

## TurkeyPoint34SLRPEm Resource

---

**From:** Eaton, Kristin <Kristin.Eaton@fpl.com>  
**Sent:** Thursday, June 6, 2019 8:59 AM  
**To:** Grange, Briana; Eldridge, Jodie  
**Subject:** [External\_Sender] RE: NMFS Consultation for Turkey Point SLR  
**Attachments:** NMFS\_RAI\_3c\_Response.xlsx

Hi Briana,

I've attached the spreadsheet to respond to the NMFS RAI question 3c. There are multiple tabs with the information on the spreadsheet so if you would prefer for us to make it in to a pdf, please let us know. Let us know if you need anything else.

Thanks!

Kristin

---

**From:** Grange, Briana [mailto:Briana.Grange@nrc.gov]  
**Sent:** Tuesday, May 07, 2019 10:24 AM  
**To:** Eldridge, Jodie; Eaton, Kristin  
**Subject:** FYI: NMFS Consultation for Turkey Point SLR

CAUTION - EXTERNAL EMAIL

Kristin and Jodie,

As part of NMFS's review of the NRC's request for concurrence on the NRC's "not likely to adversely affect" determinations for sea turtles and smalltooth sawfish for Turkey Point SLR, NMFS has requested additional information from the NRC (see attached email). I am currently working on responses. I may need to reach out to you to make sure that I am gathering the correct data for the more detailed water quality monitoring questions. For now, though, there is no action for you. I just wanted to keep you in the loop so that you are aware of where this consultation stands. NMFS's email will be in ADAMS at ML19126A028 by the end of the week.

Thanks!

Briana

**Recipients Received:**

**Sample Frequency**

Semi annual sampling frequency under EPU monitoring program: Ammonia, Total Nitrogen, Total Phosphorus

Quarterly sampling frequency under EPU monitoring program: Salinity, Temperature, Tritium

**Water Quality Standards**

There are no state or federal numeric water quality criteria for Ammonia, Total Nitrogen, Total Phosphorus

There are state numeric nutrient criteria for Biscayne Bay for Total Nitrogen and Total Phosphorus however

orous.

orous, Salinity, or Temperature associated with grab samples collected from this water body  
ever these criteria are implemented by FDEP to determine whether water bodies are impaired using spe

pecific regional monitoring sites several years. The criteria are not applied to individual grab samples (See

Chapter 62.302 and 62.303 F.A.C.)

**Definition**

Value reported is the arithmetic mean (average) of two or more determinations. This code shall be used if the reported value is the average of results for two or more discrete and separate samples. These samples shall have been processed and analyzed independently. Do not use this code if the data are the result of replicate analysis on the same sample aliquot, extract or digestate (for example, for Stream Condition Index, biochemical oxygen demand or bacteriological analyses, or instrumental analyses such as Inductively Coupled Plasma).

When reporting species: F indicates the female sex.

A "G" – qualified sample value indicates that the analyte was detected at or above the method detection limit in both the sample and the associated field blank, equipment blank, or trip blank, and the blank value was greater than 10% of the associated sample value. The value in the blank shall not be subtracted from associated

Value based on field kit determination; results may not be accurate. This code shall be used if a field screening test (e.g., field gas chromatograph data, immunoassay, or vendor-supplied field kit) was used to generate the value and the field kit or method has not been recognized by the Department as equivalent to laboratory

The reported value is greater than or equal to the laboratory method detection limit but less than the laboratory practical quantitation limit.

Estimated value. A "J" – qualified sample value shall be accompanied by a detailed explanation to justify the reason(s) for designating the value as estimated. Where possible, the organization shall report whether the actual sample value is estimated to be less than or greater than the reported value, to assist data users in any evaluation of the usability of the sample value. A "J" data qualifier code shall not be used as a substitute for G, K, L, M, S, T, V, or Y; however, if additional reasons exist for identifying the value as an estimate (e.g., laboratory control spike or matrix spiked failed to meet acceptance criteria), the "J" code may be added to a G, K, L, M, T, U, V, or Y qualifier. The following are examples of when a "J" code must be reported: instances where a quality control item associated with the reported value failed to meet the established quality control criteria (the specific failure must be identified); instances when the sample matrix interfered with the ability to make any accurate determination; instances when data are questionable because of improper laboratory or field protocols (e.g., composite sample was collected instead of a grab sample); instances when the analyte was detected at or above the method detection limit in an analytical laboratory blank other than the method blank (such as a calibration blank) and, the blank value is greater than 10% of the associated sample value; or, instances when the field or laboratory calibrations or calibration verifications did not meet calibration acceptance criteria,

Off-scale low. Actual value is known to be less than the value given. This code shall not be used for microbiological tests or for biochemical oxygen demand. This code shall not be used for field-testing measurements where quantitative bracketing is required. This code shall only be used for those tests using a calibration curve if:

1. The value is less than the lowest calibration standard and the calibration curve is known to be non-linear; or
2. The value is known to be less than the reported value based on sample size, dilution.

This code shall not be used to report values that are less than the laboratory practical quantitation limit or laboratory method detection limit.

Off-scale high. Actual value is known to be greater than value given. This code shall not be used for microbiological tests or biochemical oxygen demand. This code shall not be used for field-testing measurements where quantitative bracketing is required. To be used when the concentration of the analyte is above the acceptable level for quantitation (exceeds the linear range or highest calibration standard) and the calibration curve is known to exhibit a negative deflection.

When reporting chemical analyses: presence of material is verified but not quantified; the actual value is less than the value given. The reported value shall be the laboratory practical quantitation limit. This code shall be used if the level is too low to permit accurate quantification, but the estimated concentration is greater than or equal to the method detection limit. If the value is less than the method detection limit use "T" below.

Presumptive evidence of presence of material. This qualifier shall be used if:

1. The component has been tentatively identified based on mass spectral library search; or
2. There is an indication that the analyte is present, but quality control requirements for confirmation were not met (i.e., presence of analyte was not confirmed by alternative procedures).

Sampled, but analysis lost or not performed.

Sample held beyond the accepted holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for sample preparation or analysis. This code shall be reported with sample results calculated from two or more component analyses, if one or more component sample preparations or analyses were performed out of holding time.

Temporary Screening Qualifier

Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.

Bias Indication

"+" = Bias is high

"-" = Bias is low

Value omitted from analyses as it is a statistical and/or historical outlier.

7-10
