POOR ORIGINAL

Addressed to Victor Galinsky;

Hello, in light of the recent situation involving the nuclear energy system due to the three-mile network in harrisburg,

I would like to send a personal thought in relation to this newsituation.

Would it be possible, in the future, to construct "combined" energy systems that in which harness energy for our country\*s needs.

Basically, would not a plant featuring hydro-electric power combined with nuclear technology be of sufficient strenght,

Maybe people would be less unafraid of a type plant which featured two types of energy for power sources.

Maybe a solar powered-nuclear plant, in the future.

Thank you very much for reading this letter.

Respectfully;

David Haig.
