Docket No. 50-245

Mr. Eldon J. Brunner, Chief Reactor Operations and Nuclear Support Branch U. S. Nuclear Regulatory Commission Region I 631 Park Avenue King of Prussia, PA 19406

References: (1) Inspection No. 50-245/78-25, Additional Information.

(2) Letter, E. J. Brunner to W. G. Counsil dated February 5, 1979.

Gentlemen:

Millstone Nuclear Power Station, Unit No. 1 Personnel Air Lock Testing

During the recent refueling outage, Millstone Unit No. 1 personnel successfully completed a leak test of the personnel air lock test at 43 psig (Pa).

In accordance with previous correspondence with the NRC, Millstone will propose revisions to plant technical specifications to locally leak rate test the drywell air lock at 43 psig at least once every six (6) months. Any additional tests required due to drywell entry for maintenance will be performed at 10 psig.

Very truly yours,

NORTHEAST NUCLEAR ENERGY COMPANY

W. G. Counsil Vice President
