, and source of special nuclear material, the place of use, and the particular characteristics of the facility; LBP-12-25, 76 NRC 549 (2012)
Atomic Energy Act, 182a, 42 U.S.C. § 2232(a) applicants for nuclear power plant operating licenses are required to include technical specifications as part of the license; DD-13-3, 78 NRC 575 (2013) license applications must specifically state information that NRC, by rule or regulation, may determine to be necessary to decide technical and financial qualifications of applicant; DD-15-8, 82 NRC 110 (2015) licensee’s concerns about NRC’s administration of FOIA cannot overcome the agency’s statutory obligation to protect the public health and safety; CLI-13-5, 77 NRC 228 (2013) NRC can issue nuclear power reactor licenses to applicants only upon a finding that utilization of special nuclear material will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; CLI-15-4, 81 NRC 231 (2015) perfection in plant construction and the facility construction quality assurance program is not a precondition for a license under either the Atomic Energy Act or the Commission’s regulations; LBP-14-7, 79 NRC 471 (2014) reactor operating licenses must include technical specifications that include specific characteristics of the facility and such other information as the Commission may, by rule or regulation, deem necessary in order to enable it to find that the utilization of special nuclear material will provide adequate protection to the health and safety of the public; LBP-13-7, 77 NRC 328-29 (2013) the Commission may at any time before expiration of a license, require further written statements from licensee to determine whether a license should be modified; LBP-13-7, 77 NRC 329 (2013) Atomic Energy Act, 182c notice of combined license applications must be published in the Federal Register for 4 consecutive weeks; CLI-12-2, 75 NRC 74 n.46 (2012) Atomic Energy Act, 42 U.S.C. § 2233 the Commission is empowered to issue an order amending any license as it deems necessary to effectuate the provisions of the Act to promote the common defense and security or to protect health or to minimize danger to life or property; LBP-13-7, 77 NRC 329 (2013) Atomic Energy Act, 184, 42 U.S.C. § 2234 licensee must obtain NRC’s written consent prior to transferring an NRC license; CLI-15-26, 82 NRC 411 (2015) written consent from NRC is required for all direct or indirect license transfers; CLI-15-8, 81 NRC 502 (2015) Atomic Energy Act, 185b, 42 U.S.C. § 2235(b) in addition to contested hearings on combined licenses, where interested members of the public have the right to participate and air their concerns, uncontested safety and environmental issues are considered in a mandatory hearing; CLI-12-11, 75 NRC 527 (2012) Atomic Energy Act, 42 U.S.C. § 2237 the Commission is empowered to issue an order amending any license as it deems necessary to effectuate the provisions of the Act to promote the common defense and security or to protect health or to minimize danger to life or property; LBP-13-7, 77 NRC 329 (2013) Atomic Energy Act, 189a, 42 U.S.C. § 2239(a) any amendment to an existing license as a result of NRC review of licensee seismic hazard reevaluations that leads to changes in the current licensing basis would be subject to a hearing opportunity; CLI-15-21, 82 NRC 308 n.70 (2015) any person whose interest may be affected may request a hearing in a proceeding granting, suspending, revoking, or amending any license; CLI-13-2, 77 NRC 44 (2013) Commission refers a limited portion of the hearing request to the licensing board to determine whether petitioner has identified an NRC activity that requires an opportunity to request an adjudicatory hearing; CLI-15-14, 81 NRC 730 (2015) even in the absence of a contested hearing, NRC must hold an uncontested or mandatory hearing on a combined license application; CLI-12-9, 75 NRC 427 (2012) hearing must be held on each application to construct a nuclear power plant, regardless of whether an interested member of the public requests a hearing on the application; CLI-15-13, 81 NRC 539-60 (2015)
hearing rights are triggered when a licensee submits a license amendment request to NRC; LBP-15-27, 82 NRC 191 (2015)
in addition to contested hearings on combined licenses, where interested members of the public have the
case to participate and air their concerns, uncontested safety and environmental issues are considered
in a mandatory hearing; CLI-12-11, 75 NRC 527 (2012)
NRC has authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit
NRC has latitude to define who is an “affected person”; LBP-12-3, 75 NRC 189 n.27 (2012)
NRC has the authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit
construction and operation and a mandatory hearing regarding the application and the Staff’s
associated safety and environmental reviews, despite the absence of a petitioner challenging applicant’s
request; LBP-11-26, 74 NRC 519 (2011)
NRC has authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit
construction and operation and a mandatory hearing regarding the application and the Staff’s
associated safety and environmental reviews, despite the absence of a petitioner challenging applicant’s
request; LBP-11-26, 74 NRC 519 (2011)
petitioner cannot create a hearing opportunity merely by claiming that a facility is improperly operating
outside its licensing basis, but such claims are appropriately raised in a petition to initiate an
petitioner is not entitled to request a hearing where NRC has neither granted greater authority than that provided by its existing licenses nor otherwise altered the terms of those licenses; LBP-15-27, 82 NRC 186 (2015)
requirement for a hearing at the construction permit phase of new reactor generation facilities is stated;
CLI-12-9, 75 NRC 427 (2012)
significant delays in NRC Staff’s review potentially deprive an Indian tribe of its hearing rights;
CLI-12-4, 75 NRC 155 (2012)
the statutory footing for the procedural precepts that apply to uranium enrichment facility licensing is
provided; LBP-11-11, 73 NRC 474 (2011)
this section has been interpreted to require that the hearing must encompass all material factors bearing
on the licensing decision raised by the requester; LBP-11-22, 74 NRC 269, 275, 276 (2011)
Atomic Energy Act, 189a(1)(A), 42 U.S.C. § 2239(a)(1)(A)
an uncontested early site permit proceeding is subject to mandatory hearing requirements; LBP-11-10, 73 NRC 436 (2011)
Congress intentionally limited the opportunity for a hearing to certain designated agency actions which do not include exemptions; LBP-15-18, 81 NRC 797 n.20 (2015); LBP-15-24, 82 NRC 76 n.38 (2015)
for an individual or organization to be deemed a “person whose interest may be affected by the
proceeding,” so as to have standing as of right such that party status can be granted in an agency
adjudicatory proceeding, the intervention petition must comply with 10 C.F.R. 2.309(d)(1)(i)-(iv);
LBP-12-15, 76 NRC 23 (2012)
in any proceeding for the amending of any license, the Commission shall grant a hearing upon the request of any person whose interest may be affected by the proceeding, and shall admit any such person as a party to such proceeding; LBP-13-7, 77 NRC 329 (2013)
license amendment requests trigger hearing rights; LBP-13-7, 77 NRC 331 (2013)
license denial letter that contained apparent boilerplate that was incomplete and perforce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the Act; LBP-13-3, 77 NRC 96 (2013)
NRC must provide an opportunity for a hearing on the granting, suspending, revoking, or amending of any license; LBP-15-17, 81 NRC 797 (2015)
license denial letter that contained apparent boilerplate that was incomplete and perforce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the Act; LBP-13-3, 77 NRC 96 (2013)
NRC must conduct a hearing on the uncontested environmental and safety aspects of the proposed plant; LBP-13-4, 77 NRC 220 n.99 (2013)
NRC must conduct a hearing on the uncontested environmental and safety aspects of the proposed plant; LBP-13-4, 77 NRC 220 n.99 (2013)
NRC must provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-14-4, 79 NRC 341 (2014); LBP-15-17, 81 NRC 770 (2015)
NRC must provide an opportunity for hearing in any proceeding under this Act, for the granting, suspending, revoking, or amending of any license; LBP-15-27, 82 NRC 191 (2015)
organizations that seek to establish standing to intervene may do so by demonstrating either organizational standing or representational standing; LBP-12-10, 75 NRC 637 (2012)
participation in a licensing proceeding requires a demonstration of standing; LBP-15-17, 81 NRC 769-70 (2015)
petitioner must address its hearing request to a matter that triggers a hearing opportunity; CLI-15-5, 81 NRC 333 (2015)
request for exemption from a rule, by itself, does not give rise to an opportunity for hearing; CLI-13-1, 77 NRC 10 (2013)
requirement to demonstrate standing is derived from instruction to NRC to provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-15-5, 81 NRC 255 (2015)
the Commission shall grant a hearing to and admit as a party to any licensing proceeding any person whose interest may be affected by the proceeding; LBP-11-22, 74 NRC 269 (2011); LBP-11-29, 74 NRC 615 (2011)
the Commission, but not a licensing board, has the power to address a protracted delay in the proceeding and to direct appropriate remedial measures; LBP-11-30, 74 NRC 628 (2011)
Atomic Energy Act, 193, 42 U.S.C. § 2243
NRC needs to conduct only a single licensing action and adjudicatory proceeding to authorize construction and operation and a mandatory hearing regarding the application and the Staff’s associated safety and environmental reviews, despite the absence of a petitioner challenging applicant’s request; LBP-11-26, 74 NRC 519 (2011)
the statutory footing for the procedural precepts that apply to uranium enrichment facility licensing are provided; LBP-11-11, 73 NRC 471 n.4 (2011); LBP-12-21, 76 NRC 232-33 (2012)
Atomic Energy Act, 193b(1), 42 U.S.C. § 2243(b)(1)
the Commission shall conduct a single adjudicatory hearing on the record with regard to the licensing or construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 471 n.4 (2011); LBP-12-21, 76 NRC 232-33 (2012)
Atomic Energy Act, 193e
the Commission is prohibited from granting a license that would be inimical to the common defense and security or the health and safety of the public, and prohibits the granting of a license if the Commission knows or has reason to believe that the applicant is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; LBP-11-11, 73 NRC 488 (2011)
NRC is authorized to enter into agreements with the governor of any state providing for transfer of regulatory authority to the state over specified categories of nuclear material; CLI-11-12, 74 NRC 464 (2011)
NRC is not permitted to retain jurisdiction over a site at a licensee’s request where the state seeks to assume regulatory authority over the site and meets the “adequacy” and “compatibility” criteria; CLI-13-6, 78 NRC 158 (2013)
the central purpose and policy animating the agreement-state legislation is to recognize the interests of the states in the peaceful uses of atomic energy; CLI-11-12, 74 NRC 473 (2011)
the stated purpose of the legislation is to clarify the respective responsibilities under the AEA of the states and NRC with respect to the regulation of byproduct, source, and special nuclear materials; CLI-11-12, 74 NRC 471-72 (2011)
Atomic Energy Act, 274a(3)
the purpose of this act is to promote an orderly regulatory pattern between NRC and state governments with respect to nuclear development and use and regulation of byproduct, source, and special nuclear materials; CLI-11-12, 74 NRC 476 (2011)
LEGAL CITATIONS INDEX

STATUTES

Atomic Energy Act, 274b, 42 U.S.C § 2021(b)
NRC is authorized to enter into agreements with a state with respect to any one or more of a variety of classes of nuclear materials; CLI-11-12, 74 NRC 470 (2011)

Atomic Energy Act, 274c(1), 42 U.S.C. § 2021(c)(1)
NRC has a clear statutory mandate to regulate the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 474 (2011); LBP-11-26, 74 NRC 518-19 (2011)

Atomic Energy Act, 274c(2), 42 U.S.C. § 2021(c)(2)
NRC is responsible for authorizing the import of byproduct, source, and special nuclear material; CLI-11-3, 73 NRC 626, 627 (2011)

Atomic Energy Act, 274d, 42 U.S.C. § 2021(d)
this subsection is construed as providing the specific conditions under which the Commission shall exercise the general legal authority granted to it under subsection b; CLI-11-12, 74 NRC 472 (2011)
this subsection is construed as requiring NRC to enter into an agreement for state regulation of the particular categories of nuclear materials that a state certifies it both desires to regulate and has established a program for, provided that NRC finds the state’s program for regulation of such materials to be adequate and compatible; CLI-11-12, 74 NRC 473 (2011)

NRC retains power to revoke agreements with states and to restore NRC regulatory authority; CLI-11-12, 74 NRC 498 (2011)

state’s motion for cross-examination was granted, insofar as it would have a reasonable opportunity to examine witnesses pursuant to NRC regulations; LBP-13-13, 78 NRC 277-78 (2013)

Bald and Golden Eagle Protection Act, 16 U.S.C. § 668-668c
contention that the final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 393-94 (2014)

Clean Air Act, 42 U.S.C. § 7409(b)
EPA’s National Ambient Air Quality Standards set maximum levels for air pollutants in the ambient air deemed to provide protection for human health and welfare; LBP-11-26, 74 NRC 555 (2011)

Clean Air Act, 42 U.S.C. § 7410(a)(1)
EPA has granted authority to Idaho to implement, maintain, and enforce its own EPA-compliant air quality programs through State Ambient Air Quality Standards; LBP-11-26, 74 NRC 555 (2011)

Clean Air Act, 42 U.S.C. § 7411
EPA possesses authority to set numerical standards for air pollutants from emission sources, which would include the proposed uranium enrichment facility; LBP-11-26, 74 NRC 555 (2011)

Clean Water Act, 316(b), 33 U.S.C. § 1326(b)
a cooling tower and closed-cycle cooling system represent the best available technology and will reduce discharge temperature to the greatest extent possible; LBP-11-14, 73 NRC 597 (2011)

Clean Water Act, 316(a), (b), 33 U.S.C. § 1326(a), (b)
license renewal applicants must submit documentation of their compliance with sections 316(a) and (b) of the Clean Water Act concerning thermal discharges; LBP-12-16, 76 NRC 53 (2012)

Clean Water Act, 33 U.S.C. § 1371(c)(2)
NRC is precluded from second-guessing the conclusions in NPDES permits; LBP-12-16, 76 NRC 59 n.74 (2012)

Clean Water Act, 401, 33 U.S.C. § 1341(a)
applicant for a federal discharge permit must provide a certification from the state that the proposed activity will not violate state water pollution control standards; LBP-12-16, 76 NRC 52 (2012)

Clean Water Act, 404, 33 U.S.C. § 1344
combined license applicants must obtain permits from the U.S. Army Corps of Engineers in order to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 430 (2012)
in completing the environmental impact statement, the U.S. Army Corps of Engineers’ mission is to protect the nation’s aquatic resources, including wetlands; CLI-12-9, 75 NRC 472 (2012)
proposed plant will impact at least 668 acres of wetlands and therefore its construction and operation will require a permit from U.S. Army Corps of Engineers; LBP-13-4, 77 NRC 134-35 (2013)
the U.S. Army Corps of Engineers evaluates construction and maintenance activities to determine whether to issue permits; CLI-12-9, 75 NRC 465 n.250 (2012)
when a proposed project would cause discharge of dredged or fill material into wetlands, applicant must seek a permit from the Corps of Engineers; LBP-15-23, 82 NRC 61 (2015)

Coastal Zone Management Act, 16 U.S.C. § 1456(c)(3)(A)
applicant is required to submit its certification from the relevant state of jurisdiction, indicating that the project in question will comply with this statute; LBP-11-16, 73 NRC 704 n.364 (2011)

Comprehensive Environmental Compensation and Liabilities Act, 42 U.S.C. §§ 9601, 9675
proper sampling plan for establishing baseline values is described; LBP-15-3, 81 NRC 92 (2015)

Endangered Species Act, 16 U.S.C. § 1531(b) (1976 ed.)
purposes of the act are to provide a means whereby the ecosystems upon which endangered and threatened species depend may be conserved, and to provide a program for the conservation of such species; LBP-12-10, 75 NRC 670 (2012)

Endangered Species Act, 2(c), 16 U.S.C. § 1531(c) (1976 ed.)
all federal departments and agencies shall seek to conserve endangered and threatened species; LBP-12-10, 75 NRC 670 (2012)

Endangered Species Act, 16 U.S.C. § 1532(2)
"conserve" means to use and the use of all methods and procedures that are necessary to bring any endangered or threatened species to the point at which the measures provided pursuant to this chapter are no longer necessary; LBP-12-10, 75 NRC 670 (2012)

Endangered Species Act, 16 U.S.C. § 1533
Congress delegated broad administrative and interpretive power to the Secretary of the Interior; LBP-12-10, 75 NRC 640 n.37 (2012)

Endangered Species Act, 7, 16 U.S.C. § 1536
agencies are required to confer with the Fish and Wildlife Service on any action that is likely to jeopardize the continued existence of any proposed species or result in the destruction or adverse modification of proposed critical habitat; LBP-13-9, 78 NRC 95 (2013)

NRC Staff, not the applicant, has the legal duty to engage in consultation under the act; LBP-12-12, 75 NRC 761 (2012)
the U.S. Fish & Wildlife Service and National Marine Fisheries Service perform strictly an advisory function, and the federal agency makes the ultimate decision as to whether its proposed action will satisfy the ESA requirements; LBP-12-10, 75 NRC 641 (2012)
there is no requirement enumerating the contents of a draft environmental impact statement; LBP-12-12, 75 NRC 762 (2012)
this section applies only where threatened and endangered species or critical habitats are present and impacts on a species are expected as a result of the proposed project; LBP-13-9, 78 NRC 96 (2013)

agency must ensure that any action that it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of critical habitat of such species; CLI-15-13, 81 NRC 584 (2015)
consultation with Fish and Wildlife Service is legally mandated for any agency action that may affect listed species or critical habitat; LBP-15-11, 81 NRC 443 (2015)

federal agencies must ensure that any action that it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of critical habitat of such species; LBP-12-10, 75 NRC 639 (2012); LBP-12-11, 75 NRC 735 (2012); LBP-12-12, 75 NRC 761 (2012)
in determining that a federal action is not likely to jeopardize species or modify habitat, the acting agency is to proceed in consultation with and with the assistance of the Secretary of the Interior or Commerce; LBP-12-10, 75 NRC 639 (2012)
whether NRC Staff undertakes formal consultation with the Services in the event that they disagree with a finding by NRC of “no effect” or “not likely adversely to affect” depends upon NRC’s own regulations and its interpretation of its duty under the ESA to ensure that any action is not likely to jeopardize listed species or habitat; LBP-12-10, 75 NRC 642 (2012)
Endangered Species Act, 7(c), 16 U.S.C. § 1536(c)
if the Services advise that listed species are present, the acting agency is to prepare a biological assessment to identify any species that is likely to be affected by such action; LBP-12-11, 75 NRC 735-36 (2012)

the acting agency shall request of the U.S. Fish and Wildlife Service and the National Marine Fisheries Service information whether any species that is listed or proposed to be listed may be present in the area of the action; LBP-12-11, 75 NRC 735 (2012)

where an acting agency is engaged in major construction activities, the acting agency is to evaluate, through preparation of a biological assessment, whether the action is likely to adversely affect species or habitat; LBP-12-10, 75 NRC 640 (2012)

Endangered Species Act, 16 U.S.C. § 1536(c)(1)
a biological assessment of listed species shall be completed before any contract for construction is entered into and before construction is begun with respect to such action; LBP-12-12, 75 NRC 762 (2012)
federal agencies shall request information from the Secretary of the Interior whether any species listed or proposed to be listed may be present in the area of the proposed action; LBP-12-12, 75 NRC 761-62 (2012)

if the Secretary of the Interior advises that listed species may be present, the agency shall conduct a biological assessment for the purpose of identifying any species that is likely to be affected by the action; LBP-12-12, 75 NRC 761-62 (2012)

Endangered Species Act, 16 U.S.C. § 1536(n)
NRC does not have authority to rule on challenges to Fish and Wildlife’s compliance with the Act; CLI-12-21, 76 NRC 495 n.21 (2012)

virtually all dealings with endangered species, including taking, possession, transportation, and sale, are prohibited, except in extremely narrow circumstances; LBP-12-10, 75 NRC 670 (2012)

Endangered Species Act, 16 U.S.C. § 1540(f)
Congress delegated broad administrative and interpretive power to the Secretary of the Interior; LBP-12-10, 75 NRC 640 n.37 (2012)

Congress has left intact both NRC’s and the court’s interpretation of the Atomic Energy Act with respect to a spent fuel disposal safety finding at the time of reactor licensing; CLI-15-4, 81 NRC 228, 234 (2015)

basis for NRC authority to regulate the use of special nuclear material in facilities such as nuclear power reactors is established; CLI-15-4, 81 NRC 231 n.47 (2015)

action of the Commission shall be determined by a majority vote of the members present; CLI-12-17, 76 NRC 213 (2012)

parties who prevail against the government in certain types of agency proceedings are allowed to recover attorneys’ fees and other expenses incurred in connection with the proceeding unless the government’s position was substantially justified, or other special circumstances render an award unjust; LBP-11-8, 73 NRC 354 (2011)

“adversary adjudication” is defined as an adjudication under section 554 of the Administrative Procedure Act in which the position of the United States is represented by counsel or otherwise; LBP-11-8, 73 NRC 354 (2011)

the act applies to any adjudication required by statute to be determined on the record in which the government is represented by counsel; LBP-11-8, 73 NRC 354 (2011)

federal agencies shall identify and consider whether their actions will cause disproportionate environmental impacts on minority, low-income, or other sensitive populations; LBP-12-24, 76 NRC 520 (2012)
NRC Staff examined special pathways of exposure that could lead to a higher level of radiation exposure in minority and low-income populations in the area, including subsistence consumption of fish, native vegetation, surface waters, sediments, and local produce; CLI-15-6, 81 NRC 373 (2015) order did not, in itself, create new substantive authority for federal agencies and thus NRC determined that it would endeavor to carry out the environmental justice principles as part of the agency’s responsibilities under NEPA; CLI-15-6, 81 NRC 369 (2015)

Exec. Order No. 13175, 65 Fed. Reg. 67,249, 67,250 (Nov. 6, 2000) regular and meaningful consultation and collaboration with tribal officials is to take place through an accountable process at each agency; LBP-15-16, 81 NRC 640 (2015)

Federal Records Act, 44 U.S.C. §§ 2101-18, 2901-09, 3101-07, 3301-24 the Department of Energy has independent records retention obligations regarding creation, management, and disposal of records; CLI-11-13, 74 NRC 639 n.16 (2011)

publication of a regulation in the Federal Register constitutes notice to all persons residing in the United States; LBP-13-5, 77 NRC 97 (2013)

Florida Electrical Power Plant Siting Act, Fla. Stat. § 403.507(2)(a)(2) applications for water use permits are evaluated by local governmental agencies; LBP-13-4, 77 NRC 135 (2013)

Freedom of Information Act, 5 U.S.C. § 552 agencies must make available certain records to members of the public upon specific request for those records except to the extent that the records (or portions of them) are exempt from public disclosure by one of the nine enumerated exemptions or are excluded from disclosure; CLI-13-5, 77 NRC 228 (2013)
documents at issue are presumed to be public unless NRC Staff can demonstrate that they are protected by the deliberative process privilege; LBP-13-5, 77 NRC 242 (2013)

NRC considers whether Exemption 7 would prevent public disclosure of allegation and investigation information from release; CLI-13-5, 77 NRC 228 n.25 (2013)

Freedom of Information Act, 5 U.S.C. § 552(a) agencies must make available for public inspection a broad range of information, including the agency’s organization, general methodology, rules of procedure, substantive rules, final opinions, and statements of policy and interpretation that have been adopted by the agency; LBP-13-5, 77 NRC 238 (2013)

Freedom of Information Act, 5 U.S.C. § 552(a)(3) the government has the burden of proving that a requested document falls within one of FOIA’s exemptions; LBP-13-5, 77 NRC 238 (2013)

Freedom of Information Act, 5 U.S.C. § 552(b) agencies may avoid disclosing documents only if they prove that the documents fall within one of the exemptions; LBP-13-5, 77 NRC 238 (2013)
nine categories of documents may be exempted from disclosure; LBP-13-5, 77 NRC 238 (2013)

Freedom of Information Act, 5 U.S.C. § 552(b)(9) any reasonably segregable portion of the record shall be provided to any person requesting such record after deletion of the portions which are exempt; LBP-11-5, 73 NRC 139 n.14 (2011)

Freedom of Information Act, 5 U.S.C. § 552(c) documents are presumed to be available for public inspection if they do not fall within one of the nine exemptions; LBP-13-5, 77 NRC 238 (2013)
Low-Level Radioactive Waste Policy Act, 42 U.S.C. § 2021b(9)(A)(i)-(ii) low-level radioactive waste is defined as radioactive material that is not high-level radioactive waste, spent nuclear fuel, or byproduct material and is waste that NRC classifies as LLRW; LBP-12-4, 75 NRC 216 n.5 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1801 goal of the act is to preserve commercial and recreational fishery resources through the protection of essential fish habitat; LBP-12-10, 75 NRC 642 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1801(a)(9) continuing loss of marine, estuarine, and other aquatic habitats warrants increased attention for the conservation and management of fishery resources of the United States; LBP-12-10, 75 NRC 676-77 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1801(b)(7) the purpose of this act is to promote protection of essential fish habitat in the review of projects conducted under federal permits, licenses, or other authorities that affect or have the potential to affect such habitat; LBP-12-10, 75 NRC 676 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1855(b)(1)(D), (b)(2) a direct consultation obligation is imposed on NRC if NRC determines that approval of a requested license renewal may adversely affect any essential fish habitat; LBP-12-10, 75 NRC 642-43 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1855(b)(3) all federal agencies must consult with the National Marine fisheries Service on any proposed actions that may adversely affect essential fish habitat, and NMFS must implement these requirements and related procedures in its regulations; LBP-12-10, 75 NRC 677 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1855(b)(4)(A) federal agencies are not required to implement conservation recommendations where that agency does not have the statutory authority to implement those recommendations; LBP-12-10, 75 NRC 677 (2012)

Magnuson-Stevens Fishery Conservation and Management Act, 16 U.S.C. § 1855(d) the Secretary of the Interior may promulgate such regulations as may be necessary to carry out any other provision of this act; LBP-12-10, 75 NRC 643 n.57 (2012)

Michigan Natural Resources and Environmental Protection Act, Mich. Comp. Laws. § 324.32723 applicant must obtain a water withdrawal permit under the Michigan Natural Resources and Environmental Protection Act; LBP-12-12, 75 NRC 764 (2012)

Michigan Natural Resources and Environmental Protection Act, Mich. Comp. Laws § 324.36501(f) “take” is defined by Michigan law with respect to fish and wildlife as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct; LBP-14-7, 79 NRC 463 (2014)

Michigan Natural Resources and Environmental Protection Act, Mich. Comp. Laws § 324.36505(1)(a) individuals are prohibited from taking wildlife indigenous to the state that have been determined to be endangered or threatened; LBP-14-7, 79 NRC 463 (2014)

Michigan Natural Resources and Environmental Protection Act, Mich. Comp. Laws § 324.36505(5) upon good cause shown, endangered or threatened species found on the state list may be removed or captured, but only as authorized by a permit issued by the department; LBP-14-7, 79 NRC 463 (2014)

Migratory Bird Treaty Act, 16 U.S.C. § 703-711 contention that the final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 393-94 (2014)
National Environmental Policy Act, 42 U.S.C. § 4321
NEPA promotes its sweeping commitment to prevent or eliminate damage to the environment and biosphere by focusing government and public attention on the environmental effects of proposed agency action; LBP-12-1, 75 NRC 36 n.48 (2012)
where the information in the draft environmental impact statement is so different from the information in the environmental report that the DEIS dispenses with and moots the issues raised in the original contention, intervenor must file a new or amended contention against the DEIS; LBP-11-1, 73 NRC 26 (2011)

National Environmental Policy Act, 42 U.S.C. §§ 4321-4370
contention that NRC has promulgated a regulation that violates the NEPA is inadmissible; LBP-13-12, 78 NRC 242 (2013)

National Environmental Policy Act, 101, 42 U.S.C. § 4331
to ensure that the Act’s broad national commitment to protect and promote environmental quality is infused in the actions of the federal government, NEPA establishes certain action-forcing procedures on each federal agency; LBP-13-4, 77 NRC 119 (2013)

National Environmental Policy Act, 101a, 42 U.S.C. § 4331(a)
it is the continuing policy of the federal government to use all practicable means and measures to create and maintain conditions under which man and nature can exist in productive harmony; LBP-13-4, 77 NRC 217 (2013)

National Environmental Policy Act, 42 U.S.C. § 4331(b)
federal agencies must pause before committing resources to a project and consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-12-17, 76 NRC 81 (2012); LBP-12-18, 76 NRC 159 (2012); LBP-14-9, 80 NRC 40 (2014)
federal agencies must use all practicable means to avoid environmental degradation to the extent consistent with other essential considerations of national policy; LBP-14-9, 80 NRC 29 (2014)

National Environmental Policy Act, 42 U.S.C. § 4331(b)(4)
agencies must take a hard look at preserving important historic and cultural aspects of our national heritage; LBP-15-16, 81 NRC 655 n.218 (2015)

National Environmental Policy Act, 102, 42 U.S.C. § 4332
Continued Storage Rule and supporting generic environmental impact statement to assess the environmental impacts of spent fuel storage after the end of a reactor’s license term were approved; CLI-15-10, 81 NRC 537 (2015)
environmental impact statement’s hard look must examine reasonably foreseeable environmental impacts emanating from the proposed action; LBP-11-7, 73 NRC 281 (2011); LBP-11-39, 74 NRC 868 (2011)
NEPA applies to agencies of the federal government, not to private parties such as applicants for NRC licenses; LBP-11-32, 74 NRC 666 (2011)
NEPA’s procedural obligation is carried out through an agency’s issuance of an environmental impact statement documenting the agency’s hard look at potential environmental impacts of the proposed action and reasonable alternatives thereto; LBP-11-39, 74 NRC 868 (2011)
nothing in NEPA, which applies to agencies of the federal government, can be read to require an applicant to update its environmental report; LBP-11-34, 74 NRC 697 (2011)
when agencies propose major federal actions significantly affecting the quality of the human environment, preparation of an environmental impact statement is required; LBP-12-18, 76 NRC 159 (2012); LBP-14-9, 80 NRC 40 (2014)

National Environmental Policy Act, 102(2), 42 U.S.C. § 4332(2)
compliance with the act is ultimately the responsibility of NRC; CLI-12-13, 75 NRC 684 (2012)
every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 172 (2010)
government agencies are required to comply with NEPA to the fullest extent possible; LBP-14-9, 80 NRC 50 (2014)
the scope of environmental concerns that must be considered in the environmental impact statement are discussed; LBP-11-6, 73 NRC 172 n.20 (2010)

agencies are required to use a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in decisionmaking that may impact

671
the environment; CLI-12-2, 75 NRC 116 (2012); CLI-12-9, 75 NRC 473 (2012); CLI-15-13, 81 NRC 586 (2015)

National Environmental Policy Act, 102(2)(A), (C), and (E), 42 U.S.C. § 4332(2)(A), (C), and E

in mandatory proceedings, boards are to make independent environmental judgments with respect to certain NEPA findings; LBP-11-11, 73 NRC 476 n.10 (2011)

National Environmental Policy Act, 102(2)(C), 42 U.S.C. § 4332(2)(C)

agencies are required to create an environmental impact statement, and the moment at which an agency must have a final statement ready is the time at which it makes a recommendation or report on a proposal for federal action; LBP-13-10, 78 NRC 145 (2013)

agencies must prepare an environmental impact statement before approving any major federal action that will significantly affect the quality of the human environment that describes the action, its effects, and alternatives to the proposed action; CLI-13-7, 78 NRC 210 (2013); LBP-11-7, 73 NRC 281 (2011); LBP-11-38, 74 NRC 830 (2011); LBP-12-5, 75 NRC 236 (2012); LBP-12-8, 75 NRC 549 (2012); LBP-12-17, 76 NRC 81 (2012); LBP-12-23, 76 NRC 453 (2012); LBP-13-13, 78 NRC 272, 284-85, 508, 524 (2013); LBP-15-16, 81 NRC 637 (2015)

NEPA imposes procedural obligations on federal agencies proposing to take actions significantly affecting the quality of the human environment; LBP-11-39, 74 NRC 867-68 (2011)

NRC Staff must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-11-26, 74 NRC 857 (2011); LBP-12-10, 75 NRC 644 n.70 (2012)

requirement to prepare an environmental impact statement applies to major federal actions, not to private or state actions; LBP-14-9, 80 NRC 47 (2014)

environmental impact of any proposed major federal action significantly affecting the quality of the human environment must be discussed; LBP-11-6, 73 NRC 198 (2010)
in the area of impacts of combined licenses and limited work authorizations, NRC Staff, in its review of new and significant information, identified a change in impacts associated with terrestrial ecology; CLI-12-2, 75 NRC 117 (2012)

license renewal applications are subject to an environmental review; CLI-12-5, 75 NRC 304 (2012)
to the fullest extent possible, all federal agencies shall include in every major federal action significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-13-4, 77 NRC 119 (2013)

an environmental impact statement must include a detailed statement by the responsible agency official on, among other things, the environmental impact of the proposed action, any unavoidable adverse environmental effects that cannot be avoided, and alternatives to the proposed action; LBP-11-10, 73 NRC 440 (2011)

license renewal applicant’s environmental report must address environmental impacts of the proposed action and compare them to impacts of alternative actions; CLI-12-5, 75 NRC 338 (2012)

NRC Staff is required to issue a final environmental impact statement that thoroughly and objectively evaluates reasonable alternatives to the proposed action; LBP-12-17, 76 NRC 113 (2012)

National Environmental Policy Act, 102(2)(C)(i), (ii), (v), 42 U.S.C. § 4332(2)(C)(i), (ii), (v)
environmental impact statements must provide a detailed statement concerning environmental impact of the proposed action, any adverse environmental effects that cannot be avoided should the proposal be implemented, and any irreversible and irretrievable commitments of resources that would be involved in the proposed action should it be implemented; LBP-14-9, 80 NRC 58 (2014)

environmental documents must include a detailed statement by the responsible official on any adverse environmental effects that cannot be avoided should the proposal be implemented; CLI-12-9, 75 NRC 474 (2012); LBP-15-16, 81 NRC 687 n.433 (2015)

National Environmental Policy Act, 102(2)(C)(ii), (iii), 42 U.S.C. § 4332(2)(C)(ii), (iii)
environmental reports submitted by license renewal applicants must address the environmental impacts of the proposed action and compare them to impacts of alternative actions; CLI-12-8, 75 NRC 397 (2012)
NRC Staff must assess the relationship between local short-term uses and long-term productivity of the environment, consider alternatives, and describe the unavoidable adverse environmental impacts and the irreversible and irretrievable commitments of resources associated with the proposed action; CLI-15-13, 81 NRC 587 (2015)

alternatives discussion need not include every possible alternative, but rather every reasonable alternative; LBP-15-3, 81 NRC 104 (2015)
among the limited issues within the scope of a license renewal proceeding are alternatives for reducing adverse environmental impacts listed as Category 2 issues in Appendix B to Subpart A of 10 C.F.R. Part 51 including cost-effective alternatives for mitigating severe accidents; LBP-11-2, 73 NRC 45 (2011); LBP-11-13, 73 NRC 550 (2011)
environmental impact statements are to include a detailed statement by the responsible official on alternatives to the proposed action; LBP-12-17, 76 NRC 82 (2012); LBP-14-9, 80 NRC 43 (2014)
license renewal applications are subject to an environmental review; CLI-12-5, 75 NRC 304 (2012)
where an assessment of alternatives to the proposed action was prepared at the early site permit stage and no new information in the areas of energy alternatives or system design alternatives had been identified at the combined license stage, conclusions made at the ESP stage remain valid; CLI-12-2, 75 NRC 117 (2012)

NRC is required to assess the relationship between local short-term uses of the environment and the long-term productivity of the environment; CLI-12-2, 75 NRC 118 (2012); CLI-12-9, 75 NRC 474 (2012)

NRC is required to consider the irreversible and irretrievable commitments of resources associated with the proposed action; CLI-12-2, 75 NRC 118 (2012); CLI-12-9, 75 NRC 474 (2012); LBP-13-10, 78 NRC 137 (2013)

National Environmental Policy Act, 42 U.S.C. § 4332(2)(D)
non-NEPA document, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 430 (2015)
NEPA encourages state participation when appropriate and authorized, but coordination between a federal agency and a state requires active involvement between the two in order for the federal agency to meet its independent review burden; LBP-15-11, 81 NRC 430 n.248 (2015)
agencies must study, develop, and describe appropriate alternatives to proposed actions; CLI-12-9, 75 NRC 473 (2012); CLI-15-13, 81 NRC 587 (2015)
applicant’s alternatives analysis must be sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to the proposed action; LBP-11-13, 73 NRC 552 (2011)
applicant’s environmental report must discuss appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-11-6, 73 NRC 197 n.50 (2010)
in the area of impacts of combined licenses and limited work authorizations, NRC Staff, in its review of new and significant information, identified a change in impacts associated with terrestrial ecology; CLI-12-2, 75 NRC 117 (2012)
National Historic Preservation Act, 101(d)(6)(B)
agency official must consult with any Indian tribe or Native Hawaiian organization that attaches religious and cultural significance to historic properties that may be affected by an undertaking; LBP-13-6, 77 NRC 277 n.12 (2013)
National Historic Preservation Act, 106, 16 U.S.C. § 470
all adverse effects to any NRHP-eligible historic or cultural resource must be considered during any federal undertaking, such as an NRC licensing action for a proposed uranium enrichment facility; LBP-11-26, 74 NRC 576 (2011)
area of potential effect of a federal undertaking must be designated, and the lead federal agency must consult with the SHPO regarding the presence and protection of historic and cultural resources in the
designated area, as well as any federally recognized Native American groups with an ancestral interest in the property, to determine if resources important to the tribe are present; LBP-11-26, 74 NRC 576 (2013)

National Historic Preservation Act, 106, 16 U.S.C. § 470a(b)(3)(E), (d)(2) tribes have a procedural right to be consulted regarding historic preservation matters; LBP-13-6, 77 NRC 271 (2013)

National Historic Preservation Act, 106, 16 U.S.C. § 470f (2006) before licensing any federally assisted undertaking, federal agencies must take into account the effect of the undertaking on any site that is included or eligible for inclusion in the National Register of Historic Places; LBP-12-23, 76 NRC 480 (2012); LBP-15-16, 81 NRC 639 (2015) demolition of a historic unit to build a new unit will result in a finding of adverse effect under applicable criteria in 36 C.F.R. 800.5; CLI-15-13, 81 NRC 580-81 (2015)

NRC must also allow the federal Advisory Council on Historic Preservation a reasonable opportunity to comment with regard to a combined license; LBP-12-23, 76 NRC 480 (2012)

NRC Staff is required to consult with interested parties, including Indian tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 17 n.33 (2014)

NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 52 (2015)

Native American Graves Protection and Repatriation Act, 25 U.S.C. § 3001 et seq. historic properties may be protected under this statute; LBP-15-2, 81 NRC 52 (2015)

proper sampling plan for establishing baseline groundwater values is described; LBP-15-3, 81 NRC 92 (2015)

Rivers and Harbors Act of 1899, 10, 33 U.S.C. § 403 combined license applicants must obtain permits from the U.S. Army Corps of Engineers in order to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 430 (2012) in completing the environmental impact statement, the U.S. Army Corps of Engineers’ mission is to protect the nation’s aquatic resources, including wetlands; CLI-12-9, 75 NRC 472 (2012)

Safe Drinking Water Act, 1422, 42 U.S.C. § 1422 the EPA-approved state permitting authority for Class I injection wells is the regulatory entity from which applicant must seek and obtain the permit necessary to allow it to operate a deep injection well at the site; LBP-13-6, 77 NRC 299 (2013)

STATUTES

Trade Secrets Act, 18 U.S.C. § 1905
NRC Staff and its counsel, like the board and its staff, are federal government employees and are thus subject to stringent sanctions for the unauthorized disclosure of the protected information or protected documents; LBP-11-5, 73 NRC 138-39 n.12 (2011)

Treaty of Fort Laramie with Sioux, Etc., Sept. 17, 1851, 11 Stat. 749
Indian tribe’s treaty-based claims of ownership of mining site and international treaty-based claims cannot support admission of environmental assessment contention; LBP-15-11, 81 NRC 411 (2015)

Treaty with the Sioux — Brule, Oglala, Miniconjou, Yanktonai, Hunkpapa, Blackfeet, Cuthead, Two Kettle, Sans Arcs, and Santee — and Arapaho, Apr. 29, 1868, 15 Stat. 635
Indian tribe’s treaty-based claims of ownership of mining site and international treaty-based claims cannot support admission of environmental assessment contention; LBP-15-11, 81 NRC 411 (2015)
Administrative Conference of the United States 1981 and 1985 Model Rules
language that would have extended Equal Access to Justice Act’s applicability to proceedings in which
an agency observes formal Administrative Procedure Act § 554 procedures as a matter of discretion
was rejected; LBP-11-8, 73 NRC 356 (2011)

Black’s Law Dictionary 329 (9th ed. 2009)

no bright line is established between control or domination, on the one hand, and their absence, on the
other; LBP-14-3, 79 NRC 307 (2014)

"dicta" is a court’s opinion that goes beyond the facts before court and therefore are individual views of
the author of the opinion and not binding in subsequent cases as legal precedent; LBP-14-4, 79 NRC
360 n.39 (2014)

there would be confusion and possible conflict between federal and state regulations and uncertainty on
the part of the industry and possible jeopardy to the public health and safety if the Atomic Energy
Act had continued to remain silent as to the regulatory role of the states; CLI-11-12, 74 NRC 474
n.44 (2011)

Council on Environmental Quality and California Governor’s Office of Planning and Research, NEPA
Handbook, NEPA and CEQA: Integrating Federal and State Environmental Reviews 17 (Feb. 2014),
available at http://www.whitehouse.gov/administration/eop/ceq/initiatives/nepa/handbooks

agencies can, consistent with NEPA regulations, incorporate by reference analyses and information from
existing documents into an environmental assessment or environmental impact statement provided the
material has been appropriately cited and described; LBP-15-11, 81 NRC 440 n.258 (2015)

Fed. R. App. P. 18(a)(1)

although NRC has no specific rule governing stays of agency action pending judicial review, federal law
requires parties seeking such stays in court to come to the agency first; CLI-12-11, 75 NRC 528
(2012)

Fed. R. App. P. 28(j)

there is a difference between asserting genuinely new arguments and alerting the tribunal to new,
additional support for an existing argument; LBP-15-27, 82 NRC 189 n.32 (2015)

Fed. R. Civ. P. 12(d)
courts may treat motions to dismiss for failure to state a claim upon which relief can be granted (under
Rule 12(b)(6)) and motions for judgment on the pleadings (under Rule 12(c)) as motions for summary
judgment under Rule 56 if matters outside the pleadings are presented to and not excluded by the
court; LBP-12-2, 75 NRC 162 (2012)

Fed. R. Civ. P. 56
summary judgment movant bears the initial burden of demonstrating that no genuine issue as to any
material fact exists and that it is entitled to judgment as a matter of law; LBP-12-23, 76 NRC 450
(2012)
Fed. R. Evid. 103(a)(1)
board considered evidence submitted with petitioner’s reply to which opposing parties didn’t object; LBP-15-5, 81 NRC 289 n.252 (2015)
objection not timely made is waived; LBP-15-20, 81 NRC 859 n.184 (2015)
Fed. R. Evid. 201
judicial notice may be taken of any fact not subject to reasonable dispute in that it is either generally known within the territorial jurisdiction of the trial court or capable of accurate and ready determination by resort to sources whose accuracy cannot reasonably be questioned; LBP-11-20, 74 NRC 101 n.56 (2011)
Fed. R. Evid. 201(b), (f)
judicial notice may be taken at any stage of the proceeding; LBP-11-7, 73 NRC 290 n.231 (2011)
Fed. R. Evid. 401
evidence is relevant if it has some tendency to make deliberative process privilege opponent’s allegations more or less likely; LBP-13-5, 77 NRC 248 (2013)
Fed. R. Evid. 403
courts may exclude relevant evidence if its probative value is substantially outweighed by a danger of unfair prejudice, confusing the issues, misleading the jury, undue delay, wasting time, or needlessly presenting cumulative evidence; LBP-12-21, 76 NRC 248 n.171 (2012)
Fed. R. Evid. 615
at the request of any party a court must order witnesses excluded so that they cannot hear other witnesses’ testimony; LBP-12-21, 76 NRC 249 (2012)
Fed. R. Evid. 801(c)
out-of-court statements offered to prove the truth of a matter asserted are hearsay; LBP-11-14, 73 NRC 600 n.59 (2011)
Fed. R. Evid. 1002-1003
best evidence rule provides that an original or duplicate writing, recording, or photograph is required in order to prove its content unless an evidentiary rule or federal statute provides otherwise; CLI-13-5, 77 NRC 231 n.36 (2013)
Federal-State Relationships in the Atomic Energy Field: Hearings Before the Joint Committee on Atomic Energy, 86th Cong. at 301 (1959) (Joint Committee Hearings) (testimony of Robert Lowenstein, Atomic Energy Commission, Office of the General Counsel)
the stated purpose of AEA § 274 is to clarify the respective responsibilities under the AEA of the states and the Commission with respect to the regulation of byproduct, source, and special nuclear materials; CLI-11-12, 74 NRC 472 (2011)
existence of a specific appropriation for licensing activities prevents NRC, under well-settled principles of appropriations law, from using its general appropriations for those activities; CLI-13-8, 78 NRC 235 (2013)
Hearings Before the Subcommittee on Legislation, Joint Committee on Atomic Energy, 87th Cong. 60 (1962) (letter of AEC Commissioner Loren K. Olsen)
the Atomic Energy Act requirement that NRC grant a hearing upon the request of any person whose interest may be affected by certain agency proceedings is interpreted as requiring formal Administrative Procedure Act § 554 on-the-record hearings; LBP-11-8, 73 NRC 358 (2011)
Congress called upon the Commission to make fundamental changes in its public hearing process to ensure that hearings adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; LBP-11-6, 73 NRC 171 (2010)
agencies can reach exactly the same result on a remanded issue as long as they rely on the correct view of a law that they previously misinterpreted, or as long as they explain themselves better or develop better evidence for their position; CLI-11-12, 74 NRC 469 n.20 (2011)
connected actions are distinguished from cumulative impacts; LBP-14-6, 79 NRC 419-20 n.76 (2014)
Mandelker, Daniel R., NEPA Law and Litigation §§ 1.1, 8.18 (2d ed. 2008)
NEPA applies to agencies of the federal government, not to private parties such as applicants for NRC licenses; LBP-11-32, 74 NRC 666 (2011)

322 Mass. Code Regs. § 6.17(3)
it shall be unlawful for any person to harvest, possess, or sell river herring in the Commonwealth or in the waters under the jurisdiction of the Commonwealth; LBP-12-16, 76 NRC 55-56 (2012)

agencies are to ensure that the federal government operates within a government-to-government relationship with federally recognized Native American tribes, reflecting respect for the rights of self-government due the sovereign tribal governments; LBP-15-16, 81 NRC 639-40 (2015)

Model Rules of Professional Conduct R. 3.3(a)(3)
counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal authority that is adverse to the director’s position, especially when the target of the government’s enforcement action is not represented by counsel; LBP-14-11, 80 NRC 127-28 n.6 (2014)

6 Moore, James Wm., et al., Moore’s Federal Practice ¶ 56.22[2], at 2824-25 (2d ed. 1966)
no defense to an insufficient showing by summary disposition proponent is required; LBP-12-4, 75 NRC 219 (2012)

summary judgment movant has the burden to show that he is entitled to judgment under established principles, and if he does not discharge that burden, then he is not entitled to judgment; LBP-12-4, 75 NRC 219 (2012)

that a summary disposition opponent declines to oppose the motion does not mean that movant is entitled to a favorable judgment; LBP-12-4, 75 NRC 219 (2012)

license termination is permitted under limited restricted use for sites where only institutional controls are used or restricted use for sites where both institutional controls and engineered controls are used; CLI-11-12, 74 NRC 494 (2011)

because New Jersey has adopted more stringent criteria for license termination under restricted release than for unrestricted release, as well as more conservative criteria than NRC’s, New Jersey’s regulations are compatible with NRC’s agreement-state policy; CLI-13-6, 78 NRC 164 (2013)

N.J. Admin. Code § 7:28-6.1(a)
public doses for all Part 20 radiation protection programs must be as low as reasonably achievable and a basic radiation protection public dose standard of 100 mrem per year is required; CLI-11-12, 74 NRC 482 (2011)

N.J. Admin. Code § 7:28-12.8, 12.9, 12.10
New Jersey has two restricted-release options that permit license termination under specified soil concentration levels; CLI-11-12, 74 NRC 494 (2011)

N.J. Admin. Code § 7:28-12.8(a)(1), 12.9, 12.10, and 12.11
licensee is required to show, using concentration tables or dose modeling, that, for unrestricted use remedial action, limited restricted use remedial action, or a restricted use remedial action, the total effective dose equivalent to members of the public would not be more than 15 mrem per year; CLI-11-12, 74 NRC 482 (2011)

N.J. Admin. Code § 7:28-12.8(b) and (c)
radioactively contaminated ground and surface water must be remediated in accordance with New Jersey water quality requirements; CLI-11-12, 74 NRC 483 (2011)

N.J. Admin. Code § 7:28-12.10(d)
New Jersey has adopted license termination requirements that incorporate more conservative dose calculation methodologies than NRC requirements; CLI-11-12, 74 NRC 482-83 (2011)

N.J. Admin. Code §§ 7:28-12.10(e), 7:28-12.11(e)
New Jersey has adopted license termination requirements that incorporate more conservative dose

licensees may petition for restricted release using alternative remediation standards, under which license termination is based on dose modeling instead of soil concentration levels; CLI-11-12, 74 NRC 494 (2011)
N.J. Admin. Code § 7:28-12.11(e)
restricted-release decommissioning requires that doses to members of the public resulting from a simultaneous and complete failure of institutional and engineering controls not exceed 100 mrem per year; CLI-11-12, 74 NRC 495 (2011)

advance notice of proposed rulemaking is a formal invitation to participate in shaping the proposed rule; LBP-15-15, 81 NRC 612 n.100 (2015)

a lawyer is prohibited from knowingly making a false statement of law or fact to a tribunal; LBP-11-13, 73 NRC 549 (2011)
an attorney who purports to represent a client without authorization is subject to disciplinary proceedings by the state bar association; LBP-11-13, 73 NRC 549 (2011)
Pierce, Richard J., Jr., Administrative Law § 7.3 (5th Ed. 2010)
purpose of notice of proposed rulemaking is not to set binding law or policy, but instead to provide interested members of the public an opportunity to comment in a meaningful way on the agency’s proposal; LBP-15-15, 81 NRC 611 & n.94 (2015)
requirement for a notice of proposed rulemaking is to sufficiently and fairly apprise interested parties of the issues involved, rather than to specify every precise proposal that the agency may ultimately adopt; LBP-15-15, 81 NRC 611 n.94 (2015)

if licensing boards deem prefiled evidence to be of little or no value, they simply need not ask about it at the evidentiary hearing, and are free to accord such evidence little or no weight; LBP-12-21, 76 NRC 248 n.171 (2012)

NRC’s 50-mile proximity presumption is an example of NRC’s great liberality in the arena of standing; LBP-14-4, 79 NRC 375 n.74 (2014)

in enacting AEA § 274, Congress acknowledged the significant interest of the states in regulating radiation hazards that do not involve interstate, national, or international considerations; CLI-11-12, 74 NRC 473 (2011)

in enacting AEA § 274, Congress acknowledged the significant interest of the states in regulating radiation hazards that are local and limited in nature; CLI-11-12, 74 NRC 473 (2011)

more formal procedures are required in contested cases, especially those involving compliance; LBP-11-8, 73 NRC 357 n.31 (2011)

although NEPA does not mention mitigation, by administrative practice and regulation, mitigation plays an important role in the discharge by federal agencies of their procedural duty under NEPA to prepare an EIS; LBP-12-18, 76 NRC 159-60 (2012)

1997)

whenever a party requests it, exclusion of witnesses is now mandatory rather than a matter of discretion;
lbp-12-21, 76 nrc 249-50 (2012)
ABEYANCE OF APPEAL

given the posture of the case, the Commission declines to decide a petition for review but will allow
petitioner to file a motion to reinstate its petition should the proceeding be reactivated at a future time;
CLI-11-15, 74 NRC 815 (2011)
when a petition for review is filed with the Commission at the same time as a motion for reconsideration
is filed with the board, the Commission will delay considering the petition for review until after the
board has ruled; CLI-12-5, 75 NRC 301 (2012)

ABEYANCE OF CONTENTION

as an exercise of its inherent supervisory authority over adjudications, the Commission directed that waste
confidence contentions and any related contentions that may be filed in the near term be held in
abeyance pending further order; CLI-13-7, 78 NRC 199 (2013); LBP-12-24, 76 NRC 503 (2012);
LBP-13-1, 77 NRC 57 (2013); LBP-13-4, 77 NRC 107 (2013); LBP-13-8, 78 NRC 1 (2013);
LBP-13-13, 78 NRC 246 (2013); LBP-14-6, 79 NRC 404 (2014)
Commission directed all licensing boards to reject pending waste confidence contentions that had been
held in abeyance, because the generic impact determinations have been the subject of extensive public
participation in the rulemaking process and therefore are excluded from litigation in individual
Commission directed that all spent fuel storage contentions be held in abeyance; CLI-15-6, 81 NRC 340
Commission directed that licensing boards hold waste disposal contentions in abeyance pending further
Commission order, which would be issued in conjunction with a then-to-be-determined agency response
to the District of Columbia Circuit’s ruling; CLI-14-8, 80 NRC 71 (2014); LBP-14-12, 80 NRC 138
(2014)
Commission retained authority to provide ultimate direction on the waste confidence contentions being
held in abeyance; LBP-14-8, 79 NRC 519 (2014)
contention concerning need under NEPA to include a discussion of the environmental impacts of spent
fuel pool leakage, SFP fires, and the lack of a spent fuel repository is held in abeyance; LBP-12-26, 76
NRC 559 (2012)
contention concerning temporary storage and ultimate disposal of nuclear waste was held in abeyance
pending further order from the Commission; LBP-14-7, 79 NRC 451 (2014)
following issuance of the board’s final dispositive decision on contentions held in abeyance, and
consistent with NRC procedural rules, applicant and intervenor will have the opportunity to appeal the
board’s decisions; CLI-14-3, 79 NRC 31 (2014)
in light of the vacatur of the Waste Confidence Decision and Temporary Storage Rule, environmental
reports must consider the reasonably foreseeable impacts of permanent storage of spent fuel, and
contentions concerning the failure of the ER to do so must be held in abeyance; LBP-12-24, 76 NRC
503 (2012)
in view of the special circumstances presented by waste confidence, the Commission directed that those
contentions and any related contentions filed in the near term be held in abeyance pending our further
order; CLI-14-3, 79 NRC 31 (2014); LBP-14-3, 79 NRC 267 (2014)
licensing boards were instructed to hold in abeyance any contentions on waste confidence matters until
after the Commission’s issuance of a new generic environmental impact statement; LBP-14-16, 80 NRC
183 (2014)
SUBJECT INDEX

new contention concerning continued storage of spent nuclear fuel is ordered held in abeyance pending further Commission order; LBP-14-14, 80 NRC 144 (2014)
NRC will not issue licenses dependent upon the Waste Confidence Decision or the Temporary Storage Rule until the District of Columbia Circuit’s remand is appropriately addressed; LBP-14-3, 79 NRC 267 (2014)
request for a protective stay to hold the proceeding in abeyance indefinitely pending potential future events is inconsistent with NRC’s longstanding interest in sound case management and regulatory finality and would be unfair to the other parties; CLI-14-6, 79 NRC 445 (2014)
waste confidence and similar contentions are held in abeyance pending further order from the Commission; LBP-14-8, 79 NRC 519 (2014)
waste confidence contention’s pendency creates some uncertainty as to whether petitioner may appeal the board’s ruling on a proposed contention, or whether it must await resolution of the waste confidence issue; LBP-14-8, 79 NRC 519 (2014)
ABEYANCE OF PROCEEDING
agencies must set and complete proceedings on license applications with due regard for the rights and privileges of all the interested parties or adversely affected persons and within a reasonable time; CLI-12-6, 75 NRC 352 (2012)
because the Commission will have an opportunity to take a fresh look at concerns petitioners have expressed once the particulars of their rulemaking petition have been scrutinized by public comment and agency review, holding up proceedings is not necessary to ensure that the public will realize the full benefit of ongoing regulatory review; CLI-11-1, 73 NRC 1 (2011)
Commission generally has declined to hold proceedings in abeyance pending the outcome of other Commission actions or adjudications; CLI-11-1, 73 NRC 1 (2011)
Commission may consider requests to suspend or hold proceedings in abeyance pursuant to its inherent supervisory authority over agency proceedings; CLI-11-5, 74 NRC 141 (2011)
even absent an express provision authorizing such relief, the Commission has occasionally considered requests to suspend proceedings or hold them in abeyance in the exercise of its inherent supervisory powers over proceedings; CLI-11-1, 73 NRC 1 (2011)
forcing a pro se intervenor to file monthly disclosures and closely follow a proceeding indefinitely solely to obtain a ruling on the merits of its claim would constitute significant unfairness and hardship; LBP-12-19, 76 NRC 184 (2012)
if NRC determines that changes to its current environmental assessment rules are warranted, it can revisit whether an individual licensing review or adjudication should be held in abeyance pending the outcome of a relevant rulemaking; CLI-14-7, 80 NRC 1 (2014)
in NEPA context, path that licensee and NRC Staff must follow relative to a license condition is sufficiently clear that continuing to hold the hearing open while it is completed would be an unnecessary extension of the adjudicatory process; LBP-15-3, 81 NRC 65 (2015)
longstanding NRC practice has been to limit orders delaying proceedings to the duration and scope necessary to promote the Commission’s dual goals of public safety and timely adjudication; CLI-11-1, 73 NRC 1 (2011)
NRC will not issue licenses dependent upon the Waste Confidence Decision or the Temporary Storage Rule until the court’s remand is appropriately addressed; CLI-12-17, 76 NRC 207 (2012); LBP-12-21, 76 NRC 218 (2012)
on ordinary burden on parties in pursuing litigation pending rulemaking does not justify disrupting ongoing license review; CLI-11-1, 73 NRC 1 (2011)
petitioner’s request to hold the license renewal proceeding in abeyance until the Commission resolves petitioner’s request to suspend the proceeding pending evaluation of the Fukushima accident is denied because the Commission has denied the suspension request; LBP-11-35, 74 NRC 701 (2011)
post-9/11 abeyance of a proceeding was denied where the proceeding was at an early stage, there was no risk of immediate threat to public health and safety, there were non-terrorism-related contentions to be considered, and the only harm to petitioner would be inevitable litigation costs; CLI-11-5, 74 NRC 141 (2011)
suspension of licensing proceedings is considered a drastic action that is not warranted absent immediate threats to public health and safety; CLI-11-1, 73 NRC 1 (2011)
See also Delay of Proceeding

684
SUBJECT INDEX

ABUSE OF DISCRETION
applicants may prevail against NRC Staff if they prove that a particular contested assessment of a deficiency was arbitrary or an abuse of discretion; LBP-14-2, 79 NRC 131 (2014)
contention that NRC or licensee has abused or exceeded its lawful discretion with respect to nuclear safety programs is not admissible because it fails to provide sufficient information to show that a genuine dispute exists on a material issue of law or fact; LBP-14-4, 79 NRC 319 (2014)
NRC Staff improperly discharges its duties with respect to the grading of an operating test if the grading is inappropriate or unjustified or if the grading strays too far afield of the twin goals of equitable and consistent examination administration, thus becoming arbitrary or an abuse of discretion; LBP-14-2, 79 NRC 131 (2014)
review of discretionary Staff actions not subject to a hearing opportunity is governed by an abuse of discretion standard; CLI-13-1, 77 NRC 1 (2013)

ACCESS AUTHORIZATION
individuals who are subject to an access authorization program shall, at a minimum, report any concerns arising from behavioral observation and are individually liable if they fail to do so; LBP-14-4, 79 NRC 319 (2014)
licensees are permitted to develop their own individual access authorization programs, provided they satisfy 10 C.F.R. 73.56; LBP-14-4, 79 NRC 319 (2014)
See also Controlled Access

ACCIDENTS
all credible accident sequences must be identified in the integrated Safety analysis summary as well as items relied on for safety and necessary safety controls; LBP-12-21, 76 NRC 218 (2012)
applicant’s integrated safety analysis must consider potential accident sequences caused either by deviations in the processes that will be conducted at the proposed facility or by credible external events, including natural phenomena; LBP-11-11, 73 NRC 455 (2011)
contention that does not dispute any specific portion of applicant’s fuel handling accident analysis is inadmissible for lack of a genuine dispute; LBP-15-18, 81 NRC 793 (2015)
criteria for limiting conditions for operation address aspects of reactor operation that contribute to prevention of accidents and provide the capability to provide immediate mitigation of accidents; DD-13-3, 78 NRC 571 (2013)
items relied upon for safety in uranium enrichment facilities should be described in sufficient detail to allow a Staff reviewer to understand the IROFS’s functions in relation to the performance standards in section 70.61, which specifies limitations on the levels of risk for credible high and intermediate-consequence accidents and nuclear criticality accidents; LBP-11-11, 73 NRC 455 (2011)
nonspeculative showing that increased traffic accidents could be another impact of increased road usage might establish standing; LBP-12-3, 75 NRC 164 (2012)
to waive the generic assessment in NRC regulations to permit adjudication of issues involving the environmental impact of spent fuel pool accidents in this license renewal proceeding, the Commission must conclude that the rule’s strict application would not serve the purpose for which it was adopted; CLI-11-11, 74 NRC 427 (2011)
uranium enrichment facility applications must identify radiological and chemical hazards, facility hazards that could affect safety of licensed materials, potential accident sequences and their consequences and likelihood of occurrence, and each item relied on for safety; LBP-12-21, 76 NRC 218 (2012)
See also Design Basis Accident; Fukushima Accident; Three Mile Island Accident

ACCIDENTS, LOSS-OF-COOLANT
establishing safety limits for stored irradiated fuel is not appropriate, but measures to prevent a significant loss of coolant inventory under accident conditions that could challenge the cooling of the stored fuel are documented in the updated final safety analysis report; DD-13-3, 78 NRC 571 (2013)
revision of 10 C.F.R. 50.63 to expand the coping capability to include cooling the spent fuel, preventing a loss-of-coolant accident, and preventing containment failure would be a significant benefit; LBP-12-18, 76 NRC 127 (2012)

ACCIDENTS, SEVERE
accident sequence with a probability conservatively estimated at $2.0 \times 10^{-7}$ per reactor year is remote and speculative for the purposes of NEPA; LBP-11-38, 74 NRC 817 (2011)
agency conducting a NEPA analysis must examine both the probability of a given harm occurring and the consequences of that harm if it does occur; CLI-15-6, 81 NRC 340 (2015)
although the likelihood of severe accidents occurring is lower than that for design basis accidents, consequences of severe accidents are generally greater; LBP-11-38, 74 NRC 817 (2011)
applications for certified reactor designs include a probabilistic risk assessment for severe accidents; LBP-11-38, 74 NRC 817 (2011)
because the generic environmental impact statement provides a severe accident impacts analysis that envelops potential impacts at all existing plants, the environmental impacts of severe accidents during the license renewal term already have been addressed generically in bounding fashion; LBP-12-18, 76 NRC 127 (2012)
because the probability of a spent fuel pool accident causing significant harm is remote, there is no need for applicants to assess mitigation alternatives as part of license renewal; LBP-15-5, 81 NRC 249 (2015)
board improperly allowed petitioner to challenge the generic environmental impact statement’s finding regarding severe accident consequences; CLI-15-6, 81 NRC 340 (2015)
claim that SAMA analysis is deficient for failing to address potential spent fuel pool accidents falls beyond the scope of NRC SAMA analysis and impermissibly challenges NRC regulations; LBP-11-13, 73 NRC 534 (2011)
COL applications must include a description and plans for implementation of the guidance and strategies required by section 50.54(hh)(2) for severe accident mitigation; CLI-11-9, 74 NRC 233 (2011)
Commission imposed a license condition requiring licensees to develop and implement strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities following a beyond-design-basis external event, including a simultaneous loss of all AC power and loss of normal access to the normal heat sink; CLI-12-9, 75 NRC 421 (2012)
Commission precedent interprets the term, “severe accidents,” to encompass only reactor accidents and not spent fuel pool accidents; LBP-11-2, 73 NRC 28 (2011)
contention that in the event of a core-melt accident, applicant’s emergency plan should order an evacuation of persons within a 10-mile radius of the facility attacks NRC’s emergency planning regulation is inadmissible; LBP-11-15, 73 NRC 629 (2011)
contention that license renewal application lacks supporting documentation providing analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 1 (2013)
contention that the frequency of occurrence of severe accidents is erroneously underestimated should have been raised at the outset of the license renewal proceeding and thus is untimely; LBP-11-35, 74 NRC 701 (2011)
determination that, for any license renewal of a nuclear power plant, the probability-weighted consequences of a severe accident are small cannot be challenged; LBP-11-2, 73 NRC 28 (2011)
even if a site would not be totally evacuated, a fission product release from one unit would likely contaminate the entire site, with the result that both units could be out of operation for years; LBP-15-5, 81 NRC 249 (2015)
Fukushima accident does not significantly alter the overall environmental picture for severe reactor accidents at the site; CLI-12-15, 75 NRC 704 (2012)
Fukushima-related petitions for suspension of proceeding and rescission of regulations that make generic conclusions about environmental impacts of severe reactor and spent fuel pool accidents and that preclude consideration of those issues in individual licensing proceedings are denied; LBP-11-39, 74 NRC 862 (2011)
generic analysis remains appropriate for spent fuel pool accidents in license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
generic environmental impact statement findings with respect to severe accident consequences are not subject to challenge in individual license renewal proceedings; CLI-15-6, 81 NRC 340 (2015)
in response to the Fukushima accident in Japan, NRC is conducting a comprehensive safety review of the requirements and guidance associated with accident mitigation measures; CLI-12-1, 75 NRC 39 (2012)
in the event of a severe accident in an AP1000, squib valves, which are explosively activated, reduce pressure and inject water as needed into the reactor vessel; CLI-15-13, 81 NRC 555 (2015)
license renewal provisions cover environmental issues relating to onsite spent fuel storage generically, and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

licensees must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities to address loss of large areas from fires or explosions that arise from a beyond-design-basis event; CLI-12-2, 75 NRC 63 (2012); DD-15-11, 82 NRC 361 (2015)

licensees of boiling water reactors with Mark I and II containments are required to design and install a venting system that provides venting capability from the wetwell during severe accident conditions; DD-15-1, 81 NRC 193 (2015)

merely raising the specter of a nuclear accident does not demonstrate irreparable harm; CLI-14-4, 79 NRC 249 (2014)

NRC guidance documents outline the process licensees use to define and deploy strategies to enhance their ability to cope with beyond-design-basis external events, including station blackout; DD-15-5, 81 NRC 877 (2015)

NRC has addressed pressure suppression containment system vulnerability to early failure under severe accident conditions, including overpressurization, in NUREG-0474; DD-15-1, 81 NRC 193 (2015)

NRC has found, through its individual plant examination and individual plant examination for external events processes and other risk studies, that the severe accident risks are small for all U.S. licensed nuclear power plants; LB-12-26, 76 NRC 559 (2012)

NRC imposed requirements to provide makeup water independent of offsite power and the normal emergency a.c. power sources to maintain or restore spent fuel pool cooling capability in the event of an accident; DD-15-1, 81 NRC 193 (2015)

nuclear power reactors must have emergency plans in place to respond to accidents despite the fact that Table B-1 within 10 C.F.R. Part 51 concludes that the environmental impacts of both design basis and severe accidents at a nuclear reactor are small for all plants; LBP-13-13, 78 NRC 246 (2013)

only if the probability of a severe accident is so small as to be effectively zero could NRC Staff dispense with the consequences portion of the analysis; CLI-15-6, 81 NRC 340 (2015)

Part 51 treats all spent fuel pool accidents, whatever their cause, as generic, Category 1 events not suitable for case-by-case adjudication; LB-11-2, 73 NRC 28 (2011)

petitioner’s assertion that severe accidents from spent fuel pools must be considered in applicant’s SAMA analysis is in direct conflict with NRC regulations; LB-11-2, 73 NRC 28 (2011)

post-Fukushima spent fuel pool concerns are being addressed through rulemaking on mitigation of beyond-design-basis events; DD-15-1, 81 NRC 193 (2015)

probability-weighted consequences of a severe accident (risk) are small in the context of a license renewal proceeding; CLI-15-6, 81 NRC 340 (2015); LB-11-13, 73 NRC 534 (2011)

request that licensee replace passive autocatalytic recombiners in the containment with electrically powered thermal hydrogen recombiners is denied; DD-13-1, 77 NRC 347 (2013)

request that NRC immediately revoke prior preapproval of the hardened vent system or direct torus vent system at each GE BWR Mark I unit has been addressed by an order modifying licenses; DD-15-1, 81 NRC 193 (2015)

risk is small for all plants; LB-12-8, 75 NRC 539 (2012)

severe accidents are reactor accidents more severe than design basis accidents and involve substantial damage to the reactor core; LB-11-38, 74 NRC 817 (2011)

spent fuel pool accidents are Category 1 issues that do not need to be included in the severe accident mitigation alternatives analysis; LB-15-5, 81 NRC 249 (2015)

station blackout is a beyond-design-basis event and therefore regulations requiring emergency operating procedures do not apply, and so operators would follow a set of procedures required by 10 C.F.R. 50.63(c)(ii) & (iii); LB-12-18, 76 NRC 127 (2012)

where initial decisions have been issued, the record should not be reopened to take evidence on some accident-related issue unless the party seeking reopening shows that there is significant new evidence, not included in the record, that materially affects the decision; CLI-11-5, 74 NRC 141 (2011)

See also Fukushima Accident; Severe Accident Mitigation Alternatives; Severe Accident Mitigation Alternatives Analysis; Severe Accident Mitigation Design Alternatives Analysis.
SUBJECT INDEX

ACCOUNTABILITY
regular and meaningful consultation and collaboration with tribal officials is to take place through an accountable process at each agency; LBP-15-16, 81 NRC 618 (2015)
to the extent that petitioner’s counsel is blameworthy, petitioner may be held accountable; LBP-13-2, 77 NRC 71 (2013)

ACTIVE COMPONENTS
board examined how a transformer performs its intended function to determine whether it undergoes a change in configuration or properties; CLI-15-6, 81 NRC 340 (2015)
such components are excluded from aging management review on the basis of existing regulatory requirements for maintenance and monitoring of structures, systems, and components; CLI-15-6, 81 NRC 340 (2015)
transformer is an active component because it undergoes a change in properties when it performs its intended function; CLI-15-6, 81 NRC 340 (2015)

ADJUDICATORY HEARINGS
debuging compliance with another agency’s proposed policies before they have been finalized would subject administrative agencies to needless and repetitive litigation; LBP-15-15, 81 NRC 598 (2015)
final no significant hazards consideration determination allows the Commission to issue the challenged license amendment before the petitioner’s request for a hearing is adjudicated; LBP-15-17, 81 NRC 753 (2015)
final no significant hazards consideration determination does not either prevent the adjudication from proceeding or restrict the licensing board’s substantive determination on public health and safety issues; LBP-15-17, 81 NRC 753 (2015)
hearing can be closed if the Commission orders it; LBP-11-5, 73 NRC 131 (2011)
hearings on environmental issues addressed in the EIS may not commence before issuance of the final EIS; CLI-15-17, 82 NRC 33 (2015)
it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders; LBP-14-4, 79 NRC 319 (2014)
NRC hearings are not environmental impact statement editing sessions; LBP-11-2, 73 NRC 28 (2011)
NRC Staff is authorized to issue a license when it has completed its review during the pendency of a hearing as long as it provides the board and parties notice and an explanation why the public health and safety are protected and why the action is in accord with the common defense and security despite the pendency of the contested matter; CLI-15-17, 82 NRC 33 (2015)
NRC’s hearing process is reserved for genuine, material controversies between knowledgeable litigants; CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)
there is no fundamental right to participate in administrative adjudications; LBP-11-4, 73 NRC 91 (2011)
See also Closed Hearings; Evidentiary Hearings; Hearing Requests; Hearing Rights; Mandatory Hearings; Notice of Hearing; Operating License Amendment Proceedings; Operating License Renewal Proceedings; Public Hearings

ADJUDICATORY PROCEEDINGS
administrative agencies are allowed to address issues of general applicability through rulemaking instead of individual adjudications, and the choice made between proceeding by general rule or by individual, ad hoc, litigation is one that lies primarily within the informed discretion of the administrative agency; LBP-14-16, 80 NRC 183 (2014)
“adversary adjudication” is defined as an adjudication under section 554 of the Administrative Procedure Act in which the position of the United States is represented by counsel or otherwise; LBP-11-8, 73 NRC 349 (2011)
agency has discretion to choose between rulemaking and adjudication; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
although NRC Staff is free to carry on internecine warfare, it is not free to wage it in an adjudicatory proceeding where all elements of the NRC Staff appear as a single party; LBP-14-2, 79 NRC 131 (2014)
as an exercise of the Commission’s inherent supervisory authority over agency proceedings, it need not address procedural issues that would merit further consideration in adjudications; CLI-12-16, 76 NRC 63 (2012)
attorneys’ fees may be awarded in adversary adjudications that are governed by Administrative Procedure Act § 554, but they may not be awarded in adversary adjudications that Congress did not subject to that section; LBP-11-8, 73 NRC 349 (2011)

board refused to let a matter turn on attempts by NRC Staff and applicant to label a controversial matter in a way that would avoid adjudication; LBP-14-1, 79 NRC 39 (2014)

choice between rulemaking and adjudication (i.e., issuing orders or other license revisions) is within the agency’s discretion; LBP-11-11, 73 NRC 455 (2011)

Commission has inherent authority to supervise both NRC Staff’s work and adjudicatory proceedings relating to license applications; CLI-14-1, 79 NRC 1 (2014)

Commission has the authority to set the scope of its own hearings; LBP-14-4, 79 NRC 319 (2014)

current adjudicatory procedures and policies provide a latitude to the Commission, its licensing boards, and presiding officers to instill discipline in the hearing process and ensure a prompt yet fair resolution of contested issues in adjudicatory proceedings; CLI-14-10, 80 NRC 157 (2014)

environmental impact statements are effectively amended through the adjudicatory process; LBP-12-17, 76 NRC 71 (2012)

hearing on environmental issues focus entirely on the adequacy of NRC Staff’s work; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

hearing on environmental issues must await issuance of final environmental impact statement; LBP-15-3, 81 NRC 65 (2015)

NRC adjudication is not the appropriate forum for a challenge to a decision by a state regulatory agency; LBP-12-23, 76 NRC 445 (2012)

NRC generally applies contemporaneous judicial standing concepts in AEA § 189a proceedings; LBP-12-3, 75 NRC 164 (2012)

NRC has discretion to transact its business broadly, through rulemaking, or case by case, through adjudication; CLI-13-7, 78 NRC 199 (2013)

NRC has long preferred concentrating its resources on actual field inspections and related scientific and engineering work, as opposed to the conduct of legal proceedings; LBP-14-4, 79 NRC 319 (2014)

NRC licensing proceedings are limited to the scope of admitted contentions; CLI-15-9, 81 NRC 512 (2015)

NRC Staff’s final environmental impact statement, in conjunction with the adjudicatory record, becomes the relevant record of decision for the environmental portion of the proceeding; LBP-12-17, 76 NRC 71 (2012)

NRC’s policy of encouraging settlements specifically recognizes that settlements are not inviolate, and the presiding officer or Commission may order adjudication of the issues that the presiding officer or Commission finds is required in the public interest to dispose of the proceeding; LBP-14-4, 79 NRC 319 (2014)

objectives of the NRC adjudicatory procedures and policies include producing an informed adjudicatory record that supports agency decisionmaking on public health and safety, the common defense and security, and the environment; LBP-15-20, 78 NRC 829 (2015)

once all contentions have been decided, the adjudicatory proceeding is terminated; CLI-14-6, 79 NRC 445 (2014)

party who neglects to fully participate in a proceeding is subject to sanctions including dismissal of its contention; CLI-14-2, 79 NRC 11 (2014)

precedence requires a licensing board to let EPA’s rulemaking run its course, allowing intelligent resolution of any remaining claims instead of piecemeal and repetitive litigation; LBP-15-15, 81 NRC 598 (2015)

scope of an adjudicatory hearing is limited to the notice of hearing, which in licensing matters normally extends only to the application at issue; CLI-14-11, 80 NRC 167 (2014)

soundness of relocating certain surveillance frequencies from operating license technical specifications to licensee-controlled documents is better resolved in the context of a concrete dispute, where all of the parties have a stake in the outcome of the litigation; CLI-13-10, 78 NRC 563 (2013)

subject to exceptions, the presiding officer must adhere to the schedule set forth in 10 C.F.R. Part 2, Appendix D; CLI-13-8, 78 NRC 219 (2013)

See also Abeyance of Proceeding; Closed Hearings; Combined License Proceedings; Consolidation of Proceedings; Delay of Proceeding; Demand for Hearing; Dismissal of Proceeding; Enforcement

ADMINISTRATIVE CONTROLS
licensee must implement managerial and administrative controls to ensure safe operation through implementation of the facility’s quality assurance program; DD-13-3, 78 NRC 571 (2013)
request that NRC modify the administrative controls section of the standard technical specifications for each operating reactor design to reference the approved EOP technical guidelines for that plant design is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

ADMINISTRATIVE DISPUTE RESOLUTION
NRC Staff cannot defend its decision on a basis inconsistent with its own informal review; LBP-14-2, 79 NRC 131 (2014)
NRC Staff may not take a position or assert facts before the presiding officer contrary to a matter decided by the appeal board (i.e., the Staff itself) on applicant’s informal appeal absent an explicit confession of error; LBP-14-2, 79 NRC 131 (2014)

ADMINISTRATIVE PROCEDURE ACT
“adversary adjudication” is defined as an adjudication under section 554 of the Administrative Procedure Act in which the position of the United States is represented by counsel or otherwise; LBP-11-8, 73 NRC 349 (2011)
attorneys’ fees may be awarded in adversary adjudications that are governed by Administrative Procedure Act § 554, but they may not be awarded in adversary adjudications that Congress did not subject to that section; LBP-11-8, 73 NRC 349 (2011)
Continued Storage Rule and supporting generic environmental impact statement to assess the environmental impacts of spent fuel storage after the end of a reactor’s license term were approved; CLI-15-10, 81 NRC 535 (2015)
each specific license expires at the end of the day on the expiration date stated in the license unless licensee has filed an application for renewal not less than 30 days before that expiration date; CLI-15-17, 82 NRC 33 (2015)
Equal Access to Justice Act does not apply when an agency merely voluntarily chooses to abide by formal Administrative Procedure Act § 554 procedures, despite lacking a statutory mandate to do so; LBP-11-8, 73 NRC 349 (2011)
federal agency would be acting arbitrarily and capriciously if it did not look at relevant data and sufficiently explain a rational nexus between the facts found in its review and the choice it makes as a result of that review; LBP-11-17, 74 NRC 11 (2011)
if NRC lacks sufficient information to reach an informed decision, then the agency has a duty to collect further information and conduct further analysis; CLI-13-1, 77 NRC 1 (2013)
in cases involving license suspension or revocation, where the Atomic Energy Commission’s staff is cast in an accusatory role, the precautions prescribed by the Administrative Procedure Act should be carefully observed; LBP-11-8, 73 NRC 349 (2011)
legislative history of the Act emphasized the notice requirement for proposed rulemaking in order to fairly apprise the public of the agency’s potential action; LBP-15-15, 81 NRC 598 (2015)
no more than a description of the subjects and issues involved in a notice of proposed rulemaking is required; LBP-15-15, 81 NRC 598 (2015)

person suffering legal wrong because of agency action, or adversely affected or aggrieved by agency action within the meaning of a relevant statute, is entitled to judicial review thereof; LBP-14-4, 79 NRC 319 (2014)
“preponderance of the evidence” standard is the one generally applied in proceedings under the APA; LBP-14-2, 79 NRC 131 (2014)
proponent of a rule or order has the burden of proof; LBP-15-2, 81 NRC 48 (2015)
“rule” is broadly defined to include nearly every statement an agency may make; LBP-15-15, 81 NRC 598 (2015)
suspension of a final decision indefinitely in an adjudicatory proceeding upon receipt of a claim of new and significant information runs counter to the goal of promoting fair and efficient resolution of disputes; CLI-14-7, 80 NRC 1 (2014)

when licensee has made timely and sufficient application for a renewal, a license with reference to an activity of a continuing nature does not expire until the application has been finally determined by the agency; LBP-15-2, 81 NRC 48 (2015); LBP-15-11, 81 NRC 401 (2015)

ADVISORY COMMITTEE ON REACTOR SAFEGUARDS

independent assessment by ACRS of the safety aspects of a combined license application is required; CLI-15-13, 81 NRC 555 (2015)

ADVISORY COUNCIL ON HISTORIC PRESERVATION

Council on Environmental Quality and the ACHP regulations provide guidance on agency compliance with NEPA and are not binding on NRC when the agency has not expressly adopted them, but are entitled to considerable deference; LBP-15-16, 81 NRC 618 (2015)

NRC must also allow this federal council a reasonable opportunity to comment with regard to a combined license; LBP-12-23, 76 NRC 445 (2012)

ADVISORY OPINIONS

Commission disfavors issuance of advisory opinions; CLI-13-10, 78 NRC 563 (2013); CLI-13-4, 77 NRC 101 (2013)

if a board were to adjudicate either the admissibility of a moot contention or the standing of a petitioner who sought to adjudicate a moot contention, it would be issuing an advisory opinion in derogation of Commission precedent; LBP-13-7, 77 NRC 307 (2013)

in view of the uncertainty surrounding the application at issue, the Commission is reluctant to engage in review when its opinion might constitute a mere academic exercise; CLI-13-4, 77 NRC 101 (2013)

AESTHETIC IMPACTS

aesthetic harms may amount to an injury in fact sufficient for standing; CLI-12-12, 75 NRC 603 (2012)

impacts of energy sources may vary according to individual location; LBP-11-4, 73 NRC 91 (2011)

light pollution is a matter of concern as a proposed nuclear materials facility undergoes agency licensing review; LBP-12-3, 75 NRC 164 (2012)

NRC must adequately consider impacts to visual and aesthetic resources in its NEPA review; LBP-12-3, 75 NRC 164 (2012)

statement of supporting facts or expert opinion to establish how the project would impair the visual resources, rather than mere speculation, is required for an admissible contention; LBP-12-3, 75 NRC 164 (2012)

visual impact of operation of a uranium enrichment facility on the quality of recreational experience is discussed; LBP-11-26, 74 NRC 499 (2011)

AFFIDAVITS

absence of a competent affidavit deprives the board of the ability or opportunity to substantively consider whether a materially different result would be obtained as is required by the regulatory reopening standards; LBP-11-23, 74 NRC 287 (2011)

all disclosures under section 2.336(c) must be accompanied by a certification in the form of a sworn affidavit that all relevant materials required by this section have been disclosed, and that the disclosures are accurate and complete as of the date of the certification; LBP-14-2, 79 NRC 131 (2014)

any request for a rule waiver or exception must be accompanied by an affidavit that identifies the subject matter of the proceeding as to which the application of the regulation would not serve the purposes for which the regulation was adopted, and the affidavit must state with particularity the special circumstances alleged to justify the waiver or exception requested; LBP-11-16, 73 NRC 645 (2011)

boards are in a better position than the Commission to consider any expert affidavit or affidavits that petitioner submits to support its motion to reopen; CLI-12-14, 75 NRC 692 (2012)

each of the criteria for reopening a record must be separately addressed in an affidavit, with a specific explanation of why it has been met; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-10, 75 NRC 479 (2012); LBP-11-35, 74 NRC 701 (2011); LBP-12-10, 75 NRC 633 (2012)

evidence in affidavits supporting a motion to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-12-3, 75 NRC 132 (2012); CLI-12-15, 75 NRC 704 (2012); LBP-15-14, 81 NRC 591 (2015)
evidence in affidavits supporting a motion to reopen must meet the admissibility standards, i.e., be relevant, material, and reliable; CLI-12-3, 75 NRC 132 (2012); LBP-11-23, 74 NRC 287 (2011); LBP-15-14, 81 NRC 591 (2015)

expert’s affidavit supporting a motion to reopen must supply the factual and legal foundation for assertions that the reopening criteria are satisfied; LBP-11-20, 74 NRC 65 (2011)

factual and/or technical bases for the claim that the reopening criteria have been met must address each of the criteria separately, with a specific explanation of why it has been met; LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011)

factual support is not necessary at the contention filing stage to show that a genuine dispute exists and need not be in affidavit or formal evidentiary form or of the quality necessary to withstand a summary disposition motion; LBP-15-11, 81 NRC 401 (2015)

failure of organization member to provide an exact address in her affidavit is not a limiting concern; LBP-15-17, 81 NRC 753 (2015)

for factual disputes, petitioner need not proffer facts in formal affidavit or evidentiary form, sufficient to withstand a summary disposition motion; LBP-12-18, 76 NRC 127 (2012)

licensing boards or presiding officers should not conduct a trial on affidavits; LBP-12-23, 76 NRC 445 (2012)

mere mention of the future filing of an affidavit does not satisfy the requirement of section 2.326(b); LBP-14-8, 79 NRC 519 (2014)

motion to admit a new contention must be supported by an affidavit that separately addresses each of the 2.326(a) criteria; LBP-14-8, 79 NRC 519 (2014)

motion to reopen will not be granted unless movant satisfies all three criteria in 10 C.F.R. 2.326(a) and the motion is accompanied by an affidavit that satisfies section 2.326(b); CLI-15-19, 82 NRC 151 (2015)

motions to reopen must be accompanied by affidavits that set forth the factual and/or technical bases for the movant’s claim that the criteria of 10 C.F.R. 2.326(a) have been satisfied; CLI-11-8, 74 NRC 214 (2011); CLI-12-3, 75 NRC 132 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-14, 75 NRC 692 (2012); CLI-12-15, 75 NRC 704 (2012); LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-10, 75 NRC 633 (2012); LBP-15-14, 81 NRC 591 (2015)

motions to reopen must be supported by affidavit, be timely, address a significant safety or environmental issue, and demonstrate that a materially different result would have been likely if the evidence had been available; LBP-14-8, 79 NRC 519 (2014)

motions to reopen shall set forth such facts as would be admissible in evidence and shall show affirmatively that the affiant is competent to testify to the matters stated therein; LBP-11-23, 74 NRC 287 (2011)

parties seeking a rule waiver must attach an affidavit that, among other things, states with particularity the special circumstances claimed to justify the waiver or exception requested; CLI-12-8, 75 NRC 352 (2012); LBP-14-16, 80 NRC 183 (2014)

person qualified to assert deliberative process privilege must be involved in the initial assertion of privilege; LBP-13-5, 77 NRC 233 (2013)

petitioner has some latitude to supplement or cure a standing showing in its reply pleading, but any additional arguments should be supported by either the declaration that accompanied the original hearing request or a supplemental affidavit; LBP-12-3, 75 NRC 164 (2012)

petitioner’s assertion that recriticality is demonstrated by the relative quantities of radionuclides released is not self-evident and is clearly of the class of statements that must be supported by expert opinion; LBP-11-23, 74 NRC 287 (2011)

petitioning member’s affidavit must be sufficiently specific to show frequent contact within 50 miles of the plant; LBP-15-17, 81 NRC 753 (2015)

protective order, and the good-faith representation and designation of documents as protected documents, serves in lieu of the requirement for marking and for an affidavit; LBP-11-5, 73 NRC 131 (2011)

qualified persons, such as head of a department or division, having both expertise and an overview-type perspective concerning the balance between the agency’s duty of disclosure versus its need to conduct frank internal debate must sign an affidavit asserting deliberative process privilege; LBP-13-5, 77 NRC 233 (2013)
rule waiver petitions must include an affidavit that states with particularity the special circumstances that justify waiver of the rule; CLI-13-7, 78 NRC 199 (2013); LBP-13-12, 78 NRC 239 (2013)
supporting affidavits must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-11-8, 74 NRC 214 (2011); LBP-11-35, 74 NRC 701 (2011)
to meet the waiver standard, the party seeking a waiver must attach an affidavit that, among other things, states with particularity the special circumstances claimed to justify the waiver or exception requested; CLI-11-11, 74 NRC 427 (2011)
to obtain waiver of a rule, the allegation of special circumstances must be set forth with particularity and supported by an affidavit or other proof; LBP-15-5, 81 NRC 249 (2015)

AGING MANAGEMENT
active components are not subject to an aging management review because existing regulatory programs, including required maintenance programs, can be expected to directly detect the effects of aging on active functions; CLI-15-6, 81 NRC 340 (2015); LBP-11-2, 73 NRC 28 (2011)
age-based safety review set out in Part 54 is analytically separate from Part 51’s environmental inquiry and does not in any sense restrict NEPA; LBP-11-17, 74 NRC 11 (2011)
age management review is required for components that function without moving parts and without a change in configuration or properties, and includes a non-exhaustive list of components that either do or do not fit this description; CLI-15-6, 81 NRC 340 (2015)
although commitment to implement an aging management plan consistent with the GALL Report is an acceptable method for compliance with 10 C.F.R. 54.21(c)(1)(iii), such a commitment does not absolve the applicant from demonstrating, prior to issuance of a renewed license, that the plan is indeed consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)

amendment to aging management plan extended the AMP for medium-voltage cables to also cover low-voltage cables; LBP-11-20, 74 NRC 65 (2011)
applicants must demonstrate how their programs will be effective in managing the effects of aging during the proposed period of extended operation, at a detailed component and structure level, rather than at a more generalized system level; LBP-11-21, 74 NRC 115 (2011)
applicants must demonstrate reasonable assurance that the effects of aging will be adequately managed so that the intended function(s) will be maintained consistent with the current licensing basis for the period of extended operation; CLI-12-5, 75 NRC 301 (2012)
applicants must demonstrate that they have programs in place that will effectively manage the effects of aging for specific types of structures and components during the period of extended operation; LBP-13-13, 78 NRC 246 (2013)
applicants must reassess any time-limited aging analyses to show either that the analyses will remain valid throughout the period of extended operation or that the effects of aging on the subject component will be managed during that time period; CLI-15-6, 81 NRC 340 (2015)
applications for renewal of an ISFSI license must describe the aging management plan for management of issues associated with aging that could adversely affect structures, systems, and components important to safety; LBP-12-24, 76 NRC 503 (2012)
assertion by applicant that its aging management plan is consistent with the GALL Report does not immunize it against a challenge to the AMP; CLI-12-5, 75 NRC 301 (2012)

attempts by petitioners to challenge aspects of an aging management plan that they could have challenged earlier were rejected; LBP-15-1, 81 NRC 15 (2015)
because petitioner has not shown how a proposed plan would fail to ensure that buried pipes continue to fulfill their intended safety purposes, the contention is inadmissible; LBP-15-5, 81 NRC 249 (2015)
boards compared transformers with other types of components listed in 10 C.F.R. 54.21(a)(1)(i) as expressly subject to or excluded from aging management review; CLI-15-6, 81 NRC 340 (2015)
buried pipelines, channels, and tanks that fall under aging management provide safety-related functions by maintaining adequate flow and pressure; LBP-11-2, 73 NRC 28 (2011)
by a preponderance of the evidence, applicant has provided reasonable assurance that the effects of aging on buried pipes that contain or may contain radioactive fluids can be adequately managed during the period of extended operation; LBP-13-13, 78 NRC 246 (2013)
cables important to safety must be designed to meet their intended function for the environment that they are subjected to and if cables have been exposed to conditions for which they are not designed,
licensees must demonstrate, through testing or monitoring, reasonable assurance that the cables can perform their intended design function for the licensed operating term; DD-13-2, 78 NRC 185 (2013) challenges to section 50.54(h)(2) are neither germane to age-related degradation nor unique to the license renewal period; LBP-11-21, 74 NRC 115 (2011) claims in a contention that did not genuinely stem from the specific amendments to the aging management plan or from particular information in the revised GALL Report were untimely under standards for admission of new or amended contentions; CLI-12-10, 75 NRC 479 (2012) Commission distinguishes between aging management issues, reviewed at the time of license renewal, and operational issues, reviewed at all times as part of the current licensing basis; LBP-15-5, 81 NRC 249 (2015) commitment to implement an aging management plan that NRC finds is consistent with the GALL Report constitutes one acceptable method for compliance, but does not insulate such an approach from challenge by an intervenor, and is not binding on a licensing board in an adjudication; LBP-11-2, 73 NRC 28 (2011); LBP-11-20, 74 NRC 65 (2011); LBP-13-13, 78 NRC 246 (2013) commitments in the updated final safety analysis report and aging management plan are legally binding as part of the current licensing basis throughout the period of extended operation and can only be changed through the section 50.59 process; LBP-13-13, 78 NRC 246 (2013) conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011) contention alleging that licensee had a repeated pattern of violations which could undermine its ability to manage aging during the period of extended operations is not within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013) contention that applicant had inadequately described aging management plan by relying on a promise of compliance with NRC orders instead of describing the plan is admissible; LBP-15-24, 82 NRC 68 (2015) contention that ice condenser containments lack acceptable AMPs to adequately maintain critical components of the ice condenser containment for 20 years of additional operation is inadmissible; LBP-13-8, 78 NRC 1 (2013) contention that offers no explanation of how its assertions are directly relevant to applicant’s ability to manage the effects of aging during the renewal term is inadmissible; LBP-13-8, 78 NRC 1 (2013) critical aspects of an aging management plan such as a commitment for buried pipes can be captured in the updated final safety analysis report supplement; LBP-13-13, 78 NRC 246 (2013) each reactor license renewal application must contain a list of structures and components subject to aging management review; LBP-13-13, 78 NRC 246 (2013) effects of aging must be adequately managed so that intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-15-6, 81 NRC 314 (2015) emergency planning is neither germane to age-related degradation nor unique to the period covered by a license renewal application; LBP-11-35, 74 NRC 701 (2011) existing regulatory programs can be expected to directly detect the effects of aging on active functions; CLI-12-5, 75 NRC 301 (2012) focus of the license renewal regulations in 10 C.F.R. Part 54 is to ensure that licensee can manage the effects of aging on certain long-lived, passive components that are important to safety; CLI-15-6, 81 NRC 340 (2015) for license renewal, there must be reasonable assurance that applicant will manage the effects of aging on certain structures and components during extended operation; LBP-11-2, 73 NRC 28 (2011) goal of NRC’s license renewal safety review is to ensure that licensee can successfully manage the detrimental effects of aging; CLI-15-6, 81 NRC 340 (2015) if applicant uses a method other than that identified in NUREG-1801, Generic Aging Lessons Learned Report, for managing effects of aging at its plant, then applicant should demonstrate to NRC Staff reviewers that its program includes the ten elements cited in the GALL Report and will likewise be effective; LBP-13-13, 78 NRC 246 (2013) illustrative list of structures and components that are subject to an aging management review is provided in 10 C.F.R. 54.21(a)(1)(i); CLI-12-5, 75 NRC 301 (2012)
incorporation by reference of the applicable section of the GALL Report is permissible, but applicant must also provide sufficient plant-specific information to demonstrate that its aging management plan will be designed and implemented consistent with the report; LBP-13-13, 78 NRC 246 (2013)

inspection reports could be seen as objective evidence that applicant may not adequately manage aging in the future; CLI-11-11, 74 NRC 427 (2011)

integrated plant assessment must demonstrate that effects of aging for each structure and component will be managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 340 (2015); LBP-13-13, 78 NRC 246 (2013)

intervenors must point to the specific ways in which the shield building monitoring aging management plan is wrong or inadequate to raise a genuine dispute with applicant’s license renewal application; LBP-12-27, 76 NRC 583 (2012)

intervenors’ challenge to the aging management plan must consist of more than allegations that the AMP is deficient, but rather must point to specific ways the AMP is inadequate or wrong; LBP-12-27, 76 NRC 583 (2012)

intervenors’ requests for more testing, more methods of testing, and more information, without an explanation of why the current program is inadequate, do not create a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)

it is not necessary or appropriate to throw open the full gamut of provisions in a facility’s current licensing basis to reanalysis during the license renewal review, because the current licensing basis is effectively addressed and maintained by ongoing agency oversight, review, and enforcement; LBP-12-24, 76 NRC 503 (2012)

it makes no sense to spend the parties’ and NRC’s own valuable resources litigating allegations of current deficiencies in a proceeding that is directed to future-oriented issues of aging; LBP-15-6, 81 NRC 314 (2015)

key functions of buried structures, systems, and components that are the focus of the license renewal safety review under Part 54 do not include the prevention of inadvertent radioactive leaks from buried structures; LBP-11-2, 73 NRC 28 (2011)

later revisions to license renewal application that bring the plant into compliance with GALL-2 have generally been deemed acceptable; LBP-13-13, 78 NRC 246 (2013)

license renewal applicant is compelled to implement safety-related severe accident mitigation alternatives that deal with aging management; LBP-11-17, 74 NRC 11 (2011)

license renewal applicant is required to list structures and components subject to an aging management review; LBP-13-8, 78 NRC 1 (2013)

license renewal applicant must perform an integrated plant assessment to identify structures and components that are subject to aging management review; CLI-15-6, 81 NRC 340 (2015)

license renewal applicant must present an aging management plan with sufficient information that NRC will be able to draw its own independent conclusion as to whether the applicant’s programs are in fact consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)

license renewal applicant must provide a general description of the corporate-wide and plant-specific procedures sufficient to show that the ten elemental attributes of GALL have been addressed so as to demonstrate that the effects of aging on buried pipes will be adequately managed throughout the period of extended operation; LBP-13-13, 78 NRC 246 (2013)

license renewal applicant’s use of an aging management program identified in NUREG-1801, Generic Aging Lessons Learned Report, constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; LBP-13-13, 78 NRC 246 (2013)

license renewal applicants’ use of any aging management program identified in the GALL Report constitutes reasonable assurance that it will manage the targeted aging effect during the renewal period; CLI-12-5, 75 NRC 301 (2012); CLI-12-10, 75 NRC 479 (2012)
license renewal application must demonstrate that licensee will adequately manage effects of aging on passive, long-lived components so that their intended functions will be maintained consistent with the current licensing basis for the period of extended operation; CLI-15-6, 81 NRC 340 (2015)

license renewal applications must include an integrated plant assessment demonstrating that effects of aging on plant systems, structures, and components will be adequately managed so that the intended functions will be maintained consistent with the current licensing basis for the period of extended operation; LBP-13-8, 78 NRC 1 (2013)

license renewal regulations serve exactly their intended purpose by focusing the proceeding on future-oriented aging issues; CLI-15-21, 82 NRC 295 (2015)

license renewal review is a limited one, focused on aging management issues; CLI-11-5, 74 NRC 141 (2011)

license renewal safety review and any associated license renewal adjudicatory proceeding focus on the detrimental effects of aging posed by long-term reactor operation; CLI-12-5, 75 NRC 301 (2012)

license renewal safety review is limited to the matters specified in 10 C.F.R. Part 54, which focus on the management of aging for certain systems, structures, and components, and the review of time-limited aging analyses; LBP-11-21, 74 NRC 115 (2011)

license renewal safety reviews are generally limited to aging-related issues because NRC recognizes that it has the ongoing responsibility to oversee the safety and security of operating nuclear reactors, and maintains an aggressive and ongoing program to oversee plant operation; LBP-13-13, 78 NRC 246 (2013)

licensee commitment to develop a program by the time the 20-year extension begins does not demonstrate that the effects of aging will be adequately managed; LBP-15-1, 81 NRC 15 (2015)

licensees must assess the condition of their components, monitor performance of structures, systems, and components to ensure that they can of fulfill their intended functions, and establish a suitable test program to demonstrate that components will perform satisfactorily in service; DD-13-2, 78 NRC 185 (2013)

limited scope of the intended functions of structures, systems, and components subject to aging management review is described in 10 C.F.R. 54.4(b); CLI-12-5, 75 NRC 301 (2012)

many safety questions that relate to plant aging become important during the extended renewal term since the design of some components may have been based upon a service lifetime of only 40 years; LBP-11-21, 74 NRC 115 (2011)

merely fact that the intended function of transformers is being monitored in accordance with the current licensing basis does not exempt them from needing to be included in an aging management review program for license renewal; LBP-13-13, 78 NRC 246 (2013)

narrow and specific contention that alleges facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; CLI-11-11, 74 NRC 427 (2011)

NEPA review in license renewal proceedings is not limited to aging management-related issues; LBP-11-17, 74 NRC 11 (2011)

NRC Staff must draw its own independent conclusion as to whether applicant’s programs are in fact consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)

NRC Staff’s obligations under Part 51 and NEPA are not limited to only those severe accident mitigation alternatives that address aging management; LBP-11-17, 74 NRC 11 (2011)

NRC’s license renewal process concerns a particularized and limited inquiry into the potential impacts of an additional 20 years of nuclear power plant operation, not day-to-day operational issues; LBP-11-21, 74 NRC 115 (2011)

only structures and components with active functions that are readily monitorable are excluded from aging management review; LBP-13-13, 78 NRC 246 (2013)

operating license may be renewed if NRC finds, among other things, that actions have been identified and have been or will be taken to manage the effects of aging during the period of extended operation on the functionality of certain identified structures and components; CLI-11-11, 74 NRC 427 (2011)
passive systems, structures, and components are subject to an aging management review only if they are long-lived, that is, not subject to replacement based on a qualified life or specified time period; LBP-13-13, 78 NRC 246 (2013)

petitioners have the burden of going forward, which requires them to provide factual allegations or expert testimony to show a potential deficiency in applicant’s aging management plan; LBP-15-5, 81 NRC 249 (2015)

plant systems, structures, and components within the scope of license renewal are all non-safety-related SSCs whose failure could prevent the capability to shut down the reactor and maintain it in a safe shutdown condition; LBP-15-6, 81 NRC 314 (2015)

“reasonable assurance” standard for aging management programs does not require a 95% confidence level of compliance; LBP-11-18, 74 NRC 29 (2011)

reference to an aging management plan in the GALL Report does not insulate that program from challenge in litigation; LBP-11-2, 73 NRC 28 (2011); LBP-13-13, 78 NRC 246 (2013)

review consists of identifying the aging effects, and whether the aging management plans will manage aging effects and demonstrate that passive, long-lived structures, systems, and components will perform their intended functions during the period of extended operation; LBP-13-13, 78 NRC 246 (2013)

review only covers systems, structures, and components, that perform their intended function without moving parts or without a change in configuration or properties; LBP-13-13, 78 NRC 246 (2013)

safety contention challenging aging management of electrical transformers is decided; LBP-13-13, 78 NRC 246 (2013)

safety contentions challenging aging management of non-environmentally qualified inaccessible medium-voltage cables and wiring are decided; LBP-13-13, 78 NRC 246 (2013)

scope of a license renewal safety review is limited to plant structures and components that will require an aging management review for the period of extended operation and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; LBP-15-6, 81 NRC 314 (2015)

statements in the license renewal application promising to develop and implement an aging management plan that would be consistent with the NRC guidance document applicable at the time the application was submitted is insufficient; LBP-13-13, 78 NRC 246 (2013)

static components such as transistors and battery chargers are specifically excluded from aging management review; CLI-15-6, 81 NRC 340 (2015)

structures and components are subject to aging management review if they are not subject to routine replacement; CLI-15-6, 81 NRC 340 (2015)

structures and components are subject to aging management review if they perform an intended function without moving parts or without a change in configuration or properties; CLI-15-6, 81 NRC 340 (2015); LBP-11-2, 73 NRC 28 (2011)

structures and components associated only with active functions can be generically excluded from a license renewal aging management review; CLI-12-5, 75 NRC 301 (2012)

structures and components considered passive and designated as subject to aging management review are listed in 10 C.F.R. 54.21(a)(1)(i); LBP-13-13, 78 NRC 246 (2013)

structures and components subject to aging management review include those that perform an intended function, as described in section 54.4; LBP-13-13, 78 NRC 246 (2013)

structures, systems, and components are passive if they perform their intended function without moving parts or without a change in configuration or properties and the effects of aging degradation for these components are not readily monitorable; LBP-13-13, 78 NRC 246 (2013)

sufficiency of an aging management program that meets the GALL Report’s recommendations can be challenged if the contention admissibility requirements are otherwise met; CLI-12-10, 75 NRC 479 (2012)

there was no prejudice to intervenor where the board considered licensee’s supplement to the application, which contained the updated aging management plan, because intervenor could have sought to amend its contention to respond to the supplement; CLI-12-10, 75 NRC 479 (2012)

to evaluate an operating license renewal application, the NRC reviews the management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the
proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)
to grant a license renewal, NRC Staff must find that there is reasonable assurance that the effects of aging on relevant systems, structures, and components will be managed during the period of extended operation, that time-limited aging analyses have been identified for review, and that applicable environmental requirements have been met; LBP-15-6, 81 NRC 314 (2015)
transformer is an active component because it undergoes a change in properties when it performs its intended function; CLI-15-6, 81 NRC 340 (2015)
transformers perform their intended function through a change in state similar to switchgear, power supplies, battery chargers, and power inverters, which have been excluded from an aging management review; CLI-12-5, 75 NRC 301 (2012); CLI-15-6, 81 NRC 340 (2015); LBP-13-13, 78 NRC 246 (2013)
variety of electrical and instrumentation and control components are excluded from an aging management review for license renewal; CLI-12-5, 75 NRC 301 (2012)
whether petitioners have adequately raised an issue as to whether transformers constitute active or passive components survived a motion for summary disposition; LBP-11-2, 73 NRC 28 (2011)
See also Time Limited Aging Analyses
AGREEMENT STATE PROGRAMS
because New Jersey has adopted more stringent criteria for license termination under restricted release than for unrestricted release, as well as more conservative criteria than NRC’s, New Jersey’s regulations are compatible with NRC’s agreement-state policy; CLI-13-6, 78 NRC 155 (2013)
Criterion 25 of NRC’s policy statement does not relate to substantive standards or the regulatory outcome of a pending license application, even where a license application has been pending at the NRC for an extended period; CLI-11-12, 74 NRC 460 (2011)
if a regulated entity believes that a state’s program, as implemented, is unlawful or contrary to public health and safety, it may raise its agreement-state performance concerns with NRC; CLI-11-12, 74 NRC 460 (2011)
litigation at NRC had actually reached the point of NRC approval of an onsite plan at the time of the transfer of authority to an agreement state; CLI-11-12, 74 NRC 460 (2011)
mandatory language used in Atomic Energy Act § 274d is construed as requiring NRC to enter into an agreement for state regulation of the particular categories of nuclear materials that a state certifies it both desires to regulate and has established a program for, provided NRC finds the state’s program to be adequate and compatible; CLI-11-12, 74 NRC 460 (2011)
New Jersey’s license termination regulations are not less protective than or incompatible with NRC’s in making the terms of restricted release considerably more difficult than those for unrestricted release; CLI-11-12, 74 NRC 460 (2011)
NRC addresses agreement-state performance concerns through its Integrated Materials Performance Evaluation Program process or through an independent agreement-state performance concern evaluation, depending on the performance concern raised; CLI-11-12, 74 NRC 460 (2011)
NRC is authorized to enter into an agreement with the governor of any state if it finds that the state’s regulatory program is adequate to protect the public health and safety with respect to the materials the state seeks to regulate and is compatible with NRC’s program for regulation of such materials; CLI-11-12, 74 NRC 460 (2011); CLI-13-6, 78 NRC 155 (2013)
NRC is authorized to enter into an agreement with the governor of any state providing for transfer of regulatory authority to the state over specified categories of nuclear material; CLI-11-12, 74 NRC 460 (2011)
NRC is not permitted to retain jurisdiction over a site at a licensee’s request where the state seeks to assume regulatory authority over the site and meets the “adequacy” and “compatibility” criteria; CLI-13-6, 78 NRC 155 (2013)
NRC may not, over the objections of a state desiring jurisdiction and for reasons other than health and safety or compatibility, retain regulatory authority over pending applications involving a nuclear materials category otherwise transferred to a state; CLI-11-12, 74 NRC 460 (2011)
NRC retains power under AEA § 274j to revoke agreements with states and to restore NRC regulatory authority; CLI-11-12, 74 NRC 460 (2011)
SUBJECT INDEX

NRC’s transfer of regulatory authority to the State of New Jersey is now final and the licensing board no longer has the jurisdiction it had retained over the proceeding, and the board terminates the proceeding; LBP-15-10, 81 NRC 399 (2015)
purpose of Criterion 25 of NRC’s policy statement is to ensure that licensing records are transferred to and received by the new agreement state in an orderly manner that ensures that no pending licensing actions will be significantly delayed or that no records will be lost or misplaced as a result of the transition of authority; CLI-11-12, 74 NRC 460 (2011)
state requests for limited agreements will be considered by NRC only if the state can identify discrete categories of material or classes of licensed activity that can be reserved to NRC authority without undue confusion to the regulated community or burden to NRC resources and can be applied logically and consistently to existing and future licensees over time; CLI-11-12, 74 NRC 460 (2011)
state’s regulations are not inherently unfair because they may be designed to effectuate a state-desired regulatory outcome; CLI-11-12, 74 NRC 460 (2011)

AGREEMENT STATES
states should be provided with flexibility in program implementation to accommodate individual state preferences, state legislative direction, and local needs and conditions, including the flexibility to incorporate more stringent, or similar, requirements; CLI-11-12, 74 NRC 460 (2011)

AGREEMENTS
arrangements for requesting and effectively using assistance resources should be identified and supported by appropriate letters of agreement; LBP-15-18, 81 NRC 793 (2015)
Great Lakes Compact Agreement binds and imposes certain obligations on its member states, not on other governmental agencies or on utility companies; LBP-12-12, 75 NRC 742 (2012)
licensees and vendors are expected to adhere to any obligations and commitments addressed in confirmatory action letters that NRC Staff issues to licensees or vendors to emphasize and confirm a licensee’s or vendor’s agreement to take certain actions in response to specific issues; DD-12-2, 76 NRC 391 (2012)
Pentapartite Agreement between the United States and four European governments to prevent new restricted data from being disseminated to European nationals will be a prerequisite to the NRC Staff issuing a facility clearance; LBP-11-11, 73 NRC 455 (2011)
programmatic agreement may be used to implement the NHPA § 106 process in situations where the effects on historic properties cannot be fully determined prior to approval of an undertaking, such as where an applicant proposes a phased approach to developing its project; LBP-15-16, 81 NRC 618 (2015)
See also Nondisclosure Agreements; Settlement Agreements

AIR POLLUTION
AERMOD model for demonstrating compliance with EPA regulations and for state air quality protection planning is discussed; LBP-11-26, 74 NRC 499 (2011)
air quality impacts of particulate matter are discussed; LBP-11-26, 74 NRC 499 (2011)
contention that draft environmental impact statement fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as untimely; LBP-15-11, 81 NRC 401 (2015)
contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 401 (2015)
EPA also has granted authority to some states to implement, maintain, and enforce their own EPA-compliant air quality programs through State Ambient Air Quality Standards; LBP-11-26, 74 NRC 499 (2011)
EPA’s National Ambient Air Quality Standards set maximum levels for air pollutants in the ambient air deemed to provide protection for human health and welfare; LBP-11-26, 74 NRC 499 (2011)
failure to show the final supplemental environmental impact statement’s air emissions data represent new or materially different information renders a new contention inadmissible; LBP-14-5, 79 NRC 377 (2014)

699
in parallel with NRC Staff’s role under NEPA to assess environmental impacts, the Environmental Protection Agency possesses authority under the Clean Air Act to set numerical standards for air pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)
NRC Staff assesses air quality impacts as a matter of course, categorizing them as small, medium, or large; LBP-11-26, 74 NRC 499 (2011)
prediction of air dispersion based on defined parameters in the planetary boundary layer is discussed; LBP-11-26, 74 NRC 499 (2011)
source permit is an operating permit that the Clean Air Act requires major stationary sources of air pollution to obtain; LBP-11-13, 73 NRC 534 (2011)
surface roughness, albedo, and Bowen ratio inputs to the AERMOD model are discussed; LBP-11-26, 74 NRC 499 (2011)

ALARA
combined license application must identify the means for keeping levels of radioactive material in effluents to unrestricted areas as low as is reasonably achievable; LBP-11-6, 73 NRC 149 (2011)
dose limits for individual members of the public are 100 millirem in a year; DD-11-3, 73 NRC 375 (2011)
every reasonable effort must be made to maintain exposures to radiation as far below the dose limits in Part 20 as is practical consistent with the purpose for which the licensed activity is undertaken; CLI-11-12, 74 NRC 460 (2011)

ISFSI licensees must limit releases of radioactive materials to as low as is reasonably achievable, and establish operational limits to prevent doses to the public that exceed the limits of 10 C.F.R. 72.104(a)-(c); LBP-12-24, 76 NRC 503 (2012)
NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater remains well below the dose objectives; DD-11-1, 73 NRC 7 (2011)
radiation protection requirements with which licensees must comply, such as procedures and controls to reduce occupational doses and doses to members of the public to levels that are as low as reasonably achievable, are outlined in 10 C.F.R. 20.1101(b); LBP-12-4, 75 NRC 213 (2012)
requirement in section 20.1101(b) applies to the dose criteria for license termination; CLI-11-12, 74 NRC 460 (2011)
to have an alternate concentration limit approved, licensee must demonstrate that the hazardous constituent value is as low as reasonably achievable, after considering practicable corrective actions, and that the constituent will not pose a substantial present or potential hazard to human health or the environment as long as the ACL is not exceeded; LBP-15-3, 81 NRC 65 (2015)

ALARA PRINCIPLE
as used in NRC regulations, ALARA does not mean as low as achievable as a comparison between achievable doses, but rather as low as reasonably achievable below the dose limits; CLI-11-12, 74 NRC 460 (2011)
either as a general regulatory principle or as used in NRC’s license termination rule, the principle does not incorporate or call for any comparative analysis of doses from restricted and unrestricted release; CLI-11-12, 74 NRC 460 (2011)
nothing in NRC license termination regulations, including the ALARA principle incorporated into section 20.1403(a), calls for a comparison of doses of the restricted-release and unrestricted-release decommissioning options; CLI-13-6, 78 NRC 155 (2013)
principle has been incorporated into the restricted-use portion of the license termination rule to screen out sites that should be removing contamination to achieve unrestricted use; CLI-11-12, 74 NRC 460 (2011)
section 20.1403(a) calls for a licensee seeking to use restricted release to analyze whether it would be cost-beneficial to remove enough radioactive contamination from the site that doses to the public are no higher than 25 mrem per year without reliance on restricted-release controls; CLI-13-6, 78 NRC 155 (2013)
sites will be considered acceptable for license termination under restricted conditions if licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of section 20.1402 would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA; CLI-13-6, 78 NRC 155 (2013)
small doses of radiation below dose limits, while safe and acceptable, may have some associated risk and should be reduced below limits when reasonable; CLI-11-12, 74 NRC 460 (2011)
**SUBJECT INDEX**

**ALARM SYSTEMS**
applicant’s preliminary material control and accounting program satisfactorily demonstrates the ability to resolve the nature and cause of any MC&A alarm within approved time periods in each of the four storage areas at issue; LBP-14-1, 79 NRC 39 (2014)
applicants applying to possess 5 or more formula kilograms of SSNM must maintain alarm resolution capabilities designed to achieve the performance objectives of section 74.51(a); LBP-14-1, 79 NRC 39 (2014)
capability to resolve alarms within approved time periods is most clearly aimed at the prompt investigation of anomalies potentially indicative of SSNM losses; LBP-14-1, 79 NRC 39 (2014)
if applicant decides to remove a method from the approved list of alarm resolution methods, it would have to follow the prescribed change process or the license amendment process; LBP-14-1, 79 NRC 39 (2014)
licensees shall resolve the nature and cause of any MC&A alarm within approved time periods; LBP-14-1, 79 NRC 39 (2014)
material control and accounting alarms are not required to be resolved within any particular time frame, only that a time period be approved by NRC Staff; LBP-14-1, 79 NRC 39 (2014)
NRC must be notified within 24 hours of failure to resolve an alarm within the approved time period; LBP-14-1, 79 NRC 39 (2014)

**ALGAL BLOOMS**
contention that environmental report failed to explain whether a discharge pipe with phosphoric acid as a corrosion inhibitor would increase algae production and potential for toxic algal blooms is admissible; LBP-15-5, 81 NRC 249 (2015)
contention that NRC Staff’s environmental assessment fails to consider that applicant’s use of copper sulfate to control algae blooms will increase reactor operating temperatures in relation to waste is inadmissible; LBP-15-13, 81 NRC 456 (2015)
harmful algae blooms from *Lyngbya wollei* are unlikely to form in unsheltered areas; LBP-15-5, 81 NRC 249 (2015)

**ALTERNATE CONCENTRATION LIMITS**
admissibility of contention that environmental assessment fails to adequately describe and analyze aquifer restoration goals in light of new standards for determining ACLs is decided; LBP-15-15, 81 NRC 598 (2015)
applicant’s use of ACLs is a legal right; LBP-13-9, 78 NRC 37 (2013)
bounding analysis provided in final supplemental environmental impact statement, as supplemented in the record, provides sufficient information about a reasonable range of hazardous constituent concentration values associated with potential post-operational ACLs so as to provide an appropriate NEPA assessment of the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits; LBP-15-3, 81 NRC 65 (2015)
challenge to use of ACL is an impermissible challenge to an NRC regulation, which is not subject to attack in any adjudicatory proceeding; LBP-15-11, 81 NRC 401 (2015)
claim that ACL could not be accurately generated until the post-operational decommissioning process did not account for the possible creation of a bounding analysis based on the historical experience at other ISR sites; LBP-13-10, 78 NRC 117 (2013)
contention asserting that because no previous ISL/ISR mining operation has been able to restore groundwater to baseline standards, applicant will be required to request that the Commission set an alternate concentration limit for aqueous contaminants is admissible; LBP-12-3, 75 NRC 164 (2012)
nineteen factors must be considered in making the “present and potential hazard” finding requisite to Commission approval of an ACL; LBP-15-3, 81 NRC 65 (2015)
NRC regulations explicitly allow the use of ACLs for hazardous constituents; LBP-15-11, 81 NRC 401 (2015)
purpose of ACLs is to address situations where restoring groundwater to baseline conditions or MCLs would not be practicable; LBP-13-9, 78 NRC 37 (2013)
restoration to an ACL is permitted only when restoration to a primary or the secondary Table 5C standard is not practically achievable; LBP-15-3, 81 NRC 65 (2015)
three alternative standards for groundwater restoration at ISR facilities are background concentrations, maximum values from chart 5C, or an ACL; LBP-13-9, 78 NRC 37 (2013)
to have an ACL approved, licensee must demonstrate that the hazardous constituent value is as low as reasonably achievable, after considering practicable corrective actions, and that the constituent will not pose a substantial present or potential hazard to human health or the environment as long as the ACL is not exceeded; LBP-15-3, 81 NRC 65 (2015)

AMENDMENT
board authority under section 2.338(i) is to approve or reject a settlement agreement, and so it cannot amend the agreement without consent of the parties; LBP-15-21, 82 NRC 1 (2015)

if NRC Staff detects deficiencies in an application before or after a notice of hearing opportunity is issued, the applicant will freely be given (outside the adjudicatory process) ample opportunity to amend it; LBP-11-9, 73 NRC 391 (2011)

permitting an application to be modified or improved throughout the NRC’s review is compatible with the dynamic licensing process followed in Commission licensing proceedings; CLI-11-2, 73 NRC 333 (2011)

See also Operating License Amendments

AMENDMENT OF CONTENTIONS
after the section 2.309(b) deadline has passed for submitting an initial hearing petition with one or more accompanying contentions, petitioner/intervenor who wishes to amend an already submitted or admitted contention or gain admission of a new contention must file a motion for leave to file such a new or amended contention; LBP-13-10, 78 NRC 117 (2013)

amended contentions filed after the initial filing period has expired may be admitted only with leave of the licensing board if they satisfy the three criteria of 10 C.F.R. 2.309(f)(2)(i)-(iii); LBP-12-9, 75 NRC 615 (2012)

amended contentions must satisfy general contention admissibility criteria and either the timeliness standards of section 2.309(f)(2) or the balancing test in section 2.309(c) for nontimely contentions; LBP-12-9, 75 NRC 615 (2012)

amendment or supplement to a contention is considered timely if filed within 60 days of the date when the material information on which it is based first becomes available to the moving party through service, publication, or any other means; LBP-12-27, 76 NRC 583 (2012)

applicants may not amend their contentions on appeal; CLI-11-8, 74 NRC 214 (2011)

applicant’s change of legal position, its claims that such change no longer entails a need for an exemption from the regulations, and its identification of new means/systems to satisfy the regulations are all types of materially new information that can enable a contention to satisfy the timely new or amended contention requirements of 10 C.F.R. 2.309(f)(2)(i)-(ii); LBP-11-9, 73 NRC 391 (2011)

by filing proposed new or amended contention within the time specified in the initial scheduling order, petitioner satisfies timeliness requirements but would still have to satisfy the other requirements of section 2.309(f)(2) or the requirements of section 2.309(c), as well as the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); LBP-11-22, 74 NRC 259 (2011)

contention contesting applicant’s environmental report generally may be viewed as a challenge to NRC Staff’s subsequent draft environmental impact statement, but new claims must be raised in a new or amended contention; LBP-14-5, 79 NRC 377 (2014)

degree to which new/amended contentions will be considered timely submitted is generally defined by the presiding officer as a specific period following the triggering event that makes the previously unavailable/materially different information available so as to be the basis for the new/amended contention; LBP-13-10, 78 NRC 117 (2013)

eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)

filing of amended or new contentions is permitted only with leave of the board and upon a showing that it is based on information not previously available and materially different and the filing is timely; LBP-12-13, 75 NRC 784 (2012)

if a contention is rendered moot by information supplied by applicant or considered by Staff in a draft EIS, the party that filed the original contention of omission must file a new or amended contention if it wishes to challenge the adequacy or sufficiency of the NRC Staff’s treatment of the relevant issue; LBP-13-9, 78 NRC 37 (2013)
if a motion for summary disposition is granted, then the party that filed the original contention of
omission must file a new or amended contention if it wishes to challenge the adequacy or sufficiency
of NRC Staff’s treatment of the relevant issue; LBP-14-5, 79 NRC 377 (2014)
if intervenors make reference to new material in the final supplemental environmental impact statement
but do not address the six elements of 10 C.F.R. 2.309(f)(1), such references to new material do not
give rise to either a new or an amended contention; LBP-14-5, 79 NRC 377 (2014)
if the reason that a motion to admit a new or amended contention was filed after the deadline does not
relate to the substance of the filing itself, the standard in 10 C.F.R. 2.307 applies in determining
whether the motion can be considered timely; LBP-13-9, 78 NRC 37 (2013)
infom if applicant contends that NRC’s requirements for self-guarantors are not useful or relevant in
evaluating the financial condition of numerous similarly situated corporations, applicant may petition
NRC to amend its rules at any time; LBP-12-6, 75 NRC 256 (2012)
intervenor attempting to litigate an issue based on expressed concerns about the draft environmental
impact statement may need to amend the admitted contention or submit a new contention if the
information in the DEIS is sufficiently different from the information in the environmental report that
supported the original contention’s admission; LBP-13-9, 78 NRC 37 (2013)
intervenor is not free to change the focus of its admitted contention, at will, as the litigation progresses;
LBP-11-38, 74 NRC 817 (2011)
intervenor may need to amend an admitted environmental contention based on applicant’s environmental
report, or file a new contention altogether, challenging Staff’s draft environmental impact statement;
LBP-12-12, 75 NRC 742 (2012)
intervenor may propose new or amended contentions based on data or conclusions in the NRC draft or
final environmental impact statement, environmental assessment, or any supplements relating thereto,
that differ significantly from the data or conclusions in the applicant’s environmental documents;
LBP-11-1, 73 NRC 19 (2011); LBP-11-6, 73 NRC 149 (2011); LBP-11-7, 73 NRC 254 (2011)
intervenors and potential intervenors have a period of time to file new or amended contentions in
response to a draft environmental impact statement; LBP-13-9, 78 NRC 37 (2013)
intervenors may file new or amended contentions in response to the draft environmental impact statement
if they can satisfy the test of 10 C.F.R. 2.309(f)(2)(i)-(iii); LBP-12-12, 75 NRC 742 (2012)
new claims cannot be raised for the first time on appeal; CLI-12-1, 75 NRC 39 (2012)
new or amended contention is considered timely if it is filed within 60 days of the date when the
material information first became available to the moving party through service, publication, or any
other means; LBP-15-1, 81 NRC 15 (2015)
new or amended contentions may be filed after the deadline for requests for hearing and petitions to
intervene if they satisfy the requirements of 10 C.F.R. 2.309(f)(2); LBP-12-12, 75 NRC 742 (2012)
new or amended contentions must be based on information not previously available and materially
different from previously available information and be submitted in a timely fashion based on the
availability of the subsequent information; LBP-14-6, 79 NRC 404 (2014)
new or amended contentions must satisfy the substantive contention admissibility standards, and failure to
meet any of them renders contentions inadmissible; LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81
NRC 598 (2015)
newly proffered contention must satisfy either the timeliness standards in 10 C.F.R. 2.309(f)(2) or the
standards in 10 C.F.R. 2.309(c)(1) for newly proffered non timely contentions, and the contention
admissibility standards in 10 C.F.R. 2.309(f)(1); LBP-11-15, 73 NRC 629 (2011)
NRC preserves the right to a hearing when an application is amended by allowing new or amended
contentions to be filed in response to material new information; LBP-11-22, 74 NRC 259 (2011)
NRC proceedings would prove unmanageable and unfair to other parties if intervenor could freely change
admitted contentions at will as litigation progresses; CLI-12-1, 75 NRC 39 (2012)
NRC rules contain ample provisions through which litigants may seek admission of new or amended
contentions; CLI-12-13, 75 NRC 681 (2012)

once the deadline for filing petitions to intervene has passed, a party may file new or amended
contentions if it is able to demonstrate good cause by meeting three requirements; LBP-15-1, 81 NRC
15 (2015)

petitioner may amend its contentions or file new contentions if there are data or conclusions in the NRC
draft or final environmental impact statement or any supplements thereto, that differ significantly from
the data or conclusions in applicant’s documents; LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC
685 (2011)

petitioner may amend NEPA contentions or file new NEPA contentions if there are data or conclusions in
the NRC draft or final environmental impact statement, environmental assessment, or any supplements
relating thereto, that differ significantly from the data or conclusions in the applicant’s documents;
LBP-12-12, 75 NRC 742 (2012)

petitioner or intervenor may file timely new or amended contentions, with leave of the board, if three
requirements are met; LBP-11-9, 73 NRC 391 (2011)

proponents of new or amended contentions are required to demonstrate good cause for their filing, which
includes a demonstration that the information on which the new or amended contention is based is
materially different from information previously available; CLI-15-1, 81 NRC 1 (2015)

proposed new or amended contentions shall be deemed timely if filed within 60 days of the date when
the document containing the new and material information first becomes available; LBP-12-12, 75 NRC
742 (2012)

reply briefs cannot be used to present entirely new facts or arguments in an attempt to reinvigorate thinly
supported contentions; LBP-11-34, 74 NRC 685 (2011)

request to admit a new or amended contention requires petitioner to show that the information upon
which it is based was not previously available and is materially different from information previously
available; CLI-14-2, 79 NRC 11 (2014)

revised rules no longer require leave from the presiding officer to amend a contention or file a new
contentions; LBP-12-27, 76 NRC 583 (2012)

seismic hazard reevaluations of all nuclear power reactors are not de facto license amendments;

should NRC Staff provide a different analysis in its draft environmental impact statement, there will be
ample opportunity to either amend or dispose of a contention challenging the environmental report;
CLI-12-13, 75 NRC 681 (2012)

significant change in the nature of the purported NEPA imperfection, from one focusing on
comprehensive information omission to one centered on a deficient analysis of subsequently supplied
information, warrants issue modification by the complaining party because otherwise, absent any new
pleading, the other parties would be left to speculate whether the concerns first expressed had been
satisfied by the new information; LBP-12-25, 75 NRC 227 (2012)

standard for admission of new or amended contentions involves a balancing of eight factors; CLI-12-10,
75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)
there was no prejudice to intervenor where the board considered licensee’s supplement to the application, which contained the updated aging management plan, because intervenor could have sought to amend its contention to respond to the supplement; CLI-12-10, 75 NRC 479 (2012)
time for submitting a new/amended contention motion based on information that would be newly available, materially different, and otherwise timely submitted given the information’s availability can be extended if the extension request is based on good cause; LBP-13-10, 78 NRC 117 (2013)
to make additional claims in a contention, intervenor must provide a sufficient explanation of its concern and a concise statement of the alleged facts supporting its position; LBP-14-5, 79 NRC 377 (2014)
time for submitting a new/amended contention motion based on information that would be newly available, and NRC rules require the filing of contentions in a timely manner after such new information becomes available; CLJ-12-13, 75 NRC 681 (2012); LBP-12-13, 75 NRC 784 (2012)
time for submitting a new/amended contention motion based on information that would be newly available, and NRC rules require the filing of contentions in a timely manner after such new information becomes available; CLJ-12-13, 75 NRC 681 (2012); LBP-12-13, 75 NRC 784 (2012)
when good cause is shown, amendment of contentions and submission of new contentions are allowed; CLJ-12-1, 75 NRC 39 (2012)
where a contention alleges omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by NRC Staff in a draft environmental impact statement, the contention is moot, and intervenors must timely file a new or amended contention to raise specific challenges regarding the new information; LBP-12-5, 75 NRC 227 (2012)
where an amended version of a dismissed contention was pending before the board, the board retains jurisdiction to decide whether to admit the proposed contention; LBP-11-22, 74 NRC 259 (2011)
where a contention alleges omission of particular information or an issue from an application, and the information is later supplied by the applicant or considered by NRC Staff in a draft environmental impact statement, the contention is moot, and intervenors must timely file a new or amended contention to raise specific challenges regarding the new information; LBP-12-5, 75 NRC 227 (2012)
where an amended version of a dismissed contention was pending before the board, the board retains jurisdiction to decide whether to admit the proposed contention; LBP-11-22, 74 NRC 259 (2011)

AMENDMENT OF REGULATIONS
amended regulations apply to obligations and disputes that arise after the effective date of the regulation; LBP-15-1, 81 NRC 15 (2015)
amendment of 10 C.F.R. 2.309 in 2012 was to simplify the rules, not fundamentally change the rationale boards use to admit new/amended contentions; LBP-15-11, 81 NRC 401 (2015)
any interested person may petition the Commission to issue, amend, or rescind any regulation; CLJ-12-19, 76 NRC 377 (2012)
applying principles of statutory interpretation, the board declined to insert addition requirements into the regulations to specify damage states or the number and magnitude of fires and explosions with Commission intent to the contrary and without a showing that such a requirement is unavoidable or imperatively required; CLJ-11-9, 74 NRC 233 (2011)
contentions proposed after the filing deadline, which would have been allowable under the previous 10 C.F.R. 2.309(f)(2) requirements, will also be allowable under the current section 2.309(c)(1)
requirements; LBP-15-11, 81 NRC 401 (2015)
definition of byproduct material in 10 C.F.R. 40.4 was clarified by adding the clause “including discrete surface wastes resulting from uranium solution extraction processes”; LBP-15-16, 81 NRC 618 (2015)
exemptions do not actually modify the regulations because the ability to request an exemption is part of the regulations themselves; LBP-15-24, 82 NRC 68 (2015)
if a board issues a scheduling order before the effective date of the final rule that incorporates 10 C.F.R. 2.336(d), which currently requires parties to update their disclosures every 14 days, that obligation would change to every month on a day specified by the board, unless the parties agree otherwise, once the effective date of the rule is reached; LBP-15-1, 81 NRC 15 (2015)
it is for the Commission, not licensing boards, to revise its rulings; LBP-15-18, 81 NRC 793 (2015)
NRC revised 10 C.F.R. 50.36 in 1995 and established clearer criteria as to what constitutes a technical specification that must be in the license; LBP-12-25, 76 NRC 540 (2012)
revision of 10 C.F.R. 50.63 to expand the coping capability to include cooling the spent fuel, preventing a loss-of-coolant accident, and preventing containment failure would be a significant benefit; LBP-12-18, 76 NRC 127 (2012)

AMICUS CURIAE
it is within Commission discretion to grant leave for participation as amicus curiae; CLJ-15-1, 81 NRC 1 (2015)
state government may file an amicus brief within the time allowed to the party whose position the brief will support; CLJ-15-2, 81 NRC 213 (2015)
AMICUS PLEADINGS
although NRC rules do not provide for filing of amicus briefs in this circumstance, as a matter of
discretion the Commission has reviewed the brief; CLI-15-5, 81 NRC 329 (2015)
although NRC rules do not provide for filing of amicus briefs on motions filed pursuant to 10 C.F.R.
2.323, as a matter of discretion, the Commission has reviewed both the brief and NRC Staff’s
opposition; CLI-13-9, 78 NRC 551 (2013); CLI-14-11, 80 NRC 167 (2014)
briefs are allowed for matters taken up at the Commission discretion under 10 C.F.R. 2.341 or sua
sponte; CLI-13-9, 78 NRC 551 (2013); CLI-14-11, 80 NRC 167 (2014); CLI-15-23, 82 NRC 321
briefs may be filed for matters taken up at Commission discretion or sua sponte; CLI-15-4, 81 NRC 221
nonparties may file a brief if a matter is taken up by the Commission under 10 C.F.R. 2.341 or sua

APPEAL PANEL
although the Appeal Panel was abolished in 1991, the Commission explicitly directed that the decisions of
its boards were still to carry precedential weight; LBP-11-8, 73 NRC 349 (2011)
although the Atomic Safety and Licensing Appeal Panel is no longer in existence, the decisions of its
boards continue to be binding to the degree they concern a regulation or regulatory matter that has not
been revised or otherwise materially altered; LBP-11-34, 74 NRC 685 (2011)

APPEALS
after a petition to review a final order has been filed with the Commission, the board no longer has
jurisdiction to consider a motion to reopen and the motion is properly filed with the Commission;
CLI-12-14, 75 NRC 692 (2012)
although a party who is not injured by a board’s ruling has no right to appeal that ruling, it may file a
supporting brief at the appropriate time; CLI-12-6, 75 NRC 352 (2012)
any other party to the proceeding may file an answer supporting or opposing Commission review;
CLI-15-6, 81 NRC 340 (2015)
appeal as of right from a board’s ruling on an intervention petition is permitted only upon denial of a
petition to intervene and/or request for hearing, on the question as to whether it should have been
granted or upon the granting of a petition to intervene and/or request for hearing, on the question as to
whether it should have been wholly denied; CLI-14-3, 79 NRC 31 (2014)
appeal as of right from a licensing board ruling on an intervention petition is permitted only in two
limited circumstances; LBP-15-1, 81 NRC 15 (2015)
appeal as of right is allowed on the question whether a request for hearing should have been wholly
denied; CLI-12-19, 76 NRC 377 (2012); CLI-15-18, 82 NRC 135 (2015)
appeal as of right on the question of whether an initial intervention petition should have been wholly
denied or, alternatively, was granted improperly is governed by 10 C.F.R. 2.311; CLI-12-7, 75 NRC
379 (2012)
appeal of an order selecting a hearing procedure is permitted on the question as to whether the selection
of the particular hearing procedures was in clear contravention of the criteria set forth in section 2.310;
CLI-14-3, 79 NRC 31 (2014)
appellants seeking oral argument must show how oral argument will assist the Commission in reaching a
decision; CLI-11-8, 74 NRC 214 (2011)
applicants may prevail against NRC Staff if they prove that a particular contested assessment of a
deficiency was arbitrary or an abuse of discretion; LBP-14-2, 79 NRC 131 (2014)
automatic right exists to appeal a board decision on the question whether a petition to intervene should
have been wholly denied; CLI-15-25, 82 NRC 389 (2015)
because the Commission’s vacatur order does not address the merits, it need not address an argument that
NRC Staff impermissibly raises objections to the merits of the board’s decision without filing a petition for
review; CLI-13-9, 78 NRC 551 (2013)
board order is appealable when it disposes of a major segment of the case or terminates a party’s right to
participate; CLI-11-10, 74 NRC 251 (2011)
board rulings on hearing requests, petitions to intervene, and access to certain nonpublic information are
appealable under 10 C.F.R. 2.311(a); CLI-12-6, 75 NRC 352 (2012)
SUBJECT INDEX

Commission affirmed board’s standing ruling, but declined to accept review of challenges to the board’s admission of two contentions because petitioner had failed to perfect its appeal by challenging the validity of the board’s admissibility rulings regarding other contentions; LBP-15-3, 81 NRC 65 (2015)

Commission enforces the 10-day deadline for filing appeals strictly and excuses only in unavoidable and extreme circumstances; LBP-12-12, 75 NRC 742 (2012)

contentions filed after the initial petition generally are not subject to appeal pursuant to section 2.311; CLI-12-7, 75 NRC 379 (2012)

controversy often ends during the pendency of appeals before the Commission or the Appeal Board; CLI-13-9, 78 NRC 551 (2013)

cursory assertions are insufficient to raise an issue for appeal; CLI-13-1, 77 NRC 1 (2013)

degree to which pendency of a new contention at the time of the board’s ruling on an initial hearing petition tolled the time for filing any appeals from that decision regarding the admissibility of the contentions would be a matter for Commission determination; LBP-14-12, 80 NRC 138 (2014)

denial of hearing request on enforcement order is appealable as of right; CLI-13-2, 77 NRC 39 (2013)

dismissal of an appeal with prejudice, similar to termination of a proceeding with prejudice, generally implies that the Commission has ruled on the merits of the appeal and such ruling is reserved for unusual situations involving substantial prejudice to an opposing party or to the public interest in general; CLI-13-10, 78 NRC 563 (2013)

following issuance of the board’s final dispositive decision on contentions held in abeyance, and consistent with NRC procedural rules, applicant and intervenor will have the opportunity to appeal the board’s decisions; CLI-14-3, 79 NRC 31 (2014)

for a hearing petitioner to take an appeal pursuant to section 2.311(c), petitioner must claim that, after considering all pending contentions, the board has erroneously denied a hearing; CLI-14-3, 79 NRC 31 (2014)

general proposition that an appeal is not moot if there is a possibility of similar acts recurring in the future applies to instances where the same litigants likely will be subject to similar future action; CLI-13-9, 78 NRC 551 (2013)

generally, once there has been an appeal or petition to review a Board order, jurisdiction passes to the Commission; CLI-12-14, 75 NRC 692 (2012)

grant of summary disposition where other contentions are pending is not a final decision, and is appealable only upon a showing that the standards for interlocutory review have been met; CLI-11-14, 74 NRC 801 (2011)

in an action under the Hobbs Act for review of an NRC final order, exhaustion of remedies is not a jurisdictional requirement; LBP-14-9, 80 NRC 15 (2014)

in its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review, brief on review, or upon its own initiative; CLI-11-8, 74 NRC 214 (2011)

license applicant may take an appeal under 2.311(d)(1) if it contends that, after considering all pending contentions, the board has erroneously granted a hearing to the petitioner; CLI-14-3, 79 NRC 31 (2014)

licensee challenged NRC Staff’s use of immediately effective orders after fulfilling the underlying requirements of those orders; CLI-13-9, 78 NRC 551 (2013)

licensing board order granting a request for hearing on the question whether the request should have been wholly denied is appealable; CLI-15-23, 82 NRC 321 (2015)

motion to reply is denied because petitioner should have anticipated the arguments in the Staff’s and applicant’s answers, which were logical responses to petitioner’s suspension motion; CLI-12-6, 75 NRC 352 (2012)

new claims cannot be raised for the first time on appeal; CLI-12-1, 75 NRC 39 (2012)

