King of Prussia, Pennsylvania 19406

Dear Sir:

Three Mile Island Nuclear Station Unit 2 (TMI-2)
Operating License No. DPR-73
Docket No. 50-320
IE Bulletin No. 78-04 dated February 21, 1978

In response to your IE Bulletin No. 78-04 regarding environmental qualification of safety related stem mounted limit switches inside primary containment, the following actions have been taken:

1. Vendor drawings were reviewed and it was determined that no limit switches of the type referenced in IE Bulletin No. 78-04 are used on any safety related equipment inside primary containment.
2. Visual inspections of field modified valves were also made to determine what type of limit switches were installed. No limit switches of the type referenced in the Bulletin were used on field modified valves in safety related equipment inside primary containment.
3. Because of the thorough and complete spare parts program implemented on this unit, all vendor equipment drawings had been previously reviewed, and it was determined that 42 NAMCO Model D2400X and no EA-170-302 Snap Lock limit switches were installed at this unit. However, none of these switches are installed on safety related equipment inside primary containment.

Based on the above investigation, it has been determined no NAMCO Model D2400X or EA-170-302 Snap Lock limit switches are utilized or plan to be utilized on any safety related valves or equipment inside the primary containment.

Very truly yours,

J. G. Herbein
Vice President-Generation
