Dr. Gordon Edison Office of Nuclear Regulatory Research U.S. Nuclear Regulatory Commission Washington, D.C. 20555

Dear Dr. Edison:

Enclosed is a copy of the monthly report for July, 1979, on the program "Analysis of Hypothetical Accidents Resulting in Core Meltdown" which is Task 8 of Contract NRC-04-76-293. The report describes the efforts for: Subtask 1, Reactor Safety Study Follow-on Program; Subtask 2, Probabilistic Uncertainty Analysis; and Subtask 3, Analysis of Thermal-Hydraulic Behavior.

Sincerely,

Richard S. Denning

CONTRACTOR PROGRAM MANAGER: R. S. Denning PHONE: FTS 976-7510

PRINCIPAL INVESTIGATOR(S): P. Cybulskis PHONE: FTS 976-7509

PROGRAM OBJECTIVES:

Investigate the effects of LWR plant design variations on the risks associated with reactor meltdown accidents. Specifically, determine the effects of plant design variations on the probability and nature of the radionuclide source term released during key meltdown accident sequences.

ACTIVITIES DURING JULY, 1979

MARCH analyses for the GE Mark III design accident sequences were initiated.

The implications of hydrogen burning and deflagnation in a number of accident sequences in the B&W PWR are being reevaluated in line with recent modeling changes.

Schedules are being reevaluated based on the delay in FY79 authorizations.

Definition of the shutdown power transient to be used for the reactor protection system failure sequences for the PWR plants are still required. Reanalysis of the plants previously considered may be required in order to have a consistent treatment of these sequences.

* Includes \$30,250 carryover from FY78.

** Milestones are under review as a result of the delay in FY79 authorization.

ACTIVITIES DURING JULY, 1979

Work progressed on the analysis of the uncertainty study results. A report on the methodology and a deconstration uncertainty analysis is nearing completion. A second report will describe the results of uncertainty analyses of the TMLB' and TC sequences. Preparations were made for a review of FY79 objectives, milestones, and activities with NRC personnel.

A review of Sandia's report NUREG/CR-0394 "Risk Methodology for Geologic Disposal of Radioactive Waste: Sensitivity Analysis Techniques" was begun.