NRC rules of practice provide for an automatic right to appeal a licensing board decision deciding standing and contention admissibility, on the question whether a petition to intervene and request for hearing should have been granted, or denied in its entirety; CLI-12-8, 75 NRC 393 (2012); CLI-14-2, 79 NRC 11 (2014)

NRC Staff cannot defend its decision on a basis inconsistent with its own informal review; LBP-14-2, 79 NRC 131 (2014)

NRC Staff may not take a position or assert facts before the presiding officer contrary to a matter decided by the appeal board (i.e., the Staff itself) on applicant’s informal appeal absent an explicit confession of error; LBP-14-2, 79 NRC 131 (2014)
on appeal, intervenors must show that the board’s resolution of the contested issue in favor of applicant is clearly erroneous; CLI-14-10, 80 NRC 157 (2014)

opposing party’s litigation expenses do not provide a basis for departing from the usual rule that a dismissal should be without prejudice; CLI-13-10, 78 NRC 563 (2013)

parties may choose whether to submit a petition for review, an answer in support of the petition, or neither; CLI-11-14, 74 NRC 801 (2011)

petitioner may act to vindicate its own rights, but it has no standing to assert the rights of others; CLI-12-6, 75 NRC 352 (2012)

petitioner will have an opportunity to challenge the board’s contention admissibility decision at the end of the case; CLI-12-13, 75 NRC 681 (2012)

petitioners have a right to reply to petitions for review subject to 10 C.F.R. 2.341; CLI-12-6, 75 NRC 352 (2012)

petitioners’ request, though styled a petition for review, asked the Commission to reconsider its own prior ruling, and was therefore properly considered according to the standards governing a motion for reconsideration; CLI-12-17, 76 NRC 207 (2012)

petitions for review are allowed after a full or partial initial decision, both of which are considered final decisions; CLI-11-10, 74 NRC 251 (2011); CLI-11-14, 74 NRC 801 (2011)

petitions for review must be filed within 15 days; CLI-12-17, 76 NRC 207 (2012)

petitions for review of partial initial decisions and any answers shall conform to the requirements of 10 C.F.R. 2.341(b)(2)-(3); LBP-12-5, 75 NRC 227 (2012)

possibility that an issue may arise in the future is not grounds to continue with an appeal in a proceeding where no live controversy remains between the litigants; CLI-13-10, 78 NRC 563 (2013)

procedural rule governing appeals in a 10 C.F.R. Part 2, Subpart J proceeding provides for review only in the limited circumstances prescribed in the rule; CLI-11-13, 74 NRC 635 (2011)

replies to appeals filed pursuant to 10 C.F.R. 2.311 are not permitted; CLI-12-6, 75 NRC 352 (2012)

review of a board’s dismissal of some contentions would normally await the end of the case; CLI-12-19, 76 NRC 377 (2012)

section 2.311(a) is applicable to an appeal of a board decision rejecting an intervention petition and a hearing request; CLI-14-6, 79 NRC 445 (2014)

section 2.311(d)(1) provides for appeals as of right on the question of whether a request for hearing should have been wholly denied; CLI-11-11, 74 NRC 427 (2011)

section 2.341 applies to appeals of rulings on new contentions filed after initial intervention petitions; CLI-12-7, 75 NRC 379 (2012)

should a suspended adjudication resume, the Commission will consider appeals in due course, consistent with relevant Subpart J rules; CLI-13-8, 78 NRC 219 (2013)

time for petitioning for review of any of a board’s prior interlocutory rulings will run from the date of the Commission’s ruling closing the record; CLI-12-14, 75 NRC 692 (2012)

to the extent that petitioner challenges the board’s decision to apply the reopening standards strictly, its challenge constitutes an improper collateral attack on NRC regulations; CLI-11-2, 73 NRC 333 (2011)

under 10 C.F.R. 2.311, appeal of a ruling on contentions is allowed only if the order wholly denies an intervention petition or a party other than the petitioner alleges that a petition for leave to intervene or a request for hearing should have been wholly denied; CLI-12-7, 75 NRC 379 (2012)

when a petition for review is filed with the Commission at the same time as a motion for reconsideration is filed with the board, the Commission will delay considering the petition for review until after the board has ruled; CLI-12-5, 75 NRC 301 (2012)

See also Abeyance of Appeal; Appellate Review; Briefs, Appellate

APPEALS, INTERLOCUTORY

admission of a contention that might require further explanation of severe accident mitigation alternatives cost-benefit analysis did not have a pervasive and unusual effect on the litigation; CLI-11-6, 74 NRC 203 (2011)

allowing an environmental challenge to continue after the environmental impact statement has issued does not constitute a merits ruling that the Staff’s review document is inadequate; CLI-11-6, 74 NRC 203 (2011)
appeal under 10 C.F.R. 2.311 of a licensing board order holding various contentions inadmissible was premature because a waste confidence contention had been held in abeyance, and the board had therefore not yet granted or denied the hearing request; LBP-14-8, 79 NRC 519 (2014)

appeals from an order ruling on the admission of new or amended contentions is not permitted; LBP-14-5, 79 NRC 377 (2014)
appeals of contention admissibility rulings are available only upon denial of a petition to intervene and/or request for hearing on the question of whether it should have been granted or upon the grant of a petition to intervene and/or request for hearing on the question of whether it should have been wholly denied; CLI-13-3, 77 NRC 51 (2013)
appellate review of interlocutory licensing board orders is disfavored and will be undertaken as a discretionary matter only in extraordinary circumstances; CLI-11-10, 74 NRC 251 (2011)
applicant may file an interlocutory appeal of board orders admitting contentions, but only if the appeal challenges the admissibility of all admitted contentions; CLI-12-12, 75 NRC 603 (2012) appropriate mechanism to challenge individual contention admissibility determinations following a ruling on an initial petition is a request for interlocutory review; CLI-12-12, 75 NRC 603 (2012)
because a board makes a disputed legal ruling does not necessarily warrant immediate Commission action; CLI-11-6, 74 NRC 203 (2011)
because the board granted a hearing request, its decision to reject some contentions may not be appealed until the end of the case; CLI-14-2, 79 NRC 11 (2014)
board’s denial of a summary disposition motion did not constitute a de facto partial initial decision or a final decision on the merits, ripe for Commission review; CLI-11-6, 74 NRC 203 (2011)
broadening of issues for hearing caused by board’s admission of a contention that applicant opposes does not constitute a pervasive and unusual effect on the litigation meriting interlocutory review; CLI-15-17, 82 NRC 33 (2015)
challenges to board rulings on late-filed contentions normally fall under NRC rules for interlocutory review; CLI-12-7, 75 NRC 379 (2012)
claim of violation of National Historic Preservation Act did not in itself establish irreparable harm warranting interlocutory review; CLI-15-17, 82 NRC 33 (2015)
Commission denies a petition for interlocutory review of a licensing board order granting a motion for cross-examination of witnesses; CLI-12-18, 76 NRC 371 (2012)
Commission discourages piecemeal appeals; CLI-12-12, 75 NRC 603 (2012)
Commission generally disfavors interlocutory review; CLI-15-17, 82 NRC 33 (2015)
Commission has considered whether to exercise pendent jurisdiction of otherwise nonappealable issues, such as where those issues are inextricably intertwined with a related legal question properly before it, or where consideration of the issues together has the potential to resolve the entire litigation; CLI-12-12, 75 NRC 603 (2012)
Commission may at its discretion grant a party’s request for interlocutory review of a board decision; CLI-12-18, 76 NRC 371 (2012)
Commission may grant interlocutory review if the issue for which the party seeks review threatens the party adversely affected by it with immediate and serious irreparable impact which could not be alleviated through an appeal at the end of the case; CLI-15-17, 82 NRC 33 (2015)
Commission will consider taking discretionary interlocutory review where the requesting party shows that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-15-17, 82 NRC 33 (2015)
contention admissibility decisions generally are not considered to be extraordinary for purposes of interlocutory appellate review, particularly where petitioner has been admitted as a party and has other contentions pending; CLI-13-3, 77 NRC 51 (2013)
denial of summary disposition does not constitute a full or partial initial decision warranting immediate Commission review; CLI-11-10, 74 NRC 251 (2011)
denial of summary disposition neither threatens NRC Staff with immediate and serious irreparable impact that could not be alleviated through a petition for review of the presiding officer’s final decision nor affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-10, 74 NRC 251 (2011)
discretionary interlocutory review is granted only where the party demonstrates that the issue for which it seeks review threatens it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through an appeal following the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-12-18, 76 NRC 371 (2012)

expansion of issues for litigation that results from a board action does not have a pervasive and unusual effect on the litigation; CLI-11-10, 74 NRC 251 (2011)
grant of summary disposition on a particular contention is an interlocutory ruling appealable at the end of the case; CLI-11-6, 74 NRC 203 (2011)
in light of the board’s limited jurisdiction, it concludes that petitioner may appeal its decision immediately; LBP-14-8, 79 NRC 519 (2014)

incorrect legal ruling typically does not warrant interlocutory review because such rulings can be reviewed on appeal from partial initial decisions or a final decision; CLI-15-17, 82 NRC 33 (2015)

interlocutory review is allowed where the ruling threatens petitioner with immediate and serious irreparable harm, or has a pervasive and unusual effect on the basic structure of the proceeding; CLI-12-12, 75 NRC 603 (2012); CLI-12-13, 75 NRC 681 (2012)

interlocutory review is discretionary and will be granted only upon a showing that the issue for which review is sought threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-13-3, 77 NRC 51 (2013)

interlocutory review of a board’s dismissal of a new contention is granted only upon a showing of extraordinary circumstances; CLI-12-13, 75 NRC 681 (2012)

interlocutory review of decisions and actions of a presiding officer may be available under 10 C.F.R. 2.341(o)(2); LBP-14-5, 79 NRC 377 (2014)

intervenor normally is not allowed to challenge a board’s rejection of contentions where the board has granted a hearing on any contention; CLI-12-12, 75 NRC 603 (2012)

labor and expense of pursuing litigation that petitioner sought to curtail do not constitute irreparable harm; CLI-11-10, 74 NRC 251 (2011)

limited interlocutory appeal right attaches only when the board has fully ruled on the initial intervention petition, that is, when it has admitted or rejected all proposed contentions; CLI-14-3, 79 NRC 31 (2014); LBP-14-8, 79 NRC 519 (2014); LBP-15-1, 81 NRC 15 (2015)

NRC Staff and licensee may file interlocutory appeals on the admission of a contention, but intervenors are prohibited from filing such appeals on the denial of a contention unless all contentions have been denied; LBP-14-4, 79 NRC 319 (2014)

partial initial decision is one rendered following an evidentiary hearing on one or more contentions, but that does not dispose of the entire matter; CLI-11-6, 74 NRC 203 (2011)

petition for interlocutory review that questions the very structure of the two-step licensing process is suitable for consideration; CLI-13-3, 77 NRC 51 (2013)

petition is considered under interlocutory review standard because neither NRC Staff’s issuance of the license nor the board’s denial of a stay of the effectiveness of that license constitutes final agency action; CLI-15-17, 82 NRC 33 (2015)

petitions to review interlocutory board orders typically are denied summarily, without engaging in extensive merits discussion; CLI-13-3, 77 NRC 51 (2013)

piecemeal review of licensing board decisions is disfavored, but boards may refer rulings that, although interlocutory, raise significant and novel legal or policy issues or require Commission resolution to materially advance the orderly disposition of the proceeding; CLI-13-7, 78 NRC 199 (2013)

piecemeal review of licensing board rulings during ongoing proceedings is disfavored; CLI-11-6, 74 NRC 203 (2011); CLI-13-3, 77 NRC 51 (2013)

rejection of contention where petitioner has other contentions pending for hearing does not constitute serious and irreparable harm or affect the structure of the proceeding in a pervasive or unusual manner; CLI-15-17, 82 NRC 33 (2015)

review at the end of a case would be meaningless if the Commission could not later, on appeal from a final board decision, rectify an erroneous disclosure order; CLI-13-3, 77 NRC 51 (2013)
review of board rulings is permitted when petitioner demonstrates either that the ruling threatens the petitioner with immediate and irreparable harm or the ruling has a pervasive and unusual effect on the structure of the proceeding; CLI-11-6, 74 NRC 203 (2011)

routine contention admissibility decisions do not affect the basic structure of a proceeding in a pervasive or unusual manner; CLI-12-13, 75 NRC 681 (2012)

routine contention admissibility determinations generally are not appropriate for interlocutory review; CLI-12-12, 75 NRC 603 (2012)

waste confidence contention’s pendency creates some uncertainty as to whether petitioner may appeal the board’s ruling on a proposed contention, or whether it must await resolution of the waste confidence issue; LBP-14-8, 79 NRC 519 (2014)

where an admitted contention is pending before the board, appeals do not lie under section 2.311, but rather under section 2.341(f)(2), which governs petitions for interlocutory review, including board rulings on new contentions; CLI-13-3, 77 NRC 51 (2013)

where the adverse impact of disclosure would occur immediately, the alleged harm is immediate for purpose of interlocutory review; CLI-13-3, 77 NRC 51 (2013)

APPELLATE BRIEFS
See Briefs, Appellate

APPELLATE REVIEW
absence of an error of law or abuse of discretion, the Commission generally defers to board contention admissibility rulings; CLI-12-5, 75 NRC 301 (2012); CLI-12-19, 76 NRC 377 (2012)

abuse of discretion standard of review is applicable to discretionary Staff actions not subject to a hearing opportunity; CLI-13-1, 77 NRC 1 (2013)

adjudicatory record and board decision and any Commission appellate decisions become, in effect, part of the final environmental impact statement; CLI-11-6, 74 NRC 203 (2011); CLI-12-1, 75 NRC 39 (2012); LBP-12-17, 76 NRC 71 (2012)

although contention ultimately was resolved in NRC Staff’s favor, Commission takes review as a matter of discretion because the board’s ruling raises substantial questions of precedential importance; CLI-15-6, 81 NRC 340 (2015)

although NRC has no specific rule governing stays of agency action pending judicial review, federal law requires parties seeking such stays in court to come to the agency first; CLI-12-11, 75 NRC 523 (2012)

although the Commission has authority to undertake a de novo factual review, where a board’s decision rests on a weighing of extensive fact-specific evidence presented by technical experts, the Commission generally will defer to the board’s factual findings, unless there appears to be a clearly erroneous factual finding or related oversight; CLI-13-1, 77 NRC 1 (2013)

amicus briefs are allowed for matters taken up at the Commission discretion under 10 C.F.R. 2.341 or sua sponte; CLI-15-23, 82 NRC 321 (2015)

appeals as of right are allowed on the question of whether an intervention petition should have been wholly denied; CLI-12-12, 75 NRC 603 (2012)

appeals as of right will be granted on the question whether a request for hearing or petition to intervene should have been granted; CLI-15-21, 82 NRC 295 (2015)

applicant satisfied the regulatory standards for discretionary review by identifying a substantial question as to whether the board decision reaches at least one necessary legal conclusion without governing precedent or addresses at least one substantial and important question of law, policy, or discretion; CLI-13-1, 77 NRC 1 (2013)

as a consequence of the Commission ruling that the board should have terminated the proceeding once it resolved all contentions, all of the board’s earlier interlocutory orders become ripe for review; CLI-12-14, 75 NRC 692 (2012)

at its discretion, the Commission may allow oral argument upon the request of a party made in a petition for review; CLI-12-12, 75 NRC 603 (2012)

basis for allowing immediate appellate review of partial initial decisions rests on prior appeal board decisions permitting review of a licensing board ruling that disposes of a major segment of the case or terminates a party’s right to participate; CLI-11-14, 74 NRC 801 (2011)

because petitioners did not participate in the mandatory hearing, and were not parties to it, they may not challenge the mandatory hearing decision, as such, in court; CLI-12-11, 75 NRC 523 (2012)
board is the appropriate arbiter of fact-specific questions of contention admissibility, and the Commission will not second-guess the board’s evaluation of factual support for the contention, absent an error of law or abuse of discretion, even if support for the contention is weak; CLI-15-25, 82 NRC 389 (2015)

 Commissioners are appropriate arbiters of fact-specific questions of contention admissibility, and the Commission will not second-guess their evaluation of factual support, absent an error of law or abuse of discretion; CLI-12-5, 75 NRC 301 (2012)

 Commission affords substantial deference to licensing boards’ contention admission decisions; CLI-15-6, 81 NRC 340 (2015)

 Commission defers to a board’s contention admissibility rulings unless the appeal points to an error of law or abuse of discretion; CLI-14-2, 79 NRC 11 (2014)

 Commission defers to board’s factual findings unless they are clearly erroneous and generally steps in only to correct factual findings not even plausible in light of the record reviewed in its entirety, e.g., where it appears that the board has overlooked or misunderstood important evidence; CLI-15-6, 81 NRC 340 (2015)

 Commission denies review of a board decision rejecting a challenge to the severe accident mitigation alternatives analysis; CLI-12-1, 75 NRC 39 (2012)

 Commission generally declines to hold oral argument on appeals, absent a specific showing that oral argument will assist it in reaching a decision; CLI-12-12, 75 NRC 603 (2012)

 Commission generally defers to board threshold rulings on contention admissibility, unless it finds an error of law or abuse of discretion; CLI-11-11, 74 NRC 427 (2011); CLI-12-12, 75 NRC 603 (2012); CLI-12-14, 75 NRC 692 (2012); CLI-12-15, 75 NRC 704 (2012)

 Commission gives substantial deference to licensing board findings of fact, and will not overturn a board’s factual findings unless they are not even plausible in light of the record viewed in its entirety; CLI-14-10, 80 NRC 157 (2014); CLI-15-9, 81 NRC 512 (2015)

 Commission has declined to take interlocutory review with respect to case management decisions; CLI-15-24, 82 NRC 331 (2015)

 Commission may grant a petition for review at its discretion, giving due weight to whether there exists a substantial question regarding the considerations in 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-11-9, 74 NRC 233 (2011); CLI-12-7, 75 NRC 379 (2012); CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)

 Commission reviews board’s legal rulings de novo and will reverse those rulings if they are contrary to established law; CLI-15-6, 81 NRC 340 (2015)

 Commission reviews questions of law de novo, but defers to a board’s findings with respect to the underlying facts unless they are clearly erroneous; CLI-15-9, 81 NRC 512 (2015)

 Commission will defer to licensing board rulings on standing and contention admissibility absent error of law or abuse of discretion; CLI-15-18, 82 NRC 135 (2015); CLI-15-20, 82 NRC 211 (2015); CLI-15-25, 82 NRC 389 (2015)

 Commission will grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to one or more of the considerations of 10 C.F.R. 2.341(b)(4); CLI-15-19, 82 NRC 151 (2015)

 contention admissibility decisions generally are not considered to be extraordinary for purposes of interlocutory appellate review, particularly where petitioner has been admitted as a party and has other contentions pending; CLI-13-3, 77 NRC 51 (2013)

 contentions filed after the initial petition are not subject to appeal pursuant to 10 C.F.R. 2.311; CLI-12-3, 75 NRC 152 (2012); CLI-12-6, 75 NRC 352 (2012)

decisions on the admissibility of contentions will be affirmed where the Commission finds no error of law or abuse of discretion; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-8, 75 NRC 393 (2012); CLI-12-10, 75 NRC 479 (2012)

dereference to a board’s factual determinations is particularly high when they are based in significant part on its assessment of expert testimony and credibility of the witnesses offering that testimony; CLI-13-1, 77 NRC 1 (2013)
SUBJECT INDEX

deference to board rulings on contention admissibility is appropriate even where the Commission may consider that the support for the contention is weak, or where the claim’s materiality presents a close question; CLI-14-2, 79 NRC 11 (2014)
deferential clear error standard is applied in analyzing a board’s findings of fact; CLI-13-1, 77 NRC 1 (2013)
discretionary grant of a petition for review gives due weight to the existence of a substantial question with respect to one or more of the considerations under 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-12-6, 75 NRC 352 (2012)
expenditure of issues for litigation from the board’s denial of a motion for summary disposition had neither a pervasive and unusual effect on the litigation nor a serious and irreparable impact on movant; CLI-15-24, 82 NRC 331 (2015)
expense is not irreparable harm; CLI-15-24, 82 NRC 331 (2015)
filings of amicus briefs is permitted if a matter is taken up by the Commission under section 2.341 or sua sponte; CLI-15-24, 82 NRC 331 (2015)
for threshold issues such as contention admissibility, the Commission gives substantial deference to a board’s determinations; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
four factors must be addressed when the Commission or presiding officer is asked to stay the effectiveness of a presiding officer’s decision or action during pendency of an appeal; CLI-15-17, 82 NRC 33 (2015)
grant of discretionary review requires a showing that the board’s findings are not even plausible in light of the record viewed in its entirety; CLI-13-1, 77 NRC 1 (2013)
grant of interlocutory review requires a showing that the board’s ruling threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-15-24, 82 NRC 331 (2015)
if the Commission determines on appeal that information withheld under a protective order should have been publicly disclosed, it will direct that such information and the transcript of the related in camera session be made publicly available; CLI-15-24, 82 NRC 331 (2015)
important questions of law and material fact merit Commission review; CLI-15-6, 81 NRC 340 (2015)
interlocutory review of a board decision that denied reconsideration of a contention admissibility determination was declined; CLI-15-24, 82 NRC 331 (2015)
it is not the Commission’s role to monitor rulings that deal with reception of evidence and procedural framework under which it will be admitted on a day-to-day basis; CLI-15-24, 82 NRC 331 (2015)
licensing board opinion on appealability of an order does not bind the Commission, which will make its own decision whether an appeal may be filed; LBP-14-8, 79 NRC 519 (2014)
licensing board rulings will be addressed by the Commission after the board has issued a final decision in a case, barring extraordinary circumstances; CLI-13-3, 77 NRC 51 (2013)
licensing boards must be vested with considerable latitude in determining the course of the proceedings that they are called upon to conduct, and the Commission will enter that arena only to the extent necessary to insure that no party has been denied a fair opportunity to advance its cause; LBP-15-29, 82 NRC 246 (2015)
litigants are not entitled to challenge a board ruling unless and until that ruling has worked a concrete injury to their personal interests; CLI-12-6, 75 NRC 352 (2012)
on appeal, Commission defers to board’s rulings on contention admissibility absent an error of law or abuse of discretion; CLI-15-22, 82 NRC 310 (2015); CLI-15-23, 82 NRC 321 (2015)
only final NRC action is subject to judicial review; CLI-12-11, 75 NRC 523 (2012)
parties seeking interlocutory review must show that the issue to be reviewed threatens the party adversely affected by it with immediate and serious irreparable impact which, as a practical matter, could not be alleviated through a petition for review of the presiding officer’s final decision or affects the basic structure of the proceeding in a pervasive or unusual manner; CLI-11-4, 74 NRC 801 (2011).

petition falls short of satisfying 10 C.F.R. 2.341(b)(4) if it does not specify the subsections upon which it relies but merely sets forth a series of general grievances fundamentally going to the correctness of the board’s decision; CLI-11-2, 73 NRC 333 (2011).

petition for interlocutory review that questions the very structure of the two-step licensing process is suitable for consideration; CLI-13-3, 77 NRC 51 (2013).

petition for review will be granted at Commission discretion upon a showing that petitioner has raised a substantial question as to any of the five factors of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-11-2, 73 NRC 333 (2011); CLI-12-3, 75 NRC 132 (2012); CLI-12-21, 76 NRC 491 (2012); CLI-14-10, 80 NRC 157 (2014); CLI-15-2, 81 NRC 213 (2015); CLI-15-9, 81 NRC 512 (2015).

petitions to review interlocutory board orders typically are denied summarily, without engaging in extensive merits discussion; CLI-13-3, 77 NRC 51 (2013).

possibility that a board may have made an incorrect legal ruling can be reviewed, if necessary, on appeal from a partial initial decision or other final appealable order; CLI-15-24, 82 NRC 331 (2015).

procedural rulings involving discovery rarely meet the standard for interlocutory review; CLI-15-24, 82 NRC 331 (2015).

question before the Commission is not whether it would have made different factual findings than those of the board but whether the board’s findings of fact are so lacking in record support as to be clearly erroneous; CLI-13-1, 77 NRC 1 (2013).

requests to stay effectiveness of future licensing action pending judicial appeal are more appropriately styled motions to reconsider and motions to hold in abeyance; CLI-12-11, 75 NRC 523 (2012).

results of judicial review of rulemaking petition denial would be implemented in a meaningful way where petitioner had timely taken every conceivable procedural step to ensure that the ultimate outcome of its rulemaking petition would inform the NEPA analysis of the licensing proceedings; CLI-14-6, 79 NRC 445 (2014).

review at the end of a case would be meaningless if the Commission could not later, on appeal from a final board decision, rectify an erroneous disclosure order; CLI-13-3, 77 NRC 51 (2013).

review is granted where petitions for review raise substantial questions of law and procedure; CLI-15-6, 81 NRC 340 (2015).

review of a board’s certified question that raises a significant and novel issue whose early resolution will materially advance the orderly disposition of the proceeding is granted; CLI-11-4, 74 NRC 1 (2011).

review of the majority of presiding officer decisions is governed by 10 C.F.R. 2.341(a)(1); CLI-12-6, 75 NRC 352 (2012).

section 2.342 does not apply to requests for stays of Commission decisions pending judicial review; CLI-12-11, 75 NRC 523 (2012).

settlements approved by a presiding officer are subject to Commission review; LBP-15-21, 82 NRC 1 (2015).

standard for review of contention admissibility determinations is the same, whether an appeal lies under section 2.311 or 2.341, and the Commission will disturb a licensing board’s contention admissibility ruling only if there has been an error of law or an abuse of discretion; CLI-12-7, 75 NRC 379 (2012).

standard for showing clear error is difficult to meet, requiring that intervenors demonstrate that the board’s determination is not even plausible in light of the record as a whole; CLI-15-9, 81 NRC 512 (2015).

standard of review of a board’s determination on standing is deferential and the Commission will uphold the decision absent a clear misapplication of facts or law; CLI-15-25, 82 NRC 389 (2015).

stare decisis is not implicated where the board decision is unreviewed and therefore not binding on future tribunals, but as a prudential matter, the Commission vacates such decisions when appellate review is cut short by mootness; CLI-13-9, 78 NRC 551 (2013).

where a board’s decision rests on a weighing of extensive fact-specific evidence presented by technical experts, the Commission generally will defer to the board’s factual findings, unless there appears to be a clearly erroneous factual finding or related oversight; CLI-12-1, 75 NRC 39 (2012).
where issues in a case have been sharply contested, the Commission will explain its view of the case in some detail; CLI-13-1, 77 NRC 1 (2013)
where the adverse impact of disclosure would occur immediately, the alleged harm is immediate for purpose of interlocutory review; CLI-13-3, 77 NRC 51 (2013)
where the Commission has a thorough written record containing adequate information on which to base a decision, there is no need for oral argument; CLI-11-8, 74 NRC 214 (2011)
whether the board erred in its treatment of evidence is a matter that can be addressed following an initial decision; CLI-15-24, 82 NRC 331 (2015)
with the board’s termination of the proceeding, the board’s interlocutory rulings on contention admissibility became ripe for appeal; CLI-11-9, 74 NRC 233 (2011)
See also Appeals

APPLICANTS

absent information to the contrary, NRC may properly assume that an applicant or licensee will comply with concrete and enforceable conditions and requirements imposed by statutes, regulations, licenses, or permits issued by competent federal, state, or local governmental entities; LBP-13-4, 77 NRC 107 (2013)
although applicant has the ultimate burden of proof on any issues upon which a hearing is held, hearings are held on only those issues that an intervenor brings to the fore; LBP-11-4, 73 NRC 91 (2011)
although environmental contentions ultimately challenge NRC’s compliance with NEPA, applicant is free to support positions set forth in the environmental impact statement that are under challenge; LBP-14-7, 79 NRC 451 (2014)
applicant in a licensing proceeding must meet its burden of proof by a preponderance of the evidence; LBP-11-38, 74 NRC 817 (2011)
“applicant” means a person or entity applying for a license; LBP-14-7, 79 NRC 451 (2014)
applicant must establish and implement its own quality assurance program when it enters into a contract for the conduct of safety-related combined license application activities and to retain overall control of safety-related activities performed by the contractor; CLI-14-10, 80 NRC 157 (2014)
as proponent of the agency action at issue, applicant generally has the burden of proof in a licensing proceeding; LBP-15-3, 81 NRC 65 (2015)
board refused to let a matter turn on attempts by NRC Staff and applicant to label a controversial matter in a way that would avoid adjudication; LBP-14-1, 79 NRC 39 (2014)
boards cannot assume that applicants will not comply with its regulatory responsibilities, including its license conditions; LBP-15-3, 81 NRC 65 (2015)
burden of fulfilling the National Historic Preservation Act’s consultation requirements rests exclusively with the NRC, not with the applicant; LBP-12-23, 76 NRC 445 (2012)
burden of proof in a combined license proceeding is borne by applicant; LBP-14-3, 79 NRC 267 (2014)
burden of providing reasonable assurance that the current licensing basis will be maintained throughout the renewal period falls on applicant; LBP-15-5, 81 NRC 249 (2015)
combined license applicant’s status as a current power reactor licensee generally provides the necessary support for NRC Staff’s finding that applicant is technically qualified for a new license; CLI-12-2, 75 NRC 63 (2012)
DOE may incorporate, in its geologic repository application, information in previous reports filed with the Commission, provided that such references are clear and specific; LBP-12-24, 76 NRC 503 (2012)
environmental contentions ultimately challenge NRC’s compliance with NEPA, but applicant is free to support positions set forth in the environmental impact statement that are under challenge; LBP-12-17, 76 NRC 71 (2012)
federal trust responsibility to Indian tribes rests solely with the federal government and cannot be discharged by applicants; LBP-12-24, 76 NRC 503 (2012)
if intervenors provide sufficient evidence to support the claims made, applicant has the burden of demonstrating by a preponderance of the evidence that it has met the relevant NRC regulations and that the board should therefore reject each contention on the merits; LBP-14-1, 79 NRC 39 (2014)
in assessing whether applicant/licensee adequately carries out a licensing directive, boards are to assume that NRC Staff will be fair and judge the matter of applicant/licensee’s compliance on the merits; LBP-15-3, 81 NRC 65 (2015)
SUBJECT INDEX

in denying an exemption request, Staff is required to inform applicant of the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)
in the absence of some showing of substantial prior misdeeds, applicant/licensee will be presumed to follow the agency’s regulatory requirements, including the directives in its license; LBP-15-3, 81 NRC 65 (2015)
interlocutory appeal of board orders admitting contentions may be filed only if the appeal challenges the admissibility of all admitted contentions; CLI-12-12, 75 NRC 603 (2012)
it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site in the context of a National Historic Preservation Act contention; LBP-15-5, 81 NRC 249 (2015)
license applicant may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part thereof, but applicant retains responsibility for the QA program; LBP-12-23, 76 NRC 445 (2012)
license applicant may take an appeal under 10 C.F.R. 2.311(d)(1) if it contends that, after considering all pending contentions, the board has erroneously granted a hearing to the petitioner; CLI-14-3, 79 NRC 31 (2014)
licensing boards may not assume that applicants will violate NRC regulations; LBP-12-3, 75 NRC 164 (2012)
NRC Staff, not applicant, bears the ultimate burden of establishing compliance with NEPA; LBP-14-7, 79 NRC 451 (2014)
NRC Staff, not applicant, has the legal duty to engage in consultation under the Endangered Species Act; LBP-12-12, 75 NRC 742 (2012)
on safety issues, applicant has the burden of establishing that it is entitled to the applied-for license by a preponderance of the evidence; LBP-12-5, 75 NRC 227 (2012); LBP-14-3, 79 NRC 267 (2014)
petitioner impermissibly assumes that applicant will violate applicable state law regarding its treatment of wells at the site; LBP-11-16, 73 NRC 645 (2011)
proponent of the agency action, applicant generally has the burden of proof in a licensing proceeding; LBP-15-16, 81 NRC 618 (2015)
regardless of issuance of the license, the burden at hearing remains on applicant and, with respect to NEPA compliance, on NRC Staff; CLI-15-17, 82 NRC 33 (2015)
relative to factual matters, to carry burden of proof, NRC Staff and/or applicant must establish that its position is supported by a preponderance of the evidence; LBP-15-3, 81 NRC 65 (2015)
there is no duty to address the federal government’s trust responsibility in applicant’s environmental report; LBP-14-4, 79 NRC 404 (2014)
there is nothing in the record to suggest that applicant or NRC Staff will not act in good faith to ensure that applicant’s regulatory responsibilities, including its license conditions, are honored, and the board cannot assume noncompliance; LBP-15-11, 81 NRC 401 (2015)
time for applicant to request a hearing should be tolled until notice is issued if NRC Staff fails to provide the notice and hearing opportunity mandated by 10 C.F.R. 2.103(b); LBP-11-19, 74 NRC 61 (2011)
unless the presiding officer otherwise orders, applicant or the proponent of an order has the burden of proof; LBP-15-2, 81 NRC 48 (2015)

APPROPRIATIONS
existence of a specific appropriation for licensing activities prevents NRC, under well-settled principles of appropriations law, from using its general appropriations for those activities; CLI-13-8, 78 NRC 219 (2013)
if Congress does not appropriate enough money to meet the needs of a class of beneficiaries prescribed by Congress, and if Congress is silent on how to handle this predicament, the law sensibly allows the administering agency to establish reasonable priorities and classifications; CLI-13-8, 78 NRC 219 (2013)
NRC is ordered to promptly resume the licensing process for the high-level radioactive waste repository construction authorization application unless and until Congress authoritatively says otherwise or there are no appropriated funds remaining; CLI-13-8, 78 NRC 219 (2013)

APPROVAL OF LICENSE
adjudicatory proceeding on license amendment is not terminated by issuance of the amendment; CLI-15-17, 82 NRC 33 (2015)
exemption from regulations will only be issued if the license is granted; LBP-15-24, 82 NRC 68 (2015)
SUBJECT INDEX

final no significant hazards consideration determination allows the Commission to issue the challenged license amendment before the petitioner’s request for a hearing is adjudicated; LBP-15-17, 81 NRC 753 (2015)

NEPA requires that agencies take a hard look at the environmental effects of actions even after a proposal has received initial approval; LBP-15-16, 81 NRC 618 (2015)

NRC Staff is authorized to issue a license when it has completed its review during the pendency of a hearing as long as it provides the board and parties notice and an explanation why the public health and safety are protected and why the action is in accord with the common defense and security despite the pendency of the contested matter; CLI-15-17, 82 NRC 33 (2015)

NRC Staff is instructed to promptly issue its approval or denial of an application consistent with its findings, despite the pendency of a hearing; LBP-15-16, 81 NRC 618 (2015)

though the materials license has already been issued, the land disturbance in the project area will proceed in stages in compliance with National Historic Preservation Act § 106; LBP-15-16, 81 NRC 618 (2015)

AQUATIC IMPACTS
licensing board finds no material dispute concerning the effect of calcium contained in the thermal effluent stream on the potential proliferation of Lyngbya wollei; LBP-12-23, 76 NRC 445 (2012)

ARCHAEOLOGICAL RESOURCES PROTECTION ACT
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)

ASME CODE
after the rulemaking is completed, licensees for new reactors will be required to comply with the ASME code preservice and inservice surveillance provisions for squib valves; CLI-15-13, 81 NRC 555 (2015)

applicants must implement the edition and addendum of the ASME Code for Operation and Maintenance of Nuclear Plants incorporated by reference in 10 C.F.R. 50.55a 12 months before fuel loading; CLI-12-2, 75 NRC 63 (2012)

basis of NRC Staff’s reasonable assurance finding on combined license applicant’s squib valve inspection program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75 NRC 63 (2012)

Code for Operation and Maintenance of Nuclear Power Plants is incorporated by reference in NRC regulations; CLI-12-9, 75 NRC 421 (2012)

combined license application must describe the programs, and their implementation, necessary to ensure that systems and components meet the requirements of the ASME Boiler and Pressure Vessel Code and the ASME Code of Operation and Maintenance of Nuclear Power Plants in accordance with 10 C.F.R. 50.55a; CLI-11-8, 74 NRC 214 (2011)

if part of a reactor pressure vessel is expected to fall below the 50 ft-lb standard, licensee must demonstrate that lower values of Charpy upper-shelf energy will provide margins of safety against fracture equivalent to those required by the ASME Boiler and Pressure Vessel Code; LBP-15-20, 81 NRC 829 (2015)

inservice visual inspection of containment system must comply with ASME Boiler and Pressure Vessel Code Section XI; LBP-15-26, 82 NRC 163 (2015)

latest edition and addenda of the ASME Boiler and Pressure Vessel Code has been incorporated by reference in 10 C.F.R. 50.55a(b)(2); LBP-15-20, 81 NRC 829 (2015)

minimum frequency with which surveillance capsules must be tested is set by ASTM Standard E 185 (1982 version), which is incorporated into Appendix H; LBP-15-20, 81 NRC 829 (2015)

requirements of section XI of the ASME Boiler and Pressure Vessel Code on inservice inspections are incorporated by reference in 10 C.F.R. 50.55a(b) and 50.55a(g)(4); CLI-11-8, 74 NRC 214 (2011)

ASSESSMENT

capability to rapidly assess the validity of alleged thefts is aimed at the rapid determination of whether an actual loss of 5 or more formula kilograms of strategic special nuclear material has occurred; LBP-14-1, 79 NRC 39 (2014)

contention challenging applicant’s ability to rapidly assess the validity of alleged thefts is decided; LBP-14-1, 79 NRC 39 (2014)

717
licensees are not required to conduct assessments of alleged thefts of strategic special nuclear material without use of their records systems, or by first verifying the integrity and accuracy of those records systems; LBP-14-1, 79 NRC 39 (2014)

rapid determination of strategic special nuclear material theft assessment should be completed within an 8- or 72-hour timeline; LBP-14-1, 79 NRC 39 (2014) See also Environmental Assessment; Probabilistic Risk Assessment; Risk Assessment

ASSUMPTION OF COMPLIANCE

absent documentary support, NRC has declined to assume that licensees will contravene its regulations; LBP-15-24, 82 NRC 68 (2015)

absent information to the contrary, NRC may properly assume that an applicant or licensee will comply with concrete and enforceable conditions and requirements imposed by statutes, regulations, licenses, or permits issued by competent federal, state, or local governmental entities; LBP-13-4, 77 NRC 107 (2013)

if a federal or state environmental agency issues a permit to the operator of a nuclear power plant that imposes numerical limits on the amount of pollution that the plant may emit, then NRC’s final environmental impact statement may reasonably assume that the company’s emissions will comply with those numerical limits; LBP-13-4, 77 NRC 107 (2013)

in setting license conditions, NRC Staff may assume that a licensee will comply with all requirements imposed by the license; LBP-15-16, 81 NRC 618 (2015)

NRC generally presumes that licensees will comply with its regulations; LBP-15-16, 81 NRC 618 (2015)

there is nothing in the record to suggest that applicant or NRC Staff will not act in good faith to ensure that applicant’s regulatory responsibilities, including its license conditions, are honored, and the board cannot assume noncompliance; LBP-15-11, 81 NRC 401 (2015)

ATOMIC ENERGY ACT

absent a transfer, license renewal application will be denied where licensee remains under foreign ownership, control, or domination; CLI-14-5, 79 NRC 254 (2014)

actions taken by licensee under 10 C.F.R. 50.59 do not give rise to hearing rights under the AEA; LBP-15-27, 82 NRC 184 (2015)

adequacy finding on applicant’s material control and accounting program requires the board to make a case-by-case determination, guided by the AEA’s mandate that no license to possess special nuclear material may be issued if issuance would be inimical to the common defense and security or would constitute an unreasonable risk to the health and safety of the public; LBP-14-1, 79 NRC 39 (2014)

AEA is designed to regulate the radiological safety aspects involved in the construction and operation of a nuclear plant; LBP-11-6, 73 NRC 149 (2011)

agency actions not formally labeled as license amendments nevertheless can constitute de facto license amendments and accordingly trigger hearing rights for the public under section 189a; CLI-15-5, 81 NRC 329 (2015)

agency approval or authorization is a necessary component of NRC action that affords a hearing opportunity under AEA §189a, but not all agency approvals granted to licensees constitute de facto license amendments; CLI-14-11, 80 NRC 167 (2014)

all hearings will be public; LBP-11-5, 73 NRC 131 (2011)

although a SAMA analysis considers safety issues, it is actually an environmental review that must be judged under NEPA’s rule of reason and not under the safety requirements of the Atomic Energy Act; LBP-15-29, 82 NRC 246 (2015)

although pertinent language of the AEA is written in present tense, a board’s inquiry does not end with evaluating foreign ownership, control, or domination concerns posed only by the current corporate structure and financing; LBP-14-3, 79 NRC 267 (2014)

any amendment to an existing license as a result of NRC review of licensee seismic hazard reevaluations that leads to changes in the current licensing basis would be subject to a hearing opportunity; CLI-15-21, 82 NRC 295 (2015)

any license issued for a utilization or production facility for industrial or commercial purposes must meet the requirements set out in section 103; LBP-12-19, 76 NRC 184 (2012)

any person whose interest may be affected may request a hearing in a proceeding granting, suspending, revoking, or amending any license; CLI-13-2, 77 NRC 39 (2013)
SUBJECT INDEX

applicants are ineligible to obtain a license because they fail to meet the requirements of the AEA and NRC regulations regarding foreign ownership; LBP-12-22, 76 NRC 443 (2012)

applicants for nuclear power plant operating licenses must include technical specifications as part of the license; DD-13-3, 78 NRC 571 (2013)

argument that applying heightened late-filing standards to contentions triggered by the NRC Staff’s review documents violates a petitioner’s AEA hearing rights has been considered and rejected; CLI-12-14, 75 NRC 692 (2012)

basis for NRC authority to regulate use of special nuclear material in facilities such as nuclear power reactors is established; CLI-15-4, 81 NRC 221 (2015)

because the application for a uranium enrichment facility is governed by AEA §§§ 53 and 63, 42 U.S.C. § 2073, 2093, foreign ownership and control issues are evaluated under sections 57 and 69; LBP-11-11, 73 NRC 455 (2011)

board determined that the oral portion of the proceeding should be closed to the public to allow for the free-ranging and thorough examination of witnesses and to ensure the effective safeguard and prevention from disclosure of restricted data; LBP-12-21, 76 NRC 218 (2012)

board is directed to consider whether a confirmatory action letter issued to licensee constitutes a de facto license amendment that would be subject to a hearing opportunity under AEA § 189a, and, if so, whether the petition meets the standing and contention admissibility requirements; CLI-12-20, 76 NRC 437 (2012)

boards may exclude the public from adjudicatory hearings or actions that involve restricted data, defense information, safeguards information protected from disclosure under the authority of AEA § 147, or information protected from disclosure under the authority of section 148; LBP-11-5, 73 NRC 131 (2011)

“byproduct material” refers to the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed for its source material content; LBP-15-16, 81 NRC 618 (2015)

commercial licenses for utilization or production facilities for industrial or commercial purposes shall be issued according to the terms of section 103; LBP-11-25, 74 NRC 380 (2011)

Commission, but not a licensing board, has the power to address a protracted delay in the proceeding and to direct appropriate remedial measures; LBP-11-30, 74 NRC 627 (2011)

Commission cannot restrict the opportunity for a hearing so much that it effectively removes from the hearing issues that are material to the licensing decision; CLI-12-14, 75 NRC 692 (2012)

Commission is required to grant a hearing upon the request of any person whose interest may be affected by certain agency proceedings; LBP-11-6, 73 NRC 149 (2011); CLI-11-3, 73 NRC 613 (2011); LBP-11-8, 73 NRC 349 (2011); LBP-11-22, 74 NRC 259 (2011); LBP-11-29, 74 NRC 612 (2011); LBP-14-4, 79 NRC 319 (2014)

Commission refers a limited portion of the hearing request to the licensing board to determine whether petitioner has identified an NRC activity that requires an opportunity to request an adjudicatory hearing; CLI-15-14, 81 NRC 729 (2015)

Commission shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 455 (2011)

Congress did not intend to require a demonstration that nuclear wastes could safely be disposed of before licensing of nuclear plants was permitted; CLI-15-4, 81 NRC 221 (2015)

Congress has vested NRC with authority to issue subpoenas in conjunction with investigations that the NRC deems necessary to protect public health or to minimize danger to life or property in matters involving nuclear materials; CLI-13-5, 77 NRC 223 (2013)

Congress intentionally limited the opportunity for a hearing to certain designated agency actions which do not include exemptions; LBP-15-24, 82 NRC 68 (2015)

Congress thought foreign ownership itself should be sufficient to require denial of a license in some circumstances; LBP-12-19, 76 NRC 184 (2012)

connection of the three prohibitions on foreign ownership with the conjunction “or” rather than “and” shows that a license may not be granted if any of the three prohibitions is violated; LBP-12-19, 76 NRC 184 (2012)
determination of what constitutes adequate protection under the Atomic Energy Act, absent specific
guidance from Congress, is just such a situation in which NRC should be permitted to have discretion
to make case-by-case judgments; LBP-14-1, 79 NRC 39 (2014)

enrichment facilities are to be licensed pursuant to AEA §§53 and 63; LBP-12-21, 76 NRC 218 (2012)
every license to operate a nuclear power reactor must contain a list of technical specifications necessary
for adequate protection of public health and safety; LBP-12-25, 76 NRC 540 (2012)

extreme delay in the completion of Staff’s environmental review, and thus the equal delay in hearing the
Intervenors’ claim of injury, raises issues of compliance with section 189a of the Atomic Energy Act;
LBP-11-30, 74 NRC 627 (2011)

finding of reasonable assurance that highly hazardous and long-lived radioactive materials can be disposed
of safely is not a prerequisite to licensing; CLI-15-4, 81 NRC 221 (2015)

for an individual or organization to be deemed a “person whose interest may be affected by the
proceeding,” so as to have standing as of right such that party status can be granted in an agency
adjudicatory proceeding, the intervention petition must comply with 10 C.F.R. 2.309(d)(1)(i)-(iv);
LBP-12-15, 76 NRC 14 (2012)

general scope of NRC’s authority is established in section 161, but it does not discuss spent fuel disposal;

hearing must be held on each application to construct a nuclear power plant, regardless of whether an
interested member of the public requests a hearing on the application; CLI-15-13, 81 NRC 555 (2015)

hearing rights are provided in licensing actions concerning the granting, suspending, revoking, or
amending of any license upon the request of any person whose interest may be affected by the
proceeding; CLI-15-5, 81 NRC 329 (2015); LBP-15-16, 81 NRC 618 (2015); LBP-15-17, 81 NRC 753
(2015); LBP-15-18, 81 NRC 793 (2015)

if AEA §189a is to serve its intended purpose, parties in interest must be afforded a meaningful
opportunity to request a hearing before the Commission retroactively renews the terms of an extant
license by voiding its implicit limitations on the licensee’s conduct; LBP-13-7, 77 NRC 307 (2013)

if licensee sought to relocate its surveillance frequencies from its operating license to a licensee-controlled
document, then it would need to request a license amendment, which would trigger an opportunity for a
member of the public to request a hearing; CLI-13-10, 78 NRC 563 (2013)

impact of a proposed action on public safety is an issue that must be considered under both the National
Environmental Policy Act and the AEA; LBP-12-18, 76 NRC 127 (2012)

in any proceeding for the amending of any license, the Commission shall grant a hearing upon the
request of any person whose interest may be affected by the proceeding, and shall admit any such
person as a party to such proceeding; LBP-13-7, 77 NRC 307 (2013)

in context of license renewal, NRC’s safety review under Part 54 does not compromise or limit the
National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013)

in context with the other provisions of AEA § 104d, the foreign control limitation should be given an
orientation toward safeguarding the national defense and security; LBP-14-3, 79 NRC 267 (2014)
in determining whether intervention petitioner has alleged an interest that may be affected by the
proceeding within the meaning of section 189a of the Act, contemporaneous judicial concepts of
standing should be used; LBP-14-4, 79 NRC 319 (2014)

in ruling that NRC had appropriately interpreted the AEA to include regulatory authority over attendant
transmission lines, the court did not decide whether NEPA is an independent source of substantive
jurisdiction; LBP-14-9, 80 NRC 15 (2014)

information is specified in section 182 that must be provided by license applicant and it has no reference
to spent fuel disposal; CLI-15-4, 81 NRC 221 (2015)

intent of Congress in the Act is to prohibit relationships where an alien has the power to direct the
actions of the licensee; LBP-14-3, 79 NRC 267 (2014)

intervention petitioners must establish standing by demonstrating the nature of their right under the
Atomic Energy Act to be made a party to the proceeding, nature and extent of their interest in the
proceeding, and possible effect of any decision in the proceeding on their interest; LBP-12-24, 76 NRC
503 (2012)
it is fair to read the AEC and NRC history as a de facto acquiescence in and ratification of the Commission’s licensing procedure by Congress; CLI-15-4, 81 NRC 221 (2015)

it would be impermissible to construe the prohibition of foreign ownership so as to make it redundant or otherwise deprive it of operative effect; LBP-12-19, 76 NRC 184 (2012)

language of the National Environmental Policy Act indicates that Congress did not intend that it be precluded by the AEA; LBP-12-18, 76 NRC 127 (2012)

license amendments are not contingent upon any additional safety determination regarding spent fuel storage; CLI-15-4, 81 NRC 221 (2015)

license amendments are subject to a hearing opportunity; CLI-13-9, 78 NRC 551 (2013)

license applications must specifically state information that NRC, by rule or regulation, may determine to be necessary to decide technical and financial qualifications of applicant; DD-15-8, 82 NRC 107 (2015)

license denial letter that contained apparent boilerplate that was incomplete and perfomce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the Act; LBP-13-3, 77 NRC 82 (2013)

licensee must obtain NRC’s written consent prior to transferring an NRC license; CLI-15-26, 82 NRC 408 (2015)

licensee must show with reasonable assurance that its proposed methodology for material control and accounting will not be inimical to the common defense and security and will not constitute an unreasonable risk to the health and safety of the public; CLI-15-9, 81 NRC 512 (2015)

licenses for utilization or production facilities for industrial or commercial purposes must comply with the terms of AEA § 103; LBP-14-3, 79 NRC 267 (2014)

licensing actions that alter the terms of a license or otherwise authorize additional operating activities trigger hearing rights for the public under section 189a; CLI-15-5, 81 NRC 329 (2015)

mandatory hearings, which are required by section 189a, do not involve public participation, regardless of whether a contested hearing with public participation has occurred; CLI-12-11, 75 NRC 523 (2012)

mandatory language used in AEA § 274d is construed as requiring NRC to enter into an agreement for state regulation of the particular categories of nuclear materials that a state certifies it both desires to regulate and has established a program for, provided NRC finds the state’s program to be adequate and compatible; CLI-11-12, 74 NRC 460 (2011)

materials license suspension proceeding is not an adversary adjudication for purposes of the Equal Access to Justice Act because the AEA does not require such a hearing to be on the record pursuant to Administrative Procedure Act § 554; LBP-11-8, 73 NRC 349 (2011)

mitigation measures assessed in the SAMA analysis under the National Environmental Policy Act are supplemental to those already required under NRC safety regulations for reasonable assurance of safe operation and likewise to those NRC may order or require under ongoing regulatory oversight over reactor safety, pursuant to the AEA; CLI-12-15, 75 NRC 704 (2012)

National Environmental Policy Act and AEA and the regulations promulgated under each must be viewed in pari materia; LBP-14-9, 80 NRC 15 (2014)

neither licensee activities nor NRC inspection of or inquiry about those activities provides the opportunity for a hearing under the AEA because those activities only concern compliance with the terms of an existing license; CLI-14-11, 80 NRC 167 (2014)

no license may be issued to any person within the United States if, in the opinion of the Commission, issuance of a license to such person would be inimical to the common defense and security or to the health and safety of the public; LBP-14-3, 79 NRC 267 (2014)

NRC can issue nuclear power reactor licenses to applicants only upon a finding that utilization of special nuclear material will be in accord with the common defense and security and will provide adequate protection to the health and safety of the public; CLI-15-4, 81 NRC 221 (2015)

NRC cannot look to the sufficiency of safety standards enacted under the AEA to avoid its NEPA obligations; LBP-12-18, 76 NRC 127 (2012)

NRC has a clear statutory mandate to regulate the construction and operation of a uranium enrichment facility; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)

NRC has authority to conduct any investigations it deems necessary and proper to the administration or enforcement of its authority, which includes any regulations or orders issued pursuant to the AEA; CLI-13-5, 77 NRC 223 (2013)
NRC has authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit challenges solely on whether an order should be sustained; LBP-12-14, 76 NRC 1 (2012)

NRC has discretion in specifying the level of foreign ownership that would constitute a violation of the AEA; LBP-12-19, 76 NRC 184 (2012)

NRC has latitude to define who is an “affected person” within the meaning of AEA § 189a, 42 U.S.C. § 2239(a); LBP-12-3, 75 NRC 164 (2012)

NRC has long interpreted its statutory authority under the AEA to include conditioning approval of nuclear power plant licenses on environmentally acceptable routing of transmission lines; LBP-14-9, 80 NRC 15 (2014)

NRC is authorized to enter into agreements with the governor of any state providing for transfer of regulatory authority to the state over specified categories of nuclear material; CLI-11-12, 74 NRC 460 (2011)

NRC is authorized to enter into an agreement with the governor of any state if it finds that the state’s regulatory program is adequate to protect the public health and safety with respect to the materials the state seeks to regulate and is compatible with NRC’s program for regulation of such materials; CLI-13-6, 78 NRC 155 (2013)

NRC is authorized to issue any necessary subpoenas; CLI-13-5, 77 NRC 223 (2013)

NRC is not permitted to retain jurisdiction over a site at a licensee’s request where the state seeks to assume regulatory authority over the site and meets the “adequacy” and “compatibility” criteria; CLI-13-6, 78 NRC 155 (2013)

NRC is not required, as a precondition to issuing or renewing operating licenses for nuclear power plants, to make definitive findings concerning technical feasibility of a repository for the disposal of spent nuclear fuel; CLI-15-4, 81 NRC 221 (2015)

NRC is prohibited from issuing a license for a production and utilization facility to any corporation or other entity if the Commission knows or has reason to believe it is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government; CLI-13-4, 77 NRC 101 (2013); CLI-15-7, 81 NRC 481 (2015); LBP-12-19, 76 NRC 184 (2012)

NRC is prohibited from issuing a license to a nuclear power reactor if it would be inimical to the health or safety of the public; LBP-13-4, 77 NRC 107 (2013)

NRC is required to provide an opportunity to request a hearing under the Atomic Energy Act on a license amendment; CLI-15-21, 82 NRC 295 (2015)

NRC may not, over the objections of a state desiring jurisdiction and for reasons other than health and safety or compatibility, retain regulatory authority over pending applications involving a nuclear materials category otherwise transferred to a state; CLI-11-12, 74 NRC 460 (2011)

NRC must afford interested persons an opportunity for a hearing on the granting, suspending, revoking, or amending of any license; CLI-14-11, 80 NRC 167 (2014); LBP-15-27, 82 NRC 184 (2015)

NRC retains power under section 274j to revoke agreements with states and to restore NRC regulatory authority; CLI-11-12, 74 NRC 460 (2011)

NRC shall conduct a single adjudicatory hearing on the record with regard to the licensing of the construction and operation of a uranium enrichment facility; LBP-12-21, 76 NRC 218 (2012)

NRC Staff oversight activities normally conducted to ensure that licensees comply with existing NRC requirements and license conditions do not typically trigger an opportunity for a hearing; CLI-15-5, 81 NRC 329 (2015)

NRC Staff review procedures used to evaluate applications for issuance or transfer of control of a production or utilization facility license in light of the prohibitions in AEA §§ 103d and 104d and in 10 C.F.R. 50.38 against foreign ownership or control are described; LBP-12-19, 76 NRC 184 (2012)

opportunity for a hearing on license amendments is provided; CLI-12-20, 76 NRC 437 (2012)

orders issued under 10 C.F.R. 2.202 alter the requirements of a license and therefore fall generally under the terms of AEA § 189a; CLI-13-2, 77 NRC 39 (2013)

“owned, controlled, or dominated” refers to relationships in which the will of one party is subjugated to the will of another; CLI-15-7, 81 NRC 481 (2015); LBP-14-3, 79 NRC 267 (2014)

participation in a licensing proceeding requires a demonstration of standing; LBP-15-17, 81 NRC 753 (2015)
petitioner failed to demonstrate the existence of a licensing action subject to hearing rights under section 189a of the Atomic Energy Act; CLI-15-21, 82 NRC 295 (2015)

petitioner is not entitled to request a hearing where NRC has neither granted greater authority than that provided by its existing licenses nor otherwise altered the terms of those licenses; LBP-15-27, 82 NRC 184 (2015)

petitioner must address its hearing request to a matter that triggers a hearing opportunity; CLI-15-5, 81 NRC 329 (2015)

petitioners asserted that NRC actions following the events of September 11, 2001, and the accident at Fukushima Dai-ichi were insufficient to satisfy NRC’s general obligation to protect public health and safety; CLI-15-4, 81 NRC 221 (2015)

private parties are not guaranteed the right to have NRC Staff studies as a sort of precomplaint discovery tool; CLI-12-14, 75 NRC 692 (2012)

Purpose section specifically provides for creating a program to encourage widespread participation in order to achieve the policies set forth in the Act; LBP-14-4, 79 NRC 319 (2014)

reactor operating licenses must include technical specifications that include specific characteristics of the facility and such other information as the Commission may, by rule or regulation, deem necessary in order to enable it to find that the utilization of special nuclear material will provide adequate protection to the health and safety of the public; LBP-13-7, 77 NRC 307 (2013)

regulation of offsite transmission lines is within NRC’s authority under section 101 and nothing in the AEA precludes NRC from implementing, through issuance of conditional licenses, NEPA’s environmental mandate; LBP-14-9, 80 NRC 15 (2014)

requirement to demonstrate standing is derived from instruction to NRC to provide a hearing upon the request of any person whose interest may be affected by the proceeding; LBP-15-5, 81 NRC 249 (2015)

rule exemption requests are not entitled to a hearing under AEA § 189a; CLI-13-1, 77 NRC 1 (2013)

section 189a has been interpreted to require that the hearing must encompass all material factors bearing on the licensing decision raised by the requester; LBP-11-22, 74 NRC 259 (2011)

severe accident mitigation alternatives analysis is not part of the agency’s safety review for license renewal under the AEA, but is instead a mitigation alternatives analysis conducted pursuant to the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013)

“source material” is defined as uranium being extracted through the ISL process; LBP-15-16, 81 NRC 618 (2015)

specific structure for the mandatory hearing requirement is not specified in the Act, and the Commission has granted licensing boards considerable flexibility to select the most appropriate approach in the circumstances of each individual case; LBP-12-21, 76 NRC 218 (2012)

statutory findings required by section 103 do not apply to disposal activities that might result from operation of a licensed facility; CLI-15-4, 81 NRC 221 (2015)

substance of the NRC action determines entitlement to a section 189a hearing, not the particular label that NRC chooses to assign to its action; LBP-13-7, 77 NRC 307 (2013)

terminating an adjudication has significant implications for the rights of intervenors under section 189a; LBP-11-22, 74 NRC 259 (2011)

to determine whether an ongoing CAL process constitutes a de facto license amendment proceeding, the board must determine whether the requested change in operating authority sought by licensee is strictly in accordance with the terms and technical specifications in its existing license; LBP-13-7, 77 NRC 307 (2013)

to evaluate an operating license renewal application, NRC reviews the management of aging effects and time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011)

under AEA, NRC can issue conditional licenses for regulatory purposes, and thus there can be no objection to its use of the same means to achieve environmental ends as well; LBP-14-9, 80 NRC 15 (2014)

unless the safety findings prescribed by the Act and the regulations can be made, the reactor does not obtain a license, no matter how badly it is needed; CLI-15-4, 81 NRC 221 (2015)
written consent from NRC is required for all direct or indirect license transfers; CLI-15-8, 81 NRC 500 (2015)

ATTORNEY CONDUCT
experienced litigator should have expected that NRC Staff might challenge its interpretation of an NRC regulation regarding appeals; LBP-15-28, 82 NRC 233 (2015)
to the extent that petitioner’s counsel is blameworthy, petitioner may be held accountable; LBP-13-2, 77 NRC 71 (2013)

ATTORNEYS’ FEES AND EXPENSES
award of attorneys’ fees under the Equal Access to Justice Act can include fees paid by a third-party liability insurer; LBP-11-8, 73 NRC 349 (2011)
both union employees and the insured can be viewed as having incurred legal fees insofar as they have paid for legal services in advance as a component of the union dues or insurance premiums; LBP-11-8, 73 NRC 349 (2011)
claimant with a legally enforceable right to full indemnification of attorney fees from a solvent third party cannot be deemed to have incurred that expense for purposes of the Equal Access to Justice Act, and hence is not eligible for an award of fees; LBP-11-8, 73 NRC 349 (2011)
denying Equal Access to Justice Act awards in insurance contexts would undermine the dual purposes of EAJA by both maintaining financial deterrents for those who would want to challenge unjust government action and not deterring unreasonable government actions; LBP-11-8, 73 NRC 349 (2011)
Equal Access to Justice Act applies to any adjudication required by statute to be determined on the record in which the government is represented by counsel; LBP-11-8, 73 NRC 349 (2011)
Equal Access to Justice Act renders the United States liable for attorney’s fees for which it would not otherwise be liable, and thus amounts to a partial waiver of sovereign immunity, and any such waiver must be strictly construed in favor of the United States; LBP-11-8, 73 NRC 349 (2011)
fee-deterrent-removal purpose of the Equal Access to Justice Act would not be served by an award of fees to an individual whose fees are fully paid by an ineligible organization; LBP-11-8, 73 NRC 349 (2011)
fees may be awarded in adversary adjudications that are governed by Administrative Procedure Act § 554, but they may not be awarded in adversary adjudications that Congress did not subject to that section; LBP-11-8, 73 NRC 349 (2011)
for a prevailing applicant to recover attorneys’ fees and expenses, the applicant must have incurred those fees and expenses in connection with the adversary adjudication in question; LBP-11-8, 73 NRC 349 (2011)
in an actuarial sense the cost of the defense, to the extent borne by the insurance company, is a cost that the insured paid for, just as he would have paid a lawyer for his defense had he had no insurance; LBP-11-8, 73 NRC 349 (2011)
inasmuch as litigants against the government manifestly have no constitutional right to be compensated out of public funds for their attorneys’ fees, it cannot be doubted that Congress has the power to limit the reach of the Equal Access to Justice Act; LBP-11-8, 73 NRC 349 (2011)
“incur” within the context of Equal Access to Justice Act means that an individual who is a prevailing party meeting the financial qualification of the EAJA is ineligible to receive an EAJA award when that individual was not responsible for the costs of the attorney’s fees; LBP-11-8, 73 NRC 349 (2011)
nothing in the Equal Access to Justice Act suggests a purpose to prevent a contractual agreement, or more broadly, to discourage the purchase of liability insurance; LBP-11-8, 73 NRC 349 (2011)
parties who prevail against the government in certain types of agency proceedings are allowed to recover attorneys’ fees and other expenses incurred in connection with the proceeding unless the government’s position was substantially justified, or other special circumstances render an award unjust; LBP-11-8, 73 NRC 349 (2011)
preference of an attorney-client relationship suffices to entitle prevailing litigants to receive fee awards; LBP-11-8, 73 NRC 349 (2011)
prevailing party is not entitled to an award for attorneys’ fees and expenses if the position of the Commission over which the applicant has prevailed was substantially justified; LBP-11-8, 73 NRC 349 (2011)
when a third party who has no direct interest in the litigation pays fees on behalf of a taxpayer, the
taxpayer incurs the fees so long as he assumes an absolute obligation to repay the fees or a contingent
obligation to pay the fees in the event that he is able to recover them; LBP-11-8, 73 NRC 349 (2011)
where a pro bono attorney forgives a fee to a client unable to afford legal expenses, that client is eligible
for an Equal Access to Justice Act award on the basis of that arrangement with the attorney; LBP-11-8,
73 NRC 349 (2011)
within 30 days of the Commission’s decision upholding the board majority decision setting aside the
NRC Staff’s immediately effective enforcement order, petitioner applied for an award of over $250,000
in attorneys’ fees; LBP-11-8, 73 NRC 349 (2011)
BACKFITTING
Commission administratively exempted, from the backfit rule, an order to the combined license holder to
address spent fuel pool instrumentation requirements not specified in the certified design as enhanced
protective measures that represent a substantial increase in the protection of public health and safety;
CLI-12-9, 75 NRC 421 (2012)
Commission relied on the exception to the Backfit Rule that applies when regulatory action is necessary
to ensure that the facility provides adequate protection to the health and safety of the public;
LBP-12-18, 76 NRC 127 (2012)
Commission requests briefing from NRC Staff on the circumstances, if any, Staff would judge a
potentially cost-beneficial mitigation alternative to warrant further NRC consideration outside of license
renewal review, either via a backfit analysis or as part of another process; CLI-15-3, 81 NRC 217
(2015)
compliance with NRC requirements presumptively ensures adequate protection, but new information may
reveal that additional requirements are warranted, and in such situations, the Commission may act in
accordance with its statutory authority to require licensees and construction permit holders to take action
in order to protect health and safety and common defense and security; LBP-12-18, 76 NRC 127
(2012)
exception to the backfit rule is provided if the Commission determines that regulatory action is necessary
to ensure that the facility provides adequate protection to the health and safety of the public and is in
accord with the common defense and security; CLI-12-9, 75 NRC 421 (2012)
modification of or addition to systems, structures, components, or designs of a facility are included;
LBP-11-17, 74 NRC 11 (2011)
NRC could require modifications to the inservice testing program pursuant to compliance backfit
provisions; CLI-12-2, 75 NRC 63 (2012)
NRC may impose new requirements defined as “backfitting” on previously licensed power reactors only if
the agency finds that there will be a substantial increase in the overall protection of the public health
and safety or the common defense and security and that the direct and indirect costs of implementation
for that facility are justified in view of this increased protection; LBP-11-17, 74 NRC 11 (2011);
LBP-12-18, 76 NRC 127 (2012)
NRC Staff has authority to require implementation of non-aging-management severe accident mitigation
alternatives through its current licensing basis backfit review under Part 50 or through setting conditions
of the license renewal; LBP-11-17, 74 NRC 11 (2011)
BALD AND GOLDEN EAGLE PROTECTION ACT
contention that the final supplemental environmental impact statement violates the National Environmental
Policy Act and implementing regulations by failing to conduct the required hard-look analysis of
impacts of the proposed mine on species of birds and bats receiving special protection migrates as an
admissible contention; LBP-14-5, 79 NRC 377 (2014)
BENEFIT-COST ANALYSIS
accounting for the meteorological patterns, atmospheric transport modeling, and data issues raised by
intervenor cannot credibly alter which severe accident mitigation alternatives are potentially
cost-beneficial to implement; LBP-11-18, 74 NRC 29 (2011)
adequacy of a SAMDA analysis is judged not by whether plainly better assumptions or methodologies
could have been used or the analysis refined further but whether it looks genuinely plausible that
inclusion of an additional factor or use of other assumptions or models may change the cost-benefit
conclusions for the SAMDA analysis; LBP-11-38, 74 NRC 817 (2011)
admission of a contention that might require further explanation of severe accident mitigation alternatives cost-benefit analysis did not have a pervasive and unusual effect on the litigation; CLI-11-6, 74 NRC 203 (2011)

ALARA analysis required under section 20.1403(a) calls for a licensee seeking to use restricted release to analyze whether it would be cost-beneficial to remove enough radioactive contamination from the site that doses to the public are no higher than 25 mrem per year without reliance on restricted-release controls; CLI-13-6, 78 NRC 155 (2013)

although NEPA does not explicitly mention cost-benefit balancing, courts have interpreted the statute as requiring federal agencies to balance the environmental costs against the anticipated benefits of a proposed action; LBP-11-7, 73 NRC 254 (2011)

assertion that other severe accident mitigation alternatives might become cost-effective if implemented, without indication of any particular positive or negative environmental impact from any such implementation fails to present an exceptionally grave issue; LBP-12-1, 75 NRC 1 (2012)
because a need-for-power assessment necessarily entails forecasting power demands in light of substantial uncertainty and the duty of providing adequate and reliable service to the public, need-for-power assessments are properly conservative; LBP-11-7, 73 NRC 254 (2011); LBP-12-5, 75 NRC 227 (2012)

Commission requests briefing from NRC Staff on the circumstances, if any, NRC Staff would judge a potentially cost-beneficial mitigation alternative to warrant further NRC consideration outside of the license renewal review, either via a backfit analysis or as part of another process; CLI-15-3, 81 NRC 217 (2015)

Commission requests briefing from NRC Staff on the level of uncertainty that NRC Staff considers acceptable for the implementation cost portion of the cost-benefit analysis, and why; CLI-15-3, 81 NRC 217 (2015)

contention that alleges an omission, not an inadequacy, of an environmental report’s analysis of socioeconomic impacts raises an issue that is not material to any finding NRC must make in an early site permit proceeding; LBP-11-16, 73 NRC 645 (2011)

contention that population used for analysis might underestimate the exposed population in a severe accident and, in turn, underestimate the benefit achieved in implementing a severe accident mitigation alternatives analysis is admissible; LBP-15-5, 81 NRC 249 (2015)

contention that severe accident mitigation alternatives analysis does not accurately reflect decontamination and cleanup costs is decided; LBP-13-13, 78 NRC 246 (2013)

contentions concerning benefits assessment shall not be admitted if the applicant does not address those issues in the early site permit application; LBP-11-16, 73 NRC 645 (2011)

contributions of the uranium fuel cycle must be evaluated and added to the environmental costs of a proposed new nuclear power plant; LBP-11-26, 74 NRC 499 (2011)

cost-effective candidate severe accident mitigation alternatives are identified by comparing the annualized cost of the mitigation measure with the benefit as determined by the averted cost of severe accidents (consequences), as weighted by the probability of the accidents’ occurrence; LBP-11-13, 73 NRC 534 (2011)

costs and benefits of the energy-efficient building code are essential to determine whether the adoption of the code should be included as an alternative; LBP-11-21, 74 NRC 115 (2011)

demand for electricity is the justification for building any power plant, and satisfaction of that demand is the principal beneficial factor weighed against the environmental costs in striking the balance that NEPA requires; LBP-11-7, 73 NRC 254 (2011)

discussion of the economic costs and benefits of the proposed action and alternatives is required if such costs and benefits are essential for a determination regarding the inclusion of an alternative in the range of alternatives considered; LBP-11-21, 74 NRC 115 (2011)

draft environmental impact statement must consider the economic, technical, and other benefits and costs of the proposed action; LBP-11-7, 73 NRC 254 (2011)
eligibility test in section 20.1403(a) postulates a cost-benefit inquiry that is modeled on a traditional ALARA cost-benefit analysis, but that serves a different regulatory purpose; CLI-13-6, 78 NRC 155 (2013)
environmental impact statement need not always contain a formal or mathematical cost-benefit analysis; LBP-11-7, 73 NRC 254 (2011)
environmental impact statements serve as an environmental full disclosure law providing agency decisionmakers, as well as the President, the Congress, the Council on Environmental Quality, and the public the environmental cost-benefit information that Congress thought they should have about each qualifying federal action; LBP-13-13, 78 NRC 246 (2013)
extent to which operation and maintenance costs of a solar facility may present a comparative benefit is immaterial since the four-part combination of alternative energy sources is not environmentally preferable to two new nuclear units; LBP-11-4, 73 NRC 91 (2011)
for a proposed nuclear materials-related activity, commencement of construction relative to that activity prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
given the legal responsibility imposed upon a public utility to provide at all times adequate, reliable service, and the severe consequences that may attend upon a failure to discharge that responsibility, the most that can be required is that need-for-power forecasts be reasonable in the light of what is ascertainable at the time made; LBP-12-5, 75 NRC 227 (2012)
goal of a severe accident mitigation alternatives analysis is to identify potential changes to a nuclear power plant or its operations that might reduce the risk or likelihood or impact, or both, of a severe reactor accident for which the benefit of implementing the changes outweighs the cost of the implementation; LBP-11-18, 74 NRC 29 (2011)
if demand for power turns out to be less than predicted, it cannot be argued that the cost of the unneeded generating capacity may turn up in customers’ electric bills because the surplus can be profitably marketed to other systems or the new capacity can replace older, less efficient units; LBP-12-5, 75 NRC 227 (2012)
if important factors in the cost-benefit balancing cannot be quantified, they may be discussed qualitatively; LBP-11-7, 73 NRC 254 (2011)
if licensee demonstrates, through either of the two cost-benefit approaches, that removing radioactive contamination to the unrestricted-use level would not be cost-beneficial, then licensee must show that, with the addition of engineered barriers and institutional controls, the average annual dose to the public will not exceed 25 rem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)
if the adverse environmental effects of a proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-11-7, 73 NRC 254 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-12-18, 76 NRC 127 (2012); LBP-13-4, 77 NRC 107 (2013)
if the cost of implementing a particular severe accident mitigation alternative is greater than its estimated benefit, the SAMA is not considered cost-beneficial to implement; LBP-11-33, 74 NRC 675 (2011)
initial eligibility for restricted release is determined; CLI-11-12, 74 NRC 460 (2011)
it is sufficient if the need-for-power analysis is at a level of detail that reasonably characterizes the costs and benefits associated with proposed licensing actions; LBP-11-7, 73 NRC 254 (2011)
it must be genuinely plausible that revising the severe accident mitigation alternatives analysis would change the outcome so that one or more of the SAMA candidates that applicant evaluated and rejected would become cost-beneficial; LBP-15-5, 81 NRC 249 (2015)
license renewal applicant need not include analyses of the environmental impacts of Category 1 issues in its environmental report because NRC Staff incorporates the GEIS analysis of Category 1 issues as part of the overall cost-benefit balance in the supplemental environmental impact statement for license renewal; CLI-12-19, 76 NRC 377 (2012)
licensees, in determining whether levels are ALARA, are to consider detriments, such as traffic accidents; CLI-13-6, 78 NRC 155 (2013)
licensing board’s inquiry should not be whether there are plainly better methodologies or whether the severe accident mitigation alternatives analysis can be refined further, but rather whether the SAMA
analysis resulted in erroneous conclusions on which SAMAs and SAMDAs are found cost-beneficial to implement; LBP-11-7, 73 NRC 254 (2011)

need-for-power assessment must only be at a level of detail sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-12-5, 75 NRC 227 (2012)

need-for-power assessment need not precisely identify future market conditions and energy demand, or develop detailed analyses of system generating assets, costs of production, capital replacement ratios, and the like in order to establish with certainty that the construction and operation of a nuclear power plant is the most economical alternative for generation of power; LBP-11-7, 73 NRC 254 (2011); LBP-12-5, 75 NRC 227 (2012)

need for power is a shorthand expression for the benefit side of the cost-benefit balance that NEPA mandates for a proceeding considering the licensing of a nuclear power plant; LBP-11-6, 73 NRC 149 (2011)

NEPA itself does not mandate a cost-benefit analysis, but the statute is generally regarded as calling for some sort of a weighing of the environmental costs against the economic, technical, or other public benefits of a proposal; LBP-11-6, 73 NRC 149 (2011)

NEPA requires that NRC take a hard look at alternatives, including severe accident mitigation alternatives, and to provide a rational basis for rejecting alternatives that are cost-effective; LBP-12-8, 75 NRC 539 (2012)

NRC authority to review offsite impacts of transmission lines goes beyond merely factoring them into a final cost-benefit balance and includes as well the authority, where necessary, to impose license conditions to minimize those impacts; LBP-11-6, 73 NRC 149 (2011)

NRC generally reviews severe accident mitigation alternatives using a cost-benefit analysis, and SAMAs that are not cost-beneficial need not be implemented by licensee; LBP-12-18, 76 NRC 127 (2012)

NRC may impose new requirements defined as “backfitting” on previously licensed power reactors only if the agency finds that there will be a substantial increase in the overall protection of the public health and safety or the common defense and security and that the direct and indirect costs of implementation for that facility are justified in view of this increased protection; LBP-12-18, 76 NRC 127 (2012)

NRC Staff is to consider and weigh the environmental, technical, and other costs and benefits of a proposed action and alternatives, and, to the fullest extent practicable, quantify the various factors considered; LBP-11-7, 73 NRC 254 (2011)

NRC Staff may accord substantial weight to the stated purpose of the project, i.e., to provide additional baseload electrical generation capacity for use in the owner’s current markets and/or for potential sale on the wholesale market; LBP-11-7, 73 NRC 254 (2011)

NRC Staff must weigh unavoidable adverse environmental impacts and resource commitments (costs) against the project’s benefits; CLI-15-13, 81 NRC 555 (2015)

NRC’s position is that it need not compare the costs of alternatives to a proposed action if its FEIS does not identify an environmentally preferable alternative; LBP-12-18, 76 NRC 127 (2012)

offsite land use is a Category 2 impact because land use changes may be perceived by some community members as adverse and by others as beneficial, and so, NRC Staff is unable to assess generally the potential significance of site-specific offsite land use impacts; LBP-13-13, 78 NRC 246 (2013)

one cost that must be weighed by decisionmakers is the cost of uncertainty; LBP-15-3, 81 NRC 65 (2015)

one of the benefits of removing enough radioactivity to cross the 25-mrem threshold is that the value of the affected property is likely to increase, and it is in this sense that NRC guidelines contemplate, as part of the ALARA analysis, a comparison between restricted release and unrestricted release; CLI-13-6, 78 NRC 155 (2013)

petitioner must approximate the relative cost and benefit of a challenged SAMA or provide at least some ballpark consequence and implementation costs should the SAMA be performed; CLI-11-11, 74 NRC 427 (2011)

petitioner need not rerun applicant’s own cost-benefit calculations, but must do more than merely suggest that additional factors be evaluated or that different analytical techniques be used; LBP-15-5, 81 NRC 249 (2015)

petitioner’s failure to address applicant’s supplemental economic analyses, demonstrate specific knowledge of the analyses, and not indicate, even broadly that the SAMAs economic cost-benefit conclusions are not sufficiently conservative renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)
petitioners have not established that use of another source term would identify additional cost-beneficial severe accident mitigation alternatives; LBP-11-13, 73 NRC 534 (2011)

preponderance of the evidence supports conclusion that NRC Staff’s reasoned, qualitative approach to weighing the costs and benefits of plant shutdown on property values and the local community is reasonable and satisfies regulatory requirements; LBP-13-13, 78 NRC 246 (2013)

purpose of SAMA analyses is to identify safety enhancements that would be cost-beneficial to adopt; LBP-15-29, 82 NRC 246 (2015)

qualitative benefits and costs in the cost-benefit analysis for the uranium enrichment facility are estimated to be small, moderate, or large, using the same general definitions found in the regulations of Part 51; LBP-12-21, 76 NRC 218 (2012)

question of material impacts hinges upon whether a severe accident mitigation alternative may be cost-beneficial to implement; LBP-13-13, 78 NRC 246 (2013)

quibbling over the details of an economic analysis would effectively stand NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-11-7, 73 NRC 254 (2011); LBP-12-5, 75 NRC 227 (2012)

record of decision must discuss relevant factors including economic and technical considerations among alternatives; LBP-11-7, 73 NRC 254 (2011)

relevant issue is whether any additional SAMA should have been identified as potentially cost beneficial, not whether further analysis may refine the details in the SAMA NEPA analysis; LBP-15-29, 82 NRC 246 (2015)

required level of demonstration by petitioners of cost-effectiveness of other severe accident mitigation alternatives is case and issue specific; LBP-11-35, 74 NRC 701 (2011)

SAMA analysis is an analysis of a class of SAMA candidates using probabilistic risk assessment techniques to determine whether any of the SAMA candidates would be cost-beneficial; LBP-13-1, 77 NRC 57 (2013)

SAMA contention is admissible only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-11-7, 73 NRC 254 (2011); LBP-11-13, 73 NRC 534 (2011)

scaling severe accident mitigation design alternatives implementation costs (inflation rate, regional cost-of-living adjustment, risk reduction factor) and implementation benefits (discount rate, power pricing data, power market effects, consumer impacts, power price spikes, loss of grid) is discussed; LBP-11-38, 74 NRC 817 (2011)

sea-breeze effect and hot-spot effect must cause the expected average offsite damages to increase by at least a factor of 2 for the next most costly severe accident mitigation alternative to be cost-effective; LBP-11-18, 74 NRC 29 (2011)

severe accident mitigation alternatives analysis for license renewal is a cost-benefit analysis, weighing a particular mitigation measure’s estimated degree of risk reduction against its estimated cost of implementation; CLI-12-8, 75 NRC 393 (2012)

severe accident mitigation alternatives analysis is a cost-benefit analysis, not a direct safety analysis, and thus does not raise any exceptionally grave issues; LBP-11-23, 74 NRC 287 (2011)

severe accident mitigation alternatives analysis is a probability-weighted assessment of the benefits and costs of mitigation alternatives that can be used to reduce the risks of potential severe accidents at nuclear power plants; CLI-12-1, 75 NRC 39 (2012); CLI-12-15, 75 NRC 704 (2012)

severe accident mitigation alternatives analysis is a quantitative cost-benefit analysis, assessing whether the cost of implementing a specific enhancement outweighs its benefit; CLI-15-18, 82 NRC 135 (2015)

severe accident mitigation alternatives analysis is a quantitative cost-benefit analysis, comparing the costs of a mitigation measure against its benefits; LBP-13-13, 78 NRC 246 (2013)

severe accident mitigation alternatives analysis is governed by NEPA’s rule of reason; LBP-11-13, 73 NRC 534 (2011)

sufficiency of the NRC’s hard look at the benefits of severe accident mitigation alternatives in comparison to their costs is subject to litigation in a license renewal proceeding; LBP-11-17, 74 NRC 11 (2011)

supplemental environmental impact statements for license renewal are not required to include discussion of need for power or the economic costs and economic benefits of the proposed action or of alternatives to the proposed action; LBP-13-13, 78 NRC 246 (2013)
subject index

there can be no “hard look” at the costs and benefits of a proposed action unless all costs are disclosed;  
LBP-12-18, 76 nrc 127 (2012)
to demonstrate that a revised SAMA analysis would produce a materially different result, intervenor  
should indicate how much the mean consequences of the severe accident scenarios could reasonably be  
expected to change as well as cost of implementing other SAMAs it believes might become  
cost-effective; LBP-12-1, 75 nrc 1 (2012)
to the extent that applicant proposes modifications to the facility in response to a request for information,  
NEPA also requires the consideration of the effectiveness and relative costs of a range of alternatives  
for satisfying the NRC’s concerns; LBP-12-15, 76 nrc 14 (2012)
ultimate concern in a SAMA contention is whether any additional SAMA should have been identified as  
potentially cost-beneficial, not whether further analysis may refine the details in the SAMA NEPA  
analysis; LBP-11-13, 73 nrc 534 (2011)
unless it looks genuinely plausible that inclusion of an additional factor or use of other assumptions and  
models may change the cost-benefit conclusions for the severe accident mitigation alternative candidates  
evaluated, no purpose would be served to further refine the SAMA analysis; CLI-12-5, 75 nrc 301  
weighing of the merits and drawbacks of the various alternatives need not be displayed in a monetary  
cost-benefit analysis and should not be when there are important qualitative considerations; LBP-11-7,  
73 nrc 254 (2011)
when NRC imposes new regulatory requirements that are important safety enhancements but not deemed  
necessary to ensure adequate protection of public health and safety, NRC often does not require existing  
licensees to implement them based on considerations such as whether they are cost-beneficial; CLI-12-2,  
75 nrc 63 (2012)
whether a SAMA may be worthwhile to implement is based upon a weighing of the cost to implement  
with the reduction in risks to public health, occupational health, and offsite and onsite property;  
LBP-11-2, 73 nrc 28 (2011)
whether a severe accident mitigation alternative is worthy of more detailed analysis in an environmental  
report or supplemental environmental impact statement hinges on whether it may be cost-beneficial to  
implement; CLI-12-3, 75 nrc 132 (2012)
biological assessment
acting agency submits its completed biological assessment to the appropriate Service and awaits its  
determination of concurrence or nonconcurrence, which under the Services’ regulations is to be returned  
within 30 days; LBP-12-10, 75 nrc 633 (2012)
assessment of listed species shall be completed before any contract for construction is entered into and  
before construction is begun with respect to such action; LBP-12-12, 75 nrc 742 (2012)
clarification is provided in 50 C.F.R. 402.12 on the requirements with respect to biological assessments;  
LBP-12-11, 75 nrc 731 (2012)
content of the biological assessment is at the discretion of the federal agency; LBP-12-11, 75 nrc 731  
(2012)
federal agency need not initiate formal consultation if, as a result of the preparation of a biological  
assessment under section 402.12 or as a result of informal consultation with FWS under section 402.13,  
the federal agency determines, with the written concurrence of the U.S. Fish and Wildlife Service  
Director, that the proposed action is not likely to adversely affect any listed species or critical habitat;  
formal consultation follows only if a biological assessment shows that the action may affect listed species  
or critical habitat; LBP-12-10, 75 nrc 633 (2012)
formal consultation includes preparation of a biological opinion by the Service, detailing the likely effects  
of the action on listed species or habitat as well as mitigation alternatives; LBP-12-10, 75 nrc 633  
(2012)
if the acting agency concludes in the biological assessment that the action is not likely to affect listed  
habitats or species, and the Service concurs, the acting agency need not enter formal consultation;  
LBP-12-10, 75 nrc 633 (2012)
if the acting agency makes a “likely to affect” determination in the biological assessment, it is required to  
enter into formal consultation with the appropriate Service; LBP-12-10, 75 nrc 633 (2012)
if the Secretary of the Interior advises that listed species may be present, the agency shall conduct a biological assessment for the purpose of identifying any species that is likely to be affected by the action; LBP-12-12, 75 NRC 742 (2012)

if the Service does not concur with the agency’s “not likely to affect” determination, it may request that the acting agency enter into formal consultation; LBP-12-10, 75 NRC 633 (2012)

if the Services advise that listed species are present, the acting agency is to prepare a biological assessment to identify any species that is likely to be affected by such action; LBP-12-11, 75 NRC 731 (2012)

preparation of the biological assessment may be consolidated with interagency cooperation procedures required by other statutes, such as NEPA; LBP-12-11, 75 NRC 731 (2012)

to prepare a biological assessment, the acting agency must first request from the Services a list of endangered or threatened species or habitat that may be present in the area of the action, or provide to the Services its own list for their review; LBP-12-10, 75 NRC 633 (2012)

where an acting agency is engaged in major construction activities, the acting agency is to evaluate, through preparation of a biological assessment, whether the action is likely to adversely affect species or habitat; LBP-12-10, 75 NRC 633 (2012)

whether NRC Staff undertakes formal consultation with the Services in the event that they disagree with a finding by the NRC of “no effect” or “not likely adversely to affect” depends upon the NRC’s own regulations and its interpretation of its duty under the ESA to ensure that any action is not likely to jeopardize listed species or habitat; LBP-12-10, 75 NRC 633 (2012)

BOILING-WATER REACTORS

as part of the NRC post-Fukushima lessons-learned activities, NRC is requiring all licensees to reevaluate seismic hazards at their sites, and to this end, issued a request for information; DD-15-1, 81 NRC 193 (2015)

contention that environmental report fails to accurately and thoroughly conduct severe accident mitigation alternatives analysis to design vulnerability of GE Mark I BWR pressure suppression containment system and environmental consequences of a to-be-anticipated severe accident post-Fukushima Daiichi fails to present a genuine material dispute; LBP-15-5, 81 NRC 249 (2015)

environmental reports must discuss new SAMAs addressed in more recent reports for other nuclear power plants of the same or similar BWR Mark II design; LBP-14-15, 80 NRC 151 (2014)

existing containment vent systems at BWRs with Mark I containments provide a capability to vent the containment under design-basis conditions; DD-15-1, 81 NRC 193 (2015)

licensees of boiling water reactors with Mark I and II containments are required to design and install a venting system that provides venting capability from the wetwell during severe accident conditions; DD-15-1, 81 NRC 193 (2015)

NRC addressed concerns about flooding at GE Mark I and II BWRs through a request for information; DD-15-1, 81 NRC 193 (2015)

parameters from which ERDS transmits data points for BWRs are identified in 10 C.F.R. Part 50, App. E, § VI.2(a)(ii); LBP-15-4, 81 NRC 156 (2015)

request for additional instrumentation for all Mark I spent fuel storage pools has been addressed through an order modifying licenses with regard to reliable spent fuel pool instrumentation; DD-15-1, 81 NRC 193 (2015)

request that NRC immediately revoke prior preapproval of the hardened vent system or direct torus vent system at each GE BWR Mark I unit has been addressed by an order modifying licenses with regard to reliable hardened containment vents capable of operation under severe accident conditions; DD-15-1, 81 NRC 193 (2015)

request that NRC order licensees to include a reliable hardened vent in boiling-water reactor Mark I and Mark II containments is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order the immediate suspension of the operating licenses of all General Electric BWRs that use the Mark I primary containment system, citing the Fukushima Dai-ichi accident in Japan as its rationale basis, is resolved; DD-15-1, 81 NRC 193 (2015)

structural integrity of GE Mark I BWR spent fuel pools and spent fuel management in dry storage casks are discussed; DD-15-1, 81 NRC 193 (2015)
SUBJECT INDEX

BRIEFS

Commission directs litigants to provide either a joint stipulation that local union’s appeal should be dismissed or briefing on the question whether the appeal should be dismissed as moot and the proceeding terminated; CLI-15-16, 81 NRC 810 (2015)

Commission exercises its discretion to consider briefs that were not filed via the agency’s E-Filing system; LBP-15-4, 81 NRC 156 (2015)
electronic filing is required, unless the presiding officer grants an exemption permitting an alternative filing method for good cause shown, or unless the filing falls within the scope of an exception; CLI-13-9, 78 NRC 551 (2013)
filings not otherwise authorized by NRC rules are permitted only where necessity or fairness dictates; CLI-14-3, 79 NRC 31 (2014)
judges are not like pigs, hunting for truffles buried in briefs; LBP-11-6, 73 NRC 149 (2011); LBP-11-14, 73 NRC 591 (2011)
parties are expected to adhere to page-limit requirements, or timely seek leave for an enlargement of the page limitation; CLI-11-14, 74 NRC 801 (2011)
See also Briefs, Appellate; Reply Briefs

BRIEFS, APPELLATE

although a party who is not injured by a board’s ruling has no right to appeal that ruling, it may file a supporting brief at the appropriate time; CLI-12-6, 75 NRC 352 (2012)
although the entire record is considered on appeal, including pleadings that appellants ask to be adopted by reference, the Commission’s decision responds to the arguments made explicitly in the appellate brief; CLI-11-8, 74 NRC 214 (2011)
appellants may not amend their contentions on appeal; CLI-11-8, 74 NRC 214 (2011)
appellants must clearly identify the errors in the decision below and ensure that their brief contains sufficient information and cogent argument to alert the other parties and the Commission to the precise nature of and support for their claims; CLI-11-8, 74 NRC 214 (2011)
arguments made for the first time on appeal will not be considered; CLI-12-3, 75 NRC 132 (2012)
arguments made on appeal must be comprehensive, concise, and self-contained and incorporation of pleadings or arguments by reference is discouraged; CLI-12-3, 75 NRC 132 (2012)
arguments not raised before the board or not clearly articulated in the petition for review are deemed waived; LBP-15-5, 81 NRC 249 (2015)
briefs are limited to 30 pages, absent Commission order directing otherwise; CLI-11-8, 74 NRC 214 (2011)
briefs on appeal must conform to the requirements stated in section 2.341(c)(2); CLI-11-8, 74 NRC 214 (2011)
burden of setting forth a clear and coherent argument is on petitioner, and it should not be necessary to speculate about what a pleading is supposed to mean; CLI-11-2, 73 NRC 333 (2011)
Commission declines to consider new arguments raised on appeal that the board did not have the opportunity to consider; CLI-15-17, 82 NRC 33 (2015)
Commission requests briefing from NRC Staff on the circumstances, if any, NRC Staff would judge a potentially cost-beneficial mitigation alternative to warrant further NRC consideration outside of the license renewal review, either via a backfit analysis or as part of another process; CLI-15-3, 81 NRC 217 (2015)
Commission requests briefing from NRC Staff on whether it has a process in place to follow up with licensee to determine which potentially cost-beneficial mitigation alternatives ultimately were found by licensee to be cost-beneficial, if any, and which alternatives, if any, licensee implemented; CLI-15-3, 81 NRC 217 (2015)
Commission should not be expected to sift unaided through earlier briefs or other documents filed before the board to piece together and discern a party’s argument and the grounds for its claims; CLI-12-8, 75 NRC 393 (2012)
conclusory statement that appellants proved their position is not sufficient to show clear error or abuse of discretion on the part of the board; CLI-11-8, 74 NRC 214 (2011)
intervenors’ motion for an enlargement of the page limit for their petition for review is granted; CLI-14-10, 80 NRC 157 (2014)
issue on appeal is not properly briefed by incorporating by reference papers filed with the licensing board; CLI-11-8, 74 NRC 214 (2011)
page limit for appellate briefs excludes tables of contents and citations, appropriate exhibits, and statutory or regulatory extracts; CLI-11-8, 74 NRC 214 (2011)
parties are directed to provide further briefing on questions relating to severe accident decontamination time values and costs used in the SAMA analysis; CLI-15-2, 81 NRC 213 (2015)
petition for review falls short of satisfying 10 C.F.R. 2.341(b)(4) if it does not specify the subsections upon which it relies but merely sets forth a series of general grievances fundamentally going to the correctness of the board’s decision; CLI-11-2, 73 NRC 333 (2011)
petitioner’s appellate argument must pass regulatory muster under the rigorous standards of 10 C.F.R. 2.326(a)(3); CLI-11-2, 73 NRC 333 (2011)
references to affidavits and other exhibits supporting petitioner’s claims should include page citations; CLI-12-8, 75 NRC 393 (2012)

BURDEN OF PERSUASION

absent an obvious potential for harm, to obtain standing, it is petitioner’s burden to show how harm will or may occur; LBP-14-4, 79 NRC 319 (2014)
at the contention admissibility stage, the burden is on intervenors to demonstrate a deficiency in the application; CLI-11-9, 74 NRC 233 (2011)
burden is on the proponent of a contention to show that the Staff’s analysis or methodology is unreasonable or insufficient; CLI-12-6, 75 NRC 352 (2012)
case law test for rule waiver establishes an appreciably higher burden for would-be waiver seekers than does 10 C.F.R. 2.335(b); LBP-14-16, 80 NRC 183 (2014)
heavier burden applies to motions to reopen than to proponents of contentions in ongoing proceedings; CLI-11-5, 74 NRC 141 (2011)
intervention petitioner bears the burden of providing facts sufficient to establish its standing; LBP-11-21, 74 NRC 115 (2011)
litigant asking for consolidation of proceedings has the burden of showing that it will be conducive to the proper dispatch of the NRC’s business and to the ends of justice and will be conducted in accordance with the other provisions of Subpart C; CLI-14-5, 79 NRC 254 (2014)
litigants seeking to reopen a closed record necessarily face a heavy burden; CLI-12-6, 75 NRC 352 (2012); LBP-12-10, 75 NRC 633 (2012)
NRC rules deliberately place a heavy burden on proponents of contentions, who must challenge aspects of license applications with specificity, backed up with substantive technical support, mere conclusions or speculation being insufficient; CLI-11-5, 74 NRC 141 (2011)
petitioner bears the burden for setting forth a clear argument for its contention; CLI-12-5, 75 NRC 301 (2012)
petitioner bears the burden to provide facts sufficient to establish standing; LBP-12-3, 75 NRC 164 (2012)
petitioner’s burden on a contention of omission is to identify the omission and the supporting reasons for petitioners’ belief that the application fails to contain information on a relevant matter as required by law; LBP-15-5, 81 NRC 249 (2015)
rule waiver petitioners face a substantial burden; CLI-13-7, 78 NRC 199 (2013)
satisfying the reopening requirements is a heavy burden, and proponents must meet all of the requirements; LBP-11-20, 74 NRC 65 (2011)
stay movant has the burden on the four factors of 10 C.F.R. 2.1213(d); LBP-15-2, 81 NRC 48 (2015)
summary disposition movant bears the initial burden of showing the absence of a genuine issue as to any material fact and that it is entitled to judgment as a matter of law; LBP-12-19, 76 NRC 184 (2012) to meet its burden to establish standing, petitioner must provide plausible factual allegations that satisfy each element of standing; LBP-12-3, 75 NRC 164 (2012)

BURDEN OF PROOF

although an applicant has the ultimate burden of proof on any issues upon which a hearing is held, hearings are held on only those issues that an intervenor brings to the fore; LBP-11-4, 73 NRC 91 (2011)
although applicant carries the burden on safety issues, intervenors have the initial burden of going forward with each contention and must provide sufficient evidence to support the claims made; LBP-14-1, 79 NRC 39 (2014)

although deliberative process privilege is a qualified privilege and the agency claiming the privilege bears the initial burden of demonstrating that it is applicable, once this demonstration is made, the moving party can only defeat the privilege by a demonstration of an overriding need for the material; LBP-13-5, 77 NRC 233 (2013)

applicant bears the burden of proof in licensing proceedings; LBP-14-1, 79 NRC 39 (2014); LBP-14-3, 79 NRC 267 (2014)

applicant for an exemption bears the burden of proof on all issues; LBP-12-6, 75 NRC 256 (2012)

applicant has the burden of proof on safety issues in a licensing proceeding; LBP-13-13, 78 NRC 246 (2013)

applicant in a licensing proceeding bears the burden of proof by a preponderance of the evidence on safety issues that it is entitled to the applied-for license; LBP-12-17, 76 NRC 71 (2012)

applicant may bear the burden of proof on contentions asserting deficiencies in its environmental report and where the applicant becomes a proponent of a particular challenged position set forth in the environmental impact statement; LBP-11-38, 74 NRC 817 (2011)

applicant retains the burden of proof on the question whether the license should be issued; CLI-15-17, 82 NRC 33 (2015); CLI-15-19, 82 NRC 151 (2015)

as proponent of the agency action, applicant generally has the burden in a licensing proceeding; LBP-15-2, 81 NRC 48 (2015); LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

because draft documents are not presumptively privileged, the Staff must provide specific information to justify withholding them from disclosure; LBP-13-5, 77 NRC 233 (2013)

because NRC Staff relies heavily on applicant’s environmental report in preparing the environmental impact statement, should applicant becomes a proponent of a particular challenged position set forth in the EIS, applicant also has the burden on that matter; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

burden at hearing with respect to NEPA compliance is on NRC Staff; CLI-15-17, 82 NRC 33 (2015); LBP-15-3, 81 NRC 65 (2015)

burden of proving prejudicial error by a federal agency rests with the party challenging the agency’s action, but this is not a particularly onerous requirement; LBP-14-2, 79 NRC 131 (2014)

burden of satisfying the reopening requirements is a heavy one, and it rests with the party moving to reopen; CLI-15-19, 82 NRC 151 (2015)

cursory and conclusory assertions that merely paraphrase the standards applicable to the deliberative process privilege without explaining how they apply to any specific document in dispute will not suffice to carry the government’s burden of proof in defending FOIA cases; LBP-13-5, 77 NRC 233 (2013)

for NEPA contentions, the burden of proof falls on NRC Staff because NRC, not the applicant, bears the ultimate responsibility for complying with NEPA’s dictates; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)

government has the burden of proving that a requested document falls within one of FOIA’s exemptions; LBP-13-5, 77 NRC 233 (2013)

government officials acting in their official capacities are presumed to have properly discharged their duties and, to rebut this presumption, petitioner’s burden of proof involves presentation of clear evidence to the contrary; LBP-14-2, 79 NRC 131 (2014)

if intervenors provide sufficient evidence to support the claims made, applicant has the burden of demonstrating by a preponderance of the evidence that it has met the relevant NRC regulations and that the board should therefore reject each contention on the merits; LBP-14-1, 79 NRC 39 (2014)

if summary disposition movant fails to make the requisite showing to satisfy that initial burden, then the board must deny the motion even if the opposing party chooses not to respond or its response is inadequate; LBP-12-23, 76 NRC 445 (2012)

if summary disposition proponent meets its burden, opponent must counter each adequately supported material fact with its own statement of material facts in dispute and supporting documentation and cannot rely on mere allegations or denials, or the facts in controversy will be deemed admitted; LBP-12-23, 76 NRC 445 (2012)
SUBJECT INDEX

if, considering only the summary disposition movant’s support for its motion, the board determines that it
has met its burden, the board then looks to whether an opponent of the motion has overcome the
movant’s case by showing a genuine dispute on a material issue of fact; LBP-11-4, 73 NRC 91 (2011)
licensee generally bears the ultimate burden of proof, but intervenors must give some basis for further
inquiry; LBP-15-5, 81 NRC 249 (2015)
NRC Staff has the overall burden of complying with NEPA; LBP-13-13, 78 NRC 246 (2013)
NRC Staff, not applicant, bears the ultimate burden of establishing compliance with NEPA; LBP-12-17,
76 NRC 71 (2012); LBP-14-7, 79 NRC 451 (2014)
on safety issues, applicant has the burden of establishing that it is entitled to the applied-for license by a
preponderance of the evidence; LBP-12-5, 75 NRC 227 (2012); LBP-14-3, 79 NRC 267 (2014)
NRC Staff has the overall burden of complying with NEPA; LBP-13-13, 78 NRC 246 (2013)
NRC Staff, not applicant, bears the ultimate burden of establishing compliance with NEPA; LBP-12-17,
76 NRC 71 (2012); LBP-14-7, 79 NRC 451 (2014)
when the issue on which summary judgment is sought is one on which the nonmoving party bears the
burden of proof, the burden on the moving party may be discharged by showing that there is an
absence of evidence to support the nonmoving party’s case; LBP-11-4, 73 NRC 91 (2011)
without indicating any specific, policy-oriented communication or proffering any cogent reason for
protecting it, the bare assertion that internal agency discussions will be “chilled” is nothing but a legal
platitude asserted in the abstract; LBP-13-5, 77 NRC 97 (2013)
subject index

BURIED STRUCTURES, SYSTEMS, AND COMPONENTS

by a preponderance of the evidence, applicant has provided reasonable assurance that the effects of aging
on buried pipes that contain or may contain radioactive fluids can be adequately managed during the
period of extended operation; LBP-13-13, 78 NRC 246 (2013)
inadvertent radiological releases must be controlled to ensure that dose exposures are below regulatory
limits; LBP-13-13, 78 NRC 246 (2013)
“byproduct material” is categorized as tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-15-11, 81 NRC 401 (2015); LBP-15-16, 81 NRC 618 (2015)

byproduct materials category was created in 1978 by the Uranium Mill Tailings and Reclamation Act to afford NRC regulatory jurisdiction over mill tailings at active and inactive uranium milling sites; LBP-12-3, 75 NRC 164 (2012)

contention that the draft environmental impact statement fails to include a reviewable plan for disposal of 11e(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 37 (2013)

definition of byproduct material was clarified in 10 C.F.R. 40.4 by adding the clause “including discrete surface wastes resulting from uranium solution extraction processes”; LBP-15-16, 81 NRC 618 (2015)

policies set forth by NEPA prevent NRC Staff from segmenting the disposal issues from the inquiry into whether applicant will be allowed to create 11e(2) byproduct material in the first instance; LBP-13-9, 78 NRC 37 (2013)

section 11e(2) byproduct materials are tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-12-3, 75 NRC 164 (2012)

BYPRODUCT MATERIALS LICENSES

applicant for a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery must submit an environmental report with its application; LBP-15-3, 81 NRC 65 (2015)

application may incorporate information contained in previous applications, statements, or reports filed with the Commission, provided that the reference is clear and specific; LBP-12-24, 76 NRC 503 (2012)

grounds for license denial exist if, prior to issuance of a license to possess and use source and byproduct materials for uranium milling, there is commencement of construction by an applicant; LBP-12-3, 75 NRC 164 (2012)

license applications will be approved if, in addition to other requirements met, applicant is qualified by training and experience to use the material for the purpose requested in such manner as to protect health and minimize danger to life or property; DD-14-4, 79 NRC 506 (2014)

NRC Staff must prepare an environmental impact statement in connection with a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery; LBP-15-3, 81 NRC 65 (2015)

CABLES

amendment to aging management plan extended the AMP for medium-voltage cables to also cover low-voltage cables; LBP-11-20, 74 NRC 65 (2011)

cables important to safety must be designed to meet their intended function for the environment that they are subjected to and if cables have been exposed to conditions for which they are not designed, licensees must demonstrate, through testing or monitoring, reasonable assurance that the cables can perform their intended design function for the licensed operating term; DD-13-2, 78 NRC 185 (2013)

cables subject to the environmental qualification standards of 10 C.F.R. 50.49 are important to the safety of a nuclear power plant and are required to function during an accident when exposed to harsh environmental conditions; LBP-13-13, 78 NRC 246 (2013)

effectively qualified cable is defined in 10 C.F.R. 50.49; LBP-13-13, 78 NRC 246 (2013)

inspections to determine effects of wet or underwater conditions on underground safety-related electrical cables is discussed; DD-15-1, 81 NRC 193 (2015)

lack of clarity about which electrical cables might be subject to any saltwater environment, however high or low the concentration, and about the effects of and efforts to address this, is a level of concern sufficient to warrant further inquiry and exploration; LBP-11-20, 74 NRC 65 (2011)

request for enforcement action to address concerns about operability of the submerged and/or wetted non-environmentally qualified inaccessible cables is denied; DD-13-2, 78 NRC 185 (2013)

safety contentions challenging aging management of non-environmentally qualified inaccessible medium-voltage cables and wiring is decided; LBP-13-13, 78 NRC 246 (2013)

CANADA

although NRC regulations do not require NRC Staff to analyze the environmental impacts of NRC licensing actions on the environment of foreign nations, the Staff extended its outreach to international
organizations to inform its analysis of the potential environmental impacts of the project; CLI-15-13, 81 NRC 555 (2015)

First Nations in Canada must receive invitations to participate in the environmental impact statement scoping process when there are transboundary environmental impacts from a project; LBP-12-12, 75 NRC 742 (2012)

NEPA regulations do not apply to any environmental effects that NRC’s domestic licensing and related regulatory functions may have upon the environment of foreign nations; LBP-12-12, 75 NRC 742 (2012)

proximity of the nuclear power plant site to the Canadian border is considered in the contexts of environmental and safety reviews; CLI-15-13, 81 NRC 555 (2015)

CANCER

license renewal contention alleging higher cancer death rates in local counties than the state average is inadmissible because it is based on unsupported speculation; LBP-13-8, 78 NRC 1 (2013)

CASE MANAGEMENT

although boards are accorded considerable discretion to manage proceedings before them, they need not exercise it; LBP-15-15, 81 NRC 598 (2015)

Atomic Energy Act does not grant NRC the discretion to eliminate from the hearing, material issues in its licensing decision; LBP-11-22, 74 NRC 259 (2011)

Atomic Energy Act does not prescribe a specific structure for the mandatory hearing requirement, and the Commission has granted licensing boards considerable flexibility to select the most appropriate approach in the circumstances of each individual case; LBP-12-21, 76 NRC 218 (2012)

because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petitions and motions itself; CLI-14-9, 80 NRC 147 (2014)

boards are given broad discretion in the conduct of NRC adjudicatory proceedings, and the Commission generally defers to board case-management decisions; LBP-15-15, 81 NRC 598 (2015)

boards have the power to take necessary and appropriate actions consistent with the Atomic Energy Act to conduct a fair hearing; LBP-15-15, 81 NRC 598 (2015)

boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; LBP-11-6, 73 NRC 149 (2011); LBP-15-17, 81 NRC 753 (2015)

boards must exercise all the powers necessary to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-11-22, 74 NRC 259 (2011)

boards must use the applicable Model Milestones in 10 C.F.R. Part 2, Appendix B as a starting point for the schedule, but the board shall make appropriate modifications based upon the circumstances of each case; LBP-11-22, 74 NRC 259 (2011)

boards should develop schedules that will provide a fair and expeditious procedure for resolving new or amended contentions that might be proposed during the course of the proceeding, not just those already admitted; LBP-11-22, 74 NRC 259 (2011)

broad discretion is given to NRC licensing boards in the conduct of NRC adjudicatory proceedings, and the Commission generally defers to board case management decisions; CLI-14-10, 80 NRC 157 (2014)

Commission generally defers to the board on case management issues; CLI-11-13, 74 NRC 635 (2011)

Commission has declined to take interlocutory review with respect to case management decisions; CLI-15-24, 82 NRC 331 (2015)

if a board grants summary disposition of a foreign ownership contention, it could terminate the proceeding or move ahead with a pending environmental contention; LBP-12-19, 76 NRC 184 (2012)

licensing board may modify or waive the provisions of its scheduling orders as it deems appropriate in the interest of sound case management; LBP-15-29, 82 NRC 246 (2015)

licensing boards are expected to set procedures to ensure the case is managed efficiently, in a manner that is fair to all of the parties; CLI-14-10, 80 NRC 157 (2014)

licensing boards have broad powers to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, to avoid delay, and to maintain order; LBP-15-30, 82 NRC 339 (2015)

licensing boards must be vested with considerable latitude in determining the course of the proceedings that they are called upon to conduct, and the Commission will enter that arena only to the extent
necessary to insure that no party has been denied a fair opportunity to advance its cause; LBP-15-29, 82 NRC 246 (2015)
neither new procedures nor a separate timetable for raising new issues related to the Fukushima events is warranted; CLI-12-15, 75 NRC 704 (2012)
NRC may impose reasonable requirements on new contentions when those requirements are related to legitimate agency goals such as avoiding needless duplication and delay; LBP-11-22, 74 NRC 259 (2011)
NRC Rules of Practice provide the board with substantial authority to regulate hearing procedures; CLI-14-10, 80 NRC 157 (2014)
one fundamental purpose of the prehearing conference and the scheduling order is expediting the disposition of the proceeding; LBP-12-19, 76 NRC 184 (2012)
parties filed proposed questions for the board to ask at the evidentiary hearing; LBP-13-13, 78 NRC 246 (2013)
residing officers have the duty to conduct a fair and impartial hearing according to law, to take appropriate action to control the prehearing and hearing process, and to avoid delay and to maintain order, and they have all the powers necessary to those ends; CLI-14-10, 80 NRC 157 (2014); LBP-11-22, 74 NRC 259 (2011)
purpose of scheduling orders is to ensure proper case management, with the objective of expediting disposition of the proceeding, establishing early and continuing control so that the proceeding will not be protracted because of lack of management, and discouraging wasteful prehearing activities; LBP-15-29, 82 NRC 246 (2015)
request for a protective stay to hold the proceeding in abeyance indefinitely pending potential future events is inconsistent with NRC’s longstanding interest in sound case management and regulatory finality and would be unfair to the other parties; CLI-14-6, 79 NRC 445 (2014)
shortly after a hearing request has been granted, the board must set a schedule to govern the proceeding; LBP-11-22, 74 NRC 259 (2011)
unfettered ability to file a late contention may significantly undermine the efficiency of a proceeding even if the contention is based on newly discovered information; CLI-12-14, 75 NRC 692 (2012)
unless a schedule is so onerous or unfair that it deprives a party of procedural due process, scheduling is a matter of licensing board discretion; LBP-15-29, 82 NRC 246 (2015)
when establishing a schedule, boards are to consider NRC’s interest in providing a fair and expeditious resolution of the issues sought to be admitted for adjudication, along with other factors; LBP-11-22, 74 NRC 259 (2011)
where the board allowed petitioners to file a corrected version of an expert declaration that contained numerous typographical errors, and where some of petitioners’ corrections clearly went beyond what the board expected, the board did not try to parse which changes were authorized and did not consider or rely on the corrected version; LBP-11-2, 73 NRC 28 (2011)

CASE OR CONTROVERSY
absent compelling reasons, the Commission adheres to the case or controversy doctrine in its adjudicatory proceedings; LBP-13-7, 77 NRC 307 (2013)
case or controversy limitation does not apply to NRC because it is not an Article III court; LBP-14-4, 79 NRC 319 (2014)
Constitution permits the Supreme Court to decide legal questions only in the context of actual cases or controversies; CLI-13-9, 78 NRC 551 (2013)
judicial concepts of standing limit the jurisdiction and power of federal courts to cases and controversies; LBP-14-4, 79 NRC 319 (2014)
justiciable controversy must involve parties who raise questions presented in an adversary context and in a form historically viewed as capable of resolution through the judicial process; LBP-13-7, 77 NRC 307 (2013)
when petitioner obtains the relief it is seeking before the admissibility of its contention is resolved, the admissibility vel non of the contention is no longer justiciable, because it no longer presents a live controversy involving a true clash of interests that is susceptible to meaningful adjudicative relief; LBP-13-7, 77 NRC 307 (2013)
CATEGORICAL EXCLUSION
actions that the Commission, by rule or regulation, has declared to be a categorical exclusion do not individually or cumulatively have a significant effect on the human environment; LBP-14-6, 79 NRC 404 (2014)
any interested person may challenge use of a categorical exclusion by presenting special circumstances; LBP-15-26, 82 NRC 163 (2015)
cask certification for transportation poses such a minimal environmental impact that it merits a categorical exclusion from NEPA; LBP-14-6, 79 NRC 404 (2014)
categorical exclusion is a generic finding that a category of actions do not individually or cumulatively have a significant effect on the human environment; LBP-15-26, 82 NRC 163 (2015)
categories of actions are exempt from NEPA review where NRC has made a generic finding that the actions do not individually or cumulatively have a significant effect on the human environment; LBP-15-26, 82 NRC 163 (2015)
challenge to NRC Staff’s environmental analysis, which may come in the form of a categorical exclusion, may be filed as a timely motion to add a new contention once that analysis is complete; LBP-15-24, 82 NRC 68 (2015)
license amendment request is not categorically exempt from environmental review if it involves a significant hazards consideration that excludes it from the exemption pursuant to criteria in section 51.22(c)(9)(ii); LBP-15-26, 82 NRC 163 (2015)
recordkeeping or administrative procedures are categorically excluded from environmental review; LBP-15-24, 82 NRC 68 (2015)

CERTIFICATE OF COMPLIANCE
given that legally binding monitoring and mitigation measures have been imposed via a certificate of compliance issued by the appropriate state and local agencies, board has reasonable assurance that these measures will be implemented and that these agencies will actively monitor and enforce appropriate compliance with these environmental monitoring and mitigation measures; LBP-13-4, 77 NRC 107 (2013)
NRC Staff’s reference to, and reliance in its draft environmental impact statement on, state issuance of a site certification order and associated certificate of compliance on groundwater use does not dispense with NRC’s duty under NEPA to conduct an independent hard look at environmental impacts related to active dewatering during operations at a nuclear plant; LBP-11-1, 73 NRC 19 (2011)

CERTIFICATE OF SERVICE
service of a filing is not complete until accompanied by a certificate of service and a request for oral argument; LBP-11-21, 74 NRC 115 (2011)

CERTIFICATION
all disclosures under section 2.336(c) must be accompanied by a certification (in the form of a sworn affidavit) that all relevant materials required by this section have been disclosed, and that the disclosures are accurate and complete as of the date of the certification; LBP-14-2, 79 NRC 131 (2014)
all motions must include a certification that movant has made a sincere effort to contact other parties in the proceeding and resolve the issue raised in the motion, and that the movant’s efforts to resolve the issue have been unsuccessful; LBP-11-2, 73 NRC 28 (2011); LBP-11-15, 73 NRC 629 (2011)
applicant is required to submit its certification from the relevant state of jurisdiction, indicating that the project in question will comply with this statute; LBP-11-16, 73 NRC 645 (2011)
cask certification for transportation poses such a minimal environmental impact that it merits a categorical exclusion from NEPA; LBP-14-6, 79 NRC 404 (2014)
depending on the quantity of material, Part 70 license applicants must submit either a decommissioning funding plan or a certification of financial assurance; CLI-11-4, 74 NRC 1 (2011)
docketing of certification of shutdown and defueling means that licensee’s Part 50 license no longer authorizes operation of the reactor or emplacement or retention of fuel in the reactor vessel; DD-14-3, 79 NRC 500 (2014)
financial assurance certification may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material; CLI-11-4, 74 NRC 1 (2011)
financial assurance certifications, which are used by applicants seeking to possess smaller quantities of material, are governed by 10 C.F.R. 70.25(b)(2); CLI-11-4, 74 NRC 1 (2011)
SUBJECT INDEX

following an evidentiary proceeding, presiding officer certifies the record of the proceeding to the
Commission for its final decision; LBP-14-10, 80 NRC 85 (2014)
licensee must provide certifications to NRC Staff that it has permanently ceased power operations and
that all fuel has been permanently removed from the reactor vessel; DD-14-5, 79 NRC 500 (2014)
licensee must provide certifications to NRC Staff that it has permanently ceased power operations;
licensee must provide certifications to NRC Staff that it has permanently removed fuel from its reactors;
licensee must provide certifications when a nuclear power station has permanently ceased power
operations and all fuel has been permanently removed from the reactor vessel and placed in the spent
licensees must submit, with each operating license application, certification specifying how financial
assurance for decommissioning will be provided; DD-15-8, 82 NRC 107 (2015)
licensing board initially determines, based on the record, whether a prima facie showing has been made
by petitioner for its rule waiver request, and then the board must certify the matter directly to the
Commission for a final determination; LBP-14-16, 80 NRC 183 (2014)
motions to admit new contentions must be rejected if they do not include a certification by movant’s
attorney or representative that movant has made a sincere effort to contact other parties and resolve the
issues raised in the motion, and that movant’s efforts have been unsuccessful; LBP-11-34, 74 NRC 685
(2011); LBP-12-27, 76 NRC 583 (2012)
possibility limits associated with a certification of financial assurance are set forth in 10 C.F.R. 70.25(d);
CLI-11-4, 74 NRC 1 (2011)
record of licensing board evidentiary hearing on license transfer application must be certified to the
Commission; CLI-15-26, 82 NRC 408 (2015)
state agency’s 6-month review period of an applicant’s consistency certification begins on the date the
state agency receives the consistency certification; LBP-11-16, 73 NRC 645 (2011)
where petitioner has successfully made a prima facie showing for rule waiver, the board shall, before
ruling on the petition, certify the matter directly to the Commission, and the Commission shall
determine whether to grant or deny the waiver request; LBP-13-1, 77 NRC 57 (2013)
where the Commission does not preside over a license transfer proceeding, the presiding officer will
certify the completed hearing record to the Commission, which may then issue its decision on the
hearing or provide that additional testimony be presented; CLI-14-5, 79 NRC 254 (2014)
See also Design Certification
CERTIFIED QUESTIONS
if on the basis of the petition, affidavit, and any response provided for in 2.758(b), the presiding officer
determines that a prima facie showing has been made, the presiding officer shall, before ruling thereon,
certify the matter directly to the Commission; CLI-11-11, 74 NRC 427 (2011)
presiding officer may certify questions or refer rulings to the Commission for decision; CLI-14-5, 79
NRC 254 (2014)
referred rulings or certified questions must raise significant and novel legal or policy issues or issues
whose early resolution would materially advance the orderly disposition of the proceeding; CLI-15-1, 81
NRC 1 (2015)
review of a board’s certified question that raises a significant and novel issue whose early resolution will
materially advance the orderly disposition of the proceeding is granted; CLI-11-4, 74 NRC 1 (2011)
should a licensing board decision raise novel legal or policy questions, boards are to certify to the
Commission those questions that would benefit from Commission consideration; CLI-11-5, 74 NRC 141
(2011); LBP-11-32, 74 NRC 654 (2011)
CHANGE REQUESTS
every change request is reviewed against the criteria in the license application and the criteria in 10
C.F.R. 70.72 to determine whether NRC approval is required prior to implementing the change;
LBP-12-21, 76 NRC 218 (2012)
if applicant decides to remove a method from the approved list of alarm resolution methods, it would
have to follow the prescribed change process or the license amendment process; LBP-14-1, 79 NRC 39
(2014)
SUBJECT INDEX

CHEMICAL SPILLS
contentsions concerning release of radiological, chemical, and herbicidal materials and storage of spent fuel are Category 1 issues and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

CIVIL PENALTIES
assessment of monetary penalty against U.S. Army for possession of depleted uranium without a license is denied; DD-11-5, 74 NRC 399 (2011)
NRC can order an individual to pay civil penalties of up to $100,000 for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)
NRC’s policy of imposing graduated civil penalties takes into account the gravity of the violation as the primary consideration and the ability to pay as a secondary consideration; DD-15-3, 81 NRC 713 (2015)
petitioner’s request to impose a $10 million fine on licensee is denied; DD-15-3, 81 NRC 713 (2015)

CLASSIFIED INFORMATION
application for a uranium enrichment facility is required to contain a description of the security program to protect against unauthorized disclosure of classified matter in accord with Part 95; LBP-11-11, 73 NRC 455 (2011)

CLEAN AIR ACT
in parallel with NRC Staff’s role under NEPA to assess environmental impacts, the Environmental Protection Agency possesses authority under the Act to set numerical standards for air pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)
source permit is an operating permit that the Clean Air Act requires major stationary sources of air pollution to obtain; LBP-11-13, 73 NRC 534 (2011)

CLEAN WATER ACT
applicant for a federal discharge permit must provide a certification from the state that the proposed activity will not violate state water pollution control standards; LBP-12-16, 76 NRC 44 (2012)
before being granted a section 404 permit, applicant must demonstrate to the Corps of Engineers that it has taken all appropriate and practicable steps to avoid and minimize adverse impacts; LBP-15-23, 82 NRC 55 (2015)
blanket reliance by NRC Staff on Clean Water Act permits is not permitted; LBP-14-9, 80 NRC 15 (2014)
compliance with the CWA does not negate the requirement for NRC to weigh all environmental effects of a proposed action; LBP-12-16, 76 NRC 44 (2012)
Congress has severely limited the scope of NRC’s inquiry into Clean Water Act § 316(a) determinations; LBP-12-16, 76 NRC 44 (2012)
contention alleging deficiencies in Corp of Engineers’ compensatory mitigation methods under the Clean Water Act lack alleged facts or expert opinions; LBP-15-23, 82 NRC 55 (2015)
contention asserting that draft environmental impact statement must include the Corps of Engineers 404 permit analysis in order to satisfy NEPA fails to raise a material issue; LBP-15-23, 82 NRC 55 (2015)
failure of decision underlying section 404 permit to analyze cumulative impacts reasonably foreseeable from the expected addition of a second generation unit at the plant is one of the most egregious shortfalls of the environmental assessment; LBP-14-6, 79 NRC 404 (2014)
license renewal applicants must submit documentation of compliance with sections 316(a) and (b) of the Clean Water Act concerning thermal discharges; LBP-12-16, 76 NRC 44 (2012)
NEPA is not violated when an agency issues a supplemental environmental impact statement before the Corps of Engineers completes a section 404 permit review; LBP-15-23, 82 NRC 55 (2015)
section 404 permit review can be conducted after issuance of a final environmental impact statement; LBP-15-23, 82 NRC 55 (2015)
that the section 404 permit review is conducted after issuance of the final environmental impact statement does not impact an agency’s duty under NEPA, but rather serves to highlight the distinction between NEPA and the CWA; LBP-15-23, 82 NRC 55 (2015)
Uniform Mitigation Assessment Method code and Wetland Assessment Technique for Environmental Review code methods reflect the Corps of Engineers’ preferred approach to compensatory mitigation under the CWA; LBP-15-23, 82 NRC 55 (2015)
when a proposed project would cause discharge of dredged or fill material into wetlands, applicant must seek a permit from the Corps of Engineers; LBP-15-23, 82 NRC 55 (2015)
when an agency otherwise complies with NEPA’s requirement of a reasonably thorough mitigation analysis, there is no error in the agency’s reliance on the section 404’s substantive requirements as mitigation measures even though the permit review is not yet complete; LBP-15-23, 82 NRC 55 (2015)
when reviewing an application for a 404 permit under the Clean Water Act, the Corps of Engineers evaluates whether issuance of the permit is in the public interest, weighing all relevant factors, including economic, environmental, and aesthetic concerns; LBP-14-9, 80 NRC 15 (2014)
while CWA imposes substantive restrictions on agency action, NEPA imposes procedural requirements aimed at integrating environmental concerns into the very process of agency decisionmaking; LBP-15-23, 82 NRC 55 (2015)

CLIMATE CHANGE

although the combined license application is not expressly required to consider sea level rise, the board decides that the issue is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)
applicant’s environmental report for an early site permit application must address climate change because it is considered an environmental impact; LBP-11-16, 73 NRC 645 (2011)
cumulative impacts of water withdrawals, climate change, and saltwater intrusion on wetlands are discussed; LBP-13-4, 77 NRC 107 (2013)
if impacts are remote or speculative, the environmental impact statement need not discuss them, including greenhouse gas emissions; LBP-11-7, 73 NRC 254 (2011)

CLOSED HEARINGS

adjudicatory hearing can be closed if the Commission orders it; LBP-11-5, 73 NRC 131 (2011)
board determined that the oral portion of the proceeding should be closed to the public to allow for the free-ranging and thorough examination of witnesses and to ensure the effective safeguard and prevention from disclosure of restricted data; LBP-12-21, 76 NRC 218 (2012)
boards have closed their hearings even when they were concerned with less sensitive (i.e., nonpublic but unclassified) types of information; LBP-12-21, 76 NRC 218 (2012)
boards may exclude the public from adjudicatory hearings or actions that involve restricted data, defense information, safeguards information protected from disclosure under the authority of Atomic Energy Act § 147, or information protected from disclosure under the authority of section 148; LBP-11-5, 73 NRC 131 (2011)

COASTAL ZONE MANAGEMENT ACT

applicant is required to submit its certification from the relevant state of jurisdiction, indicating that the project in question will comply with this statute; LBP-11-16, 73 NRC 645 (2011)

COLLATERAL ESTOPPEL

affirmative misconduct means an affirmative misrepresentation or affirmative concealment of a material fact by the government, although it does not require that the government intended to mislead a party; LBP-12-16, 76 NRC 44 (2012)
claimant must prove a false representation by the government, that the government had the intent to induce the plaintiff to act on the misrepresentation, plaintiff’s lack of knowledge or inability to obtain the true facts, and plaintiff’s reliance on the misrepresentation to his detriment; LBP-12-16, 76 NRC 44 (2012)
claims must rely on its adversary’s conduct in such a manner as to change his position for the worse, and that reliance must have been reasonable in that the party claiming the estoppel did not know nor should it have known that its adversary’s conduct was misleading; LBP-12-16, 76 NRC 44 (2012)
doctrine is invoked to avoid injustice in particular cases; LBP-12-16, 76 NRC 44 (2012)
elements of a showing of estoppel against the government are described; LBP-12-16, 76 NRC 44 (2012)
fundamental fairness requires that applicant and NRC Staff be estopped from asserting that petitioners’ contention is untimely; LBP-12-16, 76 NRC 44 (2012)
government may not be estopped on the same terms as any other litigant; LBP-12-16, 76 NRC 44 (2012)
relitigation of an issue previously decided by a licensing board or the Commission may also be barred by the doctrine of collateral estoppel; LBP-11-10, 73 NRC 424 (2011)
there is a clear presumption against invoking the doctrine against government actors in any but the most extreme circumstances; LBP-12-16, 76 NRC 44 (2012)
COLOCATED UNITS
admissibility of contention that severe accident mitigation alternatives analysis fails to evaluate the impact that a severe accident at one unit would have on the operation of a proposed nearby unit is decided; LBP-15-5, 81 NRC 249 (2015)
even if a site would not be totally evacuated, a fission product release from one unit would likely contaminate the entire site, with the result that both units could be out of operation for years; LBP-15-5, 81 NRC 249 (2015)

"synergistic" refers to the joint action of different parts or sites which, acting together, enhance the effects of one or more individual sites; LBP-15-5, 81 NRC 249 (2015)

COMBINED LICENSE APPLICATION
absent a licensed low-level radioactive waste disposal facility that will accept waste from a combined license applicant’s facility, it is reasonably foreseeable that LLRW generated by normal operations will be stored at the site for a longer term than is currently envisioned in that COLA; LBP-12-4, 75 NRC 213 (2012)
although NRC may regard preconstruction activities as outside the scope of a combined license application, these activities are within the scope of the NEPA review because they are all connected actions; LBP-14-9, 80 NRC 15 (2014)

although the COLA is not expressly required to consider sea level rise, the board decides that the issue is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)

although the Commission found NRC Staff’s review of combined license applications rigorous, it imposed a condition requiring implementation of a squib-valve surveillance program prior to fuel load; CLI-15-13, 81 NRC 555 (2015)

any person except one excluded by section 50.38 may file an application for a combined license for a nuclear power facility; LBP-12-19, 76 NRC 184 (2012)
any person who is a citizen, national, or agent of a foreign country, or any corporation, or other entity that NRC knows or has reason to believe is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government, shall be ineligible to apply for and obtain a license; LBP-12-19, 76 NRC 184 (2012)
applicant has described the kinds and quantities of radioactive materials expected to be produced in the operation to the extent its COLA references a standardized design; LBP-11-6, 73 NRC 149 (2011)
applicant may reference a docketed-but-not-yet-certified design in its application, but does so at its own risk; CLI-12-9, 75 NRC 421 (2012); LBP-11-10, 73 NRC 424 (2011)

applicant must describe the programs, and their implementation, necessary to ensure that systems and components meet the requirements of the ASME Boiler and Pressure Vessel Code and the ASME Code of Operation and Maintenance of Nuclear Power Plants in accordance with section 50.55a; CLI-11-8, 74 NRC 214 (2011)

applicant must identify the means for keeping levels of radioactive material in effluents to unrestricted areas as low as is reasonably achievable; LBP-11-6, 73 NRC 149 (2011)
applicant must include an emergency plan that contains, in the event of a reactor emergency resulting in a radiological release, a range of protective actions for the public located within about a 10-mile radius from the plant; LBP-11-15, 73 NRC 629 (2011)

applicant must provide a level of information on plans to manage and store low-level radioactive waste onsite sufficient to enable the Commission to conclude that the application will comply with 10 C.F.R. Part 20; CLI-11-10, 74 NRC 251 (2011)
applicant will have to demonstrate that the site-specific parameters are bounded by the parameters developed for the certified design; LBP-11-10, 73 NRC 424 (2011)
applicant will have to determine whether it will adopt in toto the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-11-10, 73 NRC 424 (2011)
applicant’s emergency plan must contain and describe adequate provisions for emergency facilities and equipment, including at least one onsite and one offsite communication system, each of which shall have a backup power source; LBP-11-15, 73 NRC 629 (2011)
applicant’s environmental report must describe reasonably foreseeable environmental impacts, discussed in proportion to their significance, and adverse environmental effects that cannot be avoided should the proposal be implemented; LBP-11-6, 73 NRC 149 (2011)
SUBJECT INDEX

applicants may incorporate a certified reactor design in a combined license application; LBP-11-10, 73 NRC 424 (2011)
applicants must obtain permits from the Army Corps of Engineers in order to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012)
applicants referencing a certified design must provide sufficient information for NRC Staff to determine whether the site's characteristics fall within the design's parameters; CLI-15-13, 81 NRC 555 (2015)
basis of NRC Staff's reasonable assurance finding on combined license applicant's squat valve inspection program for which the current version of the ASME code is insufficient is explained; CLI-12-2, 75 NRC 63 (2012)

COLAs contain information pertaining to how applicant intends, through its design, operational organization, and procedures, to comply with relevant substantive radiation protection requirements in 10 C.F.R. Part 20, including, but not limited to, LLRW handling and storage; LBP-12-4, 75 NRC 213 (2012)

COLAs may reference a standard design certification and an early site permit; CLI-12-2, 75 NRC 63 (2012)

COLAs must include a description and plans for implementation of the guidance and strategies required by section 50.54(hh)(2) for severe accident mitigation; CLI-11-9, 74 NRC 233 (2011)

COLAs must include kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in 10 C.F.R. Part 20; LBP-12-4, 75 NRC 213 (2012)

comments and questions generated by a state agency that is examining a state application to determine compliance with state legal and technical standards do not, in and of themselves, demonstrate a material deficiency in the application; LBP-11-6, 73 NRC 149 (2011)

Commission does not review combined license application de novo, but rather considers the sufficiency of NRC Staff's review of the application; CLI-15-13, 81 NRC 555 (2015)

Commission must determine whether NRC Staff review of a combined license application has been adequate to support the findings listed in 10 C.F.R. 52.97 and 51.107(a) for each of the licenses to be issued and in 10 C.F.R. 50.10 and 51.107(d) with respect to the limited work authorizations; CLI-12-2, 75 NRC 63 (2012)

commitments in the revised COLA restrict foreign ownership share to no more than 10% and require NRC consent for any change in foreign ownership of 5% or more; LBP-14-3, 79 NRC 267 (2014)

compliance with design-related information contained in the generic design control document that is approved but not certified (Tier 2 information) is required, but generic changes to and plant-specific departures from Tier 2 are governed by 10 C.F.R. Part 52, App. D, § VIII; CLI-12-2, 75 NRC 63 (2012)
cyber security plans must be submitted for NRC approval; CLI-12-2, 75 NRC 63 (2012)
cyber security plans must take into account site-specific conditions; CLI-12-2, 75 NRC 63 (2012)
emergency plan for the site must be provided; CLI-11-9, 75 NRC 421 (2012)
environmental report is required; CLI-11-5, 74 NRC 141 (2011)
environmental report must contain an analysis of the cumulative impacts of the activities to be authorized; LBP-11-6, 73 NRC 149 (2011)
environmental report must discuss environmental impacts in proportion to their significance; LBP-11-6, 73 NRC 149 (2011)
evaluation of existing dose projection models or a dose assessment is not required by 10 C.F.R. 52.80(d) and 50.54(hh)(2); CLI-11-9, 74 NRC 233 (2011)
every COLA must be accompanied by an environmental report, the purpose of which is to aid NRC Staff in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011); LBP-12-9, 75 NRC 615 (2012)

exemption from any part of a referenced design certification rule may be granted if NRC determines that the exemption complies with any exemption provisions of the referenced design certification rule, or with 10 C.F.R. 52.63 if there are no applicable exemption provisions in the referenced rule; LBP-11-10, 73 NRC 424 (2011)
exemption requests are subjected to the same level of litigation as other issues that could be admissibly raised in a COL proceeding; LBP-11-10, 73 NRC 424 (2011)
SUBJECT INDEX

factors used for a site geological and seismological evaluation are stated in 10 C.F.R. 100.23(d); LBP-11-10, 73 NRC 424 (2011)
final safety analysis report must describe the facility and present the design bases, limits on its operation, and safety analysis of structures, systems, and components and the facility as a whole; LBP-14-8, 79 NRC 519 (2014)
final safety analysis report must describe the quality assurance program applied to the design and to be applied to the fabrication, construction, and testing, of the structures, systems, and components of the facility; LBP-14-7, 79 NRC 451 (2014)
geological, seismological, and engineering characteristics of a site and its environs must be investigated in sufficient scope and detail; LBP-11-10, 73 NRC 424 (2011)
grants of exemptions from referenced design certification rules are conditioned on the Commission’s finding that the request complies with section 52.7 and that the special circumstances provided for section 52.7 outweigh any decrease in safety that may result from the reduction in standardization caused by the exemption; LBP-11-10, 73 NRC 424 (2011)
hearing must be held on each application to construct a nuclear power plant, regardless of whether an interested member of the public requests a hearing on the application; CLI-15-13, 81 NRC 555 (2015) if and when applicants file a revision of their application, NRC Staff should renotice the application as to its foreign ownership aspect; CLI-13-4, 77 NRC 101 (2013)
impacts of the possible routes that applicant will use for its transmission lines must be analyzed for applicant to give the NRC the requisite information to make an informed decision on its license application; LBP-11-6, 73 NRC 149 (2011)
independent assessment of the safety aspects of the combined license application is required; CLI-15-13, 81 NRC 555 (2015)
information is specified in Atomic Energy Act §182 that must be provided by applicant for a license and it has no reference to spent fuel disposal; CLI-15-4, 81 NRC 221 (2015)
inservice testing and inspection program for squib valves in combined license applications is discussed; CLI-15-13, 81 NRC 555 (2015)
intervention petitioners may not challenge the adequacy of the safety evaluation report, but may file contentions challenging the combined license application based on new information in the SER; LBP-11-22, 74 NRC 259 (2011)
level of low-level radioactive waste storage information required by 10 C.F.R. 52.79(a)(3) is tied to applicant’s particular plans for compliance through design, operational organization, and procedures; LBP-12-4, 75 NRC 213 (2012)
licensees must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities to address loss of large areas from fires or explosions that arise from a beyond-design-basis event; CLI-12-2, 75 NRC 63 (2012)
mere existence of a letter of intent to ship low-level radioactive waste to a disposal facility does not answer questions as to whether such a plan will ultimately result in a transfer of LLRW title and permanent offsite disposition of the LLRW and whether nontransfer of title will result in environmental impacts; LBP-11-6, 73 NRC 149 (2011)
mere existence of comments and questions generated by NRC Staff do not, in and of themselves, demonstrate a material deficiency in applicant’s combined license application; LBP-11-6, 73 NRC 149 (2011)
notice of COLAs must be published in the Federal Register for 4 consecutive weeks; CLI-12-2, 75 NRC 63 (2012)
NRC must address any purported need for additional power during its environmental review of a combined license application; LBP-11-7, 73 NRC 254 (2011)
NRC must also allow the federal Advisory Council on Historic Preservation a reasonable opportunity to comment with regard to a combined license; LBP-12-23, 76 NRC 445 (2012)
NRC Staff considers FEMA’s findings on emergency plans in making its necessary finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; CLI-12-9, 75 NRC 421 (2012)

