## General Comment

Shame on you NRC, for considering a proposal that would move us in the backwards direction in our drive forward to provide safe, quality treatment to patients! Requirements to administer radiopharmaceuticals should not be reduced!! It is ridiculous to think that this would not end in disaster! Patients safety should be of more concern to you than making it easier for a clinic to make a profit! This is not a move our public would be happy to hear about. It is a scary situation when the regulatory committee is swayed to make a change that would endanger the public and produce more profit from clinics hoping to administer a service they are ill equipped and ill-trained to do.
