A

ADVISORY COMMITTEE ON REACTOR SAFEGUARDS  
REPORTS TO AEC ON PROPOSED SECOND NUCLEAR  
POWER PLANT ON THREE MILE ISLAND IN PENNSYLVANIA

The Atomic Energy Commission has received a report from its Advisory Committee on Reactor Safeguards concerning the second nuclear power plant proposed for the Three Mile Island Nuclear Station in Londonderry Township, Dauphin County, Pennsylvania. Unit 2 would be owned jointly by Metropolitan Edison Company and Jersey Central Power & Light Company.

The proposed Three Mile Island Nuclear Station Unit 2 will use a pressurized water reactor and will have an initial capacity of about 810,000 net electrical kilowatts and an ultimate capacity of about 920,000 kilowatts. The second unit would be adjacent to Metropolitan Edison's Unit 1 now under construction on Three Mile Island near the east shore of the Susquehanna River above York Haven Dam, about 10 miles southeast of Harrisburg.

As proposed, Metropolitan Edison will be responsible for the design, construction and operation of the plant. Aid in the design and construction of the facility will be supplied by Burns & Roe Inc., Gilbert Associates Inc., Babcock & Wilcox Company Inc., and United Engineers and Constructors. The nuclear steam supply system will be supplied by Babcock & Wilcox.

A public hearing to consider the application will be conducted soon in the vicinity of the proposed power plant.

A copy of the ACRS report is attached.