745
SUBJECT INDEX

NRC Staff evaluated and approved exemption from regulatory requirements for organization and numbering of the combined license application; CLI-12-2, 75 NRC 63 (2012)

NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 63 (2012)

NRC Staff found acceptable combined license applicant’s plan to use a single technical support center for existing and proposed units, to be colocated in the basement of the new nuclear operations building, between the protected areas of the three units, which is a departure from the AP1000 DCD; CLI-12-9, 75 NRC 421 (2012)

NRC Staff review included evaluation of exemption criteria; CLI-12-2, 75 NRC 63 (2012)

NRC Staff review relative to regulatory actions that NRC has taken in response to lessons learned from the Fukushima Dai-ichi accident is discussed; CLI-15-13, 81 NRC 555 (2015)

NRC Staff’s steps in the geographic and demographic review in the final safety evaluation report to determine whether the COL applicant has proposed an acceptable site, including acceptable site boundaries, with appropriate consideration of nearby populations and natural and manmade features, are described; CLI-12-9, 75 NRC 421 (2012)

NRC’s analysis, in its final environmental impact statement, of issues relating to dewatering associated with construction and operation of the proposed plants is adequate and satisfies the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)

NRC’s review of a COL application is the type of proposed action obliging Staff to prepare an environmental impact statement or a supplement thereto; LBP-11-39, 74 NRC 862 (2011)

operational procedures to minimize contamination of the facility and environment, facilitate eventual decommissioning, and minimize generation of radioactive waste must be included; CLI-12-2, 75 NRC 63 (2012)

past violations of NRC regulations would indicate a deficiency in an application only if they are directly germane to the licensing action, rather than being of simply historical interest; CLI-12-2, 75 NRC 63 (2012)

postponing choice between several options for radioactive waste management, each of which is concretely stated and compliant with 10 C.F.R. 52.79(a), does not violate the regulation; LBP-11-31, 74 NRC 643 (2011)

quibbling over details of an economic analysis would effectively stand NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-12-5, 75 NRC 227 (2012)

scope and specificity of information required under section 52.79(a)(3) is a fact-bound determination that is tied to applicant’s particular plans for compliance through, but not necessarily the details of, design, operational organization, and procedures associated with any contingent long-term LLRW facility; LBP-12-4, 75 NRC 213 (2012)

waste confidence undergirds new reactor licensing and power reactor license renewal; CLI-14-8, 80 NRC 71 (2014)

where the COLA references a certified design, elements of the licensing basis already have been established, and thus NRC would have to establish a regulatory basis for any change to the established design regardless of whether the COLs have issued; CLI-12-9, 75 NRC 421 (2012)

whether offsite low-level radioactive waste storage and disposal facilities will ultimately be available is not material to summary disposition because applicant’s FSAR provides an adequate contingency plan for long-term onsite storage of LLRW in the event that offsite storage and disposal facilities are not available; LBP-12-4, 75 NRC 213 (2012)

COMBINED LICENSE PROCEEDINGS

applicant bears the burden of proof by a preponderance of the evidence on safety issues that it is entitled to the applied-for license; LBP-12-17, 76 NRC 71 (2012); LBP-14-3, 79 NRC 267 (2014)

applicant bears the burden of proof in licensing proceedings; LBP-14-3, 79 NRC 267 (2014)

because petitioners did not participate in the mandatory hearing, and were not parties to it, they may not challenge the mandatory hearing decision, as such, in court; CLI-12-11, 75 NRC 523 (2012)

board accepted written limited appearance statements from members of the public in connection with the hearing; LBP-14-3, 79 NRC 267 (2014)
challenges to a combined license applicant’s failure to provide information on long-term storage of Greater-Than-Class-C radioactive waste are outside the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)
Commission addresses the sufficiency of NRC Staff’s review of a combined license application rather than making a de novo review; CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012)
Commission considers safety issues pursuant to the Atomic Energy Act and environmental issues as required by the National Environmental Policy Act; CLI-12-9, 75 NRC 421 (2012)
Commission examines whether the Staff’s safety review of the combined license application under 10 C.F.R. § 52.97(a)(1)(i)-(v) has been adequate to support its findings; CLI-12-9, 75 NRC 421 (2012)
Commission imposed license condition requiring licensees to develop and implement strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities following a beyond-design-basis external event, including a simultaneous loss of all AC power and loss of normal access to the normal heat sink; CLI-12-9, 75 NRC 421 (2012)
Commission may require implementation of mitigation measures it deems necessary and appropriate by imposing conditions in the license; LBP-12-18, 76 NRC 127 (2012)
contention alleging that statutory and regulatory prohibitions on foreign ownership, control, or domination forbid the licensing of proposed units is decided in applicant’s favor; LBP-14-3, 79 NRC 267 (2014)
contention should be deemed resolved during the early site permit proceeding if the subject of the contention was actually litigated and decided during the ESP proceeding, or, although not actually litigated, was decided by the Staff, was necessary for the Staff to resolve in the ESP proceeding, and was within the scope of that proceeding as defined in the Federal Register notice of opportunity for a hearing; LBP-11-10, 73 NRC 424 (2011)
contention that wastewater contains chemical contaminants that are not discussed in the environmental report, and that when the wastewater is discharged via deep injection wells, the chemicals might migrate to an aquifer is within the scope of the proceeding; LBP-11-6, 73 NRC 149 (2011)
contented hearing is not required if no petitioner has satisfied the criteria for intervention; LBP-11-22, 74 NRC 259 (2011)
discussion necessary to support a NEPA alternatives contention in a reactor license renewal proceeding is compared with that for a Part 52 COL proceeding; LBP-12-15, 76 NRC 14 (2012)
environmental issues that the Commission must consider in the mandatory portion of a combined license proceeding are outlined; CLI-15-13, 81 NRC 555 (2015)
generic analyses of the environmental impacts of continued storage and disposal in the context of NRC reactor licensing proceedings are acceptable; CLI-15-4, 81 NRC 221 (2015)
hearing must be held on each application to construct a nuclear power plant, regardless of whether an interested member of the public requests a hearing on the application; CLI-15-13, 81 NRC 555 (2015)
hearing procedures in Subpart L of 10 C.F.R. Part 2 will ordinarily be used in proceedings for the grant, renewal, licensee-initiated amendment, or termination of licenses or permits; LBP-11-6, 73 NRC 149 (2011)
in a mandatory proceeding, the Commission considers safety issues pursuant to Atomic Energy Act § 189a and environmental issues as required by National Environmental Policy Act § 102(2)(A), (C), and (E); CLI-12-2, 75 NRC 63 (2012)
in addition to contested hearings on combined licenses, where interested members of the public have the right to participate and air their concerns, uncontested safety and environmental issues are considered in a mandatory hearing; CLI-12-11, 75 NRC 523 (2012)
in any COL proceeding referencing an early site permit, contentions may be litigated on whether the nuclear power reactor proposed to be built does not fit within one or more of the site characteristics or design parameters included in the early site permit; LBP-11-10, 73 NRC 424 (2011)
in making its findings, the Commission will treat as resolved those matters resolved in the issuance of a design certification rule; LBP-11-38, 74 NRC 817 (2011)
insofar as a contention requests consideration of a dry cooling design alternative, that matter must be considered resolved in the early site permit proceeding; LBP-11-10, 73 NRC 424 (2011)
intervenors’ participation in COL adjudications is limited to their admitted contentions, and they are barred from participating in the uncontested portion of the hearing; CLI-12-11, 75 NRC 523 (2012)
issues surrounding severe accident mitigation design alternatives that have been resolved by regulation may not be challenged in a combined license adjudication; CLI-11-6, 74 NRC 203 (2011)
it is in the public interest for adjudications to proceed, except for contentions associated with waste confidence issues; CLI-12-16, 76 NRC 63 (2012)

licensing board’s hearing arguably allows for additional and a more rigorous public scrutiny of the final environmental impact statement than does the usual circulation for comment; LBP-14-9, 80 NRC 15 (2014)

mandatory hearings, which are required by section 189a of the Atomic Energy Act, do not involve public participation, regardless of whether a contested hearing with public participation has occurred;

CLI-12-11, 75 NRC 523 (2012)

matter resolved in an early site permit proceeding may be revisited in the COL proceeding when new and significant information is presented; LBP-11-10, 73 NRC 424 (2011)

Notice of Hearing for an uncontested COL proceeding sets the parameters for the Commission’s review;

CLI-12-2, 75 NRC 63 (2012)

NRC must conduct a hearing on the uncontested environmental and safety aspects of the proposed plant; LBP-13-4, 77 NRC 107 (2013)

NRC Staff’s creation of a list of site parameters for use in the combined license proceeding cannot cure the absence of a list of site parameters in the technical support document, rendering it impossible to resolve SAMDA issues by rule; LBP-11-7, 73 NRC 254 (2011)

petitioner fails to demonstrate that the issue of radiation dispersal due to site inundation is material to the findings the NRC must make to support approving a combined license application; LBP-12-7, 75 NRC 503 (2012)

petitioner’s demand for compliance with U.S. Army Corps of Engineers requirements is not within the scope of a combined license proceeding, because it is not the province of the NRC to enforce another agency’s regulations; LBP-11-6, 73 NRC 149 (2011)

petitions requesting suspension of all combined license decisions regarding pending completion of actions associated with the Fukushima accident are granted in part and denied in part; CLI-12-2, 75 NRC 63 (2012)

presiding officer must determine whether the license should be issued, denied, or appropriately conditioned to protect environmental values; LBP-13-4, 77 NRC 107 (2013)

proceeding is terminated because applicants have failed to provide information to show that they have changed their ownership situation so as to satisfy foreign ownership, control, and domination requirements; LBP-12-22, 76 NRC 443 (2012)

proper mechanism for raising Fukushima-related, application-specific concerns in ongoing combined license cases is to file a new contention, consistent with the applicable procedural rules; CLI-11-5, 74 NRC 141 (2011)

purpose of a mandatory hearing is to determine whether NRC Staff’s review of the application has been adequate to support the required regulatory findings; CLI-12-11, 75 NRC 523 (2012)

safety issues that the Commission must consider in the mandatory portion of a combined license proceeding are outlined; CLI-15-13, 81 NRC 555 (2015)

to reach a finding of reasonable assurance that the public health and safety will be protected, the Commission imposed a license condition relating to the testing program for squib valves; CLI-12-9, 75 NRC 421 (2012)

to satisfy requirements of NEPA, the Commission independently considers the final balance among conflicting factors in the record; CLI-12-9, 75 NRC 421 (2012)

whether the safe shutdown earthquake exceedance in applicant’s exemption request does in fact comply with 10 C.F.R. Part 50, Appendix S and 10 C.F.R. 100.23 is a question currently before the NRC Staff and is thus material to the NRC’s licensing decision in this proceeding; LBP-11-10, 73 NRC 424 (2011)

with respect to the environmental impacts of a combined license, the Commission determines whether the requirements of NEPA §102(2)(A), (C), and (E), and 10 C.F.R. 51.107(a)(1)-(4) have been met; CLI-12-9, 75 NRC 421 (2012)

COMBINED LICENSES

any person except one excluded by section 50.38 may file an application for a combined license for a nuclear power facility; CLI-13-4, 77 NRC 101 (2013); LBP-14-3, 79 NRC 267 (2014)
any person who is a citizen, national, or agent of a foreign country, or any corporation, or other entity that NRC knows or has reason to believe is owned, controlled, or dominated by an alien, a foreign corporation, or a foreign government, shall be ineligible to apply for and obtain a license; LBP-12-19, 76 NRC 184 (2012)
applicant is required to submit a report on its decommissioning funding assurance mechanism after combined licenses are issued and no later than 30 days after NRC publishes notice of intended operation in the Federal Register; CLI-12-2, 75 NRC 63 (2012)
applicant’s negation action plan is part of its final safety analysis report and therefore part of the licensing basis of the facility; LBP-14-3, 79 NRC 267 (2014)
applicant’s status as a current power reactor licensee generally provides the necessary support for NRC Staff’s finding that applicant is technically qualified for a new license; CLI-12-2, 75 NRC 63 (2012)
applicants are found ineligible to obtain a combined license because they are owned by a U.S. corporation that is 100% owned by a foreign corporation; LBP-12-19, 76 NRC 184 (2012); LBP-12-22, 76 NRC 443 (2012)
application included a request for a departure from the wet-bulb noncoincident temperature, which is considered Tier 1 information and part of the certified design and thus a regulatory exemption is required; CLI-12-9, 75 NRC 421 (2012)
applications for water use permits are evaluated by local governmental agencies; LBP-13-4, 77 NRC 107 (2013)
before issuing a combined license, NRC must conclude that there is reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-11-6, 73 NRC 149 (2011)
challenges in maintaining knowledge gained during the combined license review if construction is delayed are discussed; CLI-15-13, 81 NRC 555 (2015)
Commission administratively exempted, from the backfit rule, an order to the combined license holder to address spent fuel pool instrumentation requirements not specified in the certified design as enhanced protective measures that represent a substantial increase in the protection of public health and safety; CLI-12-9, 75 NRC 421 (2012)
early site permit authorizes the use of a specific site for the construction and operation of a new nuclear power plant, with the actual construction and operation authorized by a subsequently issued COL; LBP-11-10, 73 NRC 424 (2011)
final safety analysis report must include information regarding the kinds and quantities of radioactive materials expected to be produced in the operation and the means for controlling and limiting radioactive effluents and radiation exposures within the limits set forth in Part 20; LBP-11-6, 73 NRC 149 (2011)
for agency decisions that are based on an environmental impact statement, a monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation; LBP-12-23, 76 NRC 445 (2012)
if an assessment of alternatives to the proposed action was prepared at the early site permit stage and no new information in the areas of energy alternatives or system design alternatives has been identified at the combined license stage, conclusions made at the ESP stage remain valid; CLI-12-2, 75 NRC 63 (2012)
if applicant did not pursue an early site permit, all relevant site characteristics, including site geology, hydrology, seismology, and man-made hazards, as well as potential environmental impacts of the project, were studied as part of NRC Staff’s combined license review and are within the scope of the Commission decision; CLI-15-13, 81 NRC 555 (2015)
if combined licenses issue without including license conditions, NRC regulations relevant to the finality of decisions could result in some additional administrative requirements to satisfy in imposing new requirements on licensee; CLI-12-9, 75 NRC 421 (2012)
in making the findings required for issuance of a combined license, finality is afforded to those matters resolved in connection with a design certification; LBP-11-7, 73 NRC 254 (2011)
in the area of impacts of combined licenses and limited work authorizations, NRC Staff, in its review of new and significant information, identified a change in impacts associated with terrestrial ecology; CLI-12-2, 75 NRC 63 (2012)
inasmuch as NRC Staff relies on the benefits of proposed units to satisfy an otherwise unmet need for power, the adequacy of the need-for-power assessment is material to granting the proposed combined license; LBP-11-7, 73 NRC 254 (2011)

issuance of a combined license is a major federal action significantly affecting the quality of the human environment and requires an environmental impact statement; LBP-13-4, 77 NRC 107 (2013)

issuance of an early site permit and the subsequent authorization of construction and operation of a new nuclear power plant qualify as connected actions under 40 C.F.R. 1508.25 and should be evaluated in one environmental impact statement; LBP-11-10, 73 NRC 424 (2011)

license cannot be issued until the foreign ownership issue is properly corrected and then applicants may move to reopen the record; LBP-12-19, 76 NRC 184 (2012)

license holder under Part 50 or a combined license under Part 52 shall follow and maintain the effectiveness of an emergency plan that meets the requirements in Part 50, Appendix E; LBP-15-4, 81 NRC 156 (2015)

license will not be issued where applicants are 100% owned by a foreign corporation, which is 85% owned by the French government, and the foreign corporation has the power to exercise ownership, control, or domination over applicants, and the Negation Action Plan submitted by applicants does not negate this situation; LBP-12-19, 76 NRC 184 (2012)

licensee who has obtained an early site permit is not required to apply for a combined license or to actually construct and operate a nuclear power plant at the authorized site; LBP-11-10, 73 NRC 424 (2011)

NEPA only requires that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-11-7, 73 NRC 254 (2011)

not all license commitments must be converted into license conditions to be enforceable; LBP-14-3, 79 NRC 267 (2014)

NRC has authority to ensure that certified designs and combined licenses include appropriate Commission-directed changes before operation; CLI-11-8, 74 NRC 214 (2011); CLI-11-10, 74 NRC 251 (2011)

NRC has authority to impose environmental restrictions on new transmission lines intended to serve new nuclear power plants; LBP-14-9, 80 NRC 15 (2014)

NRC has long interpreted its statutory authority under the Atomic Energy Act to include conditioning approval of nuclear power plant licenses on environmentally acceptable routing of transmission lines; LBP-14-9, 80 NRC 15 (2014)

NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse environmental impacts that might otherwise be caused by the construction or operation of a nuclear power plant; LBP-14-9, 80 NRC 15 (2014)

NRC is prohibited from issuing a license to a nuclear power reactor applicant if it would be inimical to the health or safety of the public; LBP-13-4, 77 NRC 107 (2013)

NRC is required to consider severe accident mitigation alternatives in issuing a new operating license; LBP-11-7, 73 NRC 254 (2011)

NRC Staff may not issue a notice of violation for failure to satisfy Appendix B requirements during the preapplication period, but it may deny a combined license for failure to satisfy the standards and requirements of the Commission’s regulations; LBP-14-7, 79 NRC 451 (2014)

proposed plant will impact at least 668 acres of wetlands and therefore its construction and operation will require a permit from U.S. Army Corps of Engineers; LBP-13-4, 77 NRC 107 (2013)

radiation protection requirements with which licensees must comply, such as procedures and controls to reduce occupational doses and doses to members of the public to levels that are as low as reasonably achievable, are outlined in 10 C.F.R. 20.1101(b); LBP-12-4, 75 NRC 213 (2012)

request that NRC conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as part of the environmental review for new reactor and license renewal decisions is premature; LBP-12-18, 76 NRC 127 (2012)

section 50.54(h)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)

sheltering must be considered in developing the recommended range of protective actions in an emergency plan; LBP-11-6, 73 NRC 149 (2011)
state water use permit is required for construction and operation of the nuclear units, associated facilities, and transmission lines and corridor; LBP-13-4, 77 NRC 107 (2013)

there is generally no specific ownership percentage above which the NRC Staff would conclusively determine that an applicant is per se controlled by foreign interests, but a 100% foreign ownership has formed the basis for the licensing board’s grant of summary disposition in favor of the intervenors; LBP-14-3, 79 NRC 267 (2014)

to authorize issuance of combined licenses, NRC must determine that applicable regulations have been met, there is reasonable assurance that the new reactors will be constructed and will operate in conformity with NRC regulations, and issuance of the licenses will not be inimical to the public health and safety; CLI-12-2, 75 NRC 63 (2012)

to issue a combined license or entertain an application for a COL, the Commission cannot know or have reason to believe applicant is controlled by an alien, a foreign corporation, or a foreign government; LBP-11-25, 74 NRC 380 (2011)

to the extent NRC’s review of the Fukushima accident leads to new rules applicable to any pending application, the Commission has sufficient authority and time to apply them to any new license that may be issued; CLI-11-5, 74 NRC 141 (2011)

technology undergirds certain agency licensing decisions, in particular new reactor licensing and reactor license renewal; CLI-12-16, 76 NRC 63 (2012)

when an environmental impact statement is prepared at the early site permit stage, NRC Staff must prepare a supplemental EIS for the COL focusing on issues related to the impacts of construction and operation for which new and significant information has been identified; CLI-12-2, 75 NRC 63 (2012)

with respect to new reactor licenses, the Commission has authority to ensure that certified designs and combined licenses include appropriate Commission-directed changes before operation; CLI-11-6, 74 NRC 203 (2011)

COMMENTS
NRC must allow the federal Advisory Council on Historic Preservation a reasonable opportunity to comment with regard to a combined license; LBP-12-23, 76 NRC 445 (2012)

COMMISSIONERS, AUTHORITY
action of the Commission shall be determined by a majority vote of the members present; CLI-12-17, 76 NRC 207 (2012)

Commission, but not a licensing board, has the power to address a protracted delay in the proceeding and to direct appropriate remedial measures; LBP-11-30, 74 NRC 627 (2011)

Commission disfavors requests to invoke its inherent supervisory authority over adjudications; CLI-11-13, 74 NRC 635 (2011)

COMMON DEFENSE AND SECURITY
adequacy finding on applicant’s material control and accounting program requires the board to make a case-by-case determination, guided by the Atomic Energy Act’s mandate that no license to possess special nuclear material may be issued if issuance would be inimical to the common defense and security or would constitute an unreasonable risk to the health and safety of the public; LBP-14-1, 79 NRC 39 (2014)

evend substantial foreign funding or involvement where a foreign entity contributes 50% or more of the costs of constructing a reactor or participates in the project review and is consulted on policy and costs issues does not require a finding of foreign control, where safeguards ensure U.S. national defense and security; LBP-11-25, 74 NRC 380 (2011)

foreign ownership, control, or domination analysis should be given an orientation toward safeguarding the national defense and security; CLI-15-9, 81 NRC 512 (2015)
in context with the other provisions of the Atomic Energy Act § 104d, the foreign control limitation should be given an orientation toward safeguarding the national defense and security; LBP-14-3, 79 NRC 267 (2014)

licensee must show with reasonable assurance that its proposed methodology for material control and accounting will not be inimical to the common defense and security and will not constitute an unreasonable risk to the health and safety of the public; CLI-15-9, 81 NRC 512 (2015)

materials license regulations contain no express prohibition on foreign ownership, but require Staff to make a finding that license issuance will not be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)
SUBJECT INDEX

no imminent risk to public health and safety or to the common defense and security post-Fukushima necessitates suspensions; LBP-12-18, 76 NRC 127 (2012)
NRC can issue nuclear power reactor licenses to applicants only upon a finding that utilization of special nuclear material will be in accord with the common defense and security and will provide adequate protection of public health and safety; CLI-15-4, 81 NRC 221 (2015)
NRC may deny uranium enrichment facility applicant a license based on foreign ownership, control, or domination concerns to the extent it concludes granting such a license would be inimical to the common defense and security or the health and safety of the public; LBP-11-11, 73 NRC 455 (2011)
NRC’s enforcement order does not state that any reportable illegal, unusual, or aberrant behavior must have a nexus to public health and safety or the common defense and security in order to be reportable; LBP-14-4, 79 NRC 319 (2014)
pertinent language in 10 C.F.R. 70.31(d) and 40.32(d) tracks the statutory language identically, i.e., “inimical to the common defense and security or the health and safety of the public”; LBP-11-11, 73 NRC 455 (2011)
protecting against the threat of air attacks is not within licensees’ responsibilities because a private security force cannot reasonably be expected to defend against such attacks and adequate protection is ensured through the actions of other federal agencies with defense capabilities and air-safety expertise; CLI-11-4, 74 NRC 1 (2011)
requesting authorization from the Commission for the board, on its own motion, to examine and decide the serious safety or common defense and security matters underlying contentions is allowed to be used for matters that were initially raised by a party, where that party later withdrew; LBP-11-9, 73 NRC 391 (2011)
to be inimical to the common defense and security or to the health and safety of the public, control or domination must be of such a degree that the will of the licensee is subjugated to the will of the foreign entity, and the foreign entity must have the power to direct the actions of the licensee; LBP-14-3, 79 NRC 267 (2014)
COMMON-MODE FAILURES
admissibility of contention that common-mode failures and/or mutually exacerbating catastrophes are entitled to severe accident mitigation alternatives analysis is decided; LBP-15-5, 81 NRC 249 (2015)
COMMUNICATIONS
adequate provisions must exist for prompt communications among principal response organizations to emergency personnel and to the public; LBP-15-4, 81 NRC 156 (2015)
combined license applicant’s emergency plan must contain and describe adequate provisions for emergency facilities and equipment, including at least one onsite and one offsite communications system, each of which shall have a backup power source; LBP-11-15, 73 NRC 629 (2011)
request that NRC order licensees to provide means to power communications equipment needed to communicate onsite and offsite during a prolonged station blackout until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
COMPLIANCE
activities associated with, and data coming from, prelicensing groundwater monitoring activities are associated with compliance with the dictates of 10 C.F.R. Part 40, Appendix A, Criterion 7; LBP-15-3, 81 NRC 65 (2015)
after the rulemaking is completed, licensees for new reactors will be required to comply with the ASME code preservice and inservice surveillance provisions for squib valves; CLI-15-13, 81 NRC 555 (2015)
agencies of the government must scrupulously observe the rules, regulations, or procedures that it has established; LBP-14-2, 79 NRC 131 (2014); LBP-14-4, 79 NRC 319 (2014)
allegations of noncompliance with already-issued, existing, and open Commission orders are part of the current licensing basis and therefore cannot be challenged in a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
allowing licensee to propose its own strategies for coming into compliance with an enforcement order rather than mandating a certain set of plant alterations does not change the fundamental character of the order and transform it into an approval; LBP-12-15, 76 NRC 14 (2012)
although a standard review plan lacks the legal force of regulations, it is to be given special weight as a guidance document that has been approved by the Commission but is nonbinding guidance; LBP-14-3, 79 NRC 267 (2014)
although NRC guidance documents are not legally binding, and compliance with them is not required, they describe an acceptable approach to compliance with NRC rules; CLI-11-4, 74 NRC 1 (2011)

although NUREGs are not legally binding, they are guidance documents and applicant’s failure to comply with such documents can potentially give rise to an admissible contention; LBP-11-6, 73 NRC 149 (2011)

applicant’s program for control and accounting of special nuclear material must show how compliance with the requirements of section 74.51 will be accomplished; LBP-14-1, 79 NRC 39 (2014)

boards cannot assume that applicants will not comply with their regulatory responsibilities, including their license conditions; LBP-15-3, 81 NRC 65 (2015)

Commission has long declined to assume that licensees will refuse to meet their obligations under their licenses or NRC regulations; LBP-15-4, 81 NRC 156 (2015)

commitment to implement an aging management plan that NRC finds is consistent with the GALL Report constitutes one acceptable method for compliance; LBP-11-20, 74 NRC 65 (2011)

comprehensive system of planned and periodic audits shall be carried out to verify compliance with all aspects of the quality assurance program and to determine effectiveness of the program; LBP-14-7, 79 NRC 451 (2014)

conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011)

contention that applicant had inadequately described aging management plan by relying on a promise of compliance with NRC orders instead of describing the plan is admissible; LBP-15-24, 82 NRC 68 (2015)

current reactor licensees comply with the requirements of section 50.54(hh)(2) through conditions on their operating licenses; LBP-11-21, 74 NRC 115 (2011)

debatting compliance with another agency’s proposed policies before they have been finalized would subject administrative agencies to needless and repetitive litigation; LBP-15-15, 81 NRC 15 (2014)

government agencies are required to comply with NEPA to the fullest extent possible; LBP-14-9, 80 NRC 15 (2014)

if compliance with the current licensing basis cannot be fully achieved during the current licensing term and must be consummated during the period of extended operation, then a contention raising issues about such CLB compliance is within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

if petitioner has a credible basis to question the adequacy of licensee’s compliance with 10 C.F.R. 50.54(q)(3), it may petition for enforcement action; LBP-15-4, 81 NRC 156 (2015)

in assessing whether applicant/licensee adequately carries out a licensing directive, boards are to assume that NRC Staff will be fair and judge the matter of applicant/licensee’s compliance on the merits; LBP-15-3, 81 NRC 65 (2015)

in the absence of some showing of substantial prior misdeeds, applicant/licensee will be presumed to follow the agency’s regulatory requirements, including the directives in its license; LBP-15-3, 81 NRC 65 (2015)

it is imperative that terms of a reactor operating license be clear and unambiguous and that licensee scrupulously adhere to those terms, because it is unlawful for any person within the United States to use any utilization facility except under and in accordance with a license issued by NRC; LBP-13-7, 77 NRC 307 (2013)

legislative history and case law require compliance with NEPA unless compliance is impossible, or another statute specifically prohibits compliance with NEPA; LBP-12-18, 76 NRC 127 (2012)

license denial letter that contained apparent boilerplate that was incomplete and perforce misleading does not accord with concepts of fundamental fairness and might well counter hearing rights granted under the Atomic Energy Act; LBP-13-3, 77 NRC 82 (2013)

license renewal should not include a new, broad-scoped inquiry into compliance that is separate from and parallel to ongoing compliance oversight activity; CLI-11-11, 74 NRC 427 (2011); LBP-13-8, 78 NRC 1 (2013)

licensee is not required to list an enforcement order and its compliance with the order’s terms in the environmental report supporting its operating license renewal application; LBP-12-15, 76 NRC 14 (2012)
licensee’s compliance with the current licensing basis is not within the scope of a license renewal proceeding; LBP-13-8, 78 NRC 1 (2015)
licensees may follow regulatory guides to determine equivalent safety margins, or may use any other methods, procedures, or selection of materials and transients to demonstrate compliance; LBP-15-20, 81 NRC 829 (2015)
merely pointing to a government compliance program is insufficient to demonstrate compliance with NEPA’s requirement that agencies take a hard look at the environmental consequences of their proposed actions; LBP-12-23, 76 NRC 445 (2012)
merely pointing to the compliance program is in no way sufficient to support a scientific finding that spent fuel pools will not cause a significant environmental impact during the extended storage period; LBP-14-9, 80 NRC 15 (2014)
no agency shall utilize an excessively narrow construction of its existing statutory authorizations to avoid compliance with NEPA; LBP-14-9, 80 NRC 15 (2014)
noncompliance with orders issued as part of NRC’s ongoing oversight program are enforcement issues that are not within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
NRC guidance documents are not legally binding, and compliance with them is not required; LBP-15-20, 81 NRC 829 (2015)
NRC is ultimately responsible for compliance with the National Environmental Policy Act; CLI-12-13, 75 NRC 681 (2012)
NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-11-11, 74 NRC 427 (2011)
petitioners can raise compliance issues only under 10 C.F.R. 2.206, which would allow them to petition NRC to take an enforcement action; LBP-15-5, 81 NRC 249 (2015)
plain meaning of the word “approval,” as “the act of approving” and “certification as to acceptability,” which requires an affirmative action on the part of an approver, clearly establishes that requiring compliance is different from granting an approval; LBP-12-15, 76 NRC 14 (2012)
plants licensed to operate before January 1, 1979, must meet fire safety regulations; DD-12-3, 76 NRC 416 (2012)
post-licensing, preoperational activities conducted to comply with Part 40, Appendix A, Criterion 7 are associated with compliance with the dictates of 10 C.F.R. Part 40, Appendix A, Criteria 5B and 7A; LBP-15-3, 81 NRC 65 (2015)
“reasonable assurance” standard for aging management programs does not require a 95% confidence level of compliance; LBP-11-18, 74 NRC 29 (2011)
request that NRC order licensees to comply with twelve specific recommendations in the Near-Term Task Force Report is addressed; DD-14-2, 79 NRC 489 (2014)
satisfying the requirements of other statutes does not in itself relieve a federal agency of its obligations to comply with the procedures set forth in the Endangered Species Act; LBP-12-10, 75 NRC 633 (2012)
to consider any or all of NRC Staff documents as “approvals” by reason of the fact that they request information that will be used to assess compliance with agency requirements would impose an unintended reporting encumbrance; LBP-12-15, 76 NRC 14 (2012)
See also Assumption of Compliance; Certificate of Compliance; Procedure Compliance
COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION AND LIABILITY ACT
proper sampling plan for establishing baseline values is described; LBP-15-3, 81 NRC 65 (2015)
COMPRRESSED AIR ENERGY STORAGE
technology and its potential to produce baseload power in combination with other renewable sources are discussed; LBP-12-17, 76 NRC 71 (2012)
COMPUTER CODE
applicant’s use of the MAAP code to generate fission product source terms for use in its severe accident mitigation alternatives analysis is reasonable under NEPA; LBP-12-26, 76 NRC 559 (2012)
citation of studies indicating that source terms from the Modular Accident Analysis Progression (MAAP) code are lower than results from Source Term Code Package or NUREG-1150 satisfies the requirements of 10 C.F.R. 2.309(j)(1)(v); LBP-11-2, 73 NRC 28 (2011)
Gaussian plume model’s incorporation in the MACCS2 code and the wide, customary use of the code are not a sufficient grounds to exclude the code’s integral dispersion model from all challenge if adequate support is provided for a contention; LBP-11-2, 73 NRC 28 (2011)
it is not possible simply to plug in and run a different atmospheric dispersion model in the MACCS2 code; LBP-11-2, 73 NRC 28 (2011)

petitioners did not demonstrate that the issue of whether the MACCS2 was subject to quality assurance is material to the findings the NRC must make under NEPA to support the requested license extension; LBP-11-13, 73 NRC 534 (2011)
petitioners do not provide any alleged facts or expert support indicating that the river valley is within the geographic area for which applicant was required to model atmospheric dispersion; LBP-11-13, 73 NRC 534 (2011)
petitioners’ assertions that the MACCS2 code was not subjected to quality assurance requirements is deficient because a SAMA analysis is not subject to such requirements; LBP-11-2, 73 NRC 28 (2011)

although petitioners are not required to run their own computer models at the contention admissibility stage, a contention challenging a SAMA analysis nonetheless must be tethered to the computer modeling and mathematical aspects of the analysis; CLI-12-15, 75 NRC 704 (2012)
applicant’s severe accident mitigation alternatives analysis is sufficiently site specific and its use and NRC Staff’s approval of the NUREG-1150 TMDEC and CDNFRM input values is reasonable and appropriate and satisfies the requirements under NEPA; LBP-13-13, 78 NRC 246 (2013)
appropriate inquiry under NEPA is not whether there are alternative models that NRC could have used, or whether the analysis could have been refined, or improved by gathering additional data, but whether the NRC’s chosen methodology is reasonable; LBP-13-4, 77 NRC 107 (2013)
because the severe accident mitigation alternatives analysis is largely quantitative, resting on inputs used in computer modeling, it will always be possible to propose that the analysis use one or more other inputs; LBP-13-13, 78 NRC 246 (2013)
concern about methodology used to calculate groundwater quantity impacts is inadmissible as lacking sufficient factual or expert support and as failing to establish a material factual or legal dispute; LBP-12-3, 75 NRC 164 (2012)
modeling of salt drift from cooling towers is discussed; LBP-13-4, 77 NRC 107 (2013)
nonstatic nature of a website, in the absence of a stand-alone compact disc/digital video disc that would allow the board or parties to run a locked-down version of the website application, prevents consideration as evidence; LBP-15-3, 81 NRC 65 (2015)
regional groundwater flow modeling is discussed; LBP-13-4, 77 NRC 107 (2013)
to the extent petitioner is challenging the adequacy of computer modeling of plume variability, petitioner bears the burden of providing evidence specific to the license renewal applicant; LBP-15-5, 81 NRC 249 (2015)

boards have authority to impose reasonable conditions on voluntary withdrawals in appropriate circumstances; LBP-15-28, 82 NRC 233 (2015)
boards set conditions on voluntary withdrawals on a case-by-case basis, with any conditions tailored to address the particular circumstances of that proceeding; LBP-15-28, 82 NRC 233 (2015)
dismissal of license amendment request is conditioned on requirement that licensee provide notice to petitioner of submission of a similar LAR so that petitioner has a fair opportunity to litigate issues previously found admissible; LBP-15-28, 82 NRC 233 (2015)
narrowly tailored condition will afford petitioner an opportunity to dispute a specific decommissioning fund disbursement via a letter to the NRC or a petition for enforcement action; LBP-15-28, 82 NRC 233 (2015)
purpose of the rule to dismiss proceedings on conditions is primarily to prevent voluntary dismissals that unfairly affect the other side, and to permit the imposition of curative conditions; LBP-15-28, 82 NRC 233 (2015)
when the board has issued a Notice of Hearing, withdrawal of a license amendment request shall be on such terms as the presiding officer may prescribe; LBP-15-28, 82 NRC 233 (2015)
CONDUCT OF PARTIES

Every participant in NRC adjudicative proceedings has the duty to fulfill the obligations imposed by and in accordance with applicable law, and when participant fails to meet its obligations, a licensing board should consider the imposition of sanctions against the offending party; LBP-13-2, 77 NRC 71 (2013) fairness to all involved in NRC’s adjudicatory procedures requires that every participant fulfill the obligations imposed by and in accordance with applicable law and Commission regulations; LBP-13-2, 77 NRC 71 (2013) licensing boards may impose on contumacious parties or their representatives reprimands, censures, or suspensions from proceedings; LBP-13-2, 77 NRC 71 (2013)

CONFIDENTIAL INFORMATION

Appeals of board rulings on hearing requests, petitions to intervene, and access to certain nonpublic information are governed by 10 C.F.R. 2.311(a); CLI-12-6, 75 NRC 352 (2012) boards can request that a document for which a deliberative process privilege is claimed be provided to it for in camera inspection; LBP-13-5, 77 NRC 233 (2013) confidential commercial information, release of which likely would lead to substantial competitive harm, is entitled to protection; CLI-15-24, 82 NRC 331 (2015) flooding hazard reevaluation report contains security-related information, and so a portion of the document is not publicly available; DD-15-5, 81 NRC 877 (2015) if the Commission determines on appeal that information withheld under a protective order should have been publicly disclosed, it will direct that such information and the transcript of the related in camera session be made publicly available; CLI-15-24, 82 NRC 331 (2015) in camera hearing sessions may be held when information sought to be withheld from public disclosure is offered into evidence; CLI-15-24, 82 NRC 331 (2015) NRC Staff must supply the board with precise and certain reasons for maintaining the confidentiality of requested documents; LBP-13-5, 77 NRC 233 (2013) petitioners have an affirmative obligation to request confidential and proprietary information that has not been made publicly available in order to support a proposed contention; LBP-11-9, 73 NRC 391 (2011) privilege logs that contain only cursory statements are inadequate to permit a court to decide whether the privilege was properly claimed; LBP-13-5, 77 NRC 233 (2013) requests for protected documents shall be filed within 60 days of the listing of the document on the privilege log and, in any event, no later than 10 days after the deadline for filing rebuttal testimony; LBP-11-5, 73 NRC 131 (2011) requirements and exemptions under FOIA reflect a balancing of public disclosure with confidentiality, but this balancing does not affect the NRC’s authority to obtain requested information; CLI-13-5, 77 NRC 223 (2013) SUNSI policy does not expand upon or create any new category of legally privileged or confidential information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 131 (2011) under certain circumstances, a licensee or vendor might be required to disclose confidential ECP information (including the identity of a concerned individual) at the behest of a government agency (including the NRC), or in response to a subpoena; CLI-13-5, 77 NRC 223 (2013)

CONFIDENTIALITY

Although NRC regulations mandate that a petition contain the name, address, and telephone number of petitioner, the Commission’s hearing notice advises prospective petitioners not to include personal privacy information, such as home addresses or home phone numbers, in their filings; LBP-11-21, 74 NRC 115 (2011) disclosure to intervenors of the names of power plant employees who provided NRC with information during the course of its investigation would be inappropriate, even with a protective order in place; CLI-13-5, 77 NRC 223 (2013) factors that boards should consider in balancing applicant’s need for disclosure against the agency’s interest in confidentiality are described; LBP-13-5, 77 NRC 233 (2013) government may withhold from disclosure the identity of persons who furnish information of violations of law to officers charged with enforcement of the law; CLI-13-5, 77 NRC 223 (2013)
CONFIRMATORY ACTION LETTER
analytic framework for assessing whether a CAL process constitutes a de facto license amendment proceeding is provided; LBP-13-7, 77 NRC 307 (2013)
board determined that confirmatory action letter was a de facto license amendment, which allows for public intervention; LBP-14-1, 79 NRC 39 (2014)
board is directed to consider whether a CAL issued to licensee constitutes a de facto license amendment that would be subject to a hearing opportunity under AEA § 189a, and, if so, whether the petition meets the standing and contention admissibility requirements; CLI-12-20, 76 NRC 437 (2012)
criteria of 10 C.F.R. 50.59 were used as an analytical tool to address the question of whether a confirmatory action letter issued to the licensee by the NRC Staff constituted a de facto license amendment that would be subject to a hearing opportunity; LBP-13-11, 78 NRC 177 (2013)
issuance of a CAL is an enforcement process that does not allow for public intervention; LBP-14-1, 79 NRC 39 (2014)
licensees and vendors are expected to adhere to any obligations and commitments addressed in CALs that NRC Staff issues to licensees or vendors to emphasize and confirm a licensee’s or vendor’s agreement to take certain actions in response to specific issues; DD-12-2, 76 NRC 391 (2012)
NRC Staff inspections and CALs are oversight activities normally conducted to ensure that licensees comply with existing NRC requirements and license conditions and therefore do not typically trigger the opportunity for a hearing under the AEA; CLI-15-5, 81 NRC 329 (2015)
process and method for closing out a CAL are described; LBP-13-7, 77 NRC 307 (2013)
to determine whether a CAL process constitutes a de facto license amendment proceeding, a licensing board must look beyond the CAL itself and consider the entire process, including the documents generated incident to that process; LBP-13-7, 77 NRC 307 (2013)
to determine whether an ongoing CAL process constitutes a de facto license amendment proceeding, the board must determine whether the requested change in operating authority sought by licensee is strictly in accordance with the terms and technical specifications in its existing license; LBP-13-7, 77 NRC 307 (2013)
when an order is warranted to address a specific issue, a CAL is used to confirm initial, agreed upon, short-term actions covering the interval period prior to the actual issuance of the order; LBP-13-7, 77 NRC 307 (2013)
CONFIRMATORY ORDER
admissibility of contention asserting that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on licensee’s off-duty employees not otherwise required by 10 C.F.R. 73.56(f)(1)-(3) is argued; LBP-14-4, 79 NRC 319 (2014)
before any hearing is granted on an order issued pursuant to 10 C.F.R. 2.202, a threshold question, intertwined with both standing and contention admissibility issues, is whether the hearing requests are within the scope of the proceeding; CLI-13-2, 77 NRC 39 (2013)
board finds that the terms endorsed in a confirmatory order provide more specificity than the applicable NRC regulation which rather broadly requires reporting of any questionable behavior patterns or activities; LBP-14-4, 79 NRC 319 (2014)
challenges to NRC enforcement orders are limited to whether the order should be sustained; LBP-14-4, 79 NRC 319 (2014)
contention that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on licensee’s off-duty employees, not otherwise required by NRC, to observe and report offsite, off-duty conduct of fellow employees in inadmissible; LBP-14-4, 79 NRC 319 (2014)
contention that considers the terms of a confirmatory order warranted or unwarranted is irrelevant if they fall within NRC’s authority to impose; LBP-14-4, 79 NRC 319 (2014)
hearing on a confirmatory order is limited solely to whether, on the basis of matters set forth in the order, the order should be sustained; LBP-14-4, 79 NRC 319 (2014)
if licensee or other person to whom an order is issued consents to its issuance, or the order confirms actions agreed to by the licensee or such other person, that consent or agreement constitutes a waiver by the licensee or such other person of a right to a hearing and any associated rights; LBP-14-4, 79 NRC 319 (2014)
interested stakeholders who stand to benefit from a confirmatory order’s safety measures may intervene in a contested enforcement proceeding to protect its interest in ensuring that the order is upheld as issued; CLI-13-2, 77 NRC 39 (2013) issue to be determined at hearing is whether the order should be sustained or denied, not whether the order should be enhanced; CLI-13-2, 77 NRC 39 (2013) it is unlikely that petitioners will often obtain hearings on confirmatory enforcement orders; LBP-14-4, 79 NRC 319 (2014) nonlicensee with purely economic interest has an automatic right to demand a hearing under section 2.202(a)(3) without showing standing or proffering an admissible contention; LBP-14-4, 79 NRC 319 (2014) nonparty petitioners may not challenge a confirmatory order embodying a settlement if the order improves the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014) NRC’s notice of opportunity for hearing on a confirmatory order provides the public a safety valve because conceivably the order might remove a restriction upon a licensee or otherwise have the effect of worsening the safety situation; LBP-14-4, 79 NRC 319 (2014) orders issued under 10 C.F.R. 2.202 alter the requirements of a license and therefore fall generally under the terms of Atomic Energy Act § 189a; CLI-13-2, 77 NRC 39 (2013) petitioner may obtain a hearing on a section 2.202 order only if the measures to be taken under the order would, in themselves, harm the petitioner; CLI-13-2, 77 NRC 39 (2013) standing to challenge a confirmatory order exists only when a petitioner credibly alleges that a settlement somehow actually reduces safety; LBP-14-4, 79 NRC 319 (2014) terms of section 2.202 orders often have been negotiated with the affected licensee, who would have little incentive to negotiate if so doing would expose them to formal litigation over additional terms or requirements that third-party petitioners would like to see imposed; CLI-13-2, 77 NRC 39 (2013) union’s argument that it may demand a hearing on a confirmatory order without complying with intervention requirements of section 2.309(a) is incorrect; LBP-14-4, 79 NRC 319 (2014) whether licensee employees, as represented by a union, have a right to demand a hearing because they are persons adversely affected by a confirmatory order is discussed; LBP-14-4, 79 NRC 319 (2014) CONFLICT OF INTEREST if an examiner is assigned to a reactor operator examination that might appear to present a conflict of interest, the examiner shall inform his or her immediate supervisor of the potential conflict; LBP-14-2, 79 NRC 131 (2014) NRC regional office shall not assign an examiner who failed an applicant on an operating test to administer any part of that applicant’s retake of the operating test; LBP-14-2, 79 NRC 131 (2014) NUREG-1021 includes conflict of interest provisions that address the assignment of examiners to an examination team; LBP-14-2, 79 NRC 131 (2014) when informed of a potential conflict, the supervisor of a reactor operator test examiner must apply sound judgment to the facts of each case and, if any doubt exists, consult with regional management and/or the NRR operator licensing program office to resolve the issue; LBP-14-2, 79 NRC 131 (2014) CONNECTED ACTIONS action lacks independent utility when it would be irrational or unwise to pursue the action without the presence of the EIS-generating central action; LBP-15-16, 81 NRC 618 (2015) action with potential impacts subsequent to the initial federal action may not constitute a proposed action if it is insufficiently certain; LBP-14-9, 80 NRC 15 (2014) although NRC may regard preconstruction activities as outside the scope of a combined license application, these activities are within the scope of the NEPA review because they are all connected actions; LBP-14-9, 80 NRC 15 (2014) connected actions are closely related and therefore should be discussed in the same environmental impact statement; LBP-15-16, 81 NRC 618 (2015) connected actions are distinguished from cumulative impacts; LBP-14-6, 79 NRC 404 (2014) “connected actions” include those that lack independent utility; LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014) construction of a road to facilitate logging and the sale of timber from the logging are “connected actions” that have to be addressed in a single environmental impact statement; LBP-14-9, 80 NRC 15 (2014)
contention alleging that final supplemental environmental impact statement fails to consider connected actions is admissible; LBP-14-5, 79 NRC 377 (2014)
contention questioning whether future anticipated use of MOX fuel is sufficiently definite to constitute a proposal under the law, with a connection, cumulative impact, interdependence, or similar relationship to matters at issue in a license renewal proceeding to warrant being addressed in the supplemental environmental impact statement is admissible; LBP-14-6, 79 NRC 404 (2014)
contention that the draft supplemental environmental impact statement fails to consider connected actions is admissible; LBP-13-9, 78 NRC 37 (2013)
cumulative impact analysis is required for reasonably foreseeable future actions and test for connected actions in CEQ regulation 40 C.F.R. 1508.25 need not be satisfied; LBP-14-6, 79 NRC 404 (2014)
definition of “connected actions” in 40 C.F.R. 1508.25 is also adopted by NRC regulations; LBP-14-9, 80 NRC 15 (2014)
environmental impact statements must address interdependent projects when the dependency is such that it would be irrational, or at least unwise, to undertake the first phase if subsequent phases were not also undertaken; LBP-14-9, 80 NRC 15 (2014)
environmental impact statements must include all connected actions; LBP-14-6, 79 NRC 404 (2014)
environmental impact statements should be issued to include other related actions only when those related actions have been formally proposed and are pending before the relevant agency; LBP-13-10, 78 NRC 117 (2013)
failure to include all connected actions within the scope of the proposed action is generally referred to as segmentation; LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014)
for an action such as a transmission corridor that will not be constructed by or expressly permitted by the federal agency preparing an environmental impact statement, there must be sufficient federal control and responsibility that the action qualifies as a federal action; LBP-14-9, 80 NRC 15 (2014)
for construction of a transmission corridor to constitute a connected action, three requirements must be met; LBP-14-9, 80 NRC 15 (2014)
grounds were found for litigation regarding defendants’ assertion that treatment of highway interchanges and village development as cumulative impacts in the final environmental impact statement was sufficient under NEPA even if these actions should have been treated as connected actions under the statute’s implementing regulations; LBP-14-9, 80 NRC 15 (2014)
multiple projects are often deemed connected actions despite being undertaken by separate entities; LBP-14-9, 80 NRC 15 (2014)
NEPA does not require an agency to consider the possible environmental impacts of less imminent actions when preparing the impact statement on proposed actions; LBP-13-10, 78 NRC 117 (2013)
no language is included in 10 C.F.R. 51.45(c) to the effect that a proposed action that is the subject of an agency environmental impact statement must include all connected actions as defined in 40 C.F.R. 1508.25; LBP-14-9, 80 NRC 15 (2014)
non-NRC permits are interdependent parts of applicant’s proposed action and thus are connected actions; LBP-15-16, 81 NRC 618 (2015)
pertinent to the question of whether a facility is a connected action is whether the facility lacks any independent utility in the absence of the completion of the other sites; LBP-13-10, 78 NRC 117 (2013)
power plants without transmission lines are like airplanes that can’t fly; LBP-14-9, 80 NRC 15 (2014)
projects lack independent utility when it would be irrational, or at least unwise, to build one without the other; LBP-14-9, 80 NRC 15 (2014)
projects that are not connected actions, but are physically related to the system, are cumulative actions and are subject to an examination of cumulative impacts; LBP-14-6, 79 NRC 404 (2014)
proposals or parts of proposals that are related to each other closely enough to be, in effect, a single course of action shall be evaluated in a single impact statement; LBP-13-10, 78 NRC 117 (2013); LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014)
separate actions are “connected” if, among other things, they cannot or will not proceed unless other actions have been taken previously or simultaneously, or they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014)
three types of actions (connected, cumulative, and similar) are to be considered in looking to the scope of an EIS; LBP-13-10, 78 NRC 117 (2013)
to bring NEPA into play, a possible future action must at least constitute a proposal pending before the agency (i.e., ripeness), and must be in some way interrelated with the action that the agency is actively considering (i.e., nexus); LBP-13-10, 78 NRC 117 (2013)

to determine whether actions are connected such that they should be discussed in the same environmental impact statement, an agency is to consider whether the actions automatically trigger other actions that may require an EIS, cannot or will not proceed unless other actions are taken previously or simultaneously, or are interdependent parts of a larger action and depend on the larger action for their justification; LBP-13-10, 78 NRC 117 (2013)

to determine whether interdependence exists among the various actions at issue, courts generally have looked to see whether the first action has independent utility; LBP-13-10, 78 NRC 117 (2013)

when developing an environmental impact statement, an agency must consider the impact of other proposed projects only if the projects are so interdependent that it would be unwise or irrational to complete one without the other; LBP-13-10, 78 NRC 117 (2013)

when drafting an environmental impact statement, agency’s scope of review must include analysis of any cumulative actions or actions connected to the central proposed action; LBP-15-16, 81 NRC 618 (2015)

CONSIDERATION OF ALTERNATIVES

admissibility of contention that final environmental assessment fails to satisfy NRC’s requirement for an environmental impact statement when there are unresolved conflicts concerning reasonable alternatives is decided; LBP-15-15, 81 NRC 598 (2015)

admissible contention challenging consideration of alternatives must show that a particular alternative was not discussed in the draft environmental impact statement and provide some support that the alternative is reasonable; LBP-13-9, 78 NRC 37 (2013)

aesthetic impacts of energy sources may vary according to individual location; LBP-11-4, 73 NRC 91 (2011)

agencies are not permitted to define the objectives of a proposed action so narrowly as to preclude a reasonable consideration of alternatives; LBP-12-17, 76 NRC 71 (2012)

agencies are required to study, develop, and describe appropriate alternatives; CLI-12-9, 75 NRC 421 (2012)

agencies are to rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives that were eliminated from detailed study, briefly discuss the reasons for their having been eliminated; LBP-12-17, 76 NRC 71 (2012); LBP-14-9, 80 NRC 15 (2014)

agencies must consider the environmental impacts of major federal actions significantly affecting the quality of the human environment, as well as alternatives to the proposed action, in an environmental impact statement; LBP-12-23, 76 NRC 445 (2012)

agencies must devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits; LBP-12-17, 76 NRC 71 (2012)

agencies need only address reasonably foreseeable impacts, not those that are remote and speculative or inconsequentially small; LBP-12-5, 75 NRC 227 (2012)

agencies need only discuss those alternatives that are reasonable and will bring about the ends of the proposed action; LBP-11-13, 73 NRC 534 (2011)

agencies should take into account the needs and goals of the parties involved in the application; LBP-12-17, 76 NRC 71 (2012)

agency is required to consider all reasonable alternatives under the National Environmental Policy Act; LBP-15-15, 81 NRC 598 (2015)

agency’s consideration of three alternative routes is sufficient to meet its NEPA obligations to consider reasonable transmission line route alternatives; LBP-11-6, 73 NRC 149 (2011)

allegation that multiple, unrelated sources of electricity ought to be evaluated collectively is inadmissible; LBP-11-2, 73 NRC 28 (2011)

allowing agencies to avoid a NEPA violation through a subsequent, conclusory statement that it would not have reached a different result even with the proper analysis would significantly undermine the statutory scheme; LBP-12-17, 76 NRC 71 (2012)

alternative energy sources that will be dependent on future environmental safeguards and technological developments may be excluded from the NEPA alternatives discussion; LBP-15-3, 81 NRC 65 (2015)

alternative that fails to meet the purpose of the project does not need to be further examined in the environmental report; LBP-11-6, 73 NRC 149 (2011)
alternatives analysis is the heart of the environmental impact analysis; LBP-11-16, 73 NRC 645 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-12-17, 76 NRC 71 (2012); LBP-14-9, 80 NRC 15 (2014)
alternatives discussion need not include every possible alternative, but rather every reasonable alternative; LBP-15-3, 81 NRC 65 (2015)
alternatives might not be feasible for a variety of reasons, including a failure of an alternative to meet the project’s purpose and need; LBP-13-9, 78 NRC 37 (2013)
although NEPA establishes a national policy in favor of protecting the human environment, NEPA does not require the agency to select the most environmentally benign alternative, but rather merely prohibits uninformed rather than unwise agency action; LBP-13-4, 77 NRC 107 (2013)
although there are many possible combinations of wind and solar power, storage, and natural gas, it is not necessary to examine every possible combination; LBP-11-4, 73 NRC 91 (2011)
analysis and response to state’s extensive comments to the draft supplemental environmental impact statement regarding state-specific energy conservation and efficiency as a replacement alternative fulfills NRC Staff’s obligation to take a hard look at alternatives; LBP-13-13, 78 NRC 246 (2013)
applicant is to provide in its environmental report an analysis of alternatives to the proposed action that is sufficiently complete to aid in developing and exploring its own set of alternatives; LBP-12-8, 75 NRC 539 (2012)
applicant is to provide in its environmental report an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-12-8, 75 NRC 539 (2012)
applicant must provide a discussion of the no-action alternative in its environmental report; LBP-12-8, 75 NRC 539 (2012)
applicant need only consider those alternatives that are reasonable; LBP-12-15, 76 NRC 14 (2012)
applicant’s alternatives analysis must be sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to the proposed action; LBP-11-13, 73 NRC 534 (2011)
applicant’s alternatives analysis need not discuss every conceivable alternative to the proposed action, but rather only feasible, non-speculative, and reasonable alternatives; LBP-11-13, 73 NRC 534 (2011)
applicant’s environmental report must address both the impacts of the proposed renewal and alternatives to those impacts; LBP-12-8, 75 NRC 539 (2012)
applicant’s environmental report must discuss appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-11-6, 73 NRC 149 (2011)
applicant’s environmental report need only discuss those alternatives that will bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)
applicant’s obligation is to consider alternatives as they exist and are likely to exist; LBP-11-2, 73 NRC 28 (2011)
applicants must evaluate alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-11-16, 73 NRC 645 (2011)
application-specific NEPA review represents a snapshot in time, and although NEPA requires that NRC conduct its environmental review with the best information available at that time, it does not require that NRC wait until inchoate information matures into something that later might affect its review; LBP-12-10, 75 NRC 633 (2012)
because a single wind turbine cannot provide continuous production of electricity at or near full capacity, it does not constitute a source of baseload power; CLI-12-5, 75 NRC 301 (2012)
because a solely wind- or solar-powered facility could not satisfy the project’s purpose, there was no need to compare the impact of such facilities to the impact of the proposed nuclear plant; LBP-11-7, 73 NRC 254 (2011)
because NEPA is premised on a rule of reason, NRC need only consider reasonable alternatives to a proposed action; LBP-11-26, 74 NRC 499 (2011)
before implementing any major federal action significantly affecting the quality of the human environment, NRC must prepare an environmental impact statement that describes the action, its effects, and alternatives to the proposed action; LBP-12-10, 75 NRC 633 (2012)
blindly adopting applicant’s statement of the purpose of the action is a losing position because it does not allow for the full consideration of alternatives required by NEPA; LBP-12-17, 76 NRC 71 (2012)
boards are required to consider alternatives as they exist and are likely to exist; CLI-12-5, 75 NRC 301 (2012)

concept of alternatives evolves, and agencies must explore alternatives as they become better known and understood; LBP-11-13, 73 NRC 534 (2011)

consideration of impacts with either a low probability of occurrence, or where the link between the agency action and the claimed impact is too attenuated to find the proposed federal action to be the proximate cause of that impact are excluded under the National Environmental Policy Act; LBP-13-4, 77 NRC 107 (2013)

considering the reasonable alternatives analysis, it is only in the depth of the consideration and in the level of detail provided in the corresponding environmental documents that an environmental assessment and an environmental impact statement will differ; LBP-15-11, 81 NRC 401 (2015)

contention seeking full impacts analysis of the power supply alternative of wind, either alone or in combination with solar and storage, is inadmissible because it fails to adequately demonstrate the capacity to produce baseload power; LBP-12-15, 76 NRC 14 (2012)

contention that final environmental assessment fails to adequately analyze all reasonable alternatives is inadmissible; LBP-15-11, 81 NRC 401 (2015)

contention that the draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contentions could show a genuine dispute with respect to a technology that, although not commercially viable at the time of the application, is under development for large-scale use and is likely to be available during the period of extended operation; CLI-12-5, 75 NRC 301 (2012)

Corps of Engineers may not issue a 404 permit if there exists a practicable alternative that would have less adverse impact on the aquatic system, the permit would cause significant degradation of the water of the United States, or appropriate and practicable mitigation has not been undertaken; LBP-14-9, 80 NRC 15 (2014)

costs and benefits of the energy-efficient building code are essential to determine whether the adoption of an energy-efficient building code should be included as an alternative; LBP-11-21, 74 NRC 115 (2011)

deficiencies in NRC Staff’s analysis of a combination alternative is not harmless error; LBP-12-17, 76 NRC 71 (2012)

demonstration that an alternative energy technology, although not commercially viable at the time of the application, is under development for large-scale use and is likely to be available during the period of extended operation has not been made; LBP-12-15, 76 NRC 14 (2012)

development and discussion of a wide range of alternatives to any proposed federal action is so important that it is mandated by NEPA when any proposal involves unresolved conflicts concerning alternative uses of available resources, and the requirement is independent of and of wider scope than the duty to file an EIS; LBP-13-13, 78 NRC 246 (2013)

discussion necessary to support a NEPA alternatives contention in a reactor license renewal proceeding is compared with that for a Part 52 combined license proceeding; LBP-12-15, 76 NRC 14 (2012)

discussion of alternatives that present severe engineering requirements or are imprudent for reasons including their high cost, safety hazards, and operational difficulties is excluded under NEPA; LBP-15-3, 81 NRC 65 (2015)

discussion of need for power is required in an environmental report, but applicant need not precisely identify future market conditions and energy demand or develop other detailed analyses in order to establish with certainty that construction and operation of a nuclear power plant is the most economical alternative; LBP-11-6, 73 NRC 149 (2011)

discussion of the economic costs and benefits of the proposed action and alternatives is required if such costs and benefits are essential for a determination regarding the inclusion of an alternative in the range of alternatives considered; LBP-11-21, 74 NRC 115 (2011)

discussion of the no-action alternative need only include feasible, nonspeculative alternatives; LBP-12-8, 75 NRC 539 (2012)

discourse of harmless error has only limited application in NEPA cases, and none where the agency has failed to take the required hard look at environmental consequences and alternatives; LBP-12-17, 76 NRC 71 (2012)

draft environmental impact statement must include a preliminary analysis that considers and weighs the environmental effects of and alternatives to the proposed action and alternatives available for reducing
or avoiding adverse environmental effects; LBP-14-9, 80 NRC 15 (2014)
draft environmental impact statements must include a preliminary analysis that considers and weighs
alternatives available for reducing or avoiding adverse environmental effects; LBP-12-18, 76 NRC 127
(2012)
energy efficiency alternative is excluded because it would not advance applicant’s goal to provide
additional baseload electrical generation capacity for use in the owner’s current markets and/or for
potential sale on the wholesale markets; LBP-11-7, 73 NRC 254 (2011)
environmental impact statement must describe the potential environmental impact of the proposed action
and discuss any reasonable alternatives; LBP-11-7, 73 NRC 254 (2011)
environmental impact statement that contains an incomplete or misleading comparison of alternatives is
deficient; LBP-11-21, 74 NRC 115 (2011)
environmental impact statements are to include a detailed statement by the responsible official on
alternatives to the proposed action; LBP-12-17, 76 NRC 71 (2012)
environmental impact statements must consider the alternative of no action; LBP-12-8, 75 NRC 539
(2012)
environmental impact statements must include a detailed statement of reasonable alternatives to the
proposed action; LBP-14-9, 80 NRC 15 (2014)
environmental report need only consider the range of alternatives that are capable of achieving the goals
of the proposed action; LBP-11-13, 73 NRC 534 (2011)
environmental reports for license renewal must address environmental impacts of the proposed action and
compare those impacts to the impacts of alternative actions, but need only consider those alternatives
that are reasonable; LBP-12-15, 76 NRC 14 (2012)
environmental reports submitted by license renewal applicants must address the environmental impacts of
the proposed action and compare them to impacts of alternative actions; CLI-12-8, 75 NRC 393 (2012)
existence of a reasonable but unexamined alternative renders an environmental impact statement
inadequate; LBP-12-17, 76 NRC 71 (2012) ; LBP-14-9, 80 NRC 15 (2014)
extent of the no-action discussion is governed by a rule of reason; LBP-12-8, 75 NRC 539 (2012)
extent to which operation and maintenance costs of a solar facility may present a comparative benefit is
immaterial since the four-part combination of alternative energy sources is not environmentally
preferable to two new nuclear units; LBP-11-4, 73 NRC 91 (2011)
federal agencies must consider the likely environmental impacts of the preferred course of action as well
as reasonable alternatives; LBP-12-17, 76 NRC 71 (2012)
federal agencies must rigorously explore and objectively evaluate all reasonable alternatives and devote
substantial treatment to each alternative considered in detail including the proposed action so that
reviewers may evaluate their comparative merits; LBP-11-14, 73 NRC 591 (2011)
final environmental impact statements need not discuss remote and speculative alternatives, but must
consider only alternatives that bring about the ends of the proposed project; LBP-12-17, 76 NRC 71
(2012)
for an alternative energy source to be considered reasonable for an operating license renewal proceeding,
the alternative should be commercially viable and technically capable of producing an equal amount of
baseload power now or in the near future, but no later than the expiration date of the current operating
license; CLI-12-8, 75 NRC 393 (2012)
for an electrical generation alternative to qualify for in-depth review, the alternative must be able to
provide 1190 MWe of baseload power during the license renewal term; LBP-12-15, 76 NRC 14 (2012)
for an operating license renewal, if NRC Staff has not previously considered severe accident mitigation
alternatives for the applicant’s plant in an environmental impact statement or related supplement or in
an environmental assessment, applicant’s environmental report must contain a consideration of
alternatives to mitigate severe accidents; LBP-11-18, 74 NRC 29 (2011)
for siting alternatives, an agency’s duty under NEPA is to study all alternatives that appear reasonable
and appropriate for study at the time of drafting the environmental impact statement; CLI-12-5, 75 NRC
301 (2012)
SUBJECT INDEX

for the no-action alternative, there need not be much discussion in the environmental documents because it is most simply viewed as maintaining the status quo; LBP-12-8, 75 NRC 539 (2012)
generation of baseload power is an acceptable purpose for a licensing action and has been determined to be broad enough to permit consideration of a host of energy-generating alternatives; LBP-11-13, 73 NRC 534 (2011)
if an alternative is commercially feasible and capable of bringing about the ends of the proposed project, then NRC Staff may not dismiss it merely because it is inconsistent with the preferences of interested parties, or for other reasons inconsistent with NEPA’s rule of reason; LBP-12-17, 76 NRC 71 (2012)
if an assessment of alternatives to the proposed action was prepared at the early site permit stage and no new information in the areas of energy alternatives or system design alternatives has been identified at the combined license stage, conclusions made at the ESP stage remain valid; CLI-12-2, 75 NRC 63 (2012)
if the adverse environmental impacts of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-11-14, 73 NRC 591 (2011)
in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC 618 (2015)
inaccurate, incomplete, or misleading information in an environmental impact statement concerning the comparison of alternatives is itself sufficient to render the EIS unlawful and to compel its revision; LBP-12-17, 76 NRC 71 (2012)
intervenors fail to specify what other alternatives to the license renewal application should be discussed in the draft supplemental environmental impact statement, much less show that any proposed alternative would satisfy the purpose of applicant’s proposed action; LBP-15-1, 81 NRC 15 (2015)
it is not enough to demonstrate a theoretical possibility that wind farms spread across a wide area could provide consistent power, but rather petitioners must show concretely that wind could be a reliable, commercially viable source of baseload power during the license renewal period; LBP-15-5, 81 NRC 249 (2015)
it will always be possible to envision and propose some alternative approach to severe accident mitigation alternatives analysis, some additional detail to include, or some refinement; LBP-15-29, 82 NRC 246 (2015)
license renewal applicant must file an environmental report that includes an alternatives analysis that considers and balances the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-11-13, 73 NRC 534 (2011)
license renewal applicant’s environmental report must address environmental impacts of the proposed action and compare them to impacts of alternative actions; CLI-12-5, 75 NRC 301 (2012)
license renewal applicant’s environmental report must contain a consideration of alternatives for reducing adverse impacts for all Category 2 license renewal issues in Appendix B; LBP-11-21, 74 NRC 115 (2011)
license renewal applicant’s environmental report must include a consideration of alternatives to mitigate severe accidents if NRC Staff has not previously considered them for applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment; CLI-12-19, 76 NRC 377 (2012)
merely describing an alternative is insufficient to comply with NEPA; LBP-11-14, 73 NRC 591 (2011)
National Environmental Policy Act does not call for examination of every conceivable aspect of federally licensed projects, but requires only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
National Environmental Policy Act should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-13-4, 77 NRC 107 (2013)
need for power is a shorthand expression for the benefit side of the cost-benefit balance that NEPA mandates for a proceeding considering the licensing of a nuclear power plant; LBP-11-6, 73 NRC 149 (2011)
neither NRC nor applicant need consider any alternative that does not bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)

764
NEPA alternatives analysis is the heart of the environmental impact statement; CLI-12-9, 75 NRC 421 (2012)

NEPA does not mandate substantive results but, rather, imposes procedural restraints on agencies, requiring them to take a hard look at the environmental impacts of a proposed action and reasonable alternatives to that action; LBP-12-5, 75 NRC 227 (2012)

NEPA does not require a worst-case analysis; LBP-12-5, 75 NRC 227 (2012)

NEPA does not require agencies to analyze impacts of alternatives that are speculative, remote, impractical, or not viable; CLI-12-5, 75 NRC 301 (2012)

NEPA does not require agencies to elevate environmental concerns over other appropriate considerations; LBP-12-17, 76 NRC 71 (2012)

NEPA does not require consideration of alternatives that are technologically unproven; LBP-15-3, 81 NRC 65 (2015)

NEPA imposes procedural restraints on agencies, which require them to take a hard look at the environmental impacts of a proposed action and the reasonable alternatives to that action; LBP-12-17, 76 NRC 71 (2012)

NEPA requires agencies to exercise a degree of skepticism in dealing with self-serving statements from the prime beneficiary of a project and to look at the general goal of the project, rather than only those alternatives preferred by the applicant; LBP-12-17, 76 NRC 71 (2012)

NEPA requires consideration of reasonable alternatives, not all conceivable ones; CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)

NEPA requires federal agencies to pause before committing resources to a project and consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-12-18, 76 NRC 127 (2012); LBP-14-9, 80 NRC 15 (2014)

NEPA requires federal agencies to take a hard look at the environmental impacts of a proposed action, as well as reasonable alternatives to that action; LBP-15-3, 81 NRC 65 (2015)

NEPA requires that alternatives be considered as they exist and are likely to exist, not merely as they exist at the present time; LBP-12-17, 76 NRC 71 (2012)

NEPA requires that an actual range of alternatives be considered, so that agencies are precluded from defining the objectives of their actions in terms so unreasonably narrow that they can be accomplished by only applicant’s proposed project; LBP-15-15, 81 NRC 598 (2015)

NEPA requires that an environmental review provide a sufficient discussion of alternatives to enable the decisionmaker to take a hard look at environmental factors, and to make a reasoned decision; LBP-11-13, 73 NRC 534 (2011)

NEPA requires that NRC take a hard look at alternatives, including severe accident mitigation alternatives, and to provide a rational basis for rejecting alternatives that are cost-effective; LBP-12-8, 75 NRC 539 (2012)

NEPA’s “hard look” requirement is tempered by a rule of reason; LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012)

NEPA’s requirement to discuss alternatives to the proposed action does not extend to the construction of transmission line corridors, because it is not “construction” as defined in 10 C.F.R. 50.10; LBP-11-6, 73 NRC 149 (2011)

NEPA’s rule of reason would not exclude consideration of demand-side management as part of an alternatives analysis when applicant is a state-regulated utility; LBP-11-6, 73 NRC 149 (2011)

NRC generally defers to an applicant’s stated purpose as long as that purpose is not so narrow as to eliminate alternatives; LBP-11-7, 73 NRC 254 (2011)

NRC gives substantial weight to the preferences of the applicant and/or sponsor; CLI-12-5, 75 NRC 301 (2012)

NRC Staff is required to issue a final environmental impact statement that thoroughly and objectively evaluates reasonable alternatives to the proposed action; LBP-12-17, 76 NRC 71 (2012)

NRC Staff is to consider and weigh the environmental, technical, and other costs and benefits of a proposed action and alternatives, and, to the fullest extent practicable, quantify the various factors considered; LBP-11-7, 73 NRC 254 (2011)

NRC Staff’s environmental impact statement need only discuss those alternatives that will bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)
NRC’s position is that it need not compare the costs of alternatives to a proposed action if its FEIS does not identify an environmentally preferable alternative; LBP-12-18, 76 NRC 127 (2012) petitioner has provided adequate support for its claim that there are numerous new severe accident mitigation alternatives candidates that should be evaluated for their significance; LBP-12-8, 75 NRC 539 (2012) petitioners’ challenge to the adequacy of applicant’s existing analysis of solar and wind as alternative energy sources is not a contention of omission; CLI-12-8, 75 NRC 393 (2012) project goals determine the alternatives that are considered reasonable; LBP-12-17, 76 NRC 71 (2012) proper question is not whether there are plausible alternative choices for use in the SAMA analysis, but whether the analysis that was done is reasonable under NEPA; LBP-15-29, 82 NRC 246 (2015) reasonable alternatives under NEPA are limited to those alternatives that will bring about the ends of the proposed action; LBP-11-21, 74 NRC 115 (2011) reasonable alternatives under NEPA do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-15-3, 81 NRC 65 (2015) record of decision must discuss relevant factors including economic and technical considerations among alternatives; LBP-11-7, 73 NRC 254 (2011) remote and speculative alternatives need not be addressed in a final environmental impact statement, but NEPA requires NRC Staff to consider reasonable alternatives that are likely to be available within the time frame of the proposed action; LBP-12-17, 76 NRC 71 (2012) remote and speculative alternatives need not be addressed in an applicant’s environmental report; CLI-12-5, 75 NRC 301 (2012); LBP-11-2, 73 NRC 28 (2011) rule of reason is inherent in NEPA and its implementing regulations; LBP-12-5, 75 NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012) severe accident mitigation alternatives analysis is neither a worst-case nor a best-case impacts analysis, and the agency’s obligations under NEPA are tempered by a practical rule of reason; LBP-11-18, 74 NRC 29 (2011) Staff’s environmental impact statement need only discuss those alternatives that will bring about the ends of the proposed action; LBP-12-15, 76 NRC 14 (2012) supplemental environmental impact statements for license renewal are not required to discuss need for power or economic costs and economic benefits of the proposed action or of alternatives to the proposed action; LBP-13-13, 78 NRC 246 (2013) there exists an obligation to consider alternatives as they exist and are likely to exist; LBP-11-13, 73 NRC 534 (2011) there is no assurance of a mitigation measure efficacy where the government conducted no study of its likely effects, proposed no monitoring to determine how effective the proposed mitigation would be, and did not consider alternatives in the event the measure fails; LBP-12-23, 76 NRC 445 (2012) there is no NEPA requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-12-5, 75 NRC 227 (2012) to challenge an energy alternatives analysis, petitioner ordinarily must provide alleged facts or expert opinion sufficient to raise a genuine dispute as to whether the best information available today suggests that a commercially viable alternate technology (or combination of technologies) is available now, or will become so in the near future, to supply baseload power; CLI-12-8, 75 NRC 393 (2012) to demonstrate the admissibility of a NEPA contention that an applicant failed to consider a viable alternative to its proposed action, petitioner must show that its contention presents a genuine dispute; CLI-12-5, 75 NRC 301 (2012) to make an impact statement something more than an exercise in frivolous boilerplate, the concept of alternatives must be bounded by some notion of feasibility; LBP-13-4, 77 NRC 107 (2013) to the extent that applicant proposes modifications to the facility in response to a request for information, NEPA also requires the consideration of the effectiveness and relative costs of a range of alternatives for satisfying NRC’s concerns; LBP-12-15, 76 NRC 14 (2012) under NEPA, an agency need not discuss alternatives that are infeasible, ineffective, or inconsistent with the basic policy objectives for the management of the area; LBP-13-9, 78 NRC 37 (2013) under the rule of reason governing NEPA, the concept of alternatives must be bounded by some notion of feasibility; CLI-12-15, 75 NRC 704 (2012)
unless it looks genuinely plausible that inclusion of an additional factor or use of other assumptions and models may change the cost-benefit conclusions for the severe accident mitigation alternative candidates evaluated, no purpose would be served to further refine the SAMA analysis; CLI-12-5, 75 NRC 301 (2012)

use of mean consequences in severe accident mitigation alternatives analysis is consistent with NRC policy and precedent, whereas the 95th percentile approach is akin to a worst-case scenario analysis, which is not required by NRC; LBP-11-18, 74 NRC 29 (2011)

weighing of the merits and drawbacks of the various alternatives need not be displayed in a monetary cost-benefit analysis and should not be when there are important qualitative considerations; LBP-11-7, 73 NRC 254 (2011)

when a contention alleges the need for further study of an alternative, from an environmental perspective, such reasonableness determinations are the merits, and should only be decided after the contention is admitted; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

when NRC Staff prepares a final environmental impact statement, then, until a record of decision is issued, no action concerning the proposal may be taken by the Commission that would have an adverse environmental impact or limit the choice of reasonable alternatives; LBP-14-9, 80 NRC 15 (2014)

when reviewing a discrete license application filed by a private applicant, a federal agency may appropriately accord substantial weight to the preferences of the applicant in siting and design of the project, taking into account the economic goals of the project’s sponsor; CLI-12-5, 75 NRC 301 (2012)

when taking the requisite hard look at environmental consequences of alternatives to the proposed licensing action, the environmental impact statement must discuss the no-action alternative; LBP-13-13, 78 NRC 246 (2013)

when the purpose is to accomplish one thing, it makes no sense to consider the alternative ways by which another thing might be achieved; CLI-12-5, 75 NRC 301 (2012)

without substantive, comparative environmental impact information regarding other possible courses of action, the ability of an environmental impact statement to inform agency deliberation and facilitate public involvement would be greatly degraded; LBP-12-17, 76 NRC 71 (2012)

See also Severe Accident Mitigation Alternatives; Severe Accident Mitigation Alternatives Analysis

CONSOLIDATION OF ISSUES

any consolidation of multiple parties’ presentations of evidence that would prejudice the rights of any party may not be ordered; LBP-11-4, 73 NRC 91 (2011)

CONSOLIDATION OF PROCEEDINGS

consolidating proceedings is the exception rather than the rule; CLI-14-5, 79 NRC 254 (2014)

litigant asking for consolidation of proceedings has the burden of showing that it will be conducive to the proper dispatch of NRC’s business and to the ends of justice and will be conducted in accordance with the other provisions of Subpart C; CLI-14-5, 79 NRC 254 (2014)

proceedings have been consolidated for the renewal of a materials license and to contest NRC Staff’s denial of that renewal in order to, among other things, litigate a common issue only once; CLI-14-5, 79 NRC 254 (2014)

related proceedings may be consolidated based on similarity of issues in the proceedings, commonality of litigants, and convenience and saving of time or expense; CLI-14-5, 79 NRC 254 (2014)

separate hearings have been shown to be appropriate for cases governed by different procedural rules; CLI-14-5, 79 NRC 254 (2014)

CONSTRUCTION

activities that are no longer considered “construction” are listed; LBP-11-26, 74 NRC 499 (2011)

amendment to the definition of construction generally prohibited, absent an NRC construction permit, any clearing of land, excavation, or other substantial action that would adversely affect the natural environment of a site and construction of nonnuclear facilities such as turbogenerators and turbine buildings for use in connection with the facility; LBP-14-9, 80 NRC 15 (2014)

any action concerning applicant’s proposal that would have an adverse environmental impact or limit the choice of reasonable alternatives may be grounds for denial of a license; LBP-14-9, 80 NRC 15 (2014)

availability of funding for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)

biological assessment of listed species shall be completed before any contract for construction is entered into and before construction is begun with respect to such action; LBP-12-12, 75 NRC 742 (2012)
building of transmission lines is excluded from the definition of construction; LBP-14-9, 80 NRC 15 (2014)
certain “construction” activities are allowed at a reactor site pursuant to a limited work authorization as long as a site redress plan is submitted; LBP-11-11, 73 NRC 455 (2011)
challenges in maintaining knowledge gained during the combined license review if construction is delayed are discussed; CLI-15-13, 81 NRC 555 (2015)
“commencement of construction” is defined to include clearing of land, excavation, or other substantial action that would adversely affect the environment of the site; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
commencement of construction is prohibited prior to a NEPA determination; LBP-15-16, 81 NRC 618 (2015)
“construction” and “commencement of construction” are defined; LBP-12-3, 75 NRC 164 (2012)
excluding the transmission corridor from the scope of the proposed action also removes it from the limitation on actions; LBP-14-9, 80 NRC 15 (2014)
for a proposed nuclear materials-related activity, including uranium enrichment, commencement of construction prior to a favorable Staff conclusion regarding the NEPA cost-benefit balance is grounds for denial of the authorization to conduct that activity; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
for power reactors, NRC Staff review should encompass emissions from the uranium fuel cycle as well as from construction and operation of the facility to be licensed; LBP-11-26, 74 NRC 499 (2011)
fugitive dust generated onsite at a facility, particularly during construction, can be a concern in the vicinity of a facility; LBP-12-3, 75 NRC 164 (2012)
grounds for license denial exist if, prior to issuance of a license to possess and use source and byproduct materials for uranium milling, there is commencement of construction by an applicant; LBP-12-3, 75 NRC 164 (2012)
important consequence of decision whether to include new construction within the scope of the proposed action is that, if it is included, it will be subject to the limitation on actions in 10 C.F.R. 51.101(a); LBP-14-9, 80 NRC 15 (2014)
in situ recovery license applicant is barred from installing a complete wellfield and associated monitor well networks until after a license is issued; LBP-15-3, 81 NRC 65 (2015)
in the 2007 limited work authorization rule, NRC decided that the building of transmission lines to serve a nuclear power plant would no longer be classified as a construction activity and would no longer require authorization from NRC; LBP-14-9, 80 NRC 15 (2014)
Limited Work Authorization Rule expressly excludes transmission lines from delineated construction activities that would require NRC approval before being undertaken; CLI-15-1, 81 NRC 1 (2015)
“major construction activity” is defined as a construction project, or other undertaking having similar physical impacts, that is a major federal action significantly affecting the quality of the human environment as referred to in NEPA; LBP-12-10, 75 NRC 633 (2012)
NEPA’s requirement to discuss alternatives to the proposed action does not extend to the construction of transmission line corridors, because it is not “construction” as defined in 10 C.F.R. 50.10; LBP-11-6, 73 NRC 149 (2011)
nothing in the definition of “construction” in 10 C.F.R. 40.4 precludes the installation of wells or the use of monitoring protocols as needed to provide those background data; LBP-15-3, 81 NRC 65 (2015)
NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse environmental impacts that might otherwise be caused by the construction or operation of a nuclear power plant; LBP-14-9, 80 NRC 15 (2014)
NRC’s broad definition of “construction” in the pre-2007 version of the regulation was originally added to Part 50 because of the interpretation that enactment of NEPA required NRC to expand its permitting/licensing authority; LBP-14-9, 80 NRC 15 (2014)
scope of activities requiring permission from NRC in the form of limited work authorization was narrowed by eliminating the concept of commencement of construction formerly described in section 50.10(c) and the authorization formerly described in section 50.10(e)(1); LBP-14-9, 80 NRC 15 (2014)
site exploration, including preconstruction monitoring to establish background information related to the environmental impacts of construction or operation or the protection of environmental values, is not included in the definition of construction; LBP-15-3, 81 NRC 65 (2015)
under 10 C.F.R. 40.41(g) and 70.32(k), a uranium enrichment facility cannot be operated until the agency verifies through inspection that the facility has been constructed in accordance with the license; LBP-11-11, 73 NRC 455 (2011)

where an acting agency is engaged in major construction activities, the acting agency is to evaluate, through preparation of a biological assessment, whether the action is likely to adversely affect species or habitat; LBP-12-10, 75 NRC 633 (2012)

CONSTRUCTION AUTHORIZATION APPLICATION

at the construction authorization request stage, the board dismissed a material control and accounting contention as moot, pending submittal of applicant’s Fundamental Nuclear Material Control Plan which would require inclusion of a detailed MC&A program; LBP-14-1, 79 NRC 39 (2014)

before a final decision approving or disapproving a construction authorization application can be reached, not only must NRC Staff complete its safety and environmental reviews but a formal hearing must be conducted, and the Commission’s own review of both contested and uncontested issues must take place; CLI-13-8, 78 NRC 219 (2013)

CONSTRUCTION COMPLETION

continued construction was barred pending the filing of an adequate environmental impact statement, notwithstanding the fact that the project was initially approved and construction commenced prior to the effective date of NEPA; LBP-12-1, 75 NRC 1 (2012)

CONSTRUCTION OF MEANING

although petitioner bears the burden of establishing standing, licensing boards should construe petitioner’s standing arguments in favor of petitioner; LBP-15-13, 81 NRC 456 (2015)

board may construe an admitted contention contesting the environmental report as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-14-5, 79 NRC 377 (2014)

boards are to construe intervention petitions in favor of petitioners in determining whether petitioner has demonstrated standing; CLI-14-2, 79 NRC 11 (2014); LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-14-4, 79 NRC 319 (2014)

boards may appropriately view petitioner’s supporting information in a light favorable to petitioner, but failure to provide such information regarding a proffered contention requires that the contention be rejected; LBP-12-27, 76 NRC 583 (2012)

boards may view petitioner’s supporting information in a light favorable to the petitioner, but petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; LBP-12-25, 76 NRC 540 (2012)

definition of “power of detection” does not explicitly require a demonstration of data accuracy; LBP-14-1, 79 NRC 39 (2014)

“demand” for a hearing is understood to confer a right to a hearing; LBP-14-4, 79 NRC 319 (2014)
in context of a license renewal application, reasonable assurance is based on sound technical judgment of the particulars of a case and on compliance with NRC regulations; LBP-14-1, 79 NRC 39 (2014)

interpretation may not conflict with the plain meaning of the wording used in a regulation, which in the end of course must prevail; LBP-14-7, 79 NRC 451 (2014)

licensing board, construing the petition in favor of petitioners, based its standing finding on potential harm from traffic-generated dust and light pollution; CLI-12-12, 75 NRC 603 (2012)

licensing boards must examine the record in the light most favorable to the opponent of summary disposition and draw all justifiable inferences in favor of that party; LBP-12-23, 76 NRC 445 (2012)

meaning of “shut down permanently” is discussed; CLI-15-20, 82 NRC 211 (2015)

meaning of “verify” in the context of item presence verification is discussed; CLI-15-9, 81 NRC 512 (2015)

“prima facie” is not defined in NRC regulations, but is interpreted to mean a substantial showing; LBP-14-16, 80 NRC 183 (2014)

principle of expressio unis est exclusio alterius is discussed; LBP-15-11, 81 NRC 401 (2015)

reasonable assurance is not quantified as equivalent to a 95% (or any other percent) confidence level, but is based on sound technical judgment of the particulars of a case and on compliance with NRC regulations; LBP-13-13, 78 NRC 246 (2013)
“reductions in residual radioactivity” refers only to dose reductions to the public that can be accomplished solely through the steps associated with unrestricted-release decommissioning, i.e., removal of contaminated material or decontamination; CLI-13-6, 78 NRC 155 (2013)
“shall” is a term of legal significance, in that it is mandatory or imperative, not merely precatory; CLI-11-12, 74 NRC 460 (2011)
See also Definitions; Statutory Construction
CONSTRUCTION OF TERMS
no bright line is established between control or domination, on the one hand, and their absence, on the other; LBP-14-3, 79 NRC 267 (2014)
scope of the term “impact” includes cumulative impacts; LBP-12-24, 76 NRC 503 (2012)
CONSTRUCTION PERMITS
applicant for a construction permit must include the principal design criteria for a proposed facility and the relationship of the design bases to the PDC as part of the preliminary safety analysis report; DD-15-11, 82 NRC 361 (2015)
aplications must include the principal design criteria for a proposed facility and describe the design bases and their relationship to the principal design criteria in the preliminary safety analysis report; DD-13-3, 78 NRC 571 (2013)
approval of permits to a nuclear power plant was conditioned on the rerouting of two offsite transmission lines to avoid environmental impacts on marshlands, tree species, and migratory waterfowl; LBP-14-9, 80 NRC 15 (2014)
district court did not abuse its discretion in balancing the harms in favor of an injunction related to an electric utility’s Clean Water Act permit for the construction of a new power plant; LBP-14-6, 79 NRC 404 (2014)
in determining whether a license amendment, construction permit, or early site permit will be issued to applicant, the Commission is guided by the considerations that govern issuance of initial licenses, construction permits, or early site permits to the extent applicable and appropriate; LBP-15-20, 81 NRC 829 (2015)
CONSTRUCTION WORKERS
annual 100-millirem limit for members of the public is defined to include radiation exposure to construction workers; CLI-12-2, 75 NRC 63 (2012)
CONSULTATION DUTY
admisibility of contention that environmental assessment failed to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 401 (2015)
agencies are encouraged to incorporate consultation procedures on endangered/threatened species and essential fish habitat into their NEPA review; LBP-12-10, 75 NRC 633 (2012)
agencies are required to confer with the Fish and Wildlife Service on any action that is likely to jeopardize the continued existence of any proposed species or result in the destruction or adverse modification of proposed critical habitat; LBP-13-9, 78 NRC 37 (2013)
agencies are to ensure that the federal government operates within a government-to-government relationship with federally recognized Native American tribes, reflecting respect for the rights of self-government due the sovereign tribal governments; LBP-15-16, 81 NRC 618 (2015)
agency official must consult with any Indian tribe or Native Hawaiian organization that attaches religious and cultural significance to historic properties that may be affected by an undertaking; LBP-13-6, 77 NRC 253 (2013)
all motions must include a certification that movant has made a sincere effort to contact other parties in the proceeding and resolve the issue raised in the motion, and that the movant’s efforts to resolve the issue have been unsuccessful; LBP-11-2, 73 NRC 28 (2011); LBP-11-15, 73 NRC 629 (2011)
areas of potential effect of a federal undertaking must be designated, and the lead federal agency must consult with the state historic preservation office regarding the presence and protection of historic and cultural resources in the designated area, as well as any federally recognized Native American groups with an ancestral interest in the property, to determine if resources important to the tribe are present; LBP-11-26, 74 NRC 499 (2011)
as soon as practicable after issuance of the initial scheduling order, parties shall meet to discuss the nature and basis of their claims and defenses and the possibilities for a prompt settlement or resolution of the proceeding or any portion thereof, to make or arrange for the disclosures required by section 2.704, and to develop a proposed discovery plan; LBP-14-11, 80 NRC 125 (2014)
because applicant did not comply with the consultation requirement of 10 C.F.R. 2.323(b), the board does not consider information supplied with applicant’s letter in connection with the board’s analysis of petitioner’s contention; LBP-11-2, 73 NRC 28 (2011)
burden of fulfilling the National Historic Preservation Act’s consultation requirements rests exclusively with the NRC, not with the applicant; LBP-12-23, 76 NRC 445 (2012)
claim that NRC Staff did not engage in the consultation process relevant to issues addressed by the Migratory Bird Treaty Act and that the impacts to wildlife with respect to this Act are inadequately analyzed is inadmissible; LBP-13-9, 78 NRC 37 (2013)
consultation must provide an Indian tribe with a reasonable opportunity to identify its concerns about historic properties, advise on their identification and evaluation, articulate its views on the undertaking’s effects on such properties, and participate in the resolution of adverse effects; LBP-15-16, 81 NRC 618 (2015)
consultation with appropriate agencies is needed at the time of license renewal to determine whether threatened or endangered species are present and whether they would be adversely affected; LBP-12-10, 75 NRC 633 (2012)
consultation with U.S. Fish & Wildlife Service is legally mandated for any agency action that may affect listed species or critical habitat; LBP-15-11, 81 NRC 401 (2015)
contention alleging failure to involve or consult all interested tribes as required by federal law is admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging that an Indian tribe had not been consulted concerning cultural resources, in violation of the National Historic Preservation Act, was premature because NRC Staff, not applicant, has the duty to consult with the tribe under the Act, and Staff had not completed its review process; LBP-12-12, 76 NRC 184 (2012)
contention claiming that NRC Staff’s consultation was inadequate does not ripen until issuance of NRC Staff’s draft environmental impact statement; CLI-14-2, 79 NRC 11 (2014); LBP-15-5, 81 NRC 249 (2015)
contention contesting how the consultation mandate is being carried out can be raised in the first instance only after the Staff’s draft environmental impact statement; LBP-13-6, 77 NRC 253 (2013)
contention questioning whether an appropriate consultation was conducted pursuant to the Endangered Species Act and implementing regulations is admissible; LBP-14-5, 79 NRC 377 (2014)
direct consultation obligation is imposed on NRC if NRC determines that approval of a requested license renewal may adversely affect any essential fish habitat; LBP-12-10, 75 NRC 633 (2012)
discovery may not begin until 10 days after petitioner and the Director have held the mandatory consultation; LBP-14-11, 80 NRC 125 (2014)
duties of NRC Staff and not an applicant, such as consultation with other federal agencies, could not be raised at the environmental report stage, and therefore such a contention will not be rejected as untimely when filed after the release of the draft environmental impact statement; LBP-12-12, 75 NRC 742 (2012)
even if the National Marine Fisheries Service disagrees with NRC’s no-effect determination, it may only request that NRC enter formal consultation, but NRC is not required to consent to the request; LBP-12-10, 75 NRC 633 (2012)
federal agencies shall, in consultation with and with the assistance of the Secretary of the Interior, ensure that any action authorized, funded, or carried out an agency is not likely to jeopardize the continued existence of any endangered or threatened species or result in destruction or adverse modification of their habitat; LBP-12-12, 75 NRC 742 (2012)
federal agency is required to consult if an action may affect listed species or designated critical habitat, even if the effects are expected to be beneficial; LBP-15-11, 81 NRC 401 (2015)
federal agency must consult with any Indian tribe that attaches religious and cultural significance to potentially impacted historic properties; LBP-15-16, 81 NRC 618 (2015)
federal agency need not initiate formal consultation if, as a result of the preparation of a biological
assessment under section 402.12 or as a result of informal consultation with the FWS under section
402.13, the federal agency determines, with the written concurrence of the U.S. Fish and Wildlife
Service Director, that the proposed action is not likely to adversely affect any listed species or critical
habitat; LBP-15-11, 81 NRC 401 (2015)
federal law not only recognizes that Native American tribes have a protected interest in cultural resources
found on their aboriginal land, but has also imposed on federal agencies a consultation requirement
under the National Historic Preservation Act to ensure the protection of tribal interests in cultural
resources; CLI-14-2, 79 NRC 11 (2014)
First Nations in Canada must receive invitations to participate in the environmental impact statement
scoping process when there are transboundary environmental impacts from a project; LBP-12-12, 75
NRC 742 (2012)
formal consultation follows only if a biological assessment shows that the action may affect listed species
or critical habitat; LBP-12-10, 75 NRC 633 (2012)
formal consultation includes preparation of a biological opinion by the Service, detailing the likely effects
of the action on listed species or habitat as well as mitigation alternatives; LBP-12-10, 75 NRC 633
(2012)
Fukushima-related contention is denied for failure of its proponent to contact the other parties to resolve
the issue presented by the contention prior to its submission; LBP-11-37, 74 NRC 774 (2011)
if an agency determines that a particular action will have no effect on an endangered or threatened
species, the U.S. Fish & Wildlife Service consultation requirements are not triggered; LBP-15-11, 81
NRC 401 (2015)
if NRC engages in an informal consultation with the Fish and Wildlife Service and it is determined that
the project will not adversely affect listed species or critical habitat, it need not engage in formal
consultation; LBP-13-9, 78 NRC 37 (2013)
if the acting agency concludes in the biological assessment that the action is not likely to affect listed
habitats or species, and the Service concurs, the acting agency need not enter formal consultation;
LBP-12-10, 75 NRC 633 (2012)
if the acting agency makes a “likely to affect” determination in the biological assessment, it is required to
enter into formal consultation with the appropriate Service; LBP-12-10, 75 NRC 633 (2012)
if the Service does not concur with the agency’s “not likely to affect” determination, it may request that
the acting agency enter into formal consultation; LBP-12-10, 75 NRC 633 (2012)
in consultation with identified parties, agency must develop alternatives and proposed measures that might
avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe
them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC
618 (2015)
in determining that a federal action is not likely to jeopardize species or modify habitat, the acting
agency is to proceed in consultation with and with the assistance of the Secretary of Interior or
Commerce; LBP-12-10, 75 NRC 633 (2012)
Indian tribe’s contention that NRC Staff had not fulfilled its National Historic Preservation Act
consultation duty regarding cultural resources and tribal artifacts was premature because Staff had not
completed its NEPA review; LBP-12-23, 76 NRC 445 (2012)
"informal consultation" is an optional process that includes all discussions, correspondence, etc., between
the U.S. Fish and Wildlife Service and the federal agency designed to assist the federal agency in
determining whether formal consultation or a conference is required with the Service under section
"informal consultation" is any communication between the acting agency and one of the Services
designed to assist the acting agency in determining whether formal consultation is required; LBP-12-10,
75 NRC 633 (2012)
issue of the alleged failure to consult with the tribe on historic and cultural resources is material and
within the scope of a materials license proceeding; LBP-13-9, 78 NRC 37 (2013); LBP-15-16, 81 NRC
618 (2015)
it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site
SUBJECT INDEX

motions to admit new contentions must be rejected if they do not include a certification by movant’s attorney or representative that movant has made a sincere effort to contact other parties and resolve the issues raised in the motion, and that movant’s efforts have been unsuccessful; LBP-11-34, 74 NRC 685 (2011); LBP-12-27, 76 NRC 583 (2012)

National Marine Fisheries Service has the authority to consult with other agencies if, for example, only one of the agencies has the authority to implement measures necessary to minimize adverse effects on essential fish habitat and that agency does not act as the lead agency; LBP-12-10, 75 NRC 633 (2012)

neither formal nor informal consultation is required by the Endangered Species Act if an agency determines that its proposed activity will not affect any listed species or critical habitat; LBP-12-10, 75 NRC 633 (2012)

NRC Staff is required to consult with interested parties, including Indian tribes, to identify historic properties, evaluate the potential effects of the project on those properties, and consider mitigation measures; CLI-14-2, 79 NRC 11 (2014)

NRC Staff, not the applicant, has the legal duty to engage in consultation under the Endangered Species Act; LBP-12-12, 75 NRC 742 (2012)

only mandatory trigger for initiating formal consultation is if the acting agency itself determines that its action may affect listed species or critical habitat; LBP-12-10, 75 NRC 633 (2012)

only species listed as threatened or endangered under the Endangered Species Act are covered by the Act’s formal consultation requirements; LBP-15-11, 81 NRC 401 (2015)

portions of a contentions relevant to the completion of the Endangered Species Act § 7 consultation process and the adequacy of the NRC Staff’s impact analyses relevant to the three named species meet admissibility standards; LBP-13-9, 78 NRC 37 (2013)

prior to preparing an environmental impact statement, the responsible federal official shall consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-12-10, 75 NRC 633 (2012)

tribes have a procedural right to be consulted regarding historic preservation matters; LBP-13-6, 77 NRC 253 (2013)

under NEPA, defining the scope of effects of a project requires engagement with governments of affected tribes through an early and open process aimed at identifying concerns, potential impacts, relevant effects of past actions, and possible alternative actions; LBP-15-16, 81 NRC 618 (2015)

when engaging in informal consultation, an agency must provide its determination as to whether the proposed action will affect threatened and endangered species to U.S. Fish & Wildlife Service and request FWS concurrence; LBP-15-11, 81 NRC 401 (2015)

whether NRC Staff undertakes formal consultation with the Services in the event that they disagree with a finding by the NRC of “no effect” or “not likely adversely to affect” depends upon the NRC’s own regulations and its interpretation of its duty under the ESA to ensure that any action is not likely to jeopardize listed species or habitat; LBP-12-10, 75 NRC 633 (2012)

CONTAINMENT

acceptance criteria for Type A leak rate limits embodied in the technical specification are established to ensure that, in the event of a design-basis accident, the dose received by a member of the general public will not exceed the dose limits; LBP-15-26, 82 NRC 163 (2015)

contention claiming that modifications to repair or replace inadequate structural beams and columns is more appropriately presented as a request for enforcement action; CLI-15-5, 81 NRC 329 (2015)

contention that ice condenser containments lack acceptable aging management plans to adequately maintain critical components of the containment for 20 years of additional operation is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that license renewal application lacks supporting documentation providing analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 1 (2013)

leakage rate acceptance limit is based on minimizing leakage that would occur at the calculated peak containment internal pressure related to the design-basis loss-of-coolant accident; LBP-15-26, 82 NRC 163 (2015)

licensees must conduct periodic containment leakage tests to ensure that leakage does not exceed the allowable rates specified in the technical specifications and the containment will perform its design
function following an accident up to and including the plant design-basis accident; LBP-15-26, 82 NRC 163 (2015)

primary reactor containments are subject to the requirements 10 C.F.R. Part 50, Appendix J; LBP-15-26, 82 NRC 163 (2015)

request for enforcement action based on support beam deficiencies, flood protection inadequacy, flood risks from upstream dams, and primary reactor containment electrical penetration seals containing Teflon is denied because petitioner’s requests have been addressed through other actions; DD-15-4, 81 NRC 869 (2015)

request that licensee replace passive autocatalytic recombiners in the containment with electrically powered thermal hydrogen recombiners is denied; DD-13-1, 77 NRC 347 (2013)

request that NRC immediately revoke prior approval of the hardened vent system or direct torus vent system at each GE BWR Mark I unit has been addressed by an order modifying licenses with regard to reliable hardened containment vents capable of operation under severe accident conditions; DD-15-1, 81 NRC 193 (2015)

request that NRC order licensees to include a reliable hardened vent in boiling-water reactor Mark I and Mark II containments is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order the immediate suspension of the operating licenses of all General Electric boiling-water reactors that use the Mark I primary containment system citing the Fukushima Dai-ichi accident in Japan as its rationale basis is resolved; DD-15-1, 81 NRC 193 (2015)

required Type A containment leakage tests measure total leakage rate from all potential leakage paths, including containment liner welds, valves, fittings, and components that penetrate the containment; LBP-15-26, 82 NRC 163 (2015)

simply referencing a study without explaining the information’s significance relative to the potential containment leakage monitored by the testing at issue does not establish its materiality; LBP-15-26, 82 NRC 163 (2015)

CONTAINMENT DESIGN

assertions of a need to implement filtered vented containment are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)

containments must be designed to remain essentially leaktight during postulated accidents; LBP-13-8, 78 NRC 1 (2013)

contention that environmental report fails to accurately and thoroughly conduct severe accident mitigation alternatives analysis to design vulnerability of GE Mark I boiling water reactor pressure suppression containment system and environmental consequences of a to-be-anticipated severe accident post-Fukushima Daiichi fails to present a genuine material dispute; LBP-15-5, 81 NRC 249 (2015)

existing containment vent systems at BWRs with Mark I containments provide a capability to vent the containment under design-basis conditions; DD-15-1, 81 NRC 193 (2015)

CONTAINMENT ISOLATION VALVES

Type C pneumatic tests measure leakage rates; LBP-15-26, 82 NRC 163 (2015)

CONTAINMENT SYSTEMS

containment system is defined as the principal barrier, after the reactor coolant pressure boundary, to prevent release of quantities of radioactive material that would have a significant radiological effect on public health; LBP-15-26, 82 NRC 163 (2015)

each nuclear power plant must be able to cool the reactor core and maintain containment integrity in the event of a station blackout of a specified duration; LBP-12-18, 76 NRC 127 (2012)

each nuclear power plant must be able to cool the reactor core and maintain containment integrity in the event of a station blackout of a specified duration; LBP-12-18, 76 NRC 127 (2012)

licensees must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent-fuel pool cooling capabilities to address loss of large areas from fires or explosions that arise from a beyond-design-basis event; CLI-12-2, 75 NRC 63 (2012)

licensees of boiling water reactors with Mark I and II containments are required to design and install a venting system that provides venting capability from the wetwell during severe accident conditions; DD-15-1, 81 NRC 193 (2015)

NRC has addressed pressure suppression containment system vulnerability to early failure under severe accident conditions including overpressurization in NUREG-0474; DD-15-1, 81 NRC 193 (2015)

774
periodic visual inspections of the accessible interior and exterior surfaces of the containment system are required to identify structural deterioration that may affect containment integrity; LBP-15-26, 82 NRC 163 (2015)

request that the applicability for technical specification be revised to include secondary containment, secondary containment isolation dampers, standby gas treatment system, control room emergency ventilation, and control room air conditioning system, whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

CONTENTIONS
admissible contention is required for grant of a hearing request; LBP-15-17, 81 NRC 753 (2015)
admitted contentions of omission may be rendered moot by subsequent license-related documents filed by the NRC Staff that address the alleged omission; LBP-13-9, 78 NRC 37 (2013)
although all environmental contentions may, in a general sense, ultimately challenge NRC’s compliance with NEPA, NRC regulations expressly permit the lodging of contentions against an applicant’s environmental report well before release of NRC’s NEPA documents; LBP-11-38, 74 NRC 817 (2011)
although applicant carries the burden of proof on safety issues, intervenors have the initial burden of going forward with each contention and must provide sufficient evidence to support the claims made; LBP-14-1, 79 NRC 39 (2014)
although applicant has the ultimate burden of proof on any issues upon which a hearing is held, hearings are held on only those issues that an intervenor brings to the fore; LBP-11-4, 73 NRC 91 (2011)
although environmental contentions are, in essence, challenges to NRC Staff’s compliance with NEPA, those contentions must be raised, if possible, in response to applicant’s environmental report; CLI-15-1, 81 NRC 1 (2015); LBP-15-19, 81 NRC 815 (2015)
although environmental contentions ultimately challenge NRC’s compliance with NEPA, applicant is free to support positions set forth in the environmental impact statement that are under challenge; LBP-12-5, 75 NRC 227 (2012); LBP-14-7, 79 NRC 451 (2014)
although the Task Force Report on the Fukushima accident did not justify initiating a generic NEPA review, the Commission acknowledged that new and significant information may come to light that must be considered in individual reactor licensing proceedings; LBP-11-32, 74 NRC 654 (2011)
any person or organization seeking to intervene as a party in an NRC adjudicatory proceeding addressing a proposed licensing action must establish standing and proffer at least one admissible contention; LBP-11-13, 73 NRC 534 (2011)
applicant may bear the burden of proof on contentions asserting deficiencies in its environmental report and where the applicant becomes a proponent of a particular challenged position set forth in the environmental impact statement; LBP-11-38, 74 NRC 817 (2011)
applicants face a continuing possibility of contentions in adjudicatory proceedings based upon omissions or deficiencies in their environmental report because NRC rules require the filing of contentions as early as possible; CLI-12-13, 75 NRC 681 (2012)
assertion that final environmental impact statement inadequately addresses, and inappropriately characterizes as small, the plant’s dewatering-associated impacts to wetlands, floodplains, special aquatic sites, and other waters is litigated; LBP-13-4, 77 NRC 107 (2013)
at the outset of proceedings, NEPA contentions are to be based on the applicant’s environmental report; LBP-11-32, 74 NRC 654 (2011)

based on its language, a contention can be characterized as a contention of omission, a contention of adequacy, or both; LBP-13-9, 78 NRC 37 (2013)
board rules in favor of applicant on contention challenging adequacy of quality assurance program developed and implemented by applicant; LBP-14-7, 79 NRC 451 (2014)
board rules in favor of NRC Staff on contention challenging adequacy of assessment of impacts on the eastern fox snake contained within the final environmental impact statement; LBP-14-7, 79 NRC 451 (2014)
board’s conclusion that a contention is one of omission is driven by its examination of the contention, including its underlying arguments; LBP-11-6, 73 NRC 149 (2011)
boards have the authority to reformulate contentions to consolidate issues for a more efficient proceeding; LBP-11-13, 73 NRC 534 (2011); LBP-15-17, 81 NRC 753 (2015)
boards may construe an admitted contention contesting the environmental report as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-12-23, 76 NRC 445 (2012)

by participating in NRC proceedings, intervenors accept the obligation of uncovering relevant, publicly available information; CLI-12-21, 76 NRC 491 (2012)

commitment to implement an aging management plan that NRC finds is consistent with the GALL Report constitutes one acceptable method for compliance, but does not insulate such an approach from challenge by an intervenor, and is not binding on a licensing board in an adjudication; LBP-11-20, 74 NRC 65 (2011)

contention alleging that statutory and regulatory prohibitions on foreign ownership, control, or domination forbid the licensing of proposed units is decided in applicant’s favor; LBP-14-3, 79 NRC 267 (2014)

contention based solely upon omissions from the environmental report is rendered moot when the missing information is supplied; LBP-11-14, 73 NRC 591 (2011)

contention challenging applicant’s ability to rapidly assess the validity of alleged thefts of strategic special nuclear material is decided; LBP-14-1, 79 NRC 39 (2014)

contention of omission alleges that an application suffers from an improper omission, whereas a contention of adequacy raises a specific substantive challenge to how particular information or issues have been discussed in the application; LBP-11-6, 73 NRC 149 (2011); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

contention of omission that has been admitted may be rendered moot by subsequent license-related documents filed by NRC Staff that address the alleged omission; LBP-14-5, 79 NRC 377 (2014)

contention that final supplemental environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is decided; LBP-15-3, 81 NRC 65 (2015)

contention that final supplemental environmental impact statement lacks an adequate baseline groundwater characterization or fails to demonstrate that groundwater samples were collected in a scientifically defensible manner is decided; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

contentions challenging a severe accident mitigation alternatives analysis must identify a deficiency that plausibly could alter the overall result of the analysis in a material way; LBP-13-13, 78 NRC 246 (2013)

contentions of adequacy may migrate into contentions of omission; LBP-13-10, 78 NRC 117 (2013)

contentions of omission and contentions of inadequacy are defined; LBP-15-5, 81 NRC 249 (2015)

contentions of omission are appropriate when an issue that by law should be discussed is not, whereas contentions of adequacy are those that assert the existing discussion of an issue is incomplete; CLI-15-25, 82 NRC 389 (2015)

designation of a contention as a contention of omission is a means to limit its scope; CLI-11-11, 74 NRC 427 (2011)

environmental contentions ultimately challenge NRC’s compliance with NEPA, but applicant is free to support positions set forth in the environmental impact statement that are under challenge; LBP-12-17, 76 NRC 71 (2012)

environmental report’s adequacy is examined under the auspices of NEPA because the ER is the foundation upon which NRC’s environmental impact statement is prepared and contentions that seek compliance with NEPA must be based on that environmental report; LBP-11-13, 73 NRC 534 (2011)

exceptionally grave issue is one that raises a sufficiently grave threat to public safety; LBP-12-1, 75 NRC 1 (2012)

for an environmental issue to be “significant” for the purposes of reopening a record, new information must paint a seriously different picture of the environmental landscape; LBP-12-1, 75 NRC 1 (2012)

general discussion about contentions of omission and contentions of adequacy is provided; LBP-13-10, 78 NRC 117 (2013)

if a motion for summary disposition is granted, then the party that filed the original contention of omission must file a new or amended contention if it wishes to challenge the adequacy or sufficiency of NRC Staff’s treatment of the relevant issue; LBP-14-5, 79 NRC 377 (2014)

if all matters at issue in a contention of omission are addressed by NRC Staff in its draft environmental impact statement through the actual provision of information on all such matters, then no legal interest in that contention remains, and the contention is moot; LBP-11-4, 73 NRC 91 (2011)
if applicants believe that their actions render a contention moot, then they should promptly file a motion for summary disposition; LBP-12-19, 76 NRC 184 (2012)

if the environmental impact statement addresses the concerns alleged in the contention, the original contention becomes moot and the intervenor must raise a new contention if it claims the EIS discussion is still inaccurate or incomplete; LBP-14-6, 79 NRC 404 (2014)

in certain instances, contentions challenging an environmental report are deemed to migrate from challenging applicant’s environmental report to challenging NRC Staff’s environmental assessment; LBP-14-6, 79 NRC 404 (2014)

in ruling on whether a contention is moot, boards look to whether a justiciable controversy still exists and whether an issue is still live, such that a party still has a legal interest in the issue; LBP-11-4, 73 NRC 91 (2011)

in the future the Commission might provide relevant guidance regarding the proper time frame for adjudicating Fukushima-related contentions; LBP-11-39, 74 NRC 862 (2011)

intervenor has an iron-clad obligation to examine the publicly available documentary material with sufficient care to enable it to uncover any information that could serve as a foundation for a specific contention; LBP-12-13, 75 NRC 784 (2012)

intervenors are expected to file contentions on the basis of applicant’s environmental report and not delay their contentions until after NRC Staff issues its environmental analysis; CLI-12-13, 75 NRC 681 (2012); LBP-12-12, 75 NRC 742 (2012)

intervenors are not only permitted but are required to file their contentions in response to the license application, rather than await a fully formalized administrative decision; LBP-12-19, 76 NRC 184 (2012)

intervenors fail to establish the validity of their various challenges to the adequacy of the FSEIS description of the baseline water quality at the in situ recovery site; LBP-15-3, 81 NRC 65 (2015)

intervenors opposed renewal of the nuclear power plant license, and proposed new contentions for increased ultrasonic testing of sand bed epoxy coating integrity; LBP-15-1, 81 NRC 15 (2015)

intervention petitioner must proffer at least one admissible contention; LBP-13-8, 78 NRC 1 (2013)

issues framed in contentions challenging an application generally encompass two categories alleging an informational or analytical omission from the application and/or alleging that information/analysis in the application is inadequate (as opposed to missing); LBP-13-10, 78 NRC 117 (2013)

it is possible for a contention to contain an omission component and an inadequacy component; LBP-11-6, 73 NRC 149 (2011)

licensing proceedings are not the appropriate venue for generic issues, especially those that are about to become the subject of rulemaking; LBP-14-1, 79 NRC 39 (2014)

migration tenet applies where information in the draft environmental impact statement is sufficiently similar to the information in the environmental report; LBP-14-6, 79 NRC 404 (2014)

Model Milestones permit intervenors’ proposed late-filed contentions on SER and necessary NEPA documents to be filed within 30 days of the issuance of those documents; LBP-11-22, 74 NRC 259 (2011)

neither new procedures nor a separate timetable for raising new issues related to the Fukushima events is warranted; CLI-12-15, 75 NRC 704 (2012)

NEPA-related contentions initially are based on applicant’s environmental report which will inform the Staff’s NEPA review; CLI-13-7, 78 NRC 199 (2013); LBP-13-10, 78 NRC 117 (2013)

nothing in 10 C.F.R. Part 40, Appendix A, Criterion 5B precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to properly characterize the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 65 (2015)

NRC Staff’s issuance of an environmental assessment under NEPA does not necessarily moot contentions challenging applicant’s environmental report; LBP-14-6, 79 NRC 404 (2014)

on issues arising under NEPA, intervenor must file contentions based on the applicant’s environmental report, but may amend those contentions or file new contentions; LBP-11-7, 73 NRC 254 (2011)

once a petitioner successfully demonstrates standing, it will then be free to assert any contention, which, if proved, will afford it the relief it seeks; LBP-11-29, 74 NRC 612 (2011)

party who neglects to fully participate in a proceeding is subject to sanctions including dismissal of its contention; CLI-14-2, 79 NRC 11 (2014)
petitioner must base its environmental contentions on information available at the time its intervention petition is to be filed, including applicant’s environmental report; CLI-14-2, 79 NRC 11 (2014)

petitioner provides no support for the proposition that applicant must demonstrate that each individual resolution method can be completed, by itself, within the approved time period; LBP-14-1, 79 NRC 39 (2014)

petitioner seeking a hearing must demonstrate standing and proffer at least one admissible contention; LBP-11-29, 74 NRC 612 (2011)

petitioner will have an opportunity to submit contentions based on the final supplemental environmental impact statement if appropriate; LBP-13-9, 78 NRC 37 (2013)

petitioners must raise and reasonably specify at the outset their objections to a license application; CLI-12-1, 75 NRC 39 (2012)

petitioners’ challenge to the adequacy of applicant’s existing analysis of solar and wind as alternative energy sources is not a contention of omission; CLI-12-8, 75 NRC 393 (2012)

proper mechanism for raising Fukushima-related, application-specific concerns in ongoing combined license cases is to file a new contention, consistent with the applicable procedural rules; CLI-11-5, 74 NRC 141 (2011)

resolution of a mooted contention requires no more than a finding by the presiding officer that the matter has become moot; LBP-12-5, 75 NRC 227 (2012)

to be successful, intervenor must point to a deficiency that renders the severe accident mitigation alternatives analysis unreasonable under NEPA; LBP-13-13, 78 NRC 246 (2013)

to be successful, intervenors must demonstrate with adequate support that NRC Staff failed to take a hard look at important environmental questions or failed to provide a reasonable analysis; LBP-13-13, 78 NRC 246 (2013)

to the extent NRC takes action with respect to waste confidence on a case-by-case basis, litigants can challenge such site-specific agency actions in the adjudicatory process; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

two primary types of contentions are contentions of omission and contentions of adequacy; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

when the adequacy of an EIS mitigation strategy is challenged, the determining issue is whether the agency took a sufficiently hard look at environmental consequences, and ensured that its decision was supported by a completely informed record; LBP-15-16, 81 NRC 618 (2015)

where a contention alleges the omission of particular information or an issue from an application, and the information is later supplied by the applicant, the contention is moot; LBP-11-16, 73 NRC 645 (2011)

whether applicant’s item monitoring program has the capability to verify, on a statistical sampling basis, the presence and integrity of strategic special nuclear material items is decided; LBP-14-1, 79 NRC 39 (2014)

See also Abeyance of Contention; Amendment of Contentions

CONTENTIONS, ADMISSIBILITY

absence of a prohibition is not sufficient justification to admit a contention; CLI-15-23, 82 NRC 321 (2015)

absent a petition for a waiver, no rule or regulation of the Commission is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; CLI-14-6, 79 NRC 445 (2014); LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-11-35, 74 NRC 701 (2011); LBP-13-12, 78 NRC 239 (2013)

absent a waiver, contentions that raise a direct or indirect challenge to a Commission regulation must be rejected; LBP-15-4, 81 NRC 156 (2015)

absent a waiver, no rule or regulation of the Commission, or any provision thereof, is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding subject to 10 C.F.R. Part 2; CLI-15-19, 82 NRC 151 (2015); LBP-15-24, 82 NRC 68 (2015); LBP-15-26, 82 NRC 163 (2015)

absent any duty under Part 51 requiring applicant to supplement its environmental report to address subsequent events or information, subsequent events and information do not create a genuine dispute as to the compliance status of the ER; LBP-12-13, 75 NRC 784 (2012)

778
absent compelling reasons, the Commission adheres to the case or controversy doctrine in its adjudicatory proceedings; LBP-13-7, 77 NRC 307 (2013)

absent documentary support, NRC has declined to assume that licensees will contravene its regulations; CLI-11-9, 74 NRC 233 (2011)

absent error of law or abuse of discretion, the Commission defers to licensing board rulings on contention admissibility; CLI-11-9, 74 NRC 233 (2011); CLI-12-5, 75 NRC 301 (2012); CLI-12-19, 76 NRC 377 (2012)

absent good cause, there must be a compelling showing on the remaining late-filing factors; CLI-12-10, 75 NRC 479 (2012)

absent voluntary action by applicant to amend its environmental report, intervenor wishing to raise new or revised post-ER environmental concerns must await issuance of Staff’s draft environmental impact statement; LBP-11-37, 74 NRC 774 (2011)

admissibility of contention that a license amendment will be required for licensee to update and maintain accurate design basis documents is decided; CLI-15-5, 81 NRC 329 (2015)

admissibility of contention that applicant submit a decommissioning plan and updated financial plans related to decommissioning is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental assessment fails to adequately describe and analyze aquifer restoration goals in light of new standards for determining alternative control limits is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental assessment fails to adequately describe and analyze impacts of maintaining post-operational wellfields as long-term hazardous waste facilities is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental assessment fails to adequately describe or analyze proposed mitigation measures is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental assessment fails to analyze impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that environmental assessment fails to conduct the required hard look at impacts of the proposed mine and failed to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that environmental assessment fails to describe and analyze the environmental impacts of new porosity and permeability in the aquifer caused by mining activity is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental documents and associated monitoring values and restoration goals rely on baseline data calculations that are inadequate and unacceptable is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental documents lack an adequate description of financial assurances to cover costs of restoration and long-term monitoring of up to 30 years is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental report lacks site-specific safety and environmental findings regarding spent fuel storage and disposal is decided; LBP-15-5, 81 NRC 249 (2015)

admissibility of contention that final environmental assessment fails to adequately analyze cumulative impacts is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that final environmental assessment fails to adequately evaluate adverse impacts on public health and safety is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with restoration standards and difficulty and cost in achieving them and the use of the alternative standards permitted under the proposed rules is decided; LBP-15-15, 81 NRC 598 (2015)
subject index

admissibility of contention that licensee is undertaking modifications for protection against severe flooding in the event of upstream dam failures that will require a license amendment is decided; CLI-15-5, 81 NRC 329 (2015)
admissibility of contention that NRC Staff must conduct a new baseline groundwater characterization study of the license renewal area rather than relying on the baseline study conducted during the original license application is decided; LBP-15-11, 81 NRC 401 (2015)
admissibility of contention that severe accident mitigation alternatives analysis fails to evaluate the impact that a severe accident at one unit would have on the operation of a proposed nearby unit is decided; LBP-15-5, 81 NRC 249 (2015)
admissibility requirement generally is fulfilled when the sponsor of an otherwise acceptable contention provides a brief recitation of the factors underlying the contention or references to documents and texts that provide such reasons; LBP-15-1, 81 NRC 15 (2015)

admissible contention challenging consideration of alternatives must show that a particular alternative was not discussed in the draft environmental impact statement and provide some support that the alternative is reasonable; LBP-13-9, 78 NRC 37 (2013)
admissible contentions must point to a deficiency in the application, and not merely suggest other ways an analysis could have been done or other details that could have been included; CLI-15-18, 82 NRC 135 (2015)
admission of a contention that might require further explanation of severe accident mitigation alternatives cost-benefit analysis did not have a pervasive and unusual effect on the litigation; CLI-11-6, 74 NRC 203 (2011)
admission of a management integrity contention relied on references to a serious incident involving shutdown of the reactor, management responsible for the incident remaining in place, and a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert witness in support of the contention; CLI-11-11, 74 NRC 427 (2011)
admission of a “placeholder” contention is not necessary to ensure that petitioner’s challenges to the Continued Storage Rule and GEIS receive a full and fair airing; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
admission of contentions that NRC may ultimately deal with generically through notice-and-comment rulemaking is precluded; LBP-11-32, 74 NRC 654 (2011)
admitted contentions challenging applicant’s environmental report may, in appropriate circumstances, function as challenges to similar portions of the Staff’s environmental impact statement; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-15-11, 81 NRC 401 (2015)
adoption of building code rules by a state presents new and materially different information not previously available, upon which intervenors may rest their proposed contention; LBP-11-7, 73 NRC 254 (2011)
after reviewing the background regarding the continued storage rule, the Commission directed licensing boards to reject waste confidence contentions pending before them; LBP-14-12, 80 NRC 138 (2014) after the section 2.309(b) deadline has passed for submitting an initial hearing petition with one or more accompanying contentions, petitioner/intervenor who wishes to amend an already submitted or admitted contention or gain admission of a new contention must file a motion for leave to file such a new or amended content; LBP-13-10, 78 NRC 117 (2013)
all contentions must proffer an issue of law or fact that is material to the outcome of a licensing proceeding, meaning that the subject matter of the contention must impact the grant or denial of a pending license application; LBP-12-27, 76 NRC 583 (2012)
all contentions, regardless of when they are filed, must satisfy the six criteria specified in 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-11-20, 74 NRC 65 (2011); LBP-11-32, 74 NRC 654 (2011); LBP-11-39, 74 NRC 862 (2011); LBP-12-1, 75 NRC 1 (2012)
all proffered contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-12-3, 75 NRC 164 (2012)
all properly formulated contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-12-3, 75 NRC 164 (2012) allegation of omission, not of inadequacy, in an environmental report’s analysis of socioeconomic impacts raises an issue that is not material to any finding NRC must make in an early site permit proceeding; LBP-11-16, 73 NRC 645 (2011) allegation that applicant’s site assessment has inadequately characterized the rate of movement of growth faults at the site, as it relates to its analysis of surface deformation, is admissible; LBP-11-16, 73 NRC 645 (2011) allegation that multiple, unrelated sources of electricity ought to be evaluated collectively is inadmissible; LBP-11-2, 73 NRC 28 (2011) allegation that NRC or licensee has abused or exceeded its lawful discretion with respect to nuclear safety programs is not admissible because it fails to provide sufficient information to show that a genuine dispute exists on a material issue of law or fact; LBP-14-4, 79 NRC 319 (2014) allegation that other costs were ignored is not admissible because petitioners presented no facts or expert opinion that show it to be plausible that including them might affect the outcome of the severe accident mitigation alternatives analysis; LBP-11-2, 73 NRC 28 (2011) allegation that the Continued Storage Rule and GEIS fail to address the trust responsibility the NRC owes an Indian tribe represents a collateral attack on the Continued Storage Rule and GEIS; LBP-14-16, 80 NRC 183 (2014) allegations of inadequacies and omissions in NRC Staff’s environmental assessment satisfy the requirement to provide a specific statement of the issue of law or fact to be raised; LBP-15-13, 81 NRC 456 (2015) allegations of noncompliance with already-issued, existing, and open Commission orders are part of the current licensing basis and therefore cannot be challenged in a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015) alleged facts and expert opinions in intervention petition and associated exhibits are sufficient to satisfy regulatory requirements; LBP-15-13, 81 NRC 456 (2015) alleged violations of state law are outside the scope of, and not material to, an adjudicatory proceeding; LBP-15-24, 82 NRC 68 (2015) allowing an environmental challenge to continue after the environmental impact statement has issued does not constitute a merits ruling that the Staff’s review document is inadequate; CLI-11-6, 74 NRC 203 (2011) almost every item originally contained in technical specifications has some conceivable connection to safety, but this general premise is insufficient, by itself, as a ground for intervention; LBP-12-25, 76 NRC 540 (2012) alternatives for reducing adverse environmental impacts, including impacts of severe accidents, are among the limited issues within the scope of a license renewal proceeding; LBP-11-13, 73 NRC 534 (2011) although 10 C.F.R. 2.337(f), by its terms, applies to evidence at hearings, the bounds that this rule places on official notice is also appropriate for the contention admissibility stage of a proceeding; LBP-11-7, 73 NRC 254 (2011) although a board may view petitioner’s supporting information in a light favorable to the petitioner, petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; LBP-11-16, 73 NRC 645 (2011); LBP-11-29, 74 NRC 612 (2011) although a contention contesting applicant’s environmental report generally may be viewed as a challenge to the NRC Staff’s subsequent draft environmental impact statement, new claims must be raised in a new or amended contention; LBP-13-10, 78 NRC 117 (2013); LBP-14-5, 79 NRC 377 (2014) although a contention might have been more detailed or otherwise better supported, petitioners have done enough to raise a question about the adequacy of the probability figures used in applicant’s SAMA analysis, namely, whether they should have incorporated or otherwise acknowledged information from a Sandia study; LBP-12-18, 76 NRC 127 (2012) although a licensing board is not required to recast contentions to make them acceptable, it is also not precluded from doing so; LBP-11-13, 73 NRC 534 (2011) although an admissible contention requires no more than some minimal factual and legal foundation in support, the Commission expects that in almost all instances petitioner must go beyond merely quoting
SUBJECT INDEX

a request for additional information to justify admission; LBP-15-1, 81 NRC 15 (2015)

although boards do not decide the merits or resolve conflicting evidence at the contention admission stage, materials cited as the basis for a contention are subject to scrutiny by the board to determine whether they actually support the facts alleged; LBP-12-12, 75 NRC 742 (2012); LBP-15-20, 81 NRC 829 (2015)

although boards may appropriately view petitioner’s support for its contention in a light favorable to petitioner, they cannot do so by ignoring the contention admissibility requirements; CLI-15-18, 82 NRC 135 (2015)

although disagreement over proper interpretation of NRC regulations may give rise to an admissible contention, petitioner’s proposed interpretation is in direct conflict with the plain meaning of the regulation and its Statement of Considerations; LBP-12-8, 75 NRC 539 (2012)

although intervenors disagree with applicant’s opportunistic inspection strategy for managing rebar corrosion, they merely assert, and do not plausibly explain, how applicant’s approach will lead to a material safety impact; LBP-15-1, 81 NRC 15 (2015)

although intervenors may use discovery to develop a case once contentions are admitted, contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact(s) demonstrating a genuine material dispute with the applicant; CLI-12-5, 75 NRC 301 (2012)

although it might be fatal for standing purposes if an Indian tribe were seeking to have intervenors represent their interests in the proceeding, intervenors’ lack of authority to represent them is not a bar to intervenors raising the tribe’s contention; LBP-12-12, 75 NRC 742 (2012)

although NRC regulations do not provide a precise definition of “timely,” licensing boards have often found a new contention to be timely if it has been filed within 30 days of the availability of information on which the contention is based; LBP-12-11, 75 NRC 731 (2012)

although NRC Staff’s argument against contention admission appears to have some weight, the board need not resolve it, because the contention is inadmissible for failing to raise a genuine dispute of material fact or law with the environmental report; LBP-11-6, 73 NRC 149 (2011)

although NUREGs are not legally binding; they are guidance documents, and applicant’s failure to comply with such documents could give rise to an admissible contention; LBP-11-6, 73 NRC 149 (2011)

although petitioner proffered a contention within 30 days of events that prompted it, this does not automatically render a newly proffered contention timely; LBP-11-15, 73 NRC 629 (2011)

although petitioners are not required to run their own computer models at the contention admissibility stage, a contention challenging a SAMA analysis nonetheless must be tethered to the computer modeling and mathematical aspects of the analysis; CLI-12-15, 75 NRC 704 (2012)

although sufficiency of the application and NRC Staff’s environmental review of that application are proper targets of contentions, sufficiency of NRC Staff’s safety review of the application is not; LBP-11-29, 74 NRC 612 (2011)

although the combined license application is not expressly required to consider sea level rise, the board decides that the issue is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)

amended contentions filed after the initial filing period has expired may be admitted only with leave of the licensing board if they satisfy the three criteria of 10 C.F.R. 2.309(f)(2)(i)-(iii); LBP-12-9, 75 NRC 615 (2012)

amended contentions must satisfy general contention admissibility criteria and either the timeliness standards of section 2.309(f)(2) or the balancing test in section 2.309(c) for nontimely contentions; LBP-12-9, 75 NRC 615 (2012)

amendment of 10 C.F.R. 2.309 in 2012 was to simplify the rules, not fundamentally change the rationale boards use to admit new/amended contentions; LBP-15-11, 81 NRC 401 (2015)

among the limited issues within the scope of a license renewal proceeding are alternatives for reducing adverse environmental impacts listed as Category 2 issues in Appendix B to Subpart A of 10 C.F.R. Part 51; LBP-11-2, 73 NRC 28 (2011)

any contention that fails to directly controvert the application or environmental impact statement, or mistakenly asserts the application does not address a relevant issue, will be dismissed; LBP-12-3, 75
SUBJECT INDEX

any contention that falls outside the specified scope of the proceeding must be rejected; LBP-12-27, 76 NRC 583 (2012)

any interested person may challenge use of a categorical exclusion by presenting special circumstances; LBP-15-26, 82 NRC 163 (2015)

any NEPA-based challenge to the efficacy of, or the Staff’s reliance on, the state permitting process relative to the Staff’s environmental review must await the Staff’s initial environmental review document; LBP-13-6, 77 NRC 253 (2013)

apart from discretionary review by the Commission, NRC Staff’s no significant hazards consideration determination under section 50.92(c) may not be contested; LBP-15-26, 82 NRC 163 (2015)

appeal under 10 C.F.R. 2.311 of a licensing board order holding various contentions inadmissible was premature because a waste confidence contention had been held in abeyance, and the board had therefore not yet granted or denied the hearing request; LBP-14-8, 79 NRC 519 (2014)

appeals of contention admissibility rulings are available only upon denial of a petition to intervene and/or request for hearing on the question of whether it should have been granted or upon the grant of a petition to intervene and/or request for hearing on the question of whether it should have been wholly denied; CLI-13-3, 77 NRC 51 (2013)

applicability of a guidance document may be challenged in an individual proceeding; LBP-15-20, 81 NRC 829 (2015)

applicant’s change of legal position, its claims that such change no longer entails a need for an exemption from the regulations, and its identification of new means/systems to satisfy the regulations are all types of materially different new information that can enable a contention to satisfy the timely new or amended contention requirements of 10 C.F.R. 2.309(f)(2)(i)-(ii); LBP-11-9, 73 NRC 391 (2011)

applicant’s decision to improve an existing program to promote health and safety or to boost public support and confidence does not ordinarily confer an automatic opportunity to advance a new contention; LBP-15-1, 81 NRC 15 (2015)

appropriate mechanism to challenge individual contention admissibility determinations following a ruling on an initial petition is a request for interlocutory review; CLI-12-12, 75 NRC 603 (2012)

argument is untimely when it is raised for the first time at oral argument; LBP-15-23, 82 NRC 55 (2015)

arguments made for the first time on appeal will not be considered; CLI-12-3, 75 NRC 132 (2012)

as a matter of law and logic, if applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring program was a fortiori inadequate, and intervenor had a regulatory obligation to challenge it in its original petition to intervene; LBP-11-9, 73 NRC 391 (2011); LBP-11-20, 74 NRC 65 (2011)

as an alternative ground for excluding a NEPA terrorism contention, NRC Staff’s determination in the generic environmental impact statement that the environmental impacts of a terrorist attack were bounded by those resulting from internally initiated events is sufficient to address the environmental impacts of terrorism; CLI-11-11, 74 NRC 427 (2011)

as an exercise of its inherent supervisory authority over adjudications, the Commission directs that waste confidence contentions and any related contentions that may be filed in the near term be held in abeyance pending further order; LBP-13-1, 77 NRC 57 (2013)

as tangible Fukushima lessons emerge, Fukushima-related contentions in individual adjudications may become more plausible, except insofar as NRC is taking generic steps to address them; LBP-12-18, 76 NRC 127 (2012)

as to whether the connected action aspect of 40 C.F.R. 1508.25(a)(1) supports an improper-segmentation contention’s admissibility, petitioners have not provided sufficient supporting information to show that a genuine dispute exists on the material issue; LBP-13-10, 78 NRC 117 (2013)

asking questions and seeking additional information is an essential part of the NRC’s licensing process, and such questioning does not automatically give rise to an admissible contention; LBP-12-27, 76 NRC 583 (2012)

assertion by applicant that its aging management plan is consistent with the GALL Report does not immunize it against a challenge to the AMP; CLI-12-5, 75 NRC 301 (2012)

assertion that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on licensee’s off-duty employees not otherwise required by 10 C.F.R. 73.56(f)(1)-(3) is argued; LBP-14-4, 79 NRC 319 (2014)
assertion that a license renewal environmental report must include a discussion of need for power is inadmissible; LBP-11-13, 73 NRC 534 (2011)

assertion that additional physical analysis is necessary, without a basis to support the need for additional testing, is not admissible; CLI-15-23, 82 NRC 321 (2015)

assertion that other severe accident mitigation alternatives might become cost-effective if implemented, without indication of any particular positive or negative environmental impact from any such implementation fails to present an exceptionally grave issue; LBP-12-1, 75 NRC 1 (2012)

assertions of a need to implement filtered vented containment are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)

at the admissibility stage, a board evaluates whether a petitioner has provided sufficient support to justify admitting the contention for further litigation; CLI-11-8, 74 NRC 214 (2011); LBP-15-24, 82 NRC 68 (2015)

at the admissibility stage, a board should view petitioner’s support for its contention in a light favorable to petitioner, but cannot do so by ignoring the requirements set forth in 10 C.F.R. 2.309(f)(1); CLI-15-23, 82 NRC 321 (2015)

at the admissibility stage, it is simply not appropriate for boards to decide what additional information, if any, is necessary to cure a claimed deficiency in a license application; CLI-11-11, 74 NRC 427 (2011)

at the admissibility stage, parties must come forward with sufficiently detailed grievances to allow a board to conclude that genuine disputes exist justifying a commitment of adjudicatory resources; LBP-11-21, 74 NRC 115 (2011)

at the admissibility stage, petitioners need not marshal their evidence as though preparing for an evidentiary hearing; LBP-11-21, 74 NRC 115 (2011); LBP-15-20, 81 NRC 829 (2015)

at the admissibility stage, petitioners should provide a minimal showing that material facts are in dispute, thereby demonstrating that an inquiry in depth is appropriate; LBP-11-13, 73 NRC 534 (2011)

at the admissibility stage, the burden is on intervenors to demonstrate a deficiency in the application; CLI-11-9, 74 NRC 233 (2011)

at the construction authorization request stage, the board dismissed a material control and accounting contention as moot, pending submittal of applicant’s Fundamental Nuclear Material Control Plan that would require inclusion of a detailed MC&A program; LBP-14-1, 79 NRC 39 (2014)

at the contention filing stage the factual support necessary to show that a genuine dispute exists need not be in affidavit or formal evidentiary form and need not be of the quality necessary to withstand a summary disposition motion; LBP-15-1, 81 NRC 15 (2015)

attaching material or documents as a basis for a contention, without setting forth an explanation of that information’s significance, is inadequate to support the admission of the contention; LBP-12-15, 76 NRC 14 (2012); LBP-13-6, 77 NRC 253 (2013)

attempts by petitioners to challenge aspects of an aging management plan that they could have challenged earlier is rejected; LBP-15-1, 81 NRC 15 (2015)

availability of new information may provide good cause for nontimely filing, but the test for good cause is not simply when the intervenor became aware of the material sought to be introduced but when the information became available and when the intervenor reasonably should have become aware of the information; LBP-11-7, 73 NRC 254 (2011)

bald allegations do not suffice to support contention admissibility; LBP-13-8, 78 NRC 1 (2013)

bare assertions and speculation, even by an expert, are insufficient to trigger a full adjudicatory proceeding; CLI-12-15, 75 NRC 704 (2012)

bare assertions are insufficient to demonstrate a genuine dispute on a material issue of law or fact under general contention admissibility requirements in section 2.309(f)(1)(vi), let alone a motion to reopen, which sets a higher evidentiary standard; CLI-12-3, 75 NRC 132 (2012)

bare assertions are insufficient to support a contention; CLI-11-11, 74 NRC 427 (2011)

bare assertions in a contention run afoul of NRC’s intention to focus the hearing process and provide notice to the other parties; LBP-11-21, 74 NRC 115 (2011)

basic admissibility criteria that all contentions must satisfy are governed by 10 C.F.R. 2.309(f)(1); LBP-11-9, 73 NRC 391 (2011)

because generic impact determinations on impacts of continued storage have been the subject of extensive public participation in the rulemaking process, they are excluded from litigation in individual proceedings; LBP-14-15, 80 NRC 151 (2014)
because of the need to provide specific support for a contention in order to raise a genuine dispute, the genuine dispute admissibility requirement is sometimes discussed together with the requirement for petitioners and intervenors to provide alleged factual or expert support for their allegations; LBP-15-1, 81 NRC 15 (2015)
because petitioner fails to address information in the draft supplemental environmental impact statement and generic EIS that is relevant to the issue it raises, the board must reject arguments relating to liquid waste disposal; LBP-13-9, 78 NRC 37 (2013)
because petitioner fails to show that the possibility of site inundation is based on new and materially different information added to the environmental report as part of applicant’s revised low-level radioactive waste management plan or identify any new and materially different information on which its site-inundation argument is based, this argument is not timely; LBP-12-7, 75 NRC 503 (2012)
because petitioner has not shown how a proposed plan would fail to ensure that buried pipes continue to fulfill their intended safety purposes, the contention is inadmissible; LBP-15-5, 81 NRC 249 (2015)
because petitioner’s issue of the inadvertent release of radioactivity does not specifically relate to the ability of buried structures to perform their intended functions as defined by 10 C.F.R. 54.4(a)(1)-(3), the contention is not within the scope of a license renewal proceeding; LBP-11-2, 73 NRC 28 (2011)
because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petition and motions itself; CLI-14-9, 80 NRC 147 (2014)
because primary responsibility to address and comply with AEA safety-related requirements resides with a license applicant, that application, not the Staff’s application review, is the focus of any safety-related contentions and thus the migration tenet does not apply; LBP-13-10, 78 NRC 117 (2013)
because the board granted a hearing request, its decision to reject some contentions may not be appealed until the end of the case; CLI-14-2, 79 NRC 11 (2014)
because the final environmental impact statement had been issued and the board had ruled that a contention remained procedurally defective, it was an appropriate point for board consideration of whether the contention merited sua sponte review; LBP-14-9, 80 NRC 15 (2014)
because the shield building functions as a radiation and biological shield, failure or collapse of the shield building due to cracking propagation could lead to health and safety impacts, and thus petitioner’s contention concerns a matter that could impact the grant or denial of a pending license application; LBP-15-1, 81 NRC 15 (2015)
because three contentions are already set for hearing in the proceeding, the admission of further contentions would not substantially delay the proceeding; LBP-12-12, 75 NRC 742 (2012)
because two of the previously admitted contentions allege NEPA violations, new NEPA contentions put forward by the intervenors would not unreasonably broaden the issues; LBP-12-12, 75 NRC 742 (2012)
before any hearing is granted on an order issued pursuant to 10 C.F.R. 2.202, a threshold question, intertwined with both standing and contention admissibility issues, is whether the hearing requests are within the scope of the proceeding; CLI-13-2, 77 NRC 39 (2013)
“belief” that is not supported by alleged facts or expert opinion renders a contention inadmissible; LBP-15-26, 82 NRC 163 (2015)
board admitted a contention on a conditional basis, pending Commission ruling on merits of petition for waiver of NRC regulations; CLI-11-11, 74 NRC 427 (2011)
board admitted a contention without deciding if it was a contention of omissions or a contention of inadequacy; LBP-15-5, 81 NRC 249 (2015)
board applied the late-filing standards to a post-9/11 contention related to the risk of a terrorist attack on the ISFSI and found the contention timely but denied admission of both the safety and environmental aspects of the contention; CLI-11-5, 74 NRC 141 (2011)
board concludes that contention is not admissible because it fails to satisfy criteria of 10 C.F.R. 2.309(a)(1), and thus need not rule on its timeliness; LBP-15-29, 82 NRC 246 (2015)
board decisions that have inferred additional bases for contentions beyond those supplied by petitioner have been overturned; CLI-14-2, 79 NRC 11 (2014)
board decisions that have revised inadmissible contentions to render them admissible have been overturned; CLI-14-2, 79 NRC 11 (2014)
board declines to entertain contentions based on little more than speculation, which represent negligible knowledge of the issues being challenged; LBP-15-1, 81 NRC 15 (2015)
board denies as untimely a motion to reopen and admit a new contention alleging that the licensee lacks certain required environmental permits and approvals from state and federal agencies; LBP-12-16, 76 NRC 44 (2012)

board erred in admitting a contention pertaining to a plant’s safety culture; CLI-11-11, 74 NRC 427 (2011)

board erred in reformulating contentions with arguments not originally raised by petitioners; CLI-15-18, 82 NRC 135 (2015)

board examines the information, facts, and expert opinions provided by petitioners to confirm that they do indeed provide adequate support for the contention; LBP-15-20, 81 NRC 829 (2015)

board improperly allowed petitioner to challenge the generic environmental impact statement’s generic finding regarding severe accident consequences; CLI-15-6, 81 NRC 340 (2015)

board is free to decide contention admissibility on a theory different from those argued by the litigants, but only if it explains the specific basis of its ruling and gives litigants a chance to present arguments (and, where appropriate, evidence) regarding the board’s new theory; LBP-14-4, 79 NRC 319 (2014)

board is the agency’s expert body on matters of contention admissibility, and the Commission generally defers to its judgment on contention admissibility; CLI-12-14, 75 NRC 692 (2012)

board is the appropriate arbiter of fact-specific questions of contention admissibility, and the Commission will not second-guess the board’s evaluation of factual support for the contention, absent an error of law or abuse of discretion, even if support for the contention is weak; CLI-15-25, 82 NRC 389 (2015)

board is wrong to strain to discern the outlines of any contention in an amorphous petition; CLI-15-18, 82 NRC 135 (2015)

board may appropriately view petitioner’s support for its contention in a light favorable to petitioner, but cannot do so by ignoring the requirements in 10 C.F.R. 2.309(f)(1); LBP-15-5, 81 NRC 249 (2015); LBP-15-17, 81 NRC 753 (2015)

board may construe an admitted contention contesting applicant’s environmental report as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-14-5, 79 NRC 377 (2014); LBP-15-11, 81 NRC 401 (2015)

board may grant a timely filed petition to intervene if it concludes that petitioner has established standing and proffered at least one admissible contention; LBP-15-26, 82 NRC 163 (2015)

board may not supply its own bases for a contention; CLI-15-17, 82 NRC 33 (2015)

board members are not required to comb through the record seeking support for contentions; LBP-11-13, 73 NRC 534 (2011)

board merits determination is inappropriate at the contention admissibility stage; LBP-13-6, 77 NRC 253 (2013)

board properly rejected state’s contention that raised concerns similar to those in its rulemaking petition as an impermissible challenge to NRC regulations; CLI-12-6, 75 NRC 352 (2012)

boards admit contentions, not their supporting bases; LBP-11-2, 73 NRC 28 (2011)

boards are appropriate arbiters of fact-specific questions of contention admissibility, and the Commission will not second-guess their evaluation of factual support, absent an error of law or abuse of discretion; CLI-12-5, 75 NRC 301 (2012)

boards are directed to reject waste storage contentions pending before them; LBP-14-16, 80 NRC 183 (2014)

boards are not responsible for providing support for contentions so as to make them admissible; LBP-12-3, 75 NRC 164 (2012)

boards are not to decide the merits at the contention admissibility stage; LBP-12-18, 76 NRC 127 (2012)

boards are precluded from hearing rule challenges absent a showing of special circumstances; LBP-14-9, 80 NRC 15 (2014)

boards do not adjudicate disputed facts at the contention admission stage; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-12-8, 75 NRC 539 (2012)

boards evaluate contentions under the six requirements of 10 C.F.R. 2.309(f)(1); LBP-15-24, 82 NRC 68 (2015)

boards have authority under 10 C.F.R. 2.316, 2.319, 2.329 to further define petitioners’ admitted contentions when redrafting would clarify the scope of the contentions; LBP-11-13, 73 NRC 534 (2011)
boards have some discretion to reformulate or narrow contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding, but this authority is not without limit; CLI-15-18, 82 NRC 135 (2015)

boards in individual licensing proceedings are expected to assess contentions against applicable procedural standards; CL-12-7, 75 NRC 379 (2012)

boards may afford an interested state, local governmental body, and federally recognized Indian tribe that has not been admitted as a party under section 2.309 a reasonable opportunity to participate in a hearing; LBP-15-19, 81 NRC 815 (2015)

boards may appropriately view petitioner’s supporting information in a light favorable to petitioner, but failure to provide such information requires that the contention be rejected; LBP-12-3, 75 NRC 164 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013)

boards may appropriately view petitioner’s supporting information in a light favorable to the petitioner, but neither mere speculation nor bare or conclusory assertions, even by an expert, will suffice to allow the admission of a proffered contention; LBP-13-10, 78 NRC 117 (2013)

boards may construe an admitted contention contesting the environmental report as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-13-9, 78 NRC 37 (2013)

boards may examine both the statements in the document that support petitioner’s assertions and those that do not; LBP-15-20, 81 NRC 829 (2015)

boards may not make assumptions or draw inferences that favor petitioner or supply information that is lacking if petitioner neglects to provide the requisite support for its contentions; LBP-12-15, 76 NRC 14 (2012)

boards may not supply information that is lacking in a contention that otherwise would be inadmissible; CLI-15-18, 82 NRC 135 (2015)

boards may reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; LBP-11-6, 73 NRC 149 (2011); LBP-12-18, 76 NRC 127 (2012); LBP-15-5, 81 NRC 249 (2015); LBP-15-13, 81 NRC 456 (2015)

boards may view petitioner’s supporting information in a light favorable to the petitioner, but the petitioner (not the board) is required to supply all of the required elements for a valid intervention petition; LBP-13-8, 78 NRC 1 (2013)

boards must do more than uncritically accept a party’s mere assertion that a particular document supplies the basis for its contention, without even reviewing the document itself to determine if it appears to support a litigable contention; LBP-11-6, 73 NRC 149 (2011)

boards must not adjudicate the merits of allegations at the contention admission stage, but, to be admissible, a contention must provide more than a bare assertion, and must explain the supporting reasons for the dispute; LBP-11-16, 73 NRC 645 (2011)

boards must reject intervenors’ arguments that fail to specifically address the draft environmental impact statement; LBP-13-9, 78 NRC 37 (2013)

boards should not accept in individual license proceedings contentions that are, or are about to become, the subject of rulemaking by the Commission; LBP-12-24, 76 NRC 303 (2012)

boards should not be expected to sift unaided through documents filed before the board to piece together and discern a party’s argument and the grounds for its claims; LBP-12-3, 75 NRC 164 (2012)

boards should not have to guess what aspects of the severe accident mitigation alternatives analysis the petitioner is challenging; LBP-12-1, 75 NRC 1 (2012)

boards should not supply new information not otherwise present in the adjudicatory record in order to cure deficiencies in a petition; CLI-12-12, 75 NRC 603 (2012)

both standing (redressability) and contention admissibility (scope) in the context of an NRC enforcement order are addressed; LBP-14-4, 79 NRC 319 (2014)

both the reopening and contention admissibility criteria require that new contentions be timely presented, generally within 30-60 days of the availability of the information on which the contention is based; CLI-12-21, 76 NRC 491 (2012)

brief explanation of the basis for a contention is required; LBP-11-13, 73 NRC 534 (2011)

both the reopening and contention admissibility criteria require that new contentions be timely presented, generally within 30-60 days of the availability of the information on which the contention is based; CLI-12-21, 76 NRC 491 (2012)

brief explanation of the basis for a contention is required; LBP-11-13, 73 NRC 534 (2011)

brief explanation of the rationale underlying the contention is sufficient to satisfy 10 C.F.R. 2.309(f)(1)(ii); LBP-15-24, 82 NRC 68 (2015)
broad-based issues akin to safety culture, such as operational history, quality assurance, quality control, management competence, and human factors, are outside the scope of license renewal because they raise issues that are relevant to current plant operation; LBP-12-27, 76 NRC 583 (2012)
broadening of issues for hearing caused by board’s admission of a contention that applicant opposes does not constitute a pervasive and unusual effect on the litigation meriting interlocutory review; CLI-15-17, 82 NRC 33 (2015)
burden is on intervenors to demonstrate that a balancing of the factors of 10 C.F.R. 2.309(c)(i)-(viii) weighs in favor of granting a late-filed petition; LBP-12-27, 76 NRC 583 (2012)
burden is on the proponent of a contention to show that NRC Staff’s analysis or methodology is unreasonable or insufficient; CLI-12-6, 75 NRC 352 (2012)
by participating in NRC proceedings, intervenors accept the obligation of uncovering relevant, publicly available information; CLI-12-13, 75 NRC 681 (2012)
by pointing to the exemptions and the license amendment request, petitioner has adequately supported its statement that the LAR is legally deficient in light of the granted exemptions; LBP-15-24, 82 NRC 68 (2015)
by reason of their own standing in a proceeding, intervenors may assert any violation of law that would lead to a redress of their injuries, including their interests in seeing that the NEPA process is properly carried out or in preventing or delaying issuance of the requested combined license; LBP-12-12, 75 NRC 742 (2012)
carry-over contentions must be subjected to especially careful scrutiny by the board at the prehearing stage; LBP-11-34, 74 NRC 685 (2011)
Category 1 issues are environmental issues that NRC has resolved generically and therefore does not consider in specific license renewal proceedings; CLI-15-18, 82 NRC 135 (2015)
Category 1 issues are not subject to challenge in a relicensing proceeding, absent a waiver under 10 C.F.R. 2.335, because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-11-13, 73 NRC 534 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-15-5, 81 NRC 249 (2015)
Category 1 issues in section 51.53(c)(3)(i) are excluded from site-specific review absent a waiver of the rule; CLI-12-19, 76 NRC 377 (2012)
Category 2 issues must be reviewed on a site-specific basis because they have not been determined to be essentially similar for all plants and thus can be the subject of a contention; LBP-11-13, 73 NRC 534 (2011)
challenge that applicant’s environmental report omits material that petitioner alleges is required to be there is within the scope of the proceeding; LBP-12-8, 75 NRC 539 (2012)
challenge to NRC Staff’s environmental analysis, which may come in the form of a categorical exclusion, may be filed as a timely motion to add a new contention once that analysis is complete; LBP-15-24, 82 NRC 68 (2015)
challenge to the adequacy of the acceptance criteria or any other component of the current licensing basis is not within the scope of the license renewal proceeding; LBP-12-24, 76 NRC 503 (2012)
challenge to the inputs and methodology in the SAMA analysis is impermissibly late; CLI-12-10, 75 NRC 479 (2012)
challenge to use of an alternate concentration limit is an impermissible challenge to an NRC regulation, which is not subject to attack in any adjudicatory proceeding; LBP-15-11, 81 NRC 401 (2015)
challenges based on 10 C.F.R. 50.61a and the question of whether applicant demonstrated substantial advantage under 10 C.F.R. Part 50, Appendix H as a reason to not test capsules are beyond the scope of a license amendment proceeding, which concerns compliance with Appendix G of 10 C.F.R. Part 50; LBP-15-20, 81 NRC 829 (2015)
challenges to a combined license applicant’s failure to provide information on long-term storage of Greater-Than-Class-C radioactive waste are outside the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)
challenges to admissibility on the ground that it does not include an adequate basis because it does not include sufficient facts, evidence, or supporting factual information are misguided; LBP-15-20, 81 NRC 829 (2015)
challenges to agency rules or regulations without a waiver, in addition to being expressly prohibited, are outside the scope of the proceeding; CLI-15-21, 82 NRC 295 (2015)
challenges to an applicant’s or licensee’s character require sufficient support; CLI-11-9, 74 NRC 233 (2011)
challenges to an enhanced version of an application alone are insufficient to vitiate intervenors’ obligation
to file any challenges to the original version of that application at the outset of the proceeding;
LBP-11-9, 73 NRC 391 (2011)
challenges to board rulings on late-filed contentions normally fall under NRC rules for interlocutory
review; CLI-12-7, 75 NRC 379 (2012)
challenges to Category 1 findings based on new and significant information require a waiver of 10 C.F.R.
Part 51, Subpart A, Appendix B, in order to be litigated in a license renewal adjudication; CLI-13-7, 78
NRC 199 (2013)
challenges to emergency planning fall outside the scope of a license renewal proceeding; LBP-15-5, 81
NRC 249 (2015)
challenges to extensive damage mitigation guidelines are outside the scope of license renewal proceedings;
LBP-11-35, 74 NRC 701 (2011)
challenges to licensee actions taken under 10 C.F.R. 50.59 may only be taken by means of a petition for
challenges to NRC enforcement orders are limited to whether the order should be sustained; LBP-14-4, 79
NRC 319 (2014)
challenges to NRC's assumptions about operators' capability to mitigate an accident are outside the scope
of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to NRC's excessive secrecy regarding accident mitigation measures are outside the scope of
license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
challenges to NRC's previous rejection of petitioner's concerns regarding environmental impacts of
high-density pool storage of spent fuel are outside the scope of license renewal proceedings;
LBP-11-35, 74 NRC 701 (2011)
challenges to only the draft environmental impact statement apply equally to the final environmental
impact statement under the migration tenet; LBP-12-5, 75 NRC 227 (2012)
challenges to the $2000/person-rem conversion factor, to use of a single dose-rate reduction effectiveness
factor, and to evacuation times and assumptions are not admissible because petitioners presented no
facts or expert opinion of error; LBP-11-2, 73 NRC 28 (2011)
challenges to the ABWR design certification are impermissible; LBP-11-38, 74 NRC 817 (2011)
challenges to the basic regulatory structure of the NRC’s design basis and generic environmental impacts
already assessed through rulemaking are inadmissible; LBP-11-32, 74 NRC 654 (2011)
challenges to the design of the nuclear power plant are outside the scope of the license renewal
proceeding; LBP-11-23, 74 NRC 287 (2011)
challenges to the generic environmental impact statement’s determinations amount to attacks on NRC
regulations and are not within the scope of license renewal proceedings; LBP-13-8, 78 NRC 1 (2013)
challenging features of the AP1000 standard design is a matter for a design certification rulemaking, not
a combined license proceeding; CLI-11-8, 74 NRC 214 (2011)
challenging the environmental report preserves petitioner’s right to challenge the environmental impact
statement at a later stage of the proceedings; LBP-12-8, 75 NRC 539 (2012)
citation of studies indicating that source terms from the Modular Accident Analysis Progression (MAAP)
code are lower than results from Source Term Code Package or NUREG-1150 satisfies the requirements
of 10 C.F.R. 2.309(f)(1)(v); LBP-11-2, 73 NRC 28 (2011)
claim that application fails to adequately present the true extent of historical exploration drilling, borehole abandonment details, R&D testing, changes to groundwater quality, and interconnections of geologic strata contains no alleged facts to support this opinion and thus does not raise a genuine dispute; LBP-12-3, 75 NRC 164 (2012)

claim that NRC Staff did not engage in the consultation process relevant to issues addressed by the Migratory Bird Treaty Act and that impacts to wildlife with respect to this Act are inadequately analyzed is inadmissible; LBP-13-9, 78 NRC 37 (2013)

claim that SAMA analysis is deficient for failing to address potential spent fuel pool accidents falls beyond the scope of NRC SAMA analysis and impermissibly challenges NRC regulations; LBP-11-13, 73 NRC 534 (2011)

claim that draft environmental impact statement does not adequately assess the impacts to threatened and endangered species is rejected; LBP-13-9, 78 NRC 37 (2013)

claims for relief from Fukushima-related events are premature; LBP-11-37, 74 NRC 774 (2011)

claims in a contention that did not genuinely stem from the specific amendments to the aging management plan or from particular information in the revised GALL Report were untimely under standards for admission of new or amended contentions; CLI-12-10, 75 NRC 479 (2012)

claims must be set forth with particularity; CLI-12-1, 75 NRC 39 (2012)

claims of past and current mismanagement are outside the scope of the license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

collateral attacks on NRC regulations, unsupported by any showing of special circumstances warranting a waiver, are rejected; LBP-14-16, 80 NRC 183 (2014)

collateral challenge to NRC emergency response data system rule is inadmissible; CLI-15-20, 82 NRC 211 (2015)

comments and questions generated by a state agency that is examining a state application to determine compliance with state legal and technical standards do not, in and of themselves, demonstrate a material deficiency in applicant’s combined license application; LBP-11-6, 73 NRC 149 (2011)

