During normal operation as a result of the Pipe Stress Reanalysis being conducted by the Architect Engineer, the plant staff was notified that a pipe support associated with the Service Water System return line from the Reactor Building Cooling System was considered inoperable in accordance with the requirements of the August 14, 1979 letter lifting the Show Cause Order of March 13, 1979.

As noted above the pipe support was considered inoperable as set forth in Paragraph IV 4 of the August 14, 1979 letter. However, Technical Specifications do not include the Service Water System therefore, repair or modification of the pipe support was required within seven (7) days. Since the hanger was repaired within the allowable time frame and the affected system would have remained operable during and following a seismic event of the magnitude presented in the letter lifting the Show Cause Order, the event did not represent a significant safety hazard to the public health and safety.

As noted above, repair and modification of the pipe support was completed within the prescribed time frame and the pipe support is now considered fully operable.
