Subject: Addendum to NRC Lic. No. 21-10725-03
Docket number: 030-00823
Control Number: 580858

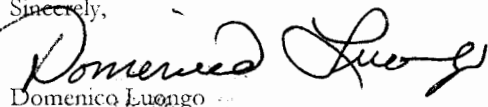

Dear Materials Licensing:

Due to a significant decrease in Oakland University radionuclide use, I am writing to amend Oakland University's NRC License. Currently, Oakland University has only four active licensed material users. In an effort to be more efficient, Oakland University requests to reduce its list of approved nuclides, reduce the number of required Radiation Safety Committee meetings and to transfer the responsibility of annual program review to the RSC. The following amendments are requested:

1. Oakland University requests the removal of the following nuclides from Section 6 of the NRC license:
 - Calcium-45
 - Rubidium-86
 - Chromium-51
 - Copper-67
2. Oakland University requests to amend section 7 of the application to state that the Radiation Safety Committee will convene biannually. Currently the committee meets quarterly. The Radiation Safety Committee believes that two meetings a year will be sufficient based on projected licensed material use.
3. Oakland University requests amending sections 7 and 8 of the University's NRC License to transfer annual audit responsibility to the RSC as opposed to the University's Internal Auditor. Though, the University Internal Auditors is guided by inspection checklist based on Appendix M in NUREG -1556 Volume 11 he does not have experience working with radioactive materials so their audit is confined to the checklist. RSC member auditors will follow the same checklist, but will also use their extensive radiation work experience to provide valuable feedback to Oakland University's Radiation Safety Officer.

Please contact me at (248) 370-4314, if you have any questions regarding this amendment.

Sincerely,

Domenico Luongo
Laboratory Compliance Manager and Radiation Safety Officer