Commission affirmed the board’s standing ruling, but declined to accept review of challenges to the board’s admission of two contentions because petitioner had failed to perfect its appeal by challenging the validity of the board’s admissibility rulings regarding other contentions; LBP-15-3, 81 NRC 65 (2015)

Commission affords substantial deference to licensing boards’ contention admission decisions; CLI-15-6, 81 NRC 340 (2015)

Commission approval of a rule waiver could allow a contention on a Category 1 issue to proceed where special circumstances exist; CLI-15-6, 81 NRC 340 (2015)

Commission approval of the Continued Storage Rule and GEIS mandates that contentions discussing the long-term storage of spent nuclear fuel are not to be heard by individual licensing boards; LBP-14-16, 80 NRC 183 (2014)

Commission chose to review intervenors’ motion along with similar motions in other proceedings and associated petitions to suspend reactor licensing pending issuance of waste confidence safety findings; CLI-15-6, 81 NRC 340 (2015)

Commission declined to establish new procedures or a separate timetable for raising issues related to the Fukushima events; CLI-12-13, 75 NRC 681 (2012)

Commission defers to a board’s contention admissibility rulings unless the appeal points to an error of law or abuse of discretion; CLI-14-2, 79 NRC 11 (2014); CLI-15-25, 82 NRC 389 (2015)

Commission denied petition to supplement and declined to admit “placeholder” contention; CLI-15-13, 81 NRC 555 (2015)

Commission directed all licensing boards to reject pending waste confidence contentions that had been held in abeyance, because the generic impact determinations have been the subject of extensive public participation in the rulemaking process and therefore are excluded from litigation in individual proceedings; LBP-15-1, 81 NRC 15 (2015); LBP-15-5, 81 NRC 249 (2015)
Commission exercised its inherent supervisory authority over agency adjudications to review petition and motions challenging the Continued Storage Rule; LBP-14-16, 80 NRC 183 (2014)
Commission exercised its supervisory authority and dismissed proposed waste confidence safety contention and denied suspension petitions; CLI-15-13, 81 NRC 555 (2015)
Commission generally defers to board decisions on contention admissibility unless it finds an error of law or abuse of discretion; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012); CLI-15-20, 82 NRC 211 (2015)
Commission has the authority to set the scope of its own hearings; LBP-14-4, 79 NRC 319 (2014)
Commission lifted suspension on final licensing decisions, declined to accept contentions concerning continued storage of spent nuclear fuel, and directed boards to reject pending contentions on this issue; LBP-14-14, 80 NRC 144 (2014)
Commission retained authority to provide ultimate direction on the waste confidence contentions being held in abeyance; LBP-14-8, 79 NRC 519 (2014)
Commission toughened its contention admissibility rule in 1989 to ensure that only intervenors with genuine and particularized concerns participate in NRC hearings; LBP-11-6, 73 NRC 149 (2011)
Commission will defer to a board’s rulings on contention admissibility absent an error of law or abuse of discretion; CLI-11-11, 74 NRC 427 (2011)
Commission will grant a petition for review at its discretion, giving due weight to the existence of a substantial question with respect to one or more of the considerations of 10 C.F.R. 2.341(b)(4)(i)-(v); CLI-11-9, 74 NRC 233 (2011)
complex, fact-intensive issues are rarely appropriate for summary disposition, much less for resolution on the initial pleadings; LBP-11-2, 73 NRC 28 (2011)
compliance with the current licensing basis is not within the scope of a license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
conceptual issues such as operational history, quality assurance, quality control, management competence, and human factors are excluded from license renewal review in favor of a safety-related review focusing on maintaining particular functions of certain physical systems, structures, and components; CLI-11-11, 74 NRC 427 (2011)
concern about computer modeling methodology used to calculate groundwater quantity impacts is inadmissible as lacking sufficient factual or expert support and as failing to establish a material factual or legal dispute; LBP-12-3, 75 NRC 164 (2012)
concerns that apply generically to all spent fuel pools at all reactors are more appropriately addressed via rulemaking or other appropriate generic activity; CLI-12-6, 73 NRC 352 (2012)
concerns with the current design and operation of a nuclear power plant are more properly addressed through a petition for enforcement action; LBP-15-13, 81 NRC 456 (2015)
conclusory assertion, even if made by an expert, is inadequate because it deprives the board of the ability to make the necessary, reflective assessment of the opinion; LBP-11-6, 73 NRC 149 (2011)
conclusory statements do not amount to a challenge to a severe accident mitigation alternatives analysis; CLI-15-18, 82 NRC 135 (2015)
concurrent with approval of the final Continued Storage Rule and companion Generic Environmental Impact Statement, the Commission lifted the suspension on final licensing decisions and directed that the proposed spent fuel storage contentions be dismissed; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
confinement of aquifers is material to the environmental impacts of the licensing action; CLI-14-2, 79 NRC 11 (2014)
Congress called upon the Commission to make fundamental changes in its public hearing process to ensure that hearings adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; LBP-11-6, 73 NRC 149 (2011)
consideration in adjudicatory proceedings of issues presently to be taken up by the Commission in rulemaking would be a wasteful duplication of effort; LBP-14-1, 79 NRC 39 (2014)
consideration of an admissible contention can be deferred, where appropriate, but an inadmissible one cannot; LBP-11-28, 74 NRC 604 (2011)
contention about a matter not covered by a specific rule need only allege that the matter poses a significant safety problem; CLI-15-23, 82 NRC 321 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-20, 81 NRC 829 (2015)
contention admissibility criteria are strict by design but should not be turned into a fortress to deny intervention; LBP-11-6, 73 NRC 149 (2011); LBP-15-20, 81 NRC 829 (2015)

contention admissibility requirements are strict by design and only focused, well-supported issues will be admitted for hearing; CLI-15-21, 82 NRC 295 (2015)

contention admissibility requirements are strict by design in order to help assure that the NRC hearing process will be appropriately focused upon disputes that can be resolved in the adjudication; LBP-11-29, 74 NRC 612 (2011)

contention admissibility requirements seek to ensure that NRC hearings adjudicate genuine, substantive safety and environmental issues placed in contention by qualified intervenors; CLI-15-8, 81 NRC 500 (2015)

contention admissibility rule serves to ensure that admitted contentions focus on real disputes that can be resolved in an adjudication, establish a sufficient factual and legal foundation to warrant further inquiry, and put other parties on notice of the disputed issues so they will know precisely those claims they must support or oppose; LBP-11-6, 73 NRC 149 (2011)

contention admissibility rules are strict by design; LBP-14-4, 79 NRC 319 (2014)

contention admissibility test in section 2.309(f)(1) was crafted by the Commission to raise the threshold bar for an admissible contention; LBP-11-6, 73 NRC 149 (2011)

contention admission stage is not the appropriate point at which to evaluate witness credibility or to weigh competing evidence, but an expert must provide a reasoned basis or explanation for opinions in support of a contention; LBP-15-17, 81 NRC 753 (2015)

contention admission standards are strict by design and exist to focus litigation on concrete issues and result in a clearer and more focused record for decision; LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)

contention alleging a failure to protect historic and cultural resources is admissible; LBP-13-9, 78 NRC 37 (2013)

contention alleging a material deficiency must link the claimed deficiency to a public health and safety or an environmental impact; LBP-15-1, 81 NRC 15 (2015)

contention alleging deficiencies in Corp of Engineers’ compensatory mitigation methods under the Clean Water Act lack alleged facts or expert opinions; LBP-15-23, 82 NRC 55 (2015)

contention alleging deficiencies or errors in an application also must indicate some significant link between the claimed deficiency and either the health and safety of the public or the environment; LBP-12-27, 76 NRC 583 (2012)

contention alleging failure to involve or consult all interested tribes as required by federal law is admissible; LBP-14-5, 79 NRC 377 (2014)

contention alleging failure to meet applicable legal requirements regarding protection of historical and cultural resources is admissible; LBP-14-5, 79 NRC 377 (2014)

contention alleging that an Indian tribe had not been consulted concerning cultural resources, in violation of the National Historic Preservation Act, was premature because NRC Staff, not applicant, has the duty to consult with the tribe under the Act, and Staff had not completed its review process; LBP-12-19, 76 NRC 184 (2012)

contention alleging that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 456 (2015)

contention alleging that final supplemental environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-14-5, 79 NRC 377 (2014)

contention alleging that final supplemental environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-14-5, 79 NRC 377 (2014)

contention alleging that final supplemental environmental impact statement fails to consider connected actions is admissible; LBP-14-5, 79 NRC 377 (2014)

contention alleging that final supplemental environmental impact statement fails to include adequate hydrogeological information to demonstrate ability to contain fluid migration and assess potential impacts to groundwater is admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging that final supplemental environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-14-5, 79 NRC 377 (2014)

contention alleging that license renewal application fails to consider plutonium fuel use, which would place it outside the current licensing basis, is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention alleging that licensee had a repeated pattern of violations which could undermine its ability to manage aging during the period of extended operations is not within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

contention argument is an improper attempt to graft a historical-event criterion onto the performance-criteria specified in Appendix J, Option B; LBP-15-26, 82 NRC 163 (2015)

contention asserting that applicant’s environmental report fails to address the reasonably foreseeable impacts of climate change on water availability is admissible; LBP-11-16, 73 NRC 645 (2011)

contention asserting that applicant’s Integrated Plant Assessment for the license renewal application fails to identify and assess safety-related incidents at the plant in its required time-limited aging analysis is a safety contention and is not admissible; LBP-13-8, 78 NRC 1 (2013)

contention asserting that because no previous ISL/ISR mining operation has been able to restore groundwater to baseline standards, applicant will be required to request that the Commission set an alternate concentration limit for aqueous contaminants is admissible; LBP-12-3, 75 NRC 164 (2012)

contention asserting that draft environmental impact statement must include the Corps of Engineers CWA 404 permit analysis in order to satisfy NEPA fails to raise a material issue; LBP-15-23, 82 NRC 55 (2015)

contention asserting that NEPA requires a groundwater baseline characterization for an in situ recovery site is admissible; LBP-12-3, 75 NRC 164 (2012)

contention asserting that NRC’s environmental review of the license renewal application has not met the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and Management Act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633 (2012)

contention bases that do not pertain specifically to the license renewal application do not provide sufficient information to demonstrate a genuine dispute with the applicant on a material issue and is thus inadmissible; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

contention challenging a Commission rule is beyond the scope of the proceeding; LBP-14-16, 80 NRC 183 (2014)

contention challenging applicant’s consideration of new and significant information regarding cleanup costs is inadmissible; LBP-12-8, 75 NRC 539 (2012)

contention challenging applicant’s safety culture and claiming to rely on NRC Staff’s Safety Evaluation Report is inadmissible because the SER did not discuss safety culture as a general matter and could not serve as a reasonably apparent foundation for a safety culture contention; LBP-15-11, 81 NRC 401 (2015)

contention challenging removal of details from licensee’s technical specifications to a licensee-controlled document was rejected; LBP-12-25, 76 NRC 540 (2012)

contention challenging sufficiency of the draft environmental impact statement as it pertains to the protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 37 (2013)

contention challenging the adequacy/propriety of a Staff determination to prepare an environmental assessment in lieu of a supplemental environmental impact statement would need to await the issuance of the draft EA; LBP-13-6, 77 NRC 253 (2013)

contention challenging the Waste Confidence Rule may not be admitted absent a waiver or exception; LBP-11-16, 73 NRC 645 (2011)

contention charging that a licensee’s poor safety culture could undermine its ability to manage aging during the period of extended operations is not within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

contention claiming that modifications to repair or replace inadequate structural beams and columns is more appropriately presented as a request for enforcement action; CLI-15-5, 81 NRC 329 (2015)
contention claiming that NRC Staff’s consultation was inadequate does not ripen until issuance of NRC Staff’s draft environmental impact statement; CLI-14-2, 79 NRC 11 (2014); LBP-15-5, 81 NRC 249 (2015)
contention claiming that the application insufficiently addresses the safety implications of low water availability is inadmissible for failure to raise a genuine dispute with the application because the contention does not provide specific references to relevant sections of the site safety analysis report that address low-water considerations; LBP-11-16, 73 NRC 645 (2011)
contention claiming that the environmental report’s discussion of environmental effects and cumulative impacts of seepage from the cooling basin into groundwater and surface water through undocumented or unplugged oil and gas wells and borings fails to comply with NRC requirements is admissible; LBP-11-16, 73 NRC 645 (2011)
contention concerning cultural and historic resources is not admissible because it provides no alleged facts or expert opinions; LBP-14-6, 79 NRC 404 (2014)
contention contending that applicant failed to evaluate groundwater impacts of in situ recovery is inadmissible for failure to present factual allegations and/or expert opinion to support the contention; LBP-13-6, 77 NRC 253 (2013)
contention contesting adequacy of hydrogeologic information provided in application regarding fluid migration is admissible; LBP-13-6, 77 NRC 253 (2013)
contention contesting adequacy of licensee’s equivalent margins analysis is not a challenge to 10 C.F.R. Part 50, Appendix H; LBP-15-20, 81 NRC 829 (2015)
contention contesting how the consultation mandate is being carried out can be raised in the first instance only after the Staff’s draft environmental impact statement; LBP-13-6, 77 NRC 253 (2013)
contention copied from an unrelated license renewal proceeding is inadmissible because the two-sentence introduction does not refer to the license renewal application or environmental report at issue; LBP-11-34, 74 NRC 685 (2011)
contention dismissal based on mootness is a jurisdictional ruling, not a decision on the merits of the claim; LBP-11-22, 74 NRC 259 (2011)
contention fails because it contests NRC Staff’s safety review rather than the license renewal application; LBP-15-15, 81 NRC 598 (2015)
contention fails to satisfy the good cause requirements of 10 C.F.R. 2.309(c)(i) because its foundational argument does not rest upon new and materially different information and could and should have been filed at the outset of the proceeding; LBP-11-35, 74 NRC 701 (2011)
contention frames a legal dispute over the meaning of regulation’s direction that a license amendment shall be in accord with the provisions of 10 C.F.R. 50.75(b)(5); LBP-15-24, 82 NRC 68 (2015)
contention in a license renewal proceeding based on applicant’s failure to consider alleged new and significant information arising from NRC’s Fukushima Task Force Report was rejected; LBP-12-8, 75 NRC 539 (2012)
contention is inadmissible for failing to raise a material issue; LBP-15-26, 82 NRC 163 (2015)
contention is inadmissible for failure to show that a genuine dispute exists with applicant on a material issue of law or fact; LBP-11-33, 74 NRC 675 (2011)
contention is inadmissible for failure to show that a genuine dispute exists with license amendment request; LBP-15-26, 82 NRC 163 (2015)
contention is within the scope of license renewal proceeding because NRC regulations require that the environmental report include a severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 249 (2015)
contention migrates when a licensing board construes it as challenging the environmental section of an application as a challenge to a subsequently issued Staff NEPA document without petitioner amending the contention; CLI-15-17, 82 NRC 33 (2015)
contention must be rejected if it attacks applicable statutory requirements or regulations, challenges the basic structure of the regulatory process, merely expresses petitioner’s view of policy, seeks to raise an issue improper for adjudication in the proceeding or not applicable to the facility in question, or raises an issue that is not concrete or is otherwise not litigable; LBP-11-6, 73 NRC 149 (2011)
contention must explain what specific deficiencies exist and why they materially impact the license renewal application or environmental impact statement; LBP-15-1, 81 NRC 15 (2015)
contention must provide more than a bare assertion and must explain the supporting reasons for the dispute; LBP-15-1, 81 NRC 15 (2015)

contention must provide sufficient information to show a genuine dispute with applicant on a material issue of law or fact; CLI-15-20, 82 NRC 211 (2015)

contention of omission claims that the application fails to contain information on a relevant matter as required by law and provides the supporting reasons for petitioner’s belief; LBP-15-5, 81 NRC 249 (2015)

contention of omission may be summarily rejected as inadmissible if there is no requirement to address the topic allegedly omitted from the application or the topic that allegedly is omitted is in fact included in the application; LBP-11-6, 73 NRC 149 (2011)

contention of omission on a matter related to the National Environmental Policy Act must describe the information that should have been included in applicant’s environmental report and provide the legal basis that requires the omitted information to be included; LBP-15-5, 81 NRC 249 (2015)

contention or amendment or supplement to a contention is considered timely if filed 60 days of the date when the material information on which it is based first became available to the moving party through service, publication, or any other means; LBP-12-27, 76 NRC 583 (2012)

contention pleading rules are designed to ensure that only well-defined issues are admitted for hearing and a board should not add material not raised by a petitioner in order to render a contention admissible; CLI-11-11, 74 NRC 427 (2011)

contention pleading standards require petitioners to plead specific grievances, not simply to provide general notice pleadings; CLI-15-18, 82 NRC 135 (2015)

contention proposing alternative inputs or methodologies for severe accident mitigation alternatives analysis must present some factual or expert basis for why the proposed changes in the analysis are warranted; LBP-12-26, 76 NRC 559 (2012)

contention questioning the accuracy of the severe accident mitigation alternatives analysis results given the geographic location and variable meteorological conditions at the site and the large population base surrounding the plant is admissible; LBP-11-2, 73 NRC 28 (2011)

contention questioning whether an appropriate consultation was conducted pursuant to the Endangered Species Act and implementing regulations is admissible; LBP-14-5, 79 NRC 377 (2014)

contention questioning whether final supplemental environmental impact statement’s impact analyses relevant to greater sage grouse, whooping crane, and black-footed ferret are sufficient is admissible; LBP-14-5, 79 NRC 377 (2014)

contention questioning whether future anticipated use of MOX fuel is sufficiently definite to constitute a proposal under the law, with a connection, cumulative impact, interdependence, or similar relationship to matters at issue in a license renewal proceeding to warrant being addressed in the supplemental environmental impact statement is admissible; LBP-14-6, 79 NRC 404 (2014)

contention quotes text from a notice of proposed rulemaking, but it never ties the statements from the NOPR to any specific section of the environmental assessment, and thus fails to raise a genuine dispute with the EA; LBP-15-15, 81 NRC 598 (2015)

contention regarding limitations and phenomena that were widely known, and should have been known to intervenor, at the outset of the proceeding, and thus could have been raised long ago, is untimely; LBP-11-23, 74 NRC 287 (2011)

contention regarding mitigation alternatives is effectively a collateral attack on the regulation that exempts applicants from having to reanalyze severe accident mitigation alternatives during the renewal process; LBP-14-15, 80 NRC 151 (2014)

contention relating to a matter not previously in controversy among the parties must satisfy the requirements of section 2.309(c) and (f); LBP-14-8, 79 NRC 519 (2014)

contention rule does not permit the filing of a vague, unperticularized contention, unsupported by affidavit, expert, or documentary material; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

contention rule is strict by design; CLI-15-8, 81 NRC 500 (2015); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

contention rule reflects a deliberate effort to prevent the major adjudicatory delays caused in the past by ill-defined or poorly supported contentions that were admitted for hearing although based on little more than speculation; CLI-15-8, 81 NRC 500 (2015)
contention rules are intended to prevent admission of ill-defined contentions where petitioners at the outset have not set forth particularized concerns; CLI-12-5, 75 NRC 301 (2012)
contention seeking full impacts analysis of the power supply alternative of wind, either alone or in combination with solar and storage, is inadmissible because it fails to adequately demonstrate the capacity to produce baseload power; LBP-12-15, 76 NRC 14 (2012)
contention should be deemed resolved during the early site permit proceeding if the subject of the contention was actually litigated and decided during the ESP proceeding, or, although not actually litigated, was decided by the Staff, was necessary for the Staff to resolve in the ESP proceeding, and was within the scope of that proceeding as defined in the Federal Register notice of opportunity for a hearing; LBP-11-10, 73 NRC 424 (2011)
contention submitted for the first time after the draft environmental impact statement is issued will be deemed untimely; LBP-12-12, 75 NRC 742 (2012)
contention that a confirmatory order should not be sustained because, without sufficient justification in the record, it imposes obligations on licensee’s off-duty employees not otherwise required by the NRC to observe and report offsite, off-duty conduct of fellow employees in inadmissible; LBP-14-4, 79 NRC 319 (2014)
contention that applicant failed to discuss a report on a recently identified seismic fault near the plant is admissible; LBP-15-20, 81 NRC 829 (2015)
contention that applicant failed to establish in its aging management plan that the effects of aging will be adequately managed for the period of extended operation is inadmissible; LBP-15-6, 81 NRC 314 (2015)
contention that applicant fails to include need-for-power analyses in its environmental report for operating license renewal is inadmissible; LBP-13-12, 78 NRC 239 (2013)
contention that applicant had inadequately described aging management plan by relying on a promise of compliance with NRC orders instead of describing the plan is admissible; LBP-15-24, 82 NRC 68 (2015)
contention that applicant must include a discussion of environmental impacts of spent fuel pool leakage, fires, and lack of a spent fuel repository is dismissed; LBP-14-12, 80 NRC 138 (2014)
contention that applicant’s revised material control and accounting plan fails to show how confirmation and verification of theft of plutonium will be carried out in the specified timelines is inadmissible; CLI-15-9, 81 NRC 512 (2015)
contention that applicant’s revised material control and accounting plan is inadequate to satisfy the alarm resolution requirements is inadmissible; CLI-15-9, 81 NRC 512 (2015)
contention that applicant’s severe accident mitigation alternatives analysis improperly ignored radioactive waste disposal is outside the scope of the proceeding because it directly challenges the generic determinations in Table B-1 of Appendix B to Part 51; LBP-11-2, 73 NRC 28 (2011)
contention that applicant’s severe accident mitigation alternatives analysis is significantly flawed because of the use of inaccurate factual assumptions about population is admissible; LBP-15-5, 81 NRC 249 (2015)
contention that attacks a Commission rule, or which seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; LBP-13-6, 77 NRC 253 (2013)
contention that challenges lack of severe accident mitigation alternatives analysis in applicant’s environmental report is inadmissible; CLI-13-7, 78 NRC 199 (2013)
contention that challenges the entire steam generator replacement project, rather than any aspect of the proposed changes to four technical specifications identified in the license amendment request is outside the scope of this proceeding; LBP-13-11, 78 NRC 177 (2013)
contention that challenges the legal sufficiency of the final environmental impact statement for a combined license is within the scope of the proceeding; LBP-12-18, 76 NRC 127 (2012)
contention that considers the terms of a confirmatory order warranted or unwarranted is irrelevant if they fall within NRC’s authority to impose; LBP-14-4, 79 NRC 319 (2014)
contention that DEIS is deficient because its evaluation of the operation of the radial collector wells does not preclude the possibility that they will change the plume dynamics of the industrial wastewater facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 815 (2015)
contention that DEIS is inadequate solely because it does not include the results of the Corps of Engineers’ section 404 permit review fails to raise a material issue; LBP-15-23, 82 NRC 55 (2015)
contention that DEIS must identify the percentage of radial collector well water drawn from underneath the industrial wastewater facility is inadmissible; LBP-15-19, 81 NRC 815 (2015)

contention that does not actually challenge any specific part of the integrated plant assessment or time-limited aging analyses fails to demonstrate the existence of a genuine dispute; LBP-15-6, 81 NRC 314 (2015)

contention that does not dispute any specific portion of applicant’s fuel handling accident analysis is inadmissible for lack of a genuine dispute; LBP-15-18, 81 NRC 793 (2015)

contention that does not focus at all on the technical specifications that are the subject of its request raises no issues that are material to any findings NRC must make to approve the license amendment request; LBP-13-11, 78 NRC 177 (2013)

contention that draft environmental assessment fails to adequately address potential impacts of the reasonably foreseeable expansion of an independent spent fuel storage installation on cultural and historic resources is admissible; LBP-14-6, 79 NRC 404 (2014)

contention that draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that draft environmental impact statement fails to analyze environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)

contention that draft environmental impact statement fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 37 (2013)

contention that draft environmental impact statement fails to include an adequate hydrogeological analysis to assess potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that draft environmental impact statement lacks an adequate description of the present baseline (i.e., original or pre-mining) groundwater quality and fails to demonstrate that groundwater samples were collected in a scientifically defensible manner, using proper sampling methodologies is admissible; LBP-13-10, 78 NRC 117 (2013)

contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as untimely; LBP-15-11, 81 NRC 401 (2015)

contention that environmental assessment violates the National Environmental Policy Act in its failure to analyze groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 401 (2015)

contention that environmental report does not satisfy NEPA because it does not consider a range of measures to mitigate the risk of catastrophic fires in densely packed, closed-frame spent fuel storage pools is decided; LBP-15-5, 81 NRC 249 (2015)

contention that environmental report fails to accurately and thoroughly conduct severe accident mitigation alternatives analysis on design vulnerability of GE Mark I boiling water reactor pressure suppression containment system and environmental consequences of a to-be-anticipated severe accident post-Fukushima Daiichi fails to present a genuine material dispute; LBP-15-5, 81 NRC 249 (2015)

contention that environmental report fails to explain whether a discharge pipe with phosphoric acid as a corrosion inhibitor would increase algae production and potential for toxic algal blooms is admissible; LBP-15-5, 81 NRC 249 (2015)

contention that environmental report is inadequate insofar as it does not consider the risk of spent fuel pool fires is inadmissible; LBP-15-5, 81 NRC 249 (2015)

contention that environmental review documents fail to identify source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene in groundwater is inadmissible as untimely; LBP-15-19, 81 NRC 815 (2015)

contention that falls outside the specified scope of the proceeding must be rejected; LBP-12-15, 76 NRC 14 (2012); LBP-12-25, 76 NRC 540 (2012)

contention that final environmental assessment fails to adequately analyze all reasonable alternatives is inadmissible; LBP-15-11, 81 NRC 401 (2015)

contention that final environmental assessment fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 401 (2015)
contention that final environmental assessment fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-15-11, 81 NRC 401 (2015)

contention that final safety analysis report is deficient because it does not include information provided in applicant’s seismic evaluation process report is rejected; LBP-15-14, 81 NRC 591 (2015)

contention that final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 377 (2014)

contention that ice condenser containments lack acceptable aging management plans to adequately maintain critical components of the containment for 20 years of additional operation is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that indicates neither positive nor negative impact from proposed severe accident mitigation alternative implementation does not paint the required seriously different picture of the environmental landscape to reopen the record; LBP-11-35, 74 NRC 701 (2011)

contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 239 (2013)

contention that license renewal application fails to adequately address the risks of flooding from failure of upstream dams is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that license renewal application has failed to establish that the effects of aging on relay switches and snubbers will be adequately managed for the period of extended operation is inadmissible; LBP-15-6, 81 NRC 314 (2015)

contention that license renewal application lacks supporting documentation providing analysis detailing licensee’s assumptions that the ice condenser containment can withstand severe accidents without leaking is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that licensee’s history of managing whistleblower complaints regarding safety issues demonstrates that the plant will not be operated safely during the license renewal term is inadmissible; LBP-13-8, 78 NRC 1 (2013)

contention that materials license amendment application fails to provide sufficient information regarding the geological setting of the area to meet regulatory requirements is admissible; CLI-14-2, 79 NRC 11 (2014)

contention that merely predicts that at some future date petitioner might petition to intervene in this adjudication fails to identify any dispute with the license application or the DEIS, and thus fails to satisfy the admission requirement; LBP-12-12, 75 NRC 742 (2012)

contention that NRC has failed to engage other relevant federal, state, and local agencies and has not analyzed impacts subject to jurisdiction and control of these other agencies, and has thus failed to comply with NEPA’s action-forcing mandate and general purpose is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-13-10, 78 NRC 117 (2013)

contention that NRC has not fulfilled its trust responsibility in its analysis and conclusion of the cumulative impacts on historic and cultural resources from the reasonably foreseeable expansion of an independent spent fuel storage installation is admissible; LBP-14-6, 79 NRC 404 (2014)

contention that NRC has promulgated a regulation that violates the National Environmental Policy Act is inadmissible; LBP-13-12, 78 NRC 239 (2013)

contention that NRC Staff’s environmental assessment fails to consider that applicant’s use of copper sulfate to control algae blooms will increase reactor operating temperatures in relation to waste is inadmissible; LBP-15-13, 81 NRC 456 (2015)

contention that offers no explanation of how its assertions are directly relevant to applicant’s ability to manage the effects of aging during the renewal term is inadmissible; LBP-13-8, 78 NRC 1 (2013)
contention that operating license should not be renewed unless and until applicant establishes that the plant can withstand and be safely shut down following an earthquake is not within the scope of a license renewal proceeding; LBP-15-6, 81 NRC 314 (2015)

contention that population used for analysis might underestimate the benefit achieved in implementing a severe accident mitigation alternatives analysis is admissible; LBP-15-5, 81 NRC 249 (2015)

contention that provides no reference to any specific portion of the license amendment request that petitioners dispute is inadmissible; LBP-13-11, 78 NRC 177 (2013)

contention that raises a genuine dispute with the sufficiency of the cumulative impacts analysis, or the lack thereof, in the environmental report is admissible; LBP-12-3, 75 NRC 164 (2012)

contention that regulatory provisions are themselves insufficient to protect the public health and safety constitutes an improper collateral attack upon NRC regulations; LBP-15-4, 81 NRC 156 (2015)

contention that requires a tribe to formulate contentions before a final EIS is released and failing to follow scoping process violates NEPA is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contention that seeks to impose a requirement beyond those imposed by NRC regulations is inadmissible; LBP-15-26, 82 NRC 163 (2015)

contention that seeks to litigate a matter that is, or clearly is about to become, the subject of a rulemaking, is inadmissible; LBP-14-1, 79 NRC 39 (2014)

contention that simply states the petitioner’s views about what regulatory policy should be does not present a litigable issue; LBP-13-6, 77 NRC 253 (2013)

contention that steam generator replacement project be deemed an experiment and that an adjudicatory public hearing be convened for independent analysis of the project before it is implemented is inadmissible; LBP-13-11, 78 NRC 177 (2013)

contention that supplementation of the environmental impact statement is necessary to allow members of the public to lodge placeholder contentions challenging Commission reliance, in individual licensing proceedings, on the continued storage GEIS and Continued Storage Rule is inadmissible; CLI-15-10, 81 NRC 535 (2015)

contention that the draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contention that the draft environmental impact statement fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that the draft environmental impact statement fails to adequately assess cumulative impacts of the proposed action and another proposed ISL uranium mining operation is inadmissible; LBP-13-10, 78 NRC 117 (2013)

contention that the draft environmental impact statement fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that the draft environmental impact statement fails to analyze the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)

contention that the draft environmental impact statement fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contention that the draft environmental impact statement fails to include a reviewable plan for disposal of 11e(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 37 (2013)

contention that the draft environmental impact statement fails to include adequate hydrogeological analysis to assess adequate confinement and potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 37 (2013)

contention that the draft environmental impact statement fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that the draft environmental impact statement fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that the draft supplemental environmental impact statement fails to consider connected actions is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that the environmental report fails to satisfy 10 C.F.R. 51.53(c)(2) because it does not include information about plans to modify the facility in response to post-Fukushima enforcement order is inadmissible; LBP-12-15, 76 NRC 14 (2012)
contention that the environmental report is deficient in concluding that environmental impacts from proposed deep injection wells will be small because the ER fails to identify the source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene is admissible; LBP-12-9, 75 NRC 615 (2012)
contention that the frequency of occurrence of severe accidents is erroneously underestimated should have been raised at the outset of the license renewal proceeding and thus is untimely; LBP-11-35, 74 NRC 701 (2011)
contention that was originally admitted as a challenge to the environmental report may be treated as a challenge to the similar section of the draft environmental impact statement; LBP-11-1, 73 NRC 19 (2011)
contention that wastewater contains chemical contaminants that are not discussed in the environmental report, and that when the wastewater is discharged via deep injection wells, the chemicals might migrate to an aquifer is within the scope of a combined license proceeding; LBP-11-6, 73 NRC 149 (2011)
contention that, in the event of a core-melt accident, applicant’s emergency plan should order an evacuation of persons within a 10-mile radius of the facility attacks NRC’s emergency planning regulation; LBP-11-15, 73 NRC 629 (2011)
contention where a fisheries biologist opined that applicant lacked adequate data on which to conclude that impacts on the aquatic environment were insignificant is admissible; LBP-15-20, 81 NRC 829 (2015)
contention where arguments and expert testimony were copied, largely without change, from another proceeding and failed to offer information specific to the challenged license renewal application is inadmissible; CLI-15-6, 81 NRC 340 (2015)
contentions alleging that applicants’ handling of past safety issues at the plants demonstrated that applicants could not provide reasonable assurance that they would manage the effects of aging during the license renewal term are inadmissible; LBP-13-8, 78 NRC 1 (2013)
contentions based on bare assertions and speculation will not be admitted; LBP-13-8, 78 NRC 1 (2013)
contentions based on new information in a document that was not previously available and that is materially different from a document that was previously available are not timely simply for not being included in an intervenor’s initial hearing request filed at the outset of a proceeding; LBP-11-9, 73 NRC 391 (2011)
contentions based on the Fukushima accident must be relevant to the present proceeding and must link the events at Fukushima to the risk of a severe accident at the site that is the subject of the proceeding; CLI-12-13, 75 NRC 681 (2012); LBP-12-1, 75 NRC 1 (2012)
contentions calling for requirements in excess of those imposed by regulations will be rejected as a collateral attack on regulations; CLI-12-5, 75 NRC 301 (2012); LBP-15-4, 81 NRC 156 (2015)
contentions cannot be automatically discarded by a hearing board simply because they repeat contentions advanced in a different proceeding; LBP-11-34, 74 NRC 685 (2011)
contentions cannot be based on speculation but must have some reasonably specific factual or legal basis; CLI-15-20, 82 NRC 211 (2015)
contentions challenging an environmental report may be viewed as a challenge to the NRC Staff’s subsequent draft or final environmental impact statement; CLI-12-1, 75 NRC 39 (2012)
contentions challenging applicable statutory requirements or Commission regulations are not admissible in NRC adjudications; LBP-15-5, 81 NRC 249 (2015)
contentions challenging existing NRC safety regulations are barred from consideration in adjudicatory proceedings; LBP-12-18, 76 NRC 127 (2012)
contentions challenging the ability of combined license applicants to handle onsite storage of Classes B and C low-level radioactive waste, as well as the attendant potential environmental impacts of such storage in the wake of the closure of the Barnwell facility in South Carolina to states outside of the Atlantic Compact are admissible; LBP-11-6, 73 NRC 149 (2011)
contentions concerning benefits assessment shall not be admitted if the applicant does not address those issues in the early site permit application; LBP-11-16, 73 NRC 645 (2011)
contentions concerning release of radiological, chemical, and herbicidal materials and storage of spent fuel are Category 1 issues and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)
contentions could show a genuine dispute with respect to a technology that, although not commercially viable at the time of the application, is under development for large-scale use and is likely to be available during the period of extended operation; CLI-12-5, 75 NRC 301 (2012)
contentions filed after the deadline for initial intervention petitions also must satisfy the standards for late-filed contentions; CLI-12-15, 75 NRC 704 (2012)
contentions filed after the initial petition are not subject to appeal pursuant to 10 C.F.R. 2.311; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012)
contentions for adjudicatory hearings must raise a genuine dispute with the applicant/licensee on a material issue of law or fact; CLI-12-10, 75 NRC 479 (2012)
contentions may challenge the adequacy of the review contained in the Staff’s NEPA documents; LBP-11-22, 74 NRC 259 (2011)
contentions may not challenge agency rules or regulations in any adjudicatory proceeding absent a waiver from the Commission; CLI-12-19, 76 NRC 377 (2012)
contentions must be based on a genuine material dispute, not the possibility that petitioners, if they perform their own additional analyses, may ultimately disagree with the application; LBP-14-6, 79 NRC 404 (2014)
contentions must be based on documents or other information available at the time the petition is to be filed, such as the application, supporting safety analysis report, environmental report, or other supporting document filed by an applicant or licensee, or otherwise available to a petitioner; LBP-11-29, 74 NRC 612 (2011)
contentions must be pled with sufficient specificity to put opposing parties on notice of which claims they will actually have to defend; CLI-15-18, 82 NRC 135 (2015)
contentions must be raised at the earliest possible opportunity; CLI-15-1, 81 NRC 1 (2015)
contentions must be raised with sufficient detail to put the parties on notice of the issues to be litigated; CLI-11-11, 74 NRC 427 (2011)
contentions must be set forth with particularity and must meet all six admissibility factors; CLI-15-18, 82 NRC 135 (2015)
contentions must be within the scope of the proceeding as defined by the Commission in its initial hearing notice and order referring the proceeding to a licensing board; LBP-12-15, 76 NRC 14 (2012); LBP-13-6, 77 NRC 253 (2013)
contentions must demonstrate that the issue raised in the contention is within the scope of the proceeding; LBP-14-6, 79 NRC 404 (2014)
contentions must directly controvert relevant sections of the environmental report; LBP-11-16, 73 NRC 645 (2011)
contentions must focus on the license application in question, challenging either specific portions of or alleged omissions from the application so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-13-6, 77 NRC 253 (2013)
contentions must focus on the license application, including the safety analysis report/technical report and the environmental report, challenging either specific portions or alleged omissions so as to establish a genuine dispute on a material issue of law or fact; LBP-12-15, 76 NRC 14 (2012)
contentions must include references to the specific portions of the application that petitioner disputes and the supporting reasons for each dispute; LBP-12-25, 76 NRC 540 (2012); LBP-14-6, 79 NRC 404 (2014)
contentions must include specific grievances beyond mere notice pleading; LBP-11-29, 74 NRC 612 (2011)

contentions must point to a deficiency in the application, not merely suggest other ways an analysis could have been done or other details that could have been included; CLI-13-7, 78 NRC 199 (2013)

contentions must provide factual support for underlying claims and identify a genuine dispute with the applicant on a material issue; CLI-14-6, 79 NRC 445 (2014)

contentions must provide sufficient information to show a genuine dispute with applicant on a material issue of law or fact; CLI-15-8, 81 NRC 500 (2015); LBP-14-6, 79 NRC 404 (2014)

contentions must satisfy the twin precepts of timeliness and admissibility; LBP-13-10, 78 NRC 117 (2013)

contentions need not be proven at the admissibility stage; LBP-13-8, 78 NRC 1 (2013)

contentions on Category 1 issues amount to a challenge to the regulation barring challenges to generic environmental findings; CLI-12-19, 76 NRC 377 (2012)

contention's proponent, not the licensing board, is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement; CLI-15-18, 82 NRC 135 (2015)

contentions proposed after the filing deadline, which would have been allowable under the previous 10 C.F.R. 2.309(f)(2) requirements, will also be allowable under the current section 2.309(c)(1) requirements; LBP-15-11, 81 NRC 401 (2015)

contentions relying on information and findings discussed in the notice of proposed rulemaking, as opposed to tentative rules or policy determinations, are not timely filed; LBP-15-15, 81 NRC 598 (2015)

contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact or facts demonstrating a genuine material dispute with the applicant; LBP-12-8, 75 NRC 539 (2012)

contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact or facts demonstrating a genuine material dispute; LBP-15-1, 81 NRC 15 (2015)

contentions should refer to portions of the application that petitioner disputes along with supporting reasons for each dispute, and if petitioner believes that an application fails altogether to contain information required by law, petitioner must identify each failure and provide supporting reasons for that belief; CLI-15-8, 81 NRC 500 (2015)

contentions submitted after the deadline for initial intervention petitions must satisfy the standards for late-filed contentions; CLI-12-10, 75 NRC 479 (2012)

contentions submitted after the initial filing period for receipt of petitions to intervene must be based on information not previously available and materially different than information previously available and must be submitted in a timely fashion based on availability of the new information; LBP-12-27, 76 NRC 583 (2012)

contentions that address an important security issue regarding Part 74’s strict requirements for the proposed facility, which applicant previously admitted it failed to satisfy, are admissible; LBP-11-9, 73 NRC 391 (2011)

contentions that advocate stricter requirements than agency rules impose or that otherwise seek to litigate a generic determination established by a Commission rulemaking are inadmissible; LBP-13-6, 77 NRC 253 (2013)

contentions that amount to an attack on applicable statutory requirements or represent a challenge to the basic structure of the Commission’s regulatory process must be rejected; LBP-11-29, 74 NRC 612 (2011)

contentions that are not accompanied by sufficient factual support to raise a genuine dispute are inadmissible; LBP-13-12, 78 NRC 239 (2013)

contentions that are the subject of general rulemaking by the Commission may not be litigated in individual license proceedings; CLI-14-8, 80 NRC 71 (2014); LBP-14-15, 80 NRC 151 (2014); LBP-14-16, 80 NRC 183 (2014); LBP-15-4, 81 NRC 156 (2015); LBP-15-17, 81 NRC 753 (2015)

contentions that challenge an NRC regulation are inadmissible; LBP-13-12, 78 NRC 239 (2013)
contentions that challenge applicant’s compliance with the loss-of-large-areas requirements of 10 C.F.R. 50.54(hh)(2) are not admissible because they are not within the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)

contentions that fail to directly controvert the application or that mistakenly assert that the application does not address a relevant issue will be dismissed; LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013)

contentions that fail to satisfy timeliness standards in section 2.309(f)(2) may still be admitted pursuant to a balancing test governing nontimely filings that weighs the factors set forth in 10 C.F.R. 2.309(c); LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012)

contentions that fall outside the specified scope of the proceeding are inadmissible; LBP-12-18, 76 NRC 127 (2012); LBP-15-20, 81 NRC 829 (2015)

contentions that neither explain how the application is inadequate nor identify which sections of the application are inadequate are inadmissible; LBP-12-21, 74 NRC 115 (2011)

contentions that relate to current operations at a plant, as opposed to how it might operate during the period of extended operation, are inadmissible; LBP-13-8, 78 NRC 1 (2013)

contentions that request more testing, more methods of testing, and more information, without explaining why the current program is inadequate, are inadmissible; LBP-15-20, 81 NRC 829 (2015)

contentions will be ruled inadmissible if petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-14-6, 79 NRC 404 (2014)

correctness of assurance that license conditions will be replaced by sections 50.75(h) and 50.82(a)(8) is a genuine concern relative to the appropriateness of the license amendment request; LBP-15-24, 82 NRC 68 (2015)

criteria that nontimely contentions must address are governed by 10 C.F.R. 2.309(c); LBP-11-9, 73 NRC 391 (2011)

crux of the “genuine dispute” prong under 10 C.F.R. 2.309(f)(1)(vi) is the requirement for specificity, that a contention must have more than general allegations; LBP-15-1, 81 NRC 15 (2015)

current licensing basis issues cannot be challenged in license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)

current operating issues are, by their very nature, beyond the scope of license renewal proceedings; CLI-11-2, 73 NRC 333 (2011)

current safety issues are beyond the scope of a license renewal proceeding; LBP-12-27, 76 NRC 583 (2012)

decisions on admissibility generally are not considered to be extraordinary for purposes of interlocutory appellate review, particularly where petitioner has been admitted as a party and has other contentions pending; CLI-13-3, 77 NRC 51 (2013)

decisions on the admissibility of contentions will be affirmed where the Commission finds no error of law or abuse of discretion; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)

decision deference to board rulings on contention admissibility is appropriate even where the Commission may consider that the support for the contention is weak, or where the claim’s materiality presents a close question; CLI-14-2, 79 NRC 11 (2014)

degree to which new/amended contentions will be considered timely submitted is generally defined by the presiding officer as a specific period following the triggering event that makes the previously unavailable/materially different information available so as to be the basis for the new/amended contention; LBP-13-10, 78 NRC 117 (2013)

degree to which pendancy of a new contention at the time of the board’s ruling on an initial hearing petition tolled the time for filing any appeals from that decision regarding the admissibility of the contentions would be a matter for Commission determination; LBP-14-12, 80 NRC 138 (2014)

delay in filing contentions caused by the schedule of counsel in other matters can support a finding of good cause; LBP-12-12, 75 NRC 742 (2012)

demonstration that an alternative energy technology, although not commercially viable at the time of the application, is under development for large-scale use and is likely to be available during the period of extended operation has not been made; LBP-12-15, 76 NRC 14 (2012)

determination that, for any license renewal of a nuclear power plant, the probability-weighted consequences of a severe accident are small cannot be challenged; LBP-11-2, 73 NRC 28 (2011)
discretionary intervention is permitted only where at least one petitioner has established standing and at least one contention has been admitted; CLI-14-11, 80 NRC 167 (2014)
discussion necessary to support a NEPA alternatives contention in a reactor license renewal proceeding is compared with that for a Part 52 combined license proceeding; LBP-12-15, 76 NRC 14 (2012)
dispute at issue is material if its resolution would make a difference in the outcome of the licensing proceeding; CLI-14-2, 79 NRC 11 (2014)
during pendency of remand, intervenors are free to submit a motion to reopen the record pursuant to 10 C.F.R. 2.326, should they seek to address any genuinely new issues related to the license renewal application that previously could not have been raised; LBP-11-20, 74 NRC 65 (2011)
duties of NRC Staff and not an applicant, such as consultation with other federal agencies, could not be raised at the environmental report stage, and therefore such a contention will not be rejected as untimely when filed after the release of the draft environmental impact statement; LBP-12-12, 75 NRC 742 (2012)
eight-factor balancing test is applied to determine whether nontimely contentions should be admitted; LBP-12-27, 76 NRC 583 (2012)
eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)
eight-factor balancing test to determine whether nontimely contentions should be admitted; LBP-12-27, 76 NRC 583 (2012)
eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)
eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)
eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)
emergency planning is neither germane to age-related degradation nor unique to the period covered by a license renewal application; LBP-11-35, 74 NRC 701 (2011)
enhancement to a program does not constitute new information sufficient to support a new contention; LBP-11-20, 74 NRC 65 (2011)
entertaining contentions in a license renewal proceeding that challenge the current licensing basis would be both unnecessary and wasteful, given ongoing agency oversight, review, and enforcement; LBP-11-21, 74 NRC 115 (2011)
environmental analysis of severe accidents is designated as a Category 2 site-specific issue for license renewal, and therefore the SAMA analysis normally is subject to challenge in a license renewal adjudicatory proceeding; CLI-13-7, 78 NRC 199 (2013)
environmental contention regarding cumulative impact on groundwater quantity of the in situ recovery project and the planned expansion satisfies admissibility requirements; LBP-12-3, 75 NRC 364 (2012)
environmental contentions are expected in response to applicant’s or NRC Staff’s environmental reviews, and contentions regarding their adequacy cannot be expected to be proffered at an earlier stage of the proceeding before the documents are available; LBP-15-11, 81 NRC 401 (2015)
environmental justice is a Category 2 issue, within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
environmental waste confidence contentions are dismissed; CLI-15-6, 81 NRC 340 (2015)
evaluation of a contention at the admissibility stage should not be confused with evaluation at the merits stage; CLI-11-8, 74 NRC 214 (2011); LBP-15-24, 82 NRC 68 (2015)
even if a contention provided information not discussed in the environmental report, it is still not admissible if it fails to provide a reasoned basis or explanation for why the ER is wrong; LBP-15-5, 81 NRC 249 (2015)
even if contentions are based on NRC Staff’s FSEIS, intervenor still bears the responsibility of demonstrating that a new contention merits admission and meets all six pleading requirements; LBP-15-16, 81 NRC 618 (2015)
even if petitioner disputes that the Commission’s newly adopted Continued Storage Rule satisfies the requirements of the National Environmental Policy Act or the court’s decision, it cannot challenge the adoption or validity of the rule itself before a board; LBP-14-15, 80 NRC 151 (2014)
even if petitioner fails to establish good cause for an untimely petition, the other late-filing factors must be examined; LBP-12-12, 75 NRC 742 (2012)

even when a proposed new contention is not found timely, it may be admitted if it meets a balancing of the eight nontimely filing factors; LBP-11-39, 74 NRC 862 (2011)

evidence contained in affidavits supporting a motion to reopen must meet the admissibility standards, i.e., be relevant, material, and reliable; CLI-12-3, 75 NRC 132 (2012); LBP-15-14, 81 NRC 591 (2015)

except as provided in section 2.335(b)-(d), no rule or regulation of the Commission, or any provision thereof, concerning the licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding subject to Part 2; LBP-15-4, 81 NRC 156 (2015); LBP-15-6, 81 NRC 314 (2015)

exception in 10 C.F.R. 51.53(c)(3)(ii)(L) operates as the functional equivalent of a Category 1 issue, removing SAMAs from litigation in certain license renewal adjudications; CLI-13-7, 78 NRC 199 (2013)

exception to the general rule that NRC regulations are not subject to challenge in adjudicatory proceedings is provided; CLI-11-11, 74 NRC 427 (2011)

exceptionally grave issue may be considered in the discretion of the presiding officer even if untimely presented; LBP-11-35, 74 NRC 701 (2011); LBP-12-1, 75 NRC 1 (2012)

exemption requests are subjected to the same level of litigation as other issues that could be admissibly raised in a COL proceeding; LBP-11-10, 73 NRC 424 (2011)

expert opinion that merely states a conclusion deprives the board of the ability to make the necessary, reflective assessment of the opinion; CLI-12-5, 75 NRC 301 (2012)

expert opinion that merely states a conclusion without providing a reasoned basis or explanation is inadequate; LBP-15-26, 82 NRC 163 (2015)

expert witness has enough knowledge in the subject area to proffer an expert opinion for the purpose of determining contention admissibility; LBP-15-24, 82 NRC 68 (2015)

expert witness must have enough knowledge in the subject area to allow him to proffer an expert opinion for the purposes of determining contention admissibility; LBP-15-20, 81 NRC 829 (2015)

external entities are not entitled to seek revisions to a Commission direction to the NRC Staff contained in a Staff Requirements Memorandum; CLI-15-19, 82 NRC 151 (2015)

factors that timely new or amended contentions must satisfy are governed by are 10 C.F.R. 2.309(f)(2); LBP-11-9, 73 NRC 391 (2011)

facts and issues raised in a contention are not in controversy and subject to a full evidentiary hearing unless the proposed contention is admitted; CLI-11-8, 74 NRC 214 (2011); LBP-15-24, 82 NRC 68 (2015)

facts put forward by intervenor should plausibly indicate why a program is inadequate; LBP-15-20, 81 NRC 829 (2015)

facts relied on to support a contention of omission need not show that the facility cannot be safely operated, but only that the application is incomplete; LBP-15-5, 81 NRC 249 (2015)

factual basis requirement for contentions admission is intended to preclude contentions from being admitted where an intervenor has no facts to support its position and instead contemplates using discovery or cross-examination as a fishing expedition that might produce relevant supporting facts; LBP-14-6, 79 NRC 404 (2014)

factual support is not necessary at the contention filing stage to show that a genuine dispute exists and need not be in affidavit or formal evidentiary form or of the quality necessary to withstand a summary disposition motion; LBP-15-11, 81 NRC 401 (2015)

factual support required for a contention at the admission stage is a minimal showing that material facts are in dispute; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-14, 73 NRC 591 (2011)

factual support required for an admissible contention need not be of the quality necessary to withstand a summary disposition motion, but need only demonstrate that material facts are in dispute; LBP-11-16, 73 NRC 645 (2011)

failure of petitioner to cite even a single specific deficiency in the application precludes satisfaction of the specificity requirement of 10 C.F.R. 2.309(f)(1)(vi); LBP-11-29, 74 NRC 612 (2011)
failure to challenge the existing severe accident mitigation alternatives analysis would be insufficient to establish a material dispute for the purposes of satisfying the general contention admissibility standards, let alone the reopening standards; CLI-12-6, 75 NRC 352 (2012)
failure to comply with any of the contention pleading requirements of 10 C.F.R. 2.309(f)(1) is grounds for dismissing a contention; LBP-11-7, 73 NRC 254 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-12-3, 75 NRC 164 (2012); LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-12-24, 76 NRC 503 (2012); LBP-12-25, 76 NRC 540 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-14-8, 79 NRC 319 (2014); LBP-15-13, 81 NRC 456 (2015); LBP-15-19, 81 NRC 815 (2015); LBP-15-23, 82 NRC 55 (2015); LBP-15-26, 82 NRC 163 (2015)
failure to demonstrate good cause for a late-filed contention requires a compelling showing on the remaining factors; CLI-12-15, 75 NRC 704 (2012)
failure to directly controvert the application or to mistakenly assert that the application does not address a relevant issue will result in rejection of the contention; LBP-12-15, 76 NRC 14 (2012)
failure to offer factual support for the proposition that applicant’s inputs for evacuation times are flawed or unreasonable or that its sensitivity analysis of these inputs was incorrect renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)
failure to provide sufficient factual or expert support for claims in a contention in contravention of section 2.309(f)(1)(v) also may have failed to show a genuine dispute with the application as required under section 2.309(f)(1)(vi); LBP-12-15, 76 NRC 14 (2012)
failure to reference specific sources showing that wind or other renewables are viable sources of baseload power within the service area, renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)
failure to show the final supplemental environmental impact statement’s air emissions data represent new or materially different information renders a new contention inadmissible; LBP-14-5, 79 NRC 377 (2014)
filing deadlines may be extended or shortened by either the Commission or the presiding officer for good cause, or by stipulation approved by the Commission or the presiding officer; LBP-14-5, 79 NRC 377 (2014)
flyspecking of environmental documents is inappropriate for environmental contentions; CLI-14-2, 79 NRC 11 (2014)
for any contention to be admissible, regardless of when it is filed, it must satisfy each of the six criteria of 10 C.F.R. 2.309(f)(1); LBP-12-10, 75 NRC 633 (2012)
for any new arguments or new support for a contention, petitioner must explain why it could not have
raised the argument or introduced the factual support earlier; CLI-15-18, 82 NRC 135 (2015)
for contentions that fall within the facility’s current licensing basis, petitioner may seek action on its
concerns by either filing a petition for rulemaking under 10 C.F.R. 2.802 or submitting an enforcement
petition under 10 C.F.R. 2.206; LBP-11-21, 74 NRC 115 (2011)
for factual disputes, petitioner need not proffer facts in formal affidavit or evidentiary form, sufficient to
withstand a summary disposition motion; LBP-12-18, 76 NRC 127 (2012)
for management integrity and character to be a viable contention, there must be a direct and obvious
relationship between these issues and the challenged licensing action; CLI-11-8, 74 NRC 214 (2011)
for threshold issues such as contention admissibility, the Commission gives substantial deference to a
board’s determinations; CLI-12-3, 75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
Fukushima contention that petitioners did not relate to any unique characteristics of the particular site at
issue was akin to the generic type of NEPA review that the Commission declared premature;
LBP-12-18, 76 NRC 127 (2012)
Fukushima-related contention based on a Staff Requirements Memorandum is inadmissible because the
SRM does not define or impose any new requirements arising from the Fukushima accident and thus
fails to establish a genuine dispute on a material issue of law or fact; LBP-11-37, 74 NRC 774 (2011)
Fukushima-related contention is denied for failure of its proponent to contact the other parties to resolve
the issue presented by the contention prior to its submission; LBP-11-37, 74 NRC 774 (2011)
Fukushima-related contention is denied for failure to reference any specific portion of the application at
issue; LBP-11-37, 74 NRC 774 (2011)
Fukushima-related contention is denied for failure to show the contention is within the scope of the
proceeding or is material to the findings NRC must make to support the requested licensing action;
LBP-11-37, 74 NRC 774 (2011)
Fukushima-related contentions are rejected as premature, and would not have addressed the standards for
reopening, contention admissibility, or rule waiver; CLI-12-6, 75 NRC 352 (2012)
Fukushima-related contentions were dismissed as premature; LBP-11-34, 74 NRC 685 (2011); LBP-11-36,
74 NRC 768 (2011); LBP-11-39, 74 NRC 862 (2011)
Gaussian plume model’s incorporation in the MACCS2 code and the wide, customary use of the code are
not sufficient grounds to exclude the code’s integral dispersion model from all challenge if adequate
support is provided for a contention; LBP-11-2, 73 NRC 28 (2011)
general and unparticularized references to health and safety significance and material deficiencies in the
environmental report would not satisfy the rule that contentions be pled with specificity; CLI-15-18, 82
NRC 135 (2015)
general requirements for admissibility for all contentions are set forth in 10 C.F.R. 2.309(f)(1)(i)-(vi);
LBP-12-27, 76 NRC 583 (2012)
generalized economic cost arguments, unsupported by asserted facts or expert opinion, are insufficient to
show a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)
generalized grievances with sufficiency of NRC Staff’s analysis or the adequacy of included
documentation are not enough to raise a proposed contention to the level of admissibility; LBP-13-9, 78
NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
generalized reference to the potential human and economic costs from an accident falls short of the
support necessary for a severe accident mitigation alternatives contention; CLI-15-18, 82 NRC 135
(2015)
generic analysis remains appropriate for spent fuel pool accidents in license renewal proceedings;
LBP-11-35, 74 NRC 701 (2011)
genetic determinations are appropriately excluded from litigation in individual proceedings; CLI-15-11, 81
NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
genetic environmental impact statement findings with respect to severe accident consequences are not
subject to challenge in individual license renewal proceedings; CLI-15-6, 81 NRC 340 (2015)
genetic environmental impact statement for ISL mining is subject to an appropriate challenge in an
adjudicatory proceeding; LBP-15-11, 81 NRC 401 (2015)
genically applicable concerns are not appropriate for resolution in an adjudicatory proceeding, a
rulemaking petition being the appropriate mechanism for raising those concerns; CLI-12-6, 75 NRC 352
(2012)

good cause doesn’t exist where petitioner’s late-filed contention is due to careless inadvertence and not, as petitioner claimed, attributable to technical difficulties with the E-Filing system; LBP-15-4, 81 NRC 156 (2015)

good cause for a newly proposed contention exists when information on which it is based was not previously available and is materially different than information previously available and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-14-5, 79 NRC 377 (2014); LBP-15-1, 81 NRC 15 (2015); LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)

good cause for failure to file on time is the most important factor of the late-filing criteria; LBP-11-7, 73 NRC 254 (2011); LBP-11-9, 73 NRC 391 (2011); LBP-11-10, 73 NRC 424 (2011); LBP-11-15, 73 NRC 629 (2011)

good cause for late filing exists when information on which the filing is based was not previously available and is materially different from information previously available and the filing has been submitted in a timely fashion based on the availability of the subsequent information; LBP-13-9, 78 NRC 37 (2013)

“good cause” for late filing is defined as a showing that petitioner could not have met the filing deadline and filed as soon as possible thereafter; LBP-11-7, 73 NRC 254 (2011)

good cause for late filing is the most important of the late-filing factors and is given the most weight; CLI-12-10, 75 NRC 479 (2012); LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012); LBP-12-12, 75 NRC 742 (2012)

good cause for the failure to file on time is afforded the most weight in the balancing of the eight late-filing factors of 10 C.F.R. 2.309(c)(i)-(viii); LBP-12-27, 76 NRC 583 (2012)

good cause in 10 C.F.R. 2.307(a) does not share the same definition that is used for good cause in final 2.309(c); LBP-14-5, 79 NRC 377 (2014)

grounds were found for litigation regarding defendants’ assertion that treatment of highway interchanges and village development as cumulative impacts in the final environmental impact statement was sufficient under NEPA even if these actions should have been treated as connected actions under the statute’s implementing regulations; LBP-14-9, 80 NRC 15 (2014)

groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)

hearing on a confirmatory order is limited solely to whether, on the basis of matters set forth in the order, the order should be sustained; LBP-14-4, 79 NRC 319 (2014)

hearing petitioners have an ironclad obligation to examine the publicly available documentary material pertaining to the facility in question with sufficient care to uncover any information that could serve as the foundation for a specific contention; LBP-11-9, 73 NRC 391 (2011)

hearing request is granted where petitioners have submitted a timely petition, established representational standing, and proffered an admissible contention; LBP-15-20, 81 NRC 829 (2015)

hearing request or petition to intervene must set forth with particularity the contentions sought to be raised by satisfying six criteria; LBP-11-21, 74 NRC 115 (2011)

holidays and weekends are excluded from the date calculation for filing new contentions; LBP-15-24, 82 NRC 68 (2015)

if a board were to adjudicate either the admissibility of a moot contention or the standing of a petitioner who sought to adjudicate a moot contention, it would be issuing an advisory opinion in derogation of Commission precedent; LBP-13-7, 77 NRC 307 (2013)

if a contention as originally pleaded did not satisfy 10 C.F.R. 2.309(f)(1), a reply cannot remediate the deficiency by introducing, for the first time, references to a genuine dispute with the license application at issue; LBP-11-34, 79 NRC 685 (2011)

if a contention is based upon new information, it must meet the standards of 10 C.F.R. 2.309(f)(2); LBP-11-35, 74 NRC 701 (2011)

if a contention is rendered moot by information supplied by applicant or considered by Staff in a draft EIS, the party that filed the original contention of omission must file a new or amended contention if it wishes to challenge the adequacy or sufficiency of the NRC Staff’s treatment of the relevant issue; LBP-13-9, 78 NRC 37 (2013)
if a contention makes a prima facie allegation that the application omits information required by law, it
necessarily presents a genuine dispute with applicant on a material issue and raises an issue plainly
material to an essential finding of regulatory compliance needed for license issuance; LBP-11-10, 73 NRC 249 (2015)

if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is
not subject to 10 C.F.R. 2.309(c) which specifically applies to nontimely filings; LBP-12-18, 76 NRC
127 (2012)

if a new contention is not timely filed, it must meet an eight-factor test to be deemed admissible;
LBP-11-10, 73 NRC 424 (2011)

if a new or amended contention is deemed untimely under section 2.309(f)(2)(iii), it will be evaluated
under 10 C.F.R. 2.309(c)(1), which requires a balancing of eight factors to determine whether it is
admissible; LBP-12-12, 75 NRC 742 (2012)

if a party submits a proposed contention after the initial filing deadline announced in the applicable
Federal Register notice for submitting a hearing petition, it will not be entertained absent a
determination by the presiding officer that a participant has demonstrated good cause; LBP-13-9, 78
NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC
598 (2015)

if a new or amended contention is not timely filed, it must meet an eight-factor test to be deemed admissible;
LBP-11-10, 73 NRC 249 (2015)

if a proposed new contention is not timely under section 2.309(f)(2)(iii), then proponent must address the
eight criteria of section 2.309(c)(1) and show that a balance of these factors weighs in favor of admitting that contention;
LBP-11-9, 73 NRC 391 (2011)

if applicant cures the omission cited in a contention, the contention will become moot unless revised by
intervenors; LBP-15-5, 81 NRC 249 (2015)

if applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring
program embodied in its license renewal application was a fortiori inadequate, and intervenors had a
regulatory obligation to challenge it in their original petition to intervene; LBP-15-1, 81 NRC 15 (2015)

if applicant’s enhanced monitoring program, which was the topic of a late-filed contention, was
insufficient, it must have been insufficient beforehand too; CLI-12-10, 75 NRC 479 (2012)

if attempting to raise a new issue based on new information in the final supplemental environmental
impact statement, intervenor must file a new contention if information in the FSEIS is sufficiently
different from the information in the DSEIS that supported the original contention’s admission;
LBP-14-5, 79 NRC 377 (2014)

if compliance with the current licensing basis cannot be fully achieved during the current licensing term
and must be consummated during the period of extended operation, then a contention raising issues
about such CLB compliance is within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

if good cause is not shown, a board may still permit the late filing, but petitioner or intervenor must
make a strong showing on the other factors of 10 C.F.R. 2.309(c); LBP-11-9, 73 NRC 391 (2011); LBP-11-32, 74 NRC 654 (2011)

if intervenor cannot meet the requirements for filing a contention under the new section 2.309(c)(1), he or
she can still take advantage of an extension request if unanticipated events, such as a weather event or
unexpected health issues, prevented the participant from filing for a reasonable period of time after the
deadline; LBP-15-1, 81 NRC 15 (2015)

if intervenor fails to show good cause for a late filing, its demonstration on the other late-filing factors
must be particularly strong; LBP-11-7, 73 NRC 254 (2011)

if intervenors make reference to new material in the final supplemental environmental impact statement
but do not address the six elements of 10 C.F.R. 2.309(f)(1), such references to new material do not
give rise to either a new or an amended contention; LBP-14-5, 79 NRC 377 (2014)
if intervenors raise issues that are not within the scope of an admitted contention and have not sought to amend the contention to include those issues, the board will not consider the issues because they are outside the scope of the admitted contention; LBP-12-23, 76 NRC 445 (2012)

if intervenors sought to introduce new issues, then they should have filed a new or amended contention; CLI-15-9, 81 NRC 512 (2015)

if petitioner believes that an application fails to contain information on a relevant matter as required by law, the contention must identify each failure and the supporting reasons for the petitioner’s belief; CLI-15-20, 82 NRC 211 (2015); LBP-11-6, 73 NRC 149 (2011)

if petitioner can provide a sound basis to dispute compliance-related statements in a license amendment request, then the contention is within the scope of the proceeding; LBP-15-24, 82 NRC 68 (2015)

if petitioner could avoid the Commission’s limitation on the scope of an enforcement order simply by characterizing its petition as opposing the order unless additional measures are granted, the Commission would never be able to limit its proceedings; LBP-12-14, 76 NRC 1 (2012)

if petitioner neglects to provide the requisite support for its contentions, it is not within the board’s power to make assumptions or draw inferences that favor petitioner, nor may the board supply information that is lacking; LBP-12-3, 75 NRC 164 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-12-27, 76 NRC 583 (2012); LBP-13-6, 77 NRC 253 (2013)

if petitioner’s challenge to an agency rule or regulation relates to an issue of broader significance, then filing a petition for rulemaking is the better approach; CLI-13-7, 78 NRC 199 (2013)

if reopening standards are inapplicable, or if reopening criteria have been satisfied, a new contention must also meet the standards for contention admissibility; LBP-11-35, 74 NRC 701 (2011)

if the reason a motion to admit a new or amended contention was filed after the initial deadline does not relate to the substance of the filing itself, the standard in 10 C.F.R. 2.307(a) applies in determining whether the motion can be considered timely; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

if there are data or conclusions in the NRC draft or final environmental impact statement that differ significantly from data or conclusions in applicant’s documents, late-filing standards are no bar to the admission of properly supported contentions; LBP-15-11, 81 NRC 401 (2015)

Intervenors submit a particularized and otherwise admissible contention regarding construction of a mixed oxide facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements or the requirements for reopening the record; LBP-11-9, 73 NRC 391 (2011)

in 1989, NRC revised its rules to prevent the admission of poorly defined or supported contentions or those based on little more than speculation; CLI-12-8, 75 NRC 393 (2012)

in a license amendment proceeding, an admissible contention must meet the six requirements of 10 C.F.R. 2.309(f)(1); LBP-15-24, 82 NRC 68 (2015)

in addition to being timely, new contention must satisfy the six-factor admissibility standard; LBP-15-19, 81 NRC 815 (2015)

in addition to satisfying the timeliness standards in 10 C.F.R. 2.309(f)(2) or the balancing test in 10 C.F.R. 2.309(c), a newly proffered contention must satisfy the admissibility criteria of 10 C.F.R. 2.309(f)(1); LBP-12-7, 75 NRC 503 (2012)

in addressing the good cause factor for late filing, petitioner must explain not only why it failed to file within the time required, but also why it did not file as soon thereafter as possible; LBP-11-7, 73 NRC 254 (2011)

in an ongoing proceeding in which a hearing petition has been granted and there are contentions pending for merits resolution, intervenors must satisfy two sets of requirements to gain the admission of a newly proffered contention; LBP-11-37, 74 NRC 774 (2011)

in analyzing the admissibility of a proffered contention, a licensing board need not turn a blind eye to those portions of a petitioner’s exhibits that might militate against admissibility; LBP-11-6, 73 NRC 149 (2011)

in any combined license proceeding referencing an early site permit, contentions may be litigated on whether the nuclear power reactor proposed to be built does not fit within one or more of the site characteristics or design parameters included in the early site permit; LBP-11-10, 73 NRC 424 (2011)
in determining whether an issue is ripe for judicial decision, a court must evaluate fitness of the issues for judicial decision and hardship to the parties of withholding court consideration; LBP-12-19, 76 NRC 184 (2012)
in examining contention admissibility, the Commission generally defers to the board unless it finds either an error of law or abuse of discretion; CLI-12-8, 75 NRC 393 (2012)
in explaining why there is a genuine material dispute, contention must give the board a reason to believe that the alleged deficiency will lead to a material safety or environmental outcome, based on factual or expert support; LBP-15-1, 81 NRC 15 (2015)
in interpreting the scope of an admitted contention, boards look back to the bases set forth in support of the contention; CLI-15-9, 81 NRC 512 (2015)
in making contention admissibility decisions, boards appropriately apply their technical and legal expertise to evaluate the proposed contention and its support; CLI-11-8, 74 NRC 214 (2011)
in the absence of a timely analysis of the section 2.309(c)(1) and (f)(1) new/amended contention precepts by the contention’s sponsor, a board is not obligated to determine whether those new/amended contention requirements could have been met relative to a migrated environmental contention; LBP-13-10, 78 NRC 117 (2013)
in the absence of good cause for late filing, a party must make an especially strong showing on the other factors to justify admission of a nontimely contention; LBP-12-10, 75 NRC 633 (2012); LBP-12-12, 75 NRC 742 (2012)
in view of its adoption of a revised rule codifying NRC’s generic determinations regarding the pertinent environmental impacts associated with continued storage of spent nuclear fuel, the Commission directs boards to reject pending contentions on this issue; LBP-14-13, 80 NRC 142 (2014)
inadequacy in the severe accident mitigation alternatives analysis is material if license renewal applicant failed to consider complete information without justifying why particular information was omitted; LBP-15-5, 81 NRC 249 (2015)
inasmuch as NRC Staff relies on the benefits of proposed units to satisfy an otherwise unmet need for power, the adequacy of the need-for-power assessment is material to granting the proposed combined license; LBP-11-7, 73 NRC 254 (2011)
Indian tribe’s contention that NRC Staff had not fulfilled its National Historic Preservation Act consultation duty regarding cultural resources and tribal artifacts was premature because Staff had not completed its NEPA review; LBP-12-23, 76 NRC 445 (2012)
Indian tribe’s treaty-based claims of ownership of mining site and international treaty-based claims cannot support admission of environmental assessment contention; LBP-15-11, 81 NRC 401 (2015)
individual licensing proceedings are not the appropriate forum for evaluating severe accident mitigation alternatives; LBP-13-1, 77 NRC 57 (2013)
information notice merely summarizes information that has long been publicly available and does not provide new information that would constitute good cause for the late filing; CLI-12-10, 75 NRC 479 (2012)
information offered in evidence, even if not specifically stated in the original contention and bases, may be relevant if it falls within the envelope, reach, or focus of the contention when read with the original bases offered for it; LBP-12-17, 76 NRC 71 (2012)
initial Notice and Order referring the proceeding to the licensing board defines the scope of litigable issues; LBP-12-27, 76 NRC 583 (2012)
inquiry into future, inchoate plans of licensee would generally invite petitioners in license renewal cases to raise safety issues involving a myriad of possible future license amendments; LBP-13-8, 78 NRC 1 (2013)
insofar as a contention requests consideration of a dry cooling design alternative, that matter must be considered resolved in the early site permit proceeding; LBP-11-10, 73 NRC 424 (2011)
inspection reports could be seen as objective evidence that applicant may not adequately manage aging in the future; CLI-11-11, 74 NRC 427 (2011)
intent of 10 C.F.R. 2.309(h)(1) is to focus litigation on concrete issues and result in a clearer and more focused record for decision and to ensure that the Commission expends resources to support the hearing process only for issues that are appropriate for, and susceptible to, resolution in an NRC hearing; LBP-11-16, 73 NRC 645 (2011)
interlocutory review of a board decision that denied reconsideration of a contention admissibility determination was declined; CLI-15-24, 82 NRC 331 (2015)
interlocutory review of a board’s dismissal of a new contention is granted only upon a showing of extraordinary circumstances; CLI-12-13, 75 NRC 681 (2012)
ter intervener attempting to litigate an issue based on expressed concerns about the draft environmental impact statement may need to amend the admitted contention or submit a new contention if the information in the DEIS is sufficiently different from the information in the environmental report that supported the original contention’s admission; LBP-15-9, 78 NRC 37 (2013)
ter intervener is not free to change the focus of its admitted contention, at will, as litigation progresses; LBP-12-5, 75 NRC 227 (2012)
ter intervener may file a new or amended contention challenging relevant new portions of the draft environmental impact statement that differ from applicant’s environmental report; LBP-11-1, 73 NRC 19 (2011)
ter intervener may not delay filing a contention until a document becomes available that collects, summarizes, and places into context previously available facts supporting that contention; LBP-12-1, 75 NRC 1 (2012)
ter intervener must do more than point to issues with the shield building, but must also indicate what is wrong with applicant’s response and its amended inspection program and why intervener believes the particular inspection program makes the license renewal application unacceptable; LBP-15-1, 81 NRC 15 (2015)
ter intervener must do more than submit bald or conclusory allegations of a dispute with the applicant; LBP-13-9, 78 NRC 37 (2013)
ter intervener need not make its case at the contention admission stage, but must indicate what facts or expert opinions provide the basis for its contention; LBP-13-6, 77 NRC 253 (2013)
ter intervener normally is not allowed to challenge a board’s rejection of contentions where the board has granted a hearing on any contention; CLI-12-12, 75 NRC 603 (2012)
ter intervener’s challenge to NRC’s compliance with NEPA in light of the NRC’s Fukushima Task Force Report is premature; LBP-11-33, 74 NRC 675 (2011)
ter intervener’s reliance on long-available documents regarding leakages and notices of violation made a contention untimely as filed; LBP-15-11, 81 NRC 401 (2015)
ter intervenors are not allowed to postpone filing a contention challenging environmental or safety information or analysis until Staff issues some document that collects, summarizes, and places into context the facts supporting that contention; LBP-15-11, 81 NRC 401 (2015)
ter intervenors cannot simply point to documents merely summarizing earlier documents or compiling preexisting, publicly available information into a single source as doing so does not render “new” the summarized or compiled information; LBP-12-27, 76 NRC 583 (2012)
ter intervenors fail to show that, with respect to terrestrial and wetland mitigation plans, there are data or conclusions in the draft environmental impact statement that differ significantly from the data or conclusions in the applicant’s documents; LBP-12-12, 75 NRC 742 (2012)
ter intervenors fail to specify what other alternatives to the license renewal application should be discussed in the draft supplemental environmental impact statement, much less show that any proposed alternative would satisfy the purpose of applicant’s proposed action; LBP-15-1, 81 NRC 15 (2015)
ter intervenors have demonstrated their ability to contribute to the development of a sound record where they have put forward in support of those contentions the views of a witness whose expertise has been recognized in other NRC proceedings; LBP-11-9, 73 NRC 391 (2011)
ter intervenors in adjudicatory proceedings are prohibited from challenging regulations unless they first obtain a waiver by showing special circumstances; LBP-14-15, 80 NRC 151 (2014)
ter intervenors may file new or amended contentions in response to the draft environmental impact statement if they can satisfy the test of 10 C.F.R. 2.309(b)(2)(i)-(iii); LBP-12-12, 75 NRC 742 (2012)
ter intervenors may not impose an additional requirement that is not present in a regulation; CLI-11-9, 74 NRC 233 (2011)
ter intervenors may question whether the draft environmental impact statement includes a sufficient justification for its reliance upon future actions of a state agency; LBP-12-23, 76 NRC 445 (2012)
ter intervenors must assert a sufficiently specific challenge that demonstrates that further inquiry is warranted; CLI-11-9, 74 NRC 233 (2011)
intervenors must demonstrate a genuine dispute suitable for evidentiary hearing; LBP-11-28, 74 NRC 604 (2011)
intervenors must develop a fact-based argument that actually and specifically challenges the application; LBP-15-1, 81 NRC 15 (2015)
intervenors must make a showing for admission of a NEPA contention sufficient to require reasonable minds to inquire further; LBP-12-18, 76 NRC 127 (2012)
intervenors must point to the specific ways in which the shield building monitoring aging management plan is wrong or inadequate to raise a genuine dispute with applicant’s license renewal application; LBP-12-27, 76 NRC 583 (2012)
intervenors must provide a concise statement of the facts or expert opinions that support their position and upon which they intend to rely at the hearing; LBP-12-18, 76 NRC 127 (2012)
intervenors need not prove their case at the contention admission stage, but petitioner must present sufficient information to show a genuine dispute and reasonably indicating that a further inquiry is appropriate; LBP-12-27, 76 NRC 583 (2012)
intervenors need not prove their case on the merits, but need only allege some fact or expert opinion that supports their position and demonstrates a genuine dispute with the sufficiency of the FEIS; LBP-12-18, 76 NRC 127 (2012)
intervenors need only demonstrate that the issue raised in the contention is material to a licensing decision, i.e., that the issue would make a difference in the decision; LBP-11-7, 73 NRC 254 (2011)
intervenors seeking a new hearing on a new contention after the board has closed the evidentiary record must move to reopen the evidentiary record and meet a deliberately higher threshold standard than that for an ordinary late-filed contention; CLI-12-15, 73 NRC 704 (2012)
intervenors were correct to file contentions on a newly adopted rule because, unlike a proposed rule, it now has indisputable legal effect; LBP-15-1, 81 NRC 598 (2015)
intervenors’ allegations are viewed in a light favorable to intervenors; LBP-15-11, 81 NRC 401 (2015)
intervenors’ allegations do not plausibly indicate that the shield building would lose its functionality under the proposed aging management plan; LBP-15-1, 81 NRC 15 (2015)
intervenors’ challenge concerning the DEIS’s alleged failure to discuss the Great Lakes Compact’s process for regional review of its application for a consumptive water use permit is inadmissible; LBP-12-12, 75 NRC 742 (2012)
intervenors’ challenge to the aging management plan must consist of more than allegations that the AMP is deficient, but rather must point to specific ways the AMP is inadequate or wrong; LBP-12-27, 76 NRC 583 (2012)
intervenors’ challenges to adequacy of applicant’s environmental report with respect to environmental impacts of dewatering associated with the proposed nuclear plant continue to serve as viable challenges to similar sections of Staff’s draft environmental impact statement and thus are not moot; LBP-11-1, 73 NRC 19 (2011)
intervenors’ requests for more testing, more methods of testing, and more information, without an explanation of why the current program is inadequate, do not create a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)
intervenors’ speculation that further review of certain issues might change some conclusions in the FSAR does not justify restarting the hearing process; LBP-11-20, 74 NRC 65 (2011)
intervention petition is denied for failure to proffer an admissible contention; LBP-11-21, 74 NRC 115 (2011); LBP-13-11, 78 NRC 177 (2013)
intervention petition was not sufficiently specific when it merely repeated the contents of petitioner’s earlier petition concerning a prior license amendment; LBP-15-17, 81 NRC 753 (2015)
intervention petitioner may not attack generic NRC requirements or regulations or express generalized grievances about NRC policies; CLI-15-9, 81 NRC 512 (2015)
intervention petitioner must review relevant documents and provide sufficient discussion of these documents and its concerns to demonstrate existence of a genuine material dispute with licensee on a material issue of law or fact; CLI-15-23, 82 NRC 321 (2015)
intervention petitioner need not discuss each and every portion of the application that bears any relation to the issue being contested, but only provide a brief explanation of the argument and a concise statement of the relevant facts; CLI-14-2, 79 NRC 11 (2014)

813
intervention petitioner’s burden is met if petitioner provides plausible factual allegations that satisfy each element of standing; LBP-13-6, 77 NRC 253 (2013)

intervention petitioners have an ironclad obligation to review the application thoroughly and to base their challenges on its contents; CLI-12-5, 75 NRC 301 (2012)

intervention petitioners may not challenge the adequacy of the safety evaluation report, but may file contentions challenging the combined license application based on new information in the SER; LBP-11-22, 74 NRC 259 (2011)

intervention petitions must be filed within 60 days based on the documents then in existence, meaning that the petition must be based on the documents submitted with the application; LBP-11-22, 74 NRC 259 (2011)

issuance of a request for additional information does not alone establish deficiencies in an application or that NRC Staff will go on to find any of applicant’s clarifications, justifications, or other responses to be unsatisfactory; CLI-15-8, 81 NRC 500 (2015)

issuance of a Staff Requirements Memorandum directing Staff to implement “without delay” the recommendations of the Fukushima Task Force does not render contentions admissible; LBP-11-36, 74 NRC 768 (2011)

issue of the alleged failure to consult with the tribe on historic and cultural resources is material and within the scope of a materials license proceeding; LBP-13-9, 78 NRC 37 (2013)

issue raised must fall within the scope of the proceeding and be material to the findings that the NRC must make; CLI-15-8, 81 NRC 500 (2015)

issue to be determined at hearing is whether the confirmatory order should be sustained or denied, not whether the order should be enhanced; CLI-13-2, 77 NRC 39 (2013)

issues addressed in a separate proceeding are beyond the scope of a later proceeding; LBP-15-20, 81 NRC 829 (2015)

issues surrounding severe accident mitigation design alternatives that have been resolved by regulation may not be challenged in a combined license adjudication; CLI-11-6, 74 NRC 203 (2011)

it is a well-established principle that a petitioner in an adjudicatory proceeding cannot use one regulation to challenge another without first obtaining a waiver by showing special circumstances; LBP-13-6, 74 NRC 253 (2011)

it is insufficient for petitioner to point to an Internet Web site or article and expect the board on its own to discern what particular issue a petitioner is raising, including what section of the application, if any, is being challenged as deficient and why; LBP-11-6, 73 NRC 149 (2011)

it is intervention petitioner’s responsibility to put others on notice as to the issues it seeks to litigate in a proceeding; CLI-11-11, 74 NRC 427 (2011); LBP-11-35, 74 NRC 701 (2011)

it is not enough to demonstrate a theoretical possibility that wind farms spread across a wide area could provide consistent power, but rather petitioners must show concretely that wind could be a reliable, commercially viable source of baseload power during the license renewal period; LBP-15-5, 81 NRC 249 (2015)

it is not the function of a licensing board to comb through the record searching for arguments in support of a proffered contention; LBP-11-6, 73 NRC 149 (2011)

it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site in the context of a National Historic Preservation Act contention; LBP-15-5, 81 NRC 249 (2015)

it makes no sense to spend the parties’ and NRC’s own valuable resources litigating allegations of current deficiencies in a proceeding that is directed to future-oriented issues of aging; CLI-15-21, 82 NRC 295 (2015); LBP-15-6, 81 NRC 314 (2015)

it must be genuinely plausible that revising the severe accident mitigation alternatives analysis would change the outcome so that one or more of the SAMA candidates that applicant evaluated and rejected would become cost-beneficial; LBP-15-5, 81 NRC 249 (2015)

it would not be consistent with the NRC’s statutorily mandated responsibilities to spend time and resources on matters that are of no substantive regulatory significance; LBP-14-16, 80 NRC 183 (2014)

judges are not like pigs, hunting for truffles buried in briefs; LBP-11-6, 73 NRC 149 (2011)

lack of clarity about which electrical cables might be subject to any saltwater environment, however high or low the concentration, and about the effects of and efforts to address this, is a level of concern sufficient to warrant further inquiry and exploration; LBP-11-20, 74 NRC 65 (2011)
late-filed contention is inadmissible both for lack of a good-cause showing and for failure to address the other factors of 10 C.F.R. 2.309(c)(1); LBP-11-6, 73 NRC 149 (2011)
late-filed contention shall not be considered by a licensing board unless the petitioner demonstrates that a multifactor balancing test weighs in favor of consideration; LBP-11-6, 73 NRC 149 (2011)
late-filed contentions lack good cause when they are based on a draft environmental impact statement that contains no new information relevant to the contention; LBP-13-9, 78 NRC 37 (2013)
late-filing factor given the most weight is whether there is good cause for the failure to file on time; CLI-12-15, 75 NRC 704 (2012)
level of support required to sustain a motion to reopen is greater than that required for a contention under the general admissibility requirements of 10 C.F.R. 2.309(f)(1); CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012)
license applications, not Staff’s review, are to be the focus of a licensing adjudication; LBP-13-6, 77 NRC 253 (2013)
license renewal applicant is not required to identify safety-related incidents that have occurred during the current licensing term; LBP-13-8, 78 NRC 1 (2013)
license renewal applications must contain any significant new information relevant to environmental impacts of license renewal of which applicant is aware, and new information generally may be challenged in individual adjudications; CLI-12-19, 76 NRC 377 (2012)
license renewal contention alleging higher cancer death rates in local counties than state average is inadmissible because it is based on unsupported speculation; LBP-13-8, 78 NRC 1 (2013)
license renewal environmental report is not required to include discussion of need for power; LBP-11-21, 74 NRC 115 (2011)
license renewal is limited to age-related issues, not issues already monitored and reviewed in the ongoing regulatory oversight processes; CLI-11-2, 73 NRC 333 (2011)
license renewal should not include a new, broad-scope inquiry into compliance that is separate from and parallel to ongoing compliance oversight activity; CLI-11-1, 74 NRC 427 (2011); LBP-13-8, 78 NRC 1 (2013)
licensing board concluded that information on a website cited by intervenors, instead of supporting intervenors’ claim, contradicted it; LBP-15-20, 81 NRC 829 (2015)
licensing board failed to provide sufficient justification for rejecting a challenge to applicant’s meteorological model where petitioners pointed to site-specific meteorological patterns to argue that the model and inputs were inaccurate and insufficiently conservative; LBP-15-20, 81 NRC 829 (2015)
licensing board finds no material dispute concerning the effect of calcium contained in the thermal effluent stream on the potential proliferation of Lyngbya wollei; LBP-12-23, 76 NRC 445 (2012)
licensing board may appropriately view petitioner’s supporting information in a light favorable to the petitioner, but may not do so by ignoring other admissibility requirements; LBP-15-1, 81 NRC 15 (2015); LBP-15-19, 81 NRC 815 (2015); LBP-15-20, 81 NRC 829 (2015)
licensing boards applied existing procedural rules to new contentions and motions to reopen filed in response to the Three Mile Island accident and the September 11, 2001, terrorist attacks; CLI-12-13, 75 NRC 681 (2012)
licensing boards are bound to admit for litigation contentions that are material and supported by reasonably specific factual and legal allegations; LBP-11-6, 73 NRC 149 (2011)
licensing boards are directed to reject pending waste confidence contentions that had been held in abeyance; LBP-14-15, 80 NRC 151 (2014)
licensing boards are expected to examine cited materials to verify that they do, in fact, support a contention; CLI-15-22, 82 NRC 310 (2015)
licensing boards are expected to reformulate contentions to eliminate extraneous issues or to consolidate issues for a more efficient proceeding; CLI-15-25, 82 NRC 389 (2015)
licensing boards are precluded from admitting contentions alleging that the project may not be consistent with the requirements of another federal, state, or local agency; LBP-12-12, 75 NRC 742 (2012)
licensing boards have commonly afforded intervenors the opportunity to propose new contentions to challenge the new information, even though no contention is pending; LBP-11-22, 74 NRC 259 (2011)
licensing boards may not stretch the scope of admitted contentions beyond their reasonably inferred bounds, but may consider issues that, although not expressly stated, can reasonably be inferred from the arguments presented; LBP-12-17, 76 NRC 71 (2012)
licensing boards must admit an adequately supported contention alleging that the agency’s NEPA analysis of severe accident mitigation alternatives is deficient; LBP-12-18, 76 NRC 127 (2012)
licensing boards must specify each basis relied upon for admitting a contention; CLI-12-5, 75 NRC 301 (2012)
licensing boards should not accept in individual licensing proceedings contentions that are or are about to become the subject of general rulemaking by the Commission; CLI-12-16, 76 NRC 63 (2012); CLI-15-9, 81 NRC 512 (2015); CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
licensing boards should not consider premature contentions; LBP-12-19, 76 NRC 184 (2012)
licensing hearing does not embrace anything new revealed in the safety evaluation report or the NEPA documents; CLI-12-14, 75 NRC 692 (2012)
licensing proceedings are not the appropriate venue for generic rulemaking issues; CLI-15-9, 81 NRC 512 (2015)
limiting exception to NRC’s general prohibition against challenges to its rules or regulations in adjudicatory proceedings is provided in 10 C.F.R. 2.335(b); CLI-13-7, 78 NRC 199 (2013)
litigability of the adequacy of applicant’s efforts to address current operational issues is excluded from a license renewal proceeding; CLI-11-11, 74 NRC 427 (2011)
litigants may not challenge a rule in NRC adjudicatory proceedings absent a showing of special circumstances; CLI-15-1, 81 NRC 1 (2015)
management integrity contentions are admissible in license renewal proceedings only if they rely on specific supporting information, including references to a serious incident involving shutdown where management responsible for the incident remained in place, a purported climate of reprisals for bringing forward safety issues, and reference to at least one expert in support of the contention; LBP-13-8, 78 NRC 1 (2013)
material difference must exist between information on which a contention is based and information that was previously available, e.g., a difference between the environmental report and the draft EIS or the final EIS; CLI-15-1, 81 NRC 1 (2015)
materiality depends on whether the information is capable of influencing the decisionmaker, not on whether the decisionmaker would, in fact, have relied on it; LBP-15-24, 82 NRC 68 (2015)
“materiality” means that petitioner must show why the alleged error or omission is significant to grant or denial of a pending license application; LBP-15-24, 82 NRC 68 (2015)
materiality of a SAMA contention is based on whether it purports to show that an additional SAMA should have been identified as potentially cost-beneficial; CLI-11-11, 74 NRC 427 (2011)
materiality requirement for contention admission often dictates that allegations of deficiencies or errors in an application also indicate some significant link between the claimed deficiency and either the public health and safety or the environment; LBP-12-15, 76 NRC 14 (2012)
“materiality” requires petitioner to show why the alleged error or omission is of possible significance to the result of the proceeding; LBP-15-20, 81 NRC 829 (2015)
matter resolved in an early site permit proceeding may be revisited in the combined license proceeding when new and significant information is presented; LBP-11-10, 73 NRC 424 (2011)
matters relating to reasonable assurance of safety during the current license term are to be addressed under the current license and are outside the scope of a license renewal review; CLI-15-21, 82 NRC 295 (2015)
members of the public may challenge an action taken under 10 C.F.R. 50.59 only by means of a petition under section 2.206; LBP-13-11, 78 NRC 177 (2013)
mere existence of comments and questions generated by NRC Staff do not, in and of themselves, demonstrate a material deficiency in applicant’s combined license application; LBP-11-6, 73 NRC 149 (2011)
mere general references to NRC Staff’s requests for additional information do not provide the requisite reasonable specificity to support admission of a contention; CLI-12-5, 78 NRC 301 (2012)
mere notice pleading is insufficient for contention admission; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-16, 73 NRC 645 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-12-8, 75 NRC 539 (2012)
mere notice pleading is insufficient, but requirement for contention specificity and factual support rather than vague or conclusory statements is not intended to prevent intervention when material and concrete issues exist; LBP-15-20, 81 NRC 829 (2015)
merits determination cannot be resolved at the contention admission stage of the proceeding; LBP-11-6, 73 NRC 149 (2011); LBP-14-6, 79 NRC 404 (2014); LBP-15-20, 81 NRC 829 (2015)
migration of a contention is appropriate only where the environmental analysis or discussion at issue is essentially in pari materia with applicant’s analysis or discussion that is the focus of the contention; LBP-12-12, 75 NRC 742 (2012); LBP-15-11, 81 NRC 401 (2015)
migration tenet applies when information in the draft environmental impact statement is sufficiently similar to information in applicant’s environmental report, and allows previously admitted contentions challenging the environmental report to apply to relevant portions of the DSEIS; LBP-15-16, 81 NRC 618 (2015)
migration tenet applies when information in the final supplemental environmental impact statement is sufficiently similar to information in the draft SEIS; LBP-14-5, 79 NRC 377 (2014)
migration tenet applies where the information in the draft environmental impact statement is sufficiently similar to the information in the environmental report; LBP-11-1, 73 NRC 19 (2011); LBP-13-9, 78 NRC 37 (2013)
migration tenet helps to expedite hearings by obviating the need to file and litigate the same contention up to three times, once against the ER, once against the DEIS, and one final time against the FEIS; LBP-12-12, 75 NRC 742 (2012)
migration tenet helps to expedite hearings by obviating the need to file and litigate the same contention up to three times, once against the ER, once against the DEIS, and one final time against the FEIS; LBP-12-12, 75 NRC 742 (2012)
minimal showing that material facts are in dispute is sufficient to render a proposed contention admissible; LBP-12-8, 75 NRC 539 (2012)
motion to admit a new contentation arguing that applicant’s environmental report fails to satisfy NEPA because it does not address findings and recommendations raised by Task Force Report on the Fukushima Dai-ichi accident is denied as premature and insufficiently focused on the license renewal application; LBP-11-28, 74 NRC 604 (2011)
motion to admit a new contention must be supported by an affidavit that separately addresses each of the 2.326(a) criteria; LBP-14-8, 79 NRC 519 (2014)
motion to admit a new waste-confidence-related contention is being held in abeyance; CLI-13-7, 78 NRC 199 (2013)
motion to file new or amended contentions must address the motion to reopen standards after an intervention petition has been denied; LBP-11-20, 74 NRC 65 (2011)
motion to reopen relating to a new contention must also satisfy the requirements for non timely contentions in section 2.309(c); LBP-11-20, 74 NRC 65 (2011)
motion to reopen that relates to a contention not previously in controversy must satisfy the section 2.309(c) requirements for new or amended contentions filed after the original hearing petition deadline; LBP-15-14, 81 NRC 591 (2015)
motions to admit new contentions must be rejected if they do not include a certification by movant’s attorney or representative that movant has made a sincere effort to contact other parties and resolve the issues raised in the motion, and that movant’s efforts have been unsuccessful; LBP-11-34, 74 NRC 685 (2011)
motions to reopen on issues not previously litigated must satisfy the balancing test of 10 C.F.R. 2.309(c) in addition to the reopening standards; CLI-12-3, 75 NRC 132 (2012)
motions to reopen to admit a new contention must be submitted in a timely fashion, based on new information that is materially different from information previously available or a balancing of the factors in 10 C.F.R. 2.326 must weigh in favor of admitting the contention; LBP-12-16, 76 NRC 44 (2012)
multifactor contention admissibility test in section 2.309(c)(1) is strict by design; LBP-11-6, 73 NRC 149 (2011); LBP-11-16, 73 NRC 645 (2011)
narrow and specific contention that alleges facts, with supporting documentation, of a longstanding and continuing pattern of noncompliance or management difficulties that are reasonably linked to whether licensee will actually be able to adequately manage aging in accordance with the current licensing basis during the period of extended operation can be an admissible contention; CLI-11-11, 74 NRC 427 (2011)
neither mere speculation nor bare or conclusory assertions, even by an expert, alleging that a matter should be considered will suffice to allow the admission of a proffered contention; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-15-1, 81 NRC 15 (2015)
neither speculation nor conclusory assertions, even by an expert, alleging that a matter fails to satisfy the Atomic Energy Act or National Environmental Policy Act will suffice to allow admission of a contention; LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012) 
neither the Commission nor the board should be expected to sift through a lengthy document in search of asserted factual support that petitioner has not specified; CLI-12-5, 75 NRC 301 (2012) 
NEPA is not intended to encompass every possible impact, and does not encompass potential losses due to individuals’ perception of a risk; LBP-12-24, 76 NRC 503 (2012) 
new and amended contentions submitted after an intervenor’s initial hearing request are evaluated under 10 C.F.R. 2.309(f)(2) for timeliness and, if found timely, their general admissibility is analyzed pursuant to section 2.309(f)(1); LBP-11-10, 73 NRC 424 (2011) 
“new and significant information” requirement does not override, for purposes of litigating the issues in an adjudicatory proceeding, the exclusion of Category 1 issues in section 51.53(c)(3)(i) from site-specific review; CLI-12-19, 76 NRC 377 (2012) 
new arguments may not be raised for the first time in a reply brief; CLI-15-20, 82 NRC 211 (2015); LBP-13-12, 78 NRC 239 (2013); LBP-15-17, 81 NRC 753 (2015) 
new contention filed after the record has closed must also satisfy general contention admissibility requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-12-16, 76 NRC 44 (2012) 
new contention is inadmissible because it neither points to nor references any specific portion of the application that is disputed; LBP-11-35, 74 NRC 701 (2011) 
new contention is inadmissible because it relies on information that is not materially different from information previously available and already in the record; LBP-15-11, 81 NRC 401 (2015); LBP-15-16, 81 NRC 618 (2015) 
novel contention must be based on information materially different than the information previously available; LBP-14-5, 79 NRC 377 (2014); LBP-14-8, 79 NRC 519 (2014) 
novel contention must meet requirements of 10 C.F.R. 2.326(a), must be timely, must concern a significant environmental or safety issue, and must demonstrate the likelihood of a materially different result; LBP-14-8, 79 NRC 519 (2014) 
novel contention must present a seriously different picture of the environmental impact of the proposed project; LBP-14-5, 79 NRC 377 (2014) 
novel contentions are deemed timely if filed within 30 days of the date when the new and material information on which they are based first became available; CLI-11-8, 74 NRC 214 (2011); LBP-11-39, 74 NRC 685 (2011); LBP-12-10, 75 NRC 633 (2012) 
novel contentions filed after the initial filing may only be admitted upon a showing that the information upon which they are based was not previously available and is materially different than information previously available and they have been submitted in a timely fashion based on the availability of the subsequent information; LBP-12-18, 76 NRC 127 (2012) 
novel contentions may be admitted as long as they meet the timeliness criteria in 10 C.F.R. 2.309(f)(2) or the nontimely contention criteria in section 2.309(c)(1) and fulfill the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); LBP-11-39, 74 NRC 662 (2011) 
novel contentions must be submitted in a timely fashion based on the availability of the information on which they are based; CLI-15-17, 82 NRC 33 (2015) 
novel contentions must paint a seriously different picture of the environmental landscape that would require supplementation of an environmental impact statement; LBP-12-10, 75 NRC 633 (2012) 
novel contentions must satisfy the six requirements of 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-11-34, 74 NRC 685 (2011); LBP-14-8, 79 NRC 519 (2014) 
novel contentions on the safety and environmental implications of the NRC Task Force Report on the Fukushima Dai-ichi accident are premature and must be denied on that basis without regard to any other considerations; LBP-11-27, 74 NRC 591 (2011) 
novel contentions submitted within 30 days of the occurrence of the triggering the event are timely; LBP-12-18, 76 NRC 127 (2012) 
novel information on the need to supplement an issued final EIS must point to impacts that affect the quality of the human environment in a significant manner or to a significant extent not already considered; LBP-15-16, 81 NRC 618 (2015)
new or amended contention is considered timely if it is filed within 60 days of the date when the material information first became available to movant through service, publication, or any other means; LBP-15-1, 81 NRC 15 (2015)
new or amended contentions are considered to be timely if filed within 60 days of any triggering event; LBP-11-9, 73 NRC 391 (2011)
new or amended contentions based on material information that has subsequently become available must meet the general contention admissibility requirements of 10 C.F.R. 2.309(f)(1) as well as the three requirements in section 2.309(c)(1); LBP-14-6, 79 NRC 404 (2014)
new or amended contentions filed after the initial filing period has expired may be admitted as timely only with leave of the licensing board if it meets the timeliness standards of 10 C.F.R. 2.309(f)(2); LBP-12-7, 75 NRC 503 (2012); LBP-12-12, 75 NRC 742 (2012)
new or amended contentions generally must meet the six admissibility factors specified in section 2.309(f)(1); LBP-13-10, 78 NRC 117 (2013); LBP-14-5, 79 NRC 377 (2014)
new or amended contentions must be based on information not previously available and materially different from previously available information and be submitted in a timely fashion based on the availability of the subsequent information; LBP-14-6, 79 NRC 404 (2014)
new or amended contentions must demonstrate good cause for post-initial-hearing petition deadline filing, based on three factors; LBP-13-10, 78 NRC 117 (2013)
new or amended contentions must satisfy the substantive contention admissibility standards, and failure to meet any of them renders a contention inadmissible; LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)
new or amended contentions not related to the question of foreign ownership that an interested person may wish to file during the pendency of the combined license application are subject to usual rules of practice, including rules governing reopening the record of a closed proceeding; CLI-13-4, 77 NRC 101 (2013)
new or amended contentions related to portions of the draft environmental impact statement that differ from the environmental report must be timely filed under section 2.309(c), and meet the contention admissibility standards of section 2.309(f)(1) to be admitted; LBP-13-9, 78 NRC 37 (2013)
newly proffered contention that does not satisfy the timeliness requirements of section 2.309(f)(2) may still be considered for admission if it satisfies section 2.309(c)(1); LBP-11-15, 73 NRC 629 (2011)
no finding on emergency planning is necessary for issuance of a renewed nuclear power reactor operating license; CLI-15-6, 81 NRC 340 (2015)
no NRC rule or regulation is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding of Part 2; CLI-15-20, 82 NRC 211 (2015); LBP-12-8, 75 NRC 539 (2012); LBP-12-24, 76 NRC 503 (2012)
no NRC rule or regulation or provision thereof is subject to attack in an adjudicatory proceeding unless a waiver is granted by the Commission; LBP-14-16, 80 NRC 183 (2014)
no NRC rule or regulation, or any provision thereof, concerning the licensing of production and utilization facilities is subject to attack by way of discovery, proof, argument, or other means in any adjudicatory proceeding; CLI-11-8, 74 NRC 214 (2011); LBP-15-5, 81 NRC 249 (2015); LBP-15-17, 81 NRC 753 (2015)
no one can challenge an enforcement order as long as the order, in any way, improves the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014)
no significant hazards consideration determination is a procedural decision barred from litigation; LBP-15-13, 81 NRC 456 (2015); LBP-15-17, 81 NRC 753 (2015)
nontimely contentions might be admissible if petitioner can show that the contention is based on new information and was filed promptly after the new information became available; LBP-12-27, 76 NRC 583 (2012)
nontimely proposed contention may be admissible if, on balance, it satisfies eight criteria; LBP-11-7, 73 NRC 254 (2011)
not only must intervenor act promptly after learning of new information, but the information itself must be new information, not information already in the public domain; LBP-11-7, 73 NRC 254 (2011)
nothing in NRC case law or regulations suggests that license renewal is an occasion for far-reaching speculation about unimplemented and uncertain plans; LBP-13-8, 78 NRC 1 (2013); LBP-14-6, 79 NRC 404 (2014)
NRC adjudication is not the appropriate forum for a challenge to a decision by a state regulatory agency; LBP-12-23, 76 NRC 445 (2012)

NRC adjudicatory hearings are not environmental impact statement editing sessions; LBP-11-2, 73 NRC 28 (2011)

NRC deliberately raised contention admissibility standards to relieve the hearing delays that poorly defined or supported contentions had caused in the past; CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012); LBP-15-1, 81 NRC 15 (2015)

NRC has authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit challenges solely on whether an order should be sustained; LBP-12-14, 76 NRC 1 (2012)

NRC has resolved many environmental impacts for license renewal through a generic environmental impact statement and these issues need not be revisited in site-specific environmental impact statements; CLI-14-7, 80 NRC 1 (2014)

NRC Information Notice that merely summarized information that was previously available is not new information upon which a new contention can be based; LBP-11-20, 74 NRC 65 (2011)

NRC opinions have long referred back to the bases set forth in support of the contention when an issue arises over the scope of an admitted contention; LBP-12-17, 76 NRC 71 (2012)

NRC has proper reserves its hearing process for genuine, material controversies between knowledgeable litigants; CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)

NRC regulations and case law already provide clear and uniform standards to determine the timeliness of motions to add new contentions on the Fukushima accident; LBP-11-32, 74 NRC 654 (2011)

NRC regulations do not allow use of reply briefs to provide, for the first time, the necessary threshold support for contentions; LBP-11-6, 73 NRC 149 (2011)

NRC regulations may not be challenged in an adjudicatory proceeding absent a request for a waiver under section 2.335(b); CLI-12-6, 75 NRC 352 (2012); LBP-12-12, 75 NRC 742 (2012); LBP-13-1, 77 NRC 37 (2013)

NRC revised its rules in 1989 to prevent admission of contentions based on little more than speculation; CLI-12-5, 75 NRC 301 (2012)

NRC rules are designed to avoid resource-intensive hearings where petitioners have not provided sufficient support for their technical claims, and do not demonstrate a potential to meaningfully participate in a hearing; CLI-12-15, 75 NRC 704 (2012)

NRC rules contain ample provisions through which litigants may seek admission of new or amended contentions; CLI-12-13, 75 NRC 681 (2012)

NRC rules deliberately place a heavy burden on proponents of contentions, who must challenge aspects of license applications with specificity, backed up with substantive technical support, mere conclusions or speculation being insufficient; CLI-11-5, 74 NRC 141 (2011); LBP-11-35, 74 NRC 701 (2011)

NRC rules of practice are designed to avoid unfocused inquiry in contested proceedings; CLI-15-1, 81 NRC 1 (2015)

NRC rules of practice require that a proposed contention be supported by alleged fact or expert opinion; CLI-12-7, 75 NRC 379 (2012)

NRC Staff and licensee may file interlocutory appeals on the admission of a contention, but intervenors are prohibited from filing such appeals on the denial of a contention unless all contentions have been denied; LBP-14-4, 79 NRC 319 (2014)

NRC Staff cannot release NEPA documents that blindly parallel the applicant’s information and omissions and then be allowed to argue that applicant’s omissions prevent filing of new contentions concerning the newly released NEPA document; LBP-13-9, 78 NRC 37 (2013)

NRC Staff’s first attempt to analyze a NEPA issue gives rise to an intervenor’s first opportunity to raise contentions on the adequacy of this assessment; LBP-15-11, 81 NRC 401 (2015)

NRC Staff’s safety analysis and environmental analysis occur separately, and intervenors are expected to raise safety challenges in response to the safety reports and environmental challenges in response to the environmental statements; LBP-15-11, 81 NRC 401 (2015)

