General Comment

The Amendments proposed to Facility Operating Licenses and Combined Licenses Involving No Significant Hazards Considerations would dial back our national security and safety as a nation immensely.

In the proposed amendments, it states,

"Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?

Response:No."----the response says these amendments do not CREATE the possibility of a new or different kind of accident from any accident previously evaluated, but dropping off the requirement that ensures these plants are up to code simply because "they're up to code now, so we don't need to worry anymore"--is beyond ignorant thinking. If these plants aren't regulated and checked to ensure safety and safety from various attacks, there WILL be CREATED problems. Facilities degrade over time. Building integrity goes down due to age and wear, just because a building or plant was up to code a few years ago doesn't mean we're supposed to just "assume" it's up to code now.

These nuclear plants are dangerous, exciting, yes, but we need to be careful with them and take care of them in order to ensure the safety of our people and nation.
