# PERFORMANCE OF FLOOD RATED PENETRATION SEALS

W. Mark Cummings, P.E.

Fisher Engineering, Inc.

### **NRC PROJECT TITLE:** Flood Penetration Seal Performance at NPPs

**Project Team:** Fire Risk Management, Inc. (*now Fisher Eng.*) Nuvia US

### **Project Overview:**

<u>Project Objective</u>: To establish Testing Standards and Protocols to evaluate the effectiveness and performance of seals for penetrations in flood rated barriers at NPPs.

#### Project Tasks:

- Task 1: Development of Testing Standards, Performance Based Criteria, and Protocols
  - Task 1.1: Identify and describe the various typical seal materials for FPSs used at NPPs
  - Task 1.2: Develop standard testing procedures, performance based criteria and protocols for testing effectiveness and performance of FPSs.
- Task 2: Testing of Selected Flood Penetration Seal Types and Designs
  - Designed to "test the test protocol"
  - Use observations to determine if mods to Test Protocol are warranted

### **TASK 1.1 OVERVIEW**

- Researched publicly-available information regarding installed Flood-rated Penetration Seals
  - ADAMS database
  - NPP responses to NRC 50.54 Letter (54)
  - NRC Audit Reports
  - LERs, NUREGs, INs. IRs (relevant info noted in 28/-/15/13)
- Wide variety of seal assemblies and materials noted
  - Concrete, Mortar, Grout
  - Mechanical seals (such as boot or link)
  - Silicone foams (high & low densities)
  - Epoxies & Elastomers
  - Urethane
  - Caulking
- Combination of "fill" materials with exterior "damming" materials applied (waterproofing)

### TASK 1.1 OVERVIEW (Cont'd)

- Wide range of penetration configurations and types of penetrants
  - Rectangular & Circular
  - Sleeved and Core Bore
  - Single & Multiple Penetrants and "Blanks"
  - Pipes, Cables, Conduit, etc.
  - Varying sizes / diameters
- Both interior and exterior applications
- FPS Assessments
  - "Formed in place" seals (foams, elastomers) appear to exhibit greatest variability in performance
  - Materials / Products (formulations) vary between Manufacturers
- Summary Report Developed: *"Flood Penetration Seal Assemblies at Existing Nuclear Power Plants"* (08/2016)

### **TASK 1.2 OVERVIEW**

- Review of NUVIA Flood Test Apparatus & Procedures
  - NUVIA is only entity currently testing FPSs; using standard procedures/protocols
- Review of UL 1479 Fire Tests of Through-Penetration Firestops
  - Section 6A Water Leakage Test (W rating)
- Review of FM Approval Standard for Flood Abatement Equipment
  - Does not address "penetrations" in flood barriers; primarily the barriers themselves, including dikes
  - Does provide some input regarding "impact" resistance
- Review of ASTM E814 Standard Test Method for Fire Tests of Penetration Firestop Systems
  - Used as a primary "template" for formatting Flood Test Procedure
  - Industry familiarity with formatting

### TASK 1.2 OVERVIEW (Cont'd)

- Development of draft Protocol complete ready for use in Phase II
  - Provided "guidance" and standardized methodology for testing flood-rated penetration seals
    - Test apparatus design; including data acquisition
    - Performance-based approach to metrics (no specific pass/fail criteria)
  - Manufacturers will need to specify limitations of their products
  - Use Task 2 testing to assess Protocol flexibility with the p-based approach
  - NRC Issued Draft for public review/comment 02/2018 "Draft Methodology for Testing and Evaluating the Performance of Flood Penetration Seals"

#### **TASK 2 OVERVIEW**

- Updated Draft Test Methodology
  - Updates based on public comment
  - Final draft developed for use during Task 2 testing series; 06/2018
- Development of Test Plan
  - Selection of candidate FPSs; types and numbers to be tested
  - Final design for Test Decks (Installed Penetrations & Seal Assemblies)
  - Location for testing (Framatome Lab in Lynchburg, VA)
  - Inclusive of Test Matrix
    - Range of seal assemblies/materials
    - Greater emphasis on "formed in place" (including configurations noted during Task 1)
    - Specific penetrations assigned to participating Mfgrs
  - Final Test Plan submitted to NRC 07/2018; "Test Plan for Flood-rated Penetration Seal Performance Testing"
- Test Objective(s)
  - Exercise & evaluate Flood Test Procedure ("test the test")
  - Research/Evaluation of specific FPS assemblies/materials noted as installed at NPPs

#### TASK 2 – Test Series

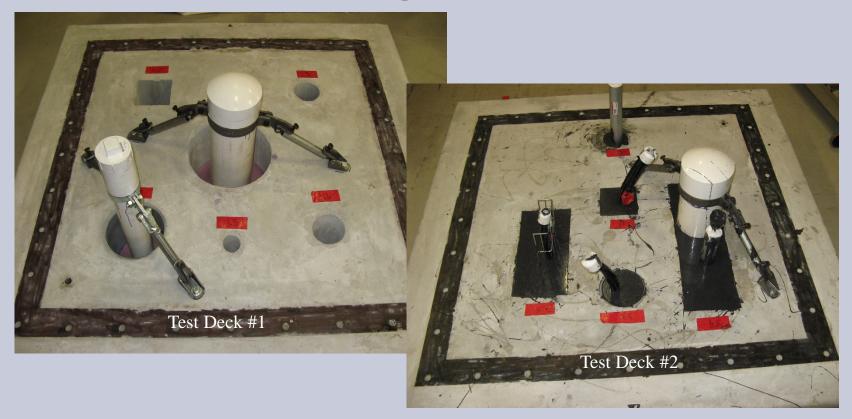

#### Candidate Test Decks

- General design/configuration predicated on Framatome Test Apparatus
- 12" concrete "slabs"
- 5 Sample Decks included in Test Series
- Variety of circular & rectangular/square penetrations
- Sleeved & core drilled
- "blanks" & variety of penetrants: pipe (PVC), cable, cable & cable trays, conduit
- Low & High density foam & silicone materials
- Mechanical seals; boot & link types
- Restrained & unrestrained penetrants
- Penetrants sealed to prevent leakage "through" penetrating item