NRC’s rules are intentionally strict; CLI-15-20, 82 NRC 211 (2015)
NRC’s “strict by design” contention admissibility standards focus the hearing process on disputes that can be resolved in adjudication; CLI-15-22, 82 NRC 310 (2015); CLI-15-23, 82 NRC 321 (2015)
NRC’s strict contention rule is designed to avoid resource-intensive hearings where petitioners have not provided sufficient support for their technical claims, and do not demonstrate a potential to meaningfully participate and inform a hearing; LBP-12-27, 76 NRC 583 (2012)
on appeal, Commission defers to board’s rulings on contention admissibility absent an error of law or abuse of discretion; CLI-15-23, 82 NRC 321 (2015)
once it made a determination of plausible injury from the proposed project, the board was not required to weigh the evidence to determine whether the harm to petitioners was beyond doubt; CLI-12-12, 75 NRC 603 (2012)
once parties demonstrate standing, they will then be free to assert any contention, which, if proven, will afford them the relief they seek; LBP-11-21, 74 NRC 115 (2011)
once the deadline for filing petitions to intervene has passed, a party may file new or amended contentions if it is able to demonstrate good cause by meeting three requirements; LBP-15-1, 81 NRC 15 (2015)
only alleged facts, not evidence or expert opinion, are required to support contention admissibility; LBP-13-8, 78 NRC 1 (2013)
only those NRC-regulated facilities located within the Ninth Circuit’s jurisdictional boundaries are required to conduct environmental analyses of possible terrorist acts; LBP-14-6, 79 NRC 404 (2014)
onsite waste storage contentions are to be held in abeyance pending further Commission order; LBP-13-8, 78 NRC 1 (2013)
original contention did not point to any specific grievance with the environmental justice discussion provided in applicant’s environmental report and so the board should have applied the standards in 10 C.F.R. 2.309(c) to determine whether petitioner had demonstrated good cause for its late filing; CLI-15-18, 82 NRC 135 (2015)
other than hypothesizing that there will be a failure of the nuclear reactor vessel because of increased stress brought by the proposed license amendment request, the contention does not provide sufficient information to show that a genuine dispute exists; LBP-11-29, 74 NRC 612 (2011)
Part 51’s license renewal provisions cover environmental issues relating to onsite spent fuel storage generically and all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-11-13, 73 NRC 534 (2011)
participant may request waiver of a current rule or regulation in a specific proceeding under special circumstances as an exception to the prohibition against challenging NRC rules or regulations in adjudicatory proceedings; CLI-14-7, 80 NRC 1 (2014)
parties are expected to bear their burden and to clearly identify the matters on which they intend to rely with reference to a specific point; LBP-11-6, 73 NRC 149 (2011)
parties may not raise new arguments that are outside the scope of their contentions, but may legitimately amplify arguments presented in support of the contention in order to fairly respond to arguments raised by the opposing party; LBP-12-23, 76 NRC 445 (2012)
parties may seek leave of the board to file new contentions that challenge the sufficiency of Staff’s NEPA documents where information on which new contentions are based was not previously available and is materially different than information previously available and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-11-39, 74 NRC 862 (2011)
parties with new and significant information that could undermine the rationale for a Commission regulation must seek a rulemaking instead of challenging the regulation in a particular proceeding unless the information uniquely applies to a given adjudication; LBP-11-35, 74 NRC 701 (2011)
party may petition the Commission for permission to challenge a rule, but that party must make a showing of special circumstances; LBP-15-5, 81 NRC 249 (2015)
petition challenging an immediately effective enforcement order asking that licensee take certain physical security measures in addition to those already required by NRC regulations, to protect the spent fuel it planned to store at its power plant site was rejected; LBP-12-14, 76 NRC 1 (2012)
petition seeking additional enforcement measures beyond those prescribed by the order was properly denied; LBP-12-14, 76 NRC 1 (2012)
petition that attempts to proffer a nontimely contention without addressing the balancing factors in section 2.309(c) may be summarily rejected; LBP-12-7, 75 NRC 503 (2012)
petitioner argued against an enforcement order unless it were modified to clarify various points, including the costs of state and local law enforcement resources that would be needed to implement the order, but the board based its analysis on whether petitioner had shown that the requirements, as stated in the order, would make the facility less safe; CLI-13-2, 77 NRC 39 (2013)

petitioner bears the burden for setting forth clear arguments for its contentions; CLI-12-5, 75 NRC 301 (2012)

petitioner bears the burden of establishing the admissibility of proffered contentions; CLI-14-2, 79 NRC 11 (2014)

petitioner can justifiably miss a contention filing deadline by showing that the delay was caused by factors such as a weather event or unexpected health issues; LBP-12-27, 76 NRC 583 (2012)

petitioner cannot cure a deficient contention with new arguments not presented in the initial petition; LBP-15-4, 81 NRC 156 (2015)

petitioner cannot rest its contentions on bare assertions and speculation; LBP-11-21, 74 NRC 115 (2011)

petitioner does not demonstrate, with the level of support required under section 2.326(b), that a materially different result would have been likely had the possibility of recriticality over a period longer than 24 hours, or even 4 days, been considered in the SAMA analysis initially; CLI-12-3, 75 NRC 132 (2012)

petitioner does not have to prove its contentions at the admission stage; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011); LBP-11-14, 73 NRC 591 (2011); LBP-11-21, 74 NRC 115 (2011)

petitioner does not identify how the Fukushima accident paints a seriously different picture of the environment, given the bounding severe accident scenarios assumed in the GEIS analysis and its consideration of liquid pathways; CLI-12-15, 75 NRC 704 (2012)

petitioner fails to demonstrate that the issue of radiation dispersal due to site inundation is material to the findings the NRC must make to support approving a combined license application; LBP-12-7, 75 NRC 503 (2012)

petitioner fails to specifically explain why a materially different result would have been likely had information currently available from the Fukushima accident been considered ab initio in the severe accident mitigation alternatives analysis or why that information presents a significant safety or environmental issue; LBP-11-35, 74 NRC 701 (2011)

petitioner has not satisfied reopening standards because it has not raised a significant environmental issue and has not demonstrated that a materially different result would be likely if the contention had been considered initially; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)

petitioner has provided adequate support for its claim that there are numerous new severe accident mitigation alternatives candidates that should be evaluated for their significance; LBP-12-8, 75 NRC 539 (2012)

petitioner has the burden of going forward with a sufficient factual basis, but the ultimate burden of proof is not shifted from applicant to petitioner, nor do the rules require petitioner to prove its case at the contention stage; LBP-12-18, 76 NRC 127 (2012)

petitioner impermissibly assumes that applicant will violate applicable state law regarding its treatment of wells at the site; LBP-11-16, 73 NRC 645 (2011)

petitioner is not required to set forth all its evidence or to prove its contentions at the admissibility stage; LBP-12-17, 76 NRC 71 (2012)

petitioner is obliged to present factual allegations and/or expert opinion necessary to support its contention; LBP-12-3, 75 NRC 164 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-12-15, 76 NRC 14 (2012); LBP-12-27, 76 NRC 583 (2012)

petitioner is required to make reference to specific sources and documents on which it intends to rely; LBP-12-8, 75 NRC 539 (2012)

petitioner lacked good cause for a hearing request filed 7 days after the filing deadline when the argument relied on a misimpression of due dates; LBP-11-9, 73 NRC 391 (2011)

petitioner may claim deficiencies in the application’s cultural resources discussion even though it is generally not expected that the applicant’s cultural resources discussion will be comprehensive; CLI-14-2, 79 NRC 11 (2014)

petitioner may file new contentions if there are data or conclusions in the draft or final environmental impact statement or environmental assessment that differ significantly from data or conclusions in applicant’s documents; LBP-15-11, 81 NRC 401 (2015)
petitioner may not provide support for a contention in its reply; LBP-15-5, 81 NRC 249 (2015)
petitioner may not rely on a document generated by a state agency if that document contains nothing more than a request for information; LBP-11-6, 73 NRC 149 (2011)
petitioner may not rely on general allegations, but must show specific ties to NRC regulatory requirements or to safety in general to demonstrate a genuine dispute of fact or law; LBP-15-20, 81 NRC 829 (2015)
petitioner may not provide support for a contention in its reply; LBP-15-5, 81 NRC 249 (2015)
petitioner may not rely on a document generated by a state agency if that document contains nothing more than a request for information; LBP-11-6, 73 NRC 149 (2011)
petitioner may not rely on general allegations, but must show specific ties to NRC regulatory requirements or to safety in general to demonstrate a genuine dispute of fact or law; LBP-15-20, 81 NRC 829 (2015)
petitioner may not rely on general allegations, but must show specific ties to NRC regulatory requirements or to safety in general to demonstrate a genuine dispute of fact or law; LBP-15-20, 81 NRC 829 (2015)

petitioner must provide factual evidence or supporting documents that produce some doubt about the adequacy of a specified portion of applicant’s documents or that provide supporting reasons that tend to show that there is some specified omission from applicant’s documents; LBP-15-20, 81 NRC 829 (2015)
petitioner must provide references to specific sources and documents on which petitioner intends to rely to support its contention; LBP-13-8, 78 NRC 1 (2013)
petitioner must provide sufficient information to show that a genuine dispute exists on a material issue of law or fact; LBP-12-13, 75 NRC 784 (2012)
petitioner must provide sufficient information to show that a genuine dispute exists with the environmental assessment on a material issue of law or fact; CLI-15-25, 82 NRC 389 (2015)
petitioner must provide sufficient information to show that a genuine dispute exists with the applicant/licensee on a material issue of law or fact, including references to specific portions of the application that petitioner disputes and the supporting reasons for each dispute; CLI-14-2, 79 NRC 11 (2014); LBP-12-24, 76 NRC 503 (2012)
petitioner must raise a genuine dispute with the license application and must provide underlying factual or legal support; CLI-12-15, 75 NRC 704 (2012)
petitioner must raise issues that are within the scope of the proceeding; LBP-12-25, 76 NRC 540 (2012)
petitioner must refer to specific portions of the application that it disputes, along with the supporting reasons for each dispute; CLI-15-20, 82 NRC 211 (2015)
petitioner must show that a genuine dispute exists on a material issue of law or fact relating to the application; LBP-15-19, 81 NRC 815 (2015)
petitioner must state the alleged facts or expert opinions that support its position and on which it intends to rely at hearing; CLI-15-20, 82 NRC 211 (2015)
petitioner must state the issue of law or fact to be raised or controverted and a brief explanation of the basis for each contention; CLI-15-20, 82 NRC 211 (2015)
petitioner must, among other things, provide a concise statement of the alleged facts or expert opinions that support its position on the issue and on which the petitioner intends to rely at hearing, together with references to the specific sources and documents that support its position; CLI-12-5, 75 NRC 301 (2012)
petitioner need not prove its contentions at the admissibility stage; LBP-11-16, 73 NRC 645 (2011); LBP-12-8, 75 NRC 539 (2012)
petitioner need not rerun applicant’s own cost-benefit calculations, but must do more than merely suggest that additional factors be evaluated or that different analytical techniques be used; LBP-15-5, 81 NRC 249 (2015)
petitioner or intervenor may file timely new or amended contentions, with leave of the board, if three requirements are met; LBP-11-9, 73 NRC 391 (2011)
petitioner proffers no new information on station blackout or mitigation measures, and the events therefore cannot form the basis for an assertion of timeliness of a motion to reopen; LBP-11-35, 74 NRC 701 (2011)
petitioner proposing alternative inputs or methodologies for the severe accident mitigation alternatives analysis must present some factual or expert basis for why the proposed changes in the analysis are warranted; CLI-12-8, 75 NRC 393 (2012)
petitioner should not wait for the Staff to perform its responsibilities under the National Historic Preservation Act before it raises a claim that information is lacking; CLI-14-2, 79 NRC 11 (2014)
petitioner who failed in its revised petition to challenge applicant’s reliance on the generic environmental impact statement cannot raise that challenge for the first time in its reply; LBP-11-6, 73 NRC 149 (2011)
petitioner that fails to provide sufficient factual or expert support for the claims in its contention in contravention of section 2.309(f)(1)(v) also may have failed to show a genuine dispute with the application as required under section 2.309(f)(1)(vi); LBP-15-1, 81 NRC 15 (2015)
petitioner who files a new contention after the board has already closed the evidentiary record is obliged to address the reopening standards; CLI-12-6, 75 NRC 352 (2012)
petitioner who satisfies the reopening standard must also show that its proposed new contention meets the standard for new or amended contentions in section 2.309(c) and the underlying admissibility standards of section 2.309(f)(1); LBP-14-8, 79 NRC 519 (2014)
petitioner will have an opportunity to challenge the board’s contention admissibility decision at the end of the case; CLI-12-13, 75 NRC 681 (2012)

petitioner’s assertion that applicant’s environmental report must be supplemented to take account of allegedly new and significant information is, as a procedural matter, unfounded and must be rejected; LBP-11-33, 74 NRC 675 (2011)

petitioner’s assertion that continued operation of an independent spent fuel storage installation causes fear and anxiety among its members is not a valid claim under NEPA; LBP-12-24, 76 NRC 503 (2012)

petitioner’s assertion that recriticality is demonstrated by the relative quantities of radionuclides released is not self-evident and is clearly of the class of statements that must be supported by expert opinion; LBP-11-23, 74 NRC 287 (2011)

petitioner’s assertion that severe accidents from spent fuel pools must be considered in applicant’s SAMA analysis is in direct conflict with NRC regulations; LBP-11-2, 73 NRC 28 (2011)

petitioner’s attempt to tie NEPA environmental justice claim to Fukushima Task Force report is an improper effort to interpose concerns that could have been raised at the outset of the proceeding; LBP-11-37, 74 NRC 774 (2011)

petitioner’s averment that the proffered environmental contentions will better position the agency to fully review the possible impacts of applicant’s proposed project and, based on petitioner’s expert’s information, may address concerns and mitigate impacts to water, land, and other resources is sufficient to fulfill the redressability requirement for standing; CLI-12-12, 75 NRC 603 (2012)

petitioner’s burden on a contention of omission is to identify the omission and the supporting reasons for petitioners’ belief that the application fails to contain information on a relevant matter as required by law; LBP-15-5, 81 NRC 249 (2015)

petitioner’s challenge to applicant’s use of Three Mile Island data constitutes a genuine dispute on a material issue and is within the scope of the license renewal proceeding because it challenges the adequacy of the environmental report; LBP-12-8, 75 NRC 539 (2012)

petitioner’s demand for compliance with U.S. Army Corps of Engineers requirements is not within the scope of a combined license proceeding, because it is not the province of the NRC to enforce another agency’s regulations; LBP-11-6, 73 NRC 149 (2011)

petitioner’s failure to address applicant’s supplemental economic analyses, demonstrate specific knowledge of the analysis, and not indicate, even broadly, that the SAMA economic cost-benefit conclusions are not sufficiently conservative renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)

petitioner’s issue of NRC Staff’s compliance with its NEPA obligation to undertake a full evaluation of the environmental impacts associated with a proposed federal action is within the scope of an operating license amendment proceeding and material to the findings NRC must make; LBP-15-13, 81 NRC 456 (2015)

petitioner’s issue will be ruled inadmissible if the petitioner has offered no tangible information, no experts, no substantive affidavits, but instead only bare assertions and speculation; LBP-11-6, 73 NRC 149 (2011)

petitioner’s request that the Commission defer a decision on the license renewal applications pending disposition of its forthcoming rulemaking and other potential events is premature and is therefore denied; CLI-14-6, 79 NRC 445 (2014)

petitioners are not allowed to postpone filing a contention challenging publicly available information or analysis until NRC Staff issues some document that collects, summarizes, and places into context the facts supporting that contention; CLI-15-17, 82 NRC 33 (2015)

petitioners are not barred from contending that additional testing is necessary to show margins of safety equivalent to those of the ASME BPV Code, Section XI, Appendix G because petitioners allege noncompliance with 10 C.F.R. Part 50, Appendix G and not Appendix H; LBP-15-20, 81 NRC 829 (2015)

petitioners are not required at the contention admission stage to prove their case on the merits or even to provide expert or factual support as strong as that necessary to withstand a summary disposition motion; LBP-15-20, 81 NRC 829 (2015)

petitioners are not required to demonstrate their asserted injury with certainty at the contention admissibility stage of the proceeding; CLI-12-12, 75 NRC 603 (2012); CLI-15-25, 82 NRC 389 (2015)

petitioners are obliged to present factual allegations and/or expert opinion necessary to support their contentions; LBP-15-1, 81 NRC 15 (2015)
petitioners are required to make a minimal showing that material facts are in dispute, thereby
demonstrating that an inquiry in depth is appropriate; LBP-15-20, 81 NRC 829 (2015)

petitioners are required to provide sufficient factual support to demonstrate a genuine dispute; LBP-15-20,
81 NRC 829 (2015)

petitioners can raise compliance issues only under 10 C.F.R. 2.206, which would allow them to petition
NRC to take an enforcement action; LBP-15-5, 81 NRC 249 (2015)

petitioners cannot challenge an NRC regulation without first obtaining a waiver; LBP-15-20, 81 NRC 829
(2015)

petitioners cannot rely on a late attempt to reinvigorate thinly supported contentions by presenting entirely
new arguments in reply briefs; LBP-15-4, 81 NRC 156 (2015)

petitioners did not demonstrate that the issue of whether the MACCS2 was subject to quality assurance is
material to the findings the NRC must make under NEPA to support the requested license extension;
LBP-11-13, 73 NRC 534 (2011)

petitioners do not need to cite a specific portion of the application to support a contention of omission;

petitioners do not provide any alleged facts or expert support indicating that the river valley is within the
geographic area for which applicant was required to model atmospheric dispersion; LBP-11-13, 73 NRC
534 (2011)

petitioners fail to link any of their past criticisms to specific provisions of the environmental report, and
the board declines to pore through the attachments to their intervention submission to assemble the
basis for such a contention; LBP-12-3, 75 NRC 164 (2012)

petitioners have an affirmative obligation to request confidential and proprietary information that has not
been made publicly available in order to support a proposed contention; LBP-11-9, 73 NRC 391 (2011)

petitioners have not established that use of another source term would identify additional cost-beneficial
severe accident mitigation alternatives; LBP-11-13, 73 NRC 534 (2011)

petitioners have not raised an issue material to findings that NRC must make to support final decisions
and they are unable to satisfy contention admissibility standards or meet the criteria to reopen a closed
record; CLI-15-4, 81 NRC 221 (2015)

petitioners may challenge a Staff guidance document such as a Regulatory Guide; LBP-15-20, 81 NRC
829 (2015)

petitioners may not raise arguments for the first time in their reply; CLI-15-22, 82 NRC 310 (2015)

petitioners may not raise in adjudicatory proceedings contentions attacking the agency’s rules and
regulations or contentions that are the subject of ongoing rulemakings; LBP-11-29, 74 NRC 612 (2011)

petitioners may raise contentions seeking correction of significant inaccuracies and omissions in the
environmental report; LBP-15-5, 81 NRC 249 (2015)

petitioners may raise issues not addressed by a specific regulation when unique features in the facility or
ongoing development of a generic solution mean that there are some gaps in the regulatory scheme that
must be addressed on a case-by-case basis; LBP-15-20, 81 NRC 829 (2015)

petitioners must do more than rest on the mere existence of requests for additional information as a basis
for their contention; CLI-15-8, 81 NRC 500 (2015)

petitioners must offer more than speculation at the contention admission stage; LBP-15-5, 81 NRC 249
(2015)

petitioners must point to a deficiency in the application, and not merely suggest other ways an analysis
could have been done, or other details that could have been included; CLI-12-5, 75 NRC 301 (2012)

petitioners must provide a concise statement of the alleged facts or expert opinions that support their
position on the issue, together with references to the specific sources and documents, on which they
intend to rely to support their position on the issue; LBP-15-5, 81 NRC 249 (2015); LBP-15-20, 81
NRC 829 (2015)

petitioners must provide a nexus between its concerns and any deficiencies in applicant’s SAMA analysis;

petitioners must provide site-specific support to show that the severe accident mitigation alternatives
analysis is unreasonable; LBP-15-5, 81 NRC 249 (2015)

petitioners must satisfy the six basic requirements of specificity, brief explanation, scope, materiality,
conce statement of alleged facts or expert opinion, and genuine dispute; LBP-12-25, 76 NRC 540
(2012)
petitioners question applicant’s failure to consider the qualitative benefits of installing engineered filters; LBP-15-5, 81 NRC 249 (2015)

petitioners who choose to wait to raise contentions that could have been raised earlier risk the possibility that there will not be a material difference between the application and NRC Staff’s review documents, thus rendering any newly proposed contention on previously available information impermissibly late; CLI-15-1, 81 NRC 1 (2015)

petitioners who have been denied a hearing for raising an issue outside the scope of a proceeding could still raise the issue through a petition for enforcement under 10 C.F.R. 2.206; LBP-12-14, 76 NRC 1 (2012)

petitioners’ argument opposing an order that imposed additional security measures at a spent fuel storage facility, because it created a false sense of security, was rejected because petitioners did not explain how they would be better off without the measures in the order; CLI-13-2, 77 NRC 39 (2013)

petitioners’ argument that additional testing should be required to demonstrate compliance with 10 C.F.R. 50.61a is an impermissible challenge to that regulation; CLI-15-22, 82 NRC 310 (2015)

petitioners’ argument that power reactor is being operated as a test reactor reflects a misreading of 10 C.F.R. 50.59; LBP-15-20, 81 NRC 829 (2015)

petitioners’ assertions that the MACCSS2 code was not subjected to quality assurance requirements is deficient because a severe accident mitigation alternatives analysis is not subject to such requirements; LBP-11-2, 73 NRC 28 (2011)

petitioners’ contention challenges the sufficiency of the equivalent margins analysis to provide reasonable assurance of reactor safety and is therefore within the scope of the proceeding; LBP-15-20, 81 NRC 829 (2015)

petitioners’ reliance on loss of future opportunities to challenge by adjudicatory intervention licensee-initiated changes in the low-level effluent monitoring details fell short of an admissible contention; LBP-12-25, 76 NRC 540 (2012)

petitions that lack alleged facts or expert opinions to support the contentions are inadmissible; LBP-11-29, 74 NRC 612 (2011)

petitions that proffer a nontimely contention without addressing the balancing factors in section 2.309(c) may be summarily rejected; LBP-12-9, 75 NRC 615 (2012)

plants for which a SAMA analysis was conducted for the first time under section 51.53(c)(ii)(L) may face general criticism that the passage of time between original licensing and renewal has rendered their SAMA analysis out of date upon application for a subsequent renewal term; CLI-13-7, 78 NRC 199 (2013)

pleading requirements calling for a recitation of facts or expert opinion supporting the issue raised are inapplicable to a contention of omission beyond identifying the regulatively required missing information; LBP-15-5, 81 NRC 249 (2015); LBP-15-11, 81 NRC 401 (2015)

pleadings submitted by pro se petitioners are afforded greater leniency than petitions drafted with the assistance of counsel; LBP-15-13, 81 NRC 456 (2015)

pointing to alleged new and significant information is not enough to allow boards to adjudicate an issue resolved generically by regulation; LBP-15-5, 81 NRC 249 (2015)

portion of a contention asserting that applicant failed to consider the results of a particular study in its SAMA analysis is admissible; CLI-11-11, 74 NRC 427 (2011)

portions of a contention relevant to completion of the Endangered Species Act § 7 consultation process and adequacy of NRC Staff’s impact analyses relevant to the three named species meet the admissibility standards; LBP-13-9, 78 NRC 37 (2013)

possible future action must at least constitute a proposal pending before the agency to be ripe for adjudication, and to establish that cumulative impacts of the action must be addressed, petitioner must first show that any proposal applicant has made is so interdependent with the application at issue that it would be unwise or irrational to complete one without the other; LBP-14-6, 79 NRC 404 (2014)
post-9/11 motion to reopen satisfied rules for reopening the record and for late-filed contentions, but contention involving a license amendment request for reconfiguring a spent fuel pool was inadmissible; CLI-11-5, 74 NRC 141 (2011)

post-environmental report, intervenor would need to file a motion to amend an already-admitted contention or to admit a new contention if the information in NRC Staff’s NEPA statement is sufficiently different from information in the ER that supported the original contention’s admission; LBP-13-10, 78 NRC 117 (2013)

post-hearing petition contention (new or amended contention) also must satisfy the substantive contention admissibility standards; LBP-13-9, 78 NRC 37 (2013)

potential legislative action that might result in a reduction in demand is speculative and therefore does not provide a basis for admission of a contention on need for power; LBP-11-7, 73 NRC 254 (2011)

potential to broaden or delay a proceeding may not be relied on to exclude a contention because NRC has a duty to consider new and significant information that arises before it makes its licensing decisions; LBP-11-35, 74 NRC 701 (2011)

presiding officer may restrict irrelevant, immaterial, unreliable, duplicative or cumulative evidence and/or arguments; LBP-11-13, 73 NRC 534 (2011)

prior to NRC’s 1989 rule revision, intervenors were able to trigger hearings after merely copying a contention from another proceeding, even though these admitted intervenors often had negligible knowledge of the issues and no direct case to present; CL-12-5, 75 NRC 301 (2012); CL-12-8, 75 NRC 393 (2012)

proper question is not whether there are plausible alternative choices for use in the SAMA analysis, but whether the analysis that was done is reasonable under NEPA; CLI-13-7, 78 NRC 199 (2013)

properly formulated contentions must focus on the license application in question, challenging either specific portions of, or alleged omissions from, the application (including the safety analysis report/technical report and the ER) so as to establish that a genuine dispute exists with the applicant on a material issue of law or fact; LBP-12-27, 76 NRC 583 (2012)

proponent of a contention must provide sufficient information to show that a genuine dispute exists with applicant/licensee on a material issue of law or fact; CLI-14-2, 79 NRC 11 (2014)

proponent of a contention, not the licensing board, is responsible for formulating the contention and providing the necessary information to satisfy the basis requirement for its admission; CL-12-5, 75 NRC 301 (2012); CL-12-13, 75 NRC 681 (2012); CL-15-23, 82 NRC 321 (2015)

proponents of contentions must challenge aspects of license applications with specificity, backed up with substantive technical support, mere conclusions or speculation being insufficient, but an even heavier burden applies to motions to reopen; LBP-11-35, 74 NRC 701 (2011)

proponents of new or amended contentions are required to demonstrate good cause for their filing, which includes a demonstration that the information on which the new or amended contention is based is materially different from information previously available; CL-15-1, 81 NRC 1 (2015)

proposed new contention will be considered timely if it is filed within 30 days of the date when the new and material information on which the proposed contention is based first becomes available; LBP-11-7, 73 NRC 254 (2011)

proposed new or amended contention shall be deemed timely if filed within 30 days of the date when the new and material information on which it is based first becomes available; LBP-12-23, 76 NRC 445 (2012)

proposed new or amended contentions shall be deemed timely if filed within 60 days of the date when the document containing the new and material information first becomes available; LBP-12-12, 75 NRC 742 (2012)

proposed rule or proposed law may not support an admissible contention because its ultimate effect is at best speculative; LBP-15-15, 81 NRC 598 (2015)

proposed rules are not binding upon administrative agencies and are not ripe for review by NRC boards; LBP-15-15, 81 NRC 598 (2015)

providing a brief explanation of the basis for a contention is but one of the six requirements for establishing that a contention is admissible; LBP-11-34, 74 NRC 685 (2011)

providing any material or document as a basis for a contention without setting forth an explanation of its significance is inadequate to support admission of that contention; LBP-12-12, 75 NRC 742 (2012); LBP-15-20, 81 NRC 829 (2015)
psychological fears or stigma effects are not cognizable NEPA claims; CLI-12-5, 75 NRC 301 (2012)
publication of NRC Staff’s draft environmental impact statement may moot a contention challenging the
environmental analysis in the applicant’s environmental report, if the DEIS dispenses with the issues
raised in the original contention challenging the ER; LBP-11-1, 73 NRC 19 (2011)
publication of the draft environmental impact statement does not provide an opportunity to renew
previously filed (and rejected) contentions, but rather, petitioner must demonstrate that the DEIS actually
contains new data or conclusions; LBP-12-12, 75 NRC 742 (2012)

purpose of 10 C.F.R. 2.309(f)(1) is to focus litigation on concrete issues and result in a clearer and more
focused record for decision; LBP-13-8, 78 NRC 1 (2013); LBP-15-5, 81 NRC 249 (2015)
purpose of contention pleading requirements is to focus litigation on concrete issues and result in a
clearer and more focused record for decision; LBP-12-25, 76 NRC 540 (2012)
purpose of the timeliness rules is not to trap petitioners into a no-win situation where a contention is
called premature if filed in the original petition and untimely if petitioners wait for a potential event to
actually transpire; LBP-15-24, 82 NRC 68 (2015)
radiological claims that represent a direct challenge to prior license amendments authorizing extended
power uprates are outside the scope of a license amendment proceeding; LBP-15-13, 81 NRC 456
(2015)

raising new issues related to the Fukushima events does not warrant new procedures or a separate
timetable; CLI-12-6, 75 NRC 352 (2012)
rarely should basis for a contention require more than a sentence or two; LBP-11-34, 74 NRC 685 (2011)
reach of a contention necessarily hinges upon its terms coupled with its stated bases; CLI-12-5, 75 NRC
301 (2012); LBP-13-6, 77 NRC 253 (2013); LBP-13-10, 78 NRC 117 (2013)
reference to Fukushima Task Force Report recommendations alone, without facts or expert opinion that
explain their significance for the unique characteristics of the sites or reactors that are the subject of the
petitions, does not provide sufficient support for the common contention; LBP-12-18, 76 NRC 127
(2012)

references to prior problems involving estimation of decommissioning costs are inadequate to establish a
likelihood that the amount of applicant’s decommissioning bond will be insufficient; LBP-12-3, 75 NRC
164 (2012)

referencing an aging management program described in the GALL Report does not insulate a program
from an adequately supported challenge at a hearing; LBP-11-2, 73 NRC 28 (2011)
regardless of when filed, all proposed contentions must comply with the general contention admissibility
criteria; LBP-11-7, 73 NRC 254 (2011)
regulations are not subject to collateral attack in NRC hearings; LBP-13-9, 78 NRC 37 (2013)
rejection of contention, where petitioner has other contentions pending for hearing, does not constitute
serious and irreparable harm or affect the structure of the proceeding in a pervasive or unusual manner;
CLI-15-17, 82 NRC 33 (2015)
release of NRC Staff’s environmental review document may be the first opportunity for a petitioner to
question the accuracy of the Staff’s environmental analysis; CLI-15-17, 82 NRC 33 (2015)
relevant issues for an additional 20 years of reactor plant operation differ from those when a reactor plant
is first built and licensed; LBP-11-21, 74 NRC 115 (2011)
repetition of an issue previously decided by a licensing board or the Commission may also be barred by
the doctrine of collateral estoppel; LBP-11-10, 73 NRC 424 (2011)
reopening a proceeding with respect to a specific issue would not have the effect of reopening the
proceeding for adjudication on unrelated matters once a record is closed; CLI-12-17, 76 NRC 207
(2012)
reopening standards expressly contemplate contentions that raise issues not previously litigated; CLI-12-3,
75 NRC 132 (2012); CLI-12-6, 75 NRC 352 (2012)
reply brief cannot introduce new issues or expand the scope of arguments advanced in the original
petition, but rather must focus on actual or logical arguments presented in the original petition or raised
in answers to it; LBP-15-26, 82 NRC 163 (2015)
reply brief may not be used to present entirely new arguments in support of an existing contention or to
propose a new contention, but board may consider information in a reply that legitimately amplifies an
issue presented in the original petition; LBP-15-5, 81 NRC 249 (2015)

829
SUBJECT INDEX

reply briefs may not be used to introduce new arguments to reinvigorate thinly supported contentions; CLI-12-5, 75 NRC 301 (2012)
reply briefs may not contain new information that was not raised in either the petition or answers, but arguments that respond to the petition or answers, whether they are offered in rebuttal or in support, are not precluded; LBP-12-8, 75 NRC 539 (2012)
request for hearing and/or petition for leave to intervene will be granted if the board determines that requestor/petitioner has standing and has proposed at least one admissible contention; LBP-12-8, 75 NRC 539 (2012)
request for hearing or petition for leave to intervene must explain proposed contentions with particularity; CLI-11-8, 74 NRC 214 (2011)
request for hearing regarding a newly proffered contention cannot be admitted unless it satisfies the stringent standards for reopening the record; LBP-11-20, 74 NRC 65 (2011)
request that NRC conduct a separate generic NEPA analysis regarding whether the Fukushima events constitute new and significant information under NEPA that must be analyzed as part of the environmental review for new reactor and license renewal decisions is premature; LBP-12-18, 76 NRC 127 (2012)
request to admit a new or amended contention requires petitioner to show that the information upon which it is based was not previously available and is materially different from information previously available; CLI-14-2, 79 NRC 11 (2014)
requests for a generic NEPA analysis were premature where the NRC evaluation of the Fukushima Dai-ichi events was still ongoing; LBP-15-24, 82 NRC 68 (2015)
requirement for brief explanation of the basis for a contention merely requires an explanation of the rationale or theory of the contention; LBP-15-20, 81 NRC 829 (2015)
requirement that a contention refer to specific portions of the application ensures that the board will be able to determine whether the contention is within the scope of the proceeding and that applicant knows which portions of the application it must defend; LBP-15-20, 81 NRC 829 (2015)
requirement that a contention refer to specific portions of the application is satisfied when a commonsense reading of the petition makes abundantly clear which sections of the application petitioners are challenging, even though petitioners do not specifically cite particular sections; LBP-15-20, 81 NRC 829 (2015)
requirements do not apply to hearing demands submitted under section 2.103(b)(2) and petitioner lacked actual and constructive notice of the contention admissibility requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)
requirements for an admissible contention are provided in 10 C.F.R. 2.309(f)(i)-(vi); CLI-15-8, 81 NRC 500 (2015)
requirements for an admissible contention are specified; LBP-12-3, 75 NRC 164 (2012)
requiring petitioners to proffer additional and conclusive support for the effect of their proposed contention would improperly require boards to adjudicate the merits of contentions before admitting them; LBP-11-7, 73 NRC 254 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-11-25, 74 NRC 380 (2011); LBP-15-20, 81 NRC 829 (2015)
results of review by NRC Staff and Indian tribe of applicant’s newly disclosed well log data did not paint a seriously different picture of the environmental landscape; LBP-15-16, 81 NRC 618 (2015)
review of a board’s dismissal of some contentions would normally await the end of the case; CLI-12-19, 76 NRC 377 (2012)
review of a license renewal application does not reopen issues relating to a plant’s current licensing basis; LBP-12-24, 76 NRC 503 (2012)
routine contention admissibility decisions do not affect the basic structure of a proceeding in a pervasive or unusual manner; CLI-12-13, 75 NRC 681 (2012)
routine contention admissibility determinations generally are not appropriate for interlocutory review; CLI-12-12, 75 NRC 603 (2012)
rule waiver would be necessary to litigate the issue of potentially new and significant information pertaining to bird collisions in an adjudicatory proceeding; CLI-13-7, 78 NRC 199 (2013)
rules on contention admissibility are strict by design; LBP-11-21, 74 NRC 115 (2011); LBP-11-22, 74 NRC 250 (2011); LBP-12-25, 76 NRC 540 (2012); LBP-13-8, 78 NRC 1 (2013); LBP-15-5, 81 NRC 249 (2015); LBP-15-17, 81 NRC 753 (2015); LBP-15-26, 82 NRC 163 (2015)

830
ruling on an appeal, the Commission defers to a board’s rulings on contention admissibility absent an error of law or abuse of discretion; CLI-15-22, 82 NRC 310 (2015)
safety culture issues are outside the scope of license renewal proceedings; LBP-15-5, 81 NRC 249 (2015)
safety culture, operational history, quality assurance, quality control, management competence, human factors, and emergency planning issues are beyond the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)
safety evaluation report did not add a last piece of information, but merely compiled and organized preexisting information; CLI-11-8, 74 NRC 214 (2011)
safety issue that does not involve aging management issues is outside the scope of the license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
safety issues that are routinely addressed through the agency’s ongoing regulatory oversight are outside the scope of license renewal proceedings because considering them in that context would be unnecessary and wasteful; LBP-11-2, 73 NRC 28 (2011)
safety matters generally need to be raised, relative to an admitted safety contention, in the context of the merits disposition of the already admitted safety contention or, in the case of a new issue, as a wholly new safety contention; LBP-13-10, 78 NRC 117 (2013)
safety portion of contention questioning risk analysis of the long-term storage of irradiated nuclear fuel is inadmissible in license renewal proceeding; LBP-13-8, 78 NRC 1 (2013)
SAMA contention is admissible only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-11-13, 73 NRC 534 (2011)
scope of a contention is limited to the issues of law and fact pleaded with particularity and any factual and legal material in support thereof; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)
scope of a proceeding is defined by the Commission in its initial hearing notice and order referring the proceeding to the licensing board; LBP-12-18, 76 NRC 127 (2012)
scope of a section 2.202 proceeding is limited to the narrow issues of whether the facts stated in the order are true and whether the remedy selected is supported by those facts; CLI-13-2, 77 NRC 39 (2013)
scope of an adjudicatory hearing is limited to the notice of hearing, which, in licensing matters, normally extends only to the application at issue; CLI-14-11, 80 NRC 167 (2014)
scope of an admitted contention is determined by the bases set forth in support of the contention; LBP-11-14, 73 NRC 591 (2011)
scope of any hearing should include the proposed license amendments, and any health, safety, or environmental issues fairly raised by them; LBP-12-25, 76 NRC 540 (2012)
scope of license amendment proceedings is limited to the license amendment request, and petitioners typically cannot challenge a Commission regulation; LBP-15-24, 82 NRC 68 (2015)
scope of the license renewal proceeding on safety-related issues is limited to plant structures and components that will require an aging management review for the period of extended operation under the renewed license and the plant’s systems, structures, and components that are subject to an evaluation of time-limited aging analyses; CLI-15-21, 82 NRC 295 (2015)
section 2.309(c)(vii) weighs heavily against admission of a contention because the addition of a hearing on its subject matter will unduly broaden the issues and materially delay the proceeding; LBP-11-35, 74 NRC 701 (2011)
section 2.381 applies to appeals of rulings on new contentions filed after initial intervention petitions; CLI-12-7, 75 NRC 379 (2012)
severe accident mitigation alternatives analysis issues can present difficult judgment calls at the contention admission stage; LBP-15-5, 81 NRC 249 (2015)
severe accident mitigation alternatives are listed as Category 2 issues, and NRC must treat them as such; LBP-12-8, 75 NRC 539 (2012)
severe accident mitigation alternatives contentions are admissible only if it looks genuinely plausible that inclusion of an additional factor or use of other assumptions or models may change the cost-benefit conclusions for the SAMA candidates evaluated; LBP-11-2, 73 NRC 28 (2011)
should requirements for reopening the record be satisfied, the requirements for untimely contentions must also be satisfied, as well as the contention admissibility criteria of section 2.309(f)(1); LBP-11-35, 74 NRC 701 (2011)
should the Commission determine at a future time that case-specific challenges to waste confidence are appropriate for consideration; normal procedural rules will apply; LBP-13-1, 77 NRC 57 (2013); LBP-14-6, 79 NRC 404 (2014)
showing necessary to demonstrate that a materially different result in the outcome of the severe accident mitigation alternatives analysis would be or would have been likely had the newly proffered evidence been considered initially is discussed; LBP-11-35, 74 NRC 701 (2011)
significant, high, and adverse disparate impacts are necessary to form a valid environmental justice contention; LBP-12-24, 76 NRC 503 (2012)
simply mentioning the need to demonstrate a materially different result in the outcome of the severe accident mitigation alternatives analysis would be or would have been likely had the newly proffered evidence been considered initially is discussed; LBP-11-35, 74 NRC 701 (2011)
simply referencing a study without explaining the information’s significance relative to the potential containment leakage monitored by the testing at issue does not establish its materiality; LBP-15-26, 82 NRC 163 (2015)
site-specific environmental issues are Category 2 issues and thus admissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)
some reasonably specific factual or legal basis is required; CLI-15-8, 81 NRC 500 (2015)
speculation by an expert cannot form the basis for admission of a contention on the basis of the matter being exceptionally grave; LBP-11-20, 74 NRC 65 (2011)
speculation cannot be the basis for an admissible contention; LBP-12-27, 76 NRC 583 (2012)
speculation that NRC would consider other SAMAs than have been previously considered does not demonstrate that the issue raised is material to NRC’s decision; LBP-12-1, 75 NRC 1 (2012)
standard for admission of new or amended contentions involves a balancing of eight factors; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)
standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed contention; CLI-11-8, 74 NRC 214 (2011); CLI-12-10, 75 NRC 479 (2012); LBP-11-20, 74 NRC 65 (2011); LBP-11-22, 74 NRC 259 (2011); LBP-11-35, 74 NRC 701 (2011)
standard for determining whether a materially different result would be obtained is measured using the Commission’s test of whether it has been shown that a motion for summary disposition could be defeated; LBP-11-20, 74 NRC 65 (2011)
standard for review of contention admissibility determinations is the same, whether an appeal lies under section 2.311 or 2.341, and the Commission will disturb a licensing board’s contention admissibility ruling only if there has been an error of law or an abuse of discretion; CLI-12-7, 75 NRC 379 (2012)
standards are deliberately strict, and any contention that does not satisfy NRC requirements will be rejected; CLI-11-8, 74 NRC 214 (2011)
standards for admission of new contentions are reviewed; LBP-11-25, 74 NRC 380 (2011)
standards governing contention admissibility are strict by design; LBP-12-7, 75 NRC 503 (2012)
state has provided sufficiently supported expert opinion to show at the contention admissibility stage why the inadvertent release of radionuclides is enough of a risk to public health and safety to warrant merits consideration as an unforeseen expense; LBP-15-24, 82 NRC 68 (2015)
state’s claim that licensee’s license amendment request contains incomplete and incorrect statements concerning its use of the trust fund is within the scope of the license amendment proceeding as defined in the notice of opportunity to request a hearing; LBP-15-24, 82 NRC 68 (2015)
statement of supporting facts or expert opinion to establish how the project would impair the visual resources, rather than mere speculation, is required for an admissible contention; LBP-12-3, 75 NRC 164 (2012)
subject matter of contentions must impact the grant or denial of a pending license application; LBP-12-15, 76 NRC 14 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-15-20, 81 NRC 829 (2015)
sufficiency of an aging management program that meets the GALL Report’s recommendations can be challenged if the contention admissibility requirements are otherwise met; CLI-12-10, 75 NRC 479 (2012)
sufficiency of the NRC’s hard look at the benefits of severe accident mitigation alternatives in comparison to their costs is subject to litigation in a license renewal proceeding; LBP-11-17, 74 NRC 11 (2011)
support for a contention must be provided when the contention is filed, not at some later date; LBP-15-5, 81 NRC 249 (2015)
support required for a contention necessarily will depend on the issue sought to be litigated; CLI-11-11, 74 NRC 427 (2011)
supertions/speculation regarding effectiveness of hydrogen control mechanisms are outside the scope of license renewal proceedings; LBP-11-35, 74 NRC 701 (2011)
tardy filing of a contention may be excusable only where the facts upon which the amended or new contention is based were previously unavailable; CLI-12-10, 75 NRC 479 (2012)
test for materiality that would require petitioners to demonstrate quantitatively how an alleged defect would result in a violation of pertinent requirements is rejected; LBP-11-7, 73 NRC 254 (2011)
that NRC Staff will develop additional information relevant to cultural resources, as part of its National Historic Preservation Act review, does not preclude a challenge to the application’s cultural resources discussion; CLI-14-2, 79 NRC 11 (2014)
that the corrective measures outlined in a confirmatory order do not improve petitioner’s personal situation does not provide grounds to rescind the confirmatory order; CLI-13-2, 77 NRC 39 (2013)
there is a difference between asserting genuinely new arguments and alerting the tribunal to new, additional support for an existing argument; LBP-15-27, 82 NRC 184 (2015)
there is no contention-based requirement mandating that to have standing, besides showing that a cognizable injury is associated with a proposed licensing action and that granting the relief sought will address that injury, petitioner also must establish a link between that injury and the issues it wishes to litigate in challenging an application; LBP-12-3, 75 NRC 164 (2012)
there is no legal requirement that an applicant consider population projections to the end of the license term, but petitioner could succeed in raising such a contention if it demonstrated that considering such data would be material to the proceeding; LBP-12-8, 75 NRC 539 (2012)
there must be some significant link between a claimed deficiency and NRC’s ultimate determination whether applicant will adequately protect the health and safety of the public and the environment; LBP-15-20, 81 NRC 829 (2015); LBP-15-24, 82 NRC 68 (2015)
there simply would be no end to NRC licensing proceedings if petitioners could ignore timeliness requirements and add new contentions at their convenience based on information that could have formed the basis for a timely contention at the outset of the proceeding; LBP-11-20, 74 NRC 65 (2011)
thinly supported contention is inadmissible; CLI-15-6, 81 NRC 340 (2015)
time for challenging the environmental report passes when NRC Staff releases its draft supplemental environmental impact statement, but contentions challenging the ER can be filed with the initial petition and prior to the time Staff’s environmental review documents are completed; LBP-12-11, 75 NRC 731 (2012)
timeliness of late-filed contentions turns on fact-specific considerations, such as when new documents or information first became available and how promptly intervenors reacted; LBP-15-24, 82 NRC 68 (2015)
timely new contentions challenging the sufficiency of Staff’s NEPA documents may be filed where data or conclusions in these documents differ significantly from data or conclusions in previous versions of these documents or in the applicant’s environmental report; LBP-11-39, 74 NRC 862 (2011)
timely new or amended contentions may be admitted if they meet three pleading requirements; LBP-11-32, 74 NRC 654 (2011)
to accept the argument that a reopening standard may never be applied in situations where a petitioner seeks to add previously unlitigated material would effectively render the regulation meaningless; CLI-12-3, 75 NRC 132 (2012)
to assess whether a contention is within the scope of, and material to, the proceeding, boards need to know the legal basis (safety or environmental) of the contention; LBP-13-8, 78 NRC 1 (2013)
to be accepted for hearing, contentions must meet strict admissibility standards; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)
to be admissible, a newly proffered contention must satisfy either the timeliness standards in 10 C.F.R. 2.309(f)(2) or the standards in 10 C.F.R. 2.309(c)(1) for newly proffered nontimely contentions, and the contention admissibility standards in 10 C.F.R. 2.309(f)(1); LBP-11-15, 73 NRC 629 (2011)

to be admissible, all contentions must satisfy the six criteria of 10 C.F.R. 2.309(f)(1); LBP-11-16, 73 NRC 645 (2011)

to be admissible, each contention must satisfy six pleading requirements; LBP-11-29, 74 NRC 612 (2011)

to be admissible, late-filed contentions must not only meet standards of section 2.309(f)(1), but must also satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 37 (2013)

to bring NEPA into play, a possible future action must at least constitute a proposal pending before the agency (i.e., ripeness), and must be in some way interrelated with the action that the agency is actively considering (i.e., nexus); LBP-14-6, 79 NRC 404 (2014)

to challenge a Category 1 issue such as public health, petitioner must request a waiver and show that unique circumstances warrant a site-specific determination; LBP-15-5, 81 NRC 249 (2015)

to challenge an energy alternatives analysis, petitioner ordinarily must provide alleged facts or expert opinion sufficient to raise a genuine dispute as to whether the best information available today suggests that a commercially viable alternative technology (or combination of technologies) is available now, or will become so in the near future, to supply baseload power; CLI-12-8, 75 NRC 393 (2012)

to challenge generic application of a rule, petitioner seeking waiver must show that there is something extraordinary about the subject matter of the proceeding such that the rule should not apply; CLI-13-7, 78 NRC 199 (2013)

to define the scope of an admitted contention properly, boards should specify which bases are admitted; LBP-13-6, 77 NRC 253 (2013); LBP-13-10, 78 NRC 117 (2013)

to demonstrate a significant safety issue, petitioners must establish either that uncorrected errors endanger safe plant operation, or that there has been a breakdown of the quality assurance program sufficient to raise legitimate doubt as to the plant’s capability of being operated safely; LBP-11-35, 74 NRC 701 (2011)

to demonstrate that a revised SAMA analysis would produce a materially different result, intervenor should indicate how much the mean consequences of the severe accident scenarios could reasonably be expected to change as well as cost of implementing other SAMAs it believes might become cost-effective; LBP-12-1, 75 NRC 1 (2012)

to demonstrate the admissibility of a NEPA contention that an applicant failed to consider a viable alternative to its proposed action, petitioner must show that its contention presents a genuine dispute; CLI-12-5, 75 NRC 301 (2012)

to eliminate the inadmissible issue of tribal notification and to clarify the scope of the subsistence consumption issue, board narrows and reformulates a contention; LBP-15-5, 81 NRC 249 (2015)

to establish that cumulative impacts must be addressed, petitioner must first show that any proposal applicant has made is so interdependent with the application at issue that it would be unwise or irrational to complete one without the other; LBP-14-6, 79 NRC 404 (2014)

to gain the admission of a new or amended contention, a party must meet the requirements of 10 C.F.R. 2.309(c) and (f); LBP-15-16, 81 NRC 618 (2015)

to have a new contention admitted after the contested proceeding has terminated, petitioner must meet three criteria; CLI-12-14, 75 NRC 692 (2012)

to litigate a SAMA-related contention in adjudicatory proceedings where the SAMA-analysis exception applies, petitioner must obtain a rule waiver as well as satisfy the contention admissibility criteria in section 2.309(f)(1); CLI-13-7, 78 NRC 199 (2013)

to litigate an issue that otherwise would be outside the scope of an adjudication, petitioner must file a petition for waiver showing that special circumstances with respect to the subject matter of the particular proceeding are such that the application of the rule or regulation (or a provision of it) would not serve the purposes for which it was adopted; CLI-13-7, 78 NRC 199 (2013)

to litigate SAMA-related issues requires demonstration of potentially significant deficiency in the SAMA analysis that credibly could render the SAMA analysis unreasonable under NEPA standards; CLI-13-7, 78 NRC 199 (2013)

to meet the section 2.309(f)(1)(v) requirement for providing factual and expert support, petitioners must proffer at least some minimal factual and legal foundation in support of their contentions; LBP-15-1, 81 NRC 15 (2015)
to obtain a hearing, petitioner must show that its request is timely, that it has standing to obtain a hearing, and that it has proposed at least one admissible contention; CLI-14-11, 80 NRC 167 (2014)
to participate in a proceeding as an intervenor, petitioner must establish standing and proffer at least one admissible contention; LBP-11-6, 73 NRC 149 (2011); LBP-11-16, 73 NRC 645 (2011)
to raise a genuine dispute on a material issue of law or fact, a properly formulated contention must challenge specific portions of, or alleged omissions from, the application or the agency’s environmental impact statement, and provide reasons in support; LBP-15-1, 81 NRC 15 (2015)
to show a genuine dispute with applicant on a material issue of law or fact, a contention must include references to specific portions of the application that the petitioner disputes and the supporting reasons for each dispute; CLI-11-9, 74 NRC 233 (2011)
to show that it is within the realm of reason that the federal government may assert an implied water right, petitioner must provide some indicia of an attempt, plan, or intention; LBP-11-16, 73 NRC 645 (2011)
to the extent a contention is premised on error, it is inadmissible for failing to raise a genuine dispute of fact; LBP-11-6, 73 NRC 149 (2011)
to the extent a contention would require licensee to maintain the ERDS link or to create another ERDS-like system after its reactor is permanently shut down and defueled, it is an impermissible collateral attack on a regulation; LBP-15-4, 81 NRC 156 (2015)
to the extent NRC takes action with respect to waste confidence on a case-by-case basis, litigants can challenge such site-specific agency actions in the adjudicatory process; CLI-12-16, 76 NRC 63 (2012)
to the extent petitioner believes there are existing management competence questions that merit immediate action, then its remedy is to direct the Staff’s attention to those matters by filing a request for action in accordance with 10 C.F.R. 2.206; CLI-11-11, 74 NRC 427 (2011)
to the extent petitioner is challenging the adequacy of computer modeling of plume variability, petitioner bears the burden of providing evidence specific to the license renewal applicant; LBP-15-5, 81 NRC 249 (2015)
to the extent petitioner seeks to have applicant implement safety measures in addition to those ordered, its recourse is to petition for rulemaking or to petition for license modification, suspension, or revocation; LBP-12-14, 76 NRC 1 (2012)
to the extent petitioner seeks to raise a generic challenge to the 10-mile plume exposure pathway EPZ, such an argument constitutes an impermissible challenge NRC regulations; LBP-11-15, 73 NRC 629 (2011)
to the extent that contentions raise matters other than onsite spent fuel storage, the board should assess their admissibility under the generally applicable rules of practice; CLI-14-8, 80 NRC 71 (2014)
to the extent that Fukushima events provide the basis for contentions appropriate for litigation in individual proceedings, NRC procedural rules contain ample provisions through which litigants may seek admission of new or amended contentions; LBP-12-18, 76 NRC 127 (2012)
to the extent that intervenors challenge all radiological releases from nuclear power plants, the contention presents an impermissible challenge to the NRC’s regulations; LBP-12-12, 75 NRC 742 (2012)
to the extent that intervenors’ proposed contention is based on asserted deficiencies in NRC Staff’s process for soliciting public participation pursuant to the National Historic Preservation Act, the contention fails to demonstrate a genuine dispute on a material issue of fact or law; LBP-12-23, 76 NRC 445 (2012)
to the extent that petitioner challenges the generic environmental impact statement, its remedy is a petition for rulemaking or a petition for a waiver of the rules based on circumstances; CLI-11-11, 74 NRC 427 (2011)
to the extent that the board relied on a precedent that allowed notice pleading under 10 C.F.R. 2.714(b) in making its contention admissibility determination, it erred; CLI-15-23, 82 NRC 321 (2015)
to trigger a full adjudicatory hearing, petitioners must be able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-12-27, 76 NRC 583 (2012)
to waive the generic assessment in NRC regulations to permit adjudication of issues involving the environmental impact of spent fuel pool accidents in this license renewal proceeding, the Commission
must conclude that the rule’s strict application would not serve the purpose for which it was adopted; CLI-11-11, 74 NRC 427 (2011)

trigger date for a filing period can be especially unclear where both public and nonpublic documents associated with a proceeding are produced and where an applicant’s stated compliance with NRC regulations shifts over time; LBP-11-9, 73 NRC 391 (2011)

trigger point for timely submission of new or amended contentions is when new information becomes available, and NRC rules require the filing of contentions in a timely manner after such new information becomes available; CLI-12-13, 75 NRC 681 (2012); LBP-12-13, 75 NRC 784 (2012)

ultimate issue on severe accident mitigation alternatives analysis is whether any additional SAMA should have been identified as potentially cost-beneficial, not whether further analysis may refine the details in the SAMA NEPA analysis; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

under 10 C.F.R. 2.309(f)(1), petitioner need only properly allege a defect in meeting materiality requirement; LBP-11-7, 73 NRC 254 (2011)

under current rules, intervenors may use discovery to develop a case once contentions are admitted, but contentions shall not be admitted if at the outset they are not described with reasonable specificity or are not supported by some alleged fact or facts demonstrating a genuine material dispute with the applicant; CLI-12-8, 75 NRC 393 (2012)

under the migration tenet, boards may construe an admitted contention contesting the environmental report as a challenge to the subsequently issued draft or final environmental impact statement without the necessity for intervenors to file a new or amended contention; LBP-12-12, 75 NRC 742 (2012)

under the previous contention admissibility rule, a contention could be admitted and litigated based on little more than speculation, with parties attempting to unearth a case through cross-examination; LBP-11-6, 73 NRC 149 (2011)

unless a contention, submitted with adequate factual, documentary, or expert support, raises a potentially significant deficiency in the severe accident mitigation alternatives analysis, a SAMA-related dispute will not be material to the licensing decision and is not appropriate for litigation in NRC proceedings; LBP-12-26, 76 NRC 559 (2012)

unless petitioner sets forth a supported contention pointing to an apparent error or deficiency that may have significantly skewed the environmental conclusions, there is no genuine material dispute for hearing; CLI-12-8, 75 NRC 393 (2012); LBP-15-5, 81 NRC 249 (2015); LBP-15-29, 82 NRC 246 (2015)

until NRC defines and imposes on licensees new requirements arising from the Fukushima events, such requirements are highly speculative; LBP-11-33, 74 NRC 675 (2011)

until NRC Staff issues its draft or final environmental impact statement, it cannot plausibly be argued that the document is inadequate or otherwise fails to satisfy NEPA; LBP-11-33, 74 NRC 675 (2011)

untimeliness constitutes sufficient grounds on its own for denying the motion to reopen and thus the board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 44 (2012)

untimely motion to reopen the proceeding and admit a new contention concerning licensee’s impacts on the roseate tern, a federally listed endangered species, is denied; LBP-12-11, 75 NRC 731 (2012)

untimely motions to reopen that present an exceptionally grave issue may be admitted at the board’s discretion; LBP-12-16, 76 NRC 44 (2012)

using reply briefs to provide, for the first time, the necessary threshold support for contentions would effectively bypass and eviscerate NRC rules governing timely filing, contention amendment, and submission of late-filed contentions; LBP-12-7, 75 NRC 503 (2012)

vague accusation does not rise to the level of an admissible genuine dispute of material fact or law; LBP-11-10, 73 NRC 424 (2011)

waiver petition would permit consideration of an issue in an adjudicatory proceeding that would otherwise impermissibly challenge an NRC rule or regulation; CLI-14-7, 80 NRC 1 (2014)

when a contention alleges the need for further study of an alternative, from an environmental perspective, such reasonableness determinations are the merits, and should only be decided after the contention is admitted; LBP-11-2, 73 NRC 28 (2011); LBP-11-13, 73 NRC 534 (2011)

when an application is alleged to be deficient, petitioner must identify the deficiencies and provide supporting reasons for its position that such information is required; LBP-15-1, 81 NRC 15 (2015)
when an NRC regulation permits use of a particular analysis, a contention asserting that a different analysis or technique should be used is inadmissible because it indirectly attacks NRC’s regulations; LBP-15-17, 81 NRC 753 (2015); LBP-15-20, 81 NRC 829 (2015)

when NRC Staff issues the environmental impact statement, interveners have an opportunity to either amend admitted contentions or proffer new contentions based on data or conclusions in the NRC draft or final EIS or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant’s documents; LBP-11-6, 73 NRC 149 (2011)

when omissions are cured by the subsequent issuance of licensing-related documents, a contention of omission must be disposed of or modified; LBP-12-5, 75 NRC 227 (2012)

when petitioner neglects to provide the requisite support for its contentions, it is not within the board’s power to make assumptions or draw inferences that favor petitioner, nor may the board supply information that is lacking; LBP-15-1, 81 NRC 15 (2015)

when petitioner obtains the relief it is seeking before the admissibility of its contention is resolved, the admissibility vel non of the contention is no longer justiciable, because it no longer presents a live controversy involving a true clash of interests that is susceptible to meaningful adjudicative relief; LBP-13-7, 77 NRC 307 (2013)

when raising a genuine material dispute with an application, petitioner must present well-defined issues, not issues based on little more than guesswork; CLI-15-23, 82 NRC 321 (2015)

where a contention alleges a deficiency or error in the application, the deficiency or error must have some independent health and safety significance; LBP-11-23, 74 NRC 287 (2011)

where admission of a late-filed contention would cause a material delay in the proceeding weighed against admission of the contention; CLI-12-15, 75 NRC 704 (2012)

where an amended version of a dismissed contention was pending before the board, the board retains jurisdiction to decide whether to admit the proposed contention; LBP-11-22, 74 NRC 259 (2011)

where implementation of a building code could not make a difference in the outcome of the proceeding, it cannot be material; LBP-11-7, 73 NRC 254 (2011)

where neither the Commission nor any licensing board has had the opportunity to interpret the meaning of 10 C.F.R. 50.75(h)(5), a legal issue exists for the board to address; LBP-15-24, 82 NRC 68 (2015)

where good cause is not shown for the late filing of a contention, the requestor’s demonstration on the other factors must be particularly strong; LBP-11-15, 73 NRC 629 (2011)

where petition fails on the merits, the Commission need not address procedural issues; CLI-15-10, 81 NRC 535 (2015)
where petitioner fails to show good cause for late filing, its demonstration on the other factors must be particularly strong; LBP-12-9, 75 NRC 615 (2012)

where seismic suitability of a site was evaluated at the early site permit stage, further litigation of a geologic fault issue is foreclosed at the combined license stage; LBP-14-8, 79 NRC 519 (2014)

where the proceeding remains open during the pendency of a remand, but the record remains closed, any contentions raising genuinely new issues would have to be accompanied by a motion to reopen; CLI-12-3, 75 NRC 132 (2012)

where the time for filing contentions had expired in a given case, no new TMI-related contentions would be accepted absent a showing of good cause and a balancing of the late-filing factors; CLI-11-5, 74 NRC 141 (2011)

whether a contention should properly be characterized as a contention of omission or a contention of adequacy and the ramifications of such a designation with regard to contention admissibility are discussed; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

whether a proposed alternative method for estimating a macroscopic frequency of occurrence of a severe offsite radiological release should have been used in the severe accident mitigation alternatives analysis could have been raised when the original license renewal application was submitted and thus is not timely; LBP-11-35, 74 NRC 701 (2011)

whether and how NRC Staff fulfills its consultation obligations are issues that could form the basis for a new contention that might appropriately be made in a timely fashion after Staff issues its draft environmental impact statement; CLI-15-18, 82 NRC 135 (2015)

whether and to what extent measures a state sought were needed to make the facility safer was essentially irrelevant because those additional measures were outside the scope of the enforcement order; CLI-13-2, 77 NRC 39 (2015)

with respect to contentions filed after the initial petition, failure to address the requirements of 10 C.F.R. 2.309(c) and 2.309(f)(2) is reason enough to reject the new contentions; LBP-11-7, 73 NRC 254 (2011)

with respect to the need to supplement an issued final EIS, the party offering the new contention has the burden of presenting information sufficient to show that there is a genuine issue regarding whether the NRC Staff should supplement its document; LBP-15-16, 81 NRC 618 (2015)

with the board’s termination of the proceeding, the board’s interlocutory rulings on contention admissibility became ripe for appeal; CLI-11-9, 74 NRC 233 (2011)

within 30 days after new information becomes available is a reasonable amount of time for filing a new contention; LBP-15-24, 82 NRC 68 (2015)

CONTENTIONS, LATE-FILED

absent good cause, there must be a compelling showing on the remaining late-filing factors; CLI-12-10, 75 NRC 479 (2012)

admission is allowed only upon a showing that information upon which the new contention is based was not previously available and is materially different than information previously available and the new contention has been submitted in a timely fashion based on the availability of the subsequent information; CLI-11-2, 73 NRC 333 (2011)

after the section 2.309(b) deadline has passed for submitting an initial hearing petition with one or more accompanying contentions, petitioner/intervenor who wishes to amend an already submitted or admitted contention or gain admission of a new contention must file a motion for leave to file such a contention; LBP-13-10, 78 NRC 117 (2013)

all contentions, regardless of when they are filed must satisfy the six criteria specified in 10 C.F.R. 2.309(f)(1)(i)-(vi); LBP-11-20, 74 NRC 65 (2011); LBP-11-32, 74 NRC 654 (2011); LBP-12-1, 75 NRC 1 (2012)

although NRC regulations do not provide a precise definition of “timely,” licensing boards have often found a new contention to be timely if it has been filed within 30 days of the availability of information on which the contention is based; LBP-12-11, 75 NRC 731 (2012)

although petitioner proffered a contention within 30 days of events that prompted it, this does not automatically render a newly proffered contention timely; LBP-11-15, 73 NRC 629 (2011)

amended contentions must satisfy general contention admissibility criteria and either the timeliness standards of section 2.309(f)(2) or the balancing test in section 2.309(c) for nontimely contentions; LBP-12-9, 75 NRC 615 (2012)
amendment of contentions and submission of new contentions are allowed when good cause is shown; CLI-12-1, 75 NRC 39 (2012)

any changes in NRC rules post-9/11 that might bear on license renewal reviews could be addressed via late-filed contentions; CLI-11-5, 74 NRC 141 (2011)

applicant’s change of legal position, its claimsthat such change no longer entails a need for an exemption from the regulations, and its identification of new means/systems to satisfy the regulations are all types of materially different new information that can enable a contention to satisfy the timely new or amended contention requirements of 10 C.F.R. 2.309(f)(2)(i)-(ii); LBP-11-9, 73 NRC 391 (2011)

argument that applying heightened late-filing standards to contentions triggered by the NRC Staff’s review documents violates a petitioner’s AEA hearing rights has been considered and rejected; CLI-12-14, 75 NRC 692 (2012)

as a matter of law and logic, if applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring program was a fortiori inadequate, and intervenor had a regulatory obligation to challenge it in its original petition to intervene; LBP-11-9, 73 NRC 391 (2011); LBP-11-20, 74 NRC 65 (2011)

availability of new information may provide good cause for nontimely filing, but the test for good cause is not simply when the intervenor became aware of the material sought to be introduced but when the information became available and when the intervenor reasonably should have become aware of the information; LBP-11-7, 73 NRC 254 (2011)

basic admissibility criteria that all contentions must satisfy are governed by 10 C.F.R. 2.309(f)(1); LBP-11-9, 73 NRC 391 (2011)

because petitioner fails to show that the possibility of site inundation is based on new and materially different information added to the environmental report as part of applicant’s revised low-level radioactive waste management plan or identify any new and materially different information on which its site-inundation argument is based, this argument is nontimely; LBP-12-7, 75 NRC 503 (2012)

because the motion to reopen and contention are based on information that is neither new nor materially different from information that was previously available, the motion and contention are untimely; LBP-12-11, 75 NRC 731 (2012)

because three contentions are already set for hearing in the proceeding, the admission of further contentions would not substantially delay the proceeding; LBP-12-12, 75 NRC 742 (2012)

because two of the previously admitted contentions allege NEPA violations, new NEPA contentions put forward by the intervenors would not unreasonably broaden the issues; LBP-12-12, 75 NRC 742 (2012)

board applied the late-filing standards to a post-9/11 contention related to the risk of a terrorist attack on the ISFSI and found the contention timely but denied admission of both the safety and environmental aspects of the contention; CLI-11-5, 74 NRC 141 (2011)

board denies as untimely a motion to reopen and admit a new contention alleging that the licensee lacks certain required environmental permits and approvals from state and federal agencies; LBP-12-16, 76 NRC 44 (2012)

boards should develop schedules that will provide a fair and expeditious procedure for resolving new or amended contentions that might be proposed during the course of the proceeding, not just those already admitted; LBP-11-22, 74 NRC 259 (2011)

both the reopening and contention admissibility criteria require that new contentions be timely presented, generally within 30-60 days of the availability of the information on which the contention is based; CLI-12-21, 76 NRC 491 (2012)

burden is on intervenors to demonstrate that a balancing of the factors of 10 C.F.R. 2.309(c)(i)-(viii) weighs in favor of granting a late-filed petition; LBP-12-27, 76 NRC 583 (2012)

by filing proposed new or amended contention within the time specified in the initial scheduling order, petitioner satisfies timeliness requirements but would still have to satisfy the other requirements of section 2.309(f)(1) or the requirements of section 2.309(c), as well as the contention admissibility requirements of 10 C.F.R. 2.309(f)(1); LBP-11-22, 74 NRC 259 (2011)

challenges to an enhanced version of an application alone are insufficient to vitiate intervenors’ obligation to file any challenges to the original version of that application at the outset of the proceeding; LBP-11-9, 73 NRC 391 (2011)

challenges to board rulings on late-filed contentions normally fall under NRC rules for interlocutory review; CLI-12-7, 75 NRC 379 (2012)
SUBJECT INDEX

contention fails to satisfy the good cause requirements of 10 C.F.R. 2.309(c)(i) because its foundational argument does not rest on new and materially different information and could and should have been filed at the outset of the proceeding; LBP-11-35, 74 NRC 701 (2011)

contention regarding limitations and phenomena that were widely known, and should have been known to intervenor, at the outset of the proceeding, and thus could have been raised long ago, is untimely; LBP-11-23, 74 NRC 287 (2011)

contention submitted for the first time after the draft environmental impact statement is issued will be deemed untimely; LBP-12-12, 75 NRC 742 (2012)

contention that environmental assessment fails to adequately describe air quality impacts is inadmissible as untimely; LBP-11-9, 73 NRC 391 (2011)

contention that the frequency of occurrence of severe accidents is erroneously underestimated should have been raised at the outset of the license renewal proceeding and thus is untimely; LBP-11-35, 74 NRC 701 (2011)

contentions based on new information in a document that was not previously available and that is materially different from a document that was previously available are not untimely simply for not being included in an intervenor’s initial hearing request filed at the outset of a proceeding; LBP-11-9, 73 NRC 391 (2011)

contentions relying on information and findings discussed in the notice of proposed rulemaking, as opposed to tentative rules or policy determinations, are not timely filed; LBP-15-15, 81 NRC 598 (2015)

contentions submitted after the deadline for initial intervention petitions must satisfy the standards for late-filed contentions; CLI-12-10, 75 NRC 479 (2012); CLI-12-15, 75 NRC 704 (2012)

contentions that fail to satisfy timeliness standards in section 2.309(f)(2) may still be admitted pursuant to a balancing test governing non timely filings that weighs the factors set forth in 10 C.F.R. 2.309(c); LBP-12-7, 75 NRC 303 (2012); LBP-12-9, 75 NRC 615 (2012)

criteria that non timely contentions must address are governed by 10 C.F.R. 2.309(c); LBP-11-9, 73 NRC 391 (2011)

degree to which new/amended contentions will be considered timely submitted is generally defined by the presiding officer as a specific period following the triggering event that makes the previously unavailable/materially different information available so as to be the basis for the new/amended contention; LBP-13-10, 78 NRC 117 (2013)

delay in filing contentions caused by the schedule of counsel in other matters can support a finding of good cause; LBP-12-12, 75 NRC 742 (2012)

denial or conditioning of a license would obviously be a materially different result; CLI-12-14, 75 NRC 692 (2012)

documents merely summarizing earlier documents or compiling preexisting, publicly available information into a single source do not render “new” the summarized or compiled information; CLI-11-2, 73 NRC 333 (2011)

duties of NRC Staff and not an applicant, such as consultation with other federal agencies, could not be raised at the environmental report stage, and therefore such a contention will not be rejected as untimely when filed after the release of the draft environmental impact statement; LBP-12-12, 75 NRC 742 (2012)

eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-13-10, 75 NRC 117 (2013)

eight-factor test that allowed a board to consider new or amended contentions that did not meet the three requirements for admissibility of late-filed contentions available under 10 C.F.R. 2.309(f)(2) is no longer available; LBP-15-1, 81 NRC 15 (2015)

even if petitioner fails to establish good cause for an untimely petition, the other late-filing factors must be examined; LBP-12-12, 75 NRC 742 (2012)

even when a proposed new contention is not found timely, it may be admitted if it meets a balancing of the eight non timely filing factors; LBP-11-39, 74 NRC 862 (2011)
excessively grave issue may be considered in the discretion of the presiding officer even if untimely presented; LBP-11-35, 74 NRC 701 (2011); LBP-12-1, 75 NRC 1 (2012)
factors that timely new or amended contentions must satisfy are governed by 10 C.F.R. 2.309(f)(2); LBP-11-9, 73 NRC 391 (2011)
failure to comply with pleading requirements for late filings constitutes sufficient grounds for rejecting intervention and hearing requests; LBP-11-7, 73 NRC 254 (2011)
failure to demonstrate good cause for a late-filed contention requires a compelling showing on the remaining factors; CLI-12-15, 75 NRC 704 (2012)
filling deadlines may be extended or shortened by either the Commission or the presiding officer for good cause, or by stipulation approved by the Commission or the presiding officer; LBP-14-5, 79 NRC 377 (2014)
filling of amended or new contentions is permitted only with leave of the board and upon a showing that it is based on information not previously available and materially different and the filing is timely; LBP-12-13, 75 NRC 784 (2012)
filling of new contentions based on the SER and Staff NEPA documents is expressly contemplated by the Model Milestones; LBP-11-22, 74 NRC 259 (2011)
for a motion to reopen to be granted and a new contention admitted after termination of a proceeding, the motion must meet all of the requirements of 10 C.F.R. 2.326 for reopening a record, and the new contention must have been submitted in a timely fashion and demonstrate admissibility as required at 10 C.F.R. 2.309; LBP-12-11, 75 NRC 731 (2012)
for a newly proffered contention to be timely, it must be based on information that was not previously available; LBP-11-15, 73 NRC 629 (2011)
for a reopening motion to be timely presented, movant must show that the issue sought to be raised could not have been raised earlier; LBP-11-20, 74 NRC 65 (2011)
for any new arguments or new support for a contention, petitioner must explain why it could not have raised the argument or introduced the factual support earlier; CLI-15-18, 82 NRC 135 (2015)
good cause doesn’t exist where petitioner’s late-filed contention is due to careless inadvertence and not, as petitioner claimed, attributable to technical difficulties with the E-Filing system; LBP-15-4, 81 NRC 156 (2015)
good cause for a newly proposed contention exists when information on which it is based was not previously available and is materially different than information previously available and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-14-5, 79 NRC 377 (2014); LBP-15-1, 81 NRC 15 (2015); LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)
good cause for failure to file on time is afforded the most weight in the balancing of the eight late-filing factors of 10 C.F.R. 2.309(c); LBP-11-23, 74 NRC 287 (2011); LBP-11-32, 74 NRC 654 (2011); LBP-12-27, 76 NRC 583 (2012)
good cause in 10 C.F.R. 2.307(a) does not share the same definition that is used for good cause in final 2.309(c); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
good cause is the most important of the factors in the 2.309(c) balancing test, and in the absence of good cause, a party must make an especially strong showing on the other factors to justify admission of a nontimely contention; CLI-12-10, 75 NRC 479 (2012); LBP-12-7, 75 NRC 503 (2012); CLI-12-15, 75 NRC 704 (2012); LBP-12-9, 75 NRC 615 (2012); LBP-12-10, 75 NRC 633 (2012); LBP-12-12, 75 NRC 742 (2012)
health issues or an unexpected weather event might constitute good cause for purposes of requesting an extension; LBP-14-5, 79 NRC 377 (2014)
hearing petitioners have an ironclad obligation to examine the publicly available documentary material pertaining to the facility in question with sufficient care to uncover any information that could serve as the foundation for a specific contention; LBP-11-9, 73 NRC 391 (2011)

if a contention is based upon new information, it must meet the standards of 10 C.F.R. 2.309(f)(2);
LBP-11-35, 74 NRC 701 (2011)

if a contention satisfies the timeliness requirement of 10 C.F.R. 2.309(f)(2)(iii), then, by definition, it is not subject to 10 C.F.R. 2.309(c) which specifically applies to nontimely filings; LBP-12-18, 76 NRC 127 (2012)

if a new contention is deemed untimely under section 2.309(f)(2)(iii), it will be evaluated under section 2.309(c)(1), which provides that a board presented with a nontimely contention shall balance eight factors to determine whether to admit the contention; LBP-12-12, 75 NRC 742 (2012); LBP-12-23, 76 NRC 445 (2012)

if a new contention is not timely filed, it must meet an eight-factor test to be deemed admissible;
LBP-11-9, 73 NRC 391 (2011); LBP-11-10, 73 NRC 424 (2011)

if a party submits a proposed contention after the initial filing deadline announced in the applicable Federal Register notice for submitting a hearing petition, it will not be entertained absent a determination by the presiding officer that participant has demonstrated good cause; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014); LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)

if a new contention is not timely under section 2.309(f)(2)(iii), then the proponent must address the eight criteria of 10 C.F.R. 2.309(c)(1); LBP-11-32, 74 NRC 654 (2011)

if applicant’s enhanced monitoring program is inadequate, then applicant’s unenhanced monitoring program embodied in its license renewal application was a fortiori inadequate, and intervenors had a regulatory obligation to challenge it in their original petition to intervene; LBP-15-1, 81 NRC 15 (2015)

if applicant’s enhanced monitoring program, which was the topic of a late-filed contention, was insufficient, it must have been insufficient beforehand too; CLI-12-10, 75 NRC 479 (2012)

if attempting to raise a new issue based on new information in the final supplemental environmental impact statement, intervenor must file a new contention if information in the FSEIS is sufficiently different from the information in the DSEIS that supported the original contention’s admission;
LBP-14-5, 79 NRC 377 (2014)

if good cause is not shown, a board may still permit the late filing, but petitioner or intervenor must make a strong showing on the other factors of 10 C.F.R. 2.309(c); LBP-11-7, 73 NRC 254 (2011); LBP-11-9, 73 NRC 391 (2011); LBP-11-15, 73 NRC 629 (2011); LBP-11-32, 74 NRC 654 (2011)

if intervenors file a new or amended contention, with supporting materials, within 60 days after pertinent information first becomes available, then the contention will be deemed timely filed and intervenors will not have to satisfy the late-filing requirements of 10 C.F.R. 2.309(c) or the requirements for reopening the record; LBP-11-22, 74 NRC 259 (2011)

if intervenors sought to introduce new issues, then they should have filed a new or amended contention; CLI-15-9, 81 NRC 512 (2015)

if new information becomes available that, e.g., an endangered species has been living on the site or that the facility has been leaking tritium into the groundwater, then a new contention alleging that the environmental report as originally filed did not comply with Part 51 may be filed; LBP-11-32, 74 NRC 654 (2011)

if reopening standards are inapplicable, or if reopening criteria have been satisfied, a new contention must also meet the standards for contention admissibility; LBP-11-35, 74 NRC 701 (2011)

if the reason a motion to admit a new or amended contention was filed after the initial deadline does not relate to the substance of the filing itself, the standard in 10 C.F.R. 2.307(a) applies in determining whether the motion can be considered timely; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

in addition to being timely, new contentions must satisfy the six-factor contention admissibility standard;

in addition to satisfying the timeliness standards in 10 C.F.R. 2.309(f)(2) or the balancing test in 10 C.F.R. 2.309(c), a newly proffered contention must satisfy the admissibility criteria of 10 C.F.R. 2.309(f)(1); LBP-12-7, 75 NRC 503 (2012)
in addressing the good cause factor for late filing, petitioner must explain not only why it failed to file within the time required, but also why it did not file as soon thereafter as possible; LBP-11-7, 73 NRC 254 (2011)
in an ongoing proceeding in which a hearing petition has been granted and there are contentions pending for merits resolution, intervenors must satisfy two sets of requirements to gain the admission of a newly proffered contention; LBP-11-37, 74 NRC 774 (2011)
in the context of a new contention filed after the initial petition, petitioner has an iron-clad obligation to examine the publicly available documentary material with sufficient care to enable it to uncover any information that could serve as the foundation for a specific contention; CLI-11-2, 73 NRC 333 (2011)
information notice merely summarizes information that has long been publicly available and does not provide new information that would constitute good cause for the late filing; CLI-12-10, 75 NRC 479 (2012)
intervenor may not delay filing a contention until a document becomes available that collects, summarizes, and places into context previously available facts supporting that contention; LBP-12-1, 75 NRC 1 (2012)
intervenor may propose new contentions based on the Fukushima accident, the SER, the new SEIS, or other sources of new and materially different information, provided that it does so promptly after the new information becomes available and that it successfully fulfills the general contention admissibility requirements; LBP-11-22, 74 NRC 259 (2011)
intervenors and potential intervenors have a period of time to file new or amended contentions in response to a draft environmental impact statement; LBP-13-9, 78 NRC 37 (2013)
intervenors are not permitted to wait until information reappears in the draft environmental impact statement to file their contentions; LBP-13-9, 78 NRC 37 (2013)
intervenors cannot simply point to documents merely summarizing earlier documents or compiling preexisting, publicly available information into a single source as doing so does not render “new” the summarized or compiled information; LBP-12-27, 76 NRC 583 (2012)
intervenors may file new or amended contentions in response to the draft environmental impact statement if they can satisfy the test of 10 C.F.R. 2.309(f)(2)(i)-(iii); LBP-12-12, 75 NRC 742 (2012)
intervenors seeking a new hearing on a new contention after the board has closed the evidentiary record must move to reopen the evidentiary record and meet a deliberately higher threshold standard than that for an ordinary late-filed contention; CLI-12-15, 75 NRC 704 (2012)
late-filed contention is inadmissible both for lack of a good-cause showing and for failure to address the other factors of 10 C.F.R. 2.309(c)(1); LBP-11-6, 73 NRC 149 (2011)
late-filed contentions lack good cause when they are based on a draft environmental impact statement that contains no new information relevant to the contention; LBP-13-9, 78 NRC 37 (2013)
licensing board’s dismissal of all pending contentions on mootness grounds due to new information ordinarily would terminate the proceeding, but new contentions could be filed on new information before termination of the proceeding; LBP-11-22, 74 NRC 259 (2011)
licensing boards have commonly afforded intervenors the opportunity to propose new contentions to challenge new information, even though no contention is pending; LBP-11-22, 74 NRC 259 (2011)
licensing hearing does not embrace anything new revealed in the safety evaluation report or the NEPA documents; CLI-12-14, 75 NRC 692 (2012)
material difference must exist between information on which a contention is based and information that was previously available, e.g., a difference between the environmental report and the draft EIS or the draft EIS and the final EIS; CLI-15-1, 81 NRC 1 (2015)
Model Milestones permit the filing of proposed late-filed contentions on the Safety Evaluation Report and necessary National Environmental Policy Act documents within 30 days of the issuance of those documents; LBP-11-22, 74 NRC 259 (2011)
most important among the late-filing factors is demonstration of good cause; LBP-15-1, 81 NRC 15 (2015)
motion to file new or amended contentions must address the motion to reopen standards after an intervention petition has been denied; LBP-11-20, 74 NRC 65 (2011)
motion to reopen that relates to a contention not previously in controversy must satisfy the section 2.309(c) requirements for new or amended contentions filed after the original hearing petition deadline; CLI-11-8, 74 NRC 214 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-15-14, 81 NRC 591 (2015)
motions seeking admission of new or amended contentions must be filed within 30 days of the date the information that forms the basis for the contention becomes available; CLI-11-8, 74 NRC 214 (2011)
motions to reopen may be granted, even if untimely presented, when the motion presents an exceptionally grave issue; LBP-12-11, 75 NRC 731 (2012)
motions to reopen relating to a contention not previously in controversy among the parties must also satisfy the requirements for non timely contentions in 10 C.F.R. 2.309(c) and the admissibility requirements of 10 C.F.R. 2.309(f)(1); LBP-12-1, 75 NRC 1 (2012); LBP-12-10, 75 NRC 633 (2012)
motions to reopen to admit a new contention must be submitted in a timely fashion, based on new information that is materially different from information previously available or a balancing of the factors in 10 C.F.R. 2.326 must weigh in favor of admitting the contention; LBP-12-16, 76 NRC 44 (2012)
new and amended contentions submitted after an intervenor’s initial hearing request are evaluated under 10 C.F.R. 2.309(f)(2) for timeliness and, if found timely, their general admissibility is analyzed pursuant to section 2.309(f)(1); LBP-11-10, 73 NRC 424 (2011)
new contention is inadmissible because it neither points to nor references any specific portion of the application that is disputed; LBP-11-35, 74 NRC 701 (2011)
new contention is inadmissible because it relies on information that is not materially different from information previously available and already in the record; LBP-15-16, 81 NRC 618 (2015)
new contentions must present a seriously different picture of the environmental impact of the proposed project; LBP-14-5, 79 NRC 377 (2014)
new contentions are timely when filed within 30 days of the date that asserted foundational information became available; LBP-12-1, 75 NRC 1 (2012)
new contentions cannot be based on previously available information; LBP-15-11, 81 NRC 401 (2015)
new contentions filed after the initial filing may only be admitted upon a showing that the information upon which they are based was not previously available and is materially different than information previously available and they have been submitted in a timely fashion based on the availability of the subsequent information; LBP-12-18, 76 NRC 127 (2012); LBP-12-27, 76 NRC 583 (2012)
new contentions filed after the record has closed must satisfy the timeliness requirement of either 10 C.F.R. 2.309(f)(2) or 2.309(c), and the admissibility requirements of section 2.309(f)(1); LBP-11-39, 74 NRC 862 (2011)
new contentions must be submitted in a timely fashion based on the availability of the information on which they are based; CLI-15-17, 82 NRC 33 (2015)
new contentions must paint a seriously different picture of the environmental landscape that would require supplementation of an environmental impact statement; LBP-12-10, 75 NRC 633 (2012)
new contentions on the safety and environmental implications of the NRC Task Force Report on the Fukushima Dai-ichi accident are premature and must be denied on that basis without regard to any other considerations; LBP-11-27, 74 NRC 591 (2011)
new environmental contentions may be filed if data or conclusions in the draft or final environmental impact statement differ significantly from the data or conclusions in the environmental report; LBP-11-32, 74 NRC 654 (2011); LBP-11-33, 74 NRC 675 (2011)
new or amended contention is considered timely if it is filed within 60 days of the date when the material information first became available to the moving party through service, publication, or any other means; LBP-15-1, 81 NRC 15 (2015)
new or amended contentions are considered to be timely if filed within 60 days of any triggering event; LBP-11-9, 73 NRC 391 (2011)
new or amended contentions based on material information that has subsequently become available must meet the general contention admissibility requirements of 10 C.F.R. 2.309(f)(1) as well as the three requirements in section 2.309(c)(1); LBP-14-6, 79 NRC 404 (2014)
new or amended contentions filed after the initial filing period has expired may be admitted as timely only with leave of the licensing board if it meets the timeliness standards of 10 C.F.R. 2.309(f)(2); LBP-12-7, 75 NRC 503 (2012); LBP-12-12, 75 NRC 742 (2012)
new or amended contentions generally must meet the six admissibility factors specified in section 2.309(f)(1); LBP-13-10, 78 NRC 117 (2013)
new or amended contentions must be based on information not previously available and materially different from previously available information and be submitted in a timely fashion based on the availability of the subsequent information; LBP-14-6, 79 NRC 404 (2014)

new or amended contentions must demonstrate good cause for post-initial-hearing petition deadline filing, based on three factors; LBP-13-10, 78 NRC 117 (2013)

new or amended contentions must satisfy the substantive contention admissibility standards and failure to meet any of them renders a contention inadmissible; LBP-15-11, 81 NRC 401 (2015); LBP-15-15, 81 NRC 598 (2015)

newly proffered contention that does not satisfy the timeliness requirements of section 2.309(f)(2) may still be considered for admission if it satisfies section 2.309(c)(1); LBP-11-15, 73 NRC 629 (2011)

nontimely proposed contention may be admissible if, on balance, it satisfies eight criteria; LBP-11-7, 73 NRC 254 (2011)

not only must intervenor act promptly after learning of new information, but the information itself must be new information, not information already in the public domain; LBP-11-7, 73 NRC 254 (2011)

NRC generally considers approximately 30-60 days as the limit for timely filings based on new information; CLI-11-2, 73 NRC 333 (2011)

NRC generally disfavors the filing of new contentions at the eleventh hour of an adjudication, a policy that is grounded in the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; CLI-11-2, 73 NRC 333 (2011)

NRC Information Notice that merely summarized information that was previously available is not new information upon which a new contention can be based; LBP-11-20, 74 NRC 65 (2011)

NRC preserves the right to a hearing when an application is amended by allowing new or amended contentions to be filed in response to material new information; LBP-11-22, 74 NRC 259 (2011)

NRC proceedings would be incapable of attaining finality if contentions that could have been raised at the outset could be added later at will, regardless of the stage of the proceeding; CLI-12-10, 75 NRC 479 (2012); CLI-12-21, 76 NRC 491 (2012)

NRC recognizes an exception to the timeliness requirement in rare instances in which petitioner raises an exceptionally grave issue; CLI-11-2, 73 NRC 333 (2011)

once the deadline for filing petitions to intervene has passed, a party may file new or amended contentions if it is able to demonstrate good cause by meeting three requirements; LBP-15-1, 81 NRC 15 (2015); LBP-15-19, 81 NRC 815 (2015)

parties’ other professional obligations do not relieve them of their obligations to meet mandatory deadlines; LBP-12-12, 75 NRC 742 (2012)

party that has successfully intervened in a licensing proceeding may propose new contentions for litigation until the license is issued; LBP-11-22, 74 NRC 259 (2011)

petition that attempts to proffer a nontimely contention without addressing the balancing factors in section 2.309(c) may be summarily rejected; LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012)

petitioner can justify missing a contention filing deadline by showing that the delay was caused by factors such as a weather event or unexpected health issues; LBP-12-27, 76 NRC 583 (2012)

petitioner demonstrates that a multifactor balancing test weighs in favor of consideration; LBP-11-6, 73 NRC 149 (2011)

petitioner lacked good cause for a hearing request filed 7 days after the filing deadline when the argument relied on a misimpression of due dates; LBP-11-9, 73 NRC 391 (2011)

petitioner may file new contentions if there are data or conclusions in the NRC draft or final environmental impact statement or environmental assessment that differ significantly from data or conclusions in applicant’s documents; LBP-15-11, 81 NRC 401 (2015)

petitioner must act reasonably and promptly after learning of the new information on which its motion to reopen is based; LBP-11-23, 74 NRC 287 (2011)

petitioner must demonstrate good cause for proffering a new contention after the initial filing deadline; LBP-15-23, 82 NRC 55 (2015)

petitioner must show that the information upon which the new contention is based was not previously available and is materially different than information previously available; CLI-12-10, 75 NRC 479 (2012)

petitioner or intervenor may file timely new or amended contentions, with leave of the board, if the three requirements are met; LBP-11-9, 73 NRC 391 (2011)
petitioner proffers no new information on station blackout or mitigation measures, and the events therefore cannot form the basis for an assertion of timeliness of a motion to reopen; LBP-11-35, 74 NRC 701 (2011)
petitioner who seeks both to reopen the record and to submit a late contention must successfully satisfy two elevated standards; CLI-11-2, 73 NRC 333 (2011)
petitioners are not allowed to postpone filing a contention challenging publicly available information or analysis until NRC Staff issues some document that collects, summarizes, and places into context the facts supporting that contention; CLI-15-17, 82 NRC 33 (2015)
petitioners may amend their contentions or file new contentions if the supplemental draft environmental impact statement differs significantly from the data or conclusions in applicant’s documents; LBP-11-34, 74 NRC 685 (2011)
petitioners who choose to wait to raise contentions that could have been raised earlier risk the possibility that there will not be a material difference between the application and NRC Staff’s review documents, thus rendering any newly proposed contention based on previously available information impermissibly late; CLI-15-1, 81 NRC 1 (2015)
petitioners who have not shown good cause for their late filing must demonstrate that the balance of the remaining factors weighs in their favor; CLI-12-21, 76 NRC 491 (2012)
post-9/11 motion to reopen satisfied rules for reopening the record and for late-filed contentions, but contention involving a license amendment request for reconfiguring a spent fuel pool was inadmissible; CLI-11-5, 74 NRC 141 (2011)
post-hearing petition contention (new or amended contention) also must satisfy the substantive contention admissibility standards; LBP-13-9, 78 NRC 37 (2013)
presiding officer has discretion to consider an exceptionally grave issue even if untimely presented; LBP-11-20, 74 NRC 65 (2011)
proponents of new or amended contentions are required to demonstrate good cause for their filing, which includes a demonstration that the information on which the new or amended contention is based is materially different from information previously available; CLI-15-1, 81 NRC 1 (2015)
proposed new or amended contentions shall be deemed timely if filed within 60 days of the date when the document containing the new and material information first becomes available; LBP-12-12, 75 NRC 742 (2012)
purpose of the timeliness rules is not to trap petitioners into a no-win situation where a contention is called premature if filed in the original petition and untimely if petitioners wait for a potential event to actually transpire; LBP-15-24, 82 NRC 68 (2015)
rationale for NRC’s policy of generally disfavoring the filing of new contentions at the eleventh hour of an adjudication is based on the doctrine of finality, which states that at some point, an adjudicatory proceeding must come to an end; LBP-11-20, 74 NRC 65 (2011)
request for hearing regarding a newly proffered contention cannot be admitted unless it satisfies the stringent standards for reopening the record; LBP-11-20, 74 NRC 65 (2011)
request to admit a new or amended contention requires petitioner to show that the information upon which it is based was not previously available and is materially different from information previously available; CLI-14-2, 79 NRC 11 (2014)
requirements for demonstrating good cause are the same as the requirements for filing late contentions previously available under section 2.309(h)(2)(ii)-(iii); LBP-15-1, 81 NRC 15 (2015)
revised rules no longer require leave from the presiding officer to amend a contention or file a new contentions; LBP-12-27, 76 NRC 583 (2012)
safety evaluation report did not add a last piece of information, but merely compiled and organized preexisting information; CLI-11-8, 74 NRC 214 (2011)
section 2.309(c)(i)(ii) does not stipulate what is considered timely, and the board looks to Commission precedent; LBP-15-11, 81 NRC 401 (2015)
section 2.309(c)(viii) weighs heavily against admission of a contention because the addition of a hearing on its subject matter will unduly broaden the issues and materially delay the proceeding; LBP-11-35, 74 NRC 701 (2011)
standard for admission of new or amended contentions involves a balancing of eight factors; CLI-12-10, 75 NRC 479 (2012)
standard for admitting a new contention after the record is closed is higher than for an ordinary late-filed
contention; CLI-11-2, 73 NRC 333 (2011); CLI-11-8, 74 NRC 214 (2011); LBP-11-20, 74 NRC 65
(2011); LBP-11-22, 74 NRC 259 (2011)
standards for admission of new contentions are reviewed; LBP-11-25, 74 NRC 380 (2011)
tardy filing of a contention may be excusable only where the facts upon which the amended or new
contention is based were previously unavailable; CLI-11-2, 73 NRC 333 (2011); CLI-12-10, 75 NRC 479 (2012)
there simply would be no end to NRC licensing proceedings if petitioners could ignore timeliness
requirements and add new contentions at their convenience based on information that could have
formed the basis for a timely contention at the outset of the proceeding; LBP-11-20, 74 NRC 65 (2011)
time for submitting a new/amended contention motion based on information that would be newly
available, materially different, and otherwise timely submitted given the information’s availability can be
extended if the extension request is based on good cause; LBP-13-10, 78 NRC 117 (2013)
timeliness of late-filed contentions turns on fact-specific considerations, such as when new documents or
information first became available and how promptly intervenors reacted; LBP-15-24, 82 NRC 68
(2015)
timeliness requirement does not apply if no formal proceeding has commenced; LBP-15-27, 82 NRC 184
(2015)
timely new contentions may be filed with leave of the presiding officer if information on which they are
based was not previously available and is materially different than information previously available and
they have been submitted in a timely fashion based on the availability of the subsequent information;
LBP-11-25, 74 NRC 380 (2011)
to be admissible, a newly proffered contention must satisfy either the timeliness standards in 10 C.F.R.
2.309(f)(2) or the standards in 10 C.F.R. 2.309(c)(1) for newly proffered nontimely contentions, and the
contention admissibility standards in 10 C.F.R. 2.309(f)(1); LBP-11-15, 73 NRC 629 (2011)
to be admissible, late-filed contentions must not only meet standards of section 2.309(f)(1), but must also
satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 37 (2013)
to gain the admission of a new or amended contention, a party must meet the requirements of 10 C.F.R.
2.309(c) and (f); LBP-15-16, 81 NRC 618 (2015)
trigger date for a filing period can be especially unclear where both public and nonpublic documents
associated with a proceeding are produced and where an applicant’s stated compliance with NRC
regulations shifts over time; LBP-11-9, 73 NRC 391 (2011)
trigger point for the timely submission of new or amended contentions is when new information becomes
available, and intervenor has the obligation to raise new contentions based on such information;
CLI-12-13, 75 NRC 681 (2012); LBP-12-13, 75 NRC 784 (2012)
understandable misapprehension of the start of the filing period for contentions, leading to inadvertent late
filing of new contentions, establishes good cause to excuse missing the filing deadline pursuant to 10
C.F.R. 2.309(c)(1); LBP-11-9, 73 NRC 391 (2011)
unfeathered ability to file a late contention may significantly undermine the efficiency of a proceeding even
if the contention is based on newly discovered information; CLI-12-14, 75 NRC 692 (2012)
unless a deadline has been specified in the scheduling order for the proceeding, the determination of
timeliness is subject to a reasonableness standard that depends on the facts and circumstances in the
case; LBP-12-27, 76 NRC 583 (2012)
untimeliness constitutes sufficient grounds on its own for denying the motion to reopen and thus the
board need not consider other subsections under sections 2.326 and 2.309; LBP-12-16, 76 NRC 44
(2012)
untimely filed contention is appropriate for sua sponte board review; LBP-14-9, 80 NRC 15 (2014)
untimely motions to reopen that present an exceptionally grave issue may be admitted at the board’s
discretion; LBP-12-16, 76 NRC 44 (2012)
when a contention is considered to be timely filed is not specified in 10 C.F.R. 2.309(c)(1)(ii);
when a motion to reopen is untimely, the section 2.326(a)(1) “exceptionally grave” test supplants the
section 2.326(a)(2) “significant safety or environmental issue” test; CLI-11-8, 74 NRC 214 (2011);
LBP-12-1, 75 NRC 1 (2012); LBP-12-10, 75 NRC 633 (2012)
when determining whether a new contention is timely for purposes of reopening a record, the
Commission looks to whether the information on which it is based was previously available or whether
it is materially different from what was previously available, and whether it has been submitted in a
timely fashion based on the information’s availability; CLI-12-21, 76 NRC 491 (2012)
where a motion to reopen relates to a contention not previously in controversy, the motion must
demonstrate that the balance of the untimely filing factors of 10 C.F.R. 2.309(c) favors granting the
motion to reopen; LBP-11-20, 74 NRC 65 (2011); LBP-11-23, 74 NRC 287 (2011); LBP-11-35, 74
NRC 701 (2011)
where a supplemental environmental impact statement is being prepared, intervenor may submit proposed
new contentions based on new information, including new information in the SER and Staff NEPA
documents; LBP-11-22, 74 NRC 259 (2011)
where admission of a late-filed contention would cause a material delay in the proceeding weighed
against admission of the contention; CL1-12-15, 75 NRC 704 (2012)
where applicant deletes a material portion of its application and replaces it with a changed explanation of
legal compliance, that replacement is materially different information that was previously unavailable
and thus can satisfy the requirements of 10 C.F.R. 2.309(f)(2)(ii); LBP-11-9, 73 NRC 391 (2011)
where initial decisions have been issued, the record should not be reopened to take evidence on some
accident-related issue unless the party seeking reopening shows that there is significant new evidence,
not included in the record, that materially affects the decision; CLI-11-5, 74 NRC 141 (2011)
where petitioner fails to establish good cause for late filing, its demonstration on the other factors must
be particularly strong; LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012)
where the time for filing contentions had expired in a given case, no new TMI-related contentions would
be accepted absent a showing of good cause and a balancing of the late-filing factors; CLI-11-5, 74
NRC 141 (2011)
whether a proposed alternative method for estimating a macroscopic frequency of occurrence of a severe
offsite radiological release should have been used in the severe accident mitigation alternatives analysis
could have been raised when the original license renewal application was submitted and thus is not
timely; LBP-11-35, 74 NRC 701 (2011)
with respect to contentions filed after the initial petition, failure to address the requirements of 10 C.F.R.
2.309(c) and 2.309(f)(2) is reason enough to reject the new contentions; LBP-11-7, 73 NRC 254 (2011)
within 30 days after new information becomes available is a reasonable amount of time for filing a new
contention; LBP-15-24, 82 NRC 68 (2015)
CONTESTED LICENSE APPLICATIONS
contested hearing is not required if no petitioner has satisfied the criteria for intervention; LBP-11-22, 74
NRC 259 (2011)
NRC rules of practice are designed to avoid unfocused inquiry in contested proceedings; CLI-15-1, 81
NRC 1 (2015)
NRC Staff is authorized to issue a license when it has completed its review during the pendency of a
hearing as long as it provides the board and parties notice and an explanation why the public health
and safety are protected and why the action is in accord with the common defense and security despite
the pendency of the contested matter; CLI-15-17, 82 NRC 33 (2015)
once all contentions have been decided, the contested proceeding is terminated; CLI-12-14, 75 NRC 692
(2012); LBP-12-19, 76 NRC 184 (2012)
presiding officer approval for settlements in contested proceedings with admitted contentions is evidenced
from provisions of section 2.338 other than paragraph (g); LBP-15-30, 82 NRC 339 (2015)
CONTINUED STORAGE RULE
absent a rule waiver, NRC Staff is not expected to revisit the impact determinations made in the
Continued Storage GEIS as part of its site-specific NEPA reviews; CLI-15-10, 81 NRC 535 (2015)
admission of a “placeholder” contention is not necessary to ensure that petitioner’s challenges to the
Continued Storage Rule and GEIS receive a full and fair airing; CLI-15-11, 81 NRC 546 (2015);
CLI-15-12, 81 NRC 551 (2015)
after reviewing the background regarding the continued storage rule, the Commission directed licensing
boards to reject waste confidence contentions pending before them; LBP-14-12, 80 NRC 138 (2014)
agency did not need to assess site-specific impacts of continuing to store the spent fuel in either an
onsite or offsite storage facility in new reactor licensing environmental impact statements or

848
environmental assessments beyond the expiration dates of reactor licenses; LBP-14-16, 80 NRC 183 (2014)
allegation that the Continued Storage Rule and GEIS fail to address the trust responsibility the NRC owes an Indian tribe represents a collateral attack on the Continued Storage Rule and GEIS; LBP-14-16, 80 NRC 183 (2014)
asumptions used in the analysis of impacts of continued storage of spent fuel are sufficiently conservative to bound the impacts such that variances that may occur between sites are unlikely to result in environmental impact determinations greater than those presented in the continued storage generic environmental impact statement; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015)
because 10 C.F.R. 51.23(b) prescribes a specific procedure for incorporating the environmental impacts of continued storage into a site-specific analysis, this procedure, rather than a procedure set forth in the general provisions of Part 51, governs NRC environmental review; CLI-15-10, 81 NRC 535 (2015) because generic impact determinations on impacts of continued storage have been the subject of extensive public participation in the rulemaking process, they are excluded from litigation in individual proceedings; LBP-14-15, 80 NRC 151 (2014)
because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petition and motions itself; CLI-14-9, 80 NRC 147 (2014) Commission adopted a generic environmental impact statement to identify and analyze the environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-12, 81 NRC 452 (2015) Commission approval of the Continued Storage Rule and GEIS mandates that contentions discussing the long-term storage of spent nuclear fuel are not to be heard by individual licensing boards; LBP-14-16, 80 NRC 183 (2014) Commission approved issuance of a revised rule codifying NRC’s generic determinations regarding the environmental impacts of continued storage of spent nuclear fuel beyond a reactor’s licensed operating life; LBP-14-14, 80 NRC 144 (2014) Commission denied motions for leave to file new contentions concerning the Continued Storage Rule; LBP-15-7, 81 NRC 391 (2015) Commission denied petition to supplement and declined to admit “placeholder” contention; CLI-15-13, 81 NRC 555 (2015) Commission directed licensing boards to reject pending waste confidence contentions after adopting a generic environmental impact statement to identify and analyze environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-5, 81 NRC 249 (2015) Commission exercised its inherent supervisory authority over agency adjudications to review petition and motions challenging the Continued Storage Rule; LBP-14-16, 80 NRC 183 (2014) Commission instituted a rulemaking to revise the agency’s generic determination on the environmental impacts of continued storage of spent nuclear fuel; LBP-14-12, 80 NRC 138 (2014) Commission lifted suspension on final licensing decisions, declined to accept contentions concerning continued storage of spent nuclear fuel, and directed boards to reject pending contentions on this issue; LBP-14-14, 80 NRC 144 (2014) concurrent with approval of the final Continued Storage Rule and companion Generic Environmental Impact Statement, the Commission lifted the suspension on final licensing decisions and directed that the proposed spent fuel storage contentions be dismissed; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015) contention that supplementation of the environmental impact statement is necessary to allow members of the public to lodge placeholder contentions challenging Commission reliance, in individual licensing proceedings, on the continued storage GEIS and Continued Storage Rule is inadmissible; CLI-15-10, 81 NRC 535 (2015) “deemed incorporated” function of 10 C.F.R. 51.23(b) provides administrative efficiency by adding the environmental impacts of continued storage to site-specific environmental impact statements without additional work by the Staff; CLI-15-10, 81 NRC 535 (2015)
environmental impacts of continued storage have been incorporated into the environmental impact statements at issue in the proceedings by operation of law; CLI-15-10, 81 NRC 535 (2015) even if petitioner disputes that the Commission’s newly adopted Continued Storage Rule satisfies the requirements of the National Environmental Policy Act or the court’s decision, it cannot challenge the adoption or validity of the rule itself before a board; LBP-14-15, 80 NRC 151 (2014) following adoption of a revised Continued Storage Rule, boards were ordered to reject continued storage contentions pending before them, except contentions unresolved by the Continued Storage Rule; CLI-15-6, 81 NRC 340 (2015) generic analyses of the environmental impacts of continued storage and disposal in the context of NRC reactor licensing proceedings are acceptable; CLI-15-4, 81 NRC 221 (2015) generic environmental impact statement for spent fuel pools is not limited to discussing only normal operations, but also discusses potential accidents and other nonroutine events, and thus need not be included in the severe accident mitigation alternatives analysis for license renewal; LBP-15-5, 81 NRC 249 (2015) generic environmental impact statement was adopted to identify and analyze the environmental impacts of continued storage of spent nuclear fuel; LBP-14-16, 80 NRC 183 (2014) impact determinations in the continued storage generic environmental impact statement shall be deemed incorporated into the environmental impact statements associated with combined license and license renewal applications; CLI-15-10, 81 NRC 535 (2015) impacts of continued storage will not vary significantly across sites and can be analyzed generically; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015); LBP-14-16, 80 NRC 183 (2014) in view of its adoption of a revised rule codifying NRC’s generic determinations regarding the pertinent environmental impacts associated with continued storage of spent nuclear fuel, the Commission directs boards to reject pending contentions on this issue; LBP-14-13, 80 NRC 142 (2014) members of the public had the opportunity to fully participate in the Continued Storage rulemaking proceeding; CLI-15-10, 81 NRC 535 (2015) NRC adopted a generic environmental impact statement identifying and analyzing environmental impacts of continued storage of spent nuclear fuel and associated revisions to the Temporary Storage Rule in 10 C.F.R. 51.23; LBP-15-1, 81 NRC 15 (2015) NRC adopted a generic environmental impact statement to identify and analyze environmental impacts of continued storage of spent nuclear fuel beyond the licensed life of nuclear reactors; LBP-15-5, 81 NRC 249 (2015) NRC considered Indian tribe’s trust responsibility concerns during its rulemaking; LBP-14-16, 80 NRC 183 (2014) NRC need not undertake incorporation by reference of a generic environmental impact statement where the Commission has already taken public comment and performed a comprehensive analysis of the environmental consequences of continued spent fuel storage; CLI-15-10, 81 NRC 535 (2015) placeholder contentions that challenge the 2014 Continued Storage Rule and associated Generic Environmental Impact Statement for Continued Storage are inadmissible; CLI-15-15, 81 NRC 803 (2015); CLI-15-27, 82 NRC 414 (2015) rule and supporting generic environmental impact statement to assess the environmental impacts of spent fuel storage after the end of a reactor’s license term were approved; CLI-15-10, 81 NRC 535 (2015) rule makes generic safety findings concerning feasibility and capacity of spent fuel disposal; LBP-15-9, 81 NRC 396 (2015) to the extent NRC takes action with respect to waste confidence on a case-by-case basis, litigants can challenge such site-specific agency actions in the adjudicatory process; CLI-15-11, 81 NRC 546 (2015); CLI-15-12, 81 NRC 551 (2015) when considering continued storage in licensing reviews with previously completed final environmental impact statements, NRC Staff is expected to use a consistent and transparent process to ensure that all stakeholders are aware of how the environmental impacts of continued storage are considered in each affected licensing action; CLI-15-10, 81 NRC 535 (2015) CONTRACTORS applicant must establish and implement its own quality assurance program when it enters into a contract for the conduct of safety-related combined license application activities and to retain overall control of safety-related activities performed by the contractor; CLI-14-10, 80 NRC 157 (2014)
license applicant may delegate to others, such as contractors, agents, or consultants, the work of establishing and executing the quality assurance program, or any part thereof, but applicant retains responsibility for the quality assurance program; CLI-14-10, 80 NRC 157 (2014); LBP-12-23, 76 NRC 445 (2012)
request that NRC shut down or prohibit restart of nuclear power plants until a criminal investigation of a licensee contractor is complete and everything has been verified safe is denied; DD-14-1, 79 NRC 7 (2014)

CONTROL RODS
See Reactor Control Rods

CONTROL ROOM
applicant must ensure that its control room remains habitable in case of accidental release of hazardous gases; CLI-12-9, 75 NRC 421 (2012)
applicant need not submit information regarding control room habitability and ventilation system design in the site safety analysis report portion of an early site permit application; LBP-11-16, 73 NRC 645 (2011)
modernization plans for seismic instrumentation following failure of an annunciation panel in the main control room are discussed; DD-12-2, 76 NRC 391 (2012)
request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)
request that technical specification for control room emergency ventilation system instrumentation be changed to require that the control building air intake radiation-high function be applicable whenever irradiated fuel is stored in the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

CONTROLLED ACCESS
area includes a permanently established place that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; LBP-14-1, 79 NRC 39 (2014)
term is defined as any temporarily or permanently established area that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; CLI-15-9, 81 NRC 512 (2015)

COOLANT
assurance of adequate cooling water supply for emergency and long-term shutdown decay heat removal shall be considered in the design of the nuclear power plant; LBP-11-16, 73 NRC 645 (2011)
petitioners’ concerns about tube leaks, unplanned power changes, and potential primary coolant contamination did not constitute any violations that were more than minor; DD-15-2, 81 NRC 205 (2015)

COOLANT SYSTEM, MAIN
licensee’s operation of primary coolant pumps contrary to plant licensing and the FSAR is a violation of 10 C.F.R. Part 50, Appendix B, Criterion III; DD-15-3, 81 NRC 713 (2015)
request for immediate action to prevent restart because a piece of primary coolant pump impeller was lodged between the reactor vessel and the flow skirt is denied; DD-15-3, 81 NRC 713 (2015)
request for licensee to replace the primary coolant pumps with others designed for their intended duty is denied; DD-15-3, 81 NRC 713 (2015)

COOLING POND
contention claiming that the environmental report’s discussion of environmental effects and cumulative impacts of seepage from the cooling basin into groundwater and surface water through undocumented or unplugged oil and gas wells and borings fails to comply with NRC requirements is admissible; LBP-11-16, 73 NRC 645 (2011)
even though a cooling pond is not a safety-related structure, knowledge of faulting under the pool and the impact this faulting might have on the pool’s operation are required; LBP-11-16, 73 NRC 645 (2011)
groundwater quality degradation for cooling ponds in salt marshes is a Category 1 issue and thus inadmissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)
mere promise by applicant to follow applicable regulations in capping and abandoning active and inactive oil and gas wells in the footprint of the cooling basin and plant is insufficient to satisfy NRC’s regulations; LBP-11-16, 73 NRC 645 (2011)
COOLING SYSTEMS

cooling tower and closed-cycle cooling system represent the best available technology and will reduce discharge temperature to the greatest extent possible; LBP-11-14, 73 NRC 591 (2011)

insofar as a contention requests consideration of a dry cooling design alternative, that matter must be considered resolved in the early site permit proceeding; LBP-11-10, 73 NRC 424 (2011)

licensees must develop and implement guidance and strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities to address loss of large areas from fires or explosions that arise from a beyond-design-basis event; CLI-12-2, 75 NRC 63 (2012); DD-15-11, 82 NRC 361 (2015)

request that technical specification for residual heat removal–high water level and RHR–low water level be revised or a new limiting condition for operation be added to require one RHR subsystem to be operable whenever the entire reactor core is offloaded into the spent fuel pool is denied; DD-13-3, 78 NRC 571 (2013)

See also Emergency Core Cooling System; Spent Fuel Cooling System

COOLING TOWERS

bird collisions have not been found to be a problem at operating nuclear power plants and are not expected to be a problem during the license renewal term; CLI-13-7, 78 NRC 199 (2013); LBP-13-1, 77 NRC 57 (2013)

combined license application included a request for a departure from the wet-bulb noncoincident temperature, which is considered Tier 1 information and part of the certified design and thus a regulatory exemption is required; CLI-12-9, 75 NRC 421 (2012)

modeling of salt drift from cooling towers is discussed; LBP-13-4, 77 NRC 107 (2013)

CORRECTIVE ACTION PROGRAM

because all aspects of licensee’s current licensing basis will remain in effect during the period of extended operation, in the event that renewed licenses are issued, the corrective action requirements of 10 C.F.R. Part 50, Appendix B will apply; LBP-13-13, 78 NRC 246 (2013)

uranium enrichment facility applicant’s commitment to monitoring and the corrective action program provides reasonable assurance that public health and safety will be protected and applicant has a program in compliance with the regulations; LBP-12-21, 76 NRC 218 (2012)

CORROSION

although intervenors disagree with applicant’s opportunistic inspection strategy for managing rebar corrosion, they merely assert, and do not plausibly explain, how applicant’s approach will lead to a material safety impact; LBP-15-1, 81 NRC 15 (2015)

COST-BENEFIT ANALYSIS

See Benefit-Cost Analysis

COSTS

contention challenging applicant’s consideration of new and significant information regarding cleanup costs is inadmissible; LBP-12-8, 75 NRC 539 (2012)

contention that other costs were ignored is not admissible because petitioners presented no facts or expert opinion that show it to be plausible that including them might affect the outcome of the severe accident mitigation alternatives analysis; LBP-11-2, 73 NRC 28 (2011)

denial of license transfer applications typically is on grounds of operating costs and inability to pay the annual cost for spent fuel storage; CLI-14-5, 79 NRC 254 (2014)

document’s unavailability does not render NRC Staff’s or applicant’s reliance on the NUREG-1150 decontamination cost values altogether unreasonable under NEPA; LBP-13-13, 78 NRC 246 (2013)

generalized economic cost arguments, unsupported by asserted facts or expert opinion, are insufficient to show a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)

if the cost of obtaining information is exorbitant, NRC must still include in the environmental impact statement a statement that the information is unavailable, the relevance of the unavailable information, a summary of existing credible scientific evidence, and the agency’s evaluation of the impacts that might be caused; LBP-14-9, 80 NRC 15 (2014)

when information relevant to a reasonably foreseeable environmental effect is incomplete or unavailable, an agency is required to obtain the unavailable information and include it in the environmental impact statement as long as costs are not exorbitant; LBP-14-9, 80 NRC 15 (2014)

See also Decommissioning Costs

852
COUNCIL ON ENVIRONMENTAL QUALITY

agencies shall use the criteria for scope in 40 C.F.R. 1508.25 to determine which proposal shall be the subject of a particular environmental impact statement; LBP-11-10, 73 NRC 424 (2011); LBP-14-16, 79 NRC 404 (2014)

CEQ regulations provide guidance on agency compliance with NEPA and are not binding on NRC when the agency has not expressly adopted them, but are entitled to considerable deference; LBP-15-16, 81 NRC 618 (2015)

CEQ regulations receive substantial deference from federal courts; LBP-12-17, 76 NRC 71 (2012) if actions are reasonably foreseeable future actions within the meaning of 40 C.F.R. 1508.7, the CEQ regulations require that they be included in a cumulative impact analysis; LBP-14-6, 79 NRC 404 (2014)

in implementing its NEPA obligations, NRC expressly adopts certain definitions promulgated by the CEQ; LBP-11-7, 73 NRC 254 (2011)

NRC has not expressly adopted CEQ regulations, but they are entitled to considerable deference; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)

NRC is directed to use the Council on Environmental Quality regulation 40 C.F.R. 1502.4 in defining the scope of its impact statements; LBP-12-12, 75 NRC 742 (2012); LBP-14-6, 79 NRC 404 (2014)

NRC is not bound by those portions of CEQ NEPA regulations that have a substantive impact on the way in which the Commission performs its regulatory functions; LBP-11-35, 74 NRC 701 (2011)

NRC looks to CEQ regulations for guidance, but is not bound by them; CLI-11-11, 74 NRC 427 (2011)

NRC regulations incorporate CEQ regulations that define the scope of an environmental impact statement to include cumulative impacts; LBP-12-3, 75 NRC 164 (2012)

COUNCIL ON ENVIRONMENTAL QUALITY GUIDELINES

CEQ guidance does not bind NRC, but NRC gives it substantial deference; LBP-12-17, 76 NRC 71 (2012)

CEQ guidance does not change or substitute for any law, regulation, or other legally binding requirement and is not legally enforceable, and some courts have declined to defer to it; LBP-12-23, 76 NRC 445 (2012)

CEQ has recognized that information may be unavoidably incomplete or unavailable, and that under those circumstances, a final environmental impact statement can overcome this deficiency if it states that fact, explains how the missing information is relevant, sets forth the existing information, and evaluates the environmental impacts to the best of the agency’s ability; CLI-11-11, 74 NRC 427 (2011)

CEQ regulation requiring an environmental impact statement to consider reasonably foreseeable impacts rather than a worst-case analysis is entitled to substantial deference and NEPA does not require a worst-case analysis in an EIS; LBP-13-4, 77 NRC 107 (2013)

CEQ regulations require that agencies discuss possible mitigation measures in defining the scope of the EIS, in discussing alternatives to the proposed action and consequences of that action, and in explaining its ultimate decision; LBP-12-18, 76 NRC 127 (2012)

definition of "connected actions" in 40 C.F.R. 1508.25 is also adopted by 10 C.F.R. 51.14(b); LBP-14-9, 80 NRC 15 (2014)

in determining whether a federal action would significantly affect the environment, the agency should consider the degree to which the proposed action affects public health and safety; LBP-12-18, 76 NRC 127 (2012)

NRC adopted CEQ’s definition of “effects” in 40 C.F.R. 1508.8; LBP-14-9, 80 NRC 15 (2014)

NRC has expressly adopted, and is therefore bound by, the CEQ definition of cumulative impacts; LBP-14-16, 79 NRC 404 (2014)

NRC should use the provisions of a CEQ regulation, 40 C.F.R. 1502.4, to define the scope of an environmental impact statement; LBP-14-9, 80 NRC 15 (2014)

numerous CEQ regulations require an agency to discuss possible mitigation measures, including 40 C.F.R. §§ 1508.25(b), 1502.14(f), 1502.16(b), and 1508.20; LBP-13-4, 77 NRC 107 (2013)

requirement that an environmental impact statement contain a detailed discussion of possible mitigation measures flows both from the language of NEPA and, more expressly, from the Council on Environmental Quality’s implementing regulations; LBP-13-4, 77 NRC 107 (2013)
COUNSEL

counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal
authority that is adverse to the director’s position, especially when the target of the government’s
enforcement action is not represented by counsel; LBP-14-11, 80 NRC 125 (2014)
delay in filing contentions caused by the schedule of counsel in other matters can support a finding of
good cause; LBP-12-12, 75 NRC 742 (2012)
failure of counsel to review the scheduling order does not constitute good cause for failure to meet a
filing deadline; LBP-12-12, 75 NRC 742 (2012)

CRACKING

because the shield building functions as a radiation and biological shield, failure or collapse of the shield
building due to cracking propagation could lead to health and safety impacts and thus petitioner’s
contention concerns a matter that could impact the grant or denial of a pending license application;
board has ample authority to ensure that evidence offered concerning microcracking is limited to that
specific material issue and does not stray into issues outside the scope of the license amendment
proceeding; LBP-15-20, 81 NRC 829 (2015)
directing NRC Staff to investigate a safety issue that the board could not reach through the adjudicatory
process may put the Commission in a position, after receiving views of applicant if it desired, to assure
itself about the significance, or lack thereof, of the shield building cracking issues raised by intervenors,
and to direct such followup proceedings, if any, as it might deem appropriate; LBP-15-1, 81 NRC 15
(2015)
request for enforcement action to prevent reactor restart until applicable adequate protection standards
regarding zero pressure boundary leakage and operation of the reactor have been met is denied;
DD-11-2, 73 NRC 323 (2011)

CREDIBILITY

findings concerning personal knowledge are entirely factual and largely dependent on witness credibility;
LBP-11-8, 73 NRC 349 (2011)

CRIMINAL PROSECUTION

NRC can take criminal enforcement action against an individual for failing to report any concerns arising
from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

CRITICALITY

petitioner’s assertion that recriticality is demonstrated by the relative quantities of radionuclides released
is not self-evident and is clearly of the class of statements that must be supported by expert opinion;
LBP-11-23, 74 NRC 287 (2011)

CRITICALITY ANALYSES

petitioner does not demonstrate, with the level of support required under section 2.326(b), that a
materially different result would have been likely had the possibility of recriticality over a period longer
than 24 hours, or even 4 days, been considered in the SAMA analysis initially; CLI-12-3, 75 NRC 132
(2012)

CRITICALITY CONTROL

adequacy of nuclear criticality safety manager qualifications for uranium enrichment facility is discussed
and a license condition is imposed; LBP-11-11, 73 NRC 455 (2011)

CROSS-EXAMINATION

although there is no right to reciprocal cross-examination, the parties should be accorded equivalent
treatment under the applicable regulatory standard; CLI-12-18, 76 NRC 371 (2012)
boards are expected to explain the necessity of cross-examination in greater detail than a broad-brush
reference to a proceedings voluminous or technical nature; CLI-12-18, 76 NRC 371 (2012)
Commission denies a petition for interlocutory review of a licensing board order granting a motion for
cross-examination of witnesses; CLI-12-18, 76 NRC 371 (2012)
complexity and number of issues in a proceeding do not per se lead ineluctably to the conclusion that
cross-examination is necessary to ensure a fair and adequate hearing; CLI-12-18, 76 NRC 371 (2012)
should the agency’s administration of its new procedural rules contradict its present representations that
cross-examination will be allowed under the rules when required for a full and true disclosure of the
facts or otherwise float this principle, the rules may be subject to future challenges; LBP-11-4, 73 NRC
91 (2011)
state’s motion for cross-examination was granted, insofar as it would have a reasonable opportunity to examine witnesses pursuant to NRC regulations; LBP-13-13, 78 NRC 246 (2013)
where parties have provided prefiled direct testimony in Subpart L cases and submitted a list of confidential proposed questions for the board to ask the witnesses, the need for cross-examination by parties should be a rare circumstance, except where questions of witness credibility, motive, or intent are at issue; CLI-12-18, 76 NRC 371 (2012)
CULTURAL RESOURCES
agencies must take a hard look at preserving important historic and cultural aspects of our national heritage; LBP-15-16, 81 NRC 618 (2015)
agency failed to take a hard look at cumulative impacts on cultural resources under NEPA even though the agency had satisfied its obligations under NHPA to consult with the tribe; LBP-15-16, 81 NRC 618 (2015)
agency official must consult with any Indian tribe or Native Hawaiian organization that attaches religious and cultural significance to historic properties that may be affected by an undertaking; LBP-13-6, 77 NRC 253 (2013)
all adverse effects to any historic or cultural resource eligible for listing on the National Register must be considered during any federal undertaking; LBP-11-26, 74 NRC 499 (2011)
applicant owes no duty to address the federal government’s trust responsibility in its environmental report; LBP-14-6, 79 NRC 404 (2014)
areas of potential effect of a federal undertaking must be designated, and the lead federal agency must consult with the state historic preservation office regarding the presence and protection of historic and cultural resources in the designated area, as well as any federally recognized Native American groups with an ancestral interest in the property, to determine if resources important to the tribe are present; LBP-11-26, 74 NRC 499 (2011)
board based tribe’s standing on the presence onsite of cultural resources that could be harmed as a result of mining activities; CLI-14-2, 79 NRC 11 (2014)
consultation must provide an Indian tribe with a reasonable opportunity to identify its concerns about historic properties, advise on their identification and evaluation, articulate its views on the undertaking’s effects on such properties, and participate in the resolution of adverse effects; LBP-15-16, 81 NRC 618 (2015)
contention alleging failure to involve or consult all interested tribes as required by federal law is admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging failure to meet applicable legal requirements regarding protection of historical and cultural resources is admissible; LBP-14-5, 79 NRC 377 (2014)
contention alleging failure to protect historic and cultural resources is admissible; LBP-13-9, 78 NRC 37 (2013)
contention challenging sufficiency of draft environmental impact statement as it pertains to protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 37 (2013)
contention concerning cultural and historic resources is not admissible because it provides no alleged facts or expert opinions; LBP-14-6, 79 NRC 404 (2014)
contention that draft environmental assessment fails to adequately address potential impacts of the reasonably foreseeable expansion of an independent spent fuel storage installation on cultural and historic resources is admissible; LBP-14-6, 79 NRC 404 (2014)
contention that NRC has not fulfilled its trust responsibility in its analysis and conclusion of the cumulative impacts on historic and cultural resources from the reasonably foreseeable expansion of an independent spent fuel storage installation is admissible; LBP-14-6, 79 NRC 404 (2014)
federal agencies must consult with any Indian tribe that attaches religious and cultural significance to the sites; LBP-15-16, 81 NRC 618 (2015)
federal law not only recognizes that Native American tribes have a protected interest in cultural resources found on their aboriginal land, but as well has imposed on federal agencies a consultation requirement under the National Historic Preservation Act to ensure the protection of tribal interests in cultural resources; CLI-14-2, 79 NRC 11 (2014)
final supplemental environmental impact statement must include an analysis of cultural impacts; LBP-15-16, 81 NRC 618 (2015)
harming Native American artifacts would constitute an irreparable injury because artifacts are, by their nature, unique, and their historical and cultural significance make them difficult to value monetarily; LBP-15-2, 81 NRC 48 (2015)
historical/cultural resources are considered eligible for listing on the National Register of Historic Places if they meet one or more of four criteria; LBP-11-26, 74 NRC 499 (2011)
Indian tribe has an organizational interest in protecting cultural artifacts connected with it; CLI-14-2, 79 NRC 11 (2014)
individual tribal member’s assertion of an interest based on cultural resource concerns must show that there is a concrete or particularized injury to herself as an individual; LBP-13-6, 77 NRC 253 (2013)
irreparable harm element of the test for issuance of injunctive relief was met where the tribe’s evidence showed that a phase of the project would involve damage to at least one known site, and virtually ensure some loss or damage; LBP-15-2, 81 NRC 48 (2015)
issue of the alleged failure to consult with a tribe on historic and cultural resources is material and within the scope of a materials license proceeding; LBP-13-9, 78 NRC 37 (2013)
materials license application must provide analyses that are adequate, accurate, and complete in all material respects to demonstrate that cultural and historic resources are identified and protected; LBP-15-16, 81 NRC 618 (2015)
Native American tribe’s statutorily recognized interest in tribal cultural resources that may still be extant on its recognized aboriginal lands provides a cognizable interest for the purpose of establishing its standing; LBP-13-6, 77 NRC 253 (2013)
NRC Staff must include in the final supplemental environmental impact statement an analysis of significant problems and objections raised by any affected Indian tribes, and by other interested persons; LBP-15-16, 81 NRC 618 (2015)
NRC Staff must take steps necessary to identify the presence of historic properties within the area encompassed by the source materials license renewal application; LBP-15-2, 81 NRC 48 (2015)
overall record for the licensing action includes a complete analysis of the cultural resources; LBP-15-16, 81 NRC 618 (2015)
petitioner asserts standing based on use of proposed site to gather eagle feathers for ceremonial and religious uses; LBP-13-6, 77 NRC 253 (2013)
petitioner may claim deficiencies in the application’s cultural resources discussion even though it is generally not expected that the applicant’s cultural resources discussion will be comprehensive; CLI-14-2, 79 NRC 11 (2014)
petitioner should not wait for NRC Staff to perform its responsibilities under the National Historic Preservation Act before it raises a claim that information is lacking; CLI-14-2, 79 NRC 11 (2014)
preliminary injunction halting a solar energy project was granted based on a tribal claim that the project would not avoid most of the 459 cultural sites identified, and that the NEPA and NHPA process had been insufficient; LBP-15-2, 81 NRC 48 (2015)
that NRC Staff will develop additional information relevant to cultural resources, as part of its National Historic Preservation Act review, does not preclude a challenge to the application’s cultural resources discussion; CLI-14-2, 79 NRC 11 (2014)
to show imminent, irreparable harm to cultural resources, petitioner must describe with specificity the resources and manner in which they are threatened; CLI-15-17, 82 NRC 33 (2015)
tribal member who regularly visits tribal migratory route on national monument land to pursue cultural undertakings has standing under NHPA to raise concerns; LBP-13-6, 77 NRC 253 (2013)
tribes have a procedural right to be consulted regarding historic preservation matters; LBP-13-6, 77 NRC 253 (2013)
CULTURAL SENSITIVITY
agencies are to ensure that the federal government operates within a government-to-government relationship with federally recognized Native American tribes, reflecting respect for the rights of self-government due the sovereign tribal governments; LBP-15-16, 81 NRC 618 (2015)
federal agencies must consult with any Indian tribe that attaches religious and cultural significance to potentially impacted historic properties; LBP-15-16, 81 NRC 618 (2015)
federal policy supports special consideration where tribal religious exercise is threatened; LBP-15-16, 81 NRC 618 (2015)

CUMULATIVE IMPACTS ANALYSIS
absence of any reference to “cumulative impacts” in a document incorporated by reference negates any intention to incorporate any discussion of cumulative impacts from these prior documents into an environmental report, consistent with the maxim of expressio unius est exclusio alterius, i.e., the expression of one thing is to the exclusion of another; LBP-12-24, 76 NRC 503 (2012)
admissibility of contention that final environmental assessment fails to adequately analyze cumulative impacts is decided; LBP-15-11, 81 NRC 401 (2015)
agencies may not undertake a piecemeal review of environmental impacts; LBP-13-9, 78 NRC 37 (2013)
agency failed to take a hard look at cumulative impacts on cultural resources under NEPA even though the agency had satisfied its obligations under NHPA to consult with the tribe; LBP-15-16, 81 NRC 618 (2015)
analysis is required for reasonably foreseeable future actions and test for connected actions in 40 C.F.R. 1508.25 need not be satisfied; LBP-14-6, 79 NRC 404 (2014)
applicant is not required to assess cumulative impacts in its environmental report, but NUREG-1748 requests that applicant discuss any past, present, or reasonably foreseeable future actions that could result in cumulative impacts when combined with the proposed action; LBP-12-24, 76 NRC 503 (2012)
connected actions are distinguished from cumulative impacts; LBP-14-6, 79 NRC 404 (2014)
contention that raises a genuine dispute with the sufficiency of the cumulative impacts analysis, or the lack thereof, in the environmental report is admissible; LBP-12-3, 75 NRC 164 (2012)
contention that the draft environmental impact statement fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that the draft environmental impact statement fails to adequately assess cumulative impacts of the proposed action and another proposed ISL uranium mining operation is inadmissible; LBP-13-10, 78 NRC 117 (2013)
contention that the draft supplemental environmental impact statement fails to consider connected actions is admissible; LBP-13-9, 78 NRC 37 (2013)
cumulative actions are those that, when viewed with other proposed actions, have cumulatively significant impacts so that they should be discussed in the same environmental impact statement; LBP-13-10, 78 NRC 117 (2013)
cumulative effects and improper segmentation issues raise separate but similar questions; LBP-14-6, 79 NRC 404 (2014)
cumulative impact is defined; LBP-13-9, 78 NRC 37 (2013)
“cumulative impact” is defined as the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions; LBP-12-24, 76 NRC 503 (2012)
“cumulative impact” is the impact on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions; LBP-13-4, 77 NRC 107 (2013); LBP-14-6, 79 NRC 404 (2014)
cumulative impacts include impacts resulting from individually minor but collectively significant actions taking place over a period of time; LBP-11-7, 73 NRC 254 (2011); LBP-14-6, 79 NRC 404 (2014)
draft environmental impact statement does not and cannot treat identified environmental concerns in a vacuum; LBP-11-7, 73 NRC 254 (2011)
environmental contention regarding cumulative impact on groundwater quantity of the in situ recovery project and the planned expansion satisfies admissibility requirements; LBP-12-3, 75 NRC 164 (2012)
environmental impact statement must consider the direct, indirect, and cumulative impacts of an action; LBP-11-7, 73 NRC 254 (2011)
environmental impact statements must cover all cumulative environmental impacts even if they occur offsite (e.g., beyond the licensee’s property line); LBP-13-4, 77 NRC 107 (2013)
environmental report must contain an analysis of the cumulative impacts of the activities to be authorized by a combined license; LBP-11-6, 73 NRC 149 (2011)
failure of decision underlying the Clean Water Act § 404 permit to analyze the cumulative impacts reasonably foreseeable from the expected addition of a second generation unit at the plant is one of the most egregious shortfalls of the environmental assessment; LBP-14-6, 79 NRC 404 (2014)

857
SUBJECT INDEX

failure to have made any effort to evaluate the cumulative impact of the ISFSI expansion on archaeological sites has been held to be one of the most egregious shortfalls of the environmental assessment; LBP-14-6, 79 NRC 404 (2014)

future expansion of a power plant was reasonably foreseeable and thus should have been included in the cumulative impacts analysis for the plant; LBP-14-6, 79 NRC 404 (2014)

given that so many more environmental assessments are prepared than environmental impact statements, adequate consideration of cumulative effects requires that EAs address them fully; LBP-14-6, 79 NRC 404 (2014)

grounds were found for litigation regarding defendants’ assertion that treatment of highway interchanges and village development as cumulative impacts in the final environmental impact statement was sufficient under NEPA even if these actions should have been treated as connected actions under the statute’s implementing regulations; LBP-14-9, 80 NRC 15 (2014)

if actions are reasonably foreseeable future actions within the meaning of 40 C.F.R. 1508.7, they should be included in a cumulative impact analysis; LBP-14-6, 79 NRC 404 (2014)

impact on the environment that results from the incremental impact of the proposed action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions is the cumulative impact; LBP-14-9, 80 NRC 15 (2014)

impacts can result from individually minor but collectively significant actions taking place over a period of time; LBP-11-26, 74 NRC 499 (2011)

impacts of water withdrawals, climate change, and saltwater intrusion on wetlands are discussed; LBP-13-4, 77 NRC 107 (2013)

NEPA analysis of cumulative impacts must give a sufficiently detailed catalogue of past, present, and future projects, and provide adequate analysis about how these projects, and differences between the projects, are thought to have impacted the environment; LBP-13-9, 78 NRC 37 (2013)

NRC has expressly adopted, and is therefore bound by, the CEQ definition of cumulative impacts; LBP-14-6, 79 NRC 404 (2014)

NRC regulations incorporate Council on Environmental Quality regulations that define the scope of an environmental impact statement to include cumulative impacts; LBP-12-3, 75 NRC 164 (2012)

NRC Staff has conducted cumulative impact analyses of covered actions that were not interdependent with the proposed action; LBP-14-6, 79 NRC 404 (2014)

NRC Staff must consider the cumulative impact of greenhouse gas emissions from a proposed facility; LBP-11-7, 73 NRC 254 (2011)

possible future action must at least constitute a proposal pending before the agency to be ripe for adjudication, and to establish that cumulative impacts of the action must be addressed, petitioner must first show that any proposal applicant has made is so interdependent with the application at issue that it would be unwise or irrational to complete one without the other; LBP-14-6, 79 NRC 404 (2014)

projects that are not connected actions, but are physically related to the system, are cumulative actions and are subject to an examination of cumulative impacts; LBP-14-6, 79 NRC 404 (2014)

rather than being determinative, interdependence of proposed actions with potential future actions should be considered alongside other pertinent facts and circumstances to determine whether there is a sufficient likelihood that an action will occur to render that action foreseeable; LBP-14-6, 79 NRC 404 (2014)

reasonably foreseeable actions must be the subject of a cumulative impacts analysis; LBP-14-6, 79 NRC 404 (2014)

regulations ask whether future actions are foreseeable, not whether they are interdependent; LBP-14-6, 79 NRC 404 (2014)

restricted environmental analysis that fails to consider cumulative impacts would impermissibly subject the decisionmaking process contemplated by NEPA to the tyranny of small decisions; LBP-14-6, 79 NRC 404 (2014)

three types of actions (connected, cumulative, and similar) are to be considered in looking to the scope of an EIS; LBP-13-10, 78 NRC 117 (2013)

to establish that cumulative impacts must be addressed, petitioner must first show that any proposal applicant has made is so interdependent with the application at issue that it would be unwise or irrational to complete one without the other; LBP-14-6, 79 NRC 404 (2014)
when drafting an environmental impact statement, agency’s scope of review must include analysis of any connected or cumulative actions to the central proposed action; LBP-15-16, 81 NRC 618 (2015)
when several proposals for actions that will have cumulative or synergistic environmental impact upon a region are pending concurrently before an agency, their environmental consequences must be considered together; LBP-13-10, 78 NRC 117 (2013)

CURRENT LICENSING BASIS
ability of a facility to shut down safely following a potential earthquake is a current operating issue, and is not unique to whether licenses should be renewed; LBP-15-6, 81 NRC 314 (2015)

allegations of noncompliance with already-issued, existing, and open Commission orders are part of the CLB and therefore cannot be challenged in a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)

although the current licensing basis is not evaluated in the license renewal process, its provisions and protections remain in effect, complementing and supplementing any additional measures added due to aging management requirements; LBP-13-13, 78 NRC 246 (2013)

any amendment to an existing license as a result of NRC review of licensee seismic hazard reevaluations that leads to changes in the current licensing basis would be subject to a hearing opportunity; CLI-15-21, 82 NRC 295 (2015)
appli...
contentions that relate to current operations at a plant, as opposed to how it might operate during the period of extended operation, are inadmissible; LBP-13-8, 78 NRC 1 (2013)

entertaining contentions in a license renewal proceeding that challenge the current licensing basis would be both unnecessary and wasteful, given ongoing agency oversight, review, and enforcement; LBP-11-21, 74 NRC 115 (2011)

except for the detrimental effects of aging on the functionality of certain plant systems, structures, and components in the period of extended operation, the regulatory process is adequate to ensure that the licensing bases of all currently operating plants provide and maintain an acceptable level of safety; LBP-15-6, 81 NRC 314 (2015)

for active structures, systems, and components, NRC chose to exempt from license renewal, challenges to a plant’s operational activities covered by its CLB; LBP-13-13, 78 NRC 246 (2013)

for contentions that fall within the facility’s CLB, petitioner may seek action on its concerns by either filing a petition for rulemaking under 10 C.F.R. 2.802 or submitting an enforcement petition under 10 C.F.R. 2.206; LBP-11-21, 74 NRC 115 (2011)

if compliance with the CLB cannot be fully achieved during the current licensing term and must be consummated during the period of extended operation, then a contention raising issues about such CLB compliance is within the scope of license renewal; LBP-13-8, 78 NRC 1 (2013)

independent spent fuel storage installation CLB includes plant-specific design-basis information defined in 10 C.F.R. 50.2 as documented in the most recent final safety analysis report; LBP-12-24, 76 NRC 503 (2012)

integrated plant assessment must demonstrate that effects of aging will be adequately managed so that the intended functions will be maintained consistent with the CLB for the period of extended operation; LBP-13-13, 78 NRC 246 (2013)

it is not necessary or appropriate to throw open the full gamut of provisions in a facility’s CLB to reanalysis during the license renewal review, because the CLB is effectively addressed and maintained by ongoing agency oversight, review, and enforcement; LBP-12-24, 76 NRC 503 (2012); LBP-13-13, 78 NRC 246 (2013)

license requirements, including license conditions and technical specifications, plant-specific design basis information, and any orders, exemptions, and licensee commitments that are part of the docket for the plant’s license make up the CLB; LBP-13-13, 78 NRC 246 (2013)

litigability of the adequacy of applicant’s efforts to address current operational issues is excluded from a license renewal proceeding; CLI-11-11, 74 NRC 427 (2011)

NRC has the ongoing responsibility to oversee the safety and security of operating nuclear reactors and maintains an aggressive and ongoing program to oversee plant operation and to maintain compliance with the current licensing basis; LBP-13-8, 78 NRC 1 (2013)

NRC regulations, orders, technical specifications, and license conditions applicable to a specific plant and licensee’s written, docketed commitments for ensuring compliance with NRC requirements and the plant-specific design basis make up the CLB; CLI-12-5, 75 NRC 301 (2012)

NRC shall require backfitting of a facility only when it determines that there is a substantial increase in the overall protection of the public health and safety or the common defense and security and that the costs of implementation are justified in view of this increased protection; LBP-11-17, 74 NRC 11 (2011)

NRC Staff has authority to require implementation of non-aging-management severe accident mitigation alternatives through its CLB backfit review under Part 50 or through setting conditions of license renewal; LBP-11-17, 74 NRC 11 (2011)

NRC’s ongoing regulatory and oversight processes provide reasonable assurance that each facility complies with its current licensing basis, which can be adjusted by future Commission order or by modification to the facility’s operating license outside the renewal proceeding; CLI-11-11, 74 NRC 427 (2011); CLI-12-5, 75 NRC 301 (2012); CLI-12-8, 75 NRC 393 (2012)

NRC’s ongoing regulatory process ensures that the CLB of an operating plant remains acceptably safe; LBP-15-5, 81 NRC 249 (2015)

petitioner may file a petition for rulemaking to expand the scope of NRC license renewal regulations if it believes that applicant’s seismic design and licensing basis are now invalid and that safe operation of the plant can no longer be ensured; CLI-15-21, 82 NRC 295 (2015)
petitioner may file a request to institute a proceeding to modify, suspend, or revoke a license, or for any other action that may be proper, if it believes that applicant’s seismic design and licensing basis are now invalid and that safe operation of the plant can no longer be ensured; CLI-15-21, 82 NRC 295 (2015)
review of a license renewal application does not reopen issues relating to a plant’s CLB; LBP-12-24, 76 NRC 503 (2012)
this term of art is comprehended as the various NRC requirements applicable to a specific plant that are in effect at the time of a license renewal application; LBP-15-20, 81 NRC 829 (2015)
updated final safety analysis report supplement represents the capturing of critical aspects of the program into applicant’s CLB; LBP-13-13, 78 NRC 246 (2013)

CYBER SECURITY
plans must be submitted for NRC approval; CLI-12-2, 75 NRC 63 (2012)
plans must take into account site-specific conditions; CLI-12-2, 75 NRC 63 (2012)
written policies, implementing procedures, site-specific analysis, and other supporting technical information developed to implement cyber security plans are subject to periodic inspection by NRC Staff; CLI-12-2, 75 NRC 63 (2012)

DAMAGES
walkdowns and inspections performed by licensee, industry, and NRC personnel following an earthquake that exceeded the plant’s design basis are described; DD-12-2, 76 NRC 391 (2012)

DEADLINES
absent compelling circumstances, NRC Staff is expected to accord sufficient priority and devote sufficient resources to meeting its estimated safety and environmental review schedules; CLI-12-4, 75 NRC 154 (2012)
adherence to deadlines and procedures in NRC rules is required so that other litigants are not taken by surprise and are accorded an opportunity to respond to new arguments or new information; CLI-15-18, 82 NRC 135 (2015)
administrative challenges to EPA permits are to be filed 30 days after EPA’s final permit decision; LBP-14-4, 79 NRC 319 (2014)
although NRC regulations do not provide a precise definition of “timely,” licensing boards have often found a new contention to be timely if it has been filed within 30 days of the availability of information on which the contention is based; LBP-12-9, 75 NRC 615 (2012); LBP-12-11, 75 NRC 731 (2012)
any person whose interests may be affected by the license renewal proceeding, and who wishes to participate as a party, must file a petition for leave to intervene within 60 days of the notice of hearing in accordance with 10 C.F.R. 2.309; LBP-12-8, 75 NRC 539 (2012)
applicant is required to submit a report on its decommissioning funding assurance mechanism after combined licenses are issued and no later than 30 days after NRC publishes notice of intended operation in the Federal Register; CLI-12-2, 75 NRC 63 (2012)
applicants must implement the edition and addendum of the ASME Code for Operation and Maintenance of Nuclear Plants incorporated by reference in 10 C.F.R. 50.55a 12 months before fuel loading; CLI-12-2, 75 NRC 63 (2012)
because an applicant denied an operator’s license (or a byproduct, source, special materials, or facility license) would be entitled to demand a hearing, rather than merely request a hearing, no more than 20 days would be required to prepare a document that would satisfy the conditions precedent to obtaining the hearing; LBP-13-3, 77 NRC 729 (2013)
board is directed to rule within 140 days of the date of the referral on whether the hearing request should be granted; CLI-15-14, 81 NRC 729 (2015)
both the reopening and contention admissibility criteria require that new contentions be timely presented, generally within 30-60 days of the availability of the information on which the contention is based; CLI-12-21, 76 NRC 491 (2012)
claims and identification of privileged materials must occur within the time provided for disclosing withheld materials; LBP-12-3, 75 NRC 164 (2012); LBP-13-6, 77 NRC 253 (2013)
Commission enforces the 10-day deadline for filing appeals strictly and excuses it only in unavoidable and extreme circumstances; LBP-12-12, 75 NRC 742 (2012)
contention filing deadlines support the Commission’s interest in promoting efficient adjudication; LBP-15-11, 81 NRC 401 (2015)
contention or amendment or supplement to a contention is considered timely if filed within 60 days of the date when the material information on which it is based first becomes available to the moving party through service, publication, or any other means; LBP-12-27, 76 NRC 583 (2012)
deadline for answer to hearing petition is specified; CLI-11-3, 73 NRC 613 (2011)
deadline for reply to an answer to a hearing petition is specified; CLI-11-3, 73 NRC 613 (2011)
determination as to whether requests or petitions are filed in a timely manner shall be subject to a reasonableness standard and are not subject to the 30-day deadline applicable to motions by existing parties to add or amend contentions; LBP-15-6, 81 NRC 314 (2015)
each licensee shall complete implementation of the ERDS by February 13, 1993, or before initial escalation to full power, whichever comes later; LBP-15-4, 81 NRC 156 (2015)
earliest that a license renewal application may be submitted is 20 years before the expiration date of the operating license in effect; CLI-13-7, 78 NRC 199 (2013)
environmental contentions are expected in response to applicant’s or NRC Staff’s environmental reviews, and contentions regarding their adequacy cannot be expected to be proffered at an earlier stage of the proceeding before the documents are available; LBP-15-11, 81 NRC 401 (2015)
evidentiary hearing should begin 175 days after release of NRC Staff’s environmental review document; CLI-15-17, 82 NRC 33 (2015)
failure of counsel to review the scheduling order does not constitute good cause for failure to meet a filing deadline; LBP-12-12, 75 NRC 742 (2012)
filing deadlines may be extended or shortened by either the Commission or the presiding officer for good cause, or by stipulation approved by the Commission or the presiding officer; LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)
filing deadlines will not be modified unless a party, in advance of the deadline, petitions the board for a change and demonstrates that there is good cause for such a change; LBP-14-11, 80 NRC 125 (2014)
for proceedings for which a Federal Register notice of agency action is published, the hearing request must be filed not later than the time specified in the notice of proposed action; CLI-14-11, 80 NRC 167 (2014); CLI-15-5, 81 NRC 329 (2015)
for proceedings in which a Federal Register notice is not published, the hearing request shall be filed by the later of 60 days after publication of notice on the NRC website or 60 days after the requestor receives actual notice of a pending application, but not more than 60 days after agency action on the application; CLI-14-11, 80 NRC 167 (2014); CLI-15-5, 81 NRC 329 (2015)
holidays and weekends are excluded from the date calculation for filing new contentions; LBP-15-24, 82 NRC 68 (2015)
if intervenors file a new or amended contention, with supporting materials, within 60 days after pertinent information first becomes available, then the contention will be deemed timely filed and intervenors will not have to satisfy the late-filing requirements of 10 C.F.R. 2.309(c) or the requirements for reopening the record; LBP-11-22, 74 NRC 259 (2011)
if NRC Staff finds that an application does not comply with regulatory requirements, it must inform applicant in writing of the nature of any deficiencies or the reason for the proposed denial and the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)
if the 20-day deadline for requesting a hearing in 10 C.F.R. 2.103(b) applies, NRC Staff’s failure to comply with its own responsibilities under that provision bars Staff from invoking it; LBP-11-19, 74 NRC 61 (2011)
if, within 60 days after pertinent information supporting a new contention first becomes available, intervenors submit a particularized and otherwise admissible contention regarding construction of a mixed oxide facility, then the contention will be deemed timely without the need to satisfy the balancing test for late-filing requirements or the requirements for reopening the record; LBP-11-9, 73 NRC 391 (2011)
in denying an exemption request, Staff is required to inform applicant of the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)
intervenors and potential intervenors have a period of time to file new or amended contentions in response to a draft environmental impact statement; LBP-13-9, 78 NRC 37 (2013)
intervenors are not allowed to postpone filing a contention challenging environmental or safety information or analysis until Staff issues some document that collects, summarizes, and places into context the facts supporting that contention; LBP-15-11, 81 NRC 401 (2015)

intervention petition must be filed within 60 days based on the documents then in existence, meaning that the petition must be based on the documents submitted with the application; LBP-11-22, 74 NRC 259 (2011)

Model Milestones permit intervenors’ proposed late-filed contentions on SER and necessary NEPA documents to be filed within 30 days of the issuance of those documents; LBP-11-22, 74 NRC 259 (2011)

motions for reconsideration must be filed within 10 days of a Board’s decision; LBP-11-15, 73 NRC 629 (2011)

motions for reconsideration must be filed within 10 days of the action for which reconsideration is requested; CLI-14-10, 80 NRC 157 (2014); LBP-12-26, 76 NRC 559 (2012)

new contentions are deemed timely if filed within 30 days of the date when the new and material information on which they are based first became available; LBP-11-39, 74 NRC 862 (2011); LBP-12-1, 75 NRC 1 (2012); LBP-12-10, 75 NRC 633 (2012)

new contentions submitted within 30 days of the occurrence of the triggering event are timely; LBP-12-18, 76 NRC 127 (2012)

new or amended contention is considered timely if it is filed within 60 days of the date when the material information first became available to the moving party through service, publication, or any other means; LBP-15-1, 81 NRC 15 (2015)

notices failing to contain a specific time limit for administrative review, as required by federal regulations, does not trigger a time bar; LBP-11-19, 74 NRC 61 (2011)

notification of renewal of source materials license triggers the 5-day filing deadline to apply for a stay of the license; LBP-15-2, 81 NRC 48 (2015)

