John G. Davis, Deputy Director for Field Operations, IE

TRIAL INSPECTION PROGRAM - THREE MILE ISLAND UNIT 1

Enclosed for your information is a copy of the scoping document relating to the subject Inspection Program, a portion of which is based on the statistical sampling inspection technique. As you know, Dr. Knuth made a decision to implement this Inspection Program at the Three Mile Island Facility after the briefing on the Sandia feasibility study on May 20, 1975.

A meeting has been scheduled for July 11, 1975 in the Region I office to brief appropriate Region I staff personnel regarding the specific details of the program and to transfer completed inspection procedures and supporting documentation to IE:I. It should be noted that all inspection procedures will not be available for the July 11 meeting. However, they will be completed and forwarded to IE:I well in advance of the first inspection, tentatively scheduled for September 1975.

Items remaining to be completed are:

- Meeting with Metropolitan Edison to advise them of the trial nature of this program. (We recommend IE:I conduct the meeting during July. ADCO will provide assistance as required).
- Issuance of news release (ADCO). This will be done subsequent to the TMI meeting.
