MEMORANDUM FOR: Harold R. Denton, Director, Office of Nuclear Reactor Regulation
 FROM: Richard H. Vollmer, Director, Three Mile Island Support
 SUBJECT: TMI-2 POST MORTEM EXAMINATION

On September 11 - 13, 1979, the TMI Examination Technical Working Group met to develop recommendations for the DOE/NRC/EPRI GPU Joint Coordinating Committee for the post mortem examination of TMI-2. The recommendations were to cover those efforts that GPU would not normally be doing as part of its TMI-2 recovery operations. A copy of the meeting report is attached.

At the meeting, it was agreed that the detailed planning efforts for 17 items should be initiated. In some areas technical planning groups are being organized to provide a detailed plan. To assure that the NRR regulatory point of view is incorporated into these plans and that information for use in licensing will be obtained, an NRR staff member was suggested for each Technical Planning Group. Each staff member will be contacted in the near future by the appropriate Technical Planning Group Chairman to arrange for his participation in the group. The following staff members were assigned:

Task No.	Task	NRR Staff
1.0	Instrumentation and Electrical Equipment Survivability	Matt Chiramel - DOR
2.1	Fission Product Transportation Deposition and Environmental Description	Walt Pasedag - DOR
6.1	Mechanical Components	Vince Noonan - DOR
6.2		
7.2	Core Damage Assessment and Fuel Removal	Ralph Meyer - DSS
7.4	Fuel Experiments and Examination	Frank Coffman - DOR