NRC generally considers approximately 30-60 days as the limit for timely filings based on new information; CLI-11-2, 73 NRC 333 (2011)

parties’ other professional obligations do not relieve them of their obligations to meet regulatory deadlines; LBP-11-34, 74 NRC 685 (2011); LBP-12-12, 75 NRC 742 (2012)

period allotted for the filing of challenges to enforcement orders that impose some sanction is 20 days; LBP-12-3, 75 NRC 207 (2012)

petitioner is generally afforded 7 days to file its reply; LBP-12-3, 75 NRC 164 (2012)

petitions for review must be filed within 15 days; CLI-12-17, 76 NRC 207 (2012)

proposed new contentions will be considered timely if it is filed within 30 days of the date when the new and material information on which the proposed contentions are based first becomes available; LBP-11-7, 73 NRC 254 (2011)

proposed new or amended contentions shall be deemed timely if filed within 60 days of the date when the document containing the new and material information first becomes available; LBP-12-12, 75 NRC 742 (2012)

reconsideration motions must be filed within 10 days of the action for which reconsideration is requested; CLI-12-17, 76 NRC 207 (2012)

reply must be filed within 7 days after the filing of answers to an intervention petition; LBP-11-21, 74 NRC 115 (2011)

requests for protected documents shall be filed within 60 days of the listing of the document on the privilege log and, in any event, no later than 10 days after the deadline for filing rebuttal testimony; LBP-11-5, 73 NRC 131 (2011)

schedule for Subpart L proceedings, including closing of the record, is described; CLI-13-3, 75 NRC 132 (2012)

settlement is encouraged, but the fact that a possible settlement is being negotiated does not change any of the deadlines set forth in the initial scheduling order; LBP-14-11, 80 NRC 125 (2014)

subject to exceptions, the presiding officer must adhere to the schedule set forth in 10 C.F.R. Part 2, Appendix D; CLI-13-8, 78 NRC 219 (2013)
summary disposition opponent has 20 days from proponent’s filing of its motion to oppose that motion; LBP-12-7, 75 NRC 503 (2012)
there simply would be no end to NRC licensing proceedings if petitioners could disregard timeliness requirements; LBP-14-4, 79 NRC 319 (2014)
time for applicant to request a hearing should be tolled until notice is issued if NRC Staff fails to provide the notice and hearing opportunity mandated by 10 C.F.R. 2.103(b); LBP-11-19, 74 NRC 61 (2011)
time for petitioning for review of any of a board’s prior interlocutory rulings will run from the date of the Commission’s ruling closing the record; CLI-12-14, 75 NRC 692 (2012)
time for submitting a new/amended contention motion based on information that would be newly available, materially different, and otherwise timely submitted given the information’s availability can be extended if the extension request is based on good cause; LBP-13-10, 78 NRC 117 (2013)
timeliness of an initial hearing petition in different situations is defined as being filed between 20 and 60 days after certain specified events; LBP-15-11, 81 NRC 401 (2015)
to be admissible, late-filed contentions must also satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 37 (2013)
timeliness of an initial hearing petition in different situations is defined as being filed between 20 and 60 days after certain specified events; LBP-15-11, 81 NRC 401 (2015)
to be admissible, late-filed contentions must also satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 37 (2013)
timeliness of an initial hearing petition in different situations is defined as being filed between 20 and 60 days after certain specified events; LBP-15-11, 81 NRC 401 (2015)
to be admissible, late-filed contentions must also satisfy the timeliness requirements of section 2.309(c) or section 2.307; LBP-13-9, 78 NRC 37 (2013)
when a filing deadline is approaching, notwithstanding that an attorney is engaged in good-faith settlement discussions, prudence should compel the attorney to take all actions that are necessary to ensure the deadline will be met in the event that settlement discussions are unsuccessful; LBP-15-4, 81 NRC 156 (2015)
where applicant has raised sufficient question as to the appropriate deadline, the board may conclude that it would be unfair to penalize applicant on account of what might be ambiguity in NRC’s own regulations; LBP-11-19, 74 NRC 61 (2011)
where NRC Staff provided advice regarding timing that misled a petitioner, the Staff had conceded timeliness in light of such advice; LBP-12-16, 76 NRC 44 (2012)
within 30 days after new information becomes available is a reasonable amount of time for filing a new contention; LBP-15-24, 82 NRC 68 (2015)
within 45 days of the initial scheduling order, target of the enforcement order must provide certain information and documents to the NRC enforcement director; LBP-14-11, 80 NRC 125 (2014)
DECAY HEAT REMOVAL
assurance of adequate cooling water supply for emergency and long-term shutdown decay heat removal shall be considered in the design of the nuclear power plant; LBP-11-16, 73 NRC 645 (2011)
DECISION ON THE MERITS
allowing an environmental challenge to continue after the environmental impact statement has issued does not constitute a merits ruling that the Staff’s review document is inadequate; CLI-11-6, 74 NRC 203 (2011)
although boards do not decide the merits at the contention admissibility stage, materials cited as the basis for a contention are subject to scrutiny to determine whether, on their face, they actually support the facts alleged; LBP-12-12, 75 NRC 742 (2012)
because the Commission’s vacatur order does not address the merits, it need not address an argument that NRC Staff impermissibly raises objections to the merits of the board’s decision without filing a petition for review; CLI-13-9, 78 NRC 551 (2013)
boards are not to decide the merits at the contention admissibility stage; LBP-12-18, 76 NRC 127 (2012)
boards do not adjudicate disputed facts at the contention admission stage; LBP-11-2, 73 NRC 28 (2011); LBP-11-21, 74 NRC 115 (2011)
boards must not adjudicate the merits of allegations at the contention admissibility stage of an NRC proceeding, but, to be admissible, a contention must provide more than a bare assertion, and must explain the supporting reasons for the dispute raised; LBP-11-16, 73 NRC 645 (2011)
Commission decision to vacate an unreviewed board decision does not intimate any opinion on the soundness of the board’s decision; CLI-13-9, 78 NRC 551 (2013); CLI-13-10, 78 NRC 563 (2013)
contention dismissal based on mootness is a jurisdictional ruling, not a decision on the merits of the claim; LBP-11-22, 74 NRC 259 (2011)
dismissal of an appeal with prejudice, similar to termination of a proceeding with prejudice, generally implies that the Commission has ruled on the merits of the appeal and such ruling is reserved for unusual situations involving substantial prejudice to an opposing party or to the public interest in general; CLI-13-10, 78 NRC 563 (2013)
evaluation of a contention at the admissibility stage should not be confused with evaluation at the merits stage; CLI-11-8, 74 NRC 214 (2011); LBP-15-24, 82 NRC 68 (2015)
if, after considering all arguments and facts proffered by the parties, no genuine issue of material fact exists, the Board may dispose of all arguments based on the pleadings; LBP-12-19, 76 NRC 184 (2012)
in assessing whether applicant/licensee adequately carries out a licensing directive, boards are to assume that NRC Staff will be fair and judge the matter of applicant/licensee’s compliance on the merits; LBP-15-3, 81 NRC 65 (2015)
it is rarely appropriate to resolve complex, fact-intensive issues on the initial pleadings; LBP-11-13, 73 NRC 534 (2011)
merits determinations cannot be made at the contention admissibility stage; LBP-14-6, 79 NRC 404 (2014); LBP-15-20, 81 NRC 829 (2015)
NRC Staff guidance is entitled to special weight in a decision on the merits; LBP-15-20, 81 NRC 829 (2015)
when a contention alleges the need for further study of an alternative, from an environmental perspective, such reasonableness determinations are the merits, and should only be decided after the contention is admitted; LBP-11-13, 73 NRC 534 (2011)
See also Licensing Board Decisions
DECISIONS
although the Atomic Safety and Licensing Appeal Panel is no longer in existence, the decisions of its appeals boards continue to be binding to the degree they concern a regulation or regulatory matter that has not been revised or otherwise materially altered; LBP-11-34, 74 NRC 685 (2011)
appellate review of the majority of presiding officer decisions is governed by 10 C.F.R. 2.341(a)(1); CLI-12-6, 75 NRC 352 (2012)
board’s ultimate NEPA judgments are made on the basis of the entire adjudicatory record in addition to NRC Staff’s final supplemental environmental impact statement; LBP-15-16, 81 NRC 618 (2015)
See also Decision on the Merits; Initial Decisions; Licensing Board Decisions; Partial Initial Decisions; Record of Decision
DECOMMISSIONING
agreement state license termination regulations are not less protective than or incompatible with NRC’s in making the terms of restricted release considerably more difficult than those for unrestricted release; CLI-11-12, 74 NRC 460 (2011)
ALARA analysis required under section 20.1403(a) calls for a licensee seeking to use restricted release to analyze whether it would be cost-beneficial to remove enough radioactive contamination from the site that doses to the public are no higher than 25 mrem per year without reliance on restricted-release controls; CLI-13-6, 78 NRC 155 (2013)

applicant need not submit an environmental report until the final stage of decommissioning as part of its license termination plan; LBP-15-24, 82 NRC 68 (2015)

areas of minor radioactive contamination are evaluated and remediated as needed during plant decommissioning; DD-11-1, 73 NRC 7 (2011)

benefit-cost analysis is used to determine initial eligibility for restricted release; CLI-11-12, 74 NRC 460 (2011)

board provides textual analysis and additional clarifying explanation of its interpretation of 10 C.F.R. 20.1403(a); CLI-13-6, 78 NRC 155 (2013)

claim that alternate concentration limit could not be accurately generated until the post-operational decommissioning process did not account for the possible creation of a bounding analysis based on the historical experience at other ISR sites; LBP-13-10, 78 NRC 117 (2013)

contention that the DEIS fails to analyze the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)

“decommissioning” is defined in 10 C.F.R. 50.2; LBP-15-24, 82 NRC 68 (2015)

despite having passed the initial eligibility test for restricted release, if licensee cannot satisfy dose criteria, its site will not be considered acceptable for license termination under restricted conditions; CLI-13-6, 78 NRC 155 (2013)

determination expressly required by the text “further reductions in residual radioactivity . . . were not being made because the residual levels associated with restricted conditions are ALARA” in 10 C.F.R. 20.1403 is an inquiry that focuses on how far it is possible, on a cost-effective basis, to further reduce the “residual levels”; CLI-13-6, 78 NRC 155 (2013)

dose limit for license termination is a constraint within the public dose limit of 25 mrem per year to members of the public; CLI-11-12, 74 NRC 460 (2011)

doses yielded by restricted-release and unrestricted-release decommissioning options are not susceptible to being compared meaningfully because of the significantly different risks and uncertainties associated with each option; CLI-13-6, 78 NRC 155 (2013)

eligibility test in section 20.1403(a) postulates a cost-benefit inquiry that is modeled on a traditional ALARA cost-benefit analysis, but that serves a different regulatory purpose; CLI-13-6, 78 NRC 155 (2013)

for license termination under restricted conditions, licensee must provide legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 mrem (0.25 mSv) per year; CLI-13-6, 78 NRC 155 (2013)

“further reductions” in 10 C.F.R. 20.1403(a) necessarily refers to further reductions from the level of residual radioactivity that a licensee proposes to leave in place under its proposed restricted-release decommissioning plan; CLI-13-6, 78 NRC 155 (2013)

if institutional controls fail and engineered barriers have degraded over a period of time, the dose to a member of the public will not exceed 100 mrem per year, or 500 mrem per year under certain circumstances, and is as low as reasonably achievable; CLI-11-12, 74 NRC 460 (2011)

if licensee demonstrates, through either of the two cost-benefit approaches, that removing radioactive contamination to the unrestricted-use level would not be cost-beneficial, then licensee must show that, with the addition of engineered barriers and institutional controls, the average annual dose to the public will not exceed 25 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

keeping radionuclides below the EPA limit is necessary to maintain public safety at a decommissioning facility; LBP-15-24, 82 NRC 68 (2015)

licensee must show that, if institutional controls fail, enough residual radioactivity has been removed from the site so that the average annual dose to the public will not exceed 100 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

licensees, in determining whether levels are ALARA, are to consider detriments, such as traffic accidents; CLI-13-6, 78 NRC 155 (2013)
litigation at NRC has actually reached the point of NRC approval of an onsite plan at the time of the transfer of authority to an agreement state; CLI-11-12, 74 NRC 460 (2011)

nothing in NRC license termination regulations, including the ALARA principle incorporated into section 20.1403(a), calls for a comparison of doses of the restricted-release and unrestricted-release decommissioning options; CLI-13-6, 78 NRC 155 (2013)

NRC explicitly expressed a preference for unrestricted release in adopting its license termination rule; CLI-11-12, 74 NRC 460 (2011)

NRC expressly altered the policy and application of 10 C.F.R. 50.59 as it related to decommissioning activities, permitting licensee to dismantle major structural components without prior NRC approval of a final decommissioning plan; CLI-15-14, 81 NRC 729 (2015)

NRC prefers that licensees satisfy radiation dose criteria for license termination through unrestricted-release decommissioning if it is cost-beneficial to do so; CLI-13-6, 78 NRC 155 (2013)

NRC regulations neither explicitly nor implicitly require a comparison of the levels of protection afforded by the unrestricted and restricted decommissioning options; CLI-11-12, 74 NRC 460 (2011)

nuclear power facility arguably exists until final decommissioning, which may take up to 60 years, or longer if approved by the Commission; LBP-15-4, 81 NRC 156 (2015)

objective is to reduce residual radioactivity in structures, soils, groundwater, and other media at the site so that the concentration of each radionuclide that could contribute to residual radioactivity is indistinguishable from the background radiation concentration for that nuclide; CLI-13-1, 77 NRC 1 (2013)

one of the benefits of removing enough radioactivity to cross the 25-mrem threshold is that the value of the affected property is likely to increase, and it is in this sense that NRC guidelines contemplate, as part of the ALARA analysis, a comparison between restricted release and unrestricted release; CLI-13-6, 78 NRC 155 (2013)

“reductions in residual radioactivity” refers only to dose reductions to the public that can be accomplished solely through the steps associated with unrestricted-release decommissioning, i.e., removal of contaminated material or decontamination; CLI-13-6, 78 NRC 155 (2013)

regulatory history, like 10 C.F.R. Part 50, App. E, § VI itself, is focused entirely on implementation and maintenance of the ERDS operations with not one word about decommissioning the system; LBP-15-4, 81 NRC 156 (2015)

“residual levels,” as used in the phrase “were not being made because the residual levels . . . are ALARA,” in 10 C.F.R. 20.1403(a) refers back to, and is shorthand for, the term “residual radioactivity” used earlier in the introductory language; CLI-13-6, 78 NRC 155 (2013)

sites will be considered acceptable for license termination under restricted conditions if licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of section 20.1402 would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA; CLI-13-6, 78 NRC 155 (2013)

sites will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a Total Effective Dose Equivalent to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and that the residual radioactivity has been reduced to levels that are as low as reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

threshold eligibility for restricted release requires that licensees demonstrate that remediation to the level of adequate protection for license termination cannot be achieved cost-beneficially through unrestricted release before allowing them to pursue restricted-release decommissioning; CLI-13-6, 78 NRC 155 (2013)

to provide adequate protection to the public upon license termination, NRC has established a maximum dose level to the public of 25 mrem per year, which licensee must satisfy without regard to cost, and regardless of whether decommissioning is to be accomplished through restricted or unrestricted release; CLI-13-6, 78 NRC 155 (2013)

unrestricted release and restricted release are both available as independent regulatory options that would provide adequate protection to the public health and safety if the applicable dose and other criteria are met; CLI-11-12, 74 NRC 460 (2011)

“unrestricted use” means that, from a radiological standpoint, no hazards exist at the site, the license can be terminated, and the site can be considered an unrestricted area; CLI-13-1, 77 NRC 1 (2013)
SUBJECT INDEX

words “further reductions in residual radioactivity necessary to comply with the provisions of § 20.1402” are analyzed; CLI-13-6, 78 NRC 155 (2013)

DECOMMISSIONING COSTS

decommissioning funding requirements encompass costs of low-level waste burial; CLI-15-8, 81 NRC 500 (2015)
decommissioning trust funds may be used by licensees if withdrawals are for expenses for legitimate decommissioning activities consistent with the definition of decommissioning in section 50.2; LBP-15-24, 82 NRC 68 (2015)
exemptions from decommissioning fund withdrawals are categorically excluded from environmental review as administrative changes that do not increase risk of public radiation exposure; LBP-15-24, 82 NRC 68 (2015)
given that licensee has not included discovery of unexpected levels of contaminants, and contamination in places not previously expected, in the decommissioning cost estimate, such fund withdrawals would require a 30-day notice; LBP-15-24, 82 NRC 68 (2015)
if licensee amends any license conditions related to the decommissioning trust fund, from that point forward it will have to comply with all requirements of 10 C.F.R. 50.75(h); LBP-15-28, 82 NRC 233 (2015)
instead of providing notice before each decommissioning expense, licensee must submit a decommissioning cost estimate and timeline, called a Post Shutdown Decommissioning Activities Report, and annual reports on expenditures; LBP-15-24, 82 NRC 68 (2015)
license amendment request seeks to replace 30-day notice requirement and other plant-specific license conditions with the decommissioning fund requirements; LBP-15-28, 82 NRC 233 (2015)
licensee is required to ensure that the site can be safely maintained and decommissioned, even in the face of unexpected costs; LBP-15-24, 82 NRC 68 (2015)
licensee must provide a 30-day notice for all withdrawals other than ordinary administrative expenses to operate the decommissioning fund, but those notices are no longer required once decommissioning has begun and withdrawals are made; LBP-15-24, 82 NRC 68 (2015)
narrowly tailored condition will afford petitioner an opportunity to dispute a specific decommissioning fund disbursement via a letter to the NRC or a petition for enforcement action; LBP-15-28, 82 NRC 233 (2015)
reporting and recordkeeping rules for decommissioning trusts are government by 10 C.F.R. 50.75(h)(1)-(4); LBP-15-28, 82 NRC 233 (2015)
spent fuel management is not a decommissioning activity; LBP-15-24, 82 NRC 68 (2015)
state has provided sufficiently supported expert opinion to show at the contention admissibility stage why inadvertent release of radionuclides is enough of a risk to public health and safety to warrant merits consideration as an unforeseen expense; LBP-15-24, 82 NRC 68 (2015)
two years before permanent cessation of operations, licensee must submit a preliminary decommissioning cost estimate that includes a plan for adjusting decommissioning funds to demonstrate that funds will be available when needed to cover decommissioning costs; DD-15-8, 82 NRC 107 (2015)
where license conditions predate issuance of 10 C.F.R. 50.75(h)(5), the plant has been allowed to keep its existing license conditions; LBP-15-28, 82 NRC 233 (2015)

DECOMMISSIONING FUNDING

acceptable trustee includes an appropriate state or federal government agency or an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency; CLI-11-4, 74 NRC 1 (2011)
annual report on recalculations of decommissioning cost estimates and projected available decommissioning funding must be submitted by a licensee for a plant that has closed before the end of its licensed life; DD-11-4, 73 NRC 713 (2011)
applicant seeks authorization to provide financial assurance for decommissioning funding on a forward-looking, incremental basis; LBP-11-11, 73 NRC 455 (2011)
applicant’s commitment to provide a letter of credit issued by a financial institution whose operations are regulated and examined by a federal or state agency is sufficient to satisfy decommissioning funding assurance requirements; CLI-11-4, 74 NRC 1 (2011); LBP-11-26, 74 NRC 499 (2011)
because it has chosen a surety method, licensee must ensure that the letter of credit is payable to a trust established for decommissioning costs; CLI-11-4, 74 NRC 1 (2011)
certification of financial assurance may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material; CLI-11-4, 74 NRC 1 (2011)
certifications of financial assurance, which are used by applicants seeking to possess smaller quantities of material, are governed by 10 C.F.R. 70.25(b)(2); CLI-11-4, 74 NRC 1 (2011)
contracts that licensee is relying on for decommissioning funding must be reported to NRC; DD-11-7, 74 NRC 787 (2011)
“credit facility” carries various definitions; CLI-13-1, 77 NRC 1 (2013)
exemption from funding requirements to allow applicant to act as a self-guarantor without satisfying the financial test for self-guarantors must be in the public interest or otherwise satisfy the requirements of 10 C.F.R. 40.14; LBP-12-6, 75 NRC 256 (2012)
exemption from the decommissioning financial assurance requirements is considered to be an extraordinary equitable remedy to be used only sparingly; CLI-13-1, 77 NRC 1 (2013)
exemption request is subject to a hearing where the plant already has a license and is seeking an exemption from the decommissioning financial assurance requirements based on an earlier exemption that it had received during its license renewal; LBP-15-24, 82 NRC 68 (2015)
exemptions from decommissioning fund expenditure notification requirements are categorically excluded from environmental review as administrative changes that do not increase the risk of public radiation exposure; LBP-15-28, 82 NRC 233 (2015)
federal financial regulatory agencies regularly examine banks within their jurisdiction, generally at 12- or 18-month intervals; CLI-11-4, 74 NRC 1 (2011)
financial assurance for decommissioning may be based on the prepayment method; CLI-15-8, 81 NRC 500 (2015)
financial qualifications review for decommissioning funding assurance is revisited every year until the license is terminated; DD-11-4, 73 NRC 713 (2011)
federal financial regulatory agencies regularly examine banks within their jurisdiction, generally at 12- or 18-month intervals; CLI-11-4, 74 NRC 1 (2011)
financial test for self-guarantee of the funding obligation requires that licensee maintain a bond rating of “A” or better and have a tangible net worth at least 10 times the total current decommissioning cost estimate; LBP-12-6, 75 NRC 256 (2012)
financial tests for parent company guarantees and self-guarantees require that an independent certified public accountant review the data used in the financial test and require that the licensee inform NRC within 90 days of any matters that cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test; CLI-11-4, 74 NRC 1 (2011) formulas, based on reactor type and power level, are provided in 10 C.F.R. 50.75(c) for determining minimum dollar amounts required to demonstrate reasonable assurance of decommissioning funding; CLI-15-8, 81 NRC 500 (2015)
if license amendment request is approved, licensee will no longer have to provide 30-day notice to the Commission once it begins decommissioning and starts making withdrawals from the decommissioning fund; LBP-15-28, 82 NRC 233 (2015)
if licensee amends any of its grandfathered license conditions that were related to the decommissioning trust fund, from that point forward licensee must comply with all of the requirements of 10 C.F.R. 50.75(h); LBP-15-24, 82 NRC 68 (2015)
if NRC Staff makes a finding of no reasonable assurance, NRC reserves the right to take steps to ensure a licensee’s adequate accumulation of decommissioning funds; DD-11-4, 73 NRC 713 (2011)
insofar as applicant contends that NRC’s requirements for self-guarantors are not useful or relevant in evaluating the financial condition of numerous similarly situated corporations, applicant may petition NRC to amend its rules at any time; LBP-12-6, 75 NRC 256 (2012)
intangible assets may be used to meet specified criteria in the financial tests for self-guarantees; CLI-13-1, 77 NRC 1 (2013)
license transfer applicant must show reasonable assurance of sufficient funds to decommission the facility; CLI-15-8, 81 NRC 500 (2015)
licensee must file an annual report to NRC certifying that financial assurance for decommissioning will be or has been provided in an amount that may be more, but not less, than the amount stated in the
regulations, adjusted as appropriate for changes in labor, energy, and waste burial costs; DD-11-3, 73 NRC 375 (2011)

licensee seeks regulatory exemptions to allow it to use decommissioning funds to manage spent fuel and eliminate the 30-day notice requirement that would otherwise apply to spent fuel management; LBP-15-28, 82 NRC 233 (2015)

licensee that wishes to be the sole guarantor of its own liabilities must satisfy a stringent test; LBP-12-6, 75 NRC 256 (2012)

licensees cannot make decommissioning fund withdrawals that would reduce the value of the trust below an amount necessary to place and maintain the reactor in a safe storage condition if unforeseen conditions or expenses arise; LBP-15-24, 82 NRC 68 (2015)

licensees have not been permitted to include the value of goodwill to meet the 10:1 tangible net worth requirement; LBP-12-6, 75 NRC 256 (2012)

licensees may use a site-specific methodology to determine the decommissioning funding needed as long as the amount is greater than the decommissioning cost estimate derived from formulas in 10 C.F.R. 50.75(c); DD-11-7, 74 NRC 787 (2011)

licensees must annually adjust the amount of decommissioning funding assurance; DD-15-8, 82 NRC 107 (2015)

licensees must submit, with each operating license application, certification specifying how financial assurance for decommissioning will be provided; DD-15-8, 82 NRC 107 (2015)

licensees must use the formulas in 10 C.F.R. 50.75(c) to estimate the minimum funding amount needed for radiological decommissioning; DD-11-7, 74 NRC 787 (2011)

NRC may grant exemptions from the alternative financial test for self-guarantee of the decommissioning funding obligation that are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest; LBP-12-6, 75 NRC 256 (2012)

NRC monitors the status of decommissioning funds and, when necessary, requires additions to funds through parent company guarantees, cash deposits, or other methods permitted by regulations; DD-15-8, 82 NRC 107 (2015)

NRC reserves the right to review, as necessary, the rate of accumulation of decommissioning funds and to take additional actions, as appropriate on a case-by-case basis, to ensure an adequate accumulation of decommissioning funds; DD-11-7, 74 NRC 787 (2011)

NRC seeks to ensure that decommissioning can be carried out in a safe and timely manner and that lack of funds does not result in delays that may cause potential health and safety problems; LBP-12-6, 75 NRC 256 (2012)

NRC Staff authorization permitting applicant to defer execution of any final letters of credit for decommissioning financial assurance until after a license is issued but before receipt of licensed material might be problematic; LBP-11-26, 74 NRC 499 (2011)

possession limits associated with a certification of financial assurance are set forth in 10 C.F.R. 70.25(d); CLI-11-4, 74 NRC 1 (2011)

power reactor licensees must report to the NRC at least once every 2 years on the status of their decommissioning funding for each reactor or part of a reactor that they own; DD-11-4, 73 NRC 713 (2011); DD-11-7, 74 NRC 787 (2011)

references to prior problems involving estimation of decommissioning costs are inadequate to establish a likelihood that the amount of applicant’s decommissioning bond will be insufficient; LBP-12-3, 75 NRC 164 (2012)

request for action against reactor facilities that have projected shortfalls in their decommissioning trust funds is denied in part and granted in part; DD-11-7, 74 NRC 787 (2011)

request for exemption from requirements of 10 C.F.R. 40.36 to allow applicant to act as a self-guarantor of the funds necessary for eventually decommissioning the facility without satisfying the financial test for self-guarantors is denied; LBP-12-6, 75 NRC 256 (2012)

request for exemption that would enable licensee to provide decommissioning funding on a forward-looking, incremental basis, at a rate proportional to the then-current decontamination and decommissioning liability is granted; CLI-11-4, 74 NRC 1 (2011)

request for hearing on Staff denial of permission to use an alternative method for demonstrating decommissioning funding assurance is granted; LBP-11-19, 74 NRC 61 (2011)
request that NRC investigate whether licensee possesses sufficient funds to cease operations and decommission its plant is denied; DD-15-8, 82 NRC 107 (2015)
request that NRC issue a demand for information from licensee relating to adequacy of financial assurances for decommissioning is denied; DD-11-4, 73 NRC 713 (2011)
“revolving credit” arrangement is one type of credit facility, and may be used repeatedly up to the limit specified after partial or total repayments have been made; CLI-13-1, 77 NRC 1 (2013)
self-guaranteeing licensees must pass the financial test annually; CLI-13-1, 77 NRC 1 (2013)
source materials licensees must demonstrate that sufficient funds will be available to cover the cost of decommissioning its facility; LBP-12-6, 75 NRC 256 (2012)
source materials licensees can seek an exemption from the decommissioning financial assurance requirements; CLI-13-1, 77 NRC 1 (2013)
source materials licensees have numerous options for meeting their decommissioning funding obligations; LBP-12-6, 75 NRC 256 (2012)
source of funds for operating and maintenance expenses would be unaffected by a transaction for decommissioning funding; CLI-11-4, 74 NRC 1 (2011)
Staff’s deference to the expertise of other federal and state agencies to set and monitor the financial soundness of institutions issuing letters of credit is reasonable; CLI-11-4, 74 NRC 1 (2011)
status of decommissioning funds must be reported to NRC at least once every 2 years; DD-15-8, 82 NRC 107 (2015)
there is no time limit on when a licensee can seek an amendment to the license conditions relating to its decommissioning trust fund; LBP-15-24, 82 NRC 68 (2015)
to qualify for the alternative method of self-funding for decommissioning, licensee must have, among other things, a bond rating of “A” or better, as issued by Standard and Poor’s or Moody’s; CLI-13-1, 77 NRC 1 (2013)
to use the self-guarantee mechanism to fulfill its decommissioning funding obligation, a licensee that issues bonds must annually satisfy the financial test set forth in 10 C.F.R. Part 30, Appendix C, § II.B.3; LBP-12-6, 75 NRC 256 (2012)
trust fund can be used only for decommissioning activities; LBP-15-24, 82 NRC 68 (2015)
with limited exceptions, source material licensees must demonstrate that they can pay for the decommissioning of their regulated facilities; CLI-13-1, 77 NRC 1 (2013)
without an exemption from the NRC, licensee is prohibited from using decommissioning funds for spent fuel management because it is not an allowable decommissioning expense; LBP-15-28, 82 NRC 233 (2015)

DECOMMISSIONING FUNDING PLANS
applicant is required to submit a report on its decommissioning funding assurance mechanism after combined licenses are issued and no later than 30 days after NRC publishes notice of intended operation in the Federal Register; CLI-12-2, 75 NRC 63 (2012)
applicant must include a periodically adjusted cost estimate, specify the method for assuring that sufficient funds will be available when needed, and certify that the amount assured for decommissioning meets or exceeds estimated decommissioning costs; CLI-13-1, 77 NRC 1 (2013)
applicant seeking a specific license for a uranium enrichment facility is required to submit a plan consistent with 10 C.F.R. 70.25(e); CLI-11-4, 74 NRC 1 (2011)

bond-issuing licensees may provide a self-guarantee of funds for decommissioning costs based on a financial test set forth in Appendix C of Part 30; CLI-13-1, 77 NRC 1 (2013)
deferral of execution of the financial instruments until after the license has issued is not allowed for a uranium enrichment facility; CLI-11-4, 74 NRC 1 (2011)
depending on the quantity of material, Part 70 license applicants must submit either a decommissioning funding plan or a certification of financial assurance; CLI-11-4, 74 NRC 1 (2011)
each plan must include a signed original of the instrument obtained to provide financial assurance for decommissioning at the time the plan is submitted; CLI-11-4, 74 NRC 1 (2011)
financial surety arrangements must be established by each mill operator before the commencement of operations to ensure that sufficient funds will be available to carry out the decontamination and decommissioning of the mill and site and for the reclamation of any tailings or waste disposal areas; LBP-15-15, 81 NRC 598 (2015)
if licensee with existing license conditions relating to decommissioning trust agreements elects to amend those conditions, the license amendment shall be in accordance with the provisions of 10 C.F.R. 50.75(h); LBP-15-24, 82 NRC 68 (2015) licensee that has collected funds based on a site-specific estimate under section 50.75(b)(1) may take credit for projected earnings on the external sinking funds using up to a 2% annual real rate of return from the time of future funds’ collection through the decommissioning period, provided that the site-specific estimate is based on a period of safe storage that is specifically described in the estimate; DD-11-4, 73 NRC 713 (2011) non-government licensees must demonstrate financial assurance for decommissioning by prepayment, use of a surety method, insurance, or other guarantee method, or use of an external sinking fund; CLI-13-1, 77 NRC 1 (2013) NRC requires a contingency factor for decommissioning funds to provide for unforeseen events that may happen during operations or decommissioning that could increase the overall costs of this activity; LBP-15-24, 82 NRC 68 (2015) state’s claim that licensee’s license amendment request contains incomplete and incorrect statements concerning its use of the trust fund is within the scope of the license amendment proceeding as defined in the notice of opportunity to request a hearing; LBP-15-24, 82 NRC 68 (2015) two years before permanent cessation of operations, licensee must submit a preliminary decommissioning cost estimate that includes a plan for adjusting decommissioning funds; DD-15-8, 82 NRC 107 (2015) use of the 4.81% forecast interest rate and the 2.81% annual inflation rate is in compliance; DD-11-4, 73 NRC 713 (2011) DECOMMISSIONING PLANS admissibility of contention that applicant submit a decommissioning plan and updated financial plans related to decommissioning is decided; LBP-15-15, 81 NRC 598 (2015) claimed deficiencies in a decommissioning plan must have health and safety significance in order to be admissible; LBP-15-24, 82 NRC 68 (2015) combined license applications include operational procedures to minimize contamination of the facility and environment, facilitate eventual decommissioning, and minimize generation of radioactive waste; CLI-12-2, 75 NRC 63 (2012) licensee must submit a plan when it decides to cease NRC-licensed activities at its facility; CLI-13-1, 77 NRC 1 (2013) licensees must submit for NRC approval their plans to manage spent fuel after the permanent cessation of reactor operation; CLI-15-4, 81 NRC 221 (2015) source materials licensees must submit a decommissioning funding plan far in advance of submitting the actual plans for decommissioning; CLI-13-1, 77 NRC 1 (2013) DECOMMISSIONING PROCEEDINGS public interest group lacked organizational standing when its business address did not lie within 50 miles of the facility; LBP-13-6, 77 NRC 253 (2013) DECONTAMINATION contention challenging applicant’s consideration of new and significant information regarding cleanup costs is inadmissible; LBP-12-8, 75 NRC 539 (2012) contention that severe accident mitigation alternatives analysis does not accurately reflect decontamination and cleanup costs is decided; LBP-13-13, 78 NRC 246 (2013) document’s unavailability does not render NRC Staff’s or applicant’s reliance on the NUREG-1150 decontamination cost values altogether unreasonable under NEPA; LBP-13-13, 78 NRC 246 (2013) parties are directed to provide further briefing on questions relating to severe accident decontamination time values and costs used in the SAMA analysis; CLI-15-2, 81 NRC 213 (2015) DEFENSE-IN-DEPTH POLICY objectives of licensee’s fire protection program to extend the concept of defense-in-depth to fire protection are discussed; DD-12-3, 76 NRC 416 (2012) DEFERRAL OF HEARING until the safety evaluation report and Staff NEPA documents have been issued, a licensing board is generally prohibited from holding the hearing on the license application; LBP-11-22, 74 NRC 259 (2011)
DEFERRAL OF RULING
consideration of an admissible contention can be deferred, where appropriate, but an inadmissible one cannot; LBP-11-28, 74 NRC 604 (2011)
petitioner’s request that the Commission defer a decision on the license renewal applications pending disposition of its forthcoming rulemaking and other potential events is premature and is therefore denied; CLI-14-6, 79 NRC 445 (2014)

DEFICIENCIES
deficiency in a final environmental impact statement is not automatic ground for reversal of an order granting a permit although the issue has been opened for full consideration in an agency hearing; CLI-15-6, 81 NRC 340 (2015)

DEFINITIONS
absent an NRC construction permit, amendment to the definition of construction generally prohibited any clearing of land, excavation, or other substantial action that would adversely affect the natural environment of a site and construction of nonnuclear facilities such as turbogenerators and turbine buildings for use in connection with the facility; LBP-14-9, 80 NRC 15 (2014)
“active dewatering” refers to the mechanical pumping of water from an aquifer; LBP-13-4, 77 NRC 107 (2013)
Administrative Procedure Act broadly defines “rule” to include nearly every statement an agency may make; LBP-15-15, 81 NRC 598 (2015)
“adversary adjudication” is defined as an adjudication under section 554 of the Administrative Procedure Act in which the position of the United States is represented by counsel or otherwise; LBP-11-8, 73 NRC 349 (2011)
ALARA is defined as every reasonable effort to maintain exposures to radiation as far below the dose limits in Part 20 as is practical consistent with the purpose for which the licensed activity is undertaken; CLI-11-12, 74 NRC 460 (2011)
although NRC regulations do not provide a precise definition of “timely,” licensing boards have often found a new contention to be timely if it has been filed within 30 days of the availability of information on which the contention is based; LBP-12-11, 75 NRC 731 (2012)
“applicant” means a person or entity applying for a license; LBP-14-7, 79 NRC 451 (2014)
“baseline” data describe results of applicant’s preoperational or baseline groundwater quality sampling program providing data on project-wide groundwater conditions; LBP-15-16, 81 NRC 618 (2015)
baseload generation is different than peaking power, which provides supplemental power during hours of the day when demand is highest; LBP-11-13, 73 NRC 534 (2011)
“baseload power” is defined as power generating energy intended to continuously produce electricity at or near full capacity, with high availability; CLI-12-5, 75 NRC 301 (2012); LBP-12-15, 76 NRC 14 (2012)
building of transmission lines is excluded from the definition of construction; LBP-14-9, 80 NRC 15 (2014)
“byproduct material” is categorized as tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-15-11, 81 NRC 401 (2015); LBP-15-16, 81 NRC 618 (2015)
categorical exclusion is a generic finding that a category of actions do not individually or cumulatively have a significant effect on the human environment; LBP-15-26, 82 NRC 163 (2015)
“Category IA material” is strategic special nuclear material directly usable in the manufacture of a nuclear explosive device; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)
“Category IB material” is defined as all strategic special nuclear material other than Category IA; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)
“closed record” refers to a record developed at an evidentiary hearing; LBP-11-22, 74 NRC 259 (2011)
“commencement of construction” includes clearing of land, excavation, or other substantial action that would adversely affect the environment of the site; LBP-11-11, 73 NRC 455 (2011); LBP-11-26, 74 NRC 499 (2011)
“connected actions” are those that lack independent utility; LBP-12-12, 75 NRC 742 (2012); LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014)
“construction” and “commencement of construction” are defined; LBP-12-3, 75 NRC 164 (2012)
“construction” does not include site exploration, including preconstruction monitoring to establish background information related to the environmental impacts of construction or operation, or the protection of environmental values; LBP-15-3, 81 NRC 65 (2015)

containment system is defined as the principal barrier, after the reactor coolant pressure boundary, to prevent the release of quantities of radioactive material that would have a significant radiological effect on public health; LBP-15-26, 82 NRC 163 (2015)

contention of omission alleges that an application suffers from an improper omission, whereas a contention of inadequacy raises a specific substantive challenge to how particular information or issues have been discussed in the application; LBP-11-6, 73 NRC 149 (2011); LBP-13-9, 78 NRC 37 (2013); LBP-14-5, 79 NRC 377 (2014)

contentions of omission and contentions of inadequacy are defined; LBP-15-5, 81 NRC 249 (2015)

“controlled access area” is any temporarily or permanently established area that is clearly demarcated, access to which is controlled, and which affords isolation of the material or persons within it; LBP-14-1, 79 NRC 39 (2014); CLI-15-9, 81 NRC 512 (2015)

“credit facility” carries various definitions; CLI-13-1, 77 NRC 1 (2013)

“cumulative action” is defined as those that, when viewed with other proposed actions, have cumulatively significant impacts so that they should be discussed in the same environmental impact statement; LBP-13-10, 78 NRC 117 (2013)

“cumulative impact” is defined as the impact on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions; LBP-11-26, 74 NRC 499 (2011); LBP-12-24, 76 NRC 503 (2012); LBP-13-4, 77 NRC 107 (2013); LBP-13-9, 78 NRC 37 (2013); LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014); LBP-15-16, 81 NRC 618 (2015)

“current licensing basis” encompasses the various Commission requirements applicable to a specific plant that are in effect at the time of the license renewal application; LBP-13-13, 78 NRC 246 (2013)

“current licensing basis” is a term of art comprehending the various NRC requirements applicable to a specific plant that are in effect at the time of a license renewal application; LBP-15-20, 81 NRC 829 (2015)

“current licensing basis” is defined in 10 C.F.R. 54.3(a); LBP-13-8, 78 NRC 1 (2013)

“current licensing basis” is the set of NRC requirements (including regulations, orders, technical specifications, and license conditions) applicable to a specific plant, and includes the licensee’s written, docketed commitments for ensuring compliance with applicable NRC requirements and the plant-specific design basis; CLI-12-5, 75 NRC 301 (2012)

“decommissioning” is defined in 10 C.F.R. 50.2; LBP-15-24, 82 NRC 68 (2015); LBP-15-28, 82 NRC 233 (2015)

“demand” and “request” are not synonyms and therefore cannot be given the same meaning and effect; LBP-13-3, 77 NRC 82 (2013)

“demand” for a hearing is understood to confer the right to a hearing; LBP-13-3, 77 NRC 82 (2013)

“design bases” means information that identifies the specific functions to be performed by a structure, system, or component of a facility, and the specific values or ranges of values chosen for controlling parameters as reference bounds for a design; DD-15-11, 82 NRC 361 (2015); LBP-13-7, 77 NRC 307 (2013)

“design basis” is information that identifies specific functions to be performed by a structure, system, or component of a facility; LBP-12-24, 76 NRC 503 (2012)

“design basis” is the set of regulations adopted without regard to their cost as fundamentally required for all NRC standards that set requirements for adequate protection of health and safety; LBP-12-18, 76 NRC 127 (2012)

“design or procedural modifications that could mitigate the consequences of a severe accident are known as severe accident mitigation alternatives; LBP-11-38, 74 NRC 817 (2011)
“dicta” is a court’s opinion that goes beyond the facts before court and therefore represents individual views of the author of the opinion and is not binding in subsequent cases as legal precedent; LBP-14-4, 79 NRC 319 (2014)

direct impacts are those caused by the action that is the subject of the environmental impact statement, and occurring at the same time and place as that action, while indirect impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-11-7, 73 NRC 254 (2011); LBP-11-26, 74 NRC 499 (2011); LBP-13-4, 77 NRC 107 (2013)

disclosing party” means the party required to make mandatory disclosure; LBP-11-5, 73 NRC 131 (2011)

document” means any medium (electronic, paper, or any other kind) that contains or stores any information, including text, data, audio, video, computer software, or computer modeling information; LBP-11-5, 73 NRC 131 (2011)

“effects” include both direct effects, which are caused by the action and occur at the same time and place, and indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-14-9, 80 NRC 15 (2014)

emergency planning zones are approximately a 10-mile radius around a reactor unit as adjusted to reflect the road network and land use; CLI-12-9, 75 NRC 421 (2012)

entity is under foreign ownership, control, or domination whenever a foreign interest has the power, direct or indirect, whether or not exercised, to direct or decide matters affecting the management or operations of the applicant; LBP-11-25, 74 NRC 380 (2011)

“environmental document” includes environmental assessment, environmental impact statement, finding of no significant impact, and notice of intent; LBP-15-16, 81 NRC 618 (2015)

environmental issue is “significant” for the purposes of reopening a record if it will paint a seriously different picture of the environmental impact of the proposed project from what was previously envisioned; LBP-12-10, 75 NRC 633 (2012)

evaluationally qualified cable is defined in 10 C.F.R. 50.49; LBP-13-13, 78 NRC 246 (2013)

“exceptionally grave” issue is one that raises a sufficiently grave threat to public safety; LBP-12-1, 75 NRC 1 (2012); LBP-12-11, 75 NRC 731 (2012)

“exceptionally grave” issues warranting reopening of a record are limited to those affecting public safety; CLI-12-21, 76 NRC 491 (2012)

failure to include all connected actions within the scope of the proposed action is generally referred to as segmentation; LBP-14-6, 79 NRC 404 (2014)

“floodplain” is an area of normally dry or semi-dry land providing temporary natural storage areas for floodwater; LBP-13-4, 77 NRC 107 (2013)

for a potential injury to be irreparable, it must be shown to be imminent, certain, and great; LBP-15-2, 81 NRC 48 (2015)

for an environmental issue to be “significant” for the purposes of reopening a record, new information must paint a seriously different picture of the environmental landscape; LBP-12-1, 75 NRC 1 (2012)

“formula kilogram” means strategic special nuclear material in any combination in a quantity of 1000 grams computed by the formula, grams = (grams contained U-235) + 2.5 (grams U-233 + grams plutonium); CLI-15-9, 81 NRC 512 (2015)

“good cause” for late filing is defined as a showing that petitioner could not have met the filing deadline and filed as soon as possible thereafter; LBP-11-7, 73 NRC 254 (2011)

“good cause” in 10 C.F.R. 2.307 does not share the same definition that is used for good cause in section 2.309(c); LBP-15-1, 81 NRC 15 (2015)

“hydroperiod” is the “natural fluctuations of the water table, the surficial aquifer; LBP-13-4, 77 NRC 107 (2013)

“incur” within the context of Equal Access to Justice Act means that an individual who is a prevailing party meeting the financial qualification of the EAJA is ineligible to receive an EAJA award when that individual was not responsible for the costs of the attorney’s fees; LBP-11-8, 73 NRC 349 (2011)

indirect effects are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-13-4, 77 NRC 107 (2013)

“informal consultation” is an optional process that includes all discussions, correspondence, etc., between the U.S. Fish and Wildlife Service and the federal agency designed to assist the federal agency in determining whether formal consultation or a conference is required with the Service under section 402.13; LBP-15-11, 81 NRC 401 (2015)
“informal consultation” is any communication between the acting agency and one of the Services designed to assist the acting agency in determining whether formal consultation is required; LBP-12-10, 75 NRC 633 (2012)

“item” means any discrete quantity or container of special nuclear material or source material, not undergoing processing, having a unique identity and also having an assigned element and isotope quantity; LBP-14-1, 79 NRC 39 (2014)

large environmental effects are clearly noticeable and are sufficient to destabilize important attributes of the resource; LBP-11-26, 74 NRC 499 (2011)

low-level radioactive waste is defined as radioactive material that is not high-level radioactive waste, spent nuclear fuel, or byproduct material and that NRC classifies as LLRW; LBP-12-4, 75 NRC 213 (2012)

low-level radioactive waste traditionally has been defined by what it is not; LBP-12-21, 76 NRC 218 (2012)

“major construction activity” is defined as a construction project, or other undertaking having similar physical impacts, that is a major federal action significantly affecting the quality of the human environment as referred to in NEPA; LBP-12-10, 75 NRC 633 (2012)

“material access area” is any location that contains special nuclear material, within a vault or a building, the roof, walls, and floor of which constitute a physical barrier; CLI-15-9, 81 NRC 512 (2015)

“material issue” is one where resolution of the dispute would make a difference in the outcome of the licensing proceeding; LBP-11-23, 74 NRC 287 (2011)

“moderate” means environmental effects are sufficient to alter noticeably, but not destabilize, important attributes of the resource; LBP-11-26, 74 NRC 499 (2011); LBP-13-4, 77 NRC 107 (2013)

NRC’s broad definition of “construction” in the pre-2007 version of the regulation was originally added to Part 50 because of the interpretation that enactment of NEPA required NRC to expand its permitting/licensing authority; LBP-14-9, 80 NRC 15 (2014)

NRC’s decision to include transmission lines that serve a nuclear power plant within the definition of “utilization facility” in 42 U.S.C. § 2014(cc) was upheld; LBP-14-9, 80 NRC 15 (2014)

nuclear power facility has shut down permanently within the meaning of 10 C.F.R. Part 50, Appendix E, § VL.2 when it has permanently ceased reactor operations, and permanently removed fuel from the reactor vessel, as those terms are defined in 10 C.F.R. 50.2; LBP-15-4, 81 NRC 156 (2015)

nuclear reactor is an apparatus, other than an atomic weapon, designed or used to sustain nuclear fission in a self-supporting chain reaction; DD-13-3, 78 NRC 571 (2013)

one authorized to make a “request” is merely given permission to ask for something, not to demand it; LBP-13-3, 77 NRC 82 (2013)

“owned, controlled or dominated” refers to relationships in which the will of one party is subjugated to the will of another; CLI-15-7, 81 NRC 481 (2015)

“partial initial decision” is one rendered following an evidentiary hearing on one or more contentions, but that does not dispose of the entire matter; CLI-11-6, 74 NRC 203 (2011); CLI-11-10, 74 NRC 251 (2011)

“passive dewatering” refers to evaporative losses of surface water or groundwater resulting from alterations in land cover, site drainage design, and changes to subsurface flow properties; LBP-13-4, 77 NRC 107 (2013)

“permanent cessation of operations” for a nuclear power reactor facility is defined as a certification by a licensee to NRC that it has permanently ceased or will permanently cease reactor operations; LBP-15-4, 81 NRC 156 (2015)

“permanent fuel removal” from a nuclear power reactor facility is defined as a certification by licensee to NRC that it has permanently removed all fuel assemblies from the reactor vessel; LBP-15-4, 81 NRC 156 (2015)

plain meaning of the word “approval,” as “the act of approving” and “certification as to acceptability,” which requires an affirmative action on the part of an approver, clearly establishes that requiring compliance is different from granting an approval; LBP-12-15, 76 NRC 14 (2012)
“power of detection” means the probability that the critical value of a statistical test will be exceeded when there is an actual loss of a specific quantity of strategic special nuclear material; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

“presiding officer” in NRC adjudicatory proceedings is defined in 10 C.F.R. 2.4; LBP-11-22, 74 NRC 259 (2011)

“primary groundwater restoration” is to return the constituent to background levels; LBP-15-3, 81 NRC 65 (2015)

production and utilization facilities include nuclear power reactors; LBP-11-25, 74 NRC 380 (2011)

“quality assurance” comprises all planned and systematic actions necessary to provide adequate confidence that a structure, system, or component will perform satisfactorily in service; DD-15-2, 81 NRC 205 (2015)

“radiographer’s assistant,” is defined in 10 C.F.R. 34.3; LBP-15-21, 82 NRC 1 (2015)

“receiving party” means the party to whom the mandatory disclosure must be made; LBP-11-5, 73 NRC 131 (2011)

“relict sinkhole” is a sinkhole that has been infilled and plugged and that is indicated by a depressional wetland; LBP-13-4, 77 NRC 107 (2013)

“representative” means the attorney or other authorized representative of a party who has entered a notice of appearance; LBP-11-5, 73 NRC 131 (2011)

“residual radioactivity” is defined as radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee’s control; CLI-13-6, 78 NRC 155 (2013)

“revolving credit” arrangement is one type of credit facility, and may be used repeatedly up to the limit specified after partial or total repayments have been made; CLI-13-1, 77 NRC 1 (2013)

ripeness is a justiciability doctrine designed to prevent Article III courts from premature judicial review of abstract controversies and to protect the agencies from judicial interference until an administrative decision has been formalized and its effects felt in a concrete way by the challenging parties; LBP-12-19, 76 NRC 184 (2012)

“rule of reason” is a judicial device to ensure that common sense and reason are not lost in the rubric of regulation; LBP-11-26, 74 NRC 499 (2011)

safety significance of a structure, system, or component is defined in terms of its safety-related functions, and within the scope of license renewal are included those SSCs whose failure could prevent satisfactory accomplishment of the safety-related function; CLI-15-6, 81 NRC 340 (2015)

safety-related systems, structures, and components are those relied upon to remain functional during and following design-basis events to ensure specific functions; LBP-11-20, 74 NRC 65 (2011)

SAMA analysis is an analysis of a class of SAMA candidates using probabilistic risk assessment techniques to determine whether any of the SAMA candidates would be cost-beneficial; LBP-13-1, 77 NRC 57 (2013)

scope of license renewal is defined in 10 C.F.R. 54.4; CLI-15-21, 82 NRC 295 (2015)

“sealed source” means any special nuclear material that is physically encased in a capsule, rod, element, etc. that prevents the leakage or escape of the SNM and that prevents removal of the SNM without penetrations of the casing; LBP-14-1, 79 NRC 39 (2014)

“secondary groundwater restoration” is restoration of constituent levels to the drinking water limits enumerated in Appendix A, Table 5C; LBP-15-3, 81 NRC 65 (2015)

section 11e(2) byproduct material is tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content; LBP-12-3, 75 NRC 164 (2012)

segmentation or piecemealing occurs when an action is divided into component parts, each involving action with less significant environmental effects; LBP-12-12, 75 NRC 742 (2012); LBP-14-6, 79 NRC 404 (2014)

“senior reactor operator” is any individual licensed under Part 55 to manipulate the controls of a facility and to direct the licensed activities of licensed operators; LBP-13-3, 77 NRC 82 (2013); LBP-14-2, 79 NRC 131 (2014)

separate actions are “connected” if, among other things, they cannot or will not proceed unless other actions have been taken previously or simultaneously, or they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-14-9, 80 NRC 15 (2014)
severe accident mitigation alternatives analysis for license renewal is a cost-benefit analysis, weighing a particular mitigation measure’s estimated degree of risk reduction against its estimated cost of implementation; CLI-12-8, 75 NRC 393 (2012)

severe accident mitigation alternatives analysis is a probability-weighted assessment of the benefits and costs of mitigation alternatives that can be used to reduce the risks of potential severe accidents at nuclear power plants; CLI-12-1, 75 NRC 39 (2012)

severe accident mitigation alternatives analysis is a quantitative cost-benefit analysis, comparing the costs of implementing a mitigation measure against the value of its benefit; LBP-13-13, 78 NRC 246 (2013)

severe accident mitigation alternatives are safety enhancements such as a new hardware item or procedure intended to reduce the risk of severe accidents; LBP-11-33, 74 NRC 675 (2011)

severe accident mitigation alternatives are somewhat broader than severe accident mitigation design alternatives, which focus on design changes and do not consider procedural modifications; LBP-11-38, 74 NRC 817 (2011)

severe accident mitigation design alternatives analyses examine whether implementing a SAMDA would decrease the probability-weighted consequences of severe accidents; LBP-11-38, 74 NRC 817 (2011)

severe accidents are reactor accidents more severe than design basis accidents and involve substantial damage to the reactor core; LBP-11-38, 74 NRC 817 (2011)

“significant” issue is not shown merely by showing that a plant component performs safety functions; CLI-12-10, 75 NRC 479 (2012)

similar actions are those that, when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental impacts together, such as common timing or geography, so that the agency may wish to analyze them together; LBP-13-10, 75 NRC 117 (2013)

“small” is defined in NRC regulations as environmental impacts that are not detectable or are so minor that they will neither destabilize nor noticeably alter any important attribute of the resource; LBP-11-26, 74 NRC 499 (2011); LBP-13-4, 77 NRC 107 (2013); LBP-13-13, 78 NRC 246 (2013)

“source material” is defined as uranium being extracted through the ISL process; LBP-15-16, 81 NRC 618 (2015)

“special aquatic sites” are defined in accordance with guidelines issued by the U.S. Environmental Protection Agency and include six categories of special aquatic sites; LBP-13-4, 77 NRC 107 (2013)

“special circumstances” must be unusual if not unique, and NRC must not have previously considered such circumstances, either explicitly or by necessary implication, when it promulgated the relevant regulation in the first place; LBP-12-6, 75 NRC 256 (2012)

special nuclear material “item” is any discrete quantity or container of special nuclear material or source material, not undergoing processing, having a unique identity and also having an assigned element and isotope quantity; CLI-15-9, 81 NRC 512 (2015)

“strategic special nuclear material” means uranium-235 (contained in uranium enriched to 20 percent or more in the U-235 isotope), uranium-233, or plutonium; CLI-15-9, 81 NRC 512 (2015)

structures, systems, and components are passive if they perform their intended function without moving parts or without a change in configuration or properties and the effects of aging degradation for these components are not readily monitorable; LBP-13-13, 78 NRC 246 (2013)

“synergistic” refers to the joint action of different parts or sites which, acting together, enhance the effects of one or more individual sites; LBP-15-5, 81 NRC 249 (2015)

“tamper-safing” means the use of devices on containers or vaults in a manner and at a time that ensures a clear indication of any violation of the integrity of previously made measurements of special nuclear material within the container or vault; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

technical specifications are those technical requirements that are incorporated in an NRC license; LBP-12-25, 75 NRC 540 (2012)

“tests or experiments not described in the UFSAR” constitute any activity where any structure, system, or component is utilized or controlled in a manner that is either outside the reference bounds of the design bases as described in the UFSAR or inconsistent with the analyses or descriptions in the UFSAR; LBP-13-7, 77 NRC 307 (2013)
“Tier 2” means the portion of the Tier 2 information, designated as such in the generic design control document, that is subject to the change process in 10 C.F.R. Part 52, App. D, § VIII.B.6; CLI-12-2, 75 NRC 512 (2012)

“unit process” means an identifiable segment or segments of processing activities for which the amounts of input and output strategic special nuclear material are based on measurements; CLI-15-9, 81 NRC 512 (2015)

“unrestricted use” means that, from a radiological standpoint, no hazards exist at the site, the license can be terminated, and the site can be considered an unrestricted area; CLI-15-9, 81 NRC 512 (2015); LBP-14-1, 79 NRC 39 (2014)

“vault” is a windowless enclosure with walls, floor, roof and door(s) designed and constructed to delay penetration from forced entry; CLI-15-9, 81 NRC 512 (2015); LBP-13-5, 77 NRC 307 (2013)

“wetlands” is defined as those areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions and generally include swamps, marshes, bogs, and similar areas; LBP-13-4, 77 NRC 107 (2013)

when an order is warranted to address a specific issue, a confirmatory action letter is used to confirm initial, agreed upon, short-term actions covering the interval period prior to the actual issuance of the order; LBP-13-7, 77 NRC 307 (2013)

See also Construction of Meaning

DELAY

admissibility of contention that final environmental assessment failed to conduct the required hard look at impacts of the proposed mine associated with restoration standards and schedules, including delays, resulting from the proposed rules, and failure to describe such impacts in the final EA is decided; LBP-15-15, 81 NRC 598 (2015)

schedule of counsel in other matters as cause of delay in filing contentions can support a finding of good cause; LBP-12-12, 75 NRC 742 (2012)

significant delays in NRC Staff’s review potentially deprive an Indian tribe of its hearing rights; CLI-11-4, 75 NRC 154 (2012)

DELAY OF PROCEEDING

agencies must set and complete proceedings on license applications with due regard for the rights and privileges of all the interested parties or adversely affected persons and within a reasonable time; CLI-12-6, 75 NRC 352 (2012)

because three contentions are already set for hearing in the proceeding, the admission of further contentions would not substantially delay the proceeding; LBP-12-12, 75 NRC 742 (2012)

Commission generally has declined to hold proceedings in abeyance pending the outcome of other Commission actions or adjudications; CLI-11-1, 73 NRC 1 (2011)

Commission, but not a licensing board, has the power to address a protracted delay in the proceeding and to direct appropriate remedial measures; LBP-11-30, 74 NRC 627 (2011)

Congress assumed that individuals establishing a right to be heard in opposition to a license application would be heard with reasonable expedition; LBP-11-30, 74 NRC 627 (2011)

extreme delay in the completion of Staff’s environmental review, and thus the equal delay in hearing intervenors’ claim of injury, raises issues of compliance with section 189a of the Atomic Energy Act; LBP-11-30, 74 NRC 627 (2011)

longstanding NRC practice has been to limit orders delaying proceedings to the duration and scope necessary to promote the Commission’s dual goals of public safety and timely adjudication; CLI-11-1, 73 NRC 1 (2011)

potential to broaden or delay a proceeding may not be relied on to exclude a contention because NRC has a duty to consider new and significant information that arises before it makes its licensing decisions; LBP-11-35, 74 NRC 701 (2011)

suspension of licensing proceedings is considered a drastic action that is not warranted absent immediate threats to public health and safety; CLI-11-1, 73 NRC 1 (2011)

where admission of a late-filed contention would cause a material delay in the proceeding weighed against admission of the contention; CLI-12-15, 75 NRC 704 (2012)
SUBJECT INDEX

DELIBERATE MISCONDUCT
choosing to store a radiographic exposure device at a facility that did not comply with NRC security requirements and was not an authorized storage location under the license is considered deliberate misconduct; LBP-14-11, 80 NRC 125 (2014)

DELIBERATIVE PROCESS PRIVILEGE
adequacy of the privilege log with respect to the sufficiency of the information contained therein is particularly important with respect to Subpart L proceedings because without sufficient information as to what allegedly makes the document deliberative, the challenger is forced to shoot in the dark and face a substantive answer by the document withheld, without the right to reply; LBP-13-5, 77 NRC 233 (2013)
agency waives the deliberative process privilege for a document when it discloses the same document or one containing equivalent text; LBP-13-5, 77 NRC 233 (2013)
although the privilege is a qualified one and the agency claiming the privilege bears the initial burden of demonstrating that it is applicable, once this demonstration is made, the moving party can only defeat the privilege by a demonstration of an overriding need for the material; LBP-13-5, 77 NRC 233 (2013)
among the categories of privileged documents are interagency or intra-agency memorandums or letters that would not be available by law to a party other than an agency in litigation with the Commission; LBP-13-5, 77 NRC 233 (2013)
because draft documents are not presumptively privileged, the Staff must provide specific information to justify withholding them from disclosure; LBP-13-5, 77 NRC 233 (2013)
board may employ case law interpreting FOIA Exemption 5 when determining whether the deliberative process privilege applies in an NRC proceeding; LBP-13-5, 77 NRC 233 (2013)
boards can request that a document for which a deliberative process privilege is claimed be provided to it for in camera inspection; LBP-13-5, 77 NRC 233 (2013)
courts disfavor government efforts to place a portion of privileged material at issue while self-servingly retaining the rest; LBP-13-5, 77 NRC 233 (2013)
courts have allowed the government to withhold memoranda containing advice, opinions, recommendations, and subjective analysis; LBP-13-5, 77 NRC 233 (2013)
cursory and conclusory assertions that merely paraphrase the standards applicable to the deliberative process privilege without explaining how they apply to any specific document in dispute will not suffice to carry the government’s burden of proof in defending FOIA cases; LBP-13-5, 77 NRC 233 (2013)
deliberative process privilege is qualified, requiring the court to balance the interests of the parties for and against disclosures; LBP-13-5, 77 NRC 233 (2013)
documents are not protected in their entirety, and if the government can segregate and disclose nonprivileged factual information within a document, it must; LBP-13-5, 77 NRC 233 (2013)
even where the government identifies significant reasons for nondisclosure, the interest in accurate judicial factfinding is predominant, especially where no satisfactory alternative source of information exists; LBP-13-5, 77 NRC 233 (2013)
evidence is relevant if it has some tendency to make deliberative process privilege opponent’s allegations more or less likely; LBP-13-5, 77 NRC 233 (2013)
explanation of reasons for asserting deliberative process privilege need not reveal the contents of the documents, but it must identify, with respect to a specific document or type of document, why that document should be protected from discovery and what specific harm would result from its disclosure; LBP-13-5, 77 NRC 233 (2013)
factual material that does not reveal the deliberative process is not protected by privilege, unless it is inextricably intertwined with the deliberative portions of the document or it could reveal the deliberative process being protected if it were disclosed; LBP-13-5, 77 NRC 233 (2013)
FOIA exemption for inter- or intra-agency materials incorporates the deliberative process privilege, which protects documents that are prepared to assist an agency, board, or official to arrive at a decision; LBP-13-5, 77 NRC 233 (2013)
in a Subpart L proceeding, NRC Staff must disclose or provide documents that support Staff’s review of the application or proposed action, together with a list of all otherwise-discoverable documents for which a claim of protected or privileged status is being made; LBP-13-5, 77 NRC 233 (2013)
SUBJECT INDEX

NRC Staff must supply the board with precise and certain reasons for maintaining the confidentiality of requested documents; LBP-13-5, 77 NRC 233 (2013)

party invoking deliberative process privilege bears the burden of explaining with particularity how and why disclosure of the documents’ substance would harm an identified deliberative function; LBP-13-5, 77 NRC 233 (2013)

person qualified to assert deliberative process privilege must be involved in the initial assertion of privilege; LBP-13-5, 77 NRC 233 (2013)

presiding officers may make a determination about the validity of a deliberative process privilege claim without reviewing a document in camera if the affidavit outlining the reasons for nondisclosure is sufficiently detailed; LBP-13-5, 77 NRC 233 (2013)

privilege applied under 10 C.F.R. 2.390(a)(5) to interagency or intra-agency memorandums or letters is similar to Exemption 5 under the Freedom of Information Act; LBP-13-5, 77 NRC 233 (2013)

privilege has been extended to draft documents, proposals, suggestions, instructions to work deletions and alterations into drafts, instructions to conduct an investigation, documents reflecting personal and advisory opinions, and rejections of recommendations; LBP-13-5, 77 NRC 233 (2013)

privilege logs that contain only cursory statements are inadequate to permit a court to decide whether the privilege was properly claimed; LBP-13-5, 77 NRC 233 (2013)

privilege may be defeated by a showing of evidentiary need by a plaintiff that outweighs the harm that disclosure of such information may cause to the defendant; LBP-13-5, 77 NRC 233 (2013)

privilege must be asserted by an individual who holds a sufficiently senior position such that he or she has control over the requested information and possesses a balanced perspective that enables him or her to discern the nature of the material at issue; LBP-13-5, 77 NRC 233 (2013)

privilege serves to protect creative debate and candid consideration of alternatives within an agency, to guard against public confusion that could result from the release of policy-oriented discussions that occur prior to policy being made, and to protect the integrity of the decisionmaking process; LBP-13-5, 77 NRC 233 (2013)

qualified persons, such as head of a department or division, having both expertise and an overview-type perspective concerning the balance between the agency’s duty of disclosure versus its need to conduct frank internal debate must sign an affidavit asserting deliberative process privilege; LBP-13-5, 77 NRC 233 (2013)

role of the government in the litigation favors disclosure when the government is a party to the litigation and has been accused of unlawful conduct; LBP-13-5, 77 NRC 233 (2013)

senior reactor operator license applicant’s motion to compel NRC Staff to produce documents that had been withheld under a claim of deliberative process privilege is granted; LBP-13-5, 77 NRC 233 (2013)

seriousness of the litigation supports disclosure of material for which deliberative process privilege is sought; LBP-13-5, 77 NRC 233 (2013)

strong competing interests must be weighed against the government’s interest in nondisclosure and foremost is the interest of the litigants, and ultimately of society, in accurate judicial factfinding; LBP-13-5, 77 NRC 233 (2013)

to qualify for the privilege, documents must be generated as part of a definable decisionmaking process that results in a final agency decision and must reflect the flow of opinions, recommendations, or advice between policymakers in formulating some type of definitive and conclusive ruling; LBP-13-5, 77 NRC 233 (2013)

when government conduct is challenged, claims of privilege may be used to obtain a litigating advantage; LBP-13-5, 77 NRC 233 (2013)

without indicating any specific, policy-oriented communication or proffering any cogent reason for protecting it, the bare assertion that internal agency discussions will be “chilled” is nothing but a legal platitude asserted in the abstract; LBP-13-5, 77 NRC 233 (2013)

DEMAND FOR HEARING

applicant denied a senior reactor operator license has the right to demand a hearing, rather than being required to negotiate the contention admissibility requirements and a possible appeal in the event a hearing is granted; LBP-13-3, 77 NRC 82 (2013)

because an applicant denied an operator’s license (or a byproduct, source, special materials, or facility license) would be entitled to demand a hearing, rather than merely request a hearing, no more than 20
days would be required to prepare a document that would satisfy the conditions precedent to obtaining
the hearing; LBP-13-3, 77 NRC 82 (2013)
contention admissibility requirements do not apply to hearing demands submitted under section
2.103(b)(2), and petitioner lacked actual and constructive notice of the contention admissibility
requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)
“demand” for a hearing is understood to confer the right to a hearing; LBP-13-3, 77 NRC 82 (2013);
LBP-14-4, 79 NRC 319 (2014)

effort or someone adversely affected by the order of his or her
right to demand a hearing; LBP-14-4, 79 NRC 319 (2014)
hearing demand under section 2.103(b)(2) has only to meet the prescribed filing deadline and specify the
reasons why the demander deemed the denial of the operator’s license to have been unjustified;
LBP-13-3, 77 NRC 82 (2013)
hearing on denial of application for a senior reactor operator license is granted; LBP-13-3, 77 NRC 82
(2013)
if an enforcement order blacklists a worker by name, under 10 C.F.R. 2.202(a)(3) he has the right to
demand a hearing even though he may be motivated by purely economic concerns; LBP-14-4, 79 NRC
319 (2014)
one demanding a hearing on a challenge to an enforcement order need not comply with the requirements
of 10 C.F.R. 2.309(a)(1); LBP-13-3, 77 NRC 82 (2013); LBP-14-4, 79 NRC 319 (2014)
period allotted for the filing of challenges to enforcement orders that impose some sanction is 20 days;
LBP-13-3, 77 NRC 82 (2013)
person adversely affected by an enforcement order has a legal right to demand a hearing; LBP-14-4, 79
NRC 319 (2014)
union’s argument that it may demand a hearing on a confirmatory order without complying with
intervention requirements of section 2.309(a) is incorrect; LBP-14-4, 79 NRC 319 (2014)
usual rule of regulatory interpretation is that different language is intended to mean different things, and
thus a demand for a hearing is not to be treated as a mere request for a hearing; LBP-13-3, 77 NRC
82 (2013)

DEMAND FOR INFORMATION
administrative action of issuing a demand for information is described; DD-15-11, 82 NRC 361 (2015)
petitioners request that NRC issue a demand for information to compel boiling-water reactor licensees
with Mark I and Mark II containment designs to describe how their individual facilities comply with 10
request that NRC issue a demand for information from licensee relating to adequacy of financial
assurances for decommissioning is denied; DD-11-4, 73 NRC 713 (2011)

DEMAND-SIDE MANAGEMENT
applicant who is a state-regulated utility is in a position to implement and promote programs such as
energy conservation, efficiency, and load management such that the need for additional generation
capacity may be reduced; LBP-11-6, 73 NRC 149 (2011)

energy efficiency alternative is excluded because it would not advance applicant’s goal to provide
additional baseload electrical generation capacity for use in the owner’s current markets and/or for
potential sale on the wholesale markets; LBP-11-7, 73 NRC 254 (2011)
NEPA’s rule of reason would not exclude consideration of demand-side management as part of an
alternatives analysis when applicant is a state-regulated utility; LBP-11-6, 73 NRC 149 (2011)

DENIAL OF LICENSE
any action concerning applicant’s proposal that would have an adverse environmental impact or limit the
choice of reasonable alternatives may be grounds for denial of a license; LBP-14-9, 80 NRC 15 (2014)

882
applicant denied a senior reactor operator license has the right to demand a hearing, rather than being required to negotiate the contention admissibility requirements and a possible appeal in the event a hearing is granted; LBP-13-3, 77 NRC 82 (2013)

applicants may prevail against NRC Staff if they prove that a particular contested assessment of a deficiency was inappropriate or unjustified; LBP-14-2, 79 NRC 131 (2014)

because an applicant denied an operator’s license (or a byproduct, source, special materials, or facility license) would be entitled to demand a hearing, rather than merely request a hearing, no more than 20 days would be required to prepare a document that would satisfy the conditions precedent to obtaining the hearing; LBP-13-3, 77 NRC 82 (2013)

contention admissibility requirements do not apply to hearing demands submitted under section 2.103(b)(2) and petitioner lacked actual and constructive notice of the contention admissibility requirements that NRC Staff asserts she was required to satisfy; LBP-13-3, 77 NRC 82 (2013)

demand for hearing on denial of application for a senior reactor operator license is granted; LBP-13-3, 77 NRC 82 (2013)

hearing demand under section 2.103(b)(2) has only to meet the prescribed filing deadline and specify the reasons why the demander deemed the denial of the sought operator’s license to have been unjustified; LBP-13-3, 77 NRC 82 (2013)

in assessing whether a senior reactor operator applicant satisfies the burden of establishing that NRC Staff’s determination of applicant’s performance was inappropriate, unjustified, arbitrary, or an abuse of discretion, the board should consult NUREG-1021; LBP-14-2, 79 NRC 131 (2014)

licensing boards have limited their review of NRC Staff reactor operator licensing decisions to those issues that were resolved against the license applicant in the Staff’s informal review; LBP-14-2, 79 NRC 131 (2014)

NRC Staff cannot defend its decision on a basis inconsistent with its own informal review; LBP-14-2, 79 NRC 131 (2014)

NRC Staff is instructed to promptly issue its approval or denial of an application consistent with its findings, despite the pendency of a hearing; LBP-15-16, 81 NRC 618 (2015)

NRC Staff may not issue a notice of violation for failure to satisfy Appendix B requirements during the preapplication period, but it may deny a combined license for failure to satisfy the standards and requirements of NRC regulations; LBP-14-7, 79 NRC 451 (2014)

NRC Staff’s decision at the conclusion of its administrative reviews is the final Staff position and hence the only Staff position open to applicant’s challenge before the presiding officer; LBP-14-2, 79 NRC 131 (2014)

senior reactor operator applicant who was denied a license after the first examination may elect to retake the tests; LBP-14-2, 79 NRC 131 (2014)

whatever the ground for the agency’s departure from prior norms, it must be clearly set forth so that the reviewing court may understand the basis of the agency’s action; LBP-14-2, 79 NRC 131 (2014)

DOE; DOE has independent records retention obligations regarding creation, management, and disposal of records; CLI-11-13, 74 NRC 635 (2011)

responsibility for constructing and operating a waste repository was assigned to the Department of Energy, not NRC; CLI-15-4, 81 NRC 221 (2015)

possession of depleted uranium at multiple installations without an NRC license and performance of decommissioning at a military installation without proper NRC authorization is a violation of 10 C.F.R. 40.3; DD-11-5, 74 NRC 399 (2011)

request for enforcement action against U.S. Army for post-license-expiration possession and release into the environment of depleted uranium from spent spotting rounds is granted in part and denied in part; DD-11-5, 74 NRC 399 (2011)
SUBJECT INDEX

DEPOSITIONS
NRC Staff counsel may take the deposition of the target of an enforcement order or any other person;
LBP-14-11, 80 NRC 125 (2014)
target of an enforcement order may require NRC Staff to attend a prehearing meeting where he can
require that Staff member to answer questions orally under oath; LBP-14-11, 80 NRC 134 (2014);
LBP-14-11, 80 NRC 125 (2014)

DESIGN
assurance of adequate cooling water supply for emergency and long-term shutdown decay heat removal
shall be considered in the design of the nuclear power plant; LBP-11-16, 73 NRC 645 (2011)
challenges to the design of the nuclear power plant are outside the scope of the license renewal
proceeding; LBP-11-23, 74 NRC 287 (2011)
deviations from the original design must be evaluated against the criteria in 10 C.F.R. 70.72 to determine
if a license amendment is required or if applicant could make the change without NRC approval;
LBP-12-21, 76 NRC 218 (2012)
every change request is reviewed against the criteria in the license application and the criteria in 10
C.F.R. 70.72 to determine whether NRC approval is required prior to implementing the change;
LBP-12-21, 76 NRC 218 (2012)
failure to verify adequacy of thermal-hydraulic and flow-induced vibration design of the replacement
steam generators was determined to be of very low safety significance, because the tubes did not leak
and continued to meet the required structural integrity criterion; DD-15-7, 82 NRC 257 (2015)
features to be included in the technical specifications are those features of the facility such as materials
of construction and geometric arrangements, which, if altered or modified, would have a significant
effect on safety and are not covered by other TSs; DD-13-3, 78 NRC 571 (2013)
level of detail required for a licensing decision does not require a final facility design or an absolutely
complete identification of all items relied on for safety and accident sequences, but instead sufficient
information must be provided to understand the process and functions of items relied on for safety and
to afford reasonable assurance that the integrated safety analysis is complete; LBP-12-21, 76 NRC 218
(2012)
process designs for uranium enrichment facilities should be described in a level of detail in the integrated
safety analysis that is sufficient to allow a Staff reviewer to understand the theory of operation for the
process; LBP-11-11, 73 NRC 455 (2011)
section 50.59 is not a process for verifying design adequacy, and required design control measures for
verifying adequacy of design are expected to be implemented before entering the section 50.59 process;
spent fuel storage systems must be designed to ensure adequate safety under normal and postulated
accident conditions; CLI-15-4, 81 NRC 221 (2015)
See also Containment Design

DESIGN BASIS
admissibility of contention that a license amendment will be required for licensee to update and maintain
accurate design basis documents is decided; CLI-15-5, 81 NRC 329 (2015)
construction permit applications must include the principal design criteria for a proposed facility and
describe the design bases and their relationship to the principal design criteria in the preliminary safety
analysis report; DD-13-3, 78 NRC 571 (2013)
current licensing basis for an independent spent fuel storage installation includes plant-specific
design-basis information defined in 10 C.F.R. 50.2 as documented in the most recent final safety
analysis report; LBP-12-24, 76 NRC 503 (2012)
current licensing basis includes plant-specific design-basis information as documented in the most recent
final safety analysis report; LBP-11-21, 74 NRC 115 (2011)
“design bases” means information that identifies the specific functions to be performed by a structure,
system, or component of a facility, and the specific values or ranges of values chosen for controlling
parameters as reference bounds for a design; DD-15-11, 82 NRC 361 (2015); LBP-13-7, 77 NRC 307
(2013)
design basis is information that identifies specific functions to be performed by a structure, system, or
component of a facility; LBP-12-24, 76 NRC 503 (2012)
design of new uranium enrichment facilities must provide for adequate protection against natural phenomena, fires and explosions, chemical risks produced from licensed material, facility conditions, and hazardous chemicals produced from licensed material; LBP-12-21, 76 NRC 218 (2012)

existing containment vent systems at BWRs with Mark I containments provide a capability to vent the containment under design-basis conditions; DD-15-1, 81 NRC 193 (2015)

if evidence subsequently indicates that the design basis of an operating nuclear power plant will not withstand a maximum flooding event, members of the public may file a request to institute a proceeding to modify, suspend, or revoke a license; LBP-11-15, 73 NRC 629 (2011)

licensee must seek a license amendment before implementing a test or experiment that will result in a departure from a method of evaluation described in the updated final safety analysis report used in establishing the design basis or in the safety analysis; LBP-13-7, 77 NRC 307 (2013)

NRC Staff ensures that applicant’s design basis for the new units will protect public health and safety by verifying that the design basis will withstand maximum flooding events; LBP-11-6, 73 NRC 149 (2011)

licensee must seek a license amendment before implementing a test or experiment that will result in a departure from a method of evaluation described in the updated final safety analysis report used in establishing the design basis or in the safety analysis; LBP-13-7, 77 NRC 307 (2013)

request that NRC order licensees to reevaluate seismic and flooding hazards at their sites against current NRC requirements and guidance, and if necessary, update the design basis and structures, systems, and components important to safety to protect against the updated hazards is addressed; DD-14-2, 79 NRC 489 (2014)

safety features for each nuclear power plant take into account the potential effects of two levels of earthquake motion; DD-12-1, 75 NRC 573 (2012)

set of regulations adopted without regard to their cost as fundamentally required for all NRC standards that set requirements for adequate protection of health and safety forms the design basis; LBP-12-18, 76 NRC 361 (2015)

request that NRC order licensees to provide reasonable protection for equipment from the effects of design-basis external events and to add equipment as needed to address multiunit events while other requirements are being revised and implemented is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)

DESIGN BASIS EVENTS

DBEs are defined in 10 C.F.R. 50.49; DD-15-11, 82 NRC 361 (2015)

facility design and operation should ensure that radiological consequences of design basis events do not exceed 10 percent of dose limits; LBP-12-7, 75 NRC 503 (2012)

request that NRC order licensees to provide reasonable protection for equipment from the effects of design-basis external events and to add equipment as needed to address multiunit events while other requirements are being revised and implemented is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)

DESIGN CERTIFICATION

all environmental issues concerning severe accident mitigation design alternatives associated with the information in NRC’s final environmental assessment for certified reactor design are deemed resolved for plants whose site parameters are within those specified in the technical support document; LBP-11-7, 73 NRC 254 (2011)
applicant has described the kinds and quantities of radioactive materials expected to be produced in the operation to the extent its combined license application references a standardized design; LBP-11-6, 73 NRC 149 (2011)
applicants may incorporate a certified reactor design in a combined license application; LBP-11-10, 73 NRC 424 (2011)
applicants referencing a certified design must provide sufficient information for NRC Staff to determine whether the site’s characteristics fall within the design’s parameters; CLI-15-13, 81 NRC 555 (2015)
applications for certified reactor designs include a probabilistic risk assessment for severe accidents; LBP-11-38, 74 NRC 817 (2011)
challenging features of the standard reactor design is a matter for a design certification rulemaking, not a combined license proceeding; CLI-11-8, 74 NRC 214 (2011); LBP-11-38, 74 NRC 817 (2011)
combined license applicant may reference a docketed-but-not-yet-certified design in its application, but does so at its own risk; CLI-12-9, 75 NRC 421 (2012); LBP-11-10, 73 NRC 424 (2011)
combined license applicant will have to demonstrate that the site-specific parameters are bounded by the parameters developed for the certified design; LBP-11-10, 73 NRC 424 (2011)
combined license application included a request for a departure from the wet-bulb noncoincident temperature, which is considered Tier 1 information and part of the certified design and thus a regulatory exemption is required; CLI-12-9, 75 NRC 421 (2012)
combined license applications may reference a standard design certification and an early site permit; CLI-12-2, 75 NRC 63 (2012)
Commission administratively exempted from the backfit rule, an order to the combined license holder to address spent fuel pool instrumentation requirements not specified in the certified design as enhanced protective measures that represent a substantial increase in the protection of public health and safety; CLI-12-9, 75 NRC 421 (2012)
compliance with design-related information contained in the generic design control document that is approved but not certified (Tier 2 information) is required, but generic changes to and plant-specific departures from Tier 2 are governed by 10 C.F.R. Part 52, App. D, § VIII; CLI-12-2, 75 NRC 63 (2012)
each combined license applicant will have to determine whether it will adopt in toto the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-11-10, 73 NRC 424 (2011)
exemption from any part of a referenced design certification rule may be granted if NRC determines that the exemption complies with any exemption provisions of the referenced design certification rule, or with 10 C.F.R. 52.63 if there are no applicable exemption provisions in the referenced rule; LBP-11-10, 73 NRC 424 (2011)
exemption requests are subjected to the same level of litigation as other issues that could be admissibly raised in a COL proceeding; LBP-11-10, 73 NRC 424 (2011)
grants of exemptions from referenced design certification rules are conditioned on the Commission’s finding that the request complies with section 52.7 and that the special circumstances provided for in section 52.7 outweigh any decrease in safety that may result from the reduction in standardization caused by the exemption; LBP-11-10, 73 NRC 424 (2011)
in making its combined license findings, the Commission will treat as resolved those matters resolved in the issuance of a design certification rule; LBP-11-38, 74 NRC 817 (2011)
in making the findings required for issuance of a combined license, finality is afforded to those matters resolved in connection with a design certification; LBP-11-7, 73 NRC 254 (2011)
licences may be amended to add appropriate conditions, depending on whether the conditions are within the scope of the certified design; CLI-12-9, 75 NRC 421 (2012)
NRC has authority to ensure that certified designs and combined licenses include appropriate Commission-directed changes before operation; CLI-11-8, 74 NRC 214 (2011); CLI-11-10, 74 NRC 251 (2011)
NRC Staff found acceptable combined license applicant’s plan to use a single technical support center for existing and proposed units, to be collocated in the basement of the new nuclear operations building, between the protected areas of the three units, which is a departure from the certified design; CLI-12-9, 75 NRC 421 (2012)
NRC Staff’s creation of a list of site parameters for use in the combined license proceeding cannot cure the absence of a list of site parameters in the technical support document, rendering it impossible to
resolve severe accident mitigation design alternatives issues by rule; LBP-11-7, 73 NRC 254 (2011)
under its certified design, the Economic Simplified Boiling Water Reactor could maintain circulation long
even if it were to lose offsite power and all of its
where the combined license application references a certified design, elements of the licensing basis
already have been established, and thus NRC would have to establish a regulatory basis for any change
to the established design regardless of whether the COLs have issued; CLI-12-9, 75 NRC 421 (2012)

DESIGN CONTROL PROGRAMS
compliance with design-related information contained in the generic design control document that is
approved but not certified (Tier 2 information) is required, but generic changes to and plant-specific
departures from Tier 2 are governed by 10 C.F.R. Part 52, App. D, § VIII; CLI-12-2, 75 NRC 63 (2012)
“Tier 2” means the portion of the Tier 2 information, designated as such in the generic design control
document, that is subject to the change process in 10 C.F.R. Part 52, App. D, §VIII.B.6; CLI-12-2, 75
NRC 63 (2012)

DICTA
holding that “petitioner does not have standing is dispositive of this case and the board need not decide
this issue” is dicta; LBP-14-4, 79 NRC 319 (2014)

DIESEL GENERATORS
equipment operability for emergency diesel generators is discussed; DD-14-5, 80 NRC 205 (2014)
under its certified design, the Economic Simplified Boiling Water Reactor could maintain circulation long

DIFFERING PROFESSIONAL OPINION
agency was not precluded from conducting licensing reviews or making licensing decisions prior to a
resolution of the DPO by the NRC Staff; LBP-12-21, 76 NRC 218 (2012)

DIRECTORS’ DECISIONS
section 2.206 process provides stakeholders a forum to advance concerns and obtain full or partial relief,
or written reasons why the requested relief is not warranted; CLI-14-11, 80 NRC 167 (2014)

DISCLOSURE
agencies are required to use alternative means for obtaining information to avoid unnecessary infringement
of First Amendment associational rights; CLI-13-5, 77 NRC 223 (2013)
agencies must make available certain records to members of the public upon specific request for those
records except to the extent that the records (or portions of them) are exempt from public disclosure by
one of the nine enumerated exemptions or are excluded from disclosure; CLI-13-5, 77 NRC 223 (2013)
agencies must make available for public inspection a broad range of information, including the agency’s
organization, general methodology, rules of procedure, substantive rules, final opinions, and statements
of policy and interpretation that have been adopted by the agency; LBP-13-5, 77 NRC 233 (2013)
all disclosures under section 2.336(c) must be accompanied by a certification in the form of a sworn
affidavit that all relevant materials required by this section have been disclosed, and that the disclosures
are accurate and complete as of the date of the certification; LBP-14-2, 79 NRC 131 (2014)
all parties, including NRC Staff, are obligated to bring any significant new information to the board’s
attention; LBP-14-2, 79 NRC 131 (2014)
any reasonably segregable portion of the record shall be provided to any person requesting such record
after deletion of the portions that are exempt; LBP-11-5, 73 NRC 131 (2011)
because parties to a Subpart L proceeding may not seek discovery from the other parties to the
proceeding, all such parties must make periodic mandatory disclosures; LBP-14-2, 79 NRC 131 (2014)
board determination of expert’s need to know with regard to a document withheld as safeguards
information was reversed; LBP-11-9, 73 NRC 391 (2011)
board suspended mandatory disclosure obligations until further notice; CLI-12-14, 75 NRC 692 (2012)
claims and identification of privileged materials must occur within the time provided for disclosing
withheld materials; LBP-12-3, 75 NRC 164 (2012)
counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal
authority that is adverse to the director’s position, especially when the target of the government’s
enforcement action is not represented by counsel; LBP-14-11, 80 NRC 125 (2014)
**SUBJECT INDEX**

deliberative process privilege does not protect documents in their entirety and if the government can segregate and disclose nonprivileged factual information within a document, it must; LBP-13-5, 77 NRC 233 (2013)

“disclosing party” means the party required to make mandatory disclosures; LBP-11-5, 73 NRC 131 (2011)

disclosure to intervenors of the names of power plant employees who provided NRC with information during the course of its investigation would be inappropriate, even with a protective order in place; CLI-13-5, 77 NRC 223 (2013)

“document” means any medium (electronic, paper, or any other kind) that contains or stores any information, including text, data, audio, video, computer software, or computer modeling information; LBP-11-5, 73 NRC 131 (2011)

each party to a proceeding must disclose all documents relevant to the admitted contentions, except those documents for which a claim of privilege or protected status is made; LBP-11-5, 73 NRC 131 (2011)

even where the government identifies significant reasons for nondisclosure, the interest in accurate judicial factfinding is predominant, especially where no satisfactory alternative source of information exists; LBP-13-5, 77 NRC 233 (2013)

factors that boards should consider in balancing applicant’s need for disclosure against the agency’s interest in confidentiality are described; LBP-13-5, 77 NRC 233 (2013)

government may withhold from disclosure the identity of persons who furnish information on violations of law to officers charged with enforcement of the law; CLI-13-5, 77 NRC 223 (2013)

hearing file consists of any correspondence between the applicant/licensee and the NRC that is relevant to the proposed action; LBP-14-2, 79 NRC 131 (2014)

if NRC Staff had in hand new information that could render invalid the original site-specific analysis, then such information should be identified and evaluated by Staff for its significance, consistent with NEPA requirements; CLI-12-19, 76 NRC 377 (2012)

if the Commission determines on appeal that information withheld under a protective order should have been publicly disclosed, it will direct that such information and the transcript of the related in camera session be made publicly available; CLI-15-24, 82 NRC 331 (2015)

in a Subpart L proceeding, NRC Staff must disclose or provide documents that support Staff’s review of the application or proposed action, together with a list of all otherwise-discoverable documents for which a claim of protected or privileged status is being made; LBP-13-5, 77 NRC 233 (2013)

lead agency must make available to the public the results of relevant monitoring of mitigation measures; LBP-15-16, 81 NRC 618 (2015)

licensee’s motion to quash a subpoena duces tecum because production of the requested file would compromise its employee concerns program by potentially subjecting information contained in the file to public disclosure as an official agency record under FOIA is denied; CLI-13-5, 77 NRC 223 (2013)

NEPA imposes on NRC a disclosure obligation that NRC publicly discuss its evaluation of the reasonably foreseeable effects of a proposed action; CLI-15-25, 82 NRC 389 (2015)

NRC considers whether Exemption 7 would prevent public disclosure of allegation and investigation information from release; CLI-13-5, 77 NRC 223 (2013)

NRC Staff and its counsel, like the board and its staff, are federal government employees and are thus subject to stringent sanctions for the unauthorized disclosure of the protected information or protected documents; LBP-11-5, 73 NRC 131 (2011)

NRC Staff is exempted from the obligations of the protective order, even though Staff might hold many documents that are subject to the mandatory disclosure requirements; LBP-11-5, 73 NRC 131 (2011)

NRC Staff is obliged to lay all relevant materials before the board to enable it to adequately dispose of the issues before it; LBP-14-2, 79 NRC 131 (2014)

NRC Staff violated requirements for initial disclosure of all relevant documents; LBP-14-2, 79 NRC 131 (2014)

NRC subpoena was upheld notwithstanding assertion of First Amendment freedom of association rights, where the subpoena was narrowly tailored to documents supporting specific allegations; CLI-13-5, 77 NRC 223 (2013)

parties must list documents claimed to be privileged or protected on a privilege log; LBP-11-5, 73 NRC 131 (2011)
SUBJECT INDEX

parties to a Subpart L proceeding must update their disclosures every month after initial disclosures on a
due date selected by the presiding officer in the order admitting contentions; LBP-14-2, 79 NRC 131
(2014)
parties, including NRC Staff, may be sanctioned for noncompliance with the disclosure regulations;
LBP-14-2, 79 NRC 131 (2014)
petitioner was denied access to a safeguards-protected design-related document on the basis of his lacking
a need to know; LBP-11-9, 73 NRC 391 (2011)
presiding officer may impose sanctions on a party that fails to provide any document required to be
disclosed, unless the party demonstrates good cause for its failure to make the disclosure; LBP-14-2, 79
NRC 131 (2014)
principle that justice cannot survive behind walls of silence has long been reflected in the
Anglo-American distrust for secret trials; LBP-11-5, 73 NRC 131 (2011)
proposed questions filed by all parties will be publicly released by order of the board 30 days after its
decision; LBP-13-13, 78 NRC 246 (2013)
questions proposed by all parties will be publicly released by order of the board 30 days after issuance of
its partial initial decision; LBP-14-3, 79 NRC 267 (2014)
“receiving party” means the party to whom the mandatory disclosure must be made; LBP-11-5, 73 NRC
131 (2011)
“representative” means the attorney or other authorized representative of a party who has entered a notice
of appearance; LBP-11-5, 73 NRC 131 (2011)
review at the end of a case would be meaningless if the Commission could not later, on appeal from a
final board decision, rectify an erroneous disclosure order; CLI-13-3, 77 NRC 51 (2013)
role of the government in the litigation favors disclosure when the government is a party to the litigation
and has been accused of unlawful conduct; LBP-13-5, 77 NRC 233 (2013)
scope of mandatory disclosures that parties must make under Subpart G is defined by the disputed issues
alleged with particularity in the pleadings; LBP-14-11, 80 NRC 125 (2014)
significance of the litigation supports disclosure of material for which deliberative process privilege is
sought; LBP-13-5, 77 NRC 233 (2013)
SUNSH policy does not expand upon or create any new category of legally privileged or confidential
information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 131
(2011)
target of an enforcement order must be provided a copy of all NRC Staff documents that are relevant to
disputed issues alleged with particularity in the pleadings; LBP-14-11, 80 NRC 125 (2014)
there can be no “hard look” at the costs and benefits of a proposed action unless all costs are disclosed;
LBP-12-18, 76 NRC 127 (2012)
under appropriate circumstances, First Amendment rights give way to the compelling government interest
in nuclear safety; CLI-13-5, 77 NRC 223 (2013)
under certain circumstances, a licensee or vendor might be required to disclose confidential ECP
information (including the identity of a concerned individual) at the behest of a government agency
(including the NRC), or in response to a subpoena; CLI-13-5, 77 NRC 223 (2013)
updates in Subpart L proceedings shall include any documents subject to disclosure that were not included
in any previous disclosure update; LBP-14-2, 79 NRC 131 (2014)
when government conduct is challenged, claims of privilege may be used to obtain a litigating advantage;
LBP-13-5, 77 NRC 233 (2013)
where the adverse impact of disclosure would occur immediately, the alleged harm is immediate for
purpose of interlocutory review; CLI-13-3, 77 NRC 51 (2013)
within 45 days of the initial scheduling order, target of the enforcement order must provide certain
information and documents to the NRC enforcement director; LBP-14-11, 80 NRC 125 (2014)
DISCOVERY
although intervenors may use discovery to develop a case once contentions are admitted, contentions shall
not be admitted if at the outset they are not described with reasonable specificity or are not supported
by some alleged fact(s) demonstrating a genuine material dispute with the applicant; CLI-12-5, 75 NRC
301 (2012); CLI-12-8, 75 NRC 393 (2012)
discovery may not begin until 10 days after petition and the Director have held the mandatory
consultation; LBP-14-11, 80 NRC 125 (2014)
intervenor is not entitled to NRC Staff’s review documents as a discovery tool; CLI-12-17, 76 NRC 207 (2012)
lack of clarity in the terms and application of the agency’s newly established SUNSI policy contributed to
intervenors’ misapprehension that they were required to demonstrate a need for the information in order
to request SUNSI documents; LBP-11-9, 73 NRC 391 (2011)
NRC Staff counsel may require the target of an enforcement order to provide the Director with a copy of
any designated relevant document that is within his possession, custody, or control; LBP-14-11, 80
NRC 125 (2014)
petitioners have an affirmative obligation to request confidential and proprietary information that has not
been made publicly available in order to support a proposed contention; LBP-11-9, 73 NRC 391 (2011)
procedural rulings involving discovery rarely meet the standard for interlocutory review; CLI-15-24, 82
NRC 331 (2015)
request that board impose additional discovery activities as a requirement of withdrawal of license
amendment request is too broad because it goes beyond the scope of the admitted contentions and
discovery is peculiarly related to particular proceedings and particular contentions; LBP-15-28, 82 NRC
233 (2015)
requests for protected documents shall be filed within 60 days of the listing of the document on the
privilege log and, in any event, no later than 10 days after the deadline for filing rebuttal testimony;
LBP-11-5, 73 NRC 131 (2011)
scope of discovery under Subpart G covers any matter that is relevant to the subject matter involved in
the proceeding, whether it relates to the claim or defense of any other party; LBP-14-11, 80 NRC 125
(2014)
SUNSI policy does not expand upon or create any new category of legally privileged or confidential
information that is exempt from discovery or from mandatory disclosure; LBP-11-5, 73 NRC 131
(2011)
until the safety evaluation report and all necessary environmental impact statements are completed,
discovery cannot be completed nor can the evidentiary hearing be held; CLI-13-8, 78 NRC 219 (2013)
DISCOVERY AGAINST NRC STAFF
AEA does not guarantee all private parties the right to have NRC Staff studies as a sort of precomplaint
discovery tool; CLI-12-14, 75 NRC 692 (2012)
although deliberative process privilege is a qualified privilege and the agency claiming the privilege bears
the initial burden of demonstrating that it is applicable, once this demonstration is made, the moving
party can only defeat the privilege by a demonstration of an overriding need for the material;
LBP-13-5, 77 NRC 233 (2013)
board may employ case law interpreting FOIA Exemption 5 when determining whether the deliberative
process privilege applies in an NRC proceeding; LBP-13-5, 77 NRC 233 (2013)
documents at issue are presumed to be public unless NRC Staff can demonstrate that they are protected
by the deliberative process privilege; LBP-13-5, 77 NRC 233 (2013)
factors that boards should consider in balancing applicant’s need for disclosure against the agency’s
interest in confidentiality are described; LBP-13-5, 77 NRC 233 (2013)
in a Subpart L proceeding, NRC Staff must disclose or provide documents that support Staff’s review of
the application or proposed action, together with a list of all otherwise-discoverable documents for
which a claim of protected or privileged status is being made; LBP-13-5, 77 NRC 233 (2013)
NRC Staff is exempted from the obligations of the protective order, even though Staff might hold many
documents that are subject to the mandatory disclosure requirements; LBP-11-5, 73 NRC 131 (2011)
NRC Staff violated requirements for initial disclosure of all relevant documents; LBP-14-2, 79 NRC 131
(2014)
overriding need or special circumstances would support granting a motion to compel; LBP-13-5, 77 NRC
233 (2013)
senior reactor operator license applicant’s motion to compel NRC Staff to produce documents that had
been withheld under a claim of deliberative process privilege is granted; LBP-13-5, 77 NRC 233 (2013)
target of an enforcement order may serve interrogatories on NRC Staff, must show that answers to the
interrogatories are necessary to a proper decision in the proceeding, and may ask the board to direct
NRC Staff to answer those interrogatories; LBP-14-11, 80 NRC 125 (2014)
SUBJECT INDEX

within certain constraints, target of an enforcement order may pursue discovery against the NRC Staff; LBP-14-11, 80 NRC 125 (2014)

DISMISSAL OF PROCEEDING

despite rulings dismissing a contention as moot and declining to admit two other contentions, the licensing proceeding remains in existence; LBP-11-22, 74 NRC 259 (2011)
dismissal of an appeal with prejudice, similar to termination of a proceeding with prejudice, generally implies that the Commission has ruled on the merits of the appeal and such ruling is reserved for unusual situations involving substantial prejudice to an opposing party or to the public interest in general; CLI-13-10, 78 NRC 563 (2013)
dismissal of license amendment request is conditioned on requirement that licensee provide notice to petitioner of submission of a similar LAR so that petitioner has a fair opportunity to litigate issues previously found admissible; LBP-15-28, 82 NRC 233 (2015)
dismissal with prejudice is a harsh sanction reserved for unusual situations because it is the equivalent of a decision on the merits of the license amendment request; LBP-15-28, 82 NRC 233 (2015)
if an application is withdrawn prior to issuance of a notice of hearing, the Commission shall dismiss the proceeding; CLI-13-10, 78 NRC 563 (2013)
if the parties settle their dispute after a hearing, the board should dismiss the adjudication; LBP-11-22, 74 NRC 259 (2011)
opposing party’s litigation expenses do not provide a basis for departing from the usual rule that a dismissal should be without prejudice; CLI-13-10, 78 NRC 563 (2013)
possibility that an issue may arise in the future is not grounds to continue with an appeal in a proceeding where no live controversy remains between the litigants; CLI-13-10, 78 NRC 563 (2013)
public interest does not require additional adjudication of an enforcement matter and, given that all matters required to be adjudicated as part of the proceeding have been resolved, the proceeding is dismissed; LBP-11-3, 73 NRC 81 (2011)
purpose of the rule to dismiss proceedings on conditions is primarily to prevent voluntary dismissals that unfairly affect the other side, and to permit the imposition of curative conditions; LBP-15-28, 82 NRC 233 (2015)
standard for dismissal with prejudice is not met because the prospect of future litigation is not unusual, being inherent in any dismissal without prejudice; LBP-15-28, 82 NRC 233 (2015)

DOCUMENT PRODUCTION

“document” means any medium (electronic, paper, or any other kind) that contains or stores any information, including text, data, audio, video, computer software, or computer modeling information; LBP-11-5, 73 NRC 131 (2011)
NRC Staff was admonished for having imposed a stricter-than-necessary standard of “need” for access to SUNSI; LBP-11-9, 73 NRC 391 (2011)
rules governing access to SUNSI apply only to potential parties, whereas party access to SUNSI is governed by protective orders and nondisclosure agreements; LBP-11-9, 73 NRC 391 (2011)

DOCUMENTARY MATERIAL

all the information that applicant uses to support its license renewal application has to be maintained in an auditable and retrievable form; LBP-13-13, 78 NRC 246 (2013)
Commission exercises its inherent supervisory authority to direct the board to complete all necessary and appropriate case management activities, including disposal of all matters currently pending before it and comprehensively documenting the full history of the adjudicatory proceeding; CLI-11-7, 74 NRC 212 (2011)
“environmental document” includes environmental assessment, environmental impact statement, finding of no significant impact, and notice of intent; LBP-15-16, 81 NRC 618 (2015)

DOCUMENTATION

admissibility of contention that a license amendment will be required for licensee to update and maintain accurate design basis documents is decided; CLI-15-5, 81 NRC 329 (2015)
agency’s reliance on mitigation in making a finding of no significant impact must be justified; LBP-14-7, 79 NRC 451 (2014)
along with the requirement to perform an integrated safety analysis is the requirement for applicant to provide the NRC Staff with an ISA summary, the content of which is specified in 10 C.F.R. 70.65(b); LBP-11-11, 73 NRC 455 (2011)
license renewal applicant must present an aging management plan with sufficient information that NRC
will be able to draw its own independent conclusion as to whether the applicant’s programs are in fact
consistent with the GALL Report; LBP-13-13, 78 NRC 246 (2013)
license renewal applicant must provide a general description of the corporate-wide and plant-specific
procedures sufficient to show that the ten elemental attributes of GALL have been addressed so as to
demonstrate that the effects of aging on buried pipes will be adequately managed throughout the period
of extended operation; LBP-13-13, 78 NRC 246 (2013)
license renewal applicant must provide a general description of the corporate-wide and plant-specific
procedures sufficient to show that the ten elemental attributes of GALL have been addressed so as to
demonstrate that the effects of aging on buried pipes will be adequately managed throughout the period
of extended operation; LBP-13-13, 78 NRC 246 (2013)
license renewal applicants must submit documentation of compliance with sections 316(a) and (b) of the
Clean Water Act concerning thermal discharges; LBP-12-16, 76 NRC 44 (2012)
licensee must maintain records of changes in the facility made pursuant to section 50.59(c)(1) that include
a written evaluation that provides the bases for the determination that the change does not require a
license amendment pursuant to section 50.59(c)(2); CLI-14-11, 80 NRC 167 (2014)
licensing board directed parties defending depositions to make efforts to identify and obtain Licensing
Support Network documents that must be indexed for the benefit of other parties and to circulate those
indexes as soon as practicable; CLI-11-13, 74 NRC 635 (2011)
ruling that supplements the record should state clearly what evidence the board found credible, whether
the evidence supports or alters NRC Staff’s conclusions in the environmental impact statement, and
what the impact of the proposed action for the specific issue is expected to be; CLI-15-6, 81 NRC 340
(2015)
simply attaching material or documents as a basis for a contention, without setting forth an explanation of
that information’s significance, is inadequate to support the admission of the contention; LBP-12-27, 76
NRC 583 (2012)
See also Recordkeeping
DOSE LIMITS
acceptance criteria for Type A leak rate limits embodied in the technical specifications ensure that, in the
event of a design-basis accident, the dose received by a member of the general public will not exceed
regulatory limits; LBP-15-26, 82 NRC 163 (2015)
ALARA analysis required under section 20.1403(a) calls for a licensee seeking to use restricted release to
analyze whether it would be cost-beneficial to remove enough radioactive contamination from the site
that doses to the public are no higher than 25 mrem per year without reliance on restricted-release
controls; CLI-13-6, 78 NRC 155 (2013)
ALARA is defined as every reasonable effort to maintain exposures to radiation as far below the dose
limits in Part 20 as is practical consistent with the purpose for which the licensed activity is
undertaken; CLI-11-12, 74 NRC 460 (2011)
ALARA principle as used in NRC regulations does not mean as low as achievable as a comparison
between achievable doses, but rather as low as reasonably achievable below the dose limits; CLI-11-12,
74 NRC 460 (2011)
ALARA principle has been incorporated into the restricted-use portion of the license termination rule to
screen out sites that should be removing contamination to achieve unrestricted use; CLI-11-12, 74 NRC
460 (2011)
ALARA principle, either as a general regulatory principle or as used in NRC’s license termination rule,
does not incorporate or call for any comparative analysis of doses from restricted and unrestricted
release; CLI-11-12, 74 NRC 460 (2011)
annual 100-millirem limit for members of the public is defined to include radiation exposure to
construction workers; CLI-12-2, 75 NRC 63 (2012)
board provides textual analysis and additional clarifying explanation of its interpretation of 10 C.F.R.
20.1403(a); CLI-13-6, 78 NRC 155 (2013)
doses yielded by the restricted-release and unrestricted-release decommissioning options are not susceptible
to being compared meaningfully because of the significantly different risks and uncertainties associated
with each option; CLI-13-6, 78 NRC 155 (2013)
even with the additional conservatisms, concentrations at potential receptor locations resulting from
bounding accidental effluent release scenarios remain within applicable regulatory limits; CLI-12-9, 75
NRC 421 (2012)
facility design and operation should ensure that radiological consequences of design basis events do not
exceed 10 percent of dose limits; LBP-12-7, 75 NRC 503 (2012)
SUBJECT INDEX

for license termination under restricted conditions, licensee must provide legally enforceable institutional controls that provide reasonable assurance that the TEDE from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 25 mrem (0.25 mSv) per year; CLI-13-6, 78 NRC 155 (2013)

if institutional controls fail and engineered barriers have degraded over a period of time, the dose to a member of the public will not exceed 100 mrem per year, or 500 mrem per year under certain circumstances, and is as low as reasonably achievable; CLI-11-12, 74 NRC 460 (2011)

if licensee demonstrates, through either of the two cost-benefit approaches, that removing radioactive contamination to the unrestricted-use level would not be cost-beneficial, then licensee then must show that, with the addition of engineered barriers and institutional controls, the average annual dose to the public will not exceed 25 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

independent spent fuel storage installation licensees must limit releases of radioactive materials to as low as is reasonably achievable, and establish operational limits to prevent doses to the public that exceed the limits of 10 C.F.R. 72.104(a)-(c); LBP-12-24, 76 NRC 503 (2012)

keeping radionuclides below the EPA limit is necessary to maintain public safety at a decommissioning facility; LBP-15-24, 82 NRC 68 (2015)

licensee must show that, if institutional controls fail, enough residual radioactivity has been removed from the site so that the average annual dose to the public will not exceed 100 mrem per year and is as low as is reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

limit for individual members of the public from a licensed activity is a total effective dose equivalent of 100 millirem per year; CLI-11-12, 74 NRC 460 (2011)

limit for license termination is a constraint within the public dose limit of 25 mrem per year to members of the public; CLI-11-12, 74 NRC 460 (2011)

nothing in NRC license termination regulations, including the ALARA principle incorporated into section 20.1403(a), calls for a comparison of doses of the restricted-release and unrestricted-release decommissioning options; CLI-13-6, 78 NRC 155 (2013)

NRC regulations neither explicitly nor implicitly require a comparison of the levels of protection afforded by the unrestricted and restricted decommissioning options; CLI-11-12, 74 NRC 460 (2011)

public doses for all Part 20 radiation protection programs must be as low as reasonably achievable and a basic radiation protection public dose standard of 100 mrem per year is required; CLI-11-12, 74 NRC 460 (2011)

sites will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a Total Effective Dose Equivalent to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and that the residual radioactivity has been reduced to levels that are as low as reasonably achievable; CLI-13-6, 78 NRC 155 (2013)

small doses of radiation below dose limits, while safe and acceptable, may have some associated risk and should be reduced below limits when reasonable; CLI-11-12, 74 NRC 460 (2011)

to provide adequate protection to the public upon license termination, NRC has established a maximum dose level to the public of 25 mrem per year, which licensee must satisfy without regard to cost, and regardless of whether decommissioning is to be accomplished through restricted or unrestricted release; CLI-13-6, 78 NRC 155 (2013)

uranium enrichment facility licensee must survey radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits in section 20.1301 for individual members of the public; LBP-12-21, 76 NRC 218 (2012)

words “further reductions in residual radioactivity necessary to comply with the provisions of § 20.1402” are analyzed; CLI-13-6, 78 NRC 155 (2013)

See also ALARA; ALARA Principle; Total Effective Dose Equivalent DOSE, RADIOLICAL

challenges to the $2000/person-rem conversion factor, to use of a single dose-rate reduction effectiveness factor, and to evacuation times and assumptions are not admissible because petitioners presented no facts or expert opinion of error; LBP-11-2, 73 NRC 28 (2011)
NRC established reasonable assurance that the dose consequence attributable to tritium in groundwater remains well below the ALARA dose objectives; DD-11-1, 73 NRC 7 (2011)

NRC-endorsed guidance on SAMA analysis methodology specifies use of the mean annual offsite dose and economic impact; CLI-12-1, 75 NRC 79 (2012)

Staff guidance documents outline acceptable methods for designing a radiological monitoring program and submitting required semiannual reports specifying principal radionuclide releases to unrestricted areas for the purpose of estimating maximum potential annual public doses from such releases; LBP-11-26, 74 NRC 499 (2011)

uranium enrichment facility licensee must submit biannual reports to the NRC specifying the quantity of each of the principal radionuclides released to unrestricted areas in liquid and gaseous effluents during the previous 6 months of operation, and such other information as the Commission may require to estimate maximum potential annual radiation doses to the public resulting from effluent releases; LBP-12-21, 76 NRC 218 (2012)

See also Total Effective Dose Equivalent

DOSIMETRY

evaluation of existing dose projection models or a dose assessment is not required by 10 C.F.R. 52.80(d) and 50.54(h)(2); CLI-11-9, 74 NRC 233 (2011)

request that NRC order licensees to add guidance to emergency plans that documents how to perform a multiunit dose assessment (including releases from spent fuel pools) using licensee’s site-specific dose assessment software and approach until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)

DRAFT ENVIRONMENTAL IMPACT STATEMENT

absent voluntary action by applicant to amend its environmental report, intervenor wishing to raise new or revised post-ER environmental concerns must await issuance of Staff’s DEIS; LBP-11-37, 74 NRC 774 (2011)

additional content is required in a final environmental impact statement compared to a draft EIS; LBP-15-3, 81 NRC 65 (2015)

adequacy of DEIS that relied on applicant’s mitigation measure that a state agency might not require the applicant to implement was challenged; LBP-13-4, 77 NRC 107 (2013)

agencies shall prepare supplements to either draft or final EISs if there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-15-13, 81 NRC 456 (2015)

although a contention contesting applicant’s environmental report generally may be viewed as a challenge to NRC Staff’s subsequent DEIS, new claims must be raised in a new or amended contention; LBP-14-5, 79 NRC 377 (2014)

although a draft supplemental environmental impact statement may rely in part on applicant’s environmental report, NRC Staff must independently evaluate and be responsible for the reliability of all information used in the DSEIS; LBP-15-3, 81 NRC 65 (2015)

although NRC has issued a generic environmental impact statement for in situ uranium recovery facilities that assesses potential ISR facility construction/operation/decommissioning impacts, for the initial licensing of each individual ISR facility, NRC Staff will first prepare a draft supplemental EIS; LBP-15-3, 81 NRC 65 (2015)

analysis for all draft and final EISs, by virtue of section 51.90, will, to the fullest extent practicable, quantify the various factors considered; LBP-15-3, 81 NRC 65 (2015)

any new and significant information that arises in the interval after the applicant files its originally compliant environmental report must be captured and addressed; LBP-11-32, 74 NRC 654 (2011)

as long as the DEIS takes a hard look at the environmental impacts from licensing a plant, nothing in NEPA requires NRC Staff’s analysis to preclude any particular environmental impact; LBP-15-19, 81 NRC 815 (2015)

boards must reject interveners’ arguments that fail to specifically address the DEIS; LBP-13-9, 78 NRC 37 (2013)

both the content of the DEIS and the additional material submitted by the parties form part of the adjudicatory record; LBP-12-23, 76 NRC 445 (2012)

challenges to only the DEIS apply equally to the final environmental impact statement under the migration tenet; LBP-12-5, 75 NRC 227 (2012)
claim that the DEIS does not adequately assess the impacts to threatened and endangered species is rejected; LBP-13-9, 78 NRC 37 (2013)
contention asserting DEIS must include the Corps of Engineers Clean Water Act section 404 permit analysis in order to satisfy NEPA fails to raise a material issue; LBP-15-23, 82 NRC 55 (2015)
contention challenging sufficiency of the DEIS as it pertains to the protection of cultural resources falls within the migration tenet and is admissible; LBP-13-9, 78 NRC 37 (2013)
contention claiming that NRC Staff’s consultation was inadequate does not ripen until issuance of NRC Staff’s draft environmental impact statement; LBP-15-5, 81 NRC 249 (2015)
contention contesting how the consultation mandate is being carried out can be raised in the first instance only after the Staff’s draft environmental impact statement; LBP-13-6, 77 NRC 253 (2013)
contention submitted for the first time after the DEIS is issued will be deemed untimely; LBP-12-12, 75 NRC 742 (2012)
contention that DEIS fails to adequately analyze cumulative impacts is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to adequately analyze groundwater quantity impacts is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to adequately assess cumulative impacts of the proposed action and another proposed ISL uranium mining operation is inadmissible; LBP-13-10, 78 NRC 117 (2013)
contention that DEIS fails to adequately describe or analyze proposed mitigation measures is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to analyze the environmental impacts that will occur if applicant cannot restore groundwater to primary or secondary limits is admissible; LBP-13-10, 78 NRC 117 (2013)
contention that DEIS fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the Endangered Species Act and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to consider all reasonable alternatives is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to demonstrate adequate technical sufficiency and fails to present information in a clear, concise manner to enable effective public review is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails include a reviewable plan for disposal of 11e(2) byproduct material is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to include adequate hydrological information to demonstrate applicant’s ability to contain groundwater fluid migration is admissible; LBP-13-10, 78 NRC 117 (2013)
contention that DEIS fails to include an adequate hydrogeological analysis to assess adequate confinement and potential impacts to groundwater is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to include necessary information for adequate determination of baseline groundwater quality is admissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS fails to take a hard look at impacts of the proposed mine related to air emissions and liquid waste disposal is inadmissible; LBP-13-9, 78 NRC 37 (2013)
contention that DEIS is deficient because its evaluation of the operation of the radial collector wells does not preclude the possibility that they will change the plume dynamics of the industrial wastewater facility/cooling canal contaminant plume is inadmissible; LBP-15-19, 81 NRC 815 (2015)
contention that DEIS must identify the percentage of radial collector well water drawn from underneath the industrial wastewater facility is inadmissible; LBP-15-19, 81 NRC 815 (2015)
contention that NRC has failed to properly define the scope of the proposed major federal action and instead improperly segments the project is inadmissible; LBP-13-10, 78 NRC 117 (2013)
DEIS does not and cannot treat identified environmental concerns in a vacuum; LBP-11-7, 73 NRC 254 (2011)
DEIS indicates what other interests and considerations of federal policy, including factors not related to environmental quality, if applicable, are relevant to the consideration of environmental effects of the proposed action; LBP-14-6, 79 NRC 404 (2014)
DEIS might cure alleged omissions or deficiencies in the environmental report by including additional analysis that addresses such omissions or deficiencies; LBP-11-7, 73 NRC 254 (2011)
DEISs must include a preliminary analysis that considers and weighs the environmental effects of and alternatives to the proposed action and alternatives available for reducing or avoiding adverse environmental effects; LBP-14-9, 80 NRC 15 (2014)

DEISs need not contain more information on mitigation measures than a description of the mitigation measures on which the NRC relies and the explanation of the limiting effect of the mitigation measures on environmental impacts; LBP-13-9, 78 NRC 37 (2013)

duties of NRC Staff and not an applicant, such as consultation with other federal agencies, could not be raised at the environmental report stage, and therefore such a contention will not be rejected as untimely when filed after the release of the DEIS; LBP-12-12, 75 NRC 742 (2012)

future actions on which the DEIS purports to rely in its analysis of impacts constitute a license condition, the use of which is permitted in NEPA documents; LBP-13-9, 78 NRC 37 (2013)

if attempting to raise a new issue based on new information in the final supplemental environmental impact statement, intervenor must file a new contention if information in the FSEIS is sufficiently different from information in the DSEIS that supported the original contention’s admission; LBP-14-5, 79 NRC 37 (2014)

if recommendations of the NRC’s Near-Term Task Force review of the Fukushima Dai-ichi accident constitute relevant new and significant information, then the DEIS must address them; LBP-11-28, 74 NRC 604 (2011)

in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe them in the environmental assessment or draft environmental impact statement; LBP-15-16, 81 NRC 618 (2015)

intervenor attempting to litigate an issue based on expressed concerns about the DEIS may need to amend the admitted contention or submit a new contention if information in the DEIS is sufficiently different from information in the environmental report that supported the original contention’s admission; LBP-13-9, 78 NRC 37 (2013)

intervenor may file a new or amended contention challenging relevant new portions of the DEIS that differ from applicant’s environmental report; LBP-11-1, 73 NRC 19 (2011)

intervenors and potential intervenors have a period of time to file new or amended contentions in response to a DEIS; LBP-13-9, 78 NRC 37 (2013)

intervenors are not permitted to wait until information reappears in the DEIS to file their contentions; LBP-13-9, 78 NRC 37 (2013)

intervenors fail to show that, with respect to terrestrial and wetland mitigation plans, there are data or conclusions in the DEIS that differ significantly from the data or conclusions in applicant’s documents; LBP-12-12, 75 NRC 742 (2012)

intervenors fail to specify what other alternatives to the license renewal application should be discussed in the draft supplemental environmental impact statement, much less show that any proposed alternative would satisfy the purpose of applicant’s proposed action; LBP-15-1, 81 NRC 15 (2015)

intervenors may file new or amended contentions in response to the DEIS if they can satisfy the test of 10 C.F.R. 2.309(h)(2)(i)-(iii); LBP-12-12, 75 NRC 742 (2012)

intervenors may question whether the DEIS includes a sufficient justification for its reliance on future actions of a state agency; LBP-12-23, 76 NRC 445 (2012)

intervenors’ challenge concerning the DEIS’s alleged failure to discuss the Great Lakes Compact’s process for regional review of its application for a consumptive water use permit is inadmissible; LBP-12-12, 75 NRC 742 (2012)

intervenors’ challenges to adequacy of applicant’s environmental report with respect to environmental impacts of dewatering associated with the proposed nuclear plant continue to serve as viable challenges to similar sections of Staff’s DEIS and thus are not moot; LBP-11-1, 73 NRC 19 (2011)

it is applicant’s responsibility to include information in the environmental report that NRC Staff needs to prepare the DEIS, including information on alternatives available for reducing or avoiding adverse environmental effects; LBP-12-12, 75 NRC 742 (2012)
it is not clear NRC Staff relied upon the generic environmental impact statement when preparing the draft supplemental environmental impact statement because it was not incorporated by reference or mentioned in any other manner; LBP-15-11, 81 NRC 401 (2015)

late-filed contentions lack good cause when they are based on a DEIS that contains no new information relevant to the contention; LBP-13-9, 78 NRC 37 (2013)

legal requirements applicable to a draft EIS, as specified in sections 51.70(b) and 51.71, are imposed on a final EIS; LBP-15-3, 81 NRC 65 (2015)

mere listing of proposed mitigation measures in the DEIS is insufficient under NEPA; LBP-15-23, 82 NRC 55 (2015)

migration tenet applies only as long as the DEIS analysis or discussion at issue is essentially in para materia with the environmental report analysis or discussion that is the focus of the contention; LBP-12-12, 75 NRC 742 (2012)

migration tenet applies when information in the draft environmental impact statement is sufficiently similar to information in applicant’s environmental report, and allows previously admitted contentions challenging the environmental report to apply to relevant portions of the DEIS; LBP-15-16, 81 NRC 618 (2015)

migration tenet applies when the information in the final supplemental environmental impact statement is sufficiently similar to the information in the draft SEIS; LBP-14-5, 79 NRC 377 (2014)

NEPA does not require the DEIS to include a fully formulated or adopted mitigation plan, but its discussion must provide sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-15-23, 82 NRC 55 (2015)

NEPA requires an agency’s DEIS to contain a detailed discussion of possible mitigation measures; LBP-15-23, 82 NRC 55 (2015)

new or amended contentions related to portions of the DEIS that differ from the environmental report must be timely filed under section 2.309(c), and meet the contention admissibility standards of section 2.309(f)(1) to be admitted; LBP-13-9, 78 NRC 37 (2013)

NRC rules provide a process to prepare supplemental draft or final environmental impact statements when the agency identifies new and significant information; CLI-14-7, 80 NRC 1 (2014)

NRC Staff cannot release NEPA documents that blindly parallel the applicant’s information and omissions and then be allowed to argue that applicant’s omissions prevent filing of new contentions concerning the newly released NEPA document; LBP-13-9, 78 NRC 37 (2013)

NRC Staff is not obligated to fully adopt, or agree with, all comments to the DEIS regarding the no-action alternative; LBP-13-13, 78 NRC 246 (2013)

NRC Staff must address matters specified in 10 C.F.R. 51.45; LBP-14-9, 80 NRC 15 (2014)

NRC Staff must consider the economic, technical, and other benefits and costs of the proposed action; LBP-11-7, 73 NRC 254 (2011)

NRC Staff must prepare a final environmental impact statement in accordance with the requirements of 10 C.F.R. 51.71 for a DEIS; LBP-12-18, 76 NRC 127 (2012)

NRC Staff must supplement the DEIS if there are substantial changes in the proposed action that are relevant to environmental concerns or there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011)

NRC Staff will independently evaluate and be responsible for the reliability of all information used in the DEIS; LBP-13-4, 77 NRC 107 (2013)

NRC Staff’s DEIS is required to list required federal permits and approvals and the current status of compliance with those requirements; LBP-12-12, 75 NRC 742 (2012)

NRC will consider all comments on the draft supplemental EIS regardless of whether the comment is directed to impacts in Category 1 or 2; CLI-13-7, 78 NRC 199 (2013)

NRC’s NEPA regulations require a request for public comment on a DEIS and a supplement to a DEIS distributed in accordance with 10 C.F.R. 51.74 and on any supplement to the FEIS prepared pursuant to 10 C.F.R. 51.92(a) or (b); LBP-14-9, 80 NRC 15 (2014)

petitioner may amend NEPA contentions or file new NEPA contentions if there are data or conclusions in the NRC draft or final EIS, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant’s documents; LBP-12-12, 75 NRC 742 (2012); LBP-12-13, 75 NRC 784 (2012)
petitioner may submit to NRC Staff any information that it believes to be new and significant by participating in NRC’s parallel NEPA process wherein an opportunity for public comment on the draft supplemental EIS is provided; CLI-13-7, 78 NRC 199 (2013)

petitioners may amend their contentions or file new contentions if the supplemental DEIS differs significantly from the data or conclusions in applicant’s documents; LBP-11-34, 74 NRC 685 (2011)

policies set forth by NEPA prevent NRC Staff from segmenting the disposal issues from the inquiry into whether applicant will be allowed to create 11e(2) byproduct material in the first instance; LBP-13-9, 78 NRC 37 (2013)

preliminary analysis that considers and weighs alternatives available for reducing or avoiding adverse environmental effects must be included; LBP-12-18, 76 NRC 127 (2012)

publication of NRC Staff’s DEIS may moot a contention challenging the environmental analysis in the applicant’s environmental report, if the DEIS dispenses with the issues raised in the original contention challenging the ER; LBP-11-1, 73 NRC 19 (2011)

publication of the DEIS does not provide an opportunity to renew previously filed (and rejected) contentions, but rather, petitioner must demonstrate that the DEIS actually contains new data or conclusions; LBP-12-12, 75 NRC 742 (2012)

recirculation of the DEIS is required only when the information presents a seriously different picture of the environmental impacts; LBP-13-9, 78 NRC 37 (2013)

relative to an individual ISR facility, when NRC Staff formulates its draft and final supplemental environmental impact statement conclusions regarding the environmental impacts of a proposed action or alternative actions, it uses as guidance a standard scheme to categorize or quantify the impacts; LBP-15-3, 81 NRC 65 (2015)

supplement to the DEIS or FEIS is required if there are significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-11-32, 74 NRC 654 (2011)

there is no enumeration of the required contents of the DEIS regarding endangered or threatened species; LBP-12-12, 75 NRC 742 (2012)

under the migration tenet, boards may construe an admitted contention contesting the environmental report as a challenge to the subsequently issued draft or final EIS without the necessity for Intervenors to file a new or amended contention; LBP-12-12, 75 NRC 742 (2012)

until NRC Staff issues its DEIS or FEIS, it cannot plausibly be argued that the document is inadequate or otherwise fails to satisfy NEPA; LBP-11-33, 74 NRC 675 (2011)

when an agency’s conclusions are different from the Fish and Wildlife Service’s regarding endangered species, the agency must clearly articulate its reasons for disagreement; LBP-13-9, 78 NRC 37 (2013)

DREDGING

when a proposed project would cause discharge of dredged or fill material into wetlands, applicant must seek a permit from the Corps of Engineers; LBP-15-23, 82 NRC 55 (2015)

DRY CASK STORAGE

licensee determined that dry cask storage cask displacement and damage to the NUHOMS HD 32PTH caused by an earthquake exceeding the design basis were not reportable; DD-12-2, 76 NRC 391 (2012)

licensee’s assessment of the structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS HD dry cask storage systems following an earthquake exceeding the plant’s design basis is described; DD-12-2, 76 NRC 391 (2012)

structural integrity of GE Mark I boiling water reactor spent fuel pools and spent fuel management in dry storage casks are discussed; DD-15-1, 81 NRC 193 (2015)

suspension request that would have halted final licensing decisions pending action on a petition for rulemaking regarding NRC Staff’s review of the potential expedited transfer of spent fuel from pools to dry casks was denied; CLI-15-13, 81 NRC 555 (2015)

DRY STORAGE CASKS

loss of spent fuel confinement would produce a dose of 0.15 rem at the nearest site boundary, which is less than the 5-rem limit; LBP-12-24, 76 NRC 503 (2012)
SUBJECT INDEX

pressure monitoring system that functions to alert independent spent fuel storage installation operators of potential storage problems, specifically a leak of one of the seals, is intended to meet the requirements for monitoring of dry spent fuel storage; LBP-12-24, 76 NRC 503 (2012)

DUE PROCESS

agencies must set and complete proceedings on license applications with due regard for the rights and privileges of all the interested parties or adversely affected persons and within a reasonable time; CLI-12-6, 75 NRC 352 (2012)

health, safety, and environmental concerns do not constitute liberty or property subject to due process protection; LBP-11-4, 73 NRC 91 (2011)

intervenors in reactor licensing proceedings ordinarily cannot raise constitutional due process issues with respect to NRC hearing procedures, inasmuch as intervenors cannot claim government deprivation of life, liberty, or property as a result of the NRC’s licensing action; LBP-11-4, 73 NRC 91 (2011)

prospective intervenors must show a direct, substantial, and legally protectable interest, the test for which is primarily a practical guide to disposing of lawsuits by involving as many apparently concerned persons as is compatible with efficiency and due process; LBP-11-4, 73 NRC 91 (2011)

there is no fundamental right to participate in administrative adjudications; LBP-11-4, 73 NRC 91 (2011)

there is nothing in the legislative history of the Equal Access to Justice Act or the pertinent case law to suggest a congressional intent to extend the EAJA to cases in which due process, rather than a statute, requires an Administrative Procedure Act § 554 hearing; LBP-11-8, 73 NRC 349 (2011)

unless a schedule is so onerous or unfair that it deprives a party of procedural due process, scheduling is a matter of licensing board discretion; LBP-15-29, 82 NRC 246 (2015)

DUST

fugitive dust generated onsite at a facility, particularly during construction, can be a concern in the vicinity of a facility; LBP-12-3, 75 NRC 164 (2012)

health-impact potential of facility traffic-associated dust, if properly pleaded, could provide a basis for standing; LBP-12-3, 75 NRC 164 (2012)

licensing board, construing the petition in favor of petitioners, based its standing finding on potential harm from traffic-generated dust and light pollution; CLI-12-12, 75 NRC 603 (2012)

standing can be based on diminishment of recreational enjoyment of wildlife area due to, among other factors, an increase in dust due to traffic on adjacent highway; CLI-12-12, 75 NRC 603 (2012)

EARLY SITE PERMIT APPLICATION

applicant need not submit information regarding control room habitability and ventilation system design in the site safety analysis report portion of an early site permit application; LBP-11-16, 73 NRC 645 (2011)

applicant’s site safety analysis report must provide sufficient data to enable the requisite determination of the potential for surface deformation as a result of growth faults at the site; LBP-11-16, 73 NRC 645 (2011)

applicants may propose complete and integrated emergency plans for review and approval in conjunction with their application, but they are not required to do so; CLI-12-2, 75 NRC 63 (2012)

climate change is considered an environmental impact that must be addressed; LBP-11-16, 73 NRC 645 (2011)

even though a cooling pond is not a safety-related structure, knowledge of faulting under the pool and the impact this faulting might have on the pool’s operation are required; LBP-11-16, 73 NRC 645 (2011)

geologic and seismic siting factors considered for design must include a determination of the safe shutdown earthquake ground motion for the site and the potential for surface tectonic and non-tectonic deformations; LBP-11-16, 73 NRC 645 (2011)

EARLY SITE PERMIT PROCEEDINGS

contention claiming that the environmental report’s discussion of environmental effects and cumulative impacts of seepage from the cooling basin into groundwater and surface water through undocumented or unplugged oil and gas wells and borings fails to comply with NRC requirements is admissible; LBP-11-16, 73 NRC 645 (2011)

contention should be deemed resolved if the subject of the contention was actually litigated and decided during the ESP proceeding, or, although not actually litigated, was decided by the Staff, was necessary for the Staff to resolve in the ESP proceeding, and was within the scope of that proceeding as defined in the Federal Register notice of opportunity for a hearing; LBP-11-10, 73 NRC 424 (2011)
contention that alleges an omission, not an inadequacy, of an environmental report’s analysis of socioeconomic impacts raises an issue that is not material to any finding NRC must make; LBP-11-16, 73 NRC 645 (2011)

contentions concerning benefits assessment shall not be admitted if applicant does not address those issues in the ESP application; LBP-11-16, 73 NRC 645 (2011)

insofar as a contention requests consideration of a dry cooling design alternative, that matter must be considered resolved in the ESP proceeding; LBP-11-10, 73 NRC 424 (2011)

matter resolved in an ESP proceeding may be revisited in the combined license proceeding when new and significant information is presented; LBP-11-10, 73 NRC 424 (2011)

uncontested proceeding is subject to mandatory hearing requirements; LBP-11-10, 73 NRC 424 (2011)

where seismic suitability of a site was evaluated at the early site permit stage, further litigation of a geologic fault issue is foreclosed at the combined license stage; LBP-14-8, 79 NRC 519 (2014)

EARLY SITE PERMITS

agency responsible for preparing the environmental impact statement must define the scope of the issues it will address; LBP-11-10, 73 NRC 424 (2011)

applicant’s environmental report must identify and discuss the status of all permits, licenses, and other approvals that are required from federal, state, and local agencies; LBP-11-16, 73 NRC 645 (2011)

applicants must evaluate alternative sites to determine whether there is any obviously superior alternative to the site proposed; LBP-11-16, 73 NRC 645 (2011)

combined license applications may reference a standard design certification and an early site permit; CLI-12-2, 75 NRC 63 (2012)

entity is allowed to bank a site for the possible future construction of a specified number of new nuclear power generation facilities; LBP-11-16, 73 NRC 645 (2011)

entity may apply for an early site permit authorizing it to resolve key site-related environmental, safety, and emergency planning issues before selecting the design of a nuclear power facility for the subject site; LBP-11-16, 73 NRC 645 (2011)

ESP authorizes the use of a specific site for the construction and operation of a new nuclear power plant, with the actual construction and operation authorized by a subsequently issued combined license; LBP-11-10, 73 NRC 424 (2011)

ESP is valid for 20 to 40 years from the date of issuance; LBP-11-16, 73 NRC 645 (2011)

if an assessment of alternatives to the proposed action was prepared at the early site permit stage and no new information in the areas of energy alternatives or system design alternatives has been identified at the combined license stage, conclusions made at the ESP stage remain valid; CLI-12-2, 75 NRC 63 (2012)

if applicant did not pursue an early site permit, all relevant site characteristics, including site geology, hydrology, seismology, and man-made hazards, as well as potential environmental impacts of the project, were studied as part of NRC Staff’s combined license review and are within the scope of the Commission decision; CLI-15-13, 81 NRC 555 (2015)

in determining whether a license amendment, construction permit, or early site permit will be issued to applicant, the Commission is guided by the considerations that govern issuance of initial licenses, construction permits, or early site permits to the extent applicable and appropriate; LBP-15-20, 81 NRC 829 (2015)

issuance of an ESP and the subsequent authorization of construction and operation of a new nuclear power plant qualify as connected actions under 40 C.F.R. 1508.25 and should be evaluated in one environmental impact statement; LBP-11-10, 73 NRC 424 (2011)

licensee who has obtained an ESP is not required to apply for a combined license or to actually construct and operate a nuclear power plant at the authorized site; LBP-11-10, 73 NRC 424 (2011)

section 50.54(h)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)

section 50.54(h)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)

licensee who has obtained an ESP is not required to apply for a combined license or to actually construct and operate a nuclear power plant at the authorized site; LBP-11-10, 73 NRC 424 (2011)

section 50.54(h)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)

section 50.54(h)(2) applies to both current reactor licensees under Part 50 and new applicants for licenses under Part 52; LBP-11-21, 74 NRC 115 (2011)

licensee who has obtained an ESP is not required to apply for a combined license or to actually construct and operate a nuclear power plant at the authorized site; LBP-11-10, 73 NRC 424 (2011)
when an environmental impact statement is prepared at the ESP stage, NRC Staff must prepare a supplemental EIS for the combined license focusing on issues related to the impacts of construction and operation for which new and significant information has been identified; CLI-12-2, 75 NRC 63 (2012)

EARTHQUAKE MOTION

licensee is required to shut down a nuclear power plant when the vibratory ground motion exceeds that of the operating basis earthquake; DD-12-2, 76 NRC 391 (2012)
request that NRC suspend the operating licenses until completion of a set of activities related to the effects of an earthquake that exceeded the plant’s operating basis earthquake is granted in part and denied in part; DD-12-2, 76 NRC 391 (2012)

EARTHQUAKE ZONES

request that NRC order the immediate shutdown of all nuclear power reactors that are known to be located on or near an earthquake fault line is denied; DD-15-6, 81 NRC 884 (2015)

EARTHQUAKES

ability of a facility to shut down safely following a potential earthquake is a current operating issue, and is not unique to whether licenses should be renewed; LBP-15-6, 81 NRC 314 (2015)
admittance of contention that environmental assessment failed to analyze impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 401 (2015)
before restart, licensee is required to demonstrate to NRC that no functional damage from seismic events has occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 573 (2012)
contention that operating license should not be renewed unless and until applicant establishes that the plant can withstand and be safely shut down following an earthquake is not within the scope of a license renewal proceeding; LBP-15-6, 81 NRC 314 (2015)
design basis of safety features for each nuclear power plant takes into account the potential effects of two levels of earthquake motion; DD-12-1, 75 NRC 573 (2012)
highly site-specific seismic hazard analysis reflects consideration not only of the location and magnitude of historic earthquakes, but also the nature of the bedrock and the style of faulting in the surrounding region; LBP-11-11, 73 NRC 455 (2011)
inspections of electrical systems and components following an earthquake that resulted in loss of offsite power are described; DD-12-1, 75 NRC 573 (2012)
licensee assessed the structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS-HD dry cask storage systems following an earthquake and reviewed the event for reportability; DD-12-1, 75 NRC 573 (2012)
licensee determined that dry cask storage cask displacement and damage to the NUHOMS HD 32PTH caused by an earthquake exceeding the design basis were not reportable; DD-12-2, 76 NRC 391 (2012)
licensee’s assessment of the structural integrity and radiation shielding capability of both the TN-32 cask and NUHOMS HD dry cask storage systems following an earthquake exceeding the plant’s design basis is described; DD-12-2, 76 NRC 391 (2012)
NRC and licensee inspections to assess the integrity of the North Anna plant following a seismic event that exceeded the operating basis and design basis earthquake are described; DD-12-1, 75 NRC 573 (2012)
NRC’s independent technical evaluation of information submitted by licensee to demonstrate that no functional damage occurred as a result of an earthquake is described; DD-15-9, 82 NRC 274 (2015)
reactors must be shut down and remain shut down until licensee demonstrates to NRC that an earthquake exceeding its operating basis caused no functional damage to features necessary for continued operation without undue risk; DD-15-9, 82 NRC 274 (2015)
to demonstrate that no functional damage occurred as a result of the earthquake, licensee performed inspections, tests, and analyses to address the requirements of 10 C.F.R. Part 100, Appendix A; DD-15-9, 82 NRC 274 (2015)
when an earthquake results in ground accelerations greater than those assumed in the design of the nuclear power plant, the plant is required to be shut down and to remain shut down until licensee demonstrates to NRC that no functional damage occurred to those features necessary for continued operation without undue risk to the health and safety of the public; DD-12-1, 75 NRC 573 (2012)
See also Seismic Analysis; Seismic Design  

SUBJECT INDEX
ECONOMIC EFFECTS
ability of a totally unfunded group to provide testimony from experts is not taken into account in ruling on motions to reopen; LBP-11-20, 74 NRC 65 (2011)
discussion of the economic costs and benefits of the proposed action and alternatives is required if such costs and benefits are essential for a determination regarding the inclusion of an alternative in the range of alternatives considered; LBP-11-21, 74 NRC 115 (2011)
NRC-endorsed guidance on SAMA analysis methodology specifies use of the mean annual offsite dose and economic impact; CLI-12-1, 75 NRC 39 (2012)
petitioner’s failure to address applicant’s supplemental economic analyses, demonstrate specific knowledge of the analysis, and not indicate, even broadly that the SAMA economic cost-benefit conclusions are not sufficiently conservative renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)
supplemental environmental impact statements for license renewal are not required to include discussion of need for power or the economic costs and economic benefits of the proposed action or of alternatives to the proposed action; LBP-13-13, 78 NRC 246 (2013)
See also Benefit-Cost Analysis

