NRC to Hold Open House to Discuss 2018 Performance of Davis-Besse Nuclear Power Station

Nuclear Regulatory Commission staff will discuss the 2018 safety performance of the Davis-Besse nuclear power plant during an open house on July 18 in Oak Harbor, Ohio.

The open house, to be held at the Carroll Township Service Complex, 11080 W. Toussaint East Rd., will run from 6-7:30 p.m. NRC employees responsible for plant inspections, including the resident inspectors based full-time at the site, will be available to discuss the plant's performance.

The facility, operated by FirstEnergy Nuclear Operating Co., is located in Oak Harbor, approximately 21 miles east southeast of Toledo.

Davis-Besse operated safely during 2018. At the end of the year, all inspection findings and performance indicators were of very low safety significance. As a result, it remains under the NRC's normal level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Inspections are performed by two NRC resident inspectors and inspection specialists from the Region III office located in Lisle, Ill.

The [annual assessment letter](#) for Davis-Besse, as well as the [notice](#) for the open house, are available on the [NRC website](#). Current [performance information](#) is also available.