#### TASK 2 – Test Series

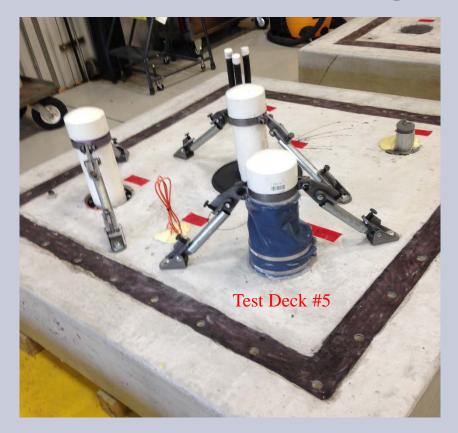

Candidate Test Decks – Pre-test Preparation

#### TASK 2 – Test Series

Candidate Test Decks – Pre-test Preparation

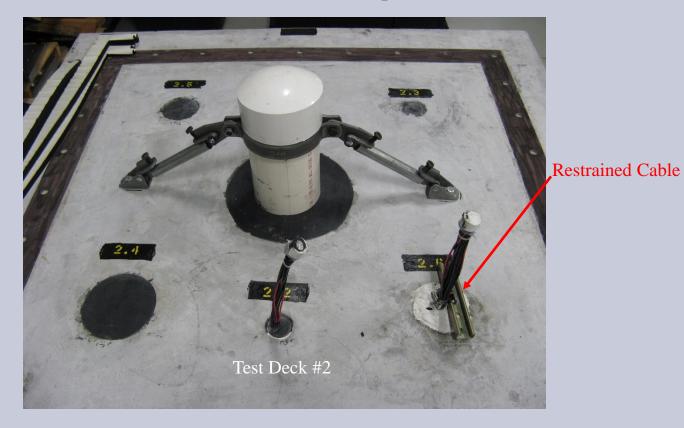

#### Sealed Cable Penetrant

#### TASK 2 – Test Series

Candidate Test Decks – Pre-test Preparation

#### TASK 2 – Test Series

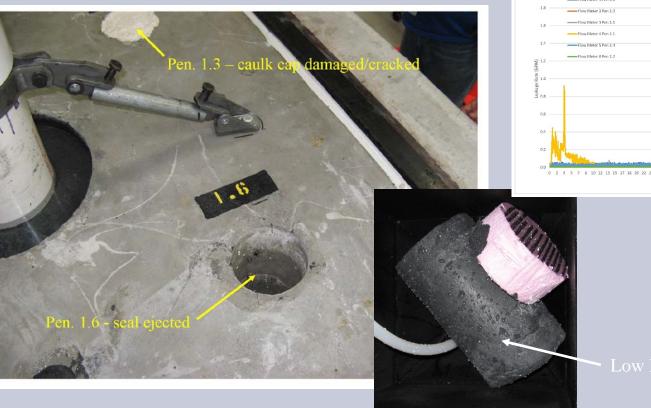

Candidate Test Decks – Pre-test Preparation

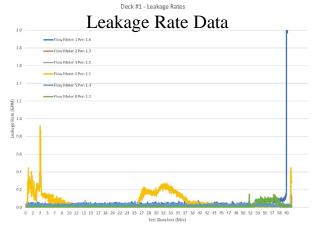

#### **TASK 2 RESULTS**

Candidate Test Decks – Post-test Results

Low Density Foam

### TASK 2 RESULTS

Candidate Test Decks – Post-test Results

#### **TASK 2 RESULTS**

Candidate Test Decks – Post-test Results

### **TASK 2 RESULTS**

- Candidate Test Decks Post-test Results
  - Lessons Learned
    - Mechanical Seals performed well (link & boot seals  $\geq$  19 psig)
    - Performance of low density foam dependant on numerous variables
      - Number/type of penetrant(s)
      - Sleeved vs. unsleeved and sleeve material
      - Small "free area" to circumference ratio (higher density fill ratio)
    - Silicone elastomer did not adhere well to PVC penetrant or sleeve
    - Better performance with restrained penetrant(s) (low density foams/high density elastomers)
  - Test Methodology Appears Adequate and Flexible to Support Seal Performance Data
- Final Task 2 Testing (Summary) Report Submitted
  - *"Flood-Rated Penetration Seal Performance Testing"* (09/2018)

### PATH FORWARD

- Promulgation of Test Methodology for Industry Use
  - Issued via NUREG (NRC action)
    - Provide guidance to Industry for standardized process for evaluating/quantifying FPS performance
    - Support NRC oversight requirements
    - FPS pass/fail criteria will be function of Flood PRA requirements; NPP-specific