ECONOMIC INJURY
if an enforcement order blacklists a worker by name, he has the right to demand a hearing even though he may be motivated by purely economic concerns; LBP-14-4, 79 NRC 319 (2014)
more subjective appraisal of declining property values might be permissible in the context of a licensing action associated with an applicant or facility shown to have engaged in a continuous and pervasive course of illegal conduct; LBP-12-3, 75 NRC 164 (2012)
opposing party’s litigation expenses do not provide a basis for departing from the usual rule that a dismissal should be without prejudice; CLI-13-10, 78 NRC 563 (2013)
whether economic concerns relating to job loss qualify as adverse effects within the meaning of 10 C.F.R. 2.202(a)(3) is discussed; LBP-14-4, 79 NRC 319 (2014)

ECONOMIC INTERESTS
intervenors may be granted standing based on purely economic interests; LBP-14-4, 79 NRC 319 (2014)
nonlicensee with a purely economic interest has an automatic right to demand a hearing under section 2.202(a)(3) without showing standing or proffering an admissible contention; LBP-14-4, 79 NRC 319 (2014)
ratepayers’ economic injuries are not particularized or distinct to the extent required to support standing, but are instead generalized and shared by a large class; LBP-14-4, 79 NRC 319 (2014)
standing has been granted to a utilities commission based on injuries that would increase costs to regulated utilities; LBP-14-4, 79 NRC 319 (2014)
taxpayer interest is too generalized and attenuated to support Article III standing; LBP-14-4, 79 NRC 319 (2014)

ECONOMIC ISSUES
generalized economic cost arguments, unsupported by asserted facts or expert opinion, are insufficient to show a genuine dispute with a license renewal application; LBP-15-1, 81 NRC 15 (2015)
generic, unsubstantiated claims regarding health, safety, and property devaluation impacts are insufficient to establish standing; LBP-12-3, 75 NRC 164 (2012)
quibbling over the details of an economic analysis would effectively stand NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-11-7, 73 NRC 254 (2011)
standing claims based on economic impacts are only cognizable in NRC proceedings with regard to NEPA-based concerns; LBP-12-3, 75 NRC 164 (2012)
See also Costs; Financial Assurance

ECONOMIC SIMPLIFIED BOILING WATER REACTOR
under its certified design, the ESBWR could maintain circulation long enough to permit safe shutdown of the reactor even if it were to lose offsite power and all of its backup generators failed to operate; LBP-15-5, 81 NRC 249 (2015)

EFFECTIVENESS
NRC regulations appropriately require a hearing before the proposed license amendment becomes effective whenever the amendment creates the possibility of a new or different kind of accident; LBP-13-20, 81 NRC 829 (2015)
senior reactor operator licenses shall be effective as of the date issued and shall be subject to the usual terms and conditions; LBP-14-2, 79 NRC 131 (2014)
See also Immediate Effectiveness; Stay of Effectiveness

ELECTRICAL DISTRIBUTION SYSTEM
although NRC does not license construction or operation of a transmission corridor, it has the authority to deny the license for a proposed nuclear plant if, for example, the total environmental costs of the new reactor and connected actions exceed the benefits; LBP-12-12, 75 NRC 742 (2012)
construction of a transmission line is defined as a preconstruction activity; LBP-12-12, 75 NRC 742 (2012)
even if the transmission corridor is a preconstruction activity and outside the NRC’s regulatory jurisdiction, the construction and maintenance of the transmission corridor likely qualifies as a connected action under governing NRC and Council on Environmental Quality regulations, and therefore must be analyzed in the FEIS; LBP-12-12, 75 NRC 742 (2012)
to require detailed analysis in the final environmental impact statement, a transmission corridor must be a proposed action rather than one that is merely contemplated; LBP-12-12, 75 NRC 742 (2012)
transformers perform their intended function through a change in state similar to switchgear, power supplies, battery chargers, and power inverters, which have been excluded from an aging management review; CLI-12-5, 75 NRC 301 (2012)
See Transmission Lines

ELECTRICAL EQUIPMENT
amendment to aging management plan extended the AMP for medium-voltage cables to also cover low-voltage cables; LBP-11-20, 74 NRC 65 (2011)
board reviews whether transformers are subject to replacement based on a qualified life or specified time period; LBP-13-13, 78 NRC 246 (2013)
high temperature in the engineered safety feature switchgear rooms is discussed; DD-14-5, 80 NRC 205 (2014)
inspection to determine effects of wet or underwater conditions on underground safety-related electrical cables is discussed; DD-15-1, 81 NRC 193 (2015)
inspections of electrical systems and components following an earthquake that resulted in loss of offsite power are described; DD-12-1, 75 NRC 573 (2012)
licensees are required to establish a program for qualifying certain defined electric equipment; LBP-11-20, 74 NRC 65 (2011)
request for enforcement action to address concerns about operability of the submerged and/or wetted non-environmentally qualified inaccessible cables is denied; DD-13-2, 78 NRC 185 (2013)
safety contention challenging aging management of electrical transformers is decided; LBP-13-13, 78 NRC 246 (2013)
safety-related equipment that must be environmentally qualified is described; LBP-11-20, 74 NRC 65 (2011)
structural limits on the block wall between the engineered safety feature switchgear rooms is discussed; DD-14-5, 80 NRC 205 (2014)
transformer is an active component because it undergoes a change in properties when it performs its intended function; CLI-15-6, 81 NRC 340 (2015)
transformers perform their intended function through a change in state similar to switchgear, power supplies, battery chargers, and power inverters, which have been excluded from an aging management review; CLI-12-5, 75 NRC 301 (2012); LBP-13-13, 78 NRC 246 (2013)
variety of electrical and instrumentation and control components are excluded from an aging management review for license renewal; CLI-12-5, 75 NRC 301 (2012)
whether petitioners have adequately raised an issue as to whether transformers constitute active or passive components survived a motion for summary disposition; LBP-11-2, 73 NRC 28 (2011)
See also Environmental Qualification of Electrical Equipment

ELECTRICAL POWER
“baseload power” is defined as power generating energy intended to continuously produce electricity at or near full capacity, with high availability; LBP-12-15, 76 NRC 14 (2012)
baseload generation is different than peaking power, which provides supplemental power during hours of the day when demand is highest; LBP-11-13, 73 NRC 534 (2011)
for an electrical generation alternative to qualify for in-depth review, the alternative must be able to provide 1190 MWe of baseload power during the license renewal term; LBP-12-15, 76 NRC 14 (2012)

**ELECTRONIC FILING**

Commission exercises its discretion to consider briefs that were not filed via the agency’s E-Filing system; LBP-15-4, 81 NRC 156 (2015)

e-filing is required unless an exemption is granted permitting an alternative filing method for good cause shown, or unless the filing falls within the scope of the exception identified in 10 C.F.R. 2.302(g)(1); CLI-13-9, 78 NRC 551 (2013); CLI-14-3, 79 NRC 31 (2014)

failure to comply with NRC’s e-filing requirements without good cause or without obtaining an exemption from the requirements under 10 C.F.R. 2.302(g) can result in rejection of a pleading; LBP-15-4, 81 NRC 156 (2015)

filing is only complete when the filer performs the last act that it must perform to transmit a document in its entirety; LBP-11-13, 73 NRC 534 (2011)

good cause doesn’t exist where petitioner’s late-filed contention is due to careless inadvertence and not, as petitioner claimed, attributable to technical difficulties with the E-Filing system; LBP-15-4, 81 NRC 156 (2015)

persistent difficulties with the NRC electronic filing system despite petitioners’ good-faith efforts is good cause for late filing; LBP-11-2, 73 NRC 28 (2011)

persons without digital ID certificates may sign electronically by typing “Executed in Accord with 10 C.F.R. 2.304(d)” or its equivalent on the signature line and including the date of signature and the signatory’s name, capacity, address, phone number, and e-mail address; LBP-11-2, 73 NRC 28 (2011)

State intervenor provided good cause for its late E-filing submission because the State submitted its petition to NRC by e-mail before the deadline lapsed and the delay was purely a matter of obtaining digital credentials for the system, not an attempt to gain extra time to prepare a pleading or otherwise to float NRC’s procedural requirements; LBP-15-4, 81 NRC 156 (2015)

**EMBRITTLEMENT**

application to use alternate pressurized thermal shock rule must contain the projected embrittlement reference temperatures along various portions of the reactor pressure vessel, from the present to a future point, compared to the alternate screening criteria; LBP-15-17, 81 NRC 753 (2015)

application to use alternate pressurized thermal shock rule must contain an assessment of flaws in the reactor pressure vessel; LBP-15-17, 81 NRC 753 (2015)

consistency check compares mean and slope of the embrittlement model curve against surveillance data and checks to confirm that outliers fall within acceptable residual values provided in the regulation; LBP-15-17, 81 NRC 753 (2015)

consistency check seeks to compare, for a specific material type, the model’s projected embrittlement with the actual embrittlement values at the same fluence provided by material samples; LBP-15-17, 81 NRC 753 (2015)

differing amounts of copper, nickel, phosphorus, and manganese between material samples for the consistency check are accounted for; LBP-15-17, 81 NRC 753 (2015)

if fewer than three surveillance data points exist for a specific material, then the embrittlement model must be used without performing the consistency check; LBP-15-17, 81 NRC 753 (2015)

if the embrittlement model deviates from the physical samples over the limits specified in 10 C.F.R. 50.61(a)(6)(ii)(vi), licensee must submit additional evaluations and seek approval for the deviations from the Director of the Office of Nuclear Reactor Regulation; LBP-15-17, 81 NRC 753 (2015)

if the reference values projected at specific areas of the reactor pressure vessel for the end of life of the plant surpass the current screening criteria, licensee must submit a safety analysis and obtain NRC approval to continue to operate; LBP-15-17, 81 NRC 753 (2015)

in calculating embrittlement reference temperatures, licensee must calculate neutron flux through the reactor pressure vessel using a methodology that has been benchmarked to experimental measurements and with quantified uncertainties and possible biases; LBP-15-17, 81 NRC 753 (2015)

information that license amendment request must contain to use updated embrittlement model is described; CLI-15-22, 82 NRC 310 (2015)
integrated surveillance program among similar reactors is allowed if the reactors have sufficiently similar design and operating features to permit accurate comparisons of the predicted amount of radiation damage; LBP-15-17, 81 NRC 753 (2015)
license amendments related to reactor pressure vessel embrittlement present an obvious potential for offsite public health and safety consequences; LBP-15-17, 81 NRC 753 (2015)
licensee is not required to collect additional surveillance data from the subject plant, but rather licensee must use any data that demonstrate the embrittlement trends for the materials, including surveillance programs at other plants with or without a surveillance program integrated under Part 50, Appendix H; CLI-15-22, 82 NRC 310 (2015)
licensee must perform a consistency check of its embrittlement model against available surveillance data; LBP-15-17, 81 NRC 753 (2015)
licensees have some discretion in considering other plant-specific information that may be helpful in aligning their embrittlement models with the surveillance data; LBP-15-17, 81 NRC 753 (2015)
licensing actions that could increase reactor vessel embrittlement, such as license renewals, hold the potential for offsite consequences that are obvious; LBP-15-17, 81 NRC 753 (2015)
model projects the reference temperatures for various parts of the reactor pressure vessel at the end of life of the plant; LBP-15-17, 81 NRC 753 (2015)
neutron radiation embrittlement of reactor pressure vessel walls, decreasing their fracture toughness, is discussed; LBP-15-17, 81 NRC 753 (2015)
probabilistic embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data in a process called the consistency check; LBP-15-17, 81 NRC 753 (2015)
purpose of the consistency check is to determine if the surveillance data show a significantly different trend than the embrittlement model predicts; LBP-15-17, 81 NRC 753 (2015)
surveillance data are continuously integrated into future embrittlement projections; LBP-15-17, 81 NRC 753 (2015)
surveillance data include any data that demonstrate embrittlement trends for the beltl ine materials; LBP-15-17, 81 NRC 753 (2015)
surveillance data need not be obtained from the same reactor pressure vessel that is the subject of the license amendment; LBP-15-17, 81 NRC 753 (2015)
updated embrittlement model is used to predict future reference temperatures across the reactor pressure vessel, which is then verified by existing surveillance data; CLI-15-22, 82 NRC 310 (2015)

EMERGENCIES

licensee may take reasonable action that departs from a license condition or a technical specification in an emergency when the action is immediately needed to protect the public health and safety and no action consistent with license conditions and technical specifications that can provide adequate or equivalent protection is immediately apparent; DD-11-6, 74 NRC 420 (2011)
where NRC finds that an emergency situation exists, in that failure to act in a timely way would result in derating or shutdown of a nuclear power plant, it may issue a license amendment involving no significant hazards consideration without prior notice and opportunity for a hearing or for public comment; LBP-15-13, 81 NRC 456 (2015)

EMERGENCY BACKUP POWER

combined license applicant’s emergency plan must contain and describe adequate provisions for emergency facilities and equipment, including at least one onsite and one offsite communication system, each of which shall have a backup power source; LBP-11-15, 73 NRC 629 (2011)
equipment operability for emergency diesel generators is discussed; DD-14-5, 80 NRC 205 (2014)
NRC imposed requirements to provide makeup water independent of offsite power and the normal emergency alternating current power sources to maintain or restore spent fuel pool cooling capability in the event of an accident; DD-15-1, 81 NRC 193 (2015)

EMERGENCY CORE COOLING SYSTEM

Commission imposed a license condition requiring licensees to develop and implement strategies to maintain or restore core cooling, containment, and spent fuel pool cooling capabilities following a

905
beyond-design-basis external event, including a simultaneous loss of all AC power and loss of normal access to the normal heat sink; CLI-12-9, 75 NRC 421 (2012)
each nuclear power plant must be able to cool the reactor core and maintain containment integrity in the event of a station blackout of a specified duration; LBP-12-18, 76 NRC 127 (2012)
in the event of a severe accident in an AP1000, squib valves, which are explosively activated, reduce pressure and inject water as needed into the reactor vessel; CLI-15-13, 81 NRC 555 (2015)

EMERGENCY EXERCISES

every 2 years, licensee stages full-participation emergency exercises, which are evaluated by both FEMA and NRC; CLI-12-9, 75 NRC 421 (2012)
licensee must maintain an emergency plan, review it annually through an independent reviewer, and conduct periodic exercises to measure the plan’s effectiveness; CLI-15-6, 81 NRC 340 (2015)
offsite emergency plans are reviewed biennially by NRC and the Federal Emergency Management Agency in a comprehensive emergency preparedness exercise; CLI-15-6, 81 NRC 340 (2015)
request that NRC order licensees to conduct periodic training and exercises for multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
whether exercise frequency is adequate to maintain personnel knowledge and skill to implement emergency responsibilities for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)

EMERGENCY OPERATING PROCEDURES

licensees must activate the ERDS as soon as possible but not later than 1 hour after declaring an Emergency Class of alert, site area emergency, or general emergency; LBP-15-4, 81 NRC 156 (2015)
request that NRC modify the administrative controls section of the standard technical specifications for each operating reactor design to reference the approved EOP technical guidelines for that plant design is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to modify the technical guidelines to include emergency operations procedures, severe accident mitigation guidelines, and extensive damage mitigation guidelines in an integrated manner, specify clear command and control strategies for their implementation, and stipulate appropriate qualification and training for those who make decisions during emergencies is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
station blackout is a beyond-design-basis event and therefore regulations requiring emergency operating procedures do not apply, and so operators would follow a set of procedures required by 10 C.F.R. 50.63(c)(ii) & (iii); LBP-12-18, 76 NRC 127 (2012)

EMERGENCY OPERATIONS FACILITY

combined license applicant’s emergency plan must contain and describe adequate provisions for emergency facilities and equipment, including at least one onsite and one offsite communication system, each of which shall have a backup power source; LBP-11-15, 73 NRC 629 (2011)
ERDS is a direct electronic data link between licensees of operating reactors and the NRC Operations Center, and its objective is to allow NRC to monitor critical parameters during an emergency; LBP-15-4, 81 NRC 156 (2015)
request that NRC order licensees to ensure that emergency planning equipment and facilities are sufficient for dealing with multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)

EMERGENCY PLANNING ZONES

combined license application must include an emergency plan that contains, in the event of a reactor emergency resulting in a radiological release, a range of protective actions for the public located within about a 10-mile radius from the plant; LBP-11-15, 73 NRC 629 (2011)
EPZs are approximately a 10-mile radius around a reactor unit as adjusted to reflect the road network and land use; CLI-12-9, 75 NRC 421 (2012)
ingestion exposure pathway consists of an area about 50 miles in radius around a plant and its principal concern is ingestion of contaminated water or foods; LBP-11-15, 73 NRC 629 (2011)
NRC’s safety regulations cover a 50-mile planning area; LBP-14-4, 79 NRC 319 (2014)
pertinent zone in operating license renewal proceedings and other power reactor license matters is the area within a 50-mile radius of the site; LBP-11-2, 73 NRC 28 (2011)
plume exposure pathway consists of an area about 10 miles in radius around a plant, the principal concern of which is radiation exposure to the public (whole-body external exposure and inhalation exposure) from a radioactive plume; LBP-11-15, 73 NRC 629 (2011)
to the extent petitioner seeks to raise a generic challenge to the 10-mile plume exposure pathway EPZ, such an argument constitutes an impermissible challenge to this regulation; LBP-11-15, 73 NRC 629 (2011)

EMERGENCY PLANNING

all Part 50 licensees must meet emergency planning requirements, regardless of whether the facility is operating or has been permanently shut down and defueled; LBP-15-18, 81 NRC 793 (2015)
before issuing a combined license, NRC must conclude that there is reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; LBP-11-6, 73 NRC 149 (2011)
challenges to emergency planning fall outside the scope of a license renewal proceeding; CLI-15-6, 81 NRC 340 (2015); LBP-15-5, 81 NRC 249 (2015)
contention is neither germane to age-related degradation nor unique to the period covered by a license renewal application; LBP-11-35, 74 NRC 701 (2011)
in any NRC licensing proceeding, a FEMA finding will constitute a rebuttable presumption on questions of adequacy and implementation capability; LBP-11-6, 73 NRC 149 (2011)
proximity of the nuclear power plant site to the Canadian border is considered in the contexts of environmental and safety reviews; CLI-15-13, 81 NRC 555 (2015)
sheltering must be considered in developing the recommended range of protective actions in an emergency plan; LBP-11-6, 73 NRC 149 (2011)
this issue is beyond the scope of a license renewal proceeding; LBP-11-21, 74 NRC 115 (2011)

EMERGENCY PLANS

because current levels of emergency planning are required by regulation, licensee cannot make changes contemplated in its license amendment request without first receiving certain regulatory exemptions; LBP-15-18, 81 NRC 793 (2015)
before licensee may change its emergency plan to discontinue the ERDS link, it must perform and retain an analysis that concludes that the removal of ERDS is not a reduction in emergency plan effectiveness; LBP-15-4, 81 NRC 156 (2015)
combined license applicant’s emergency plan must contain and describe adequate provisions for emergency facilities and equipment, including at least one onsite and one offsite communication system, each of which shall have a backup power source; LBP-11-15, 73 NRC 629 (2011)
combined license application must include an emergency plan that contains, in the event of a reactor emergency resulting in a radiological release, a range of protective actions for the public located within about a 10-mile radius from the plant; LBP-11-15, 73 NRC 629 (2011)
combined license applications must provide an emergency plan for the site; CLI-12-9, 75 NRC 421 (2012)
concerns about a facility’s emergency plans may be raised at any time pursuant to 10 C.F.R. 2.206; CLI-15-6, 81 NRC 340 (2015)
contention that, in the event of a core-melt accident, applicant’s emergency plan should order an evacuation of persons within a 10-mile radius of the facility attacks NRC’s emergency planning regulation; LBP-11-15, 73 NRC 629 (2011)
early site permit applicants may propose complete and integrated emergency plans for review and approval in conjunction with their application, but they are not required to do so; CLI-12-2, 75 NRC 63 (2012)
holder of a combined license for a newly built reactor may not load fuel or operate except as provided in accordance with Part 50, Appendix E; LBP-15-4, 81 NRC 156 (2015)
holder of a license under Part 50, or a combined license under Part 52, shall follow and maintain the effectiveness of an emergency plan that meets the requirements in Part 50, Appendix E; LBP-15-4, 81 NRC 156 (2015)
in any NRC licensing proceeding, a FEMA finding will constitute a rebuttable presumption on questions of adequacy and implementation ability of state and local emergency plans; LBP-15-4, 81 NRC 156 (2015)
SUBJECT INDEX

in developing the range of protective actions, consideration will be given to evacuation, sheltering, and, as a supplement to these, the prophylactic use of potassium iodide, as appropriate; LBP-11-15, 73 NRC 629 (2011)
lack of detail for emergency sheltering option is not significant because size of sheltering population is very small; LBP-15-18, 81 NRC 793 (2015)
license amendment request does not require an updated or separate emergency plan unless such a plan would be germane to the type of license amendment request under review or is part of a licensee’s periodic update of emergency plans; LBP-11-29, 74 NRC 612 (2011)
licensee changes to its plan must not reduce the effectiveness of the plan; CLI-15-20, 82 NRC 211 (2015)
licensee is forbidden to change its emergency plan unless it performs and retains an analysis that demonstrates the changes do not reduce the effectiveness of the plan as changed; LB-15-4, 81 NRC 156 (2015)
licensee may change its emergency plan without prior NRC approval if licensee completes and retains an analysis demonstrating that the revised emergency plan satisfies a two-part test; CLI-15-20, 82 NRC 211 (2015)
licensee must comply with the requirements of 10 C.F.R. 50.54(q)(3) before it effects a change to its emergency plan to delete references to ERDS or its use during an emergency; LB-15-4, 81 NRC 156 (2015)
licensee must maintain an emergency plan, review it annually through an independent reviewer, and conduct periodic exercises to measure the plan’s effectiveness; CLI-15-6, 81 NRC 340 (2015)
licensees whose emergency plan describes emergency response data system or its use during an emergency would need to process a change to their emergency plans: CLI-15-20, 82 NRC 211 (2015)
NRC Staff considers FEMA’s findings on emergency plans in making its necessary finding of reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency; CLI-12-9, 75 NRC 421 (2012)
nuclear power reactors must have emergency plans in place to respond to accidents despite the fact that Table B-1 within 10 C.F.R. Part 51 concludes that the environmental impacts of both design basis and severe accidents at a nuclear reactor are small for all plants; LBP-13-13, 78 NRC 246 (2013)
offsite emergency plans are reviewed biennially by NRC and the Federal Emergency Management Agency in a comprehensive emergency preparedness exercise; CLI-15-6, 81 NRC 340 (2015)
plans are approved by NRC and FEMA and are updated on an ongoing basis; CLI-15-6, 81 NRC 340 (2015)
range of protective actions for persons within about a 10-mile radius is required, and guidelines for the choice of protective actions during an emergency, consistent with federal guidance, must be developed and in place; LB-15-11, 73 NRC 629 (2011)
reduction in emergency plan effectiveness means a reduction in licensee’s capability to perform an emergency planning function in the event of a radiological emergency; CLI-15-20, 82 NRC 211 (2015)
request that NRC order licensees to add guidance to emergency plans that documents how to perform a multunit dose assessment (including releases from spent fuel pools) using licensee’s site-specific dose assessment software and approach until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
revised plan must continue to meet the requirements in Part 50, Appendix E and the standards in section 50.47(b); CLI-15-20, 82 NRC 211 (2015)
EMERGENCY POWER
request that NRC order licensees to provide means to power communications equipment needed to communicate onsite and offsite during a prolonged station blackout until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to provide safety-related AC electrical power for the spent fuel pool makeup system is addressed; DD-14-2, 79 NRC 489 (2014)
request that NRC order licensees to revise their technical specifications to address requirements to have one train of onsite emergency electrical power operable for spent fuel pool makeup and spent fuel pool instrumentation when there is irradiated fuel in the spent fuel pool, regardless of the operational mode of the reactor is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)
SUBJECT INDEX

EMERGENCY PREPAREDNESS

offsite emergency plans are reviewed biennially by NRC and the Federal Emergency Management Agency in a comprehensive emergency preparedness exercise; CLI-15-6, 81 NRC 340 (2015)

proposed staffing changes meet emergency plan standards and provide reasonable assurance that adequate protective measures can and will be taken in the event of a radiological emergency commensurate with credible accidents in the permanently shutdown and defueled condition; CLI-15-20, 82 NRC 211 (2015)

whether exercise frequency is adequate to maintain personnel knowledge and skill to implement emergency responsibilities for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)

EMERGENCY RESPONSE DATA SYSTEM

activation requirements are specified in 10 C.F.R. 50.72(a)(4); CLI-15-20, 82 NRC 211 (2015)

all nuclear power facilities that are shut down permanently or indefinitely are exempted from participating in the ERDS program; LBP-15-4, 81 NRC 156 (2015)

all operational nuclear power plants except Big Rock Point must participate in the ERDS program by providing onsite hardware at each unit to interface with NRC receiving station; LBP-15-4, 81 NRC 156 (2015)

any alleged ambiguity in the exception provision of 10 C.F.R. Part 50, Appendix E, § VI is eliminated when the regulatory language is examined in light of the regulatory history and framework; LBP-15-4, 81 NRC 156 (2015)

any facility with an operating reactor unit is required to provide ERDS for that unit, regardless of the status of other reactors at the facility; LBP-15-4, 81 NRC 156 (2015)

before licensee may change its emergency plan to discontinue the ERDS link, it must perform and retain an analysis that concludes that the removal of ERDS is not a reduction in emergency plan effectiveness; LBP-15-4, 81 NRC 156 (2015)

collateral challenge to NRC emergency response data system rule is inadmissible; CLI-15-20, 82 NRC 211 (2015)

each licensee shall complete implementation of the ERDS by February 13, 1993, or before initial escalation to full power, whichever comes later; LBP-15-4, 81 NRC 156 (2015)

ERDS is a direct electronic data link between licensees of operating reactors and the NRC Operations Center, and its objective is to allow NRC to monitor critical parameters during an emergency; LBP-15-4, 81 NRC 156 (2015)

except Big Rock Point and all nuclear power facilities that are shut down permanently or indefinitely, onsite hardware for the emergency response data system shall be provided at each unit by the licensee to interface with the NRC receiving system; CLI-15-20, 82 NRC 211 (2015)

exception in 10 C.F.R. 50.72 is most reasonably interpreted as exempting from the ERDS program all nuclear reactors that have permanently ceased operations and defueled, i.e., that are permanently shut down; LBP-15-4, 81 NRC 156 (2015)

if 10 C.F.R. Part 50, Appendix E, § VI were a one-time requirement that applied only to units existing in 1991, that would mean it was not intended to apply prospectively to newly built reactors; LBP-15-4, 81 NRC 156 (2015)

if licensee of a permanently shutdown reactor is never required to activate the ERDS link, it must be concluded that such a licensee is exempt from the ERDS program; LBP-15-4, 81 NRC 156 (2015)

licensee must activate the ERDS as soon as possible but not later than 1 hour after declaring an Emergency Class of alert, site area emergency, or general emergency; LBP-15-4, 81 NRC 156 (2015)

licensee must comply with the requirements of 10 C.F.R. 50.54(q)(3) before it effects a change to its emergency plan to delete references to ERDS or its use during an emergency; LBP-15-4, 81 NRC 156 (2015)

licensees must activate the ERDS as soon as possible but not later than 1 hour after declaring an Emergency Class of alert, site area emergency, or general emergency; CLI-15-20, 82 NRC 211 (2015)

licensees whose emergency plan describes the ERDS or its use during an emergency would need to process a change to their emergency plans; CLI-15-20, 82 NRC 211 (2015)

parameters from which ERDS transmits data points for boiling water reactors are identified in 10 C.F.R. Part 50, App. E, § V1.2(a)(ii); LBP-15-4, 81 NRC 156 (2015)

participation in the ERDS is mandatory; CLI-15-20, 82 NRC 211 (2015)

909
regulatory history, like 10 C.F.R. Part 50, App. E, § VI itself, is focused entirely on implementation and maintenance of the ERDS operations with not one word about decommissioning the system; LBP-15-4, 81 NRC 156 (2015)

scope of the ERDS exception is informed by the regulatory history, which states that ERDS is to be used by licensees of operating reactors; LBP-15-4, 81 NRC 156 (2015)

section 50.72(a)(4) describes implementation, maintenance, and activation of the ERDS system in the event of an emergency; LBP-15-4, 81 NRC 156 (2015)

section 50.72(a)(4) directing licensees to activate ERDS during exigent circumstances applies only to operating nuclear power reactors; LBP-15-4, 81 NRC 156 (2015)

to the extent a contention would require licensee to maintain the ERDS link or to create another ERDS-like system after its reactor is permanently shut down and defueled, it is an impermissible collateral attack on a regulation; LBP-15-4, 81 NRC 156 (2015)

when selected plant data are not available on licensee’s onsite computer system, retrofitting of data points is not required; CLI-15-20, 82 NRC 211 (2015)

EMERGENCY RESPONSE PERSONNEL

request that NRC order licensees to determine and implement required staff to fill all necessary positions for responding to a multiunit event until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to modify the technical guidelines to include emergency operations procedures, severe accident mitigation guidelines, and extensive damage mitigation guidelines in an integrated manner, specify clear command and control strategies for their implementation, and stipulate appropriate qualification and training for those who make decisions during emergencies is being addressed through rulemaking; DD-14-2, 79 NRC 489 (2014)

EMERGENCY RESPONSE PLANS

arrangements for requesting and effectively using assistance resources should be identified and supported by appropriate letters of agreement; LBP-15-18, 81 NRC 793 (2015)

radiological emergency response plan was developed by the State and approved by the Federal Emergency Management Agency to ensure that the State is prepared to handle the offsite effects of a radiological emergency; LBP-15-4, 81 NRC 156 (2015)

EMERGENCY RESPONSE

adequate provisions must exist for prompt communications among principal response organizations to emergency personnel and to the public; LBP-15-4, 81 NRC 156 (2015)

during a nuclear emergency in the United States, the individual licensee and the appropriate state and local government officials have direct responsibilities for the coordinated response to the event; LBP-11-15, 73 NRC 629 (2011)

NRC, in its capacity as the federal agency charged with regulating the nuclear industry in a manner that protects public health and safety, monitors nuclear emergencies; LBP-11-15, 73 NRC 629 (2011)

request that licensees should be required to maintain Emergency Response Data System capability throughout an accident will be addressed by an advance notice of proposed rulemaking; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to complete the Emergency Response Data System modernization initiative by June 2012 to ensure multiunit site monitoring capability is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to have an installed, seismically qualified means to spray water into the spent fuel pools, including an easily accessible connection to supply the water (e.g., using a portable pump or pumper truck) at grade outside the building is addressed; DD-14-2, 79 NRC 489 (2014)

whether exercise frequency is adequate to maintain personnel knowledge and skill to implement emergency responsibilities for proposed uranium enrichment facility is discussed; LBP-11-11, 73 NRC 455 (2011)

EMPLOYEE PROTECTION

disclosure to intervenors of the names of power plant employees who provided NRC with information during the course of its investigation would be inappropriate, even with a protective order in place; CLI-13-5, 77 NRC 223 (2013)
licensee’s motion to quash a subpoena duces tecum because production of the requested file would compromise its employee concerns program by potentially subjecting information contained in the file to public disclosure as an official agency record under FOIA is denied; CLI-13-5, 77 NRC 223 (2013)

if an enforcement order blacklists a worker by name, under 10 C.F.R. 2.202(a)(3) he has the right to demand a hearing even though he may be motivated by purely economic concerns; LBP-14-4, 79 NRC 319 (2014)

EMPLOYMENT

if an enforcement order blacklists a worker by name, under 10 C.F.R. 2.202(a)(3) he has the right to demand a hearing even though he may be motivated by purely economic concerns; LBP-14-4, 79 NRC 319 (2014)

ENDANGERED SPECIES

acting agency shall request information from the U.S. Fish and Wildlife Service and the National Marine Fisheries Service on whether any species that is listed or proposed to be listed may be present in the area of the action; LBP-12-11, 75 NRC 731 (2012)

acting agency submits its completed biological assessment to the appropriate Service and awaits its determination of concurrence or nonconcurrence, which under the Services’ regulations is to be returned within 30 days; LBP-12-10, 75 NRC 633 (2012)

admissibility of contention that environmental assessment failed to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 401 (2015)

agencies are encouraged to incorporate consultation procedures on endangered/threatened species and essential fish habitat into their NEPA review; LBP-12-10, 75 NRC 633 (2012)

agencies are required to confer with the Fish and Wildlife Service on any action that is likely to jeopardize the continued existence of any proposed species or result in the destruction or adverse modification of proposed critical habitat; LBP-13-9, 78 NRC 37 (2013)

biological assessment of listed species shall be completed before any contract for construction is entered into and before construction is begun with respect to such action; LBP-12-12, 75 NRC 742 (2012)

board rules in favor of NRC Staff on contention challenging adequacy of assessment of impacts on the eastern fox snake contained within the final environmental impact statement; LBP-14-7, 79 NRC 451 (2014)

claim that the draft environmental impact statement does not adequately assess the impacts to threatened and endangered species is rejected; LBP-13-9, 78 NRC 37 (2013)

clarification is provided in 50 C.F.R. 402.12 on the requirements with respect to biological assessments; LBP-12-11, 75 NRC 731 (2012)

consultation with appropriate agencies is needed at the time of license renewal to determine whether threatened or endangered species are present and whether they would be adversely affected; LBP-12-10, 75 NRC 633 (2012)

consultation with U.S. Fish & Wildlife Service is legally mandated for any agency action that may affect listed species or critical habitat; LBP-15-11, 81 NRC 401 (2015)

content of the biological assessment is at the discretion of the federal agency; LBP-12-11, 75 NRC 731 (2012)

contention questioning whether the final supplemental environmental impact statement’s impact analyses relevant to greater sage grouse, whooping crane, and black-footed ferret are sufficient is admissible; LBP-14-5, 79 NRC 377 (2014)

contention that the final supplemental environmental impact statement violates the National Environmental Policy Act and implementing regulations by failing to conduct the required hard-look analysis of impacts of the proposed mine on species of birds and bats receiving special protection migrates as an admissible contention; LBP-14-5, 79 NRC 377 (2014)

determination of possible effects on an endangered species is ultimately the acting agency’s responsibility; LBP-12-10, 75 NRC 633 (2012)

federal agencies shall request information from the Secretary of the Interior whether any species listed or proposed to be listed may be present in the area of the proposed action; LBP-12-12, 75 NRC 742 (2012)

formal consultation includes preparation of a biological opinion by the Service, detailing the likely effects of the action on listed species or habitat as well as mitigation alternatives; LBP-12-10, 75 NRC 633 (2012)
SUBJECT INDEX

if an agency determines that a particular action will have no effect on an endangered or threatened species, the U.S. Fish & Wildlife Service consultation requirements are not triggered; LBP-15-11, 81 NRC 401 (2015)

if the acting agency concludes in the biological assessment that the action is not likely to affect listed habitats or species, and the Service concurs, the acting agency need not enter formal consultation; LBP-12-10, 75 NRC 633 (2012)

if the acting agency makes a “likely to affect” determination in the biological assessment, it is required to enter into formal consultation with the appropriate Service; LBP-12-10, 75 NRC 633 (2012)

if the Secretary of the Interior advises that listed species may be present, the agency shall conduct a biological assessment for the purpose of identifying any species that is likely to be affected by the action; LBP-12-12, 75 NRC 742 (2012)

if the Service does not concur with the agency’s “not likely to affect” determination, it may request that the acting agency enter into formal consultation; LBP-12-10, 75 NRC 633 (2012)

if the Services advise that listed species are present, the acting agency is to prepare a biological assessment to identify any species that is likely to be affected by such action; LBP-12-11, 75 NRC 731 (2012)

it is unlawful for any person to harvest, possess, or sell river herring in the Commonwealth of Massachusetts or in waters under its jurisdiction; LBP-12-16, 76 NRC 44 (2012)

“informal” consultation is an optional process that includes all discussions, correspondence, etc., between the U.S. Fish and Wildlife Service and the federal agency designed to assist the federal agency in determining whether formal consultation or a conference is required with the Service under section 402.13; LBP-15-11, 81 NRC 401 (2015)

preparation of the biological assessment may be consolidated with interagency cooperation procedures required by other statutes, such as NEPA; LBP-12-11, 75 NRC 731 (2012)

this is a Category 2 issue that requires site-specific analysis in the supplemental environmental impact statement; LBP-12-10, 75 NRC 633 (2012)

to prepare a biological assessment, the acting agency must first request from the Services a list of endangered or threatened species or habitat that may be present in the area of the action, or provide to the Services its own list for their review; LBP-12-10, 75 NRC 633 (2012)

untimely motion to reopen the proceeding and admit a new contention concerning licensee’s impacts on the roseate tern, a federally listed endangered species, is denied; LBP-12-11, 75 NRC 731 (2012)

when an agency’s conclusions are different from the Fish and Wildlife Service’s regarding endangered species, the agency must clearly articulate its reasons for disagreement; LBP-13-9, 78 NRC 37 (2013)

when engaging in informal consultation, an agency must provide its determination as to whether the proposed action will affect threatened and endangered species to U.S. Fish & Wildlife Service and request FWS concurrence; LBP-15-11, 81 NRC 401 (2015)

where an acting agency is engaged in major construction activities, the acting agency is to evaluate, through preparation of a biological assessment, whether the action is likely to adversely affect species or habitat; LBP-12-10, 75 NRC 633 (2012)

whether NRC Staff undertakes formal consultation with the Services in the event that they disagree with a finding by the NRC of “no effect” or “not likely adversely to affect” depends upon the NRC’s own regulations and its interpretation of its duty under the ESA to ensure that any action is not likely to jeopardize listed species or habitat; LBP-12-10, 75 NRC 633 (2012)

whooping crane and black-footed ferret are listed as threatened or endangered under the Endangered Species Act; LBP-15-11, 81 NRC 401 (2015)

ENDANGERED SPECIES ACT

agencies cannot unilaterally determine that an action will not jeopardize species listed under the act; LBP-12-10, 75 NRC 635 (2012)

agency must ensure that any action that it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in destruction or adverse modification of critical habitat of such species; CLI-15-13, 81 NRC 555 (2015)

Biological Opinion and its accompanying Incidental Take Statement issued by U.S. Fish and Wildlife Service were arbitrary and capricious because they were based in part on a conservation plan that was not enforceable under the Act; LBP-12-23, 76 NRC 445 (2012)
candidate species have no legal status and are accorded no protection under the act; LBP-12-10, 75 NRC 633 (2012)
contention asserting that the NRC’s environmental review of the license renewal application has not met the requirements of the act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633 (2012)
contention questioning whether an appropriate consultation was conducted pursuant to the Endangered Species Act and implementing regulations is admissible; LBP-14-5, 79 NRC 377 (2014)
contention that draft environmental impact statement fails to comply with NEPA with regard to impacts on wildlife, and fails to comply with the ESA and Migratory Bird Treaty Act is admissible in part; LBP-13-9, 78 NRC 37 (2013)
each agency proposing to take an action that might be covered by the act is to review its actions at the earliest possible time to determine whether any listed species or critical habitat may be affected; LBP-12-10, 75 NRC 633 (2012)
even if the National Marine Fisheries Service disagrees with NRC’s no-effect determination, it may only request that NRC enter formal consultation, but NRC is not required to consent to the request; LBP-12-10, 75 NRC 633 (2012)
federal agencies must consult with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service to ensure that any action authorized, funded, or carried out by such agencies is not likely to jeopardize the continued existence of any species that has been listed as threatened or endangered, or to destroy or adversely modify critical habitat; LBP-12-11, 75 NRC 731 (2012); LBP-12-12, 75 NRC 742 (2012)
federal agency is required to consult if an action may affect listed species or designated critical habitat, even if the effects are expected to be beneficial; LBP-15-11, 81 NRC 401 (2015)
federal agency need not initiate formal consultation if, as a result of the preparation of a biological assessment under section 402.12 or as a result of informal consultation with the Service under section 402.13, the federal agency determines, with the written concurrence of the U.S. Fish and Wildlife Service Director, that the proposed action is not likely to adversely affect any listed species or critical habitat; LBP-15-11, 81 NRC 401 (2015)
formal consultation follows only if a biological assessment shows that the action may affect listed species or critical habitat; LBP-12-10, 75 NRC 633 (2012)
formal consultation under the act includes preparation of a biological opinion by the Service, detailing the likely effects of the action on listed species or habitat as well as mitigation alternatives; LBP-12-10, 75 NRC 633 (2012)
if an agency determines that a particular action will have no effect on an endangered or threatened species, the consultation requirements are not triggered, and the finding of no effect obviates the need for formal consultation under the act; LBP-12-10, 75 NRC 633 (2012)
if NRC engages in an informal consultation with the Fish and Wildlife Service and it is determined that the project will not adversely affect listed species or critical habitat, it need not engage in formal consultation; LBP-13-9, 78 NRC 37 (2013)
in determining that a federal action is not likely to jeopardize species or modify habitat, the acting agency is to proceed in consultation with and with the assistance of the Secretary of Interior or Commerce; LBP-12-10, 75 NRC 633 (2012)
"informal consultation” is any communication between the acting agency and one of the Services designed to assist the acting agency in determining whether formal consultation is required; LBP-12-10, 75 NRC 633 (2012)
license renewal applicants must assess the impact of the proposed action on threatened or endangered species in accordance with the act as part of their environmental report; LBP-12-10, 75 NRC 633 (2012)
neither formal nor informal consultation is required by the act if an agency determines that its proposed activity will not affect any listed species or critical habitat; LBP-12-10, 75 NRC 633 (2012)
NRC does not have authority to rule on challenges to Fish and Wildlife’s compliance with the Endangered Species Act; CLI-12-21, 76 NRC 491 (2012)
NRC must ensure that any action that it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered species or threatened species or result in the destruction or adverse modification of critical habitat of such species; LBP-12-10, 75 NRC 633 (2012)
NRC Staff, not the applicant, has the legal duty to engage in consultation under the act; LBP-12-12, 75 NRC 742 (2012)
only mandatory trigger for initiating formal consultation is if the acting agency itself determines that its action may affect listed species or critical habitat; LBP-12-10, 75 NRC 633 (2012)
only species listed as threatened or endangered under the Act are covered by the Act’s formal consultation requirements; LBP-15-11, 81 NRC 401 (2015)
portions of a contention relevant to the completion of the Endangered Species Act § 7 consultation process and the adequacy of the NRC Staff’s impact analyses relevant to the three named species meet the admissibility standards; LBP-13-9, 78 NRC 37 (2013)
satisfying the requirements of other statutes does not in itself relieve a federal agency of its obligations to comply with the procedures set forth in the ESA; LBP-12-10, 75 NRC 633 (2012)
section 7 applies only where threatened and endangered species or critical habitats are present and impacts on a species are expected as a result of the proposed project; LBP-13-9, 78 NRC 37 (2013)
there is no requirement enumerating the required contents of a draft environmental impact statement; LBP-12-12, 75 NRC 742 (2012)
U.S. Fish & Wildlife Service and National Marine Fisheries Service perform strictly an advisory function and the federal agency makes the ultimate decision as to whether its proposed action will satisfy the ESA requirements; LBP-12-10, 75 NRC 633 (2012)
when it enacted the ESA, Congress delegated broad administrative and interpretive power to the Secretary of the Interior; LBP-12-10, 75 NRC 633 (2012)
ENERGY
See Department of Energy; Renewable Energy Sources; Wind Energy
ENERGY EFFICIENCY
analysis and response to state’s extensive comments to the draft supplemental environmental impact statement regarding state-specific energy conservation and efficiency as a replacement alternative fulfills NRC Staff’s obligation to take a hard look at alternatives; LBP-13-13, 78 NRC 246 (2013)
costs and benefits of the energy-efficient building code are essential to determine whether the adoption of an energy-efficient building code should be included as an alternative; LBP-11-21, 74 NRC 115 (2011)
ENERGY REORGANIZATION ACT
action of the Commission shall be determined by a majority vote of the members present; CLI-12-17, 76 NRC 207 (2012)
basis for NRC authority to regulate the use of special nuclear material in facilities like nuclear power reactors is established; CLI-15-4, 81 NRC 221 (2015)
if there were any doubt over the intent of Congress not to require a safety finding on spent fuel disposal, it was laid to rest by enactment of the ERA; CLI-15-4, 81 NRC 221 (2015)
ENFORCEMENT
administrative subpoena duces tecum is judicially enforceable where the inquiry is within the authority of the agency, the demand for production is neither too indefinite nor unreasonably broad nor burdensome, and the information sought is reasonably relevant to the authorized inquiry; CLI-13-5, 77 NRC 223 (2013)
Biological Opinion and its accompanying Incidental Take Statement issued by U.S. Fish and Wildlife Service were arbitrary and capricious because they were based in part on a conservation plan that was not enforceable under the Endangered Species Act; LBP-12-23, 76 NRC 445 (2012)
compliance with orders issued as part of NRC’s ongoing oversight program are enforcement issues that are not within the scope of a license renewal proceeding; LBP-15-5, 81 NRC 249 (2015)
for agency decisions such as a combined license that are based on an environmental impact statement, a monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation; LBP-12-23, 76 NRC 445 (2012)
monitoring and enforcement program must be adopted where applicable for any mitigation; LBP-15-16, 81 NRC 618 (2015)
NEPA does not impose a substantive obligation for a reviewing agency to require or enforce mitigation measures discussed in an environment assessment; LBP-14-6, 79 NRC 404 (2014)
not all license commitments must be converted into license conditions in order to be enforceable; LBP-14-3, 79 NRC 267 (2014)
petitioner’s demand for compliance with U.S. Army Corps of Engineers requirements is not within the scope of a combined license proceeding, because it is not the province of the NRC to enforce another agency’s regulations; LBP-11-6, 73 NRC 149 (2011)

See also Request for Action

ENFORCEMENT ACTIONS

applicants may prevail against NRC Staff if they prove that a particular contested assessment of a deficiency was inappropriate or unjustified; LBP-14-2, 79 NRC 131 (2014)

assertion that the section 2.206 process does not provide a viable forum for relief is rejected; CLI-15-14, 81 NRC 729 (2015)

board determined that confirmatory action letter was a de facto license amendment, which allows for public intervention; LBP-14-1, 79 NRC 39 (2014)

board refused to let a matter turn on attempts by NRC Staff and applicant to label a controversial matter in a way that would avoid adjudication; LBP-14-1, 79 NRC 39 (2014)

Commission denies portions of a hearing request but refers petitioner’s underlying concerns to the Executive Director for Operations for consideration as an enforcement action; CLI-15-14, 81 NRC 729 (2015)

concerns about how some aspect of a settlement agreement is being implemented or enforced can be brought to the attention of the Commission, which retains supervisory authority over the parties’ agreement; LBP-15-21, 82 NRC 1 (2015)

confirmatory action letter is an enforcement process that does not allow for public intervention; LBP-14-1, 79 NRC 39 (2014)

current licensing basis includes licensee’s commitments remaining in effect that were made in docketed licensing correspondence such as licensee responses to NRC bulletins, generic letters, and enforcement actions, as well as licensee commitments documented in NRC safety evaluations or licensee event reports; LBP-11-21, 74 NRC 115 (2011)

director of NRC office with responsibility for the subject matter shall either institute the requested proceeding or advise the person who made the request in writing that no proceeding will be instituted, in whole or in part, with respect to the request and the reason for the decision; DD-15-7, 82 NRC 257 (2015)

dissatisfaction with regulatory requirements of 10 C.F.R. 50.75 are outside an enforcement petition; DD-11-4, 73 NRC 713 (2011)

if NRC Staff makes a finding of no reasonable assurance, NRC reserves the right to take steps to ensure a licensee’s adequate accumulation of decommissioning funds; DD-11-4, 73 NRC 713 (2011)

if petitioner has a credible basis to question the adequacy of licensee’s compliance with 10 C.F.R. 50.54(q)(3), it may petition for enforcement action; LBP-15-4, 81 NRC 156 (2015)

in any enforcement action, especially one that has been settled to NRC’s satisfaction without creating a formal record, NRC’s choice of sanctions is quintessentially a matter of the Commission’s sound discretion; LBP-14-4, 79 NRC 319 (2014)

licensee is banned from engaging in NRC-licensed activities, including performing, supervising, or assisting in any industrial radiographic operations and must complete a formal radiation safety officer training course; LBP-15-21, 82 NRC 1 (2015)

meaning of “other person adversely affected by the order” in 10 C.F.R. 2.202(a)(3) is discussed; LBP-14-4, 79 NRC 319 (2014)

NRC can issue an order suspending an individual from working anywhere in the nuclear industry who fails to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

NRC can order an individual to pay civil penalties of up to $100,000 for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

NRC can take criminal enforcement action against an individual for failing to report any concerns arising from behavioral observation; LBP-14-4, 79 NRC 319 (2014)

oversight activities at times involve enforcement actions, including orders and civil penalties, to which a hearing right or opportunity attaches; CLI-15-5, 81 NRC 329 (2015)

pending tax litigation would not have a significant implication for public health and safety and, to the extent the claim is viable, it would be better handled through a petition for enforcement action; LBP-15-15, 81 NRC 598 (2015)
petitioners can raise compliance issues only under 10 C.F.R. 2.206, which would allow them to petition NRC to take an enforcement action; LBP-15-5, 81 NRC 249 (2015)

public interest does not require additional adjudication of an enforcement matter and, given that all matters required to be adjudicated as part of this proceeding have been resolved, the proceeding is dismissed; LBP-11-3, 73 NRC 81 (2011)

request for action against reactor facilities that have projected shortfalls in their decommissioning trust funds is denied in part and granted in part; DD-11-5, 74 NRC 787 (2011)

request for cold shutdown because of inoperability of main steam safety relief valves is denied but petitioner’s concern about the SRVs have been resolved; DD-11-6, 74 NRC 420 (2011)

request for enforcement action against U.S. Army for post-license-expiration possession and release into the environment of depleted uranium from spent spotting rounds is granted in part and denied in part; DD-11-5, 74 NRC 399 (2011)

request for enforcement action to modify operating licenses or require licensee to submit amendment requests to revise technical specifications for spent fuel pool instrumentation is denied; DD-11-3, 78 NRC 571 (2013)

request that NRC issue a demand for information from licensee relating to adequacy of financial assurances for decommissioning is denied; DD-11-4, 73 NRC 713 (2011)

section 2.206 provides a process for stakeholders to advance concerns and obtain full or partial relief, or written reasons why the requested relief is not warranted; CLI-15-20, 82 NRC 211 (2015); LBP-15-4, 81 NRC 156 (2015)

upon review of a settlement agreement, the board is satisfied that its terms reflect a fair and reasonable settlement in keeping with the objectives of the NRC’s enforcement policy, and satisfy the requirements of 10 C.F.R. 2.338(g) and (h); LBP-11-3, 73 NRC 81 (2011)

when the police power of the federal government is deployed to order a person to perform certain actions, under pain of losing his or her livelihood, liberty, and/or property, then that person has a right to challenge the order, and have a hearing to determine what the order means and whether it comports with the law; LBP-14-4, 79 NRC 319 (2014)

ENFORCEMENT ORDERS

allowing licensee to propose its own strategies for coming into compliance with an enforcement order rather than mandating a certain set of plant alterations does not change the fundamental character of the order and transform it into an approval; LBP-12-15, 76 NRC 14 (2012)

as de facto targets of an enforcement order, licensee employees have automatic standing if they are adversely affected by an enforcement order; LBP-14-4, 79 NRC 319 (2014)

Commission did not intend to relieve third-party individuals who are not the subject of an enforcement order, but who nonetheless seek a hearing on the order, from satisfying the requirements for a petition for intervention in section 2.309; LBP-14-4, 79 NRC 319 (2014)

contents of licensee’s behavioral observation program cannot substitute for the duty of NRC Staff to be reasonably clear as to what is required of workers who are trying to comply with their legal obligation to report on their co-workers; LBP-14-4, 79 NRC 319 (2014)

demand for a hearing by the subject of an enforcement order is automatic without regard to satisfying section 2.309; LBP-14-4, 79 NRC 319 (2014)

if an order blacklists a worker by name, under 10 C.F.R. 2.202(a)(3) he has the right to demand a hearing even though he may be motivated by purely economic concerns; LBP-14-4, 79 NRC 319 (2014)

immediately effective enforcement orders must be based on preliminary investigation or other emerging information that is reasonably reliable and indicates the need for immediate action; LBP-11-8, 73 NRC 349 (2011)

licensee and any other person adversely affected by an enforcement order have equal rights to a hearing; LBP-14-4, 79 NRC 319 (2014)

licensee is not required to list an enforcement order and its compliance with the order’s terms in the environmental report supporting its operating license renewal application; LBP-12-15, 76 NRC 14 (2012)

licensee or any other person adversely affected by the order must be informed of his or her right to demand a hearing; LBP-14-4, 79 NRC 319 (2014)
no one can challenge an enforcement order as long as the order, in any way, improves the safety situation over what it was in the absence of the order; LBP-14-4, 79 NRC 319 (2014)

NRC requires that workers report any observed “illegal, unusual, or aberrant” behavior by their co-workers, words not appearing in 10 C.F.R. 73.56(f); LBP-14-4, 79 NRC 319 (2014)

NRC’s enforcement order does not state that any reportable illegal, unusual, or aberrant behavior must have a nexus to public health and safety or the common defense and security in order to be reportable; LBP-14-4, 79 NRC 319 (2014)

one demanding a hearing on a challenge to an enforcement order need not comply with the requirements of 10 C.F.R. 2.309(f)(1); LBP-13-3, 77 NRC 82 (2013); LBP-14-4, 79 NRC 319 (2014)

period allotted for the filing of challenges to enforcement orders that impose some sanction is 20 days; LBP-13-3, 77 NRC 82 (2013)

person adversely affected by an enforcement order has a legal right to demand a hearing; LBP-14-4, 79 NRC 319 (2014)

petition challenging an immediately effective enforcement order asking that licensee to take certain physical security measures in addition to those already required by NRC regulations, to protect the spent fuel it planned to store at its power plant site was rejected; LBP-12-14, 76 NRC 1 (2012)

reactors subject to the section 2.202 confirmatory orders would not have to shut down if the orders were not sustained; CLI-13-2, 77 NRC 39 (2013)

Staff enforcement orders are essentially directives to licensee to achieve compliance with the order’s requirements by a certain date; LBP-12-15, 76 NRC 14 (2012)

standard that must be met before NRC Staff can issue an immediately effective enforcement order is one of adequate evidence, which is akin to the test for probable cause; LBP-11-8, 73 NRC 349 (2011)

target of an enforcement order has the right to demand and receive, not merely request, a hearing; LBP-14-11, 80 NRC 125 (2014)

third-party requests for a hearing on an enforcement order have been treated as a petition for intervention under the Commission’s generally applicable rules; LBP-14-4, 79 NRC 319 (2014)

to the extent petitioner seeks to have applicant implement safety measures in addition to those ordered, its recourse is to petition for rulemaking or to petition for license modification, suspension, or revocation; LBP-12-14, 76 NRC 1 (2012)

where a licensed and operating plant has been found unsafe, where the Commission has ordered some remedial amendment, and where licensee has accepted that amendment, there is no public interest in the proceeding; LBP-14-4, 79 NRC 319 (2014)

where an enforcement order imposes measures to enhance safety, a petitioner cannot obtain a hearing to litigate whether additional safety measures should be imposed; CLI-13-2, 77 NRC 39 (2013)

whether licensee or other person consents to an enforcement order, other persons adversely affected by an order issued under section 2.202 will be offered an opportunity for a hearing consistent with current practice and the authority of the Commission to define the scope of the proceeding on an enforcement order; LBP-14-4, 79 NRC 319 (2014)

within 30 days of the Commission’s decision upholding the board majority decision setting aside the NRC Staff’s immediately effective enforcement order, petitioner applied for an award of over $250,000 in attorneys’ fees; LBP-11-8, 73 NRC 349 (2011)

ENFORCEMENT POLICY

NRC’s policy of imposing graduated civil penalties takes into account the gravity of the violation as the primary consideration and the ability to pay as a secondary consideration; DD-15-3, 81 NRC 713 (2015)

ENFORCEMENT PROCEEDINGS

as soon as practicable after issuance of the initial scheduling order, parties shall meet to discuss the nature and basis of their claims and defenses and the possibilities for a prompt settlement or resolution of the proceeding or any portion thereof, to make or arrange for the disclosures required by section 2.704, and to develop a proposed discovery plan; LBP-14-11, 80 NRC 125 (2014)

before any hearing is granted on an order issued pursuant to 10 C.F.R. 2.202, a threshold question, intertwined with both standing and contention admissibility issues, is whether the hearing requests are within the scope of the proceeding; CLI-13-2, 77 NRC 39 (2013)
board conducted an initial scheduling conference to discuss development of an initial scheduling order that would help achieve just resolution of a dispute as efficiently and expeditiously as possible; LBP-14-11, 80 NRC 125 (2014)
both standing (redressability) and contention admissibility (scope) in the context of an NRC enforcement order are addressed; LBP-14-4, 79 NRC 319 (2014)
challenges to NRC enforcement orders are limited to whether the order should be sustained; LBP-14-4, 79 NRC 319 (2014)
concern that involves safety will not support standing in an enforcement proceeding if petitioner seeks merely a better settlement, i.e., one that promises greater improvements to safety than the settlement that was actually negotiated; LBP-14-4, 79 NRC 319 (2014)
discovery may not begin until 10 days after petitioner and the Director have held the mandatory consultation; LBP-14-11, 80 NRC 125 (2014)
enforcement proceedings are typically conducted pursuant to the procedures in Subpart G; LBP-13-3, 77 NRC 82 (2013)
for an enforcement order, the threshold question, related to both standing and admissibility of contentions, is whether the hearing request is within the scope of the proceeding as outlined in the order; LBP-14-4, 79 NRC 319 (2014)
hearing on a confirmatory order is limited solely to whether, on the basis of matters set forth in the order, the order should be sustained; LBP-14-4, 79 NRC 319 (2014)
if petitioner could avoid the Commission’s limitation on the scope of an enforcement order simply by characterizing its petition as opposing the order unless additional measures are granted, the Commission would never be able to limit its proceedings; LBP-12-14, 76 NRC 1 (2012)
in cases involving license suspension or revocation, where the Atomic Energy Commission’s staff is cast in an accusatory role, the precautions prescribed by the Administrative Procedure Act should be carefully observed; LBP-11-8, 73 NRC 349 (2011)
initial scheduling orders set forth issues or matters in controversy to be determined in the proceeding; LBP-14-11, 80 NRC 125 (2014)
issue to be determined at hearing is whether the order should be sustained or denied, not whether the order should be enhanced; CLI-13-2, 77 NRC 39 (2013)
labor disputes are not within the scope of enforcement proceedings; LBP-14-4, 79 NRC 319 (2014)
NRC has authority to define the scope of its proceedings, which, in enforcement proceedings, is to permit challenges solely on whether an order should be sustained; LBP-12-14, 76 NRC 1 (2012)
NRC has never adopted a “clear and convincing” standard as the evidentiary yardstick in its enforcement proceedings, nor is it required to do so under the Atomic Energy Act or the Administrative Procedure Act; LBP-14-2, 79 NRC 131 (2014)
NRC Staff counsel may file written interrogatories that the target of an enforcement order must answer; LBP-14-11, 80 NRC 125 (2014)
NRC Staff counsel may require the target of an enforcement order to provide the Director with a copy of any designated relevant document that is within his possession, custody, or control; LBP-14-11, 80 NRC 125 (2014)
NRC Staff counsel may take the deposition of the target of an enforcement order or any other person; LBP-14-11, 80 NRC 125 (2014)
NRC Staff’s position in an enforcement proceeding is not itself dispositive of whether an enforcement agreement should be approved, but regulatory instruction to accord that position due weight is dispositive proof of the importance of Staff’s views; LBP-15-21, 82 NRC 1 (2015)
parties who prevail against the government in certain types of agency proceedings are allowed to recover attorneys’ fees and other expenses incurred in connection with the proceeding unless the government’s position was substantially justified, or other special circumstances render an award unjust; LBP-11-8, 73 NRC 349 (2011)
petition seeking additional enforcement measures beyond those prescribed by the order was properly denied; LBP-12-14, 76 NRC 1 (2012)
petitioner argued against an enforcement order unless it were modified to clarify various points, including the costs of state and local law enforcement resources that would be needed to implement the order, but the board based its analysis on whether petitioner had shown that the requirements, as stated in the order, would make the facility less safe; CLI-13-2, 77 NRC 39 (2013)
petitioner cannot create a hearing opportunity merely by claiming that a facility is improperly operating outside its licensing basis, but such claims are appropriately raised in a petition to initiate an enforcement proceeding; LBP-15-27, 82 NRC 184 (2015)
petitioner does not meet the redressability requirement for standing, because vacating the confirmatory orders would not ameliorate the injury of which Pilgrim Watch complains; CLI-13-2, 77 NRC 39 (2013)
petitioner has standing when seeking to intervene to ensure that an enforcement order will be upheld; CLI-13-2, 77 NRC 39 (2013)
petitioners’ argument opposing an order that imposed additional security measures at a spent fuel storage facility, because it created a false sense of security was rejected because petitioners did not explain how they would be better off without the measures in the order; CLI-13-2, 77 NRC 39 (2013)
proceedings must be conducted under the procedures of Subpart G unless all parties agree otherwise; LBP-14-11, 80 NRC 125 (2014)
record before the board falls far short of rebutting the presumption that 10 C.F.R. 2.206 is a meaningful avenue for seeking administrative relief; CLI-12-20, 76 NRC 437 (2012)
relevant legal standards when evaluating a third-party petition for hearing on a confirmatory order is section 2.309(d) and (f); LBP-14-4, 79 NRC 319 (2014)
scope of a section 2.202 proceeding is limited to the narrow issues of whether the facts stated in the order are true and whether the remedy selected is supported by those facts; CLI-13-2, 77 NRC 39 (2013)
scope of discovery under Subpart G covers any matter that is relevant to the subject matter involved in the proceeding, whether it relates to the claim or defense of any other party; LBP-14-11, 80 NRC 125 (2014)
scope of mandatory disclosures that parties must make under Subpart G is defined by the disputed issues alleged with particularity in the pleadings; LBP-14-11, 80 NRC 125 (2014)
settlement is encouraged, but the fact that a possible settlement is being negotiated does not change any of the deadlines set forth in the initial scheduling order; LBP-14-11, 80 NRC 125 (2014)
settlements may become illusory if licensees consent to confirmatory orders and are nonetheless subjected to formal proceedings, possibly leading to different or more severe enforcement actions; LBP-14-4, 79 NRC 319 (2014)
standing to challenge a confirmatory order exists only when a petitioner credibly alleges that a settlement somehow actually reduces safety; LBP-14-4, 79 NRC 319 (2014)
target of an enforcement order may require NRC Staff to attend a prehearing meeting where he can require that Staff member to answer questions orally under oath; LBP-14-11, 80 NRC 134 (2014); LBP-14-11, 80 NRC 125 (2014)
target of an enforcement order may serve interrogatories on NRC Staff, must show that answers to the interrogatories are necessary to a proper decision in the proceeding, and may ask the board to direct NRC Staff to answer those interrogatories; LBP-14-11, 80 NRC 125 (2014)
target of an enforcement order must be provided a copy of all NRC Staff documents that are relevant to disputed issues alleged with particularity in the pleadings; LBP-14-11, 80 NRC 125 (2014)
that the corrective measures outlined in a confirmatory order do not improve petitioner’s personal situation does not provide grounds to rescind the confirmatory order; CLI-13-2, 77 NRC 39 (2013)
too freely allowing third parties to contest enforcement settlements at hearings would undercut the NRC’s policy favoring enforcement settlements; LBP-14-4, 79 NRC 319 (2014)
whether and to what extent measures a state sought were needed to make the facility safer was essentially irrelevant because those additional measures were outside the scope of the enforcement order; CLI-13-2, 77 NRC 39 (2013)
within 45 days of the initial scheduling order, target of the enforcement order must provide certain information and documents to the NRC enforcement director; LBP-14-11, 80 NRC 125 (2014)
within certain constraints, target of an enforcement order may pursue discovery against NRC Staff; LBP-14-11, 80 NRC 125 (2014)

ENGINEERED SAFETY FEATURES
high temperature in the engineered safety feature switchgear rooms is discussed; DD-14-5, 80 NRC 205 (2014)
structural limits on the block wall between the engineered safety feature switchgear rooms is discussed; DD-14-5, 80 NRC 205 (2014)

ENVIRONMENTAL ANALYSIS

agencies are required to use a systematic, interdisciplinary approach that will ensure the integrated use of the natural and social sciences and the environmental design arts in decisionmaking that may impact the environment; CLI-12-9, 75 NRC 421 (2012)

agency conducting a NEPA analysis must examine both the probability of a given harm occurring and the consequences of that harm if it does occur; CLI-15-6, 81 NRC 340 (2015)

although NEPA does not require an agency preparing an environmental impact statement to respond to EPA concerns, an agency’s failure even to address them in the EIS at the very least brings into question the sufficiency of the agency’s analysis; LBP-14-9, 80 NRC 15 (2014)

challenge to NRC Staff’s environmental analysis, which may come in the form of a categorical exclusion, may be filed as a timely motion to add a new contention once that analysis is complete; LBP-15-24, 82 NRC 68 (2015)

commencement of construction is prohibited prior to a NEPA determination; LBP-15-16, 81 NRC 618 (2015)

Commission declined to conduct a generic NEPA analysis on the effects of Fukushima-related events; CLI-12-7, 75 NRC 379 (2012)

compliance with the Clean Water Act does not negate the requirement for NRC to weigh all environmental effects of a proposed action; LBP-12-16, 76 NRC 44 (2012)

discussion of any environmental impact of spent fuel storage during the period following the term of the reactor operating license in any environmental impact statement, environmental assessment, environmental report, or other analysis prepared in connection with enumerated power reactor and dry cask licenses is excluded; CLI-14-8, 80 NRC 71 (2014)

discussion of steps that can be taken to mitigate adverse environmental consequences plays an important role in the environmental analysis under NEPA; LBP-12-18, 76 NRC 127 (2012)

environmental assessment cannot import previous environmental analyses without considering subsequent developments at the site and to hold otherwise would render meaningless NEPA’s requirement to supplement an environmental impact statement or environmental assessment; CLI-15-25, 82 NRC 389 (2015)

environmental impacts will be considered irrespective of whether a certification or license from the appropriate authority has been obtained; LBP-15-16, 81 NRC 618 (2015)

environmental reports need only discuss reasonably foreseeable environmental impacts of a proposed action; LBP-12-7, 75 NRC 503 (2012)

heated debate would not have occurred unless the label attached to the actions made a difference to the content, scope, and/or depth of environmental analysis; LBP-14-9, 80 NRC 15 (2014)

if the NRC Staff safety review reveals any new and significant information relating to the environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 404 (2014)

license transfer applications need not include an environmental analysis under NEPA; CLI-15-8, 81 NRC 500 (2015)

NEPA does not require NRC Staff to analyze every conceivable aspect of the proposed project; LBP-15-16, 81 NRC 618 (2015)

NEPA does not require NRC to use the absolutely best scientific methodology available; LBP-13-4, 77 NRC 107 (2013)

NEPA imposes procedural obligations on federal agencies proposing to take actions significantly affecting the quality of the human environment; LBP-11-39, 74 NRC 862 (2011)

non-NEPA document, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 401 (2015)

non-NRC permits are interdependent parts of applicant’s proposed action and thus are connected actions; LBP-15-16, 81 NRC 618 (2015)

NRC limits the scope of environmental analysis of preconstruction activities to activities falling within the scope of its regulatory authority; CLI-12-9, 75 NRC 421 (2012)
only if the harm in question is so remote and speculative as to reduce the effective probability of its occurrence to zero may the agency dispense with the consequences portion of its EA; LBP-13-13, 78 NRC 246 (2013)

only those NRC-regulated facilities located within the Ninth Circuit’s jurisdictional boundaries are required to conduct environmental analyses of possible terrorist acts; LBP-14-6, 79 NRC 404 (2014)

psychological fears or stigma effects are not cognizable NEPA claims; CLI-12-5, 75 NRC 301 (2012)

requests for a generic NEPA analysis were premature where the NRC evaluation of the Fukushima Dai-ichi events was still ongoing; LBP-15-24, 82 NRC 68 (2015)

restricted environmental analysis that fails to consider cumulative impacts would impermissibly subject the decisionmaking process contemplated by NEPA to the tyranny of small decisions; LBP-14-6, 79 NRC 404 (2014)

section 51.92(a)(2) does not apply to the question whether the environmental assessment adequately describes the current environment, but rather applies when considering whether to supplement an environmental analysis for the period between issuance of the final document and before the agency has taken the proposed action; CLI-15-25, 82 NRC 389 (2015)

shared transmission corridor is an offsite transmission line excluded from environmental impact analysis; LBP-15-5, 81 NRC 249 (2015)

to ensure that NEPA’s broad national commitment to protecting and promoting environmental quality is infused in the actions of the federal government, the Act establishes certain action-forcing procedures on each federal agency; LBP-13-4, 77 NRC 107 (2013)

whether the NEPA analysis is generic or site-by-site, it must be thorough and comprehensive; LBP-12-18, 76 NRC 127 (2012)

See also Cumulative Impacts Analysis

ENVIRONMENTAL ASSESSMENT

admissibility of contention that EA fails to adequately describe and analyze aquifer restoration goals in light of new standards for determining alternative control limits is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that EA fails to adequately describe and analyze impacts of maintaining post-operational wellfields as long-term hazardous waste facilities is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that EA fails to adequately describe and analyze proposed mitigation measures is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that EA fails to analyze impacts on the project from earthquakes, especially concerning secondary porosity and adequate confinement is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that EA fails to conduct the required hard look at impacts of the proposed mine and fails to consult with the U.S. Fish & Wildlife Service is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that EA fails to describe and analyze the environmental impacts of new porosity and permeability in the aquifer caused by mining activity is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that EA violates the National Environmental Policy Act in its failure to analyze groundwater quantity impacts of the project is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that environmental documents and associated monitoring values and restoration goals rely on baseline data calculations that are inadequate and unacceptable is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that environmental documents lack an adequate description of financial assurances for payment of the costs of restoration and long-term monitoring of up to 30 years is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that final EA fails to adequately analyze cumulative impacts is decided; LBP-15-11, 81 NRC 401 (2015)

admissibility of contention that final EA fails to adequately evaluate adverse impacts on public health and safety is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that final EA fails to conduct the required hard look at impacts of the proposed mine associated with restoration standards and difficulty and cost in achieving them and the
use of the alternative standards permitted under the proposed rules is decided; LBP-15-15, 81 NRC 598 (2015)

admissibility of contention that final EA fails to satisfy NRC’s requirement for an environmental impact statement when there are unresolved conflicts concerning reasonable alternatives is decided; LBP-15-15, 81 NRC 598 (2015)

agencies can, consistent with NEPA regulations, incorporate by reference analyses and information from existing documents into an EA or environmental impact statement, provided the material has been appropriately cited and described; LBP-15-11, 81 NRC 401 (2015)

agency did not need to assess site-specific impacts of continuing to store the spent fuel in either an onsite or offsite storage facility in new reactor licensing environmental impact statements or environmental assessments beyond the expiration dates of reactor licenses; LBP-14-16, 80 NRC 183 (2014)

agency’s decision to issue a finding of no significant impact rather than prepare an environmental impact statement was arbitrary because the agency had obligated itself contractually to issue a FONSI before it conducted an environmental assessment; LBP-14-6, 79 NRC 404 (2014)

allegations of inadequacies and omissions in NRC Staff’s EA satisfy the requirement to provide a specific statement of the issue of law or fact to be raised; LBP-15-13, 81 NRC 456 (2015)

alternatively to preparing an environmental impact statement, NRC can conduct an environmental assessment and make a finding of no significant impact; LBP-13-13, 78 NRC 246 (2013)

categorical exclusion from the NEPA requirement to prepare an EA or environmental impact statement for the issuance of import licenses involving low-level radioactive waste is provided; CLI-11-3, 73 NRC 613 (2011)

considering the reasonable alternatives analysis, it is only in the depth of the consideration and in the level of detail provided in the corresponding environmental documents that an EA and an environmental impact statement will differ; LBP-15-11, 81 NRC 401 (2015)

contention alleging that environmental assessment has not adequately addressed environmental impacts associated with saltwater intrusion arising from saline water migration from the plant into surrounding waters, and applicant’s use of aquifer withdrawals to lower salinity and temperature is admissible; LBP-15-13, 81 NRC 456 (2015)

contention challenging the adequacy/propriety of a Staff determination to prepare an EA in lieu of a supplemental EIS would need to await the issuance of the draft EA; LBP-13-6, 77 NRC 253 (2013)

contention quotes text from a notice of proposed rulemaking, but it never ties the statements from the NOPR to any specific section of the EA, and thus fails to raise a genuine dispute with the EA; LBP-15-15, 81 NRC 598 (2015)

contention that draft environmental assessment fails to adequately address potential impacts of the reasonably foreseeable expansion of an independent spent fuel storage installation on cultural and historic resources is admissible; LBP-14-6, 79 NRC 404 (2014)

contention that EA fails to adequately describe air quality impacts is inadmissible as untimely; LBP-15-11, 81 NRC 401 (2015)

contention that final EA fails to adequately analyze all reasonable alternatives is inadmissible; LBP-15-11, 81 NRC 401 (2015)

contention that final EA fails to conduct the required hard look at impacts of the proposed mine associated with air emissions and liquid waste disposal is admissible in part; LBP-15-11, 81 NRC 401 (2015)

contention that final EA fails to present relevant information in a clear and concise manner that is readily accessible to the public and other reviewers is inadmissible; LBP-15-11, 81 NRC 401 (2015)

Corps of Engineers improperly constrained NEPA analysis; LBP-14-6, 79 NRC 404 (2014)

decision can be given to a state permit’s findings as to the acceptability of environmental impacts; LBP-15-11, 81 NRC 401 (2015)

EA and associated finding of no significant impact must contain sufficient discussion of environmental impacts and the reasons why the proposed action will not have a significant effect on the quality of the human environment; LBP-15-13, 81 NRC 456 (2015)

environmental assessment can be the basis of a finding under section 51.32 that the proposed agency action will not have a significant effect upon the environment such that a full-blown EIS (or supplemental EIS) is not required; LBP-13-6, 77 NRC 253 (2013)
failure of decision underlying the Clean Water Act § 404 permit to analyze the cumulative impacts reasonably foreseeable from the expected addition of a second generation unit at the plant is one of the most egregious shortfalls of the environmental assessment; LBP-14-6, 79 NRC 404 (2014)

for operating license renewal, if NRC Staff has not previously considered severe accident mitigation alternatives for applicant’s plant in an environmental impact statement or related supplement or in an EA, applicant’s environmental report must contain a consideration of alternatives to mitigate severe accidents; LBP-11-18, 74 NRC 29 (2011); LBP-11-21, 74 NRC 115 (2011)
given that so many more environmental assessments are prepared than environmental impact statements, adequate consideration of cumulative effects requires that EAs address them fully; LBP-14-6, 79 NRC 404 (2014)

if NRC determines that changes to its current environmental assessment rules are warranted, it can revisit whether an individual licensing review or adjudication should be held in abeyance pending the outcome of a relevant rulemaking; CLI-14-7, 80 NRC 1 (2014)

if the board’s findings after the evidentiary hearing affect NRC Staff’s conclusions in the EA, then those conclusions would have to be revisited; CLI-15-17, 82 NRC 33 (2015)

importing analysis from a previously completed EA while disregarding intervening events would render meaningless NEPA’s requirement to supplement an environmental impact statement or EA; LBP-15-13, 81 NRC 456 (2015)

in consultation with identified parties, agency must develop alternatives and proposed measures that might avoid, minimize, or mitigate any adverse effects of the undertaking on historic properties and describe them in the EA or draft environmental impact statement; LBP-15-16, 81 NRC 618 (2015)

increase in noise levels is a significant impact because the agency’s environmental assessment made no firm commitment to any noise mitigation measures; LBP-12-23, 76 NRC 445 (2012)

issuance of an EA is appropriate where NRC Staff determines that the proposed project will result in no significant impacts; LBP-15-11, 81 NRC 401 (2015)

it is appropriate for NRC Staff to give substantial weight to state agency’s decision that issuing the NPDES permit would be environmentally acceptable; LBP-15-11, 81 NRC 401 (2015)

it would be incongruous with NEPA’s approach to environmental protection, and with NEPA’s manifest concern with preventing uninformed action, for the blindness to adverse environmental effects, once unequivocally removed, to be restored prior to the completion of agency action simply because the relevant proposal has received initial approval; LBP-15-13, 81 NRC 456 (2015)

level of analysis required by NEPA in an environmental impact statement is more rigorous than is required when the agency has determined on the basis of its environmental assessment that the project as proposed will not result in significant environmental impact; LBP-14-7, 79 NRC 451 (2014)

NEPA does not impose a substantive obligation for a reviewing agency to require or enforce mitigation measures discussed in an EA; LBP-14-6, 79 NRC 404 (2014)

NEPA does not require circulation of a draft EA in all cases; CLI-15-17, 82 NRC 33 (2015)

NEPA requires a hard look at the environmental effects of the planned action, not a circular restatement of NRC Staff’s own conclusions; LBP-15-11, 81 NRC 401 (2015)

NRC Staff cannot import previous environmental analyses without considering subsequent developments at the site and to hold otherwise would render meaningless NEPA’s requirement to supplement an environmental impact statement or environmental assessment; CLI-15-25, 82 NRC 389 (2015)

NRC Staff must describe the potential environmental impact of a proposed action and discuss any reasonable alternatives; LBP-15-11, 81 NRC 401 (2015)

NRC Staff’s issuance of an environmental assessment under NEPA does not necessarily moot contentions challenging an applicant’s environmental report; LBP-14-6, 79 NRC 404 (2014)

petitioner may amend NEPA contentions or file new NEPA contentions if there are data or conclusions in the NRC draft or final environmental impact statement, EA, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant’s documents; LBP-12-12, 75 NRC 742 (2012)

petitioner must provide sufficient information to show that a genuine dispute exists with the environmental assessment on a material issue of law or fact; CLI-15-25, 82 NRC 389 (2015)
petitioner’s issue of NRC Staff’s compliance with its NEPA obligation to undertake a full evaluation of the environmental impacts associated with a proposed federal action is within the scope of an operating license amendment proceeding and material to the findings NRC must make; LBP-15-13, 81 NRC 456 (2015)
prior environmental analyses need not be revisited in the environmental assessment; CLI-15-25, 82 NRC 389 (2015)
public comment will be afforded in advance on any generic waste confidence document that NRC issues on remand, be it a fresh rule, a policy statement, an environmental assessment, or an environmental impact statement; CLI-12-16, 76 NRC 63 (2012)
question whether the environmental assessment is sufficient to satisfy NRC Staff’s NEPA requirements must await consideration at a full evidentiary hearing; LBP-15-13, 81 NRC 456 (2015)
reasonably foreseeable actions must be the subject of a cumulative impacts analysis; LBP-14-6, 79 NRC 404 (2014)
reliance on a state permit, let alone one prepared and adopted by a state government, cannot satisfy a federal agency’s obligations under NEPA; LBP-15-11, 81 NRC 401 (2015)
section 51.92(a)(2) does not apply to the question whether the environmental assessment adequately describes the current environment, but rather applies when considering whether to supplement an environmental analysis for the period between issuance of the final document and before the agency has taken the proposed action; CLI-15-25, 82 NRC 389 (2015)
standard for preparing a supplemental EA is the same as for preparing a supplemental environmental impact statement; LBP-15-13, 81 NRC 456 (2015)
when an environmental assessment is appropriate, it need only include a brief discussion of environmental impacts of the proposed action; LBP-14-6, 79 NRC 404 (2014)
where an EA resulted in a finding of no significant impact, a full environmental impact statement is unnecessary; CLI-15-17, 82 NRC 33 (2015)

ENVIRONMENTAL EFFECTS

actions that the Commission, by rule or regulation, has declared to be a categorical exclusion do not individually or cumulatively have a significant effect on the human environment; LBP-14-6, 79 NRC 404 (2014)
adverse environmental effects that must be assessed under NEPA include aesthetic, historic, cultural, economic, social, or health effects; LBP-15-16, 81 NRC 618 (2015)
any action concerning applicant’s proposal that would have an adverse environmental impact or limit the choice of reasonable alternatives may be grounds for denial of a license; LBP-14-9, 80 NRC 15 (2014)
approval of permits to a nuclear power plant was conditioned on the rerouting of two offsite transmission lines to avoid environmental impacts on marshlands, tree species, and migratory waterfowl; LBP-14-9, 80 NRC 15 (2014)
as an alternative ground for excluding a NEPA terrorism contention, NRC Staff’s determination in the generic environmental impact statement that the environmental impacts of a terrorist attack were bounded by those resulting from internally initiated events is sufficient to address the environmental impacts of terrorism; CLI-11-11, 74 NRC 427 (2011)
assertion that final environmental impact statement inadequately addresses, and inappropriately characterizes as small, the plant’s dewatering-associated impacts to wetlands, floodplains, special aquatic sites, and other waters is litigated; LBP-13-4, 77 NRC 107 (2013)
because petitions to suspend licensing decisions and proposed contentions are inextricably linked, and as a matter of sound case management, the Commission exercises its inherent supervisory authority over agency adjudications to review the petition and motions itself; CLI-14-9, 80 NRC 147 (2014)
by 1974, NRC had adopted an aggressive approach to its environmental responsibilities in the context of transmission line siting; LBP-14-9, 80 NRC 15 (2014)
Category 2 issues focus on severe accident mitigation, to further reduce severe accident risk (probability or consequences); CLI-12-19, 76 NRC 377 (2012)
confinement of aquifers is material to the environmental impacts of the licensing action; CLI-14-2, 79 NRC 11 (2014)
contention alleging a material deficiency must link the claimed deficiency to a public health and safety or an environmental impact; LBP-15-1, 81 NRC 15 (2015)
cumulative impact is the impact on the environment that results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (federal or nonfederal) or person undertakes such other actions; LBP-13-4, 77 NRC 107 (2013); LBP-15-16, 81 NRC 618 (2015)
cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time; LBP-11-7, 73 NRC 254 (2011); LBP-11-26, 74 NRC 499 (2011); LBP-13-4, 77 NRC 107 (2013)
DEIS, like the environmental report, must cover all significant environmental impacts associated with the combined license, including offsite environmental impacts; LBP-11-1, 73 NRC 19 (2011)
direct effects are caused by the action and occur at the same time and place; LBP-13-4, 77 NRC 107 (2013)
direct impacts are those caused by the action that is the subject of the environmental impact statement, and occurring at the same time and place as that action, while indirect impacts are caused by the action at a later time or more distant place, yet are still reasonably foreseeable; LBP-11-7, 73 NRC 254 (2011); LBP-11-26, 74 NRC 499 (2011)
draft environmental impact statement indicates what other interests and considerations of federal policy, including factors not related to environmental quality, if applicable, are relevant to the consideration of environmental effects of the proposed action; LBP-14-6, 79 NRC 404 (2014)
effects and impacts as used in 10 C.F.R. 51.14(b) are synonymous with terms in 40 C.F.R. 1508.8; LBP-13-4, 77 NRC 107 (2013)
"effects” include both direct effects, which are caused by the action and occur at the same time and place, and indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-14-9, 80 NRC 15 (2014)
"effects” include ecological, aesthetic, historic, cultural, economic, social, or health, whether direct, indirect, or cumulative; LBP-14-9, 80 NRC 15 (2014)
Fukushima accident does not provide a seriously different picture of the environmental impact of a proposed uranium enrichment facility from what was previously envisioned; LBP-11-26, 74 NRC 499 (2011)
if NRC Staff review reveals any new and significant information relating to environmental impacts of storage of high-burnup fuel, Staff will supplement its environmental analysis as required by the National Environmental Policy Act; LBP-14-6, 79 NRC 404 (2014)
if the adverse environmental effects of a proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-11-7, 73 NRC 254 (2011); LBP-13-4, 77 NRC 107 (2013)
if the cost of obtaining information is exorbitant, NRC must still include in the environmental impact statement a statement that the information is unavailable, the relevance of the unavailable information, a summary of existing credible scientific evidence, and the agency’s evaluation of the impacts that might be caused; LBP-14-9, 80 NRC 15 (2014)
immediate, irreparable harm is not presumed by a NEPA violation, even assuming such a violation has occurred; CLI-15-17, 82 NRC 33 (2015)
in areas with a designated use as aquatic habitat, cooling water intake structures hinder the attainment of water quality standards; LBP-12-16, 76 NRC 44 (2012)
in enacting NEPA, Congress’s twin aims were to require an agency to consider every significant aspect of the environmental impact of a proposed action and ensure that the agency will inform the public that it has considered environmental concerns in its decisionmaking process; LBP-11-6, 73 NRC 149 (2011)
in its Waste Confidence Decision, NRC failed to consider environmental impacts of a repository never becoming available, its analysis of spent fuel pool leaks was not forward-looking, and it had not sufficiently considered the consequences of spent fuel pool fires; CLI-15-4, 81 NRC 221 (2015)
in light of the dim prospects for moving forward with a geologic repository in the contemporary political environment, NRC must consider the environmental effects of storing waste in spent fuel pools or casks for extended periods; LBP-12-24, 76 NRC 503 (2012)
indirect effects are caused by the action and are later in time or farther removed in distance, but are still reasonably foreseeable; LBP-13-4, 77 NRC 107 (2013)
irrespective of the cause of the impact or the appropriate level of administrative scrutiny, for the purpose of NEPA evaluation, NRC regulations categorize impacts into direct, indirect, and cumulative; LBP-11-26, 74 NRC 499 (2011)

it is the continuing policy of the federal government to use all practicable means and measures to create and maintain conditions under which man and nature can exist in productive harmony; LBP-13-4, 77 NRC 107 (2013)

large effects are clearly noticeable and are sufficient to destabilize important attributes of the resource; LBP-11-26, 74 NRC 499 (2011); LBP-13-4, 77 NRC 107 (2013)

license applicants were permitted to omit any discussion of any environmental impact of spent fuel storage in independent spent fuel storage installations for the period following the term of the initial ISFSI license in any environmental report, environmental impact statement, environmental assessment, or other analysis; LBP-12-24, 76 NRC 503 (2012)

NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-13-13, 78 NRC 246 (2013)

NEPA does not require agencies to elevate environmental concerns over other appropriate considerations; LBP-14-9, 80 NRC 15 (2014)

NEPA does not require NRC to consider the environmental consequences of hypothetical terrorist attacks on NRC-licensed facilities; CLI-11-11, 74 NRC 427 (2011)

NEPA regulations do not apply to any environmental effects that NRC’s domestic licensing and related regulatory functions may have upon the environment of foreign nations; LBP-12-12, 75 NRC 742 (2012)

NEPA requires a reasonably close causal relationship between the environmental effect and the alleged cause; LBP-12-21, 76 NRC 218 (2012)

nothing in 10 C.F.R. Part 40, Appendix A, Criterion 5B precludes an inquiry, based on a well-pleaded contention, into whether the particular measures used in applicant’s prelicensing program were adequate to provide the necessary information to characterize properly the environmental impacts of employing an ISR mining process in the aquifers below a proposed site; LBP-15-3, 81 NRC 65 (2015)

NRC adopted the Council on Environmental Quality’s definition of “effects” in 40 C.F.R. 1508.8; LBP-14-9, 80 NRC 15 (2014)

NRC authority to review offsite impacts of transmission lines goes beyond merely factoring them into a final cost-benefit balance and includes as well the authority where necessary to impose license conditions to minimize those impacts; LBP-11-6, 73 NRC 149 (2011)

NRC can, as a condition of licensure, insist that offsite transmission lines built solely to serve a nuclear facility be designed to minimize environmental disturbance; LBP-14-9, 80 NRC 15 (2014)

NRC is authorized to impose environmental conditions on a license to prevent or mitigate adverse environmental impacts that might otherwise be caused by the construction or operation of a nuclear power plant; LBP-14-9, 80 NRC 15 (2014)

NRC is clearly authorized to require licensees to protect the environment and to prevent them from causing adverse environmental impacts; LBP-13-4, 77 NRC 107 (2013)

nuclear power reactors must have emergency plans in place to respond to accidents despite the fact that Table B-1 within 10 C.F.R. Part 51 concludes that the environmental impacts of both design basis and severe accidents at a nuclear reactor are small for all plants; LBP-13-13, 78 NRC 246 (2013)

offsite land use is a Category 2 impact because land use changes may be perceived by some community members as adverse and by others as beneficial, and so, NRC Staff is unable to assess generically the potential significance of site-specific offsite land use impacts; LBP-13-13, 78 NRC 246 (2013)

programmatic agreement may be used to implement the NHPA § 106 process in situations where the effects to historic properties cannot be fully determined prior to the approval of an undertaking, such as where an applicant proposes a phased approach to developing its project; LBP-15-16, 81 NRC 618 (2015)

proposed mitigation measures are sufficient if they are supported by sufficient evidence, such as studies conducted by the agency, or are adequately policed; LBP-14-7, 79 NRC 451 (2014)
proposed plant will impact at least 668 acres of wetlands and therefore its construction and operation will require a permit from U.S. Army Corps of Engineers; LBP-13-4, 77 NRC 107 (2013)
small effects are not detectable or are so minor that they would neither destabilize nor noticeably alter any important attribute of the resource; LBP-11-26, 74 NRC 499 (2011); LBP-13-4, 77 NRC 107 (2013); LBP-13-13, 78 NRC 246 (2013)
“small,” “moderate,” and “large” environmental impacts are defined; LBP-13-8, 78 NRC 1 (2013)
to reopen a record, petitioners must reveal a seriously different picture of the environmental impact of a proposed project; LBP-12-16, 76 NRC 44 (2012)
to waive the generic assessment in NRC regulations to permit adjudication of issues involving the environmental impact of spent fuel pool accidents in this license renewal proceeding, the Commission must conclude that the rule’s strict application would not serve the purpose for which it was adopted; CLI-11-11, 74 NRC 427 (2011)
under NEPA, defining the scope of effects of a project requires engagement with governments of affected tribes through an early and open process aimed at identifying concerns, potential impacts, relevant effects of past actions, and possible alternative actions; LBP-15-16, 81 NRC 618 (2015)
under NEPA, federal agencies must use all practicable means to avoid environmental degradation to the extent consistent with other essential considerations of national policy; LBP-14-9, 80 NRC 15 (2014)
under the Atomic Energy Act, NRC can issue conditional licenses for regulatory purposes, and thus there can be no objection to its use of the same means to achieve environmental ends as well; LBP-14-9, 80 NRC 15 (2014)
when an action is divided into component parts, each involving action with less significant environmental effects, segmentation or piecemealing occurs; LBP-14-9, 80 NRC 15 (2014)
when an environmental assessment is appropriate, it need only include a brief discussion of environmental impacts of the proposed action; LBP-14-6, 79 NRC 404 (2014)
when information relevant to a reasonably foreseeable environmental effect is incomplete or unavailable, an agency is required to obtain the unavailable information and include it in the environmental impact statement as long as the costs are not exorbitant; LBP-14-9, 80 NRC 15 (2014)
within the geographic boundary of the Ninth Circuit, NRC may not exclude NEPA terrorism contentions categorically; CLI-11-11, 74 NRC 427 (2011)
ENVIRONMENTAL FUNCTIONS
if impacts are unavoidable, applicant shall provide mitigation measures that must be, to the extent practicable, sufficient to replace lost aquatic resource functions; LBP-15-23, 82 NRC 55 (2015)
ENVIRONMENTAL IMPACT STATEMENT
action with potential impacts subsequent to the initial federal action may not constitute a proposed action if it is insufficiently certain; LBP-14-9, 80 NRC 15 (2014)
actions requiring an EIS or a supplement to an EIS are a limited work authorization, construction permit for a nuclear power reactor, testing facility, or fuel reprocessing plant, or an early site permit; LBP-11-10, 73 NRC 424 (2011)
adjudicatory hearings are not EIS editing sessions; CLI-12-1, 75 NRC 39 (2012); CLI-12-6, 75 NRC 352 (2012)
adjudicatory records, board decisions, and any Commission decisions become effectively part of the environmental review document; CLI-12-1, 75 NRC 39 (2012)
admissibility of contention that final environmental assessment fails to satisfy NRC’s requirement for an EIS when there are unresolved conflicts concerning reasonable alternatives is decided; LBP-15-15, 81 NRC 598 (2015)
admitted contentions challenging applicant’s environmental report may, in appropriate circumstances, function as challenges to similar portions of NRC Staff’s EIS; LBP-14-5, 79 NRC 377 (2014)
agencies are given broad discretion to keep their NEPA inquiries within appropriate and manageable boundaries; LBP-15-3, 81 NRC 65 (2015)
agencies are required to create an EIS, and the moment at which an agency must have a final statement ready is the time at which it makes a recommendation or report on a proposal for federal action; LBP-13-10, 78 NRC 117 (2013)
agencies are to use the parameters laid out in 40 C.F.R. 1508.25 when defining the scope of the EIS; LBP-13-10, 78 NRC 117 (2013)
SUBJECT INDEX

agencies can, consistent with NEPA regulations, incorporate by reference analyses and information from existing documents into an environmental assessment or environmental impact statement provided the material has been appropriately cited and described; LBP-15-11, 81 NRC 401 (2015)

agencies may not undertake a piecemeal review of environmental impacts; LBP-13-9, 78 NRC 37 (2013)

agencies must consider the impact of other proposed projects only if the projects are so interdependent that it would be unwise or irrational to complete one without the other; LBP-13-10, 78 NRC 117 (2013)

agencies must devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits; LBP-12-17, 76 NRC 71 (2012)

agencies must make sure that the proposal that is the subject of an EIS is properly defined; LBP-13-10, 78 NRC 117 (2013)

agencies must prepare an EIS before approving any major federal action that will significantly affect the quality of the human environment; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-12-8, 75 NRC 539 (2012); LBP-12-17, 76 NRC 71 (2012); LBP-12-23, 76 NRC 445 (2012)

agencies must rigorously explore and objectively evaluate all reasonable alternatives and briefly discuss reasons for eliminating alternatives; LBP-12-17, 76 NRC 71 (2012)

agencies need only address reasonably foreseeable impacts, not those that are remote and speculative or inconsequentially small; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)

agencies shall use the criteria for scope in 40 C.F.R. 1508.25 to determine which proposal shall be the subject of a particular statement; LBP-11-10, 73 NRC 424 (2011); LBP-14-6, 79 NRC 404 (2014)

agencies should consider both the context and intensity of environmental impacts; LBP-11-26, 74 NRC 499 (2011)

agencies violate NEPA when their EIS fails to adequately respond to the critical opinions of their own experts; LBP-12-18, 76 NRC 127 (2012)

agencies did not need to assess site-specific impacts of continuing to store spent fuel in either an onsite or offsite storage facility in new reactor licensing environmental impact statements or environmental assessments beyond the expiration dates of reactor licenses; LBP-14-16, 80 NRC 183 (2014)

agency does not have to follow the Environmental Protection Agency’s comments, just take them seriously; LBP-14-9, 80 NRC 15 (2014)

agency preparing the NEPA document must explain the statutory or regulatory requirements it is relying on and its reasons for concluding that the application of those requirements will actually result in the mitigation and monitoring it assumes will occur; LBP-15-11, 81 NRC 401 (2015)

agency responsible for preparing the EIS must define the scope of the issues it will address; LBP-11-10, 73 NRC 424 (2011)

agency that has prepared an EIS cannot simply rest on the original document but must be alert to new information that may alter the results of its original environmental analysis, and continue to take a hard look at the environmental effects of its planned action, even after a proposal has received initial approval; LBP-12-18, 76 NRC 127 (2012)

all adverse effects to any NRHP-eligible historic or cultural resource must be considered during any federal undertaking; LBP-11-26, 74 NRC 499 (2011)

all connected actions must be included; LBP-14-6, 79 NRC 404 (2014)

all cumulative environmental impacts even if they occur offsite (e.g., beyond the licensee’s property line) must be addressed; LBP-13-4, 77 NRC 107 (2013)

all cumulative environmental impacts even if they occur offsite (e.g., beyond the licensee’s property line) must be addressed; LBP-13-4, 77 NRC 107 (2013)

allowing an environmental challenge to continue after the EIS has issued does not constitute a merits ruling that the Staff’s review document is inadequate; CLJ-11-6, 74 NRC 203 (2011)

almost every EIS contains some original research, and almost every time an EIS is ruled inadequate by a court, it is because more data or research is needed; LBP-14-9, 80 NRC 15 (2014)

alternative energy sources that will be dependent on future environmental safeguards and technological developments may be excluded from the NEPA alternatives discussion; LBP-15-3, 81 NRC 65 (2015)

alternatively to preparing an environmental impact statement, NRC can conduct an environmental assessment and make a finding of no significant impact; LBP-13-13, 78 NRC 246 (2013)

alternatives analysis is the heart of the environmental impact statement; CLJ-12-9, 75 NRC 421 (2012)

LBP-11-16, 73 NRC 645 (2011); LBP-12-17, 76 NRC 71 (2012); LBP-14-9, 80 NRC 15 (2014)
alternatives discussion need not include every possible alternative, but rather every reasonable alternative; LBP-15-3, 81 NRC 65 (2015)
although contention contesting applicant’s environmental report generally may be viewed as a challenge to NRC Staff’s subsequent draft environmental impact statement, new claims must be raised in a new or amended contention; LBP-13-10, 78 NRC 117 (2013)
although environmental contentions ultimately challenge NRC’s compliance with the National Environmental Policy Act, applicant may advocate for a particular challenged position set forth in the environmental impact statement; LBP-12-5, 75 NRC 227 (2012)
although environmental contentions ultimately challenge the NRC’s compliance with NEPA, applicant is free to support positions set forth in the EIS that are under challenge; LBP-14-7, 79 NRC 451 (2014)
although license requirements and other environmental quality standards are to be considered in assessing environmental impacts, they do not negate NRC Staff’s responsibility to consider all environmental effects; LBP-15-3, 81 NRC 65 (2015)
although NEPA does not explicitly mention cost-benefit balancing, courts have interpreted the statute as requiring federal agencies to balance the environmental costs against the anticipated benefits of a proposed action; LBP-11-7, 73 NRC 254 (2011)
although NEPA does not mention mitigation, by administrative practice and regulation, mitigation plays an important role in the discharge by federal agencies of their procedural duty under NEPA to prepare an EIS; LBP-12-18, 76 NRC 127 (2012)
although NEPA does not require an agency preparing an EIS to respond to Environmental Protection Agency concerns, an agency’s failure even to address them in the EIS at the very least brings into question the sufficiency of the agency’s analysis; LBP-14-9, 80 NRC 15 (2014)
although NEPA establishes a national policy in favor of protecting the human environment, NEPA does not require the agency to select the most environmentally benign alternative, but rather merely prohibits uninformed rather than unwise agency action; LBP-13-4, 77 NRC 107 (2013)
albeit NEPA mandates that an agency prepare an EIS and take a hard look at the environmental impacts of a proposed agency action, NEPA itself does not mandate particular results, but simply prescribes the necessary process; LBP-13-4, 77 NRC 107 (2013)
albeit NRC does not license construction or operation of a transmission corridor, it has the authority to deny the license for a proposed nuclear plant if, for example, the total environmental costs of the new reactor and connected actions exceed the benefits; LBP-12-12, 75 NRC 742 (2012)
albeit NRC must respond to the significant views of other agencies, particularly if they are critical of NRC’s analysis, that duty applies at the final EIS stage after the draft EIS has been circulated to interested federal and state agencies for their review and comment; LBP-12-12, 75 NRC 742 (2012)
albeit NRC regulations do not require NRC Staff to analyze the environmental impacts of NRC licensing actions on the environment of foreign nations, Staff extended its outreach to international organizations to inform its analysis; CLL-15-13, 81 NRC 555 (2015)
albeit there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-12-5, 75 NRC 227 (2012)
any adverse environmental effects that cannot be avoided should the proposal be implemented and a reasonably complete discussion of possible mitigation measures must be included; LBP-12-23, 76 NRC 445 (2012)
appeal board’s ruling that the EIS was deemed modified by the parties’ stipulations at hearing did not violate the letter or spirit of NEPA; CLI-15-6, 81 NRC 340 (2015)
applicant and Staff treatment of need for the construction and operation of uranium enrichment facilities should explain why the proposed action is needed, describe the underlying need for the proposed action, but should not be written merely as a justification of the proposed action or to alter the choice of alternatives; LBP-11-26, 74 NRC 499 (2011)
applicant’s environmental report must contain a sufficient analysis of potential environmental consequences and alternatives to enable the NRC Staff to prepare an EIS that fulfills the agency’s obligations under NEPA; LBP-11-14, 73 NRC 591 (2011); LBP-11-21, 74 NRC 115 (2011)
as a practical matter, Staff relies heavily upon applicant’s environmental report in preparing its EIS; LBP-11-38, 74 NRC 817 (2011); LBP-14-7, 79 NRC 451 (2014)
as a tool for assessing the significance of potential impacts, NRC regulations establish a standard scheme; LBP-11-26, 74 NRC 499 (2011)
as long as the adverse effects of the proposed action are adequately indentified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-13-4, 77 NRC 107 (2013)
as part of its NEPA analysis, NRC must provide information that addresses the purpose and need for the proposed action; LBP-11-26, 74 NRC 499 (2011)
as part of NRC’s NEPA analysis for licensing a nuclear power plant, the agency must balance the costs and benefits resulting from issuance of a license, but the EIS need not always contain a formal or mathematical cost-benefit analysis; LBP-11-7, 73 NRC 254 (2011)
as to whether the connected action aspect of 40 C.F.R. 1508.25(a)(1) supports an improper-segmentation contention’s admissibility, petitioners have not provided sufficient supporting information to show that a genuine dispute exists on the material issue; LBP-13-10, 78 NRC 117 (2013)
because a need-for-power assessment necessarily entails forecasting power demands in light of substantial uncertainty and the duty of providing adequate and reliable service to the public, need-for-power assessments are properly conservative; LBP-12-5, 75 NRC 227 (2012)
because federal agencies typically describe their consideration of the energy requirements of a proposed action, in the context of that analysis agencies should evaluate greenhouse gas emissions; LBP-11-26, 74 NRC 499 (2011)
because NRC Staff relies heavily on applicant’s environmental report in preparing the EIS, should the applicant become a proponent of a particular challenged position set forth in the EIS, the applicant, as such a proponent, also has the burden on that matter; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)
before implementing any major federal action significantly affecting the quality of the human environment, NRC must prepare an EIS that describes the action, its effects, and alternatives to the proposed action; LBP-12-10, 75 NRC 633 (2012)
board may construe an admitted contention contesting applicant’s environmental report as a challenge to a subsequently issued draft or final EIS without the necessity for intervenors to file a new or amended contention; LBP-15-11, 81 NRC 401 (2015)
board may incorporate material from another agency’s EIS, which was submitted in the hearing record, as part of the record of decision; CLI-15-6, 81 NRC 340 (2015)
boards do not sit to “flyspeck” environmental documents or to add details or nuances, but the environmental report or EIS must come to grips with all important considerations; LBP-15-5, 81 NRC 249 (2015)
boards may construe an admitted contention contesting the environmental report as a challenge to a subsequently issued draft or final EIS without the need for intervenors to file a new or amended contention; LBP-12-23, 76 NRC 445 (2012)
burden is on the proponent of a contention to show that the Staff’s analysis or methodology is unreasonable or insufficient; CLI-12-6, 75 NRC 352 (2012)
categorical exclusion from the NEPA requirement to prepare an environmental assessment or EIS for issuance of import licenses involving low-level radioactive waste is provided; CLI-11-3, 73 NRC 613 (2011)
CEQ regulations require that agencies discuss possible mitigation measures in defining the scope of the EIS, in discussing alternatives to the proposed action and consequences of that action, and in explaining its ultimate decision; LBP-12-18, 76 NRC 127 (2012)
challenging the environmental report preserves petitioner’s right to challenge the EIS at a later stage of the proceedings; LBP-12-8, 75 NRC 539 (2012)
common practice in an EIS is to use bounding evaluations when more exact calculations cannot be performed or are not necessary; LBP-12-18, 76 NRC 127 (2012)
compliance with the National Historic Preservation Act does not relieve a federal agency of the duty of complying with the EIS requirement to the fullest extent possible; LBP-15-16, 81 NRC 618 (2015)
conclusory statement in an EIS unsupported by explanatory information of any kind not only fails to crystallize issues, but affords no basis for a comparison of the problems involved with the proposed project and the difficulties involved in the alternatives; LBP-14-9, 80 NRC 15 (2014)
connected actions are closely related and therefore should be discussed in the same EIS; LBP-15-16, 81 NRC 618 (2015)
consideration of alternatives is the heart of the EIS; LBP-11-35, 74 NRC 701 (2011)
consideration of alternatives under NEPA that are technologically unproven is unnecessary; LBP-15-3, 81 NRC 65 (2015)
consideration of impacts with either a low probability of occurrence, or where the link between the agency action and the claimed impact is too attenuated to find the proposed federal action to be the proximate cause of that impact are excluded under NEPA; LBP-13-4, 77 NRC 107 (2013)
consideration of remote and speculative impacts is not required; LBP-12-5, 75 NRC 227 (2012)
considering the reasonable alternatives analysis, it is only in the depth of the consideration and in the level of detail provided in the corresponding environmental documents that an environmental assessment and an EIS will differ; LBP-15-11, 81 NRC 401 (2015)
construction of a road to facilitate logging and the sale of timber from the logging are “connected actions” that have to be addressed in a single EIS; LBP-14-9, 80 NRC 15 (2014)
contention that environmental review documents fail to identify source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene in groundwater is inadmissible as untimely; LBP-15-19, 81 NRC 815 (2015)
contention that it is premature to relicense nuclear facilities with existing permits that will not expire for 11 to 14 years because relicensing more than 10 years in advance of the expiration of the existing licenses will result in environmental impact statements that will be stale by the time the existing licenses expire is inadmissible; LBP-13-12, 78 NRC 239 (2013)
contention that relies on testimony marking the first time NRC Staff has addressed an impact at the site is timely; LBP-15-24, 82 NRC 68 (2015)
contention that was originally admitted as a challenge to the environmental report may be treated as a challenge to the similar section of the DEIS; LBP-11-1, 73 NRC 19 (2011)
contentions challenging an environmental report may be viewed as a challenge to the NRC Staff’s subsequent draft or final environmental impact statement; CLI-12-1, 75 NRC 39 (2012)
contentions may challenge the adequacy of the review contained in the Staff’s NEPA documents; LBP-11-22, 74 NRC 259 (2011)
continued construction was barred pending the filing of an adequate environmental impact statement, notwithstanding the fact that the project was initially approved and construction commenced prior to the effective date of NEPA; LBP-12-1, 75 NRC 1 (2012)
Council on Environmental Quality regulation requiring an environmental impact statement to consider reasonably foreseeable impacts rather than a worst-case analysis is entitled to substantial deference and NEPA does not require a worst-case analysis in an EIS; LBP-13-4, 77 NRC 107 (2013)
courts decide whether a mitigation plan was adequately or inadequately discussed, but the line between these two options is not well defined; LBP-15-16, 81 NRC 618 (2015)
cumulative actions are those that, when viewed with other proposed actions, have cumulatively significant impacts so that they should be discussed in the same EIS; LBP-13-10, 78 NRC 117 (2013)
cumulative impact of the proposed action must be addressed; LBP-13-4, 77 NRC 107 (2013)
“deemed incorporated” function of 10 C.F.R. 51.23(b) provides administrative efficiency by adding the environmental impacts of continued storage to site-specific EISs without additional work by the Staff; CLI-15-10, 81 NRC 535 (2015)
deficiency in a final EIS is not automatic ground for reversal of an order granting a permit although the issue has been opened for full consideration in an agency hearing; CLI-15-6, 81 NRC 340 (2015)
definition of the scope of the EIS is the responsibility of the NRC Staff; LBP-14-9, 80 NRC 15 (2014)
despite the ability of both NRC Staff and applicant to present evidence and witnesses on environmental issues, the ultimate issue in determining NEPA compliance is the adequacy of NRC Staff’s environmental review, not the applicant’s environmental report; LBP-13-13, 78 NRC 246 (2013)
detailed statement by the responsible agency official on, among other things, the environmental impact of the proposed action, any unavoidable adverse environmental effects that cannot be avoided, and alternatives to the proposed action must be included; LBP-11-10, 73 NRC 424 (2011)
detailed statement by the responsible official on alternatives to the proposed action is required; LBP-12-17, 76 NRC 71 (2012)
determination of minimal environmental impact would make little sense when an agency lacks essential information and has not sought to compile it through independent research; LBP-14-9, 80 NRC 15 (2014)
direct impacts are those caused by the action that is the subject of the EIS, and occurring at the same
time and place as that action, while indirect impacts are caused by the action at a later time or more
distant place, yet are still reasonably foreseeable; LBP-11-26, 74 NRC 499 (2011)
discovery cannot be completed nor can the evidentiary hearing be held until the safety evaluation report
and all necessary environmental impact statements are completed; CLI-13-8, 78 NRC 219 (2013)
discussion of alternatives that present severe engineering requirements or are imprudent for reasons
including their high cost, safety hazards, and operational difficulties is excluded under NEPA;
discussion of mitigation measures an important part of an agency’s hard look at the environmental
consequences of proposed federal action; LBP-13-4, 77 NRC 107 (2013); LBP-14-7, 79 NRC 451
(2014)
discussion of the no-action alternative need only include feasible, nonspeculative alternatives; LBP-12-8,
75 NRC 539 (2012)
duty to prepare an EIS and to identify and consider every significant environmental impact is tempered
by the rule of reason; LBP-13-4, 77 NRC 107 (2013)
EIS cannot fulfill its role of providing a springboard for public comment if it defers indefinitely and
deleagates to other agencies the duty to inform the public of the environmental impacts of the proposed
action and potential measures to mitigate those impacts; LBP-14-9, 80 NRC 15 (2014)
EIS is required for renewal of an operating license for a nuclear power reactor; LBP-12-1, 75 NRC 1
(2012)
EIS is required when the proposed project is a major federal action significantly affecting the quality of
EIS must describe the potential environmental impact of the proposed action and discuss any reasonable
alternatives; LBP-11-7, 73 NRC 254 (2011)
EIS that contains an incomplete or misleading comparison of alternatives is deficient; LBP-11-21, 74
NRC 115 (2011)
EIS’s hard look must examine reasonably foreseeable environmental impacts emanating from the proposed
action; LBP-11-39, 74 NRC 862 (2011)
EISs are not intended to be research documents, reflecting the frontiers of scientific methodology, studies,
and data; CL1-12-5, 75 NRC 301 (2012); LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227
(2012); LBP-13-4, 77 NRC 107 (2013); LBP-13-13, 78 NRC 246 (2013); LBP-15-3, 81 NRC 65
EISs are subject to a rule of reason that grants the agency a degree of deference exempting it from
examining impacts that it in good faith deems to be remote and speculative or inconsequentially small;
LBP-11-39, 74 NRC 862 (2011)
EISs cannot fulfill their role of providing a springboard for public comment if they fail to evaluate
significant issues such as measures that the agency’s experts recommend to mitigate the consequences
of a severe accident; LBP-12-18, 76 NRC 127 (2012)
EISs may be deemed modified by the hearing record because hearing procedures allow for additional and
more rigorous public scrutiny of the FSEIS than does the usual circulation for comment; CLI-15-6, 81
NRC 340 (2015)
EISs must discuss any adverse environmental effects that cannot be avoided should the proposal be
implemented and must provide a reasonably complete discussion of possible mitigation measures;
EISs serve as an environmental full disclosure law providing agency decisionmakers, as well as the
President, the Congress, the Council on Environmental Quality, and the public the environmental
cost-benefit information that Congress thought they should have about each qualifying federal action;
LBP-13-13, 78 NRC 246 (2013)
EISs should be issued to include other related actions only when those related actions have been formally
proposed and are pending before the relevant agency; LBP-13-10, 78 NRC 117 (2013)
environmental assessment can be the basis of a finding under section 51.32 that the proposed agency
action will not have a significant effect upon the environment such that a full-blown EIS (or
supplemental EIS) is not required; LBP-13-6, 77 NRC 253 (2013)
environmental considerations that the environmental report must discuss are equivalent to, and in most instances verbatim restatements of, environmental considerations that NEPA requires the agency to describe in detail in the EIS; LBP-15-5, 81 NRC 249 (2015)

environmental contents ultimately challenge NRC’s compliance with NEPA; but applicant is free to support positions set forth in the environmental impact statement that are under challenge; LBP-12-17, 76 NRC 71 (2012)

environmental documents must include a detailed statement by the responsible official on any adverse environmental effects that cannot be avoided should the proposal be implemented; LBP-15-16, 81 NRC 618 (2015)

equipment impact statement must consider the direct, indirect, and cumulative impacts of an action; LBP-11-7, 73 NRC 254 (2011)

equipment impacts of at-reactor and away-from-reactor storage of spent fuel are considered for 60 years after the end of a reactor’s licensed life for operation, an additional 100 years of storage, and the indefinite storage of spent nuclear fuel and incorporated into site-specific EISs; CLI-15-10, 81 NRC 535 (2015)

environmental impacts of continued storage have been incorporated into the EISs at issue in the proceedings by operation of law; CLI-15-10, 81 NRC 535 (2015)

environmental mitigation options must be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-14-9, 80 NRC 15 (2014)

Environmental Protection Agency determination that an EIS is unsatisfactory gives rise to a heightened obligation on the lead agency’s part to explain clearly and in detail its reasons for proceeding; LBP-14-9, 80 NRC 15 (2014)

environmental report for limited work authorization application for a site where a construction permit was issued but construction of the plant was never completed may incorporate the earlier EIS; LBP-12-24, 76 NRC 503 (2012)

environmental report’s adequacy is examined under NEPA as well as under Part 51 because the ER is the basis upon which NRC’s EIS will be prepared; LBP-11-13, 73 NRC 534 (2011); LBP-11-14, 73 NRC 591 (2011)

every combined license application must be accompanied by an environmental report to aid the Commission in its preparation of an EIS; LBP-11-6, 73 NRC 149 (2011); LBP-12-9, 75 NRC 615 (2012)

effects of the no-action discussion is governed by a rule of reason; LBP-12-8, 75 NRC 539 (2012)

effect to include all connected actions within the scope of the proposed action is generally referred to as segmentation; LBP-14-9, 80 NRC 15 (2014)

examples of need for the proposed facility include a benefit provided if the proposed action is granted or descriptions of the detriment that will be experienced without approval of the proposed action; LBP-11-26, 74 NRC 490 (2011)

excluding the transmission corridor from the scope of the proposed action also removes it from the limitation on actions; LBP-14-9, 80 NRC 15 (2014)

existence of a reasonable but unexamined alternative renders an EIS inadequate; LBP-12-17, 76 NRC 71 (2012); LBP-14-9, 80 NRC 15 (2014)

extent of the no-action discussion is governed by a rule of reason; LBP-12-8, 75 NRC 539 (2012)

federal agencies are required, to the fullest extent possible, to include in every recommendation or report on proposals for major federal actions significantly affecting the quality of the human environment a detailed statement on the environmental impact of the proposed action; LBP-13-13, 78 NRC 246 (2013)

federal agencies may plan a number of related actions but may decide to prepare impact statements on each action individually rather than prepare an impact statement on the entire group, creating a segmentation or piecemealing problem; LBP-14-6, 79 NRC 404 (2014)

federal agencies must consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-12-17, 76 NRC 71 (2012)

federal agencies must prepare an EIS for those proposed actions that have the potential to significantly affect the quality of the human environment; LBP-11-7, 73 NRC 254 (2011); LBP-15-16, 81 NRC 618 (2015)

federal courts of appeal have approved of the process by which an EIS is effectively amended through the adjudicatory process; LBP-14-9, 80 NRC 15 (2014)
SUBJECT INDEX

filing of new contentions based on the SER and Staff NEPA documents is expressly contemplated by the Model Milestones; LBP-11-22, 74 NRC 259 (2011)

First Nations in Canada must receive invitations to participate in the EIS scoping process when there are transboundary environmental impacts from a project; LBP-12-12, 75 NRC 742 (2012)

for agency decisions such as a combined license that are based on an EIS, a monitoring and enforcement program shall be adopted and summarized where applicable for any mitigation; LBP-12-23, 76 NRC 445 (2012)

for an action such as a transmission corridor that will not be constructed by or expressly permitted by the federal agency preparing an EIS, there must be sufficient federal control and responsibility that the action qualifies as a federal action; LBP-14-9, 80 NRC 15 (2014)

for operating license renewal, if NRC Staff has not previously considered severe accident mitigation alternatives for applicant’s plant in an EIS or related supplement or in an environmental assessment, applicant’s environmental report must contain a consideration of alternatives to mitigate severe accidents; LBP-11-18, 74 NRC 29 (2011); LBP-11-21, 74 NRC 115 (2011)

for siting alternatives, an agency’s duty under NEPA is to study all alternatives that appear reasonable and appropriate for study at the time of drafting the EIS; CLI-12-5, 75 NRC 301 (2012)

for the no-action alternative, there need not be much discussion in the environmental documents because it is most simply viewed as maintaining the status quo; LBP-12-8, 75 NRC 539 (2012)

general statements by an agency about possible effects and some risk do not constitute the hard look required by NEPA absent a justification of why more definitive information could not be provided; LBP-12-5, 75 NRC 227 (2012)

given the legal responsibility imposed upon a public utility to provide at all times adequate, reliable service, and the severe consequences that may attend upon a failure to discharge that responsibility, the most that can be required is that need-for-power forecasts be reasonable in the light of what is ascertainable at the time made; LBP-12-5, 75 NRC 227 (2012)

goals of NEPA are to ensure that agency decisionmakers will have detailed information concerning significant environmental impacts of proposed projects when they make their decisions and to guarantee that such information will be available to the larger audience that may also play a role in the decisionmaking process; LBP-12-17, 76 NRC 71 (2012)

hard look under NEPA is intended to foster both informed agency decisionmaking and informed public participation so as to ensure that the agency does not act upon incomplete information, only to regret its decision after it is too late to correct; LBP-15-3, 81 NRC 65 (2015)

if demand for power turns out to be less than predicted, it cannot be argued that the cost of the unneeded generating capacity may turn up in customers’ electric bills because the surplus can be profitably marketed to other systems or the new capacity can replace older, less efficient units; LBP-12-5, 75 NRC 227 (2012)

if impacts are remote or speculative, the EIS need not discuss them, including greenhouse gas emissions; LBP-11-7, 73 NRC 254 (2011)

if new and significant information on Fukushima events comes to light that requires consideration as part of the ongoing preparation of application-specific NEPA documents, NRC will assess the significance of that information as appropriate; CLI-12-7, 75 NRC 379 (2012)

if NRC Staff had in hand new information that could render invalid the original site-specific analysis, then such information should be identified and evaluated by Staff for its significance, consistent with NEPA requirements; CLI-12-19, 76 NRC 377 (2012)

if the adverse environmental effects of the proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental cost; LBP-13-4, 77 NRC 107 (2013)

if the adverse environmental impacts of a proposed action are adequately identified and evaluated, the agency is not constrained by NEPA from deciding that other values outweigh the environmental costs; LBP-12-18, 76 NRC 127 (2012)

if the cost of obtaining information is exorbitant, NRC must still include in the EIS a statement that the information is unavailable, the relevance of the unavailable information, a summary of existing credible scientific evidence, and the agency’s evaluation of the impacts that might be caused; LBP-14-9, 80 NRC 15 (2014)
if the EIS addresses the concerns alleged in the contention, the original contention becomes moot and the intervenor must raise a new contention if it claims the EIS discussion is still inaccurate or incomplete; LBP-14-6, 79 NRC 404 (2014)

impact determinations in the continued storage generic EIS shall be deemed incorporated into the EISs associated with combined license or license renewal application; CLI-15-10, 81 NRC 535 (2015)

impacts that are remote and speculative may be excluded from consideration; LBP-12-1, 75 NRC 1 (2012)

implicit in NEPA’s demand that an agency prepare a detailed environmental impact statement is an understanding that the EIS will discuss the extent to which adverse effects can be avoided; LBP-12-18, 76 NRC 127 (2012)

important consequence of decision whether to include new construction within the scope of the proposed action is that, if it is included, it will be subject to the limitation on actions in 10 C.F.R. 51.101(a); LBP-14-9, 80 NRC 15 (2014)

important qualitative considerations or factors that cannot be quantified in the EIS will be discussed in qualitative terms; LBP-15-3, 81 NRC 65 (2015)

in an NRC adjudicatory proceeding, even if a board finds an EIS prepared by NRC Staff inadequate in certain respects, the board’s findings, as well as the adjudicatory record, become, in effect, part of the final EIS; LBP-15-16, 81 NRC 618 (2015)

in defining the scope of the EIS, all connected actions must be analyzed in one statement; LBP-11-10, 73 NRC 424 (2011)

in determining whether a federal action would significantly affect the environment, the agency should consider the degree to which the proposed action affects public health and safety; LBP-12-18, 76 NRC 127 (2012)

in the area of impacts of combined licenses and limited work authorizations, NRC Staff, in its review of new and significant information, identified a change in impacts associated with terrestrial ecology; CLI-12-2, 75 NRC 63 (2012)

intervenor may propose new or amended contentions based on data or conclusions in the NRC draft or final environmental impact statement, environmental assessment, or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant’s environmental documents; LBP-11-7, 73 NRC 254 (2011)

issuance of a combined license is a major federal action significantly affecting the quality of the human environment, and requiring an EIS; LBP-13-4, 77 NRC 107 (2013)

issuance of a renewed operating license for a nuclear power reactor is a major federal action under NEPA; LBP-12-8, 75 NRC 539 (2012)

issuance of an early site permit and the subsequent authorization of construction and operation of a new nuclear power plant qualify as connected actions under 40 C.F.R. 1508.25 and should be evaluated in one EIS; LBP-11-10, 73 NRC 424 (2011)

it is not necessary that every alternative device and thought conceivable by the mind of man be considered, but a hard look must be taken at the environmental consequences; LBP-12-1, 75 NRC 1 (2012)

it would be inconsistent with NEPA’s reliance on procedural mechanisms, as opposed to substantive, result-based standards, to demand the presence in an EIS of a fully developed plan that will mitigate environmental harm before an agency can act; LBP-13-4, 77 NRC 107 (2013)

level of analysis required by NEPA in an environmental impact statement is more rigorous than is required when the agency has determined on the basis of its environmental assessment that the project as proposed will not result in significant environmental impact; LBP-14-7, 79 NRC 451 (2014)

license applicants were permitted to omit any discussion of any environmental impact of spent fuel storage in independent spent fuel storage installations for the period following the term of the initial ISFSI license in any environmental report, environmental impact statement, environmental assessment, or other analysis; LBP-12-24, 76 NRC 503 (2012)

license renewal application need not provide an analysis of severe accident mitigation alternatives in its environmental report if NRC Staff has already considered SAMAs for applicant’s plant in an EIS or related supplement or in an environmental assessment; LBP-12-8, 75 NRC 539 (2012)

license renewal applications must include an environmental report to assist NRC Staff in preparing its EIS; LBP-12-8, 75 NRC 539 (2012)

935
licensing hearing does not embrace anything new revealed in the safety evaluation report or the NEPA documents; CLI-12-14, 75 NRC 692 (2012)
merely listing possible mitigation options does not satisfy NEPA; LBP-15-16, 81 NRC 618 (2015)
merely offering general statements about possible effects and some risk does not constitute a hard look at environmental impacts absent a justification regarding why more definitive information could not be provided; LBP-11-38, 74 NRC 817 (2011)
merely pointing to a government compliance program is insufficient to demonstrate compliance with
NEPA’s requirement that agencies take a hard look at the environmental consequences of their proposed actions; LBP-12-23, 76 NRC 445 (2012)
merely referencing an actual or anticipated certification by another agency fails to satisfy NEPA requirements; LBP-14-9, 80 NRC 15 (2014)
migration tenet applies where the information in the DEIS is sufficiently similar to the information in the environmental report; LBP-11-1, 73 NRC 19 (2011)
mitigation must be discussed in sufficient detail to ensure that environmental consequences have been fairly evaluated; LBP-13-4, 77 NRC 107 (2013)
Model Milestones permit the filing of proposed late-filed contentions on the Safety Evaluation Report and necessary National Environmental Policy Act documents within 30 days of issuance of those documents; LBP-11-22, 74 NRC 259 (2011)
National Marine Fisheries Service has the authority to consult with other agencies if, for example, only one of the agencies has the authority to implement measures necessary to minimize adverse effects on essential fish habitat and that agency does not act as the lead agency; LBP-12-10, 75 NRC 633 (2012)
need-for-power assessments must be only at a level of detail sufficient to reasonably characterize the costs and benefits associated with proposed licensing actions; LBP-12-5, 75 NRC 227 (2012)
need-for-power forecasts need not precisely identify future market conditions and energy demand, or develop detailed analyses of system generating assets, costs of production, capital replacement ratios, and the like in order to establish with certainty that the construction and operation of a nuclear power plant is the most economical alternative for generation of power; LBP-12-5, 75 NRC 227 (2012)
neither NRC nor applicant need consider any alternative that does not bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)
NEPA allows agencies to select their own methodology as long as that methodology is reasonable; CLI-12-6, 75 NRC 352 (2012)
NEPA analysis of cumulative impacts must give a sufficiently detailed catalogue of past, present, and future projects, and provide adequate analysis about how these projects, and differences between the projects, are thought to have impacted the environment; LBP-13-4, 77 NRC 37 (2013)
NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-12-9, 75 NRC 615 (2012); LBP-12-18, 76 NRC 127 (2012); LBP-15-16, 81 NRC 618 (2015)
NEPA does not call for examination of every conceivable aspect of federally licensed projects, but requires only a discussion of reasonably foreseeable impacts; LBP-13-4, 77 NRC 107 (2013)
NEPA does not demand the presence of a fully developed plan that will mitigate environmental harm before an agency can act; LBP-15-16, 81 NRC 618 (2015)
NEPA does not mandate particular results, but simply prescribes the necessary process that agencies must follow in evaluating environmental impacts; LBP-12-17, 76 NRC 71 (2012); LBP-15-19, 81 NRC 815 (2015)
NEPA does not mandate substantive results but rather imposes procedural restraints on agencies, requiring them to take a hard look at the environmental impacts of a proposed action and reasonable alternatives to that action; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)
NEPA does not require a fully developed plan that will mitigate all environmental harm before an agency can act, only that mitigation be discussed in sufficient detail to ensure that environmental consequences have been fully evaluated; LBP-12-18, 76 NRC 127 (2012); LBP-12-23, 76 NRC 445 (2012)
NEPA does not require a worst-case analysis; LBP-12-5, 75 NRC 227 (2012); LBP-13-13, 78 NRC 246 (2013)
NEPA does not require agencies to analyze impacts of alternatives that are speculative, remote, impractical, or unviable; CLI-12-5, 75 NRC 301 (2012)
NEPA does not require agencies to elevate environmental concerns over other appropriate considerations; LBP-12-18, 76 NRC 127 (2012)

NEPA does not require an agency to consider the possible environmental impacts of less imminent actions when preparing the impact statement on proposed actions; LBP-13-10, 78 NRC 117 (2013)

NEPA does not require NRC Staff to examine every conceivable aspect of federally licensed projects in preparing its EIS; LBP-15-3, 81 NRC 65 (2015)

NEPA does not require NRC to use the absolutely best scientific methodology available; LBP-13-4, 77 NRC 107 (2013)

NEPA does not require that a complete mitigation plan be actually formulated and adopted before the agency makes its decision; LBP-13-4, 77 NRC 107 (2013)

NEPA does not require that the agency wait until inchoate information matures into something that later might affect its review; CLI-12-7, 75 NRC 379 (2012)

NEPA does not require the adoption of best practices, particularly in the face of a potentially significant resource commitment; LBP-15-3, 81 NRC 65 (2015)

NEPA generally does not mandate that identified mitigation measures be implemented; LBP-13-4, 77 NRC 107 (2013)

NEPA imposes a procedural requirement on an agency’s decisionmaking process by mandating that an agency consider the environmental impacts of a proposed action and inform the public that it has taken those impacts into account in making its decision; LBP-11-17, 74 NRC 11 (2011)

NEPA is intended to ensure that environmental impacts will not be overlooked or underestimated only to be discovered after resources have been committed or the die otherwise cast; LBP-13-4, 77 NRC 107 (2013)

NEPA only requires reasonable forecasting of need for power; LBP-12-5, 75 NRC 227 (2012)

NEPA only requires that the EIS address those environmental impacts that are reasonably foreseeable; LBP-13-4, 77 NRC 107 (2013)

NEPA places upon an agency the obligation to consider every significant aspect of the environmental impact of a proposed action and ensures that the agency will inform the public that it has indeed considered environmental concerns in its decisionmaking process; LBP-11-7, 73 NRC 254 (2011)

NEPA precludes an agency from avoiding NEPA’s requirements by simply relying on another agency’s conclusions about a federal action’s impact on the environment; LBP-13-4, 77 NRC 107 (2013)

NEPA regulations require consideration of severe accident mitigation alternatives in its EISs and supplements thereto at the operating license stage; LBP-12-15, 76 NRC 14 (2012)

NEPA requirement to prepare an EIS places upon an agency the obligation to consider every significant aspect of the environmental impact of a proposed action; LBP-13-4, 77 NRC 107 (2013)

NEPA requirements are subject to a rule of reason, and an EIS need not address remote and highly speculative consequences; LBP-14-9, 80 NRC 15 (2014)

NEPA requires an agency to take a hard look at the environmental consequences before taking a major action and to report the result of that hard look in an EIS; LBP-11-6, 73 NRC 149 (2011)

NEPA requires each agency to undertake research needed to adequately expose environmental harms; LBP-14-9, 80 NRC 15 (2014)

NEPA requires each EIS to include a detailed discussion of measures that might mitigate the adverse environmental consequences of the proposed action; LBP-13-4, 77 NRC 107 (2013)

NEPA requires federal agencies to pause before committing resources to a project and consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-12-18, 76 NRC 127 (2012)

NEPA requires federal agencies to take a hard look at the environmental impacts of a proposed action, as well as reasonable alternatives to that action; LBP-12-10, 75 NRC 633 (2012); LBP-13-4, 77 NRC 107 (2013); LBP-15-3, 81 NRC 65 (2015)

NEPA requires NRC to reevaluate any prior analysis if it is presented with any new and significant information that would cast doubt on a previous environmental analysis; LBP-12-8, 75 NRC 539 (2012)

NEPA requires that NRC consider reasonably foreseeable environmental impacts of the proposed licensing action, but need not consider remote and speculative impacts, particularly if the impact cannot easily be estimated at the current time, and an appropriate future opportunity will exist for the agency to analyze the impact; LBP-12-3, 75 NRC 164 (2012)
NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-11-38, 74 NRC 817 (2011); LBP-13-4, 77 NRC 107 (2013)

NEPA-related contentions initially are based on applicant’s environmental report which will inform NRC Staff’s NEPA review; LBP-13-10, 78 NRC 117 (2013)

NEPA’s “hard look” requirement is subject to a rule of reason in that consideration of environmental impacts need not address all theoretical possibilities, but rather only those that have some reasonable possibility of occurring; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-15-3, 81 NRC 65 (2015)

NEPA’s hard look requirement does not allow sweeping generalities about possible effects and risk without a justification as to why more definitive information was not provided; LBP-13-13, 78 NRC 246 (2013)

NEPA’s procedural obligation is carried out through an agency’s issuance of an EIS documenting the agency’s hard look at potential environmental impacts of the proposed action and reasonable alternatives thereto; LBP-11-39, 74 NRC 862 (2011)

NEPA’s requirement that federal agencies prepare an EIS when considering a major action serves the statute’s action-forcing purpose in two ways; LBP-11-7, 73 NRC 254 (2011)

NEPA’s requirements, like publication of the EIS, implement NEPA’s sweeping policy goals by ensuring that agencies will take a hard look at environmental consequences; LBP-13-13, 78 NRC 246 (2013)

NEPA’s rule of reason excludes consideration of remote and speculative impacts or worst-case scenarios; LBP-13-4, 77 NRC 107 (2013)

no language is included in 10 C.F.R. 51.45(c) to the effect that a proposed action that is the subject of an agency environmental impact statement must include all connected actions as defined in 40 C.F.R. 1508.25; LBP-14-9, 80 NRC 15 (2014)

NRC adjudicatory hearings are not EIS editing sessions wherein the board sits to parse and fine-tune EISs; LBP-11-2, 73 NRC 28 (2011); LBP-13-13, 78 NRC 246 (2013)

NRC argument that leaks from spent fuel pools will not occur because the NRC is on duty was rejected; LBP-13-4, 77 NRC 107 (2013)

NRC gives substantial weight to the preferences of the applicant and/or sponsor; CLI-12-5, 75 NRC 301 (2012)

NRC has established small, moderate, and large levels of impacts; LBP-11-26, 74 NRC 499 (2011)

NRC has the right to prepare an independent EIS whenever NRC has regulatory authority over an activity; LBP-13-9, 78 NRC 37 (2013)

NRC is directed to adopt the Department of Energy EIS for the high-level waste repository to the extent practicable; CLI-13-8, 78 NRC 219 (2013)

NRC is directed to use the Council on Environmental Quality regulation 40 C.F.R. 1502.4 in defining the scope of its EIS; LBP-12-12, 75 NRC 742 (2012); LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014)

NRC is required to assess the relationship between local short-term uses of the environment and the long-term productivity of the environment; CLI-12-2, 75 NRC 63 (2012); CLI-12-9, 75 NRC 421 (2012)

NRC is required to describe the irreversible and irretrievable commitments of resources associated with the proposed action; CLI-12-9, 75 NRC 421 (2012)

NRC is required to describe unavoidable adverse environmental impacts; CLI-12-9, 75 NRC 421 (2012)

NRC is required to prepare a detailed statement discussing the environmental impacts, alternatives, and mitigation measures for any major federal action significantly affecting the quality of the human environment; CLI-13-7, 78 NRC 199 (2013)

NRC is required under NEPA to consider new and significant information in its environmental analyses; CLI-13-7, 78 NRC 199 (2013)

NRC may not abdicate its duty under NEPA to other agencies to consider environmental impacts, even if those agencies have special expertise relating to environmental impacts; LBP-13-4, 77 NRC 107 (2013)

NRC must adequately consider impacts to visual and aesthetic resources in its NEPA review; LBP-12-3, 75 NRC 164 (2012)

NRC must include an evaluation of failure to secure permanent disposal, as well as an improved analysis of spent fuel pool leaks and spent fuel pool fires; CLI-14-8, 80 NRC 71 (2014)

938
NRC must prepare an EIS that adequately evaluates the environmental impacts of relicensing, including impacts to tribal hunting and fishing rights and subsistence consumption; LBP-15-5, 81 NRC 249 (2015)

NRC must rigorously explore and objectively analyze environmental impacts, so that merely offering general statements about possible effects and some risk does not constitute a hard look absent a justification regarding why more definitive information could not be provided; LBP-11-26, 74 NRC 499 (2011)

NRC need only address reasonably foreseeable impacts, not those that are remote and speculative or inconsequentially small; LBP-13-13, 78 NRC 246 (2013)

NRC policy statement is not a sufficient vehicle to preclude consideration of severe accident mitigation design alternatives, and NRC must take the requisite hard look at them, giving them the careful consideration and disclosure required by the National Environmental Policy Act; CLI-12-19, 76 NRC 377 (2012)

NRC regulations incorporate Council on Environmental Quality regulations that define the scope of an environmental impact statement to include cumulative impacts; LBP-12-3, 75 NRC 164 (2012)

NRC Staff assesses air quality impacts as a matter of course, categorizing them as small, medium, or large; LBP-11-26, 74 NRC 499 (2011)

NRC Staff is required to do more than simply state that necessary information is unavailable; LBP-14-9, 80 NRC 15 (2014)

NRC Staff is required to furnish only such information as appears reasonably necessary under the circumstances for evaluation of the project, rather than to be so all-encompassing in scope that the task of preparing it would become either fruitless or well nigh impossible; LBP-13-4, 77 NRC 107 (2013)

NRC Staff is required to prepare EISs for reactor licensing proceedings; CLI-14-7, 80 NRC 1 (2014)

NRC Staff may accord substantial weight to the stated purpose of the project, i.e., to provide additional baseload electrical generation capacity for use in the owner’s current markets and/or for potential sale on the wholesale market; LBP-11-7, 73 NRC 254 (2011)

NRC Staff must address all reasonably foreseeable environmental impacts even if the probability of such an occurrence is low; LBP-14-9, 80 NRC 15 (2014)

NRC Staff must consider the alternative of no action; LBP-12-8, 75 NRC 539 (2012)

NRC Staff must consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-11-26, 74 NRC 499 (2011)

NRC Staff must describe the potential environmental impact of a proposed action and discuss any reasonable alternatives; LBP-15-11, 81 NRC 401 (2015)

NRC Staff must include a detailed statement of reasonable alternatives to the proposed action; LBP-14-9, 80 NRC 15 (2014)

NRC Staff must include in an EIS an analysis of significant problems and objections raised by any affected Indian tribes and other interested persons; LBP-15-16, 81 NRC 618 (2015)

NRC Staff must prepare an EIS in connection with a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery; LBP-15-3, 81 NRC 65 (2015)

NRC Staff must provide a detailed statement concerning environmental impact of the proposed action, any adverse environmental effects that cannot be avoided should the proposal be implemented, and any irreversible and irretrievable commitments of resources that would be involved in the proposed action should it be implemented; LBP-14-9, 80 NRC 15 (2014)

NRC Staff need consider only those environmental impacts that are reasonably foreseeable, not those that are remote and speculative possibilities; LBP-12-9, 75 NRC 615 (2012)

NRC Staff need not perform a wholly independent analysis from scratch, but may rely on the scientific data and inferences drawn by another federal agency; LBP-13-4, 77 NRC 107 (2013)

NRC Staff need only discuss those alternatives that will bring about the ends of the proposed action; LBP-12-15, 76 NRC 14 (2012)

NRC Staff relies heavily on applicant’s environmental report in preparing its EIS; LBP-12-5, 75 NRC 227 (2012)

NRC Staff review must address interdependent projects when the dependency is such that it would be irrational, or at least unwise, to undertake the first phase if subsequent phases were not also undertaken; LBP-14-9, 80 NRC 15 (2014)
NRC Staff, pursuant to its obligation to prepare an adequate EIS, is empowered to issue requests for additional information relevant to an applicant’s environmental report; LBP-11-33, 74 NRC 675 (2011)

