U. S. Nuclear Regulatory Commission
ATTN: Document Control Desk
Washington, DC 20555

Reference: Letter ET 17-0001, dated January 17, 2017, from J. H. McCoy, WCNOG to USNRC

Subject: Docket No. 50-482: Implementation Date for License Amendment Request for the Transition to Westinghouse Core Design and Safety Analyses

To Whom It May Concern:

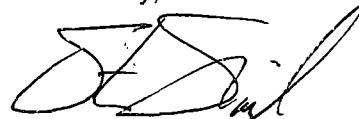

The Reference provided the Wolf Creek Nuclear Operating Corporation (WCNOG) application to revise the Technical Specifications to support transition to the Westinghouse Core Design and Safety Analyses methodologies. The amendment request included revising the Wolf Creek Generating Station (WCGS) licensing basis by adopting the Alternative Source Term radiological analysis methodology in accordance with 10 CFR 50.67, "Accident Source Term."

Upon Nuclear Regulatory Commission staff approval of this proposed license amendment, it is anticipated that the license amendment, as approved, will become effective upon issuance, with WCNOG requesting an implementation date of startup (entry into Mode 2) from Refueling Outage 23 (RF23). RF23 is scheduled to begin on September 21, 2019.

The additional information provided in this submittal does not expand the scope of the application and does not impact the no significant hazards consideration determination presented in the Reference. In accordance with 10 CFR 50.91, "Notice for public comment; State consultation," a copy of this submittal is being provided to the designated Kansas State official.

This letter contains no commitments. If you have any questions concerning this matter, please contact me at (620) 364-4093, or Ron Benham at (620) 364-4204.

Sincerely,

Stephen L. Smith
