

Socket No. 50-320

AUG 6 1974

Metropolitan Edison Company  
ATTN: Mr. R. C. Arnold  
Vice President  
P. O. Box 542  
Reading, Pennsylvania 19603

Gentlemen:

We have completed our review of your letter dated February 15, 1974, and of the referenced material which you filed in response to our letter of January 22, 1974. The information you provided relates to the authority and organizational freedom of Quality Assurance (QA) personnel within Metropolitan Edison Company, General Public Utility Service Company, Babcock and Wilcox, Burns and Roe, and United Engineers and Constructors performing work on the design and construction of the Three Mile Island Nuclear Station, Unit 2.

Our review and evaluation considered the duties, responsibilities, and authority vested in persons responsible for verification of quality by testing, inspecting, and auditing. We also reviewed the organizational arrangement and administrative and technical direction exercised over these persons with particular attention given to freedom and independence from the pressures of costs and schedules.

Based on our evaluation, we find that sufficient authority and organizational freedom exists in the Metropolitan Edison Company and its contractors and suppliers to enable QA personnel to perform their critical functions effectively and without reservation for the design and construction of the Three Mile Island Nuclear Station, Unit 2.

Sincerely,

Voss A. Moore, Assistant Director  
for Light Water Reactors, Group 2  
Directorate of Licensing