NRC Staff’s EIS need only discuss those alternatives that will bring about the ends of the proposed action; CLI-12-5, 75 NRC 501 (2012)

NRC Staff’s NEPA responsibilities for preparing an EIS are described; LBP-11-6, 73 NRC 149 (2011)

NRC Staff’s reference to, and reliance in its DEIS on, state issuance of a site certification order and associated certificate of compliance on groundwater use does not dispense with NRC’s duty under NEPA to conduct an independent hard look at environmental impacts related to active dewatering during operations at a nuclear plant; LBP-11-1, 73 NRC 19 (2011)

NRC Staff’s reliance in an environmental impact statement on predicted future monitoring and regulatory compliance program to prevent environmental impacts is not permitted; LBP-14-9, 80 NRC 15 (2014)

NRC uses environmental impact information to determine, after weighing the environmental, economic, technical, and other benefits against environmental and other costs, whether the combined license should be issued, denied, or appropriately conditioned to protect environmental values; LBP-14-9, 80 NRC 15 (2014)

NRC’s environmental analysis need only consider environmental impacts that are reasonably foreseeable, and need not consider remote and speculative scenarios; LBP-11-16, 73 NRC 645 (2011)

NRC’s obligation to evaluate new recommendations for enhanced accident mitigation does not depend upon whether intervenors have identified unique characteristics of the site or the proposed new reactor; LBP-12-18, 76 NRC 127 (2012)

NRC’s record of decision for the license must state whether the Commission has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm from the alternative selected, and if not, to explain why those measures were not adopted; LBP-12-18, 76 NRC 127 (2012)

NRC’s review of a COL application is the type of proposed action obliging Staff to prepare an EIS or a supplement thereto; LBP-11-39, 74 NRC 862 (2011)

numerous Council on Environmental Quality regulations require an agency to discuss possible mitigation measures, including 40 C.F.R. §§ 1508.25(b), 1502.14(f), 1502.16(b), and 1508.20; LBP-13-4, 77 NRC 107 (2013)

once NRC has properly defined the scope of the proposed action, including any connected actions, the agency’s EIS must evaluate the environmental effects of the proposed action; LBP-14-9, 80 NRC 15 (2014)

one important component of an EIS is the discussion of possible actions that might mitigate adverse environmental consequences; LBP-11-7, 73 NRC 254 (2011)

only role for a court is to ensure that the agency has taken a hard look at environmental consequences; LBP-11-17, 74 NRC 11 (2011)

only those activities that have sufficient federal involvement to qualify as federal actions need be included in the scope of the proposed action evaluated in an EIS; LBP-14-9, 80 NRC 15 (2014)

parties may seek leave of the board to file new contentions that challenge the sufficiency of Staff’s NEPA documents where information on which new contentions are based was not previously available and is materially different than information previously available and has been submitted in a timely fashion based on the availability of the subsequent information; LBP-11-39, 74 NRC 862 (2011)

permissive “may” language of 40 C.F.R. 1508.25(a)(3) affords an agency more discretion in making a choice about whether a single EIS is the best way to assess similar actions; LBP-13-10, 78 NRC 117 (2013)

post-environmental report, intervenor would need to file a motion to amend an already-admitted contention or to admit a new contention if information in NRC Staff’s NEPA statement is sufficiently different from information in the ER that supported the original contention’s admission; LBP-13-10, 78 NRC 117 (2013)

preparation of an EIS on a proposal should be timed so that the final statement may be completed in time for the statement to be included in any recommendation or report on the proposal; LBP-14-9, 80 NRC 15 (2014)

preparation of an environmental impact statement for the proposed action is unnecessary if NRC Staff determines that the proposed action will not have a significant effect on the quality of the human environment; CLI-15-25, 82 NRC 389 (2015)
preparation of the biological assessment may be consolidated with interagency cooperation procedures required by other statutes, such as NEPA; LBP-12-11, 75 NRC 731 (2012)

presiding officer in the adjudication will determine the extent to which adoption by the NRC of DOE’s repository EIS and its supplements is practicable, which in turn will satisfy NRC’s NEPA obligations; CLI-13-8, 78 NRC 219 (2013)

principal goals of a final EIS are to force agencies to take a hard look at the environmental consequences of a proposed project and to permit the public a role in the agency’s decisionmaking process; LBP-11-14, 73 NRC 591 (2011); LBP-15-16, 81 NRC 618 (2015)

prior to preparing an EIS, the responsible federal official shall consult with and obtain the comments of any federal agency that has jurisdiction by law or special expertise with respect to any environmental impact involved; LBP-12-10, 75 NRC 633 (2012)

proposals or parts of proposals that are related to each other closely enough to be, in effect, a single course of action shall be evaluated in a single EIS; LBP-11-10, 73 NRC 424 (2011); LBP-12-12, 75 NRC 742 (2012); LBP-13-10, 78 NRC 117 (2013); LBP-14-6, 79 NRC 404 (2014); LBP-14-9, 80 NRC 15 (2014)

proposed action that is the subject of an agency environmental impact statement must include all connected actions as defined in 40 C.F.R. 1508.25; LBP-14-9, 80 NRC 15 (2014)

public comment periods are beneficial only to the extent the public has meaningful information on which to comment; LBP-12-17, 76 NRC 71 (2012)

purpose of applicant’s environmental report is to assist NRC in preparing the agency’s own environmental analysis; LBP-11-28, 74 NRC 604 (2011)

purpose of NEPA requirement that EIS be prepared is to obviate the need for speculation by ensuring that available data are gathered and analyzed prior to implementation of the proposed action; LBP-15-23, 82 NRC 55 (2015)

quibbling over details of an economic analysis would effectively stand NEPA on its head by asking that the license be rejected not due to environmental costs, but because the economic benefits are not as great as estimated; LBP-12-5, 75 NRC 227 (2012)

reasonable alternatives under NEPA are limited to those alternatives that will bring about the ends of the proposed action; LBP-11-21, 74 NRC 115 (2011)

reasonable alternatives under NEPA do not include alternatives that are impractical, that present unique problems, or that cause extraordinary costs; LBP-15-3, 81 NRC 65 (2015)

reasonably complete discussion of possible mitigation measures must be included in a NEPA document, to allow the agency and the public a chance to properly evaluate the severity of the adverse effects; LBP-12-18, 76 NRC 127 (2012); LBP-15-16, 81 NRC 618 (2015)

reasonably foreseeable environmental impacts that have catastrophic consequences, even if their probability of occurrence is low, must be considered in the EIS; LBP-11-23, 74 NRC 287 (2011)

regardless of their classification as direct, indirect, or cumulative, impacts that are reasonably foreseeable are to be assessed in an EIS; LBP-11-26, 74 NRC 499 (2011)

reliance on mitigation to support findings with regard to environmental impacts of an activity is justified; LBP-14-7, 79 NRC 451 (2014)

requirement that an EIS contain a detailed discussion of possible mitigation measures flows both from the language of NEPA and, more expressly, from the Council on Environmental Quality’s implementing regulations; LBP-13-4, 77 NRC 107 (2013)

requirement to prepare an EIS applies to major federal actions, not to private or state actions; LBP-14-9, 80 NRC 15 (2014)

requirement to prepare an EIS is a procedural mechanism designed to ensure that agencies give proper consideration to the environmental consequences of their actions; LBP-12-18, 76 NRC 127 (2012)

rule of reason under NEPA means that an agency must only consider reasonably foreseeable impacts in its EIS, and need not address those that are remote and speculative or inconsequentially small; LBP-12-17, 76 NRC 71 (2012)

scope of an EIS is defined as the range of actions, alternatives, and impacts to be considered in the EIS; LBP-12-12, 73 NRC 742 (2012); LBP-14-9, 80 NRC 15 (2014)

scope of environmental concerns that must be considered in the EIS are discussed; LBP-11-6, 73 NRC 149 (2011)
section 51.102(c) replaced a previous version that expressly permitted licensing boards to modify the content of an EIS; CLI-15-6, 81 NRC 340 (2015)

segmentation is to be avoided in order to ensure that interrelated projects, the overall effect of which is environmentally significant, not be fractionalized into smaller, less significant actions; LBP-12-12, 75 NRC 742 (2012); LBP-14-9, 80 NRC 15 (2014)

segmentation occurs when an action is divided into component parts, each involving action with less significant environmental effects; LBP-12-12, 75 NRC 742 (2012)

separate actions are connected if, among other things, they cannot or will not proceed unless other actions are taken previously or simultaneously, or they are interdependent parts of a larger action and depend on the larger action for their justification; LBP-11-10, 73 NRC 424 (2011); LBP-12-12, 75 NRC 742 (2012)

severe accident mitigation alternatives review identifies and assesses possible plant changes such as improvements in hardware, training, or procedures that could cost-effectively mitigate the environmental impacts that would otherwise flow from a potential severe accident; LBP-11-17, 74 NRC 11 (2011)

significant health, socioeconomic, and cumulative consequences of the environmental impact of a proposed action must be disclosed; LBP-12-9, 75 NRC 615 (2012)

severe accident mitigation alternatives review identifies and assesses possible plant changes such as improvements in hardware, training, or procedures that could cost-effectively mitigate the environmental impacts that would otherwise flow from a potential severe accident; LBP-11-17, 74 NRC 11 (2011)

significant health, socioeconomic, and cumulative consequences of the environmental impact of a proposed action must be disclosed; LBP-12-9, 75 NRC 615 (2012)

similar actions are those that, when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental impacts together, such as common timing or geography, so that the agency may wish to analyze them together; LBP-13-10, 78 NRC 117 (2013)

Staff guidance documents set forth information that should be provided in the environmental report and the EIS regarding a radiological monitoring program and monitoring program acceptance criteria; LBP-11-26, 74 NRC 499 (2011)

state public service commission’s determination of need for power may be relied on by the NRC in its own analysis, as long as that determination is neither shown nor appears on its face to be seriously defective; LBP-11-6, 73 NRC 149 (2011)

statutory requirement to prepare an EIS ensures that decisionmakers will have available, and will carefully consider, detailed information concerning significant environmental impacts; CLI-15-10, 81 NRC 535 (2015)

statutory requirement to prepare an EIS guarantees that the relevant information will be made available to the larger audience, such as petitioners and state and local governments; CLI-15-10, 81 NRC 535 (2015)

taking a hard look at environmental impacts fosters both informed decisionmaking and informed public participation, and thus ensures that NRC does not act on incomplete information, only to regret its decision after it is too late to correct it; LBP-11-26, 74 NRC 499 (2011); LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)

can be no “hard look” at the costs and benefits of a proposed action unless all costs are disclosed; LBP-12-18, 76 NRC 127 (2012)

there is no NEPA requirement to use the best scientific methodology, and NEPA should be construed in the light of reason if it is not to demand virtually infinite study and resources; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012); LBP-15-3, 81 NRC 65 (2015)

there must be some assurance that mitigation measures constitute an adequate buffer against the negative impacts that result from the authorized activity to render such impacts so minor as to not warrant an EIS; LBP-14-7, 79 NRC 451 (2014)

though mitigation measures must be discussed in an EIS, NEPA does not guarantee that federally approved projects will have no adverse impacts; LBP-15-16, 81 NRC 618 (2015)

three types of actions (connected, cumulative, and similar) are to be considered in looking to the scope of an EIS; LBP-13-10, 78 NRC 117 (2013)

timely new contentions challenging the sufficiency of Staff’s NEPA documents may be filed where data or conclusions in those documents differ significantly from data or conclusions in previous versions of those documents or in applicant’s environmental report; LBP-11-39, 74 NRC 862 (2011)

to be successful, intervenors must demonstrate with adequate support that NRC Staff failed to take a hard look at important environmental questions or failed to provide a reasonable analysis; LBP-13-13, 78 NRC 246 (2013)
to bring NEPA into play, a possible future action must at least constitute a proposal pending before the agency (i.e., ripeness), and must be in some way interrelated with the action that the agency is actively considering (i.e., nexus); LBP-13-10, 78 NRC 117 (2013)
to determine whether actions are connected such that they should be discussed in the same EIS, an agency is to consider whether the actions automatically trigger other actions that may require an EIS, cannot or will not proceed unless other actions are taken previously or simultaneously, or are interdependent parts of a larger action and depend on the larger action for their justification; LBP-13-10, 78 NRC 117 (2013)
to determine whether interdependence exists among the various actions at issue, courts generally have looked to see whether the first action has independent utility; LBP-13-10, 78 NRC 117 (2013)
to issue an early site permit, NRC must comply with the National Environmental Policy Act by including in an environmental impact statement a detailed statement on the environmental impact of the proposed action, any unavoidable adverse environmental effects that cannot be avoided, and alternatives to the proposed action; LBP-11-10, 73 NRC 424 (2011)
to make an EIS something more than an exercise in frivolous boilerplate, the concept of alternatives must be bounded by some notion of feasibility; LBP-13-4, 77 NRC 107 (2013)
to require detailed analysis in the final EIS, a transmission corridor must be a proposed action rather than one that is merely contemplated; LBP-12-12, 75 NRC 742 (2012)
to the fullest extent possible, all federal agencies shall include in every major federal action significantly affecting the quality of the human environment, a detailed statement by the responsible official on the environmental impact of the proposed action; LBP-13-4, 77 NRC 107 (2013)
under NEPA, an agency need not discuss alternatives that are infeasible, ineffective, or inconsistent with the basic policy objectives for the management of the area; LBP-13-9, 78 NRC 37 (2013)
under NEPA, NRC must assess the environmental impacts of a proposed facility, including those impacts associated with greenhouse gas emissions by the proposed facility; LBP-11-26, 74 NRC 499 (2011)
under NEPA, NRC Staff must consider the cumulative impact of greenhouse gas emissions from a proposed facility; LBP-11-7, 73 NRC 254 (2011)
until the safety evaluation report and Staff NEPA documents have been issued, a licensing board is generally prohibited from holding the hearing on the license application; LBP-11-22, 74 NRC 259 (2011)
when a decision to which NEPA obligations attach is made without the informed environmental consideration that NEPA requires, the harm that NEPA intends to prevent has been suffered; LBP-14-9, 80 NRC 15 (2014)
when adequacy of an EIS mitigation strategy is challenged, the determining issue is whether the agency took a sufficiently hard look at environmental consequences, and ensured that its decision was supported by a completely informed record; LBP-15-16, 81 NRC 618 (2015)
when agencies propose major federal actions significantly affecting the quality of the human environment, preparation of an EIS is required; LBP-12-18, 76 NRC 127 (2012); LBP-14-9, 80 NRC 15 (2014)
when an EIS is prepared at the early site permit stage, NRC Staff must prepare a supplemental EIS for the combined license focusing on issues related to the impacts of construction and operation for which new and significant information has been identified; CLI-12-2, 75 NRC 63 (2012)
when considering alternatives, agencies are to rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives that were eliminated from detailed study, briefly discuss the reasons for their having been eliminated; LBP-14-9, 80 NRC 15 (2014)
when drafting an EIS, agency’s scope of review must include analysis of any connected or cumulative actions to the central proposed action; LBP-15-16, 81 NRC 618 (2015)
when information relevant to a reasonably foreseeable environmental effect is incomplete or unavailable, an agency is required to obtain the unavailable information and include it in the EIS as long as the costs are not exorbitant; LBP-14-9, 80 NRC 15 (2014)
when NRC Staff issues the environmental impact statement, intervenors have an opportunity to either amend admitted contentions or proffer new contentions based on data or conclusions in the NRC draft or final EIS or any supplements relating thereto, that differ significantly from the data or conclusions in the applicant’s documents; LBP-11-6, 73 NRC 149 (2011)
when omissions are cured by the subsequent issuance of licensing-related documents, a contention of omission must be disposed of or modified; LBP-12-5, 75 NRC 227 (2012)
when reviewing a discrete license application filed by a private applicant, a federal agency may appropriately accord substantial weight to the preferences of the applicant in siting and design of the project, taking into account the economic goals of the project’s sponsor; CLI-12-5, 75 NRC 301 (2012)
when several proposals for actions that will have cumulative or synergistic environmental impact upon a region are pending concurrently before an agency, their environmental consequences must be considered together; LBP-13-10, 78 NRC 117 (2013)
when taking the requisite hard look at environmental consequences of the alternatives to the proposed licensing action, the EIS must discuss the no-action alternative; LBP-13-13, 78 NRC 246 (2013)
where an environmental assessment resulted in a finding of no significant impact, a full EIS is unnecessary; CLI-15-17, 82 NRC 33 (2015)
where an environmental impact statement is involved, hearings on environmental issues addressed in the EIS may not commence before issuance of the final EIS; CLI-15-17, 82 NRC 33 (2015)
where the agency has found mitigation strategies necessary to alleviate a potential impact, the associated discussion should be reasonably complete to properly evaluate the severity of the adverse effects; LBP-15-11, 81 NRC 401 (2015)
with regard to reasonably foreseeable impacts, NEPA does not call for certainty or precision, but an estimate of anticipated (not unduly speculative) impacts; LBP-15-3, 81 NRC 65 (2015)
within the rule of reason, an EIS must address both the direct and indirect effects or impacts; LBP-13-4, 77 NRC 107 (2013)
without substantive, comparative environmental impact information regarding other possible courses of action, the ability of an EIS to inform agency deliberation and facilitate public involvement would be greatly degraded; LBP-11-23, 74 NRC 287 (2011)

See also Draft Environmental Impact Statement; Final Environmental Impact Statement; Generic Environmental Impact Statement; Supplemental Environmental Impact Statement

ENVIRONMENTAL ISSUES

admitted contentions challenging applicant’s environmental report may, in appropriate circumstances, function as challenges to similar portions of NRC Staff’s environmental impact statement; LBP-13-9, 78 NRC 37 (2013); LBP-15-11, 81 NRC 401 (2015)
all environmental issues concerning severe accident mitigation design alternatives associated with the information in NRC’s final environmental assessment for certified reactor design are deemed resolved for plants whose site parameters are within those specified in the technical support document; LBP-11-7, 73 NRC 254 (2011)
although all environmental contentions may, in a general sense, ultimately challenge NRC’s compliance with NEPA, NRC regulations expressly permit the lodging of contentions against applicant’s environmental report well before release of NRC’s NEPA documents; LBP-11-38, 74 NRC 817 (2011)
although applicant carries the burden of proof on safety issues, NRC Staff has the overall burden of complying with NEPA; LBP-13-13, 78 NRC 246 (2013)
although environmental contentions are, in essence, challenges to NRC Staff’s compliance with NEPA, those contentions must be raised, if possible, in response to applicant’s environmental report; CLI-15-1, 81 NRC 1 (2015)
although environmental contentions ultimately challenge NRC’s compliance with the National Environmental Policy Act, applicant may advocate for a particular challenged position set forth in the environmental impact statement; LBP-12-5, 75 NRC 227 (2012); LBP-14-7, 79 NRC 451 (2014)
although safety issues are reviewed under the adequacy and sufficiency standard, licensing boards conducting mandatory hearings must independently consider the final balance among the conflicting costs and benefits when reviewing NEPA issues; LBP-12-21, 76 NRC 218 (2012)
at the outset of proceedings, NEPA contentions are to be based on the applicant’s environmental report; LBP-11-32, 74 NRC 654 (2011)
because two of the previously admitted contentions allege NEPA violations, new NEPA contentions put forward by the intervenors would not unreasonably broaden the issues; LBP-12-12, 75 NRC 742 (2012)
boards may construe an admitted contention contesting the environmental impact statement as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-13-9, 78 NRC 37 (2013)
boards’ ultimate NEPA judgments are made on the basis of the entire adjudicatory record in addition to NRC Staff’s final supplemental environmental impact statement; LBP-15-16, 81 NRC 618 (2015)
Category 1 issues are environmental issues that NRC has resolved generically and therefore does not consider in specific license renewal proceedings; CLI-15-18, 82 NRC 135 (2015)

Category 1 issues are not subject to challenge in a relicensing proceeding, absent a waiver under 10 C.F.R. 2.335, because they involve environmental effects that are essentially similar for all plants and need not be assessed repeatedly on a site-specific basis; LBP-11-13, 73 NRC 534 (2011); LBP-11-21, 74 NRC 115 (2011); LBP-15-5, 81 NRC 249 (2015)

Category 2 issues require plant-specific review as part of license renewal; LBP-12-8, 75 NRC 539 (2012)

Commission has codified generic determinations for certain environmental issues, identified as Category 1 issues, for license renewal proceedings; LBP-11-13, 73 NRC 534 (2011)

Completion of NRC Staff’s final environmental review document always must precede the conduct of hearings on environmental issues; LBP-11-30, 74 NRC 627 (2011)

Contention migrates when a board construes a contention challenging the environmental section of an application as a challenge to a subsequently issued Staff NEPA document without petitioner amending the contention; CLI-15-17, 82 NRC 33 (2015)

Contention of omission on a matter related to the National Environmental Policy Act must describe the information that should have been included in applicant’s environmental report and provide the legal basis that requires the omitted information to be included; LBP-15-5, 81 NRC 249 (2015)

Contentions arising under NEPA must be filed based on applicant’s environmental report; LBP-15-19, 81 NRC 815 (2015)

Cumulative effects and improper segmentation issues raise separate but similar questions; LBP-14-6, 79 NRC 404 (2014)

Despite the ability of both NRC Staff and applicant to present evidence and witnesses on environmental issues, the ultimate issue in determining NEPA compliance is the adequacy of NRC Staff’s environmental review, not applicant’s environmental report; LBP-13-13, 78 NRC 246 (2013)

Environmental contentions are expected in response to applicant’s or NRC Staff’s environmental reviews, and contentions regarding their adequacy cannot be expected to be proffered at an earlier stage of the proceeding before the documents are available; LBP-15-11, 81 NRC 401 (2015)

Environmental implications of new and significant information must be considered under NEPA before NRC may grant renewed operating licenses; LBP-11-32, 74 NRC 654 (2011)

Environmental waste confidence contentions are dismissed; CLI-15-6, 81 NRC 340 (2015)

Failure to include all connected actions within the scope of the proposed action is generally referred to as segmentation; LBP-14-6, 79 NRC 404 (2014)

Flyspecking of environmental documents is inappropriate for environmental contentions; CLI-14-2, 79 NRC 11 (2014)

For NEPA contentions, the burden of proof shifts to NRC Staff, because NRC, not applicant, bears the ultimate burden of complying with NEPA; LBP-11-38, 74 NRC 817 (2011); LBP-12-5, 75 NRC 227 (2012)

Health, safety, and environmental concerns do not constitute liberty or property subject to due process protection; LBP-11-4, 73 NRC 91 (2011)

Hearings on environmental issues addressed in the environmental impact statement may not commence before issuance of the final EIS; LBP-13-13, 78 NRC 246 (2013)

If a board grants summary disposition of a foreign ownership contention, it could terminate the proceeding or move ahead with a pending environmental contention; LBP-12-19, 76 NRC 184 (2012)

If new information becomes available that, e.g., an endangered species has been living on the site or that the facility has been leaking tritium into the groundwater, then a new contention alleging that the environmental report as originally filed did not comply with Part 51 may be filed; LBP-11-32, 74 NRC 654 (2011)

If there are data or conclusions in the NRC draft or final environmental impact statement that differ significantly from data or conclusions in applicant’s documents, late-filing standards are no bar to the admission of properly supported contentions; LBP-15-11, 81 NRC 401 (2015)

In certain instances, contentions challenging an environmental report are deemed to migrate from challenging applicant’s ER to challenging NRC Staff’s environmental assessment; LBP-14-6, 79 NRC 404 (2014)
intervenors are expected to file contentions on the basis of applicant’s environmental report and not delay
their contentions until after NRC Staff issues its environmental analysis; CLI-12-13, 75 NRC 681
(2012); LBP-12-12, 75 NRC 742 (2012)
issue is “significant” for the purposes of reopening a record if it will paint a seriously different picture of
the environmental impact of the proposed project from what was previously envisioned; LBP-12-1, 75
NRC 1 (2012); LBP-12-10, 75 NRC 633 (2012)
issue raised in untimely motion to reopen could be exceptionally grave depending on the circumstances of
the case and the facts presented but the motion will be granted rarely and only in truly extraordinary
circumstances; CLI-12-21, 76 NRC 491 (2012)
issues that the Commission must consider in the mandatory portion of a combined license proceeding are
outlined; CLI-15-13, 81 NRC 555 (2015)
license applications, not Staff’s review, are to be the focus of a licensing adjudication; LBP-13-6, 77
NRC 253 (2013)
license renewal provisions cover environmental issues relating to onsite spent fuel storage generically, and
all such issues, including accident risk, fall outside the scope of license renewal proceedings; LBP-15-5,
81 NRC 249 (2015)
migration tenet for admitted contentions applies when information in the draft environmental impact
statement is sufficiently similar to the information in the environmental report; LBP-13-9, 78 NRC 37
(2013); LBP-14-6, 79 NRC 404 (2014)
migration tenet helps to expedite hearings by obviating the need to file and litigate the same contention
up to three times and applies when the information contained in a subsequently released document is
sufficiently similar to the information contained in the original document upon which the original
contention was filed; LBP-12-23, 76 NRC 445 (2012)
NEPA-related contentions initially are based on applicant’s environmental report which will inform NRC
Staff’s NEPA review; LBP-13-10, 78 NRC 117 (2013)
new contentions on the safety and environmental implications of the NRC Task Force Report on the
Fukushima Dai-ichi accident are premature and must be denied on that basis without regard to any
other considerations; LBP-11-27, 74 NRC 591 (2011)
NRC has not expressly adopted Council on Environmental Quality regulations, but they are entitled to
considerable deference; LBP-15-3, 81 NRC 65 (2015)
NRC hearings on NEPA issues focus entirely on the adequacy of NRC Staff’s work; LBP-15-3, 81 NRC
NRC Staff’s first attempt to analyze a NEPA issue gives rise to an intervenor’s first opportunity to raise
contentions on the adequacy of this assessment; LBP-15-11, 81 NRC 401 (2015)
NRC Staff’s safety analysis and environmental analysis occur separately, and intervenors are expected to
raise safety challenges in response to the safety reports and environmental challenges in response to the
environmental statements; LBP-15-11, 81 NRC 401 (2015)
NRC’s longstanding practice of considering environmental issues through general rulemaking in
appropriate circumstances has been endorsed by higher courts; LBP-12-18, 76 NRC 127 (2012)
petitioner may amend its contentions or file new contentions if there are data or conclusions in the NRC
draft or final environmental impact statement or any supplements thereto, that differ significantly from
the data or conclusions in applicant’s documents; LBP-11-32, 74 NRC 654 (2011); LBP-11-33, 74 NRC
675 (2011); LBP-15-11, 81 NRC 401 (2015)
petitioner must base its environmental contentions on information available at the time its intervention
petition is to be filed, including applicant’s environmental report; CLI-14-2, 79 NRC 11 (2014)
proposed transmission-line corridor is discussed; CLI-15-13, 81 NRC 555 (2015)
NEPA compliance, on NRC Staff; CLI-15-17, 82 NRC 33 (2015)
regardless of the issuance of the license, the burden at hearing remains on applicant and, with respect to
segmentation is to be avoided in order to ensure that interrelated projects, the overall effect of which is
environmentally significant, not be fractionalized into smaller, less significant actions; LBP-14-6, 79
NRC 404 (2014)
segmentation or piecemealing occurs when an action is divided into component parts, each involving action with less significant environmental effects; LBP-14-6, 79 NRC 404 (2014)
severe accident mitigation alternatives analysis is a Category 2 issue; CLI-12-19, 76 NRC 377 (2012)
severe accident mitigation alternatives analysis is conducted pursuant to the National Environmental Policy Act, and thus is an environmental issue, not a safety issue; LBP-15-1, 81 NRC 15 (2015)
significant change in the nature of the purported NEPA imperfection, from one focusing on comprehensive information omission to one centered on a deficient analysis of subsequently supplied information, warrants issue modification by the complaining party because otherwise, absent any new pleading, the other parties would be left to speculate whether the concerns first expressed had been satisfied by the new information; LBP-12-5, 75 NRC 227 (2012)

site-specific environmental issues are Category 2 issues and thus admissible in operating license renewal proceedings; LBP-12-8, 75 NRC 539 (2012)
to assess whether a contention is within the scope of, and material to, the proceeding, boards need to know the legal basis (safety or environmental) of the contention; LBP-13-8, 78 NRC 1 (2013)
to bring NEPA into play, a possible future action must at least constitute a proposal pending before the agency (i.e., ripeness), and must be in some way interrelated with the action that the agency is actively considering (i.e., nexus); LBP-14-6, 79 NRC 404 (2014)

unless petitioner sets forth a supported contention pointing to an apparent error or deficiency that may have significantly skewed the environmental conclusions, there is no genuine material dispute for hearing; LBP-15-5, 81 NRC 249 (2015)
when NEPA contentions are involved, the burden of proof shifts to NRC Staff; LBP-15-16, 81 NRC 618 (2015)
where the rules in question, as well as the contention itself, address compliance with NEPA and not safety issues under the Atomic Energy Act, the rule waiver is needed to address a significant environmental issue instead of a significant safety issue; LBP-14-16, 80 NRC 183 (2014)
See also National Environmental Policy Act

ENVIRONMENTAL JUSTICE
Exec. Order No. 12898 did not, in itself, create new substantive authority for federal agencies and thus NRC determined that it would endeavor to carry out the EJ principles as part of the agency’s responsibilities under NEPA; CLI-15-6, 81 NRC 340 (2015)
federal agencies shall identify and consider whether their actions will cause disproportionate environmental impacts on minority, low-income, or other sensitive populations; LBP-12-24, 76 NRC 503 (2012)
impacts to subsistence consumption must be evaluated as part of the site-specific EJ analysis; LBP-15-5, 81 NRC 249 (2015)
license renewal review must consider EJ, which is a Category 2 issue; CLI-15-6, 81 NRC 340 (2015); LBP-15-5, 81 NRC 249 (2015)
NRC must prepare an environmental impact statement that adequately evaluates the environmental impacts of relicensing, including impacts to tribal hunting and fishing rights and subsistence consumption; LBP-15-5, 81 NRC 249 (2015)
NRC Staff examined special pathways of exposure that could lead to a higher level of radiation exposure in minority and low-income populations in the area, including subsistence consumption of fish, native vegetation, surface waters, sediments, and local produce; CLI-15-6, 81 NRC 340 (2015)
NRC will make an effort under NEPA to become aware of the demographic and economic circumstances of local communities; LBP-13-13, 78 NRC 246 (2013)
NRC’s goal is to identify and adequately weigh, or mitigate, effects on low-income and minority communities that become apparent only by considering factors peculiar to those communities; LBP-13-13, 78 NRC 246 (2013)
original contention did not point to any specific grievance with the environmental justice discussion provided in applicant’s environmental report and so the board should have applied the standards in 10 C.F.R. 2.309(c) to determine whether petitioner had demonstrated good cause for its late filing; CLI-15-18, 82 NRC 135 (2015)
 petitioner’s attempt to tie NEPA environmental justice claim to Fukushima Task Force report is an improper effort to interpose concerns that could have been raised at the outset of the proceeding; LBP-11-37, 74 NRC 774 (2011)
significant, high, and adverse disparate impacts are necessary to form a valid environmental justice contention; LBP-12-24, 76 NRC 503 (2012)
subsistence consumption is a subset of EJ; LBP-15-5, 81 NRC 249 (2015)
ENVIRONMENTAL PROTECTION AGENCY
AERMOD model for demonstrating compliance with EPA regulations and for state air quality protection planning is discussed; LBP-11-26, 74 NRC 499 (2011)
agency is recognized as an expert in environmental protection, and its final policy determinations deserve consideration; LBP-15-15, 81 NRC 598 (2015)
EPA also has granted authority to some states to implement, maintain, and enforce their own EPA-compliant air quality programs through State Ambient Air Quality Standards; LBP-11-26, 74 NRC 499 (2011)
in parallel with NRC Staff’s role under NEPA to assess environmental impacts, EPA possesses authority under the Clean Air Act to set numerical standards for air pollutants from emission sources; LBP-11-26, 74 NRC 499 (2011)
radon emissions are regulated by EPA; LBP-15-16, 81 NRC 618 (2015)
surface roughness, albedo, and Bowen ratio inputs to the AERMOD model are discussed; LBP-11-26, 74 NRC 499 (2011)
ENVIRONMENTAL QUALIFICATION OF ELECTRICAL EQUIPMENT
cables important to safety must be designed to meet their intended function for the environment that they are subjected to and if cables have been exposed to conditions for which they are not designed, licensees must demonstrate, through testing or monitoring, reasonable assurance that the cables can perform their intended design function for the licensed operating term; DD-13-2, 78 NRC 185 (2013)
cables subject to the environmental qualification standards of 10 C.F.R. 50.49 are important to the safety of a nuclear power plant and are required to function during an accident when exposed to harsh environmental conditions; LBP-13-13, 78 NRC 246 (2013)
electrical equipment important to safety but located in a mild environment does not fall within the scope of 10 C.F.R. 50.49(c); LBP-11-20, 74 NRC 65 (2011)
environmental qualification program must include and be based on temperature and pressure, humidity, submergence (if the equipment could be subject to submergence) that could result from a design-basis accident, chemical effects, aging, synergistic effects, and margins; DD-15-11, 82 NRC 361 (2015)
equipment important to safety located in an environment that would at no time be significantly more severe than the environment that would occur during normal plant operation are not included within the scope of 10 C.F.R. 50.49(c); CLI-12-10, 75 NRC 479 (2012)
lack of clarity about which electrical cables might be subject to any saltwater environment, however high or low the concentration, and about the effects of and efforts to address this, is a level of concern sufficient to warrant further inquiry and exploration; LBP-11-20, 74 NRC 65 (2011)
licensees are required to establish a program for qualifying certain defined electric equipment; LBP-11-20, 74 NRC 65 (2011)
licensees have identified, and NRC has accepted, lists of equipment important to safety subject to environmental qualification; DD-15-11, 82 NRC 361 (2015)
licensees must ensure that electrical cables are designed to function in environmental conditions during normal operation and during accidents; DD-13-2, 78 NRC 185 (2013)
licensees must establish an environmental qualification program for electrical equipment important to safety that would be exposed to harsh environmental conditions expected to develop as a result of design-basis accidents; DD-15-11, 82 NRC 361 (2015)
mild environment would at no time be significantly more severe than the environment that would occur during normal plant operation, including anticipated operational occurrences; CLI-12-10, 75 NRC 479 (2012)
particular requirements for the environmental qualification of electric components important to safety for nuclear power plants are set forth in 10 C.F.R. 50.49; CLI-12-10, 75 NRC 479 (2012)
request for enforcement action to address concerns about operability of the submerged and/or wetted non-environmentally qualified inaccessible cables is denied; DD-13-2, 78 NRC 185 (2013)
requirements to establish an environmental qualification program do not apply to equipment in a mild environment; DD-15-11, 82 NRC 361 (2015)
safety-related electrical equipment that must be environmentally qualified is described; LBP-11-20, 74 NRC 65 (2011)

ENVIRONMENTAL REPORT

absence of any reference to “cumulative impacts” in a document incorporated by reference negates any intention to incorporate any discussion of cumulative impacts from these prior documents into an ER, consistent with the maxim of expressio unius est exclusio alterius, i.e., the expression of one thing is to the exclusion of another; LBP-12-24, 76 NRC 503 (2012)

absent voluntary action by applicant to amend its ER, intervenor wishing to raise new or revised post-ER environmental concerns must await issuance of Staff’s draft environmental impact statement; LBP-11-37, 74 NRC 774 (2011)

admissibility of contention that ER lacks site-specific safety and environmental findings regarding storage and disposal of spent fuel is decided; LBP-15-5, 81 NRC 249 (2015)

admitted contentions challenging applicant’s ER may, in appropriate circumstances, function as challenges to similar portions of NRC Staff’s environmental impact statement; LBP-14-5, 79 NRC 377 (2014)

alleged defects in applicant’s ER may be mooted by the content of NRC’s environmental impact statement or supplemental environmental impact statement; LBP-11-28, 74 NRC 604 (2011)

alternative that fails to meet the purpose of the project does not need to be further examined in the ER; LBP-11-6, 73 NRC 149 (2011)

although a contention contesting applicant’s ER generally may be viewed as a challenge to NRC Staff’s subsequent draft environmental impact statement, new claims must be raised in a new or amended contention; LBP-14-5, 79 NRC 377 (2014)

although a draft supplemental environmental impact statement may rely in part on applicant’s ER, NRC Staff must independently evaluate and be responsible for the reliability of all information used in the DSEIS; LBP-15-3, 81 NRC 65 (2015)

although all environmental contentions may, in a general sense, ultimately challenge the NRC’s compliance with NEPA, NRC regulations expressly permit the lodging of contentions against applicant’s ER well before release of NRC’s NEPA documents; LBP-11-38, 74 NRC 817 (2011)

although environmental contentions are, in essence, challenges to NRC Staff’s compliance with NEPA, those contentions must be raised, if possible, in response to applicant’s ER; CLI-15-1, 81 NRC 1 (2015)

although there are many possible combinations of wind and solar power, storage, and natural gas, it is not necessary to examine every possible combination; LBP-11-4, 73 NRC 91 (2011)

applicant and Staff treatment of need for the construction and operation of uranium enrichment facilities should explain why the proposed action is needed; describe the underlying need for the proposed action, but should not be written merely as a justification of the proposed action or to alter the choice of alternatives; LBP-11-26, 74 NRC 499 (2011)

applicant for a license to possess and use source and AEA § 11e(2) byproduct material for the purpose of in situ uranium recovery must submit an ER with its application; LBP-15-5, 81 NRC 65 (2015)

applicant for license renewal must address environmental impacts of the proposed action and compare those impacts to the impacts of alternative actions, but need only consider those alternatives that are reasonable; LBP-12-15, 76 NRC 14 (2012)

applicant had no legal duty to update its environmental report to encompass matters that occurred after that report was filed with the agency; LBP-12-15, 76 NRC 14 (2012)

applicant is exempt from including in its environmental report a site-specific severe accident mitigation alternatives analysis because NRC Staff previously considered severe accident mitigation design alternatives in its final environmental impact statement; CLI-13-7, 78 NRC 199 (2013)

applicant is not barred from voluntarily supplementing its ER; LBP-11-32, 74 NRC 654 (2011)

applicant is not required to assess cumulative impacts in its ER, but NUREG-1748 requests that applicant discuss any past, present, or reasonably foreseeable future actions that could result in cumulative impacts when combined with the proposed action; LBP-12-24, 76 NRC 503 (2012)

applicant is not required to discuss the federal government’s trust responsibility to Indian tribes in its ER; LBP-12-24, 76 NRC 503 (2012)

applicant is not required to explain every aspect of the process it must pursue in the course of obtaining a federal permit, license, or approval; LBP-12-15, 76 NRC 14 (2012)
applicant is not required to update or otherwise supplement an ER subsequent to the time that the Staff finds that report acceptable for review as part of a license application; LBP-11-37, 74 NRC 774 (2011)
applicant is to provide an analysis of alternatives to the proposed action that is sufficiently complete to aid NRC Staff in developing and exploring its own set of alternatives; LBP-12-8, 75 NRC 530 (2012)
applicant is to provide an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-12-8, 75 NRC 539 (2012)
applicant may bear the burden of proof on contentions asserting deficiencies in its ER and where the applicant becomes a proponent of a particular challenged position set forth in the environmental impact statement; LBP-11-38, 74 NRC 817 (2011)
applicant may update an ER if relevant new and significant information becomes available but is under no regulatory or statutory obligation to do so; LBP-11-33, 74 NRC 675 (2011); LBP-11-34, 74 NRC 685 (2011)
applicant must analyze environmental impacts of a license renewal on matters identified as Category 2 issues in 10 C.F.R. Part 51, Subpart A, Appendix B; LBP-15-5, 81 NRC 249 (2015)
applicant must describe and discuss reasonably foreseeable environmental impacts in proportion to their significance and adverse environmental effects that cannot be avoided should the proposal be implemented; LBP-11-6, 73 NRC 149 (2011); LBP-11-16, 73 NRC 645 (2011)
applicant must describe the proposed action, state its purposes, and describe the environment affected; LBP-15-3, 81 NRC 65 (2015)
applicant must discuss appropriate alternatives to recommended courses of action in any proposal that involves unresolved conflicts concerning alternative uses of available resources; LBP-11-6, 73 NRC 149 (2011)
applicant must discuss in its ER the impact of the proposed action on the environment; LBP-12-24, 76 NRC 503 (2012)
applicant must discuss the five elements of 10 C.F.R. 51.45(b)(1)-(5); LBP-15-3, 81 NRC 65 (2015)
applicant must discuss the status of its compliance with environmental quality standards and requirements that have been imposed by federal, state, regional, and local agencies having responsibility for environmental protection; LBP-12-12, 75 NRC 742 (2012)
applicant must identify and discuss the status of all permits, licenses, and other approvals that are required from federal, state, and local agencies; LBP-11-16, 73 NRC 645 (2011)
applicant must include a discussion of severe accident mitigation alternatives if NRC has not considered them previously for the applicant’s plant; CLI-13-7, 78 NRC 199 (2013)
applicant must include an analysis that considers and balances the environmental effects of the proposed action, the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-11-6, 73 NRC 149 (2011)
applicant must provide a discussion of the no-action alternative in its ER; LBP-12-8, 75 NRC 539 (2012)
applicant must provide an analysis of the cumulative impacts of the activities to be authorized by a combined license; LBP-11-6, 73 NRC 149 (2011)
applicant must update its license renewal application annually to reflect changes in its current licensing basis, but such updating does not explicitly extend to the ER; LBP-11-32, 74 NRC 654 (2011)
applicant need consider only those environmental impacts that are reasonably foreseeable, not those that are remote and speculative possibilities; LBP-12-7, 75 NRC 503 (2012); LBP-12-9, 75 NRC 615 (2012)
applicant need not submit an ER until the final stage of decommissioning as part of its license termination plan; LBP-15-24, 82 NRC 68 (2015)
applicant need only consider the range of alternatives that are capable of achieving the goals of the proposed action; LBP-11-13, 73 NRC 534 (2011)
applicant need only discuss reasonably foreseeable environmental impacts of a proposed action; LBP-11-6, 73 NRC 149 (2011)
applicant owes no duty to address the federal government’s trust responsibility in its ER; LBP-14-6, 79 NRC 404 (2014)
applicants environmental report is to discuss any irreversible and irretrievable commitments of resources that would be involved in the proposed action; LBP-12-3, 75 NRC 164 (2012)
applicant’s alternatives analysis must be sufficiently complete to aid the Commission in developing and exploring appropriate alternatives to the proposed action; LBP-11-13, 73 NRC 534 (2011)
applicant’s alternatives analysis need not discuss every conceivable alternative to the proposed action, but rather only feasible, non-speculative, and reasonable alternatives; LBP-11-13, 73 NRC 534 (2011)
applicant’s ER is not the vehicle for the NRC Staff’s safety review; LBP-11-6, 73 NRC 149 (2011)
applicant’s ER must contain a sufficient analysis of potential environmental consequences and alternatives to enable the NRC Staff to prepare an environmental impact statement that fulfills the agency’s obligations under NEPA; LBP-11-14, 73 NRC 591 (2011)
applicant’s ER must contain analyses of the environmental impacts of the proposed action for those matters identified as Category 2 license renewal issues in Appendix B; LBP-11-21, 74 NRC 115 (2011)
applicant’s ER must include new information when a prior license has been issued for the facility, and the ER in question is associated with a subsequent license for the same facility; LBP-11-32, 74 NRC 654 (2011)
applicant’s ER must provide sufficient information about alternatives to enable NRC Staff to prepare an environmental impact statement in compliance with NEPA; LBP-11-21, 74 NRC 115 (2011)
applicant’s ER need only discuss those alternatives that will bring about the ends of the proposed action; CLI-12-5, 75 NRC 301 (2012)
applicant’s ER should contain sufficient data to aid the Commission in its development of an independent analysis; LBP-11-6, 73 NRC 149 (2011)
applicant’s obligation is to consider alternatives as they exist and are likely to exist; LBP-11-2, 73 NRC 28 (2011)
applicants may submit a supplement to an environmental report at any time; CLI-12-13, 75 NRC 681 (2012); LBP-12-13, 75 NRC 784 (2012)
applicants must discuss new severe accident mitigation alternatives addressed in more recent reports for other nuclear power plants of the same or similar boiling water reactor Mark II design; LBP-14-15, 80 NRC 151 (2014)
applicants still face a continuing possibility of contentions in adjudicatory proceedings based upon omissions or deficiencies in their environmental report because NRC rules require the filing of contentions as early as possible; CLI-12-13, 75 NRC 681 (2012)
application for land disposal of radioactive waste may incorporate by reference information contained in the application or in any previous application, statement, or report filed with the Commission provided that such references are clear and specific; LBP-12-24, 76 NRC 503 (2012)
as a practical matter, Staff relies heavily upon applicant’s environmental report in preparing its environmental impact statement; LBP-11-38, 74 NRC 817 (2011); LBP-14-7, 79 NRC 451 (2014)
at the outset of proceedings, NEPA contentions are to be based on applicant’s ER; LBP-11-32, 74 NRC 654 (2011)
because Category 1 issues in 10 C.F.R. Part 51, Subpart A, Appendix B already have been reviewed on a generic basis, applicant’s ER need not provide a site-specific analysis of these issues; CLI-11-11, 74 NRC 427 (2011); LBP-11-21, 74 NRC 115 (2011)
because it is a Category 1 issue, license renewal applicants need not address bird collisions in their environmental reports unless they are aware of relevant new and significant information; CLI-13-7, 78 NRC 199 (2013)
because NRC Staff relies heavily on the applicant’s ER in preparing the environmental impact statement, should the applicant become a proponent of a particular challenged position set forth in the EIS, the applicant, as such a proponent, also has the burden on that matter; LBP-15-3, 81 NRC 65 (2015); LBP-15-16, 81 NRC 618 (2015)
because petitioner fails to show that the possibility of site inundation is based on new and materially different information added to the ER as part of applicant’s revised low-level radioactive waste management plan or identify any new and materially different information on which its site-inundation argument is based, this argument is untimely; LBP-12-7, 75 NRC 503 (2012)
board may construe an admitted contention contesting applicant’s ER as a challenge to a subsequently issued draft or final environmental impact statement without the necessity for intervenors to file a new or amended contention; LBP-15-11, 81 NRC 401 (2015)
boards do not sit to “fliespeck” environmental documents or to add details or nuances, but the ER or environmental impact statement must come to grips with all important considerations; LBP-11-16, 73 NRC 645 (2011); LBP-15-5, 81 NRC 249 (2015)

boards may construe an admitted contention contesting the ER as a challenge to a subsequently issued draft or final environmental impact statement without the need for intervenors to file a new or amended contention; LBP-12-23, 76 NRC 445 (2012)

Category 1 issues are those resolved generically by the generic environmental impact statement and need not be addressed as part of license renewal; LBP-12-8, 75 NRC 539 (2012)

Category 2 issues are reviewed on a site-specific basis because they have not been determined to be essentially similar for all plants; LBP-15-5, 81 NRC 249 (2015)

challenge that applicant’s environmental report omits material that petitioner alleges is required to be there is within the scope of the proceeding; LBP-12-8, 75 NRC 539 (2012)

challenging the ER preserves petitioner’s right to challenge the environmental impact statement at a later stage of the proceedings; LBP-12-8, 75 NRC 539 (2012)

climate change is considered an environmental impact that must be addressed; LBP-11-16, 73 NRC 645 (2011)

Commission decision to decline review of a referred question does not constitute an endorsement of the board’s views on the question of an applicant’s duty to supplement its environmental report; CLI-12-13, 75 NRC 681 (2012)

commitment to implement an aging management plan that NRC finds is consistent with the GALL Report constitutes one acceptable method for demonstrating that the effects of aging will be adequately managed; LBP-11-2, 73 NRC 28 (2011)

contention asserting that a license renewal ER must include a discussion of need for power is inadmissible; LBP-11-13, 73 NRC 534 (2011)

contention based solely on omissions from the ER is rendered moot when the missing information is supplied; LBP-11-14, 73 NRC 591 (2011)

contention claiming that the ER’s discussion of environmental effects and cumulative impacts of seepage from the cooling basin into groundwater and surface water through undocumented or unplugged oil and gas wells and borings fails to comply with NRC requirements is admissible; LBP-11-16, 73 NRC 645 (2011)

contention is within the scope of a license renewal proceeding because NRC regulations require that the ER include a severe accident mitigation alternatives analysis; LBP-15-5, 81 NRC 249 (2015)

contention of omission on a matter related to the National Environmental Policy Act must describe the information that should have been included in applicant’s ER and provide the legal basis that requires the omitted information to be included; LBP-15-5, 81 NRC 249 (2015)

contention that alleges an omission, not an inadequacy, of an ER’s analysis of socioeconomic impacts raises an issue that is not material to any finding NRC must make in an early site permit proceeding; LBP-11-16, 73 NRC 645 (2011)

contention that applicant fails to include need-for-power analyses in its ERs for operating license renewal is inadmissible; LBP-13-12, 78 NRC 239 (2013)

contention that applicant must include a discussion of environmental impacts of spent fuel pool leakage, fires, and lack of a spent fuel repository is dismissed; LBP-14-12, 80 NRC 138 (2014)

contention that challenges lack of severe accident mitigation alternatives analysis in applicant’s environmental report is inadmissible; CLI-13-7, 78 NRC 199 (2013)

contention that ER does not satisfy NEPA because it does not consider a range of mitigation measures to mitigate the risk of catastrophic fires in densely packed, closed-frame spent fuel storage pools is decided; LBP-15-5, 81 NRC 249 (2015)

contention that ER fails to accurately and thoroughly conduct severe accident mitigation alternatives analysis to design vulnerability of GE Mark I boiling water reactor pressure suppression containment system and environmental consequences of a to-be-anticipated severe accident post-Fukushima Daiichi fails to present a genuine material dispute; LBP-15-5, 81 NRC 249 (2015)

contention that ER is inadequate insofar as it does not consider the risk of spent fuel pool fires is inadmissible; LBP-15-5, 81 NRC 249 (2015)

contention that raises a genuine dispute with the sufficiency of the cumulative impacts analysis, or the lack thereof, in the ER is admissible; LBP-12-3, 75 NRC 164 (2012)
contention that the ER fails to satisfy 10 C.F.R. 51.53(c)(2) because it does not include information about plans to modify the facility in response to post-Fukushima enforcement order is inadmissible; LBP-12-15, 76 NRC 14 (2012)
contention that the ER is deficient in concluding that environmental impacts from proposed deep injection wells will be small because the ER fails to identify the source data of the chemical concentrations for ethylbenzene, heptachlor, tetrachloroethylene, and toluene is admissible; LBP-12-9, 75 NRC 615 (2012)
contention that was originally admitted as a challenge to the ER may be treated as a challenge to the similar section of the draft environmental impact statement; LBP-11-1, 73 NRC 19 (2011)
contentions arising under NEPA must be filed based on applicant’s ER; LBP-15-19, 81 NRC 815 (2015)
contentions challenging an ER may be viewed as a challenge to the NRC Staff’s subsequent draft or final environmental impact statement; CLI-12-1, 75 NRC 39 (2012)
contentions must directly controvert relevant sections of the ER; LBP-11-16, 73 NRC 645 (2011)
current licensing basis of an operating license shall continue during the license renewal period, but these conditions may be supplemented or amended as necessary to protect the environment during the term of the renewed license and will be derived from information contained in the supplement to the environmental report, as analyzed and evaluated in the NRC record of decision; LBP-11-17, 74 NRC 11 (2011)
despite the ability of both NRC Staff and applicant to present evidence and witnesses on environmental issues, the ultimate issue in determining NEPA compliance is the adequacy of NRC Staff’s environmental review, not applicant’s ER; LBP-13-13, 78 NRC 246 (2013)
discussion of need for power is required in an ER, but applicant need not precisely identify future market conditions and energy demand or develop other detailed analyses in order to establish with certainty that construction and operation of a nuclear power plant is the most economical alternative; LBP-11-6, 73 NRC 149 (2011)
discussion of the no-action alternative need only include feasible, nonspeculative alternatives; LBP-12-8, 75 NRC 539 (2012)
draft environmental impact statement might cure alleged omissions or deficiencies in the ER by including additional analyses that address such omissions or deficiencies; LBP-11-7, 73 NRC 254 (2011)
environmental considerations that the ER must discuss are equivalent to, and in most instances verbatim restatements of, environmental considerations that NEPA requires the agency to describe in detail in the environmental impact statement; LBP-15-5, 81 NRC 249 (2015)
environmental impacts must be discussed in proportion to their significance; LBP-12-9, 75 NRC 615 (2012)
ER for the license renewal stage need not contain environmental analysis of Category 1 issues identified in 10 C.F.R. Part 51, Subpart A, Appendix B; LBP-15-5, 81 NRC 249 (2015)
ER is required for a combined license application; CLI-11-5, 74 NRC 141 (2011)
ER must contain a consideration of alternatives for reducing adverse impacts for all Category 2 license renewal issues in 10 C.F.R. Part 51, Subpart A, Appendix B; LBP-13-5, 81 NRC 249 (2015)
ER’s adequacy is examined under NEPA as well as under Part 51 because the ER is the basis upon which the NRC’s environmental impact statement will be prepared; LBP-11-13, 73 NRC 534 (2011); LBP-11-14, 73 NRC 591 (2011)
ERs prepared under 10 C.F.R. 51.53(a) may incorporate by reference any information contained in a prior ER or supplement thereto that relates to the production or utilization facility or site, or any information contained in a related final environmental document previously prepared by NRC Staff; LBP-12-24, 76 NRC 503 (2012)
even if a contention provided information not discussed in the ER, it is still not admissible if it fails to provide a reasoned basis or explanation for why the ER is wrong; LBP-15-5, 81 NRC 249 (2015)
every combined license application must be accompanied by an ER, the purpose of which is to aid NRC Staff in its preparation of an environmental impact statement; LBP-11-6, 73 NRC 149 (2011); LBP-12-9, 75 NRC 615 (2012)
every ER prepared for the construction permit stage, the early site permit stage, or the combined license stage of a light-water-cooled nuclear power reactor must contain a statement concerning transportation of fuel and radioactive wastes to and from the reactor; LBP-12-12, 75 NRC 742 (2012)
examples of need for the proposed facility include a benefit provided if the proposed action is granted or
descriptions of the detriment that will be experienced without approval of the proposed action;
LBP-11-26, 74 NRC 499 (2011)
exception in section 51.53(c)(3)(ii)(L) operates as the functional equivalent of a Category 1 designation
for Limerick and similarly situated plants for which SAMAs were already considered in an
environmental impact statement or environmental assessment; CLI-13-7, 78 NRC 199 (2013)
extent of the no-action discussion is governed by a rule of reason; LBP-12-8, 75 NRC 539 (2012)
failure to provide a direct critique of the analysis in the ER discussing the potential for offshore power
and interconnected wind farms is a failure to identify a genuine dispute with applicant; LBP-15-5, 81
NRC 249 (2015)
for Category 2 environmental issues, applicants must include a site-specific environmental analysis in their
license renewal applications; CLI-12-19, 76 NRC 377 (2012)
for materials license amendment or renewal application or other form of permission for which applicant
has previously submitted an ER, the supplement to applicant’s ER may be limited to incorporating by
reference, updating, or supplementing the information previously submitted to reflect any significant
environmental change, including any resulting from operational experience or a change in operations or
proposed decommissioning activities; LBP-12-24, 76 NRC 503 (2012)
for operating license renewal, if NRC Staff has not previously considered severe accident mitigation
alternatives for applicant’s plant in an environmental impact statement or related supplement or in an
environmental assessment, applicant’s ER must contain a consideration of SAMAs; LBP-11-17, 74 NRC
11 (2011); LBP-11-18, 74 NRC 29 (2011); LBP-11-21, 74 NRC 115 (2011)
for the no-action alternative, there need not be much discussion in the environmental documents because
it is most simply viewed as maintaining the status quo; LBP-12-8, 75 NRC 539 (2012)
full discussion of mitigation plans must be included; LBP-11-6, 73 NRC 149 (2011)
general and unperticularized references to health and safety significance and material deficiencies in the
ER would not satisfy the rule that contentions be pled with specificity; CLI-15-18, 82 NRC 135 (2015)
if an ER is compliant as of its date of issuance, then subsequent events and information are not material
to the compliance status of the ER; LBP-12-13, 75 NRC 784 (2012)
if new information becomes available that, e.g., an endangered species has been living on the site or that
the facility has been leaking tritium into the groundwater, then a new contention alleging that the
environmental report as originally filed did not comply with Part 51 may be filed; LBP-11-32, 74 NRC
654 (2011)
impacts of the possible routes that applicant will use for its transmission lines must be analyzed for
applicant to give the NRC the requisite information to make an informed decision on its license
application; LBP-11-6, 73 NRC 149 (2011)
in light of the vacatur of the Waste Confidence Decision and Temporary Storage Rule, ERs must
consider the reasonably foreseeable impacts of permanent storage of spent fuel, and contentions
concerning the failure of the ER to do so must be held in abeyance; LBP-12-24, 76 NRC 503 (2012)
inadequacy in the severe accident mitigation alternatives analysis is material if license renewal applicant
failed to consider complete information without justifying why particular information was omitted;
information provided to NRC by an applicant must be complete and accurate in all material respects;
LBP-11-32, 74 NRC 654 (2011)
information request from NRC Staff is not an approval that needs to be listed in applicant’s ER under 10
C.F.R. 51.45(d); LBP-15-27, 82 NRC 184 (2015)
intervenor may file a new or amended contention challenging relevant new portions of the draft
environmental impact statement that differ from applicant’s ER; LBP-11-1, 73 NRC 19 (2011)
intervenors’ challenges to the adequacy of applicant’s ER with respect to environmental impacts of
dewatering associated with the proposed nuclear plant continue to serve as viable challenges to similar
sections of Staff’s draft environmental impact statement and thus are not moot; LBP-11-1, 73 NRC 19
(2011)
intervenors must file their NEPA contentions based on the ER; LBP-12-12, 75 NRC 742 (2012)
issues that a license renewal applicant must address in its ER, as well as those that it need not address, are listed in 10 C.F.R. 51.53(c)(3); LBP-12-8, 75 NRC 539 (2012)
it is applicant’s responsibility to include information in the ER that NRC Staff needs to prepare the draft environmental impact statement, including information on alternatives available for reducing or avoiding adverse environmental effects; LBP-12-12, 75 NRC 742 (2012)
license amendment applicants must include in their environmental report any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware; LBP-11-29, 74 NRC 612 (2011)
license applicants were permitted to omit any discussion of any environmental impact of spent fuel storage in independent spent fuel storage installations for the period following the term of the initial ISFSI license in any ER, environmental impact statement, environmental assessment, or other analysis; LBP-12-24, 76 NRC 503 (2012)
license renewal applicant is required to consider any new and significant information that might alter previous environmental conclusions; LBP-12-8, 75 NRC 539 (2012)
license renewal applicant may adopt generic findings of the generic environmental impact statement, but must also include site-specific analyses of Category 2 issues; CLI-15-6, 81 NRC 340 (2015)
license renewal applicant must consider alternatives to mitigate severe accidents for all plants that have not considered such alternatives; LBP-15-5, 81 NRC 249 (2015)
license renewal applicant must file an ER that includes an alternatives analysis that considers and balances the environmental impacts of alternatives to the proposed action, and alternatives available for reducing or avoiding adverse environmental effects; LBP-11-13, 73 NRC 534 (2011)
license renewal applicant must include a consideration of alternatives to mitigate severe accidents if NRC Staff has not previously considered them for applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment; CLI-12-19, 76 NRC 377 (2012)
license renewal applicant need not provide a severe accident mitigation alternatives analysis in its ER if NRC Staff has already considered SAMAs for applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment; LBP-12-8, 75 NRC 539 (2012)
license renewal applicants must provide a plant-specific analysis of issues designated as Category 2; CLI-11-11, 74 NRC 427 (2011)
license renewal applicants must provide a severe accident mitigation alternatives analysis in their license renewal application if NRC Staff has not previously considered SAMAs for the applicant’s plant in an environmental impact statement or related supplement or in an environmental assessment; CLI-15-18, 82 NRC 135 (2015)
license renewal applicants must submit an ER to aid the Staff in its preparation of a supplemental environmental impact statement; CLI-12-13, 75 NRC 681 (2012); LBP-12-8, 75 NRC 539 (2012)
license renewal applicants need not include a need-for-power discussion in their ER; CLI-14-6, 79 NRC 445 (2014)
license renewal applicants need not provide a site-specific analysis of the environmental impacts of spent fuel storage in their environmental report; CLI-11-11, 74 NRC 427 (2011)
license renewal applicants need not submit an analysis of Category 1 issues in their site-specific ER; LBP-11-2, 73 NRC 28 (2011)

955
license renewal applicants whose facilities qualify for the SAMA-analysis exception are exempt from
addressing severe accident mitigation in their environmental reports, just as they would be exempt from
addressing Category 1 issues; CLI-13-7, 78 NRC 199 (2013)
license renewal applications must contain any significant new information relevant to environmental
impacts of license renewal of which applicant is aware, and new information generally may be
challenged in individual adjudications; CLI-12-19, 76 NRC 377 (2012)
license renewal ER is not required to include discussion of need for power; LBP-11-21, 74 NRC 115
(2011)
licensees is not required to list an enforcement order and its compliance with the order’s terms in the
environmental report supporting its operating license renewal application; LBP-12-15, 76 NRC 14
(2012)
licensing board refers ruling that applicant has no legal duty to supplement an originally compliant
environmental report to incorporate new and significant information that arises after the ER was duly
submitted; LBP-11-32, 74 NRC 654 (2011)
limited work authorization application for a site where a construction permit was issued but construction
of the plant was never completed may incorporate the earlier environmental impact statement;
LBP-12-24, 76 NRC 503 (2012)
mere promise by applicant to follow applicable regulations in capping and abandoning active and inactive
oil and gas wells in the footprint of the cooling basin and plant is insufficient to satisfy NRC’s
regulations; LBP-11-16, 73 NRC 645 (2011)
migration tenet applies only as long as the DEIS analysis or discussion at issue is essentially in para
materia with the ER analysis or discussion that is the focus of the contention; LBP-12-12, 75 NRC 742
(2012)
migration tenet applies when information in the draft environmental impact statement is sufficiently
similar to information in applicant’s ER, and allows previously admitted contentions challenging the ER
to apply to relevant portions of the DSEIS; LBP-11-1, 73 NRC 19 (2011); LBP-15-16, 81 NRC 618
(2015)
neither NEPA nor 10 C.F.R. Part 51 requires an applicant to update an originally compliant ER to reflect
new information derived from subsequent events; LBP-12-13, 75 NRC 784 (2012)
neither NRC nor applicant need consider any alternative that does not bring about the ends of the
proposed action; CLI-12-5, 75 NRC 301 (2012)
NEPA-related contentions initially are based on applicant’s environmental report which will inform NRC
Staff’s NEPA review; LBP-13-10, 78 NRC 117 (2013)
“new” in 10 C.F.R. 51.53(c)(3)(iv) requires that the ER include environmental information that is new as
compared to the original ER for the same facility and new as of the time of submission of the required
ER, but does not impose a continuing duty to supplement an ER which was compliant when submitted;
LBP-11-32, 74 NRC 654 (2011)
nonspeculative irreversible and irretrievable commitment of resources requires that an ER provide an
impacts analysis of such an occurrence; LBP-13-10, 78 NRC 117 (2013)
nothing in NEPA, which applies to agencies of the federal government, can be read to require an
applicant to update its environmental report; LBP-11-34, 74 NRC 685 (2011)
NRC does not mandate a specific approach to SAMA analyses, but instead, reviews each severe accident
mitigation consideration provided by a license renewal applicant on its merits and determines whether it
constitutes a reasonable consideration of SAMAs; CLI-13-7, 78 NRC 199 (2013)
NRC is required to independently assess the validity of the information that applicant submits in its ER;
LBP-13-4, 77 NRC 107 (2013)
NRC Staff cannot release NEPA documents that blindly parallel the applicant’s information and omissions
and then be allowed to argue that applicant’s omissions prevent filing of new contentions concerning
the newly released NEPA document; LBP-13-9, 78 NRC 37 (2013)
NRC Staff is empowered to issue requests for additional information relevant to an applicant’s
environmental report; LBP-11-34, 74 NRC 685 (2011)
NRC Staff is not barred from filing a request for additional information asking the applicant to
supplement its ER; LBP-11-32, 74 NRC 654 (2011)
NRC Staff relies heavily on applicant’s ER in preparing its environmental impact statement; LBP-12-5, 75
NRC 227 (2012); LBP-12-17, 76 NRC 71 (2012)
SUBJECT INDEX

NRC Staff uses applicant’s ER as a starting point for its own environmental review of a license renewal application, the results of which are published as a supplement to the generic environmental impact statement; CLI-15-6, 81 NRC 340 (2015)

NRC Staff was asked to review generically an applicant’s duty to supplement or correct its ER; CLI-12-19, 76 NRC 377 (2012)

NRC Staff, pursuant to its obligation to prepare an adequate EIS, is empowered to issue requests for additional information relevant to an applicant’s ER; LBP-11-33, 74 NRC 675 (2011)

NRC Staff’s issuance of an environmental assessment under NEPA does not necessarily moot contentions challenging applicant’s ER; LBP-14-6, 79 NRC 404 (2014)

on issues arising under NEPA, intervenor must file contentions based on the applicant’s ER, but may amend those contentions or file new contentions; LBP-11-7, 73 NRC 254 (2011)

on issues arising under the National Environmental Policy Act, participants shall file contentions based on applicant’s ER; CLI-13-7, 78 NRC 199 (2013)

once challenged, there is no presumption that an ER is correct or accurate, with applicant, as the proponent of the license, bearing the burden of proof; LBP-15-2, 81 NRC 48 (2015)

operating license renewal applications must contain any new and significant information regarding the environmental impacts of license renewal of which the applicant is aware; LBP-13-1, 77 NRC 57 (2013)

Part 51, not NEPA, is the source of the legal requirements applicable to applicant’s ER; LBP-11-32, 74 NRC 654 (2011)

petitioner may claim deficiencies in the application’s cultural resources discussion even though it is generally not expected that applicant’s cultural resources discussion will be comprehensive; CLI-14-2, 79 NRC 11 (2014)

petitioner must challenge the ER, which acts as a surrogate for the environmental impact statement during the early stages of a relicensing proceeding; LBP-12-8, 75 NRC 539 (2012)

petitioner must file NEPA-related contentions based on applicant’s environmental report, but the filing of new or amended contentions is explicitly permitted if there are data or conclusions in the NRC draft or final environmental impact statement that differ significantly from data or conclusions in applicant’s documents; LBP-12-13, 75 NRC 784 (2012)

petitioner’s assertion that applicant’s ER must be supplemented to take account of allegedly new and significant information is, as a procedural matter, unfounded and must be rejected; LBP-11-33, 74 NRC 675 (2011)

petitioner’s challenge to applicant’s use of Three Mile Island data constitutes a genuine dispute on a material issue and is within the scope of the license renewal proceeding because it challenges the adequacy of the environmental report; LBP-12-8, 75 NRC 539 (2012)

petitioners fail to link any of their past criticisms to specific provisions of the environmental report, and the board declines to pore through the attachments to their intervention submission to assemble the basis for such a contention; LBP-12-3, 75 NRC 164 (2012)

petitioners may raise contentions seeking correction of significant inaccuracies and omissions in the ER; LBP-15-5, 81 NRC 249 (2015)

post-operating license stage supplement to applicant’s ER may incorporate by reference any information contained in applicant’s construction permit stage ER; LBP-12-24, 76 NRC 503 (2012)

publication of NRC Staff’s draft environmental impact statement may moot a contention challenging the environmental analysis in the applicant’s ER if the DEIS dispenses with the issues raised in the original contention challenging the ER; LBP-11-1, 73 NRC 19 (2011)

purpose of applicant’s ER is to assist NRC in preparing the agency’s own environmental analysis; LBP-11-28, 74 NRC 604 (2011)

referencing an aging management program described in the GALL Report does not insulate a program from an adequately supported challenge at a hearing; LBP-11-2, 73 NRC 28 (2011)

reliance on mitigation to support findings with regard to environmental impacts of an activity is justified; LBP-14-7, 79 NRC 451 (2014)

remote and speculative alternatives need not be addressed in applicant’s ER; CLI-12-5, 75 NRC 301 (2012); LBP-11-2, 73 NRC 28 (2011)

requirement for license renewal applicants to consider severe accident mitigation alternatives stems from 10 C.F.R. 51.53(c)(3)(ii)(L); CLI-12-10, 75 NRC 479 (2012)
requirements for ERs are listed in 10 C.F.R. 51.45(b)(1), (2), (5); LBP-14-9, 80 NRC 15 (2014)
severe accident mitigation alternatives analyses identify and assess possible plant changes, such as
hardware modifications and improved training or procedures, that could cost-effectively reduce the
radiological risk from a severe accident; LBP-11-13, 73 NRC 534 (2011); LBP-11-17, 74 NRC 11
(2011); LBP-15-5, 81 NRC 249 (2015)
severe accident mitigation alternatives analysis must be considered as part of the ER and, ultimately, as
part of NRC Staff’s supplemental environmental impact statement for a power reactor license renewal;
Staff guidance documents set forth information that should be provided in the ER and the environmental
impact statement regarding a radiological monitoring program and monitoring program acceptance
criteria; LBP-11-26, 74 NRC 499 (2011)
Staff’s ability to satisfy its NEPA obligations will be undermined if applicant either fails to include
seismic information in its SAMA analysis, or, in omitting the information, fails to explain its absence
and justify that the overall costs of obtaining it are exorbitant; CLI-11-11, 74 NRC 427 (2011)
sufficient data should be provided to aid the Commission in its development of an independent analysis;
CLI-12-13, 75 NRC 681 (2012); LBP-12-9, 75 NRC 615 (2012)
time for challenging the ER passes when NRC Staff releases its draft supplemental environmental impact
statement, but contentions challenging the ER can be filed with the initial petition and prior to the time
Staff’s environmental review documents are completed; LBP-12-11, 75 NRC 731 (2012)
to assist NRC in preparation of a supplemental environmental impact statement, license renewal applicants
are required to prepare an ER; CLI-13-7, 78 NRC 199 (2013)
to litigate a SAMA-related contention in adjudicatory proceedings where the SAMA-analysis exception
applies, petitioner must obtain a rule waiver as well as satisfy the contention admissibility criteria in
section 2.308(b)(1); CLI-13-7, 78 NRC 199 (2013)
to the extent there are important NEPA qualitative considerations or factors that cannot be quantified,
these considerations or factors will be discussed in qualitative terms; LBP-15-5, 81 NRC 249 (2015)
types of information that an ER must contain are described in 10 C.F.R. 51.53(c)(3)(ii); CLI-13-7, 78
NRC 199 (2013)
under the migration tenet, boards may construe an admitted contention contesting the ER as a challenge
to the subsequently issued draft or final environmental impact statement without the necessity for
Intervenors to file a new or amended contention; LBP-12-12, 75 NRC 742 (2012)
uranium enrichment facility applicant is required to prepare an ER; LBP-12-21, 76 NRC 218 (2012)
whether a severe accident mitigation alternative is worthy of more detailed analysis in an ER or
supplemental environmental impact statement hinges on whether it may be cost-beneficial to implement;
CLI-12-3, 75 NRC 132 (2012)
ENVIRONMENTAL REVIEW
absent a rule waiver, NRC Staff is not expected to revisit the impact determinations made in the
Continued Storage GEIS as part of its site-specific NEPA reviews; CLI-15-10, 81 NRC 535 (2015)
absent a valid regulation limiting NRC’s NEPA obligations, the consideration of alternative severe
accident mitigation measures may not be excluded from the agency’s NEPA reviews; LBP-12-18, 76
NRC 127 (2012)
adequacy of NRC Staff’s review of transmission-corridor impacts might be appropriate for the board’s
consideration sua sponte; CLI-15-1, 81 NRC 1 (2015)
after a licensing board in an uncontested proceeding determines that Staff’s NEPA review is adequate, it
must then independently consider the final balance among conflicting factors that is struck in the Staff’s
recommendation; LBP-12-21, 76 NRC 218 (2012)
agencies are encouraged to incorporate consultation procedures on endangered/threatened species and
essential fish habitat into their NEPA review; LBP-12-10, 75 NRC 633 (2012)
agencies are given broad discretion to keep their NEPA inquiries within appropriate and manageable
boundaries; LBP-15-3, 81 NRC 65 (2015)
agencies are not permitted to define the objectives of a proposed action so narrowly as to preclude a
reasonable consideration of alternatives; LBP-12-17, 76 NRC 71 (2012)
agencies must use a systematic, interdisciplinary approach that will ensure the integrated use of the
natural and social sciences and the environmental design arts in decisionmaking that may impact the
environment; CLI-15-13, 81 NRC 555 (2015)
agency cannot relinquish its NEPA responsibility to evaluate environmental impacts by relying on expected compliance with the environmental standards of another agency; LBP-15-23, 82 NRC 55 (2015)

agency conducting a NEPA review shall independently evaluate the information submitted and shall be responsible for its accuracy; LBP-15-11, 81 NRC 401 (2015)

agency failed to take a hard look at cumulative impacts on cultural resources under NEPA even though the agency had satisfied its obligations under NHPA to consult with the tribe; LBP-15-16, 81 NRC 618 (2015)

agency that has prepared an EIS cannot simply rest on the original document but must be alert to new information that may alter the results of its original environmental analysis, and continue to take a hard look at the environmental effects of its planned action, even after a proposal has received initial approval; LBP-12-18, 76 NRC 127 (2012)

agency’s reliance on mitigation in making a finding of no significant impact must be justified; LBP-12-23, 76 NRC 445 (2012)

agency’s reliance on mitigation in making a finding of no significant impact is justified if the proposed mitigation is imposed by statute or regulation or has been so integrated into the initial proposal that it is impossible to define the proposal without mitigation; LBP-12-23, 76 NRC 445 (2012)

aging-based safety review set out in Part 54 is analytically separate from Part 51’s environmental inquiry and does not in any sense restrict NEPA; LBP-11-17, 74 NRC 11 (2011)

although a SAMA analysis considers safety issues, it is actually an environmental review that must be judged under NEPA’s rule of reason and not under the safety requirements of the Atomic Energy Act; LBP-15-29, 82 NRC 246 (2015)

although an agency may coordinate and, where practicable, integrate its National Environmental Policy Act and National Historic Preservation Act review efforts, the two statutes impose separate and distinct obligations; LBP-15-16, 81 NRC 618 (2015)

although NRC has found that severe accident risks are small for all U.S. licensed nuclear power plants, NRC Staff is required under NEPA to consider mitigation alternatives during its license renewal review; LBP-12-26, 76 NRC 559 (2012)

although NRC may regard preconstruction activities as outside the scope of a combined license application, these activities are within the scope of the NEPA review because they are all connected actions; LBP-15-29, 80 NRC 15 (2014)

although NRC must take a hard look under NEPA, NEPA itself does not mandate particular results; LBP-13-13, 78 NRC 246 (2013)

although NRC takes the position that it lacks authority to impose environmental restrictions on transmission corridors, those impacts should have been analyzed as a direct effect of the NRC action even under NRC’s new interpretation; LBP-14-9, 80 NRC 15 (2014)

although sufficiency of the application and NRC Staff’s environmental review of that application are proper targets of contentions, sufficiency of NRC Staff’s safety review of the application is not a proper target of contentions; LBP-11-28, 74 NRC 612 (2011)

although there will always be more data that could be gathered, agencies must have some discretion to draw the line and move forward with decisionmaking; LBP-13-4, 77 NRC 107 (2013)

any NEPA-based challenge to the efficacy of, or the Staff’s reliance on, the state permitting process relative to the Staff’s environmental review must await the Staff’s initial environmental review document; LBP-13-6, 77 NRC 253 (2013)

application-specific NEPA review represents a snapshot in time, and although NEPA requires that NRC conduct its environmental review with the best information available at that time, it does not require that NRC wait until inchoate information matures into something that later might affect its review; LBP-12-10, 75 NRC 633 (2012)

because 10 C.F.R. 51.23(b) prescribes a specific procedure for incorporating the environmental impacts of continued storage into a site-specific analysis, this procedure, rather than a procedure set forth in the general provisions of Part 51, governs NRC environmental review; CLI-15-10, 81 NRC 535 (2015)

before a final decision approving or disapproving a construction authorization application may be reached, not only must NRC Staff complete its safety and environmental reviews but a formal hearing must be conducted, and the Commission’s own review of both contested and uncontested issues must take place; CLI-13-8, 78 NRC 219 (2013)

959
blanket reliance by NRC Staff on Clean Water Act permits is not permitted; LBP-14-9, 80 NRC 15 (2014)
boards are to make independent environmental judgments with respect to certain NEPA findings, though
even then they need not rethink or redo every aspect of NRC Staff’s environmental findings or
undertake their own fact-finding activities; LBP-11-26, 74 NRC 499 (2011)
categories of actions are exempt from NEPA review where NRC has made a generic finding that the
actions do not individually or cumulatively have a significant effect on the human environment;
certification by agencies without overall responsibility for the particular federal action in question that its
own environmental standards are satisfied attend only to one aspect of the problem without considering
the broad range of environmental concerns and considerations mandated by NEPA; LBP-15-23, 82 NRC
55 (2015)
completion of NRC Staff’s final environmental review document always must precede the conduct of
hearings on environmental issues; LBP-11-30, 74 NRC 627 (2011)
compliance with the environmental quality standards and requirements of the Federal Water Pollution
Control Act is not a substitute for, and does not negate the requirement for NRC to weigh all
environmental effects of the proposed action, including the degradation, if any, of water quality;
certification asserting that the NRC’s environmental review of the license renewal application has not met
the requirements of the Endangered Species Act and the Magnuson-Stevens Fishery Conservation and
Management Act fails to satisfy the requirements for reopening the record; LBP-12-10, 75 NRC 633
(2012)
contention asserting that NRC Staff’s consultation was inadequate does not ripen until issuance of the
Staff’s draft environmental review document; CLI-14-2, 79 NRC 11 (2014)
the duty to exercise independent judgment does not mean that NRC must reinvent every wheel or duplicate
the competent and professional environmental data and studies that have already been done on a proposed
site; LBP-13-4, 77 NRC 107 (2013)
ensuring continued availability of diverse, reliable sources of domestic enrichment services to provide
low-enriched uranium for domestic power reactors supports a finding of need for the facility;
LBP-11-26, 74 NRC 499 (2011)
“environmental document” includes environmental assessment, environmental impact statement, finding of
no significant impact, and notice of intent; LBP-15-16, 81 NRC 618 (2015)
environmental impact statements must address all reasonably foreseeable environmental impacts even if
the probability of such an occurrence is low; LBP-14-9, 80 NRC 15 (2014)
environmental impacts of license renewal are classified as either Category 1, which are generically
addressed by the NRC’s generic environmental impact statement for license renewal, or Category 2,
which are analyzed on a site-specific basis; LBP-11-17, 74 NRC 11 (2011)
environmental justice must be addressed in individual license renewal reviews; LBP-13-13, 78 NRC 246
(2013)
establishment of baseline conditions of the affected environment is a fundamental requirement of the
National Environmental Policy Act process; LBP-13-9, 78 NRC 37 (2013)
evidence of significant actual utility commitments provides a compelling showing in support of the need
for uranium enrichment facility; LBP-11-26, 74 NRC 499 (2011)
evidentiary hearing should begin 175 days after release of NRC Staff’s environmental review document; 
CLI-15-17, 82 NRC 33 (2015)
exemptions from decommissioning fund expenditure notification requirements are categorically excluded
from environmental review as administrative changes that do not increase the risk of public radiation
exemptions from decommissioning fund withdrawals are categorically excluded from environmental review
as administrative changes that do not increase the risk of public radiation exposure; LBP-15-24, 82
NRC 68 (2015)
extreme delay in the completion of Staff’s environmental review, and thus the equal delay in hearing
intervenors’ claim of injury, raises issues of compliance with section 189a of the Atomic Energy Act;
LBP-11-30, 74 NRC 627 (2011)
SUBJECT INDEX

fact that a competent and responsible state authority has approved the environmental acceptability of a site or a project after extensive and thorough environmentally sensitive hearings is properly entitled to substantial weight in the conduct of NRC’s own NEPA analysis; LBP-15-11, 81 NRC 401 (2015)
federal agency must assess the effects of the undertaking on any eligible historic properties found; LBP-15-16, 81 NRC 618 (2015)
for the mandatory uncontested proceeding on a uranium enrichment facility license, a licensing board is to conduct a simple sufficiency review rather than a de novo review on both safety and environmental issues; LBP-11-26, 74 NRC 499 (2011)
in analyzing predictions of water availability in a report, NRC Staff consulted with the other government agencies to determine whether data from either of those agencies could be obtained to prepare a new water availability prediction; LBP-13-4, 77 NRC 107 (2013)
in its need-for-power analysis, NRC Staff may rely on studies and forecasts prepared by expert, independent agencies charged with the duty of ensuring that the utilities within their jurisdiction fulfill the legal obligation to meet customer demands; LBP-11-7, 73 NRC 254 (2011)
in the context of license renewal, NRC’s Atomic Energy Act safety review under Part 54 does not compromise or limit the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013); LBP-13-13, 78 NRC 246 (2013)
in uncontested hearings, it is NRC’s duty to ensure, among other things, that it has adhered to its obligations under the National Environmental Policy Act; CLI-15-1, 81 NRC 1 (2015)
Indian tribe’s contention that NRC Staff had not fulfilled its National Historic Preservation Act consultation duty regarding cultural resources and tribal artifacts was premature because Staff had not completed its NEPA review; LBP-12-23, 76 NRC 445 (2012)
it is the duty of NRC Staff, not applicant, to consult with interested tribes concerning the proposed site in the context of a National Historic Preservation Act contention; LBP-15-5, 81 NRC 249 (2015)
license amendment request is not categorically exempt from environmental review if it involves a significant hazards consideration that excludes it from categorical exemption pursuant to the criteria in section 51.22(c)(9)(i); LBP-15-26, 82 NRC 163 (2015)
license renewal applications are subject to an environmental review; CLI-12-5, 75 NRC 301 (2012)
NEPA allows agencies to select their own methodology as long as that methodology is reasonable; LBP-13-4, 77 NRC 107 (2013)
NEPA does not require that the agency wait until inchoate information matures into something that later might affect its review; CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012)
NEPA encourages state participation when appropriate and authorized, but coordination between a federal agency and a state requires active involvement between the two in order for the federal agency to meet its independent review burden; LBP-15-11, 81 NRC 401 (2015)
NEPA ensures that an agency will not act on incomplete information, only to regret its decision after it is too late to correct; LBP-12-17, 76 NRC 71 (2012)
NEPA hard look must emerge from an engagement in informed and reasoned decisionmaking, as the agency obtains opinions from its own experts and experts outside the agency and gives careful scientific scrutiny and responds to all legitimate concerns that are raised; LBP-15-16, 81 NRC 618 (2015)
NEPA imposes on NRC a disclosure obligation that NRC publicly discuss its evaluation of the reasonably foreseeable effects of a proposed action; CLI-15-25, 82 NRC 389 (2015)
NEPA imposes procedural restraints on agencies, which require them to take a hard look at the environmental impacts of a proposed action and the reasonable alternatives to that action; LBP-12-17, 76 NRC 71 (2012)
NEPA mandates a case-by-case balancing judgment on the part of federal agencies, not the private parties seeking federal action; LBP-14-9, 80 NRC 15 (2014); LBP-15-23, 82 NRC 55 (2015)
NEPA obligates NRC Staff to undertake a full and independent evaluation of the environmental impacts of applicant’s proposed action; LBP-12-9, 75 NRC 615 (2012)
NEPA obligations supplement existing statutory authority and must be complied with to the fullest extent, unless there is a clear conflict of statutory authority; LBP-14-9, 80 NRC 15 (2014)
NEPA requires federal agencies to pause before committing resources to a project and consider the likely environmental impacts of the preferred course of action as well as reasonable alternatives; LBP-14-9, 80 NRC 15 (2014)
NEPA requires that agencies take a hard look at the environmental effects of actions even after a proposal has received initial approval; LBP-15-16, 81 NRC 618 (2015)

NEPA requires that an environmental review provide a sufficient discussion of alternatives to enable the decisionmaker to take a hard look at environmental factors, and to make a reasoned decision; LBP-11-13, 73 NRC 534 (2011)

NEPA requires that NRC conduct its environmental review with the best information available at that time; CLI-12-6, 75 NRC 352 (2012); CLI-12-7, 75 NRC 379 (2012); CLI-12-15, 75 NRC 704 (2012); LBP-12-8, 75 NRC 539 (2012)

NEPA review in license renewal proceedings is not limited to aging management-related issues; LBP-11-17, 74 NRC 11 (2011); LBP-15-5, 81 NRC 249 (2015)

NEPA’s hard-look requirement is tempered by a rule of reason that requires agencies to address only impacts that are reasonably foreseeable, not those that are remote and speculative; LBP-12-17, 76 NRC 71 (2012); LBP-14-7, 79 NRC 451 (2014)

no agency shall utilize an excessively narrow construction of its existing statutory authorizations to avoid compliance with NEPA; LBP-14-9, 80 NRC 15 (2014)

NRC is not required to wait until inchoate information matures into something that might affect its review; CLI-12-15, 75 NRC 704 (2012)

NRC is required to analyze potential terrorist attacks as part of its NEPA review with regard to facilities located in the Ninth Circuit; LBP-12-21, 76 NRC 218 (2012)

NRC is required to independently assess the validity of the information that applicant submits in its environmental report; LBP-13-4, 77 NRC 107 (2013)

NRC must address any purported need for additional power during its environmental review of a combined license application; LBP-11-7, 73 NRC 254 (2011)

NRC Staff examined special pathways of exposure that could lead to a higher level of radiation exposure in minority and low-income populations in the area, including subsistence consumption of fish, native vegetation, surface waters, sediments, and local produce; CLI-15-6, 81 NRC 340 (2015)

NRC Staff is required to prepare environmental impact statements for reactor licensing proceedings; CLI-14-7, 80 NRC 1 (2014)

NRC Staff may rely on the scientific data and inferences drawn by another government agency but need not slavishly defer to that agency’s findings or its conclusions about water quality; LBP-13-4, 77 NRC 107 (2013)

NRC Staff must assess the relationship between local short-term uses and long-term productivity of the environment, consider alternatives, and describe the unavoidable adverse environmental impacts and the irreversible and irreplaceable commitments of resources associated with the proposed action; CLI-15-13, 81 NRC 555 (2015)

NRC Staff must correctly evaluate basic issues whether or not they were raised by intervenors; LBP-14-9, 80 NRC 15 (2014)

NRC Staff must have some discretion to draw the line and move forward with decisionmaking; LBP-15-16, 81 NRC 618 (2015)

NRC Staff must make a recommendation on the environmental acceptability of the license renewal action, and the Commission shall determine whether the adverse environmental impacts of license renewal are so great that preserving the option of license renewal for energy planning decisionmakers would be unreasonable; CLI-12-8, 75 NRC 393 (2012)

NRC Staff must prepare a Record of Decision to accompany any Commission decision on any action for which a final EIS has been prepared; LBP-13-13, 78 NRC 246 (2013)

NRC Staff must prepare a summary of determinations and conclusions and provide it to scoping participants; LBP-13-9, 78 NRC 37 (2013)

NRC Staff must prepare supplemental environmental review documents when there are substantial changes in the proposed action that are relevant to environmental concerns or significant new circumstances or information relevant to environmental concerns and bearing on the proposed action or its impacts; LBP-12-18, 76 NRC 127 (2012)

NRC Staff must provide a reasonably thorough discussion of the significant aspects of the probable environmental consequences of a proposed action; LBP-15-16, 81 NRC 618 (2015)

NRC Staff must weigh unavoidable adverse environmental impacts and resource commitments (costs) against the project’s benefits; CLI-15-13, 81 NRC 555 (2015)
SUBJECT INDEX

NRC Staff uses applicant’s ER as a starting point for its own environmental review of a license renewal application, the results of which are published as a supplement to the generic environmental impact statement; CLI-15-6, 81 NRC 340 (2015)

NRC Staff’s environmental review was conducted in cooperation with the U.S. Army Corps of Engineers, with NRC acting as lead agency and ACE as cooperating agency under a memorandum of understanding because applicants also needed permits from ACE to complete construction activities that may affect wetlands; CLI-12-9, 75 NRC 421 (2012)

NRC Staff’s need-for-power analysis may accord an expert, independent agency’s forecasts and studies great weight and may give heavy reliance to those forecasts and studies absent a showing they contain a fundamental error; LBP-11-7, 73 NRC 254 (2011)

NRC uses environmental impact information to determine, after weighing the environmental, economic, technical, and other benefits against environmental and other costs, whether the combined license should be issued, denied, or appropriately conditioned to protect environmental values; LBP-14-9, 80 NRC 15 (2014)

Once NRC completes its environmental review, its record of decision must state whether NRC has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm from the alternative selected, and if not, to explain why those measures were not adopted, and summarize any license conditions and monitoring programs adopted in connection with mitigation measures; LBP-11-17, 74 NRC 11 (2011)

Part 40, Appendix A, Criteria 4(e) and 5G(2) are safety criteria that apply to applicants and licensees and are not relevant to the NEPA review; LBP-13-9, 78 NRC 37 (2013)

Part 51 process for environmental review associated with license renewal, focusing upon the potential impacts of an additional 20 years of plant operation, is described; CLI-12-5, 75 NRC 301 (2012)

Presiding officer must take into consideration NRC Staff’s projected schedule for completion of its safety and environmental evaluations to ensure that the hearing schedule does not adversely impact Staff’s ability to complete its reviews in a timely manner; LBP-13-13, 78 NRC 246 (2013)

Proposed mitigation measures are sufficient if they are supported by sufficient evidence, such as studies conducted by the agency, or are adequately policed; LBP-12-23, 76 NRC 445 (2012)

Proximity of the nuclear power plant site to the Canadian border is considered in the contexts of environmental and safety reviews; CLI-15-13, 81 NRC 555 (2015)

Recordkeeping or administrative procedures are categorically excluded from environmental review; LBP-15-24, 82 NRC 68 (2015)

Reissuance of a reactor license is a major federal action requiring an environmental review; LBP-13-13, 78 NRC 246 (2013)

Release of NRC Staff’s environmental review document may be the first opportunity for petitioner to question the accuracy of Staff’s environmental analysis; CLI-15-17, 82 NRC 33 (2015)

Review method chosen by NRC in creating its models with the best information available when it began its analysis and then checking the assumptions of those models as new information becomes available is a reasonable means of balancing competing considerations, particularly given the many months required to conduct full modeling with new data; CLI-12-7, 75 NRC 379 (2012)

Rule that excluded certain environmental impacts from NEPA consideration and deferred totally to environmental quality standards devised and administered by other agencies violated NEPA; LBP-15-23, 82 NRC 55 (2015)

Rulemaking petitioners assert that NRC Staff’s review of the expedited-transfer issue generated new and significant information regarding the environmental impacts of spent fuel storage; CLI-14-7, 80 NRC 1 (2014)

Severe accident mitigation alternatives analyses are conducted for the purposes of the NRC’s environmental review under NEPA and are not safety analyses; CLI-15-18, 82 NRC 135 (2015)

Severe accident mitigation alternatives analysis is not part of the agency’s safety review for license renewal under the Atomic Energy Act, but is instead a mitigation alternatives analysis conducted pursuant to the National Environmental Policy Act; LBP-13-8, 78 NRC 1 (2013)

Test for determining when a nonfederal project should be analyzed under NEPA as a major federal action is discussed; LBP-14-9, 80 NRC 15 (2014)
to be analyzed under NEPA as a major federal action, a nonfederal project must restrict or limit the
statutorily prescribed federal decisionmakers’ choice of reasonable alternatives; LBP-14-9, 80 NRC 15
(2014)
to evaluate an operating license renewal application, NRC reviews the management of aging effects and
time-limited aging analysis of particular safety-related functions of the plant’s systems, structures, and
components pursuant to 10 C.F.R. Part 54 and the environmental impacts and alternatives to the
proposed action in accordance with Part 51; LBP-11-17, 74 NRC 11 (2011)
to meet its environmental review burden in license renewal cases, NRC Staff developed the generic
environmental impact statement, which contains findings that apply to all nuclear power plants and are
to satisfy the hard-look requirement, NRC must provide detailed analysis of new information and a
reasonable explanation of the agency’s decision concerning supplementation, not merely a conclusory
assertion that the agency has reviewed the new information and concluded that no supplement is
required; LBP-12-18, 76 NRC 127 (2012)
under NEPA, NRC is required to take a hard look at the environmental impacts of a proposed action;
LBP-14-7, 79 NRC 451 (2014)
under the NEPA rule of reason, NRC’s environmental analysis need only consider environmental impacts
that are reasonably foreseeable, and need not consider remote and speculative scenarios; LBP-13-13, 78
NRC 246 (2013)
waiver of a rule pertaining to the agency’s environmental responsibilities is possible; CLI-13-7, 78 NRC
199 (2013)
when conducting a NEPA-required environmental review, an agency may consider the ameliorative effects
of mitigation in determining the environmental impacts of an activity; LBP-12-23, 76 NRC 445 (2012);
LBP-14-7, 79 NRC 451 (2014)
when drafting an environmental impact statement, agency’s scope of review must include analysis of any
connected or cumulative actions to the central proposed action; LBP-15-16, 81 NRC 618 (2015)
when preparation of the essential fish habitat assessment is consolidated with other environmental review
procedures, the National Marine Fisheries Service is to have timely notification of actions that may
adversely affect EFH, and whenever possible, at least 60 days’ notice prior to a final decision on an
action; LBP-12-10, 75 NRC 633 (2012)
when reviewing an application for a 404 permit under the Clean Water Act, the Corps of Engineers
evaluates whether issuance of the permit is in the public interest, weighing all relevant factors,
including economic, environmental, and aesthetic concerns; LBP-14-9, 80 NRC 15 (2014)
where increased air pollution in California resulting from two export turbines at a Mexican plant was a
direct effect of the new transmission lines, DOE was required to evaluate the air pollution impacts
under NEPA; LBP-14-9, 80 NRC 15 (2014)
while reviewing any adverse effects, federal agencies must take a hard look at the environmental impacts of
a proposed action; LBP-15-16, 81 NRC 618 (2015)
with respect to the environmental impacts of a combined license, the Commission determines whether the
requirements of NEPA §102(2)(A), (C), and (E), and 10 C.F.R. §51.107(a)(1)-(4) have been met;
CLI-12-9, 75 NRC 421 (2012)

EQUAL ACCESS TO JUSTICE ACT
act applies to any adjudication required by statute to be determined on the record in which the
government is represented by counsel; LBP-11-8, 73 NRC 349 (2011)
act does not apply when an agency merely voluntarily chooses to abide by formal Administrative
Procedure Act § 554 procedures, despite lacking a statutory mandate to do so; LBP-11-8, 73 NRC 349
(2011)
act renders the United States liable for attorney’s fees for which it would not otherwise be liable, and
thus amounts to a partial waiver of sovereign immunity and any such waiver must be strictly construed
in favor of the United States; LBP-11-8, 73 NRC 349 (2011)
“adversary adjudication” is defined as an adjudication under section 554 of the Administrative Procedure
Act in which the position of the United States is represented by counsel or otherwise; LBP-11-8, 73
NRC 349 (2011)

964
although a court’s merits reasoning may be quite relevant to the resolution of the substantial justification question, the inquiry into the reasonableness of the government’s position may not be collapsed into an antecedent evaluation of the merits; LBP-11-8, 73 NRC 349 (2011)

award of attorneys’ fees can include fees paid by a third-party liability insurer; LBP-11-8, 73 NRC 349 (2011)

awards in insurance contexts would undermine the dual purposes of EAJA by both maintaining financial deterrents for those who would want to challenge unjust government action and not deterring unreasonable government actions; LBP-11-8, 73 NRC 349 (2011)

because the act operates as a waiver of sovereign immunity it must be narrowly construed to avoid creating a waiver that Congress did not intend; LBP-11-8, 73 NRC 349 (2011)

both a union employee and the insured can be viewed as having incurred legal fees insofar as they have paid for legal services in advance as a component of the union dues or insurance premiums; LBP-11-8, 73 NRC 349 (2011)

claimant with a legally enforceable right to full indemnification of attorney fees from a solvent third party cannot be deemed to have incurred that expense for purposes of the Act, and hence is not eligible for an award of fees under the Act; LBP-11-8, 73 NRC 349 (2011)

Congress did not want the “substantially justified” standard to be read to raise a presumption that the government position was not substantially justified simply because it lost the case; LBP-11-8, 73 NRC 349 (2011)

fact that one other court agreed or disagreed with the government does not establish whether its position was substantially justified; LBP-11-8, 73 NRC 349 (2011)

fee-deterrent-removal purpose of the Act would not be served by an award of fees to an individual whose fees are fully paid by a ineligible organization; LBP-11-8, 73 NRC 349 (2011)

for a prevailing party to recover attorneys’ fees and expenses, the party must have incurred those fees and expenses in connection with the adversary adjudication in question; LBP-11-8, 73 NRC 349 (2011)

government bears the burden of establishing that its position was substantially justified; LBP-11-8, 73 NRC 349 (2011)

government must demonstrate the reasonableness not only of its litigation position, but also of the agency’s actions; LBP-11-8, 73 NRC 349 (2011)

government’s position should be considered substantially justified if a reasonable person could think it correct, that is, if it has a reasonable basis in law and fact; LBP-11-8, 73 NRC 349 (2011)

in an actuarial sense, the cost of the defense, to the extent borne by the insurance company, is a cost that the insured paid for, just as he would have paid a lawyer for his defense had he had no insurance; LBP-11-8, 73 NRC 349 (2011)

in determining whether the government’s position was substantially justified, the board does not make separate determinations regarding each stage but arrives at one conclusion that simultaneously encompasses and accommodates the entire civil action; LBP-11-8, 73 NRC 349 (2011)

“incur” means that an individual who is a prevailing party meeting the financial qualification of the EAJA is ineligible to receive an EAJA award when that individual was not responsible for the costs of the attorney’s fees; LBP-11-8, 73 NRC 349 (2011)

materials license suspension proceeding is not an adversary adjudication for purposes of the Act because the Atomic Energy Act of 1954, as amended, does not require such a hearing to be on the record pursuant to Administrative Procedure Act § 554; LBP-11-8, 73 NRC 349 (2011)

nothing in the Act suggests a purpose to prevent a contractual agreement, or more broadly, to discourage the purchase of liability insurance; LBP-11-8, 73 NRC 349 (2011)

parties who prevail against the government in certain types of agency proceedings are allowed to recover attorneys’ fees and other expenses incurred in connection with the proceeding unless the government’s position was substantially justified, or other special circumstances render an award unjust; LBP-11-8, 73 NRC 349 (2011)

presence of an attorney-client relationship suffices to entitle prevailing litigants to receive fee awards; LBP-11-8, 73 NRC 349 (2011)

prevailing party is not entitled to an award for attorneys’ fees and expenses if the position of the Commission over which the applicant has prevailed was substantially justified; LBP-11-8, 73 NRC 349 (2011)
SUBJECT INDEX

reasonable, the legal standard governing the determination of substantial justification, is separate and distinct from the legal standard used in assessing the merits phase of a proceeding; LBP-11-8, 73 NRC 349 (2011)

there is nothing in the legislative history of the Equal Access to Justice Act or the pertinent case law to suggest a congressional intent to extend the EAJA to cases in which due process, rather than a statute, requires an Administrative Procedure Act § 554 hearing; LBP-11-8, 73 NRC 349 (2011)

underlying purpose of the Act is to eliminate financial disincentives for those who would defend against unjustified governmental action and thereby to deter the unreasonable exercise of government authority; LBP-11-8, 73 NRC 349 (2011)

when a third party who has no direct interest in the litigation pays fees on behalf of a taxpayer, the taxpayer incurs the fees so long as he assumes an absolute obligation to repay the fees or a contingent obligation to pay the fees in the event that he is able to recover them; LBP-11-8, 73 NRC 349 (2011)

where a pro bono attorney forgives a fee to a client unable to afford legal expenses, that client is eligible for an award on the basis of that arrangement with the attorney; LBP-11-8, 73 NRC 349 (2011)

EQUAL PROTECTION

equal protection principles require that all persons similarly situated shall be treated alike; LBP-11-15, 73 NRC 629 (2011)

equal protection component of the Fifth Amendment’s Due Process Clause applies to federal action, and the Equal Protection Clause of the Fourteenth Amendment applies to state action; LBP-11-15, 73 NRC 629 (2011)

EQUIPMENT

protection of regulatory treatment of nonsafety systems equipment from external hazards at the site is discussed; CLI-15-13, 81 NRC 555 (2015)

request that NRC order licensees to ensure that emergency planning equipment and facilities are sufficient for dealing with multiunit and prolonged station blackout scenarios until rulemaking is complete is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to provide reasonable protection for equipment from the effects of design-basis external events and to add equipment as needed to address multiunit events while other requirements are being revised and implemented is addressed; DD-14-2, 79 NRC 489 (2014)

EQUIPMENT, SAFETY-RELATED

changes with respect to components (e.g., steam generators) are permitted without a license amendment under prescribed conditions that assure that the replacement components are sufficiently similar to the original so that safety requirements are maintained or improved; LBP-13-7, 77 NRC 307 (2015)

request that NRC order licensees to provide sufficient safety-related instrumentation, able to withstand design-basis natural phenomena, to monitor key spent fuel pool parameters from the control room is addressed; DD-14-2, 79 NRC 489 (2014)

request that NRC order licensees to reevaluate seismic and flooding hazards at their sites against current NRC requirements and guidance, and if necessary, update the design basis and structures, systems, and components important to safety to protect against the updated hazards is addressed; DD-14-2, 79 NRC 489 (2014)

EQUITY

when considering stays or other forms of temporary injunctive relief, the Commission has applied the stay factors outlined in 10 C.F.R. 2.342(e), which restate commonplace principles of equity; CLI-14-6, 79 NRC 445 (2014)

ERROR

board decisions that have inferred additional bases for contentions beyond those supplied by the petitioner have been overturned; CLI-14-2, 79 NRC 11 (2014)

board decisions that have revised inadmissible contentions to render them admissible have been overturned; CLI-14-2, 79 NRC 11 (2014)

board did not err in factual finding that applicant was not under foreign ownership, control, or domination; CLI-15-7, 81 NRC 481 (2015)

board erred in admitting a contention pertaining to a plant’s safety culture; CLI-11-11, 74 NRC 427 (2011)

board erred in allowing a collateral attack on the GEIS Category 1 finding associated with severe accident consequences; CLI-15-6, 81 NRC 340 (2015)
board erred in allowing collateral attacks on emergency plans; CLI-15-6, 81 NRC 340 (2015)
board erred in concluding that it is impossible to waive the exception in 10 C.F.R. 51.53(c)(3)(ii)(L);
CLI-13-7, 78 NRC 199 (2013)
board erred in concluding that transformers are passive components under the license renewal rule;
CLI-15-6, 81 NRC 340 (2015)
board erred in finding that NRC Staff analyzed the wrong variables in its environmental justice review;
CLI-15-6, 81 NRC 340 (2015)
board erred in reformulating contentions with arguments not originally raised by petitioners; CLI-15-18,
82 NRC 135 (2015)
board failed to provide sufficient justification for rejecting a challenge to applicant’s meteorological model
where petitioners pointed to site-specific meteorological patterns to argue that the model and inputs
were inaccurate and insufficiently conservative; LBP-15-20, 81 NRC 829 (2015)
board improperly allowed petitioner to challenge the generic environmental impact statement’s generic
finding regarding severe accident consequences; CLI-15-6, 81 NRC 340 (2015)
board is wrong to strain to discern the outlines of any contention in an amorphous petition; CLI-15-18,
82 NRC 135 (2015)
board was not justified in rendering a final judgment in the face of unfolding developments having a
decided bearing and conceivably crucial effect on the issue that shaped that judgment; LBP-12-19, 76
NRC 184 (2012)
Commission defers to board’s factual findings unless they are clearly erroneous and generally steps in
only to correct factual findings not even plausible in light of the record reviewed in its entirety, e.g.,
where it appears that the board has overlooked or misunderstood important evidence; CLI-15-6, 81
NRC 340 (2015)
deferential clear error standard is applied in analyzing a board’s findings of fact; CLI-13-1, 77 NRC 1
(2013)
for a hearing petitioner to take an appeal pursuant to section 2.311(c), petitioner must claim that, after
considering all pending contentions, the board has erroneously denied a hearing; CLI-14-3, 79 NRC 31
(2014)
if leave to file a motion for reconsideration is granted, the motion must demonstrate a compelling
circumstance, such as the existence of a clear and material error in a decision, which could not have
reasonably been anticipated, which renders the decision invalid; CLI-12-17, 76 NRC 207 (2012)
in proving prejudicial error by a federal agency, it is sufficient that the agency’s error may have affected
the outcome; LBP-14-2, 79 NRC 131 (2014)
incorrect legal ruling typically does not warrant interlocutory review because such rulings can be reviewed
on appeal from partial initial decisions or a final decision; CLI-15-17, 82 NRC 33 (2015)
motions for reconsideration must demonstrate a compelling circumstance, such as the existence of a clear
and material error in a decision, which could not have been reasonably anticipated, which renders the
decision invalid; CLI-14-1, 79 NRC 1 (2014)
on appeal intervenors must show that the board’s resolution of the contested issue in favor of applicant is
clearly erroneous; CLI-14-10, 80 NRC 157 (2014)
original contention did not point to any specific grievance with the environmental justice discussion
provided in applicant’s environmental report and so the board should have applied the standards in 10
C.F.R. 2.309(c) to determine whether petitioner had demonstrated good cause for its late filing;
possibility that a board may have made an incorrect legal ruling can be reviewed, if necessary, on appeal
from a partial initial decision or other final appealable order; CLI-15-24, 82 NRC 331 (2015)
silence is not a confession of error, nor can there be an implied confession of error; LBP-14-2, 79 NRC
131 (2014)
to show clear error, petitioner must show that the board’s determination is not even plausible in light of
the record as a whole; CLI-15-7, 81 NRC 481 (2015); CLI-15-9, 81 NRC 512 (2015)
to the extent a contention is premised on error, it is inadmissible for failing to raise a genuine dispute of
fact; LBP-11-6, 73 NRC 149 (2011)
**SUBJECT INDEX**

to the extent that the board relied on a precedent that allowed notice pleading under 10 C.F.R. 2.714(b) in making its contention admissibility determination, it erred; CLI-15-23, 82 NRC 321 (2015)

whether the board erred in its treatment of evidence is a matter that can be addressed following an initial decision; CLI-15-24, 82 NRC 331 (2015)

See also Harmless Error

**ETHICAL ISSUES**

counsel has an ethical duty of candor to disclose to a tribunal any relevant information and/or legal authority that is adverse to the director’s position, especially when the target of the government’s enforcement action is not represented by counsel; LBP-14-11, 80 NRC 125 (2014)

pro se representatives in licensing board proceedings, like all other representatives and/or lawyers, are required to be accurate and truthful and are subject to reprimand, censure, or suspension for failing in these duties; LBP-13-8, 78 NRC 1 (2013)

**EVACUATION**

contention that, in the event of a core-melt accident, applicant’s emergency plan should order an evacuation of persons within a 10-mile radius of the facility attacks NRC’s emergency planning regulation; LBP-11-15, 73 NRC 629 (2011)

**EVACUATION PLANS**

if petitioner is concerned about the sufficiency of the ongoing oversight of a nuclear power plant and its current evacuation plan, it has the option of requesting a modification, suspension, or revocation of its operating license; LBP-11-29, 74 NRC 612 (2011)

**EVACUATION TIME ESTIMATES**

challenges to the $2000/person-rem conversion factor, to use of a single dose-rate reduction effectiveness factor, and to evacuation times and assumptions are not admissible because petitioners presented no facts or expert opinion of error; LBP-11-2, 73 NRC 28 (2011)

failure to offer factual support for the proposition that applicant’s inputs for evacuation times are flawed or unreasonable or that its sensitivity analysis of these inputs was incorrect renders a contention inadmissible; LBP-15-5, 81 NRC 249 (2015)

**EVIDENCE**

absent documentary support, NRC has declined to assume that licensees will contravene its regulations; LBP-15-3, 81 NRC 65 (2015); LBP-15-24, 82 NRC 68 (2015)

affidavits supporting a motion to reopen must be given by competent individuals with knowledge of the facts alleged, or by experts in the disciplines appropriate to the issues raised; CLI-12-6, 75 NRC 352 (2012)

affidavits supporting a motion to reopen must meet the admissibility standards of 10 C.F.R. 2.337; CLI-12-6, 75 NRC 352 (2012)

although 10 C.F.R. 2.337(f), by its terms, applies to evidence at hearings, the bounds this rule places on official notice is also appropriate for the contention admissibility stage of a proceeding; LBP-11-7, 73 NRC 254 (2011)

although the quality of evidence presented for reopening must be at least of a level sufficient to withstand a motion for summary disposition, more is required; CLI-12-10, 75 NRC 479 (2012)

any consolidation of multiple parties’ presentations of evidence that would prejudice the rights of any party may not be ordered; LBP-11-4, 73 NRC 91 (2011)

at the contention admission stage, petitioners need not marshal their evidence as though preparing for an evidentiary hearing; LBP-15-20, 81 NRC 829 (2015)

at the contention admission stage, the factual support necessary to show that a genuine dispute exists need not be in affidavit or formal evidentiary form and need not be of the quality necessary to withstand a summary disposition motion; LBP-15-1, 81 NRC 15 (2015)

best evidence rule provides that an original or duplicate writing, recording, or photograph is required in order to prove its content unless an evidentiary rule or federal statute provides otherwise; CLI-13-5, 77 NRC 223 (2013)

board considered a letter written after the original petition was filed and submitted with petitioner’s reply; LBP-15-5, 81 NRC 249 (2015)

board considered evidence submitted with petitioner’s reply to which opposing parties didn’t object; LBP-15-5, 81 NRC 249 (2015)
board has ample authority to ensure that evidence offered concerning microcracking is limited to that specific material issue and does not stray into issues outside the scope of the license amendment proceeding; LBP-15-20, 81 NRC 829 (2015)

contention admission stage is not the appropriate point at which to evaluate witness credibility or to weigh competing evidence, but an expert must provide a reasoned basis or explanation for opinions in support of a contention; LBP-15-17, 81 NRC 753 (2015)
courts may exclude relevant evidence if its probative value is substantially outweighed by a danger of unfair prejudice, confusing the issues, misleading the jury, undue delay, wasting time, or needlessly presenting cumulative evidence; LBP-12-21, 76 NRC 218 (2012)
document’s unavailability does not render NRC Staff’s or applicant’s reliance on the NUREG-1150 decontamination cost values altogether unreasonable under NEPA; LBP-13-13, 78 NRC 246 (2013)
evidence is relevant if it has some tendency to make deliberative process privilege opponent’s allegations more or less likely; LBP-13-5, 77 NRC 233 (2013)
factual support is not necessary at the contention filing stage to show that a genuine dispute exists and need not be in affidavit or formal evidentiary form or of the quality necessary to withstand a summary disposition motion; LBP-15-11, 81 NRC 401 (2015)

Federal Rules of Evidence are not directly applicable to NRC proceedings, but NRC adjudicatory boards often look to those rules for guidance; LBP-12-21, 76 NRC 218 (2012)

if evidence in favor of the summary disposition opponent is merely colorable or not significantly probative, summary disposition may be granted; LBP-11-4, 73 NRC 91 (2011)

if licensing boards deem prefiled evidence to be of little or no value, they simply need not ask about it at the evidentiary hearing, and are free to accord such evidence little or no weight; LBP-12-21, 76 NRC 218 (2012)
in camera hearing sessions may be held when information sought to be withheld from public disclosure is offered into evidence; CLI-15-24, 82 NRC 331 (2015)
in establishing the evidentiary standard of “relevant, material, and reliable evidence” being admissible in a hearing, 10 C.F.R. 2.337 thereby establishes the right of all parties to present such admissible evidence; LBP-11-4, 73 NRC 91 (2011)
information offered in evidence, even if not specifically stated in the original contention and bases, may be relevant if it falls within the envelope, reach, or focus of the contention when read with the original bases offered for it; LBP-12-17, 76 NRC 71 (2012)
irreparable harm element of the test for issuance of injunctive relief was met where the tribe’s evidence showed that a phase of the project would involve damage to at least one known site, and virtually ensure some loss or damage; LBP-15-2, 81 NRC 48 (2015)
it is not the Commission’s role to monitor rulings that deal with reception of evidence and procedural framework under which it will be admitted on a day-to-day basis; CLI-15-24, 82 NRC 331 (2015)
licensing boards may not stretch the scope of admitted contentions beyond their reasonably inferred bounds, but may consider issues that, although not expressly stated, can reasonably be inferred from the arguments presented; LBP-12-17, 76 NRC 71 (2012)
limited appearance statements do not constitute evidence but may assist the board and/or parties in defining the issues being considered; LBP-13-13, 78 NRC 246 (2013); LBP-15-27, 82 NRC 184 (2015)
mere presence of evidence supporting both sides does not call for Commission review where it appears that the board considered all the evidence and arguments before it; CLI-15-7, 81 NRC 481 (2015)
nonstatic nature of a website, in the absence of a stand-alone compact disc/digital video disc that would allow the board or parties to run a locked-down version of the website application, prevents consideration as evidence; LBP-15-3, 81 NRC 65 (2015)
only alleged facts, not evidence or expert opinion, are required to support contention admissibility; LBP-13-8, 78 NRC 1 (2013)
only relevant, material, and reliable evidence that is not unduly repetitious will be admitted; LBP-12-21, 76 NRC 218 (2012)
petitioner is not required to set forth all its evidence or to prove its contentions at the admissibility stage; LBP-12-17, 76 NRC 71 (2012)
requiring petitioners to proffer conclusive support for the effect of their proposed contention would improperly require boards to adjudicate the merits of contentions before admitting them; LBP-15-20, 81 NRC 829 (2015)
strict rules of evidence do not apply to written submissions; LBP-12-21, 76 NRC 218 (2012)
support for a motion to reopen must be relevant, material, and reliable; LBP-11-23, 74 NRC 287 (2011)
support for a motion to reopen must be sufficiently compelling to suggest a likelihood of materially
affecting the ultimate results in the proceeding; CLI-12-10, 75 NRC 479 (2012)
to avoid summary disposition, intervenors must present contrary evidence so significantly probative that it
creates a material factual issue; LBP-12-19, 76 NRC 184 (2012)
to meet the reasonable assurance standard, applicant must make a showing that meets the
preponderance-of-the-evidence threshold of compliance with the applicable regulations; LBP-13-13, 78
NRC 246 (2013); LBP-14-1, 79 NRC 39 (2014)
whether the board erred in its treatment of evidence is a matter that can be addressed following an initial
decision; CLI-15-24, 82 NRC 331 (2015)
written prefilled testimony and exhibits are typically submitted well in advance of the evidentiary hearing,
and in most common types of hearings, licensing boards themselves, not the parties, orally examine the
witnesses; LBP-12-21, 76 NRC 218 (2012)
See also Federal Rules of Evidence

EVIDENCE, HEARSAY
boards are not precluded from considering documents despite their hearsay nature; LBP-11-14, 73 NRC
591 (2011)
even if a witness’s testimony was entirely hearsay, evidence of that character is generally admissible in
administrative proceedings; LBP-11-14, 73 NRC 591 (2011)
in absence of objection, hearsay evidence is treated as being properly admitted and may be given such
probative effect and value to which it is entitled; LBP-15-20, 81 NRC 829 (2015)
in proceedings under Part 2, strict rules of evidence do not apply to written submissions; LBP-11-14, 73
NRC 591 (2011)
in upholding summary disposition in a proceeding to enforce a suspension order, the Commission ruled
that the hearsay nature of a witness’s statement did not preclude the licensing board from considering
it, at least in the absence of evidence questioning its reliability; LBP-11-14, 73 NRC 591 (2011)
out-of-court statements offered to prove the truth of a matter asserted are hearsay; LBP-11-14, 73 NRC
591 (2011)

EVIDENTIARY HEARINGS
adjudicatory hearings are not environmental impact statement editing sessions; CLI-12-1, 75 NRC 39
(2012)
board’s determination of whether the government’s position was substantially justified is made on the
basis of the written record and oral argument; LBP-11-8, 73 NRC 349 (2011)
boards have considerable discretion in their evidentiary rulings; CLI-15-6, 81 NRC 340 (2015)
discovery cannot be completed nor can the evidentiary hearing be held until the safety evaluation report
and all necessary environmental impact statements are completed; CLI-13-8, 78 NRC 219 (2013)
fact-finding administrative body, such as a licensing board, with authority to develop an evidentiary
record, is distinguished from reviewing adjudicatory and judicial bodies, generally with a more limited
facts and issues raised in a contention are not in controversy and subject to a full evidentiary hearing
unless the proposed contention is admitted; LBP-15-24, 82 NRC 68 (2015)
hearing should begin 175 days after release of NRC Staff’s environmental review document; CLI-15-17,
82 NRC 33 (2015)
hearings can provide the public venting that the circulation of an amended environmental impact
statement would otherwise provide; LBP-13-13, 78 NRC 246 (2013)
hearings on environmental issues addressed in the environmental impact statement may not commence
before issuance of the final EIS; LBP-13-13, 78 NRC 246 (2013)
if a board grants summary disposition of a foreign ownership contention, it could terminate the
proceeding or move ahead with a pending environmental contention; LBP-12-19, 76 NRC 184 (2012)
if licensing boards deem prefilled evidence to be of little or no value, they simply need not ask about it
at the evidentiary hearing, and are free to accord such evidence little or no weight; LBP-12-21, 76
NRC 218 (2012)
in assessing whether applicant satisfies the burden of establishing that NRC Staff’s determination of applicant’s performance was inappropriate, unjustified, arbitrary, or an abuse of discretion, the board should consult NUREG-1021; LBP-14-2, 79 NRC 131 (2014)

licenses may be revoked, conditioned, modified, or affirmed based on the evidence reviewed at the evidentiary hearing; LBP-15-16, 81 NRC 618 (2015)

issued licenses are not the appropriate vehicles for reviewing 2.206 petitions; CLI-12-20, 76 NRC 437 (2012)

NRC administrative proceedings have applied a “preponderance of the evidence” standard in reaching the ultimate conclusions after hearing in resolving a proceeding; LBP-14-2, 79 NRC 131 (2014)

NRC Staff is obliged to lay all relevant materials before the board to enable it to adequately dispose of the issues before it; LBP-14-2, 79 NRC 131 (2014)

NRC Staff will disposition violations as part of its ongoing reactor oversight process, and evidentiary hearings before NRC at the request of third parties are not a part of this process; DD-12-3, 76 NRC 416 (2012)

parties filed proposed questions for the board to ask at the evidentiary hearing; LBP-13-13, 78 NRC 246 (2013)

presiding officer must take into consideration NRC Staff’s projected schedule for completion of its safety and environmental evaluations to ensure that the hearing schedule does not adversely impact Staff’s ability to complete its reviews in a timely manner; LBP-13-13, 78 NRC 246 (2013)

process similar to jury trial in NRC proceedings would require creating one licensing board to review the evidence for purposes of admissibility and a second board to weigh the admitted evidence for the purpose of ruling on the merits, which is unnecessary in administrative proceedings; LBP-12-21, 76 NRC 218 (2012)

question whether the environmental assessment is sufficient to satisfy NRC Staff’s NEPA requirements must await consideration at a full evidentiary hearing; LBP-15-13, 81 NRC 456 (2015)

record of licensing board evidentiary hearing on license transfer application must be certified to the Commission; CLI-15-26, 82 NRC 408 (2015)

state’s motion for cross-examination was granted, insofar as it would have a reasonable opportunity to examine witnesses pursuant to NRC regulations; LBP-13-13, 78 NRC 246 (2013)

to trigger a full adjudicatory hearing, petitioners must be able to proffer at least some minimal factual and legal foundation in support of their contentions; LBP-12-27, 76 NRC 583 (2012)

when using Subpart L procedures, the board has the primary responsibility for questioning the witnesses at any evidentiary hearing; LBP-11-13, 73 NRC 534 (2011)

written prefiled testimony and exhibits are typically submitted well in advance of the evidentiary hearing, and in most common types of hearings, licensing boards themselves, not the parties, orally examine the witnesses; LBP-12-21, 76 NRC 218 (2012)

EXAMINATION

See Reactor Operator Examinations

EXAMINERS

if an examiner is assigned to a reactor operator examination that might appear to present a conflict of interest, the examiner shall inform his or her immediate supervisor of the potential conflict; LBP-14-2, 79 NRC 131 (2014)

NRC regional office shall not assign an examiner who failed an applicant on an operating test to administer any part of that applicant’s operating test retake; LBP-14-2, 79 NRC 131 (2014)

when informed of a potential conflict, the supervisor of a reactor operator test examiner must apply sound judgment to the facts of each case and, if any doubt exists, consult with regional management and/or the NRR operator licensing program office to resolve the issue; LBP-14-2, 79 NRC 131 (2014)

EXCEPTIONS

Commission relied on the exception to the Backfit Rule that applies when regulatory action is necessary to ensure that the facility provides adequate protection to the health and safety of the public; LBP-12-18, 76 NRC 127 (2012)

except Big Rock Point and all nuclear power facilities that are shut down permanently or indefinitely, onsite hardware for the emergency response data system shall be provided at each unit by the licensee to interface with the NRC receiving system; CLI-15-20, 82 NRC 211 (2015)
exception for situations where parties seek to add previously unlitigated material would effectively render
the reopening regulation meaningless; CLI-12-10, 75 NRC 479 (2012)
exception in 10 C.F.R. 50.72 is most reasonably interpreted as exempting from the ERDS program all
nuclear reactors that have permanently ceased operations and defueled, i.e., that are permanently shut
down; LBP-15-4, 81 NRC 156 (2015)
exception in 10 C.F.R. 51.53(c)(3)(ii)(L) operates as the functional equivalent of a Category 1 designation
for Limerick and similarly situated plants for which SAMAs were already considered in an
environmental impact statement or environmental assessment; CLI-13-7, 78 NRC 199 (2013)
exception to the backfit rule is provided if the Commission determines that regulatory action is necessary
to ensure that the facility provides adequate protection of the health and safety of the public and is in
accord with the common defense and security; CLI-12-9, 75 NRC 421 (2012)
exception to the mootness doctrine occurs if the challenged action is too short in duration to be litigated
and there is a reasonable expectation that the same party will be subjected to the same action again;
CLI-13-9, 78 NRC 551 (2013)
future cases are appropriately decided in the context of a concrete dispute, with self-interested parties
vigorously advocating opposing positions; CLI-13-9, 78 NRC 551 (2013)
limited exception to NRC’s general prohibition against challenges to its rules or regulations in
adjudicatory proceedings is provided in 10 C.F.R. 2.335(b); CLI-13-7, 78 NRC 199 (2013)
the scope of the ERDS exception is informed by the regulatory history, which states that ERDS is to be used
by licensees of operating reactors; LBP-15-4, 81 NRC 156 (2015)
sole ground for petition of waiver or exception is that special circumstances with respect to the subject
matter of the particular proceeding are such that the application of the rule or regulation (or a provision
of it) would not serve the purposes for which the rule or regulation was adopted; LBP-13-1, 77 NRC
57 (2013); LBP-14-16, 80 NRC 183 (2014)
EXECUTIVE ORDER 12898
order did not, in itself, create new substantive authority for federal agencies and thus NRC determined
that it would endeavor to carry out the environmental justice principles as part of the agency’s
responsible under NEPA; CLI-15-6, 81 NRC 340 (2015)
EXEMPTIONS
agencies must make available certain records to members of the public upon specific request for those
records except to the extent that the records (or portions of them) are exempt from public disclosure by
one of the nine enumerated exemptions or are excluded from disclosure; CLI-13-5, 77 NRC 223 (2013)
any alleged ambiguity in the exception provision of 10 C.F.R. Part 50, Appendix E, § VI is eliminated
when the regulatory language is examined in light of the regulatory history and framework; LBP-15-4,
81 NRC 156 (2015)
applicant for an exemption bears the burden of proof on all issues; LBP-12-6, 75 NRC 256 (2012)
applicant may act as a self-guarantor without satisfying the financial test for self-guarantors if it is in the
public interest or otherwise satisfies the requirements of 10 C.F.R. 40.14; LBP-12-6, 75 NRC 256
(2012)
applicant should clearly describe any exemptions or authorizations of an unusual nature and adequately
justify them for the NRC’s consideration; LBP-11-11, 73 NRC 455 (2011)
because current levels of emergency planning are required by regulation, licensee cannot make changes
contemplated in its license amendment request without first receiving certain regulatory exemptions;
LBP-15-18, 81 NRC 793 (2015)
because NRC’s decision to grant the exemptions is a matter of public record, the board takes notice that
the exemptions have now been approved; LBP-15-24, 82 NRC 68 (2015)
because resolution of a rule exemption request directly affects licensability of the proposed facility, the
exemption raises material questions directly connected to an agency licensing action and thus comes
within the hearing rights of interested parties; CLI-13-1, 77 NRC 1 (2013)
board may employ case law interpreting FOIA Exemption 5 when determining whether the deliberative
process privilege applies in an NRC proceeding; LBP-13-5, 77 NRC 233 (2013)
SUBJECT INDEX

COL application included a request for a departure from the wet-bulb noncoincident temperature, which is considered Tier 1 information and part of the certified design and thus a regulatory exemption is required; CLI-12-9, 75 NRC 421 (2012)

Commission administratively exempted from the backfit rule, an order to the combined license holder to address spent fuel pool instrumentation requirements not specified in the certified design as enhanced protective measures that represent a substantial increase in the protection of public health and safety; CLI-12-9, 75 NRC 421 (2012)

Congress intentionally limited the opportunity for a hearing to certain designated agency actions which do not include exemptions; LBP-15-18, 81 NRC 793 (2015); LBP-15-24, 82 NRC 68 (2015)

deliberative process privilege applied under 10 C.F.R. 2.390(a)(5) to interagency or intra-agency memorandums or letters is similar to Exemption 5 under the Freedom of Information Act; LBP-13-5, 77 NRC 233 (2013)

demonstration that application of a regulation is not necessary to achieve its underlying purpose is listed as a special circumstance warranting an exemption; CLI-12-9, 75 NRC 421 (2012); LBP-12-6, 75 NRC 256 (2012)

each combined license applicant will have to determine whether it will adopt in toto the certified design, or whether it will take exemptions thereto and/or departures therefrom; LBP-11-10, 73 NRC 424 (2011)
electronic filing is required unless an exemption is granted permitting an alternative filing method for good cause shown, or unless the filing falls within the scope of the exception identified in this section; CLI-13-9, 78 NRC 551 (2013); CLI-14-3, 79 NRC 31 (2014)
examples of the kinds of facts that must be weighed when determining whether to grant an exemption are given; CLI-13-1, 77 NRC 1 (2013)
exemption cannot remove a matter germane to a licensing proceeding from consideration in a hearing; LBP-15-24, 82 NRC 68 (2015)
exemption from a regulation will be granted if application of the regulation in the particular circumstances conflicts with other NRC rules or requirements, would not serve or is not necessary to achieve the underlying purpose of the rule, would result in undue hardship or other costs, would not benefit public health and safety, would provide only temporary relief, or there is present any other material circumstance not considered when the regulation was adopted; LBP-11-10, 73 NRC 424 (2011)
exemption from a regulation will be granted when the request is authorized by law, will not present an undue risk to the public health and safety, and is consistent with the common defense and security; LBP-11-10, 73 NRC 424 (2011); LBP-11-11, 73 NRC 455 (2011)
exemption from any part of a referenced design certification rule may be granted if NRC determines that the exemption complies with any exemption provisions of the referenced design certification rule, or with 10 C.F.R. 52.63 if there are no applicable exemption provisions in the referenced rule; LBP-11-10, 73 NRC 424 (2011)
exemption from regulations will be issued only if the license is granted; LBP-15-24, 82 NRC 68 (2015)
exemption from the decommissioning financial assurance requirements is considered to be an extraordinary equitable remedy to be used only sparingly; CLI-13-1, 77 NRC 1 (2013)
exemption from the surveillance program is allowed if a reactor’s lifetime irradiation levels are below a certain threshold; LBP-15-17, 81 NRC 753 (2015)
exemption request is subject to a hearing where the plant already has a license and is seeking an exemption from the decommissioning financial assurance requirements based on an earlier exemption that it had received during its license renewal; LBP-15-24, 82 NRC 68 (2015)
exemption requests are subject to the same level of litigation as other issues that could be admissible in a combined license proceeding; LBP-11-10, 73 NRC 424 (2011)
exemption requests ordinarily do not trigger hearing rights when an already-licensed facility is asking for relief from performing a duty imposed by NRC regulations; LBP-15-24, 82 NRC 68 (2015)
exemptions are the sort of directly related and dependent exemption-related issues that are within the scope of a license amendment proceeding; LBP-15-24, 82 NRC 68 (2015)
exemptions do not actually modify the regulations because the ability to request an exemption is part of the regulations themselves; LBP-15-24, 82 NRC 68 (2015)
exemptions from decommissioning fund expenditure notification requirements are categorically excluded from environmental review as administrative changes that do not increase the risk of public radiation exposure; LBP-15-28, 82 NRC 233 (2015)
exemptions from decommissioning fund withdrawals are categorically excluded from environmental review as administrative changes that do not increase the risk of public radiation exposure; LBP-15-24, 82 NRC 68 (2015)
exemptions ordinarily do not trigger hearing rights when an already-licensed facility is asking for relief from performing a duty imposed by NRC regulations; LBP-15-18, 81 NRC 793 (2015)
failure to comply with NRC’s e-filing requirements without good cause or without obtaining an exemption from the requirements under 10 C.F.R. 2.302(g) can result in rejection of a pleading; LBP-15-4, 81 NRC 156 (2015)
FOIA exemption for inter- or intra-agency materials incorporates the deliberative process privilege, which protects documents that are prepared to assist an agency, board, or official to arrive at a decision; LBP-13-5, 77 NRC 233 (2013)
FOIA’s purpose is to encourage disclosure, and, to that end, its exemptions are to be interpreted narrowly; LBP-13-5, 77 NRC 233 (2013)
for active structures, systems, and components, NRC chose to exempt from license renewal, challenges to a plant’s operational activities covered by its current licensing basis; LBP-13-13, 78 NRC 246 (2013)
government has the burden of proving that a requested document falls within one of FOIA’s exemptions; LBP-13-5, 77 NRC 233 (2013)
grants of exemptions from referenced design certification rules are conditioned on the Commission’s finding that the request complies with section 52.7 and that the special circumstances provided for section 52.7 outweigh any decrease in safety that may result from the reduction in standardization caused by the exemption; LBP-11-10, 73 NRC 424 (2011)
hearing on exemption-related matters is necessary insofar as resolution of the exemption request directly affects the licensability of a proposed fuel storage site and the exemption raises material questions directly connected to an agency licensing action; LBP-15-18, 81 NRC 793 (2015)
in a limited number of appropriate circumstances, NRC Staff may exempt an applicant from regulatory requirements; LBP-15-24, 82 NRC 68 (2015)
in denying an exemption request, Staff is required to inform applicant of the deadline for seeking a hearing; LBP-11-19, 74 NRC 61 (2011)
in exempting an aquifer from MCLs, EPA has to find that the aquifer cannot and will not serve as a source of drinking water because it is mineral producing and can be demonstrated to contain minerals that, considering their quantity and location, are expected to be commercially producible; LBP-15-3, 81 NRC 65 (2015)
license renewal applicants whose facilities qualify for the SAMA-analysis exception are exempt from addressing severe accident mitigation in their environmental reports, just as they would be exempt from addressing Category 1 issues; CLI-13-7, 78 NRC 199 (2013)
licensee cannot be exempted from license conditions without a license amendment modifying such conditions; LBP-15-28, 82 NRC 233 (2015)
licensee seeks regulatory exemptions to allow it to use decommissioning funds to manage spent fuel and eliminate the 30-day notice requirement that would otherwise apply to spent fuel management; LBP-15-28, 82 NRC 233 (2015)
licensing boards are not free to reexamine fundamental policy judgments that are reflected in NRC regulations by creating exceptions to them in situations that will frequently recur; LBP-12-6, 75 NRC 256 (2012)
licensing boards have authority to adjudicate exemption issues, but NRC Staff serves as an initial reviewer of exemption requests; LBP-12-6, 75 NRC 256 (2012)
licensing boards will not consider exemption requests that were not first made to NRC Staff; LBP-12-6, 75 NRC 256 (2012)
limited grounds for creation of exemptions are inherent in the administrative process, and agencies may use equitable discretion to afford case-by-case treatment, taking into account circumstances peculiar to individual parties in the application of a general rule or even in appropriate cases to grant dispensation from the rule’s operation; CLI-13-1, 77 NRC 1 (2013)
nine categories of documents may be exempted from disclosure under the Freedom of Information Act; LBP-13-5, 77 NRC 233 (2013)
NRC considers whether Exemption 7 would prevent public disclosure of allegation and investigation information from release; CLI-13-5, 77 NRC 223 (2013)
NRC may grant exemptions from the alternative financial test for self-guarantee of the decommissioning funding obligation that are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest; LBP-12-6, 75 NRC 256 (2012)

NRC may, upon application by any interested person or upon its own initiative, grant such exemptions from the requirements of the regulations as it determines are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest; LBP-12-21, 76 NRC 218 (2012)

NRC regulations do not merely establish a standard that applicant is entitled to invoke for its benefit, but that may then be disregarded whenever applicant wants to argue its case on an individual, fact-specific basis; LBP-12-6, 75 NRC 256 (2012)

NRC Staff evaluated and approved exemption from regulatory requirements for organization and numbering of the combined license application; CLI-12-2, 75 NRC 63 (2012)

NRC Staff evaluated and approved exemption from regulatory requirements for special nuclear material control and accounting program description; CLI-12-2, 75 NRC 63 (2012)

NRC Staff granted an exemption from 10 C.F.R. 74.33(c)(5) subject to license conditions that require applicant to submit, for the Staff’s prior review and approval, detailed analyses of such potentially credible diversion scenarios and the processes and management measures best suited to address them; LBP-12-21, 76 NRC 218 (2012)

NRC Staff is exempted from the obligations of the protective order, even though Staff might hold many documents that are subject to the mandatory disclosure requirements; LBP-11-5, 73 NRC 131 (2011)

NRC Staff review included evaluation of exemption criteria; CLI-12-2, 75 NRC 63 (2012)

NRC’s statutory authority to adopt rules of general application entails a concomitant authority to provide exemption procedures in order to allow for special circumstances; CLI-13-1, 77 NRC 1 (2013)

purpose of the exemption from 10 C.F.R. 51.53(c)(3)(ii)(L) is to reflect NRC’s view that one severe accident mitigation alternatives analysis, as a general matter, satisfies NRC obligation to consider measures to mitigate both the risk and the environmental impacts of severe accidents; LBP-14-15, 80 NRC 151 (2014)

request for an exemption that would enable licensee to provide decommissioning funding on a forward-looking, incremental basis, at a rate proportional to the then-current decontamination and decommissioning liability is granted; CLI-11-4, 74 NRC 1 (2011)

request for exemption from a rule, by itself, does not give rise to an opportunity for hearing; CLI-13-1, 77 NRC 1 (2013)

request for exemption from requirements of 10 C.F.R. 40.36 to allow applicant to act as a self-guarantor of the funds necessary for eventually decommissioning facility without satisfying the financial test for self-guarantors is denied; LBP-12-6, 75 NRC 256 (2012)

requirements and exemptions under FOIA reflect a balancing of public disclosure with confidentiality, but this balancing does not affect the NRC’s authority to obtain requested information; CLI-13-5, 77 NRC 223 (2013)

rule exemption decisions should take into account the equities of each situation; CLI-13-1, 77 NRC 1 (2013)

rule exemption requests that do not involve special circumstances must be denied as a matter of law; CLI-13-1, 77 NRC 1 (2013)

source materials licensees can seek an exemption from the decommissioning financial assurance requirements; CLI-13-1, 77 NRC 1 (2013)

uranium enrichment facility applicant seeks an exemption from regulations to permit it to begin certain preconstruction activities at the site before completion of NRC’s environmental review under Part 51; LBP-11-11, 73 NRC 455 (2011)

when licensee requests a rule exemption in a related license amendment application, hearing rights on the amendment application are considered to encompass the exemption request as well; CLI-13-1, 77 NRC 1 (2013); LBP-15-18, 81 NRC 793 (2015); LBP-15-24, 82 NRC 68 (2015)

where license conditions predate issuance of 10 C.F.R. 50.75(b)(5), the plant was grandfathered and allowed to keep its existing license conditions; LBP-15-24, 82 NRC 68 (2015)

where NRC has temporarily exempted the licensee, on the basis of an existing rule, from one of many rules made generally applicable by the license does not amount to a license amendment; CLI-14-11, 80 NRC 167 (2014)
where there is present any circumstance that was not considered by NRC when it promulgated the pertinent regulation in the first place, exemption may be appropriate; LBP-12-6, 75 NRC 256 (2012)
whether the safe shutdown earthquake exceedance in applicant’s exemption request does in fact comply with 10 C.F.R. Part 50, Appendix S and 10 C.F.R. 100.23 is a question currently before the NRC Staff and is thus material to the NRC’s licensing decision in the proceeding; LBP-11-10, 73 NRC 424 (2011)
See also Waiver of Rule
EXHIBITS
boards accord each exhibit weight to the extent it is relevant, material, and reliable; LBP-11-18, 74 NRC 29 (2011)
EXIGENT CIRCUMSTANCES
determination seems compelled by the fact that violation of the technical specifications limit for the plant, whatever the cause of the temperature increase, requires a dual-unit shutdown; LBP-15-13, 81 NRC 456 (2015)
NRC Staff may determine that exigent circumstances exist such that there is insufficient time for a full 30-day public comment period on a license amendment request; LBP-15-13, 81 NRC 456 (2015)
EXPORT LICENSES
Department of State provides the Commission with Executive Branch views on the merits of import/export applications; CLI-11-3, 73 NRC 613 (2011)
