General Comment

Unfortunately, we residents do not know what is being considered for approximately 3,800 thousand acres to guide our issues or suggestions. Our environment and what it sustains cannot write, text or email you of their concerns. That being said, I'll will go forward and comment

The best free clean energy the earth can have are trees, water and wetlands. They serve many purposes man has yet to duplicate. We all depend on our resources in many areas. Trees provide a stable earth, cleansing the air /provide oxygen, provide shade, wildlife habitat and food. Our wetlands and mangroves are the life blood for marine nurseries. Without a safe haven to reproduce,we loose. They sustain our marine industry, most importantly is our first line of defense creating a barrier reef against storm surge and flooding.And we must have a reliable source of clean water.

I ask Duke Energy to set an example to others on how to be compatible with our surrounding environment and be sustainable for generations to come. Our resources are not forever - think of alternatives the will guide us all into the future. By setting aside hundreds of acres for conservation easements will be a win/win for all. Please, no mitigation of our resources.

So without knowing Duke Energy plans, I ask you take my concerns into consideration. If and when you plans are make public, I will at that time provide more comments.
